V. *From the Reformation until the present Time.*—The controversies called forth by Wycliffe, Huss, and other reformers of the Middle Ages, awakened in large circles the longing for a thorough reformation of the Church. The councils of Constance (q. v.) and Basle (q. v.) at first attempted to carry through this reformation, but they only diminished a few of the grossest abuses, being both unable and unwilling to remedy them thoroughly. The corruption of the Church not only continued, but certain abuses (e. g. the traffic in indulgences) became so flagrant that at the beginning of the 16th century contempt of the Church, her officers, doctrines, and ordinances, became almost general throughout Europe. When, therefore, Luther, Zwingle, and others raised the standard of a radical reformation of the Church on the basis of the Bible, millions of Christians, especially in Germany, Switzerland, Holland, England, Denmark, Sweden, Prussia, at once rallied around it. See REFORMATION. Though the Reformers did not agree on all points of doctrine, they were unanimous in claiming the Bible as *the* rule of faith, decidedly rejecting everything which had crept into the Church in opposition to the Biblical doctrine. The Roman Church made many unsuccessful attempts to suppress these reformatory movements, and the new order of the *Jesuits* (q. v.), the most powerful and influential of all monastic institutions, was instituted for this special purpose. These attempts, which led to the war of the Huguenots in France, and the Thirty Years' War in Germany, were in vain. From some countries the Roman Church was entirely excluded, while in others it had at least to grant to Protestants equal rights and toleration. The Church saw itself also compelled to convoke a General Council [see TRENT], and to abolish at least a few of the grossest abuses. A few futile efforts were made to bring about a union with the Protestants. The doctrine of the Roman Church received in the Council of Trent its final form, yet since that period several doctrinal controversies (e. g. Jansenism [q. v.] and Quietism [q. v.] in France, and the philosophy of Hermes [q. v.] and Gunther in Germany) have required new decisions of the Papal See. The Gallican Church (q. v.) in council, with Bossuet (q. v.) at its head (1682), and a number of distinguished bishops in Germany [see FEBRONIUS], Italy [see RICCI], and other countries, protested against making the infallibility claimed by the popes a doctrine of the Church; yet, on the whole, the popes have been so successful in enforcing obedience to their doctrinal definitions and divisions, that in 1854 an entirely novel dogma [see IMMACULATE CONCEPTION] was proclaimed by Pope Pius IX, without the sanction of a General Council. Some princes, as Joseph II of Austria, Leopold of Tuscany, and others, have attempted to restrict the absolute power claimed by the pope over clergy and people, mostly without success. Still less successful were certain attempts to establish national "Catholic" churches independent of Rome (viz. the "French Catholic Church" in 1831, the "German Catholics" in 1854). These movements were not made on the ground of the Bible and of revealed Christianity, and therefore necessarily were failures. The relation between the different states of

Europe, in which the Roman Church is recognised as a state religion, and the pope, is regulated by *Concordats* (q. v.).

The *Protestants* in course of time formed a number of different denominations, among which two main tendencies are to be distinguished, viz. the Lutheran and the Reformed Churches. The latter were subdivided into the German Reformed, Swiss Reformed, Dutch Reformed, Presbyterians, Baptist, Congregational, and other minor churches. The Church of England, as far as it identified itself with the Reformation, belongs to the class of Reformed churches; yet it retains also enough elements from the time before the Reformation to leave room for the continuance of a party which rejects altogether the Protestant character of the Church, refuses association with other Protestant denominations, and acknowledges only the churches which claim the so-called apostolical succession of bishops as valid. From the Church of England sprang the *Methodists* (q. v.), who discarded everything un-Protestant in the mother Church, and took at once a prominent place among the Reformed denominations. In the rapidity of their extension they have surpassed all other bodies of Protestant Christians.

In a large part of Europe the Protestant churches have unfortunately allowed to the secular government an undue influence over ecclesiastical affairs—an influence which has generally been used for the entire subjugation of the Church. Only by hard struggles have *dissenters* from state religions secured toleration. Many of them had to cross the Atlantic in order to be at liberty to worship God according to the dictates of conscience. The declaration of American independence was the first heavy blow against state-churchism; and the independence of the Church, which was now, for the first time, carried through on a large scale, worked so well, that all the European churches began to feel the influence of the new principle, and gradually to loosen, at least, the connection between Church and state. The question of a union between various Protestant bodies has been, from the beginning of the Reformation, a favorite idea of many distinguished men, though it has frequently led to an increase of parties and of controversies, especially as generally these schemes of ecclesiastical union have been attempted with the aid of the secular arm. The most important of these attempts was the establishment of the United Evangelical Church (q. v.) of Germany in 1817, through the instrumentality of Frederick William III of Prussia. In modern times the opinion has gained ground that the large number of evangelical denominations has had a beneficial rather than a disastrous influence on the advancement of Christianity, and that it would be better, instead of aiming at ecclesiastical uniformity, to form a cordial alliance of evangelical Christians of all denominations. This led to the formation of the so-called "*Evangelical Alliance*" (q. v.), which soon assumed grand dimensions. It has held some large assemblies, which have been called the first œcumenical councils of Protestant Christianity. The development of theology during this period has centred mostly in Germany. See GERMAN THEOLOGY. The struggle, after the Reformation, between Lutheranism and Calvinism, was soon followed by the more important contest between Christianity and an infidel philosophy, represented by the Deists in England, the Encyclopædists in France, and Rationalism in Germany. The belief in Christianity was for a time undermined in a large proportion of the European population, but with the beginning of the nineteenth century a powerful reaction in favor of Christianity has set in. The influence of Christianity over the political, social, and literary life of mankind is now greater than ever before. But infidel parties have not been wanting in the nineteenth century. Among them may be named Young Germany, the Free Congregations and German Catholics, the Young Hegelians, the Socialistic Mechanics' Associations in Switzerland and France, the Materialism in natural science, the Positivist followers of Comte, the Westminster Review and its party in England, the Mormons and Spiritualists in America. The movements of these parties have led to a new development of powerful agencies in defence of Christianity. In nearly every department of science and literature the works of former centuries have been surpassed by modern Christian writers. The various denominations vie with each other in establishing religious periodicals, which already form one of the grandest characteristics of the church history of the nineteenth century. Free associations for religious and other charitable purposes have rapidly multiplied; missionary societies, Bible, tract, and book societies have displayed a wonderful and unparalleled activity.

Thus the spread of Christianity from the beginning has been like to the growth of the "grain of mustard seed;" to-day its branches overshadow the whole earth; the prospects of Christ's kingdom on earth are brighter than at any previous period of its history. Compare Smith, *Tables of Church History* (especially the column "General Characteristics"). See CHRISTENDOM; CHURCH HISTORY; THEOLOGY.

Christians (improperly pronounced *Christ*-ians), a denomination usually styled "the Christian Connection."

I. *History.*—This body is purely American in its origin, having sprung from three different sources widely apart from each other—the Methodist, Baptist, and Presbyterian Churches in different parts of America. (1.) When the so-called "O'Kelly secession" from the Methodist Episcopal Church (q. v.) took place in the year 1793, the seceders at first took the name of "Republican Methodists," but afterward assumed the name of "Christians," avowing the N. T. as their only code of doctrine and discipline. (2.) In the year 1800, Dr. Abner Jones, a member of the Baptist Church in Hartland, Vermont, "becoming dissatisfied with the creed of his church, and with all sectarian denominations, and preferring the Bible alone as the confession of his faith," organized a church of twenty-five members in the town of Lyndon, Vt. In a few years he was joined by ministers from the Close Communion and Free-will Baptist churches, who left their former associations, and, in some cases, brought their flocks with them. (3.) The third source of the new sect was found in Kentucky and Tennessee. About the year 1801, several ministers withdrew from the jurisdiction of the Presbyterian Church, and "organized themselves into a new and independent presbytery, called the Springfield Presbytery. They kept up this organization for about two years, when they formally adopted a new name for themselves and followers — that of Christians." (See Davidson, *Presbyterian Church in Kentucky*, chap. viii.)

The three bodies thus separately organized were finally brought into one society, adopting the common name "Christians." They have become quite numerous.

At the Quadrennial General Conference of this denomination held at Marshall, Michigan, on October 2, 1866, and the following days, the following 40 Annual Conferences were represented by delegates:

	CONFERENCES.	No. of Delegates
1	Passamaquoddy, Me.	
2	Vermont Western	13
3	Merrimack	20
4	Rockingham	
5	York and Cumberland	15
6	Strafford	13
7	Massachusetts and Rhode Island	
8	New York Eastern	47
9	New York Central	40
10	New York Western	14

	Conferences.	No. of Delegates.
11	New York Northern	11
12	New York Southern	14
13	New Jersey	14
14	Tioga River, N. Y.	25
15	Erie, Pa.	16
16	Canada	
17	Miami, O.	52
18	Central Ohio	29
19	Maumee Valley	5
20	Southern Ohio	30
21	Deer Creek, O.	14
22	Eel River, Ind.	16
23	Antioch and Blufton	42
24	Western Indiana	33
25	Mason River, Ill.	5
26	Northern Illinois and Southern Wisconsin.	28
27	Central Illinois	
28	Spoon River	25
29	North-eastern Iowa	29
30	Union, Iowa	8
31	Des Moines, Iowa	28
32	Eastern Michigan	17
33	South-east Michigan	7
34	Central Michigan	
35	Grand River Valley	
36	Southwestern Michigan	
37	Northern Indiana and Western Michigan	12
38	Richland Union, Wis.	6
39	Northern Wisconsin	
40	Jacksonville	

The Rev. I. C. Goff, of Illinois, was elected President. A letter, expressing harmony of views and fraternal feelings, was read from the Association of General Baptists in England, this being the first communication of the kind since 1823. The General Conference replied by a series of resolutions, reciprocating the feelings of the General Baptists, and by appointing a delegate to attend their next annual meeting. It was resolved to establish a Biblical institute in the State of New York, and to increase the number of denominational periodicals by the establishment of a *Quarterly* and of an *Annual Register*. The original platform of the denomination, namely, "That the name Christian is the only name of distinction which we take, and by which we, as a denomination, desire to be known, and the Bible our only rule of faith and practice," was unanimously reaffirmed.

A convention of members of the denomination in the Southern States ("Southern Christian Convention") was held at Mount Auburn, N. C., on May 2, 1866, at which it was resolved to revive the denominational book concern at Suffolk, Va., which had been destroyed by fire soon after the beginning of the war. See *Annual American Cyclopædia* for 1866, s. v. Christian Connection; *Minutes of the U. S. Quadrennial Christian Connection* (Dayton, 1866).

II. *Doctrines.*—Each congregation of "Christians" is independent, and they take the Bible as their binding standard of doctrine. The following principles appear to be generally recognised among them: (1) The Scriptures are inspired, and are of divine authority. (2) Every man has a right to interpret the Bible for himself, and therefore differences of theological views are no bar to Church fellowship. (3) There is one God, but the doctrine of the Trinity is not generally received. (4) Christ is a divine being, pre-existed, and is the mediator between God and man. (5) Christ's sufferings atone for the sins of all men, who, by repentance and faith, may be saved. (6) Immersion is the only proper form of baptism, and believers the only proper subjects (rejecting infant baptism). (7) Communion at the Lord's table is open to believers of all denominations.

III. *Government and Usages.*—Though each congregation is theoretically independent, there are "Annual" or "State" Conferences, composed of ministerial and lay delegates from the churches, which receive and ordain pastors, etc., but can pass no laws binding the several churches. They have an American Christian Convention, whose officers from 1866 to 1867 were: *President*, D. P. Pike, of Massachusetts; *Secretary*, N. Summerbell, of Ohio; *Secretary of Missionary Department*, D. E. Millard, of Michigan; *Secretary of Educational Department*, J. W. Haley, of Massachusetts; *Secretary of the Sabbath-school Department*, I. C. Goff, of Illinois; *Secretary of the Publishing Department*, C. A. Morse, of Ohio. The forms of worship, etc., are in general the same as those in the Baptist churches.

The Constitution of the General Convention, as amended in 1866, is as follows:

ARTICLE I.—This organization shall be styled "The American Christian Convention."

ART. II. The business of the Convention shall be to arrange, direct, or transact such matters as may be thought proper and necessary, in connection with and for the furtherance of the interests and honor of the cause of Christ.

ART. III. The officers of the Convention shall consist of a President, one Vice-president from each state or province connected with the Convention, a Secretary of the Convention, and one Secretary for each department hereinafter provided for; all of the above officers, except the Vice-presidents, shall be chosen by ballot for the term of four years, and until their successors are chosen. The Vice-presidents shall be nominated by the states and provinces represented in the Convention.

ART. IV. It shall be the duty of the President to preside in all meetings of the Convention and of the Executive Board.

ART V. In the absence of the President at any meeting one of the Vice-presidents shall preside.

ART. VI. The Secretary shall faithfully note and record all the doings of the Convention and of the Executive Board.

ART. VII. The Convention shall consist of the following named departments, viz.: 1. Missionary; 2. the Educational; 3. the Publishing; 4. the Sabbath-school; 5. Treasury Department. Each department shall have an appropriate secretary, who shall have the supervision thereof, subject to the control of the Executive Board hereinafter named.

ART. VIII. The Executive Board shall consist of the President and the six Secretaries above named, whose duty it shall be to carry out any measure determined on by the Convention, and any other measure which it may deem necessary and proper; and such Secretary shall, not less than one month prior to every regular meeting of the Convention, make a written or printed report of the doings of his department, accompanied with recommendations, which, on the opening of the Convention, the President shall lay before it, together with a like report and recommendation made by himself to the Convention.

ART. IX. The Secretary of the Treasury shall keep and invest funds belonging to the Convention, subject only to be drawn by a vote of the Convention or Executive Board; in either case the order to bear the sanction and signature of the President and Secretary of the Convention. He shall give bonds to the acceptance of the Executive Board.

ART. X. Any person shall, on the payment of twenty-five dollars into the treasury, be entitled to a certificate of life-membership; or, on the like payment of three dollars, to a certificate of quadrennial membership. Every Christian benevolent organization, Convention, Conference, and church which shall contribute to the treasury of the Convention shall be entitled to membership, with one vote for every three dollars quadrennially contributed. Also the presidents of our Conferences, state associations or state Conferences, and colleges or institutes, shall be ex-officio members of the Convention.

ART. XI. The Missionary Department shall have charge of the missionary enterprises of the denomination, with the power to acquire and hold the title to real estate, appropriate to church purposes, erect churches, and aid in their erection and maintenance, and in general promote the cause of Christ in all parts of the world. The Educational Department shall establish colleges and Biblical and literary institutes, as well as aid those already established by the denomination, and assist young men preparing for the ministry by pecuniary loan or gifts. The Publishing Department shall have charge of the publishing interests of the denomination, the printing and diffusing of useful books, magazines, papers, tracts, and every form of literature suitable to religious and moral culture. The Sabbath-school Department shall have charge of the cause of Sabbath-schools, their establishment support, and successful operation throughout the denomination, endeavoring to secure their welfare, and promote interest, zeal, and efficiency in this department.

ART. XII. The sessions of the Convention, under this Constitution, shall be called by the Executive Board quadrennially, and at other times when deemed by them necessary and proper.

IV. *Statistics.*—The denomination published in 1867 in the United States three periodicals, viz. *The Christian Sun* (discontinued during the war, but revived in 1867), at Suffolk, Va.; *The Herald of Gospel Liberty*—the first religious newspaper published in this country, first number issued September 1st, 1808—now pub-

lished at Newburyport, Mass.; and *The Gospel Herald*, at Dayton, O. The statements concerning their statistics greatly vary. Belcher, *The Religious Denominations in the United States* (1854), gives to them 607 organized churches, 489 ministers, and 34,000 communicants. In 1889 they claimed 1906 churches and 1452 ministers, and 147,253 communicants. The denomination has spread in England and the English possessions. Their institutions of learning are Christian Union College, at Merom, Ind.; Graham College, in North Carolina; and academies at Wolfborough, N. H., and Starkey, N. Y. They are to commence a Biblical School, and have fixed its location at Newark, N. Y. More than sixty Conferences have been organized in the United States and Canada, which meet annually.—Winebrenner, *History of all Denominations*; Belcher, *History of Relig. Denom. in the U. S.*, Gorrie, *Churches and Sects*; Schem, *Ecclesiastical Year-book*, p. 78; Baird, *Religion in America*.

Christians, Bible, also called **Bryanites**, after their founder, William Bryan, a Methodist local preacher in Cornwall, who left the Wesleyan body in 1815. He rapidly gathered churches in Devon and Cornwall, but left the party which he had formed in 1819. The denomination commenced its operations in Canada in the year 1831, and was organized there under a separate Conference in 1854. In 1866 the Bible Christians had 87 circuits and 43 home missions in England and 53 abroad, with 245 itinerant preachers, 1691 local preachers, 25,138 members, 1050 on trial, 39,249 scholars, and 8272 teachers. Their creed is Wesleyan, and so is their government, only more popular. See METHODISTS.

Christians of St. John. "In the middle of the 17th century certain Carmelite missionaries discovered a sect residing in the neighborhood of Basrah and Susa, calling themselves *Nazoreans* or *Mendæans*, and called by the Mohammedans *Sabians* (Sabæi, a name taken probably from the Koran), to whom they gave the name of Johannites, or St. John Christians. Comp. Ignatii a Jesu *narratio originis, rituum, et errorum Christianorum S. Johannis* (Rom. 1652, 8vo). One of their books has been published entire (*Codex Nazaræus, liber Adami appellatus, Syriace transcriptus latineque redditus a Matth. Norberg*, 3 vols. Lond. 1815-16, 4to), and fragments of others, besides many accounts of travellers. In the *Universal Encyclopædia* of Ersch und Gruber, Gesenius has given a general view of their system (art. Zabier), which he shows to be Gnostic-ascetic, and nearly related to that of Zoroaster, John being represented as an incarnated æon. The language of their holy books is an Aramæan dialect intermediate between Syriac and Chaldaic. They pretend to have come from the Jordan, and to have been driven thence by the Mohammedans. Some writers admit that they are really the descendants of John's disciples, or of John Baptist's. On the other side, see O. G. Tychsen in *Deutschen Museum*, 1784, ii, 414; Baumgarten Crusius, *Bibl. Theol.* p. 143."—Gieseler, *Church History*, i, § 22; Mosheim, *Commentaries* (N. Y. 1851), i, 60 note; Neander, *Church History* (Torrey's), i, 376. See HEMERO-BAPTISTS; MENDEANS; SABIANS.

Christians of St. Thomas. This name is now applied only to a people residing on the Malabar coast, in the south of India. But in former centuries St. Thomas Christians were mentioned also in other Eastern countries; thus Cosmas Indicopleustes found them in Arabia before 535. The accounts of the Portuguese navigators, who first visited the Thomas Christians of India in the fifteenth century, represent them as professing to be descendants of the proselytes of the apostle Thomas, who is believed by some to have carried the Gospel into India. Other accounts represent them as the descendants of a colony of Nestorians. It seems most probable that they were originally an offshoot of the ancient Christian churches in Persia. In the sixth century they were in regular connection with the Nestorian Church of Western Asia. Under the patriarch Timotheus (778 to 820) they received a metropolitan, and thenceforth, also, their bishops were ordained by the Nestorian patriarch. The Indian princes conferred on them, especially at the beginning of the ninth century, many privileges, for which they were especially indebted to one Thomas Cananaius, also named Mar Thomas, who was probably not a bishop, but a rich and influential merchant. In consequence of the great increase of their number, they afterward formed an independent state, which, after the extinction of the royal line, fell by inheritance to the rulers of Cochin. They greatly suffered from the many contests of the Indian princes among each other, which the Mohammedans skilfully turned to their advantage. The St. Thomas Christians, therefore, offered, in 1502, the crown to Vasco de Gama. Their connection with the Nestorian patriarchate seems to have been early interrupted. Between 1120 and 1280 their ecclesiastical head, John, is said to have gone to Constantinople to ask for the episcopal consecration, and from there to Rome; later the church and the clergy became altogether extinct, so that only one deacon was left. Hence, in 1490, two delegates were sent to the Nestorian patriarch to ask for a bishop. The patriarch ordained the two delegates priests, and sent home with them two bishops, Thomas and John. John remained in India, but Thomas soon returned. Patriarch Elias († 1502) sent him again to India, with one metropolite Jaballaha, and two bishops, Jacobus and Denha. They reported that they found bishop John still alive, and 30,000 Christian families in twenty towns. Later Portuguese reports estimate the number of families at 16,000. On account of their poverty, and the oppression which they suffered from many sides, they invoked the protection of the Portuguese. The Portuguese protectorate was soon followed by the establishment of Jesuit missions among them. In 1599 the archbishop of Goa prevailed upon them to submit to the pope, and to accept the decrees of the synod held by him at Diamper. Only a few congregations in the mountains kept aloof from this union. But in 1653 a large number of them broke off the connection with Rome, and established the independence of the Church. In 1889 the number of (non-united) Thomas Christians was estimated at 70,000; of those united with Rome, 150,000, of whom 96,000, with 97 churches, still follow their old Syrian rite, while the others have entirely identified themselves with the Latin rite. They are, under the British government, free from any ecclesiastical restraint, and form among themselves a kind of spiritual republic, under a bishop chosen by themselves, and in which the priests and elders administer justice, using excommunication as a means of punishment. They are said still to acknowledge dependence on the patriarch of Antioch. They call themselves *Syrian Christians*, or *the Syrian Church of Malagala*. They still celebrate the agapæ; and their ideas respecting the Lord's Supper incline to those of the Protestants, but in preparing the bread they are said to use salt and oil. They anoint with oil the body of the infant at baptism. Their priests are distinguished by the tonsure, and are allowed to marry. Their churches contain, except the cross, no symbols or pictures. Syriac is the language employed in their liturgies and other church-services, but the Scriptures are expounded in Malabar. See Herzog, *Real-Encyklopädie*, x, 279; Schem, *Ecclesiastical Year-book* for 1860. See NESTORIANS.

Christie, WILLIAM B., an eminent Methodist Episcopal minister, was born in Clermont County, O., Sept. 2, 1803, studied at Augusta College, Kentucky, entered the itinerant ministry in 1825, and died in Cincinnati, March 26, 1842. During his term of service in the ministry he occupied the most important pulpits of the denomination with great honor and usefulness.

His stations were, 1825, Union; 1826, Piqua; 1827–8, Zanesville; 1829, Cincinnati; 1830, Lebanon District; 1834, Cincinnati; 1835–8, Cincinnati District; 1839–40, Urbana. He was three times elected a member of the General Conference. His mind was of broad compass, and he was well versed in theology and ecclesiastical polity. In all discussions in the conferences he was an able and successful debater, and seldom failed of his aim. In the pulpit he was pre-eminent. His preaching was logical and vigorous, and he poured forth a flood of fervid and passionate eloquence that carried his audiences with him, and brought very many to Christ. His death was triumphant.—*Minutes of Conferences*, iii, 347; Sprague, *Annals*, vii, 703.

Christmas, the day (December 25th) which is celebrated throughout nearly the whole of Christendom as the birthday of our Saviour. "It is occupied, therefore, with the event—the incarnation—which forms the centre and turning-point of the history of the world. It is, of all the festivals, the one most thoroughly interwoven with the popular and family life, and stands at the head of the great feasts in the Western Church year. It continues to be, in the entire Catholic world, and in the greater part of Protestant Christendom, the grand jubilee of children, on which innumerable gifts celebrate the infinite love of God in the gift of his only-begotten Son. It kindles in mid-winter a holy fire of love and gratitude, and preaches in the longest night the rising of the Sun of Life and the glory of the Lord. It denotes the advent of the true Golden Age, of the freedom and equality of all the redeemed before God and in God. No one can measure the joy and blessing which from year to year flow forth upon all ages of life from the contemplation of the holy child Jesus in his heavenly innocence and divine humility" (Schaff, *Church History*, iii, § 77).

The observance of Christmas is not of divine appointment, nor is it of N. T. origin. The day of Christ's birth cannot be ascertained from the N. T., or, indeed, from any other source. The fathers of the first three centuries do not speak of any special observance of the nativity. The baptism of Jesus was celebrated in the Eastern Church by A.D. 220, but not in the Western until the fourth century; and the Eastern Church finally adopted the Christmas festival from the Western (about A.D. 380). Some writers (e. g. Cave, *Primitive Christianity*, pt. i, ch. vii, p. 194) trace the observance to the 2d century, about the time of the emperor Commodus. Cave cites, to prove that it was observed before the time of Constantine, the following sad story from Baronius (*An.* 301, p. 41): "While the persecution raged under Diocletian, who then kept his court at Nicomedia, the tyrant, finding multitudes of Christians, young and old, met together to celebrate Christ's nativity, commanded the church door to be shut, and fire put to it, which reduced them and the church to ashes." But it is historically certain that the Christmas festival proper "is of comparatively late institution. This may doubtless be accounted for in the following manner. In the first place, no corresponding festival was presented by the Old Testament, as in the case of Easter and Pentecost. In the second place, the day and month of the birth of Christ are nowhere stated in the Gospel history, and cannot be certainly determined. Again, the Church lingered at first about the death and resurrection of Christ, the completed fact of redemption, and made this the centre of the weekly worship and the Church year. Finally, the earlier feast of Epiphany afforded a substitute. The artistic religious impulses, however, which produced the whole Church year, must sooner or later have called into existence a festival which forms the groundwork of all other annual festivals in honor of Christ" (Schaff, l. c.). To account for the origin of Christmas, therefore, it is not necessary to trace it, as some writers do, to *the feast of dedication* celebrated by the Jews; or, as others do, to the heathen Saturnalia. Jablonski endeavors to show that it originated with the Basilidians in Egypt (*Opuscula*, ii, 372). "The institution may be sufficiently explained by the circumstance that it was the taste of the age to multiply festivals, and that the analogy of other events in our Saviour's history, which had already been marked by a distinct celebration, may naturally have pointed out the propriety of marking his nativity with the same honorable distinction. It was celebrated with all the marks of respect usually bestowed on high festivals, and distinguished also by the custom, derived probably from heathen antiquity, of interchanging presents and making entertainments." At the same time, the heathen winter holidays (Saturnalia, Juvenalia, Brumalia) were undoubtedly transformed, and, so to speak, sanctified by the establishment of the Christmas cycle of holidays; and the heathen customs, so far as they were harmless (e. g. the giving of presents, lighting tapers, etc.), were brought over into Christian use.

The Christmas *Cycle* of festivals gradually grew up around the observance of the day of nativity. It embraced Christmas eve, or Vigils, which were celebrated with especial solemnity, because, though the precise day of Christ's birth could not be ascertained, it is certain that he was born in the night (Luke ii, 8). The four Sundays before Christmas were made preparation days for the festival, and called Advent-Sundays. See ADVENT. Memorial days, etc., for the Martyr Stephen (Dec. 26), St. John (Dec. 27), Massacre of the Innocents (Dec. 28), were established in the fourth century. The festival of Circumcision and New Year (Jan. 1) is of later origin, while Epiphany (Jan. 6) is earlier than Christmas.

In later ages many observances, some pleasant, others absurd, grew up around the Christmas festival. Accounts of old English Christmas usages may be found in Chambers, *Book of Days* (Edinb. 1864, 2 vols. 8vo), and in Brand, *Popular Antiquities* (Lond. 1841, 3 vols. 12mo). Among them are the following. It was customary to light candles of large size, and to lay upon the fire a huge log, called a *Yule clog* or *Christmas block*, a custom not yet extinct in some parts of England. Yule (from *huel*, a wheel) was a sun-feast, commemorative of the turn of the sun and the lengthening of the day, and seems to have been a period of pagan festival in Europe from ancient times. At court, among many public bodies, and in distinguished families, an officer, under various titles, was appointed to preside over the revels. Leland, speaking of the court of Henry VII, A.D. 1489, mentions an *Abbot of Misrule*, who was created for this purpose, who made much sport, and did right well his office (*Collect.* iii, *App.* 256). In Scotland he was termed the *Abbot of Unreason*; but the office was suppressed by act of Parliament, A.D. 1555. Stow (*Survey of London*, p. 79) describes the same officer as *Lord of Misrule*. The Puritans regarded these diversions, which appear to have offended more against good taste than against morality, with a holy horror. Prynne says, in his strong way (in *Histrio-Mastix*), "Our Christmas lords of misrule, together with dancing, masks, mummeries, stage-players, and such other Christmas disorders, now in use with Christians, were derived from these Roman Saturnalia and Bacchanalian festivals, *which should cause all pious Christians eternally to abominate them.*" The dishes most in vogue were formerly, for breakfast and supper on Christmas eve, a boar's head stuck with rosemary, with an apple or an orange in the mouth, plum porridge, and minced pies. Eating the latter was a test of orthodoxy, as the Puritans conceived it to be an abomination; they were originally made long, in imitation of the manger in which our Lord was laid (Selden's *Table-Talk*). The houses and churches were dressed with evergreens, and the former especially with mistletoe—a custom probably as old as the Druidical worship. Whether this festi-

val was always celebrated on December 25th is a subject of dispute. It was not till the sixth century that the whole Christian world concurred in celebrating the nativity on the same day. As to the question of the date of Christ's birth, see NATIVITY.

Christmas day is observed by nearly all churches in the world except the Dissenters of the British Islands, and the American churches that have sprung from them. In the Roman Church three masses are performed: one at midnight, one at daybreak, and one in the morning. Sometimes, however, the three masses are said directly one after the other. Both in the Greek and Roman churches, the manger, the holy family, etc., are sometimes represented at large. In the Church of England, and in the Protestant Episcopal Church, divine service is held always on Christmas day. In the former, the Athanasian Creed is required to be said or sung. If Christmas fall on a Friday, it is not to be a fast. In the Wesleyan Methodist Church in England the day is always observed, and *generally* in the Methodist Episcopal Church in the large cities.—Bingham, *Orig. Eccles.* bk. xx, ch. iv; Coleman, *Christian Antiquities*, ch. xxi, § 4; Dorner, *Person of Christ*, i, 178; Neander, *Life of Chrysostom* (Lond. 1845, 8vo), p. 340 (gives Chrysostom's *Christmas Homily*); Thompson, *Christmas and the Saturnalia* (*Bibliotheca Sacra*, xii, 144); *North British Review*, viii, 202 (Christmas Literature); Siegel, *Christlich-kirchliche Alterthümer*, ii, 189; Cassel, *Weihnachten-Ursprünge, Bräuche, und Aberglauben* (Berl. 1861); Marbach, *Die heilige Weihnachtszeit* (Frankfort, 1865).

Christology, a word of comparatively recent origin in theological science, now used to denote the doctrine of or concerning Christ. Trench (*Study of Words*) finds it in use in one or two cases among the English divines of the 17th century. Owen gave the title Χριστολογία to his treatise on the Person of Christ (Owen's *Works*, Russell's ed. 1826, vol. xi). Fleming's *Christology* (Lond. 1705-8, 3 vols. 8vo), contains (1) general view of Christology; (2) concerning Christ as the Logos; (3) concerning Christ as he is Logos made man. The word has only been common in English theology within the last twenty years; and both the common use of the term and the special treatment of the subject are due to German theologians within the present century.

As to the scope of Christology, and its proper place in systematic theology, some writers include under it all that relates to the history, the person, and the work of Christ. Hase (*Evangel-protest. Dogmatik*) makes Christology the second chief division of Dogmatics, and includes under it not only the person and work of Christ as commonly defined, but also Christ in the Church, the sacraments, etc. Coquerel (*Christologie*, Paris, 1858, 2 vols. 12mo) gives the following definition: "Une Christologie est une étude de la personne ou de la nature de Jésus Christ, de ses rapports avec Dieu et avec l'humanité, ainsi que de son œuvre en ce monde" (p. 1). Christology and Soteriology are closely related to each other. Some writers (e. g. Pelt) include the former under the latter. Kling includes under Christology both the person and the work of Christ; it is impossible, he says, to separate them, because Christ is the Saviour of men in virtue of what he is in his divine human person, and this person is necessary to the accomplishment of the work (Herzog, *Real-Encyklopädie*, ii, 683). The latest tendency appears to be to confine the word Christology more strictly to the doctrine of the person of Christ, leaving his work to be treated separately, though in close and vital connection with his person. (So Hagenbach, *History of Doctrines*; Shedd, *History of Doctrines*; Beck, *Dogmengeschichte*, etc.) In this article we confine ourselves to this narrower use of the term. The work of Christ (ἔργον, John iv, 34; xvii, 4, rendered in the Latin Church *munus*, *officium*) is treated under the heads CHRIST, OFFICES OF; ATONEMENT; INTERCESSION; JUSTIFICATION; REDEMPTION; SAVIOUR.

The doctrine of the person of Christ is the central doctrine of Christianity. Our view of the whole character and issues of his redemption, and consequently our whole system of thought, both theological and ethical, depends upon our view of the person of Christ. The Church has always, with a sure instinct, understood the fundamental importance of this doctrine; but after the settlement of the early disputes by the Council of Chalcedon (see below), the discussion of other topics (e. g. sin, grace, and predestination), especially in the Western Church, became necessary, and Christology was apparently thrown into the background. So, at a later period, the discussions concerning the atoning work of Christ, and of the merits of his death, took precedence of that of his person. But all classes of orthodox theologians, in all communions, have held to the fundamental importance of Christology; and with the subsidence of what may be called minor discussions, Christology has of late assumed new prominence. The Puritan theology, no less than the so-called sacramental theology, holds that Christ is the centre of the Christian system. So Flavel: "The knowledge of Christ is the very marrow and kernel of all the Scriptures, the scope and centre of all divine revelations; both Testaments meet in Christ. The right knowledge of Christ, like a clew, leads you through the whole labyrinth of the Scriptures" (*Fountain of Life opened up*, Serm. 1). Liebner, a modern German divine, expresses the same thought in more scientific form (*Christologie*, Göttingen, 1849): "The question, What do you think of Christ: whose son is he? has become again, in its full force, the cardinal question of theology; theologians become pre-eminently Christologians; the stone which the (theological) builders had rejected has again, in reality, become the corner. And there arises again for our age, with peculiar adaptedness for apologetical purposes, that grand and majestic train of Christological truths, from the centre of which all is seen in true evangelical fulness, and in the proper evangelical order, up to the doctrine concerning the Triune and only true God, and down to every question connected with Christian ethics. And what here comes to light is, to say it in a few words, the system of all systems. The ancient Church has in sanctified and gigantic speculations laid the foundation; the Church of every succeeding period, when alive to her calling, has continued her efforts in the same direction, and its completion will require the efforts of the Church to the end of days. It is the system of the eternal divine thoughts that are laid down in the facts of revelation, and have been actualized most distinctly in Christ, the only-begotten Son, and which are reproduced by the believer, who by a living faith has received these facts within himself. We shall grow in the knowledge of Jesus Christ as *the truth*, in whom all riches of wisdom and knowledge are hid, and shall learn to understand and show more clearly that only those views of God, of creation, of the world, of men, of sin and grace, that have their root in the Christological truths, are tenable and victorious; in short, that Christianity embodies all true philosophy as well as all spiritual life." So, with reference to the theological conflicts of the age, especially in Germany, Dorner remarks: "It is gratifying to see how, in the long conflict between Christianity and reason, the point, on the handling of which the decision of the controversy turns, has become ever more and more distinct to the consciousness. The energies of all parties engaged in this conflict are gathered ever more and more around the person of Christ, as the central point at which the matter must be determined. The advantage of this is obvious as respects the settlement of this great strife; as in other things, so here, with the right statement of the question, the answer is already half found.

It is easy also to see that, in point of fact, all lies in the question whether such a Christ as dwells, if not always in the words, yet ever in the mind of the Church—one in whom the perfect personal union of the divine and human appeared historically—be necessary and actual. For let us suppose that philosophy could incontrovertibly establish and carry to the conviction of all thoughtful men that the person of a Christ in the sense above set forth is a self-contradiction, and therefore an impossibility, there would be no longer any conflict between Christian theology and philosophy, because with the person of Christ would be abolished the Christian theology, as well as the Christian Church altogether. And, conversely, were it brought under the recognition of philosophy that the idea of an historical as well as an ideal Christ is necessary, and were a speculative construction of the person of Christ once reached, it is clear that philosophy and theology, essentially and intrinsically reconciled, would thenceforward have a common work, or, rather, properly speaking, would have become one, and philosophy would consequently not have relinquished her existence, but confirmed it." Care is to be taken, however, not to run into the Romanist error of substituting the incarnation for the death of Christ, and of putting aside the work of the Holy Spirit, which is the special life of the present dispensation of grace. The "sacramental" system tends to this by its theory that Christ is present in "the body" in his Church, instead of in his Holy Spirit. See HOLY SPIRIT.

The Christology of the Old Testament will be treated under the article MESSIAH. See also the article CHRIST. We here discuss, briefly, I. The Christology of the N. T.; II. The Christology of the Church; III. The principal Christological heresies.

I. CHRISTOLOGY OF THE NEW TESTAMENT.—The older divines generally adduce the passages of the N. T. which treat of the person of Christ under the heads of (1) the Divinity of Christ; (2) the Humanity of Christ. The first class of passages adduced generally includes those which assert the pre-existence of Christ; then follow passages which ascribe divine functions and attributes to Christ; and, thirdly, those which give him divine titles (comp. Watson, *Theol. Institutes*, I, ch. xxv-xxxii; Hill, *Divinity*, book iii). The recent discussions as to the origin of the Gospels, and as to the so-called development of doctrine in the N. T., have made it more convenient to state the Christology of the N. T. under the following heads: (1) Christ's own testimony as to his person, with the doctrine taught by his acts, as recorded in the Gospels, (*a*) the Synoptists; (*b*) John; (2) The Christology of the apostles. Pye Smith (*Scripture Testimony to the Messiah*, books iii, iv) makes the two heads following: 1. The Person of Christ, as taught in the Gospels and in our Lord's assertions and intimations; 2. The Person of Christ, as taught by the Apostles.

1. *The Synoptical Gospels, with the Testimony of Christ as to His Person* (see Dorner, *Person of Christ*, vol. i, p. 52 sq.; and Schaff, *Person of Christ the Miracle of History*, p. 115 sq.; both of whom are used in what follows).—(1.) Christ calls himself υἱὸς Θεοῦ, *Son of God*, and this in the highest sense, as implying the divinity of his own person (Matt. xxvi, 63; xvi, 16, 17). "He is not merely *a* son of God (as David, the kings of Israel, or the prophets were so styled); not merely *one* of the sons of God, but *The Son*, the only, the well-beloved (Matt. iii, 17; xvii, 5; xxii, 42-45). David's son is David's Lord. The phrase "Son of God" has three meanings in the synoptical Gospels: (1) What may be called the *physical* meaning (Matt. i, 23; Luke i, 35), because he has this name by nature, and on account of the mode of his birth. Of John it is said, "He shall be filled with the Holy Ghost from his mother's womb" (Luke i, 15), where the existence of the person of John precedes the filling with the Holy Ghost. But of Jesus it is said that, because he comes into being through the power of the Holy Ghost (Luke i, 35), because he is conceived by the power of the Holy Ghost (Matt. i, 20), and so is from a divine essence, he has the name Son of God (Luke i, 35, 32); *God with us* (Matt. i, 23); God has in him redeemed his people (Luke ii, 11), yea, all mankind (Luke ii, 14, 31). And it is not one of the natures that has this name, but the entire person. But what this is by nature and in itself, that must it become through a truly human development. So far as he verifies and morally realizes this natural divine Sonship, we have (2) the *second* meaning of the phrase "Son of God," viz. the *ethical* sonship (Luke ii, 49, 52; iv, 8, 9). That he also, in this sense, perfectly represented the Sonship of God was, for the time preceding this public manifestation, attested by the utterance at his baptism (Matt. iii, 17). Without the physical sonship as a presupposition, the ethical would be impossible, whereby he is the Holy One of God, the sinless man, come to bring, personally in himself, the divine law into actual manifestation (Matt. v, 17); but even on that account, in a perfectly human way, in a progressive manifestation, advancing through conflict (Matt. xix, 16, 17; Mark x, 18; Luke iv, 13; xiii, 49, 50). So (3) without both the physical and the ethical, the *official* sonship would be impossible; which, conversely, is as naturally and necessarily the end of both the others as the ethical is of the physical. This third meaning of the phrase is, indeed, that commonly attributed to it, as a designation of the Messiah, by his contemporaries; but this will not justify us in reducing the Christian idea of the divine Sonship within the meagre limits of the Jewish ideas of the Messiah" (Dorner, vol. i, 52 sq.). See MESSIAH; SON OF GOD. (2.) Christ calls himself also, and most commonly, υἱὸς ἀνθρώπου, *Son of Man* (about eighty times in all the Gospels. See *Englishman's Greek Concordance*, s. v.). The use of this phrase clearly denotes his true and perfect manhood. "But why should Christ use it? Why call himself 'a man?' Is it not because, in the mind of Christ, the sense of human sonship was secondary to that of the divine? But why call himself, not simply man, or the son of *a* man, but 'the Son of Man?' Is it not because he, being divine, could not be simply a man, like others, imperfect, or even sinful? Does not the phrase, as thus used by Christ, indicate, not simply that there lies in him, of necessity, a perfect equality with others in what is essential to humanity, but also that, at the same time, he corresponds to the ideal conception of man?" (Dorner, l. c.). The expression, *the Son of Man*, while it places Christ, "in one view, on common ground with us, as flesh of our flesh and bone of our bone, already indicates, at the same time, that he is more than an ordinary individual; not merely *a* son of man, like all other descendants of Adam, but *the* Son of Man; the Man, in the highest sense; the ideal, the universal, the absolute Man; the second Adam, descended from heaven; the Head of a new and superior order of the race, the King of Israel, the Messiah" (Schaff, l. c.). So also Trench: "He was '*Son of Man*,' as alone realizing all which in the idea of man was contained, as the second Adam, the head and representative of the race—the one true and perfect flower, which ever unfolded itself, of the root and stock of humanity. Claiming this title as his own, he witnessed against opposite poles of error concerning his person—the Ebionite, to which the exclusive use of the title, 'Son of David,' might have led, and the Gnostic, which denied the reality of the human nature that bore it." *Notes on the Parables*, 9th Lond. ed. p. 84. (Matt. ix, 27; xv, 22; xii, 23; xxxi, 9; xxii, 41 sq., etc.)

"The appellation *the Son of Man* does not express, then, as many suppose, the humiliation and condescension of Christ simply, but his elevation rather above the ordinary level, and the actualization, in him and through him, of the ideal standard of human nature under its moral and religious aspect, or in its re-

lation to God. This interpretation is suggested grammatically by the use of the definite article, and historically by the origin of the term in Dan. vii, 13, where it signifies the Messiah, as the head of a universal and eternal kingdom. It commends itself, moreover, at once, as the most natural and significant, in such passages as, 'The Son of Man hath power to forgive sins' (Matt. ix, 6; Mark ii, 10); 'The Son of Man is Lord even of the Sabbath day' (Matt. xii, 8; Mark ii, 28); 'The Son of Man shall come in the glory of his Father;' 'The Son of Man is come to save' (Matt. xviii, 11; comp. Luke xix, 10). Even those passages which are quoted for the opposite view receive, in our interpretation, a greater force and beauty from the sublime contrast which places the voluntary condescension and humility of Christ in the most striking light, as when he says, 'Foxes have holes, and birds of the air have nests, but the Son of Man hath not where to lay his head' (Luke ix, 58); or, 'Whosoever will be chief among you, let him be your servant; even as the Son of Man came not to be ministered unto, but to minister, and to give his life a ransom for many' (Matt. xx, 27, 28). Thus the manhood of Christ, rising far above all ordinary manhood, though freely coming down to its lowest ranks with the view to their elevation and redemption, is already the portal of his Godhead." (Schaff, *Person of Christ*, 113 sq.). Christ also, in many passages, calls himself simply "The Son," who stands to the Father in relations so peculiar that he never calls God "Our Father," as he directs his followers to do, but "My Father," from whom he received witness at the Transfiguration as the only and well-beloved Son. Among the *acts* ascribed to Christ in the synoptical Gospels (leaving out his miracles), one of the most significant is the forgiveness of sins, which he claims as his attribute as the "Son of Man" (Matt. ix, 2, 6; Luke, v, 20, 24); and which the Pharisees considered blasphemous, as well they might, if Christ had been simply man. In instituting the rite of baptism, he puts his own title, "Son," along with that of the Father and of the Holy Ghost. Further, he ascribes to himself a power infinitely beyond the human, and in this respect puts himself on an equality with God (Luke x, 22; Matt. xxviii, 18) (Dorner, l. c.). See SON OF MAN.

2. *John's Gospel.*—Here it is not necessary to dilate as with regard to the Synoptical Gospels, inasmuch as in St. John the Christological doctrine takes a more definite, if not more scientific form, and its teaching is not matter of dispute, at least to the same extent. John's Gospel teaches the pre-existence of Christ. "It ascribes to the Son not merely a moral, but an essential divinity; a not merely economical, but an ontological or metaphysical relation to the Father. It also teaches the true manhood of Christ, and its perfect historical reality; and, finally, that the Son, with the Father and the Holy Ghost, complete the end of creation in the reconciliation of man with God (John i, 1. 2, 14, 18 [comp. xvii, 2]; i, 32, 34, 51; iv, 6; v, 26, 27; vi, 53; viii, 16; x, 15, 33; xii, 34; xiv, 23; xix, 26, 30; xx, 17)" (Dorner, l. c.; Bloomfield, *Five Lectures on the Gospel of St. John* [1823, 12mo]; Sadler, *Emmanuel*, ch. i, § 3 [Lond. 1867, 8vo]).

3. *The Apostles.*—(1) St. *Paul* gives his testimony both as to the divinity and the humanity of Christ, his sonship and his Messianic work, as fully as St. John, especially setting forth the purely Christian idea of the Messiah (Rom. i, 3; v, 6-10; vi, 3-10; ix, 5; viii, 3; 1 Cor. ii, 7; viii, 6; x, 16; xv, 3-8 [comp. Acts xxii, 8-10]; 1 Cor. xv, 47 [1 Cor. iii, 13-18; 2 Cor. v, 16-19]; Gal. iv, 4, 5; Eph. i, 20-23; Phil. ii, 6-10; Col. i, 15-17, etc.; comp. Heb. i, 6, 10-12). The testimony of Paul is well stated by Sadler, *Emmanuel*, ch. i, § 2. See also Dorner, i, 51.

(2) The Epistle of *James* has been called an Ebionitish Gospel, as if its Christology were of a lower type. But James evidently presupposes the *faith*, as the groundwork of the ethical teaching which is the main object of his epistle. He calls Christ "our Lord Jesus Christ, the Lord of Glory" (ii, 1), in which passage the royal function of Christ is expressly set forth, as also in his second coming to judgment (v, 7-9; comp. iv, 12).

(3) "The discourses of *Peter in the Acts*, having for their object the establishment of the faith among unbelievers, all present the Christology as their centre-point, yet rather in the Old Testament form. For instance, the appellation 'Servant of God,' παῖς Θεοῦ, is taken from the prophets, and also the assertion of the anointing with the Holy Ghost. As respects particulars, the fortunes of Christ are, according to Peter, predicted by the prophets (Acts i, 16; ii, 16, 34; iii, 18, 22-26; x, 34; 1 Pet. ii, 7, 22-25; i, 10), as well as the outpouring of the Holy Ghost (Acts ii, 16, 23, 31; i, 16). Christ himself is anointed with the Holy Ghost and with power (x, 38); by God is made both Lord and Christ (ii, 36), as God hath glorified him (iii, 13), appointed him to be Prince and Saviour, the Judge of the living and the dead. Here everything, in accordance with the historical starting-point, proceeds from the humiliation of Christ; but the end at which this representation aims from the first is, that He is the Prince of Life (Acts iii, 15), whom the bonds of death could not hold; who has gone up into heaven (ii, 33; xxiv, 31), and is now Lord of all (x, 38-42)."

In the epistles of Peter it is not only the case, as in the Acts, that the life and death of Christ are spoken of as fulfilling the O. T., but the O. T. dispensation is made to look to and depend on Christianity (1 Pet. i, 10, 11). "In the prophets the πνεῦμα Χριστοῦ was operative; it wrought in them its own preparation, foretelling the grace in Christ, his sufferings, and the glory that should follow. In Christ are we chosen from eternity (1 Pet. i, 2); we are eternally contemplated by the Father as standing in the sanctification of the spirit; as destined for obedience and for purifying, through the blood of Jesus Christ (1 Pet. i, 20). As respects the historical appearance of Christ, there is ascribed to him true manhood (1 Pet. iii, 18; iv, 1). Thus the epistle is as far from Docetism as from Ebionitism.

Jude places Christ along with the Father in the formula of salutation (ver. 2) and in the doxology (ver. 24, 25); the being kept in the true and most holy faith (ver. 20) is a being preserved in Christ Jesus (ver. 1, 8) and in the Holy Ghost (ver. 20). The persons whom Jude opposes are not merely such as have practically swerved from the right way (ver. 8, 15); they are also teachers of error, because they deny the only God and our Lord Jesus Christ (ver. 4).

The *Second Epistle of Peter* has more definitely to do with errorists, especially the "heretics" who "deny the Lord that bought them" (ii, 1). To Christ belong μεγαλειότης (i, 16), δόξα καὶ ἀρετή (i, 3); he is the beloved Son of God, in whom he is well pleased (i, 17); he is our σωτήρ (i, 1, 11, etc.), our Lord (i, 2, 8, etc.), who hath an everlasting kingdom (i, 2), and whose exaltation is not taught in cunningly devised myths, but is attested by the prophets and eye-witnesses (i, 16, 18; iii, 2) (Dorner, i, 72).

On the Christology of the N. T., see, besides the works already cited, Gess, *Lehre von der Person Christi* (Basel, 1856, 8vo); Sadler, *Emmanuel* (Lond. 1867, 8vo, especially ch. 1); Schaff, *Apostolic Church*, § 148; Goodwin, *Christ the Mediator* (Plymouth, 1819, 8vo); Hooker, *Eccles. Polity*, bk. v, 51; Waterland's *Works* (12 vols.), vol. iv; Pye Smith, *First Lines of Theology*, bk. ii, chap. iv; Gurney, *Biblical Notes to Confirm the Deity of Christ* (Lond. 1830, 8vo), and the writers generally on the Trinity, on the Divinity of Christ, and the Life of Christ. Prof. Beyschlag, of Halle, in his *Christologie des N. T.* (Berlin, 1866, 8vo), attempts to show that the N. T. represents Christ as divine, but not as pre-existent, or equal with the Father.

II. CHRISTOLOGY OF THE CHURCH. The doc-

trine of the person and work of Christ formed the main topic of theological speculation and controversy in the early Church, and is again the most prominent religious problem of modern times. The peculiarity of his Person consists in the perfect union of the divine and human which constitutes him the Mediator between God and man, and the Saviour of the fallen race. This has always been the faith of the Christian Church, but in every age it has had to encounter a new enemy, or the old enemy in ever-varying phases, and to achieve new triumphs in the refutation of error and the vindication of truth. The orthodox Christology is derived from the New Testament, especially from St. Paul and St. John (see above), and has gradually been unfolded in sharp conflict with a large number of Christological heresies, each serving to elicit a clearer view of some particular aspect either of the divinity or of the humanity of Christ, or of the union of the two natures. "The person of Jesus Christ in the fulness of its theanthropic life cannot be exhaustively set forth by any formulas of human logic. Even the imperfect, finite personality of man has a mysterious background that escapes the speculative comprehension; how much more, then, the perfect personality of Christ, in which the tremendous antithesis of Creator and creature, infinite and finite, immutable, eternal Being and changing temporal becoming, are harmoniously conjoined! The formulas of orthodoxy can neither beget the faith nor nourish it; they are not the bread and the water of life, but a standard for theological investigation and a rule of public teaching" (Schaff).

The Orthodox Christology is essentially the same in the Greek, Latin, and evangelical Protestant churches. It forms (like the doctrine of the Trinity, so closely connected with it) one of the fundamental bonds of union between the great divisions of Christendom. Yet there have been some new features brought out since the Reformation. We subdivide it into œcumenical, scholastic, and evangelical.

1. The Œcumenical or Catholic Christology was prepared in the ante-Nicene age (see Bull's *Defensio fidei Nicænæ*), and fully matured in the Nicene and post-Nicene age. The doctrine of the person of Christ, in inseparable connection with the doctrine of the Holy Trinity, was the chief problem of theological speculation from the third to the middle of the fifth century, and was settled by the four great œcumenical councils of Nicæa (325), Constantinople (381), Ephesus (431), and Chalcedon (451). The first two were mainly concerned with the assertion of the strict divinity of Christ against its partial denial by Arianism and Semi-Arianism. The last two set forth the relation of the divine and the human nature of the one person against the opposite extremes of Nestorianism and Eutychianism. The decree of the Council of Ephesus was more negative, a condemnation of Nestorius. But the Council of Chalcedon gave a clear and full statement of the positive doctrine of Christ's person, and summed up the final result of those deep, earnest, and violent Trinitarian and Christological controversies which had agitated the Church so long.

The Christological symbol of the Chalcedonian or fourth œcumenical Synod of 451 ranks next in authority to the Apostles' and Nicene Creeds, and has not been superseded to this day. "It does not aspire to comprehend the Christological mystery, but contents itself with setting forth the facts and establishing the boundaries of orthodox doctrine. It does not mean to preclude further theological discussion, but to guard against such erroneous conceptions as would mutilate either the divine or the human in Christ, or would place the two in a false relation. It is a lighthouse to point out to the ship of Christological speculation the channel between Scylla and Charybdis, and to save it from stranding upon the reefs of Nestorian Dyophysitism, or of Eutychian Monophysitism. As the Nicene doctrine of the Trinity stands midway between Tritheism and Sabellianism, so the Chalcedonian formula strikes the true mean between Nestorianism and Eutychianism. But it contents itself with setting forth, in clear outlines, the final *result* of the theanthropic process of incarnation, leaving the study of the *process* itself to scientific theology" (Schaff).

The Chalcedonian symbol is as follows:

"Following the holy fathers, we unanimously teach one and the same Son, our Lord Jesus Christ, complete as to his Godhead and complete as to his manhood, truly God and truly man, of a reasonable soul and human flesh subsisting: consubstantial with the Father as to his Godhead, and consubstantial also with us as to his manhood; like unto us in all things, yet without sin; as to his Godhead begotten of the Father before all worlds, but as to his manhood, in these last days born, for us men and for our salvation, of the Virgin Mary, the mother of God; one and the same Christ; Son, Lord, Only-begotten, known *in (of) two natures* [ἐν δύο φύσεσιν, *in duabus naturis*, or, with the present Greek text, ἐκ δύο φύσεων, *of* two natures, which signifies essentially the same thing], *without confusion* (ἀσυγχύτως), *without conversion* (ἀτρέπτως), *without severance* (ἀδιαιρέτως), *and without division* (ἀχωρίστως); the distinction of the natures being in no wise abolished by their union, but the peculiarity of each nature being maintained, and both concurring in one person and hypostasis. We confess not a Son divided and sundered into two persons, but one and the same Son, and Only-begotten, and God-Logos, our Lord Jesus Christ, even as the prophets had before proclaimed concerning him, and he himself hath taught us, and the symbol of the fathers hath handed down to us." See Chalcedon.

The same doctrine is set forth in a more condensed form in the second part of the so-called Athanasian Creed, which originated probably in the school of Augustine during the fifth century, and is the third of the œcumenical symbols:

"Furthermore, it is necessary to everlasting salvation that we believe also rightly in the incarnation of our Lord Jesus Christ. Now the right faith is, that we believe and confess that our Lord Jesus Christ, the Son of God, is God and man; God, of the substance of the Father, begotten before the worlds; and man, of the substance of his mother, born in the world. Perfect God; perfect man, of a reasonable soul and human flesh subsisting. Equal to the Father as touching his Godhead; inferior to the Father as touching his manhood. And although he is God and man, yet he is not two, but one Christ. One, not by conversion of the Godhead into flesh, but by assumption of the manhood into God. One altogether, not by confusion of substance, but by unity of person. For as the reasonable soul and flesh is one man, so God and man is one Christ, who suffered for our salvation," etc.

(For an analysis and criticism of this œcumenical or Catholic Christology, see Shedd's *History of Christian Doctrine*, i, 399 sq.; Schaff's *Church History*, iii, 747-762, and the respective sections of the works of Baur, Dorner, and others quoted below.)

2. The Scholastic Christology of the Middle Ages is represented mainly by Anselm (the author of *Cur Deus homo*, with his epoch-making theory of the *atonement*; see Anselm), Peter the Lombard, and Thomas Aquinas. It confined itself, as regards the person of Christ, to a dialectical analysis and defense of the old Catholic dogma, with some unfruitful speculations on minor points, especially on the abstract question whether Christ would have become incarnate if the Fall had not taken place. Thomas Aquinas decided for the former, as the safer formula (*si homo non peccasset, Deus incarnatus non fuisset*); Ruprecht of Deutz, Duns Scotus, and Alexander Hales for the other view. This question has recently been taken up again and ably discussed by J. Müller against, Dorner and Liebner for, the doctrine of Incarnation without a Fall. See *Brit. and For. Evang. Review*, Jan. 1861, art. iv.

3. The Protestant or Evangelical Christology. The churches of the Reformation, both Lutheran and Reformed or Calvinistic, adopted in their confessions of faith, either in form or in substance, the three œcumenical Creeds (the Apostles', the Nicene, and the Athanasian), and with them the ancient Catholic doctrine of the Trinity and Christ's divine-human character and work, which doctrine is, in fact, the sum and substance of those symbols. We quote from the principal Protestant confessions:

The *Augsburg Confession* of the Lutheran Church, Art. III. De Filio Dei:

"Item docent, quod Verbum, hoc est, Filius Dei, assumpserit humanam naturam in utero beatæ Mariæ virginis, ut sint duæ naturæ, divina et humana, in unitate personæ inseparabiliter conjunctæ, unus Christus, vere Deus, et vere homo, natus ex Virgine Maria, vere p ssus, crucifixus, mortuus et sepultus, ut reconciliaret nobis Patrem, et hostia esset non tantum pro culpa originis, sed etiam pro omnibus actualibus hominum peccatis."

The *Thirty-nine Articles* of the Church of England, Art. II. Of the Word or Son of God, which was made very man:

"The Son, which is the Word of the Father, begotten from everlasting of the Father, the very and eternal God, and of one substance with the Father, took man's nature in the womb of the blessed Virgin, of her substance: so that two whole and perfect natures, that is to say, the Godhead and manhood, were joined together in one Person, never to be divided, whereof is one Christ, very God and very man; who truly suffered, was crucified, dead, and buried, to reconcile his Father to us, and to be a sacrifice not only for original guilt, but also for actual sins of men."

The *Westminster Confession*, which gives the clearest and strongest expression to the faith of the strictly Reformed or Calvinistic churches, thus states the doctrine of Christ's person in ch. viii, § 2:

"The Son of God, the second person in the Trinity, being very and eternal God, of one substance and equal with the Father, did, when the fulness of time was come, take upon him man's nature, with all the essential properties and common infirmities thereof, yet without sin, being conceived by the Holy Ghost in the womb of the Virgin Mary, of her substance: so that two whole, perfect, and distinct natures, the Godhead and the manhood, were inseparably joined together in one person, without conversion, composition, or confusion. Which person is very God and very man, yet one Christ, the only Mediator between God and man."

The 2d Article of the Methodist Episcopal Church is the same as that of the Church of England, except that the words "begotten from everlasting of the Father," and "of her substance," are omitted (probably by typographical error).

On this general basis of the Chalcedonian Christology, and following the indications of the Scriptures as the only rule of faith, the Lutheran and Reformed churches have built some additional views or developed new aspects of Christ's person. Protestantism cannot consistently adopt any doctrinal or disciplinary decisions of the Church as strictly infallible and as an absolute *finale*, but simply with the reservation of the right of further research, and with the understanding of a constant progress in theology—not, indeed, of a progress beyond Christ and the Bible, but in the ever-deepening apprehension and subjective appropriation of Christ and his infallible word. There is a characteristic difference between the Christology of the Lutheran and that of the Reformed Confessions which affects the whole system. Upon the whole, we may say that the former has a leaning towards the Eutychian confusion of the divine and human nature, the latter to the Nestorian separation; yet both distinctly disown the Eutychian and Nestorian heresies. (On the difference between the Lutheran and Reformed Christology, compare especially the very able and acute treatise of Schneckenburger, *Die orthodoxe Lehre vom doppelten Stande Christi nach lutherischer und reformirter Fassung* [Pforzheim, 2d ed. 1861]; also his *Vergleichende Darstellung d. lutherischen u. reformirten Lehrbegriffs*, edited by Güder [Stuttgart, 1855].) The progress made in Christology since the Reformation within the limits of the Chalcedonian orthodoxy, or, at all events, not in conflict with it, relates to the communion of the two natures, and to the states and the offices of Christ.

(*a*) The doctrine of the *communicatio idiomatum*, the communication of attributes or properties of one nature to the other or to the whole person. The beginning of it may be found in Cyril of Alexandria and John of Damascus; but it has been much more fully *developed* by the Lutheran Church in the interest of her peculiar tenet of the ubiquity of Christ's body, in order to support Luther's eucharistic theory of consubstantiation so called. It was embodied in the *Formula Concordiæ*, but has never been adopted in the Reformed or Calvinistic churches. The Lutheran divines distinguish three kinds of the *communicatio idiomatum*, which is derived from the *communio naturarum*: (1) *genus idiomaticum* (or ἰδιοποιητικόν), whereby the properties of one nature are transferred and applied to the whole person (Rom. i, 3; 1 Pet. iii, 18; iv, 1); (2) *genus apotelesmaticum* (κοινοποιητικόν), whereby the ἀποτελέσματα, i. e. the redemptory functions and actions which belong to the whole person are predicated only of one or the other nature (1 Tim. ii, 5 sq.; Heb. i, 2 sq.); (3) *genus auchematicum* (αὐχηματικον) or *majestaticum*, whereby the human nature is clothed and magnified by the attributes of the divine nature (John iii, 13; v, 27; Matt. xxviii, 18, 20; Rom. ix, 5; Phil. ii, 10). Under this head the Lutheran Church claims a certain ubiquity or omnipresence for the body of Christ, on the ground of its personal union with the divine nature; yet she makes this ubiquity dependent on the will of Christ, who can be present with his whole person wherever he pleases to be or has promised to be. But for this very reason the Reformed divines reject the whole doctrine of the *communicatio idiomatum*, and pronounce the *propositiones idiomaticæ* to be mere figures of speech (ἀλλοίωσις, a rhetorical exchange of one part for another). See COMMUNICATIO IDIOMATUM.

(*b*) The doctrine of a twofold *state* of Christ—the state of *humiliation* and the state of *exaltation*. This is based upon Phil. ii, 5-9, and is no doubt substantially true. The *status exinanitionis* (*humiliationis*) embraces the supernatural conception, birth, circumcision, education, earthly life, passion, death, and burial of Christ; the *status exaltationis* includes the resurrection, ascension, and the sitting at the right hand of God. As to the descent into hell, or Hades rather, the Lutheran and the Reformed churches differ according to their different conceptions of this difficult article in the Apostles' Creed. The Lutheran Confessions, regarding it as a triumph over hell, make the *descensus ad inferos* the first stage of the *status exaltationis*, while the Reformed Confessions view it as the last stage of the *status exinanitionis*. It is properly the turning-point from the one state to the other, and thus belongs to both. The Lutheran Creed, moreover, refers the two states only to the human nature of Christ, regarding the divine as not susceptible of any humiliation or exaltation. The Reformed symbols refer them to both natures, so that Christ's human nature was in a state of humiliation as compared with its future exaltation, and his divine nature was in the state of humiliation as to its external manifestation (*ratione occultationis*). With them the incarnation itself is the beginning of the state of humiliation, while the Lutheran symbols exclude the incarnation from the humiliation. Between the Lutheran divines of Tübingen and Giessen there was a controversy in the 17th century about the question whether Christ in the state of humiliation entirely abstained from the use of his divine attributes (κένωσις), or whether he used them secretly (κρύψις). The divines of Giessen defended the former, those of Tübingen the latter view. Both schools were agreed as to the possession (κτῆσις), and differed only as to the use (χρῆσις), of the divine attributes. This controversy has been renewed, in a modified form, among recent German divines. See KENOSIS.

(*c*) The threefold *office* of Christ. (1) The *prophetical* office (*munus*, or *officium propheticum*) includes teaching and the miracles of Christ. (2) The *priestly* office (*munus sacerdotale*) consists in the satisfaction made for the sins of the world by the death on the cross, and in the continued intercession of the exalted Saviour for his people (*redemptio et intercessio sacerdotalis*). (3) The *kingly* office (*munus regium*), whereby Christ founded his kingdom, defends his Church against all enemies, and rules all things in heaven and on earth. The old divines distinguish between the reign of nature (*regnum naturæ* sive *potentiæ*), which

embraces all things; the reign of grace (*regnum gratiæ*), which relates to the church militant on earth; and the reign of glory (*regnum gloriæ*), which belongs to the church triumphant in heaven.

4. *Modern* Christological speculations. Upon the whole, the orthodox doctrine has laid the main stress upon the divine element in Christ, and left the human element more or less out of sight, without ever denying it. Rationalism, on the contrary, developed the human element to the exclusion and denial of the divine. When evangelical theology revived after the reign of Rationalism in Germany, it endeavored to do justice to both elements, and so to reconstruct the old Christology as to set forth the sinless, yet truly human character of Christ from his infancy to full maturity, without prejudice to his deity. Schleiermacher opened a new era of Christological speculation, but, forsaking the Chalcedonian basis of two natures in one person, he discarded the proper idea of the incarnation as the union of the eternal personal Logos with human nature, and, after all, presented Christ merely as a perfect model man without sin, in whom God dwelt in a peculiar manner, as he did in no other man before or since. This indwelling of God is with him only a principle, a power of life, and not the second person of the Holy Trinity. Schleiermacher's view of the Trinity is essentially Sabellian. From him and from Hegel's philosophy proceeded two opposite currents of Christological speculation—a humanitarian, negative and infidel, culminating in Strauss and Renan (see below, under the second division, No. 15), and an evangelical, positive and in the main orthodox, which labors to reconcile the old faith of the Church in the God-Man with the demands and forms of modern thought. The principal evangelical writers on the Christological problem, under its latest phases, are Dorner, Lange, Goeschel, Liebner, Martensen, Thomasius, Gess, Kahnis, Ebrard. Some of these, especially Thomasius, Gess, and Godet (Commentary on John), have strained the Pauline idea of the *kenosis*, the self-limitation, self-renunciation of the Logos, far beyond former conceptions, even to a partial or entire self-emptying of the divine essence and suspension of the inner Trinitarian process during the earthly life of Christ, while others restrict the *kenosis* to the laying aside of the divine form of existence or divine dignity and glory. Dorner opposes these modern Kenotics or Kenosists (*Kenotiker*) as a new sect of Theopaschites and Patripassians, and he assumes a gradual ethical and vital unification of the pre-existent Logos and the human nature, by a condescension of the former and an elevation of the latter. This view leaves room for the growth of the Messianic consciousness, but makes the incarnation itself a process of growth which was not completed till the resurrection, or at least till the baptism of Christ.

These modern inquiries, however, earnest, profound, and valuable as they are, have not yet led to definite and generally-accepted results. English and American theology have not been affected by them to any considerable extent; Dr. Shedd, in his able though incomplete *History of Christian Doctrine*, even ignores them altogether, and pronounces the Chalcedonian symbols the *ne plus ultra* of Christological knowledge, "beyond which it is probable the human mind is unable to go in the endeavor to unfold the mystery of Christ's complete person" (i, 403). But there certainly have been very important advances made within the last thirty years in the critical history of the life of Christ, and in the manifold exhibition of his perfect humanity, which itself is an overwhelming proof of his divinity. (For a review of the recent Christological speculations, see Dorner, in his large work on the history of Christology, ii, 1260 sq., Engl. trans., div. 2d, iii, 100 sq., and in several dissertations upon the immutability of God in the *Jahrbücher für Deutsche Theologie*, 1856 and 1858; also Woldemar Schmidt, *Das Dogma vom Gottmenschen, mit Beziehung auf die neuesten Lösungsversuche der Gegensätze* [Leipzig, 1865].)

III. CHRISTOLOGICAL HERESIES. The numerous Christological errors may be divided into three classes, according as they relate either to the divine or to the human nature of Christ, or to the union of the two. Ebionism, Socinianism, and Rationalism, in its various shapes, deny, either in whole or in part, the divinity of Christ; Gnosticism, Manichæism, Apollinarianism, deny, more or less, his real humanity; while Nestorianism, Eutychianism, Monophysitism, and Monotheletism admit the Godhead and manhood of Christ, but place them in a false relation to each other. We present them here in chronological order.

1. EBIONISM (see that article), the earliest Christian heresy, was essentially Jewish, and looked upon Christianity merely as a perfected Judaism, upon the Gospel as a new law, and upon Christ as a second Moses. Origen derived the name of the sect from the poverty of their doctrine of Christ (אֶבְיוֹן, *poor*); but they regarded themselves as the genuine followers of the poor Christ. They held that Jesus was, indeed, the promised Messiah, the Son of David, and the supreme lawgiver of the Church; yet a mere man, the son of Joseph and Mary, and that his death had no atoning efficacy. With this were closely connected other heresies. The *pseudo-Clementine Homilies* (see CLEMENTINES) differ from the ordinary Ebionism by peculiar speculative and semi-Gnostic ideas, and teach that Christ was the last and highest representative of the primitive religion which appeared in the seven pillars of the world, Adam, Enoch, Noah, Abraham, Isaac, Jacob, Moses, and Christ. These are, in reality, only different incarnations of the same Adam, or primitive man, the true prophet of God. Christianity and Mosaism are identical, and both coincide with the religion of Adam. Whether a man believe in Moses or Christ is all the same, provided he blaspheme neither. Christianity is an advance only in extending this primitive religion to the Gentiles (comp. Schliemann, *Die Clementinen und der Ebionitismus*, 1844, p. 362-552).

2. GNOSTICISM, which flourished in the second century (see article), varied in its Christology according to its numerous schools of Cerinthus, Basilides, Valentine, Marcion, etc., and generally dealt more in vague notions and speculative fancies than in solid, clearly-defined doctrines and arguments. But its Christology was a radical denial of the mystery of the incarnation, and therefore anti-Christian, according to the criterion of John (1 John iv, 3), although from a view the very opposite of Ebionism. While the latter denied the divinity of Christ, Gnosticism was *docetistic* (hence *Docetism*), i. e. it denied the realness of Christ's human nature, and resolved it into an empty show and deceptive appearance (δόκησις, φάντασμα), or a transient vision, after the manner of the Indian Mythology. The real Christ, or Saviour, is one of the æons or divine powers, which either assumed this spectral form of humanity, or united himself temporarily, at the baptism in Jordan, with the man Jesus of Nazareth, to forsake him again at the passion. But he entered into no real contact with a human body which, as a part of matter (ὕλη), was regarded as essentially evil and antagonistic to God; he was not actually born, he did not suffer and die, nor rise again. He appeared like a meteor from the sky, to disappear again. Reduced to a modern philosophical conception, the Gnostic Christ is, in the end, nothing more than the ideal spirit of man himself, the Christ of Strauss and modern pantheism. Valentinus, the most ingenious among the Gnostics, distinguished the ἄνω Χριστός, or heavenly Christ; the σωτήρ, or Jesus; and the κάτω Χριστός, the Jewish Messiah, who passed through the body of Mary as water through a pipe, and was crucified by the Jews, although, having no material body, he did not actually suffer. With him Soter, the proper re-

deemer, united himself at the baptism in Jordan, to announce his divine gnosis on earth, and lead spiritual persons to perfection.

3. The MANICHÆAN system, which we know best from the writings of St. Augustine (who himself belonged to the sect for nine years, and was thereby better able to refute it), was essentially Gnostic and Docetistic, and by its perverted view of body and matter as essentially evil, wholly excluded the idea of an incarnation of God. The Manichæans held that the apostles corrupted and falsified the real teachings of Christ, but that Mani, the promised Paraclete, has restored them. Traces of the Manichæan heresy run through a number of sects of the Middle Ages.

4. Ante-Nicene UNITARIANISM, or MONARCHIANISM.—The Antitrinitarians of the third century must be divided into two distinct classes: (*a*) The *rationalistic* or *dynamic* Monarchians denied the divinity of Christ, or explained it as a mere power (δύναμις), although they generally admitted his supernatural generation by the Holy Spirit. To these belong the ALOGIANS, THEODOTUS and the THEODOTIANS, ARTEMON and the ARTEMONITES, and PAUL OF SAMOSATA. (See the several articles.) (*b*) The *Patripassians* (so called first by Tertullian) held, in connection with their idea of the divine unity or monarchy, the doctrine of the divinity of Christ, but they sacrificed his independent personality to the divinity, and merged it into the essence of the Father, so that the Father was asserted to have suffered and died on the cross, which is absurd. This school was represented by PRAXEAS, NOËTUS, CALLISTUS (Pope Callixtus I), BERYLLUS of Bostra, and, in connection with a very original and ingenious doctrine of the Trinity, by SABELLIUS, all of the third century. (See the separate articles on these heretics, and the relevant sections of the Doctrine histories of Münscher, Hagenbach, Neander, Baur, Beck, etc.)

5. ARIANISM, so called after Arius, presbyter of Alexandria († 336), shook the Church to its very base during the greater part of the fourth century, and called forth the first two œcumenical councils, viz. Nicæa, 325, and Constantinople, 381. Its doctrine was, that Christ is a middle being between God and man, a sort of demi-god, who pre-existed before this world, and who created this world, yet was himself created out of nothing, the first creature of God, and consequently of a different essence (ἑτερο-ούσιος), and not eternal (κτίσμα ἐξ οὐκ ὄντων, ἦν ποτε ὅτε οὐκ ἦν). Against this view the Nicene Creed asserts that Christ is "God of God, Light of Light, very God of very God, begotten, not made, being of one substance (ὁμο-ούσιος) with the Father." (On the history of ancient and modern Arianism and its literature, comp. the articles ARIANISM in vol. i, p. 388–393; ATHANASIUS, i, 505–508; also Schaff's *History of the Christian Church*, iii, 616–670.)

6. SEMI-ARIANISM is an inconsistent middle doctrine between the Arian heresy and the Athanasian or Nicene orthodoxy. It asserts the similarity of Christ to the Father (ὁμοι-ουσία—a very elastic term), in opposition to the Nicene co-equality (ὁμο-ουσία) and the Arian difference of substance (ἑτερο-ουσία). It was a strong political church party, under the emperor Constantius († 361), and was led by Eusebius, bishop of Nicomedia, but it disappeared before the second œcumenical council in 381, which marked the final downfall of Arianism within the limits of the Roman empire, while it continued to linger, without vitality, among the barbarians till the seventh century.

7. APOLLINARIANISM is a partial denial of the humanity, as Arianism of the divinity of Christ. Apollinaris the younger, bishop of Laodicea (died about 390), otherwise orthodox, and highly esteemed for his learning and piety, ascribed to Christ a human body (σῶμα) and a human (animal) soul (ψυχὴ ἄλογος), but not a human spirit or reason (ψυχὴ λογική, anima rationalis, νοῦς, πνεῦμα); putting the divine Logos in the place of the human reason. He wished to secure a true incarnation and vital unity of the eternal Word with the human nature, but at the expense of the most important constituent in man, and thus he reached, instead of the idea of the God-man, θεάνθρωπος, only the idea of a θεὸς σαρκοφόρος (the very opposite of the Nestorian ἄνθρωπος θεοφόρος). This heresy was condemned by a council at Alexandria in 362. (For particulars, see art. APOLLINARIS, vol. i, p. 296, 297; and Schaff, *Church History*, vol. iii, p. 708–714.)

8. NESTORIANISM, from Nestorius, patriarch of Constantinople, who died in exile about A.D. 440, had its roots in the Antiochian school of theology, of which Nestorius was a pupil, and agitated the Church with great violence from 428–451. Nestorius believed that Christ was fully God and fully man, but he put the two natures only into an external mechanical relation to each other (συνάφεια, affinity, intercourse, attachment, as distinct from ἕνωσις, true interior union). He pressed the distinction of the two natures at the expense of the unity of the person. Hence he took great offence at the term *Mother of God* (θεοτόκος, *Deipara, Mater Dei*), which then began to be applied to the Virgin Mary, and has since passed into the devotional and theological vocabulary of the Greek and Latin Church. He denounced the term as heathenish, absurd, and blasphemous, since the eternal Godhead could not be born in any sense whatever. This gave rise to the Nestorian controversy, in which the violent Cyril of Alexandria took the most prominent part, as the champion of the honor of the Holy Virgin and the doctrine of a real incarnation, although with a decided leaning to the opposite extreme of Monophysitism. See art. CYRIL OF ALEXANDRIA. Nestorius was condemned by the third œcumenical council, held at Ephesus in 431, and deposed from the sacerdotal office; but his name and doctrine are perpetuated to this day in the sect of the Nestorians. (See the articles NESTORIUS and NESTORIANS, and the literature below.)

9. EUTYCHIANISM, so called from Eutyches (q. v.), an aged presbyter and archimandrite of Constantinople (died soon after 451), is the exact counterpart of Nestorianism, and presents the consistent development of the Alexandrian school of theology as opposed to the Antiochian. Eutyches likewise held Christ to be the God-man as well as Nestorius, but he pressed the unity of person to the exclusion of the distinction of the two natures. He denied that two natures could be spoken of *after* the incarnation. The human nature was absorbed in the divine by that act, or deified by the personal Logos, so that even his body was unlike ours, of a heavenly character and substance (a σῶμα ἀνθρώπου, but not a σῶμα ἀνθρώπινον). Hence it was proper to say, God is born, God suffered, God was crucified and died. The strongest opponent of this view was Theodoret, the well-known Church historian, a friend of Nestorius. At first Eutychianism triumphed at the Robber Synod, so called, which was held at Ephesus A.D. 449, under the lead of the violent patriarch Dioscurus of Alexandria, who inherited all the bad and none of the good qualities of his predecessor Cyril. But the fourth œcumenical council, held at Chalcedon (near Constantinople) A.D. 451, reversed this decision, condemned the Eutychian doctrine as heresy, and set forth in clear and precise terms the orthodox doctrine of the person of Christ, maintaining with equal decision the distinction of natures against Eutyches, and the unity of person against Nestorius. (See sub. I, 1. above.) In this triumph of the orthodox faith, Leo I, bishop of Rome, had an important share, and his dogmatic letter to Flavian of Constantinople was made the basis of the synodical decision.

10. MONOPHYSITISM is only a modification and continuation of Eutychianism. As the term indicates, the Monophysites, although they rejected the Eutychian notion of an absorption of the human nature into the

divine, nevertheless held firmly to the doctrine of but *one* nature in Christ. They conceded, indeed, a composite nature (μία φύσις σύνθετος or μία φύσις διττή), but not two natures. They assumed a diversity of qualities without corresponding substances, and made the humanity of Christ a mere accident of the immutable divine substance. Their liturgical shibboleth was, *God has been crucified*, which they introduced into the trisagion (ἅγιος ὁ θεός, ἅγιος ἰσχυρός, ἅγιος ἀθάνατος, ὁ σταυρωθεὶς δι' ἡμᾶς, ἐλέησον ἡμᾶς—an extension of the seraphic ascription, Isa. vi, 3). Hence they were also called THEOPASCHITES (θεοπασχῖται). The Monophysite controversies commenced soon after the Council of Chalcedon, which failed to pacify the Church, and convulsed the East, from patriarchs and emperors down to monks and peasants, for more than a hundred years. The detailed history will be presented in a special article. The fifth œcumenical council, held at Constantinople A.D. 553, which was to end these violent strifes, resulted in the condemnation of the Antiochian (Nestorian and semi-Nestorian) theology, and a *partial* victory of the Alexandrian Monophysitism, as far as it could be reconciled with the symbol of Chalcedon. Notwithstanding this concession, the Monophysites, like their antipodes, the Nestorians, continued as separate sects in hostile opposition to the orthodox Greek Church. They are divided into separate branches, the *Jacobites* in Syria, the *Copts* in Egypt, the *Abyssinians*, the *Armenians*, and the *Maronites*. (See the respective articles.)

11. The MONOTHELITE controversy is a continuation of the Nestorian and Eutychian controversies, and relates to the question whether Christ had but one will (θέλημα) or two, a divine and a human. Nestorianism, of course, required two wills as a complement of two natures, while the Monophysites taught but one will. The emperor Heraclius proposed a compromise formula—one divine human energy (μία θεανδρικὴ ἐνέργεια), but it was opposed in the West. The sixth œcumenical council in Constantinople, A.D. 680, settled the dispute by teaching the doctrine of two wills harmoniously co-operating, the human will following the divine (δύο φυσικὰ θελήματα, οὐχ ὑπεναντία, ἀλλ' ἑπόμενον τὸ ἀνθρώπινον αὐτοῦ θέλημα καὶ ὑποτασσόμενον). Thus Monotheletism was condemned, but was adhered to by the Maronites on Mount Lebanon till the time of the Crusades. The Monophysites (q. v.) are all Monothelites (q. v.).

12. The ADOPTIAN controversy arose in Spain toward the close of the eighth century, and turned upon the question whether Christ, according to his human nature, was the Son of God by nature (*naturaliter*), or only by adoption (*nuncupative*). The latter doctrine was condemned as heretical in a synod at Frankfort on the Maine, 794. (See article ADOPTIANISTS, vol. i, 76, and ELIPANDUS of Toledo and FELIX of Urgel.)

13. SOCINIANISM, a system of ultra and pseudo Protestantism, founded by Lälius Socinus (died 1562) and his nephew Faustus Socinus (died 1604), returned almost to the poor and meagre Christology of the Ebionites and Nazarenes, and added to it the heathenish notion of an apotheosis of Christ after his death. It teaches that Jesus of Nazareth, though supernaturally conceived, was a mere man, but favored by God with extraordinary revelations, elevated to heaven, deified in reward of his holy life, and intrusted with the government of the Church which he founded. It substitutes for an incarnate divinity a created and delegated divinity. Invocation of Christ is allowed, but not enjoined; it is an adiaphoron. See SOCINIANS; SOCINUS.

14. Modern UNITARIANISM in England and America has no uniform and settled belief concerning the person of Christ, and branches out into two very different tendencies, the conservative, represented by Channing, which in its approach towards orthodoxy rises to a sort of high Arianism, and the radical, represented by the erratic Theodore Parker, which sinks almost to the mythical Christ of Strauss, and sacrifices his sinless perfection, although Parker has some eloquent passages on the superiority of Christ over all other sages. The more serious class of Unitarians make great account of the perfect example of Christ, and Channing's sermon on the "Character of Christ" (*Works*, vol. iv, p. 1-29), is one of the noblest tributes to the moral perfection of Jesus of Nazareth. See UNITARIANISM.

15. RATIONALISM has assumed different phases, and resorted to various theories concerning the person of Christ, which agree only in the denial of his divinity, and of all the supernatural or miraculous events in his history. The Wolfenbüttel Fragmentist (Reimarus) represents the hypothesis of wilful imposture; Paulus of Heidelberg the hypothesis of innocent delusion, which mistook extraordinary medical cures for supernatural miracles, and an extraordinary man for a divine being; Strauss and Renan, the theory of poetical fiction, the one in its mythical, the other in its legendary form. (Comp. on these different Christological hypotheses, Schaff, *The Person of Christ; the Miracle of History, with a Reply to Strauss and Renan, and a Collection of Testimonies of Unbelievers*, 1865.) But all these rationalistic attempts, instead of explaining the mystery of Christ's life, only substitute an unnatural prodigy for a supernatural miracle. They have been tried and found wanting; one has in turn superseded the other, even during the lifetime of their champions. Paulus rejects the hypothesis of Reimarus; Strauss most acutely refutes Paulus; Renan, in part at least, dissents from Strauss; the unprincipled Schenkel makes a half-way approach to both in his insignificant *Characterbild Jesu*, and is in turn treated with contemptuous scorn and the keenest sarcasm by Strauss. (See *Die Halben und die Ganzen*, 1865.) The old and ever young faith in the divine-human Redeemer has outlived all these attacks, and is now stronger than ever, the only refuge and comfort of a sinful world. It is in conflict with these latest forms of unbelief that the evangelical theology of Germany has achieved its greatest triumphs and most lasting merits. France, England, and America have engaged in the battle, and contributed their share towards the defeat of the modern anti-Christ, and the defence of the true Christ of the Gospels and of the Church, on whom the salvation of the world depends.

Literature.—Besides the works on special topics already quoted, we mention on the general subject Dionysius Petavius (Jesuit, died 1652), *De theologicis dogmatibus* (Paris, 1644-50, and other editions), tom. iv and v, *de incarnatione Verbi* (the most profoundly learned Roman Catholic work on doctrinal history); George Bull, *Defensio fidei Nicanæ* (Oxford, 1685, and often since; a standard work in defence of the essential identity of the Trinitarian and Christological faith of the first four centuries, though defective in not admitting a gradual development of *doctrine* and logical *statement*, which is entirely compatible with the essential identity of religious *faith*); Dan. Waterland, *Vindication of Christ's Divinity* (Oxf. 1719; a very able defense of the orthodox faith against the high Arianism of Dr. Sam. Clarke and Dr. Whitby); Chr. W. F. Walch, *Vollständige Kirchen- und Ketzerhistorie* (Lpz. 1762 sq. vols. ii-ix; exceedingly learned and minute, but dry and tedious); Edw. Burton, *Testimonies of the Ante-Nicene Fathers to the Divinity of Christ* (2d ed. Oxford, 1829); F. Chr. Baur, *Die christliche Lehre von der Dreieinigkeit und Menschwerdung in ihrer geschichtlichen Entwickelung* (Tübingen, 1841-43, 3 vols.; very learned, able, and critical, but skeptical); J. A. Dorner, *Entwickelungsgeschichte der Lehre von der Person Christi* (1836, 2d ed.; Stuttgart, 1845-53, in 2 vols.; the most learned and complete history of Christology; Eng. transl. by Alexander and Simon in Clark's Foreign Theol. Library, Edinb. 1861, 5 vols.); R. Wilberforce, *The Doctrine of the Incarnation of our Lord Jesus*

Christ (4th ed. London, 1852); M. F. Sadler, *Emmanuel; or, the Incarnation of the Son of God the Foundation of immutable Truth* (Lond. 1867); Schaff, *History of the Christian Church* (N. York, 1867, vol. iii, p. 705–783). Among the *Lives of Christ* which have to do mainly with his history and character as a man on earth we mention those of J. J. Hess (1781), K. Hase (1829; 5th ed. 1865), Neander (1837; 6th ed. 1863; Eng. transl. by M'Clintock and Blumenthal, N.Y. 1848), Sepp (1843; new ed. 1862, in 6 vols.), Lange (1847, 3 vols. Engl. transl.; Edinb. 1865, in 6 vols.), Ewald (1854) and J. J. van Osterzee (1853, 3 vols.), Riggenbach (1858), C. J. Ellicott (1861), S. J. Andrews (N.Y. 1862), Pressensé (Paris, 1865; Eng. transl. Lond. 1866, 8vo). To these must be added a number of smaller works on the moral character of Christ and his sinless perfection as an argument for his divinity, viz. Ullmann, *Die Sündlosigkeit Jesu* (Hamburg, 7th ed. 1864); J. Young, *The Christ of History* (London and N. Y. 1855); Horace Bushnell, *The Character of Jesus, forbidding his Classification with Men* (N. York, 1861, ch. x of his work on Nature and the Supernatural, and also separately printed); Phil. Schaff, *The Person of Christ, the Miracle of History*, etc. (Boston, 1865; the same in German, Dutch, and French transl.); *Ecce Homo* (Lond. and N. Y. 1866, a theological sensation-book by an anonymous author), and its counterparts, *Ecce Deus* (Edinb. 1867; likewise anonymous) and *Deus Homo: God-man* (by Prof. Theoph. Parsons, a Swedenborgian, Chicago, 1867).

Christopher, St. (Christophorus, *Christ-bearer*), a saint and martyr of the Roman and Greek calendars. The legends make him twelve feet high, and enormous statues of him are still to be found in cathedrals. The place and time of his birth, and, in fact, his very existence, are doubtful. He is said to have suffered martyrdom under Decius. His day in the Greek calendar is May 9; in the Roman, July 25. Of the curious legend of St. Christopher, and the representations of it in mediæval art, see Mrs. Jameson, *Sacred and Legendary Art*, ii, 439–450. See also *Acta Sanctorum*, July 25; Butler, *Lives of Saints*, July 25; Hoefer, *Biog. Générale*, s. v.

Christopher, Pope. See Christophorus.

Christophŏrus (Χριστοφόρος, *Christ-bearer*), an epithet applied originally to Christians, especially to martyrs, as "bearing all for Christ," and therefore "bearing Christ." It afterwards became a proper name (Christopher). See Eusebius, *Ch. Hist.* iii, 10; Bingham, *Orig. Eccles.* bk. i, ch. i, § 4.

Christophŏrus, Pope (Nov., 903, to June, 904), deposed his predecessor Leo V, and imprisoned him; but was, in his turn, soon driven from power by a revolt of the Romans, led by the monster Sergius (q. v.), and forced to retire into a convent, where, in June, 904, he met with a wretched death. Some Roman Catholic writers count him not among the regular popes, but among the antipopes.

Christo-sacrum, a society founded at Delft, Holland (1797–1801), for the purpose "of promoting the union of all Christian denominations which admit the divinity of Jesus Christ and redemption by the merits of his passion." It was established by two members of the Reformed Church, one of whom (*Onder van Vyngaard-Ceanzius*) was burgomaster of Delft. It separated "worship" from "teaching," and used a liturgy framed after that of the Church of England. It numbered at one time some 3000 members, mostly Mennonites, but has now nearly, if not quite died out. See an apology and sketch of the society in the work *Het genootschap Christo Sacrum binnen Delft* (Leyden, 1801).—Hase, *Ch. History*, § 486; Wetzer u. Welte, *Kirchen-lexikon*, ii, 514; Herzog, *Real-Encyklop.* ii, 688.

Christs, False (ψευδόχριστοι, Mark xiii, 22). No fewer than twenty-four different persons have appeared making pretensions to be the Christ. In the maintenance of their claims to the Messiahship there has been a great expenditure of blood and treasure. They have appeared at different times, from an early date in the second century till 1682. The first was called Caziba, or Barcocheba (q. v.); and the Jews admit that, in the defence of this false Messiah, they lost between five and six hundred thousand souls. The last that gained any considerable number of converts was Mordecai, a Jew, of Germany, who lived in 1682. Our Lord warned his followers that such false Christs should make their appearance (Matt. xx, 24). See Antichrist.

Chrodegang, bishop of Metz in the eighth century, was born of noble Frankish parents, brought up at the court of Charles Martel, and made his recorder (*referendarius*). In 742 he was raised by Pepin to the bishopric of Metz, and was very active in building churches, and in increasing the influence of Rome during the rest of his life. He is chiefly known as the founder of the Order of Cathedral and Collegiate Canons, and as the author of a Rule of Monastic Life (*Regula Sincera*) for the regulation of the monks of the monastery that he founded, whither he transported the reliques of Gorgonus, Nabor, and Nazarius, given him by Paul I. See Canons. He died A.D. 766. His Rule (that of Benedict of Nursia modified) consists of thirty-four canons and a preface, in which he says that "the necessity of his new rule arises from the clergy neglecting the rules already in existence, and therefore he comes forward to remind them how they should live."—D'Achery, *Spicileg.* i, 565; Pertz, *Monum. Germ.* ii, 267; Mansi, *Concil.* xiv, 313; Mosheim, *Ch. Hist.* c. viii, pt. ii, ch. ii, n. 23; Neander, *Ch. History* (Torrey's), vol. iii, 106 sq.

Chromatius, bishop of Aquileia (after 388), a distinguished theological writer of the Latin Church. The place and date of his birth are not known. He was a friend of Jerome, Ambrose, Rufinus, and other distinguished men of that period. It was Chromatius who induced Jerome to translate the Old Testament into Latin, and Jerome dedicated to him the commentary on Habakkuk. When the controversy on the writings of Origen broke out between Jerome and Rufinus, Chromatius in vain endeavored to reconcile the former friends. He disapproved of the writings of Origen, but opposed the exclusion from the church of Rufinus, whom he had baptized, and who had dedicated to him several works. When bishop Anastasius of Rome condemned Rufinus, and communicated the sentence to Chromatius, the latter deemed it his right to dissent from the Roman bishop, and received Rufinus into the communion of his church. Chromatius was a warm defender of Chrysostom, and the latter wrote him a letter of thanks. Most of the works of Chromatius are lost, among others his *Letter to Jerome* (on Rufinus), and his *Letter to the Emperor Honorius* (in defence of Chrysostom); but there are still extant *Discourses on the Eight Beatitudes*, treatises *On the Fifth and Sixth Chapters of St. Matthew* and *On Baptism*, and a small number of Letters. These works have been edited at Basle (1528 and 1551), Louvain (1646), in Galland's *Bibliotheca Patrum*, vol. vii, and by Pietro Braida, at Udine (*Sancti Chromatii episcopi Aquilejensis Scripta, sive Opuscula, etc., Utini*, 1816, 4to).—Wetzer und Welte, *Kirchen-Lexikon*, ii, 526; Cave, *Script. Eccles. Hist. Liter.* i, 378 sq.

Chronicles (דִּבְרֵי הַיָּמִים, *dibrey' hay-yamim'*, *words* [or *acts*] *of the days*, 1 Kings xiv, 19, Sept. ῥήματα τῶν ἡμερῶν, Vulg. *verba dierum;* 1 Chron. xxvii, 24, βιβλίον λόγων, *fasti;* Esth. vi, 1, μνημόσυνα, *annales;* 1 Esdr. ii, 12, ὑπομνηματισμοί; 1 Macc. xvi, 24, βιβλίον ἡμερῶν), journals or diaries, i. e. the record of the daily occurrences; the name originally given to the record made by the appointed historiographers in the kingdoms of Judah and Israel, usually called more simply "book of the kings of Israel and Judah"

(1 Chron. ix, 1); so also of separate sovereigns, e. g. Solomon (1 Kings xi, 41), Jehu (2 Chron. xx, 34), etc. See HISTORY.

CHRONICLES, (FIRST and SECOND) BOOKS OF, the designation in the English Bible of the last of the historical books of the Old Test. preceding Ezra; but in the Heb. Scriptures they conclude the entire volume. See BIBLE.

I. *Name.*—The Hebrews call them דִּבְרֵי הַיָּמִים (see above), *registers of days*, and reckon them but one book. The Sept. translators, who regarded them as two books, used the appellation Παραλειπόμενα, *things omitted*, as if they were *supplementary* to the other historical records belonging to the Old-Test. canon. The Vulg. retains both the Heb. and Greek name in Latin characters, *Dabre jammim*, or *hajamim*, and *Paralipomenon*. Jerome tells us (*ad Domnion. et Rogatian.*) that in his time they formed only one book in the Heb. MSS., but had been divided by the Christian churches using the Sept. for convenience, on account of their length. In his *Ep. to Paulinus* he further explains the name *Paralipomenon*, and eulogizes the book. The name *Chronica*, or *Chronicorum liber*, which is given in some copies of the Vulg., and from which we derive our English name of "Chronicles," seems to be taken from Jerome's saying in his *prologus Galeatus*, "*Dibre hajamim*, i. e. *words of days*, which we may more significantly call the *Chronicon* of the whole divine history." It was possibly suggested to him by his having translated the *Chronica* of Eusebius into Latin. Later Latin writers have given them the name of *Ephemerides*. The division into two books, after the example of the Sept. and later versions, was adopted by Bomberg in his Heb. Bible, since which time it has been universal.

II. *Contents.*—(*a.*) In 1 Chron. i-ix is given a series of genealogical tables, interspersed with historical, geographical, and other notices. These genealogies are not complete: the generations of Adam to Abraham (ch. i, 1-28); of Abraham and Esau (i, 28-54); of Jacob and his son Judah (ii); of king David (iii); of Judah in another line (iv, 1-23); of Simeon (iv, 24-43); of Reuben, Gad, and Manasseh, with historical and topographical notices (v); two lists of the sons of Levi (vi, 1-30); genealogical registers of Heman and Asaph (vi, 31-43); of Merari (vi, 44-50); of Aaron, with a list of the residences of the Levitical families (vi, 50-81); list of the sons of Issachar (vii, 1-5); of Benjamin and Naphtali (vii, 6-13); of Manasseh (vii, 14-19); of Ephraim, with notices of their possessions (vii, 20-29); of Asher (vii, 30-40); a second list of the descendants of Benjamin, with the genealogy of Saul (viii); list of families dwelling at Jerusalem, with intimations of the tribes to which they belonged (ix).

(*b.*) 1 Chron. x-xxix contains the history of David's reign from the death of Saul, partly agreeing with the account given of him in the books of Samuel, though with several important additions relating to the Levites.

2 Chron. i-ix contains the history of Solomon.

2 Chron. x-xxviii furnishes a succinct account of the kingdom of *Judah* while *Israel* still remained, but separate from the history of the latter.

2 Chron. xxix-xxxvi describes the kingdom of Judah after the downfall of Israel, especially with reference to the worship of God.

From this analysis it appears that the Chronicles contain an epitome of sacred history, particularly from the origin of the Jewish nation to the end of the first captivity. Besides important notices of a historical character not found in the other books, there are others of a doctrinal and devotional nature. There is one psalm (1 Chron. xvi, 7-36), the first which David assigned for public worship (verse 7).

III. *Diction.*—This is such as suits the time *immediately* subsequent to the Captivity. It is substantially the same with that of Ezra, Nehemiah, and Esther, which were all written shortly after the Babylonish exile. It is mixed with *Aramaisms*, marking at once the decline of the Jews in power and the corruption of their native tongue. The pure Hebrew had then been laid aside. It was lost during their sojourn in Babylon. The *orthography* is characterized by an adoption of the *matres lectionis* and frequent interchanges of the weak letters, with other peculiarities (see below, § 4).

IV. *Age and Author.*—Internal evidence sufficiently demonstrates that the Chronicles were written after the Captivity. Thus the history is brought down to the end of the exile, and mention is made of the restoration by Cyrus (2 Chron. xxxvi, 21, 22). It is certain that they were compiled after the time of Jeremiah (2 Chron. xxxv, 25), who lived to see the destruction of Jerusalem by the Chaldæans. The same opinion is supported by the character of the *orthography* and the nature of the *language* employed, as we have already seen, both which are Aramæan in complexion, and harmonize with the books confessedly written after the exile. The Jews generally (unanimously, according to Huet, *Demonst. Evangelica*, iv, 14) ascribe the Chronicles to Ezra (*Baba Bathra*, f. xv, c. 1). In fact, the internal evidence as to the time when the books of Chronicles were compiled seems to tally remarkably with the tradition concerning their authorship. Notwithstanding this agreement, however, the authenticity of *Chronicles* has been vehemently impugned by De Wette and other German critics, whose arguments have been successfully refuted by Dahler, Keil, Movers, and others. It has been clearly shown that the attack was grounded not upon any real marks of spuriousness in the books themselves, but solely upon the desire of the critics in question to remove a witness whose evidence was fatal to their favorite theory as to the post-Babylonian origin of the books of Moses. If the accounts in the books of Chronicles of the courses of priests and Levites, and the ordinances of divine service as arranged by David, and restored by Hezekiah and Josiah, are genuine, it necessarily follows that the Levitical law as set forth in the Pentateuch was not invented after the return from the Captivity. Hence the successful vindication of the authenticity of Chronicles has a very important bearing upon many of the very gravest theological questions.

There is particularly the circumstance that these books bring down the genealogy of David (1 Chron. iii, 19, etc.) to a period admitted on all hands to be subsequent to the restoration. Indeed, from the resemblance of several of the names given in that list with some of those in the ancestry of Christ (Luke iii, 25, 26), the genealogy of David is there brought down to the ninth generation after Zerubbabel (Strong's *Harmony and Exposition of the Gospels*, p. 17, note *m*). This passage, however, may have been added by final editors of the sacred canon, traditionally reputed to have been the members of the Great Synagogue (q. v.). That the author was at least a contemporary of Zerubbabel is clear; and to show still more the writer's intimate acquaintance with and interest in him, Shelomith, a daughter of Zerubbabel, is inserted, and numerous details given about the family. The name Hattush (verse 22) occurs also in Ezra viii, 2, as that of a descendant of David who returned with Ezra from Babylon: this would favor the view advanced if the identity could be established; but for this there is no evidence. But a more important note of time is the notice in 1 Chron. ix, 17, 18, regarding the Levitical porters, "who hitherto (עַד־הֵנָּה, *until now*, to the time of the writer) waited in the king's gate;" and of two of which, Akkub and Talmon, mention is made in Neh. xii, 25, 26, as "keeping the ward at the thresholds of the gates . . . . in the days of Nehemiah, and of Ezra the priest the scribe."

These conclusions of date from historical notices are confirmed by various peculiarities of expression and by the whole literary character of the composition. Of the peculiarities marking the late age of the writer is the term בִּירָה (*birah*, "palace"), applied to the Temple, instead of the old and usual הֵיכָל (*heykal*). This was an imitation of the great Persian cities, in correspondence with which Jerusalem is conceived of as having its palace, afterwards called Βάρις. See BARIS. Another term with which the Hebrews became acquainted in Babylon was בּוּץ (*buts*), *byssus*, which occurs in none of the older books, notwithstanding the frequent mention of שֵׁשׁ (*shesh*), or "fine linen," and is found only in 1 Chron. iv, 21; xv, 27; 2 Chron. ii, 14; iii, 14; v, 12; Esth. i, 6; viii, 15; and in a book written in Chaldæa, Ezek. xxvii, 16 (Eichhorn, *Einleitung*, § 493). So also the mention of אֲדַרְכֹּן (*adarkon*, "dram," but more correctly *daric*, 1 Chron. xxix, 7; also Ezra ii, 69; viii, 27; Neh. vii, 70), a Persian coin, the current money of the time. Jahn (*Einleitung*, § 50) refers to a remark in 2 Chron. iii, 3, that the cubit was after the "first (or old) measure," intimating that a new standard was in use in the time of the writer. The literary character of the work, in general, entirely betokens a period when the language was greatly deteriorated through foreign influences, particularly during the exile, manifesting many peculiarities of style and orthography. Many examples of the latter, as the interchange of *aleph* with *he* quiescent, may be seen on comparing the two lists of David's heroes in 1 Chron. ix and 2 Sam. xiii. With respect, again, to the later books, more particularly that of Ezra, there are many important resemblances, a list of which may be found in Hävernick, p. 270.

This determination of the age of the composition narrows the ground of inquiry as to its authorship. The Jewish opinion that Ezra was the author of the Chronicles was universally received down to the middle of the seventeenth century, when it was called in question by the English deistical writer Hobbes, who assigned to it an earlier date. It was Spinoza who first referred it, on the contrary, to a later period than the time of Ezra, bringing it down to the time of the Maccabees, a view adopted in modern times by Gramberg, and partly by De Wette. Carpzov, Eichhorn, Hävernick, Welte, and modern writers in general, consider Ezra to be the author. Ewald (*Geschichte des Volkes Israel*, 2d ed., i, 252) admits that the Chronicles and the book of Ezra are by the same author, and even contends that they originally formed one work, not the production of Ezra himself, but a much later writer. Jahn denies all appearance of similarity between the Chronicles and Ezra, and ascribes the former to some unknown writer at the close of the Captivity.

The identity of authorship of the books of Chronicles and Ezra can be established by numerous arguments, besides the marks of similarity in expression already adverted to. The internal relation of the Chronicles and the book of Ezra was early recognised. This is seen from the arrangement of the two adopted by the Sept. different from that of the Jewish canon. Further, the writer of the *third* (apocryphal) book of Ezra has wrought up the two writings into one. The conclusion of Chronicles and the beginning of the book of Ezra are almost identical in expression, from which it is but reasonable to infer that the one was intended to be a continuation of the other; the one history terminating with the decree for the restoration from captivity, the other narrating how that decree was obtained and how it was carried out. Without this connection the opening words of the book of Ezra must appear exceedingly abrupt, presenting a form of commencement which is in reality only a continuation. (See Ezra i, 1.) The connection thus indicated is further evinced by the style, the manner of narration, and of regarding events from a Levitical point of view, common to the two works; the whole spirit, in fact, and characteristics are identical. Thus the frequent citations of the law, and in similar terms, as כַּמִּשְׁפָּט (*kam-mishpat*), meaning "according to the law of Moses" (1 Chron. xxiii, 31; 2 Chron. xxxv, 13; Ezra, iii, 4; yet also in Neh. viii, 18). The descriptions of the sacrificial rites are in the two books very full, and in nearly the same terms (comp. Ezra ii, 2-5, with passages like 1 Chron. xvi, 40; 2 Chron. viii, 13; xiii, 11); so also the account of the celebration of the passover (Ezra vi, 19, etc., and 2 Chron. xxx, 35), and the order of the Levites in charge of the Temple (Ezra iii, 8, 9; 1 Chron. xxxiii, 2, 3). What presents the greatest apparent contrast in the two books is the high-priest's genealogy in 1 Chron. vi, 1-15, in the descending line, terminating with the Captivity, and in Ezra vii, 1-5, in the ascending line, from that priest himself to Aaron; but a little consideration will reconcile the discrepancy. The two lists are partly parallel, and partly the one is a continuation of the other; as regards the latter point there can be no conflict, and as to the former it will be observed that the list in Ezra is considerably abridged, many links being omitted (Bertheau), and this could the more readily be done if the writer had elsewhere given a complete register. See EZRA (BOOK OF).

The only serious objection to their authorship by Ezra is the fact (above noticed) that certain genealogies (e. g. of Zerubbabel (1 Chron. iii, 19-24; comp. that of the high-priests, Neh. xii, 11) are continued much later than his time; but these few verses may have been inserted by a later hand, without affecting his general authorship, just as the notice of the death of Moses (Deut. xxxiv) must have been added to the Pentateuch by another hand than his own. See CANON (OF SCRIPTURE).

V. *Scope and Method.*—The books of Chronicles, as compared with those of Kings, are more *didactic* than *historical*. The *historical* tendency is subordinated to the *didactic*. Indeed, the purely historic form appears to be preserved only in so far as it presented an appropriate medium for those religious and moral observations which the author specially aimed to adduce. Samuel and Kings are more occupied with the relation of *political* occurrences, while the Chronicles furnish detailed accounts of *ecclesiastical* institutions. Thus 1 Chron. xvii, 11-14, compared with 2 Sam. viii, 12-16, manifests more distinctly the Messianic character of the promises made to David (see Pye, *Script. Testimony*, i, 171). So, too, in the genealogical table, while no place is given to some of the tribes, as Dan and Asher, that of Judah in the line of David is traced down to the writer's own time (1 Chron. i, 1-27; ii, 1, 3-15; iii), beyond any other historical notice of the O. T., and connecting with the genealogy of Christ (Matt. i). See GENEALOGY.

The *plan* of these books, of which the book of Ezra is a continuation, forming one work, immediately becomes apparent if we consider it as the compilation of Ezra, or some one nearly contemporary with him. One of the greatest difficulties connected with the Captivity and the return must have been the maintenance of that genealogical distribution of the lands which yet was a vital point of the Jewish economy. Accordingly it appears to have been one to which both Ezra and Nehemiah gave their earnest attention, as David, Hezekiah, and other kings had done before them. Another difficulty intimately connected with this was the maintenance of the Temple services at Jerusalem. This could only be effected by the residence of the priests and Levites in Jerusalem in the order of their courses; and this residence was only practicable in case of the payment of the appointed tithes, first-fruits, and other offerings. As soon as these ceased the priests and Levites were obliged to

disperse to their own villages to obtain a livelihood, and the Temple services were neglected. But then, again, the registers of the Levitical genealogies were necessary in order that it might be known who were entitled to such and such allowances, as porters, as singers, as priests, and so on, because all these offices went by families; and, again, the payment of the tithes, first-fruits, etc., was dependent upon the different families of Israel being established each in his inheritance. Obviously, therefore, one of the most pressing wants of the Jewish community after their return from Babylon would be trusty genealogical records, and if there were any such in existence, the arrangement and publication of them would be one of the greatest services a person in Ezra's situation could confer. But further, not only had Zerubbabel (Ezra iii, v, vi), and after him Ezra and Nehemiah (Ezra ii, viii; Neh. vii, viii), labored most earnestly in the teeth of immense difficulties to restore the Temple and the public worship of God there to the condition it had been in under the kings of Judah, but it appears clearly from their policy, and from the language of the contemporary prophets, Haggai and Zechariah, that they had it much at heart to reinfuse something of national life and spirit into the bosom of the people, and to make them feel that they were still the inheritors of God's covenanted mercies, and that the Captivity had only temporarily interrupted, not dried up, the stream of God's favor to their nation. Now nothing could more effectually aid these pious and patriotic designs than setting before the people a compendious history of the kingdom of David, which should embrace a full account of its prosperity, should trace the sins which led to its overthrow, but should carry the thread through the period of the Captivity, and continue it, as it were, unbroken on the other side; and those passages in their former history would be especially important which exhibited their greatest and best kings as engaged in building or restoring the Temple, in reforming all corruptions in religion, and zealously regulating the services of the house of God. As regards the kingdom of Israel or Samaria, seeing it had utterly and hopelessly passed away, and that the existing inhabitants were among the bitterest "adversaries of Judah and Benjamin," it would naturally engage very little of the compiler's attention. These considerations explain exactly the design of that historical work which consists of the two books of Chronicles and the book of Ezra. For, after having in the first eight chapters given the genealogical divisions and settlements of the various tribes, the compiler marks distinctly his own age and his own purpose by informing us, in ch. ix, 1, of the disturbance of those settlements by the Babylonish Captivity, and, in the following verses, of the partial restoration of them at the return from Babylon (2-24); and that this list refers to the families who had returned from Babylon is clear, not only from the context, but from its reinsertion, Neh. xi, 3-22, with additional matter evidently extracted from the public archives, and relating to times subsequent to the return from Babylon, extending to Neh. xii, 27, where Nehemiah's narrative is again resumed in continuance with Neh. xi, 2. Having thus shown the re-establishment of the returned families, each in their own inheritance according to the houses of their fathers, the compiler proceeds to the other part of his plan, which is to give a continuous history of the kingdom of Judah from David to his own times, introduced by the closing scene of Saul's life (ch. x), which introduction is itself prefaced by a genealogy of the house of Saul (ix, 35-44), extracted from the genealogical tables drawn up in the reign of king Hezekiah, as is at once manifest by counting the thirteen or fourteen generations, from Jonathan to the sons of Azel inclusive, exactly corresponding to the fourteen from David to Hezekiah inclusive. This part of the plan extends from 1 Chron. ix, 35, to the end of the book of Ezra; 1 Chron. xv-xxii, xxii-xxix; 2 Chron. xiii-xv, xxiv-xxvi, xxix-xxxi, and xxxv are among the passages wholly or in part peculiar to the books of Chronicles, which mark the purpose of the compiler, and are especially suited to the age and the work of Ezra (q. v.).

VI. *Sources.*—It is evident that the Chronicles were compiled not only from former inspired writers, but, for the most part, from public records, registers, and genealogies belonging to the Jews. That national annals existed there can be no doubt. They are expressly mentioned, as in 1 Chron. xxvii, 24. They contained an account of the most important events in the history of the Hebrews, and were generally lodged in the tabernacle or Temple, where they could most conveniently be consulted.

The following are the explicit *references* by the compiler himself to older memoirs or historical works: (1) The book (דְּבָרִים, *words* or *acts*) of Samuel the seer, the book of Nathan the prophet, and the book of Gad the seer (1 Chron. xxix, 29). This cannot mean the inspired books of Samuel, because they do not contain the entire history of David ("his acts first and last"). It refers to a history of his own times written by Samuel, and to a continuation of it, embracing succeeding times, written by Nathan and Gad, from which it is probable that part of the contents of the present books of Samuel was drawn. See Nathan; Gad. (2) The book of Nathan the prophet, the prophecy of Ahijah the Shilonite, and the visions of Iddo the seer (2 Chron. ix, 29). See Ahijah; Iddo. (3) The book of Shemaiah the prophet, and of Iddo the seer *concerning genealogies*; or, as De Wette translates it, *after the manner of family-registers* (2 Chron. xii, 15). See Shemaiah. (4) The *story*, or, rather, the *interpretation* (מִדְרָשׁ, *midrash*) of the prophet Iddo (2 Chron. xiii, 22). (5) The book of Jehu the son of Hanani, inserted in the book of the Kings of Israel (2 Chron. xx, 34). See Jehu. (6) The history of Uzziah, by Isaiah the son of Amoz (2 Chron. xxvi, 22). (7) The vision of Isaiah the prophet, in the book of the Kings of Judah and Israel (2 Chron. xxxii, 32). See Isaiah. (See Gesenius's *Commentar über den Jesaia; Einleit.* § 4.) (8) The sayings of the seers (2 Chron. xxxiii, 19). See Hozai. (9) The interpretation of the book of the Kings (2 Chron. xxiv, 27). (10) The book of the Kings of Judah and Israel (2 Chron. xvi, 11; xxv, 26; xxvii, 7; xxviii, 26; xxxv, 27; xxxvi, 8). This could not have been our present books of Kings, but *public annals*, because, in several instances where the reader is referred to them for farther information, our books of Kings contain less than what is stated in the Chronicles. (11) The book of the Kings of Israel (2 Chron. xx, 34). (12) The words or histories of the Kings of Israel (2 Chron. xxxiii, 18). It is probable that Nos. 10, 11, and 12 refer to the same historical work. See Kings (Books of). (13) The Chronicles of King David (1 Chron. xxvii, 24). (14) The Lamentations (2 Chron. xxxv, 25). This, however, has been thought by some not to mean the Lamentations of Jeremiah which we now have, but other Lamentations, composed by the prophet on *the death of Josiah*, and long since lost. See Lamentations.

In addition to the above avowed documents, the compiler must have had others. Thus the lists of David's heroes (xi, 10-47), of those who came to him at Ziklag (xii, 1-22), of the captains, princes of the tribes, and officers of David's household (xxvii), the number and distribution of the Levites, and the minute information given respecting divine worship (xxiii-xxvi), must have been derived from written sources not included in the *book of the Kings of Israel and Judah*. Some documents are mentioned by the compiler which he did not *use*. Thus a writing of Elijah. addressed to Jehoram, is spoken of in 2 Chron. xxi, 12. See Elijah.

In 1 Chron. i, 9, we have only a few references to the origin of the genealogical lists. Throughout most of this portion the compiler relied on registers, which he carefully followed, but does not definitely cite (yet see 1 Chron. v, 7, 17; vii, 7, 9; ix, 1). Although the genealogies of 1 Chron. i-ii, 2, are substantially the same as in Genesis, greatly abridged, and with the omission of nearly all the historical notices, these matters being already so well known as to render repetition unnecessary—a strong, because indirect argument for the authority of the Mosaic writings—yet the greater portion of those which follow is found nowhere else. Even in this abridgment of the older genealogies there is manifested much independence. In proof of this it is only necessary to observe some of the appended notices, e. g.: 1 Chron. i, 51, "Hadad died also," an addition to Gen. xxxvi, 39, it being inferred by Hengstenberg (*Genuin. of the Pentateuch*, ii, 245) and others, from the latter passage, that Hadad was still living in the time of Moses. See HADAD. After 1 Chron. ii, 2, the genealogical lists are interspersed with fuller details, and the work attains to more completeness and independence.

It has been inquired whether our present books of Samuel and Kings were among the sources whence the Chronicle writer drew his materials? The question is answered in the affirmative by De Wette, Movers, and Bleek; by Hävernick and others in the negative. The first-named critic adduces three arguments in favor of the hypothesis that the parallel accounts were derived from the earlier books, only one of which appears to us valid, viz., the certainty of the Chronist's having known the earlier books. After denying the force of all these arguments, Keil proceeds to adduce some positive grounds against the hypothesis that the books of Kings and Samuel were used as sources. The considerations adduced by him, however, are singularly wanting in validity (*Einleitung*, p. 480–482, Frcf. 1853). If the compiler of Chronicles knew the canonical books, why should it be thought that he abstained from using them? They would have facilitated his work. The most convincing proof that he both knew and used them is furnished by some forty parallels, which are often verbal. Thus, in 2 Chron. i, 14–17, there is a paragraph almost verbally coinciding with 1 Kings x, 26-29. Again, 1 Chron. xvii and xviii are in many places verbally parallel with 2 Sam. vii and viii. Compare also 1 Chron. xix, 1–xx, 1, with 2 Sam. x–xi; 2 Chron. x, 1–xi, 4, with 1 Kings xii, 1–24; 2 Chron. xv, 16-18, with 1 Kings xv, 13–15; 2 Chron. xxv, 1–4, 17–28, with 2 Kings xiv, 1–6, 8-20; 2 Chron. xxxiii, 1-9, with 2 Kings xxi, 1-9; 2 Chron. xxxiii, 21-25, with 2 Kings xxi, 19–26, etc. Nor can all these coincidences be explained by a common use of the older documents, for in many of the passages, evidently abridgments, the compression or selection is identical. See SAMUEL (BOOKS OF).

On the other hand, many particulars, more especially in the lives of David and Solomon, recorded in these books, are entirely passed over in the Chronicles, and in their stead are given notices of the state of religion and of public worship.

(1.) *The principal omissions in the Chronicles* are: The family scene between Michal and David (2 Sam. vi, 20–23); David's kindness to Mephibosheth (2 Sam. ix); his adultery with Bathsheba (2 Sam. xi, 2–xii, 25); his son Amnon's defilement of Tamar, and the rebellion of Absalom (2 Sam. xiv–xix); the revolt of Sheba (2 Sam. xx); the delivering up of Saul's sons to the Gibeonites (2 Sam. xxi, 1–14); the war with the Philistines (2 Sam. xxi, 15-17); David's psalm of thanksgiving, and last words (2 Sam. xxii–xxiii, 7); Adonijah's attempted usurpation, and the anointing of Solomon (1 Kings i); David's last will (1 Kings ii, 1-9); Solomon's throne established by the punishment of his opponents (1 Kings ii, 13–46); his marriage with Pharaoh's daughter (1 Kings iii, 1); his wise decision (1 Kings iii, 16–28); his officers, glory, and wisdom (1 Kings iv); his strange wives, and idolatry (1 Kings xi, 1–40). The entire omission of the history of the kingdom of Israel, except that it was carried away captive by the Assyrians, as a punishment for its sins (1 Chron. v, 25, 26), is noteworthy (see above, § 5).

(2.) *Matter peculiar to the Chronicles.*—The list of the heroes who came to David at Ziklag, and of the hosts who came to Hebron to make him king (1 Chron. xii); David's preparation for building the Temple (ch. xxii); the enumeration and order of the Levites and priests (ch. xxiii–xxvi); the order of the army and its captains (ch. xxvii); David's directions in public assembly shortly before his death (ch. xxviii, xxix); Rehoboam's fortifications, his reception of the priests and Levites who fled from the kingdom of Israel, his wives and children (2 Chron. xi, 5-24); Abijah's war with Jeroboam (xiii, 3–20); the notice of Abijah's wives and children (xiii, 21); Asa's works in fortifying his kingdom and his victory over Zerah the Cushite (xiv, 8–14); a prophecy of Azariah, which induced Asa to put down idolatry (xv, 1-15); the address of the prophet Hanani (xvi, 7-10); Jehoshaphat's endeavors to restore the worship of Jehovah, his power and riches (xvii, 2–xviii, 1); his instructions and ordinances as to judgment (ch. xix); his victory over the Ammonites and Moabites (xx, 1-30); his provision for his sons, and their death by his son and successor, Jehoram (xxi, 2–4); Jehoram's idolatry and punishment (xxi, 11–19); the death of the high-priest Jehoiada, and the apostasy of Joash (xxiv, 15–22); Amaziah's warlike preparations (xxv, 5–10); his idolatry (xxv, 14-16); Uzziah's wars, victories, and forces (xxvi, 6-15); Jotham's war with the Ammonites (xxvii, 4–6); Hezekiah's reformation and passover (xxix, 3–xxxi, 21); his riches (xxxii, 17–30); Manasseh's captivity, release, and reformation (xxxiii, 11-17).

(3.) *Matter more fully related in Chronicles.*—The list of David's heroes (1 Chron. xii, 11–47), of which the names (ver. 42–47) are wanting in 2 Sam. xxiii, 8, etc.; the removal of the ark from Kirjath-jearim to Mount Zion (1 Chron. xiii; xv, 2-24; xvi, 4-43; comp. with 2 Sam. vi); the candlesticks, tables, and courts of the Temple (2 Chron. iv, 6-9; comp. with 1 Kings vii, 38, 39); the description of the brazen scaffold on which Solomon knelt (2 Chron. vi, 12, 13, with 1 Kings viii, 22); in Solomon's prayer, the passage 2 Chron. vi, 41, 42, from Psa. cxxxii, 7-9; the mention of the fire from heaven consuming the burnt-offering (2 Chron. vii, 1, etc.); the enlargement of the divine promise (2 Chron. vii, 12, 16, with 1 Kings ix, 3); Shishak's invasion of Judæa; the address of the prophet Shemaiah (2 Chron. xii, 2–8, with 1 Kings xiv, 23); Amaziah's victory over the Edomites (2 Chron. xxv, 11–16, with 2 Kings xiv, 7); Uzziah's leprosy; its cause (2 Chron. xxvi, 16–21, with 2 Kings xv, 5); the passover under Josiah (2 Chron. xxxv, 2-19, with 2 Kings xxii, 21, etc.).

(4.) Other peculiarities distinguishing the book of Chronicles, and fitting it for the altered circumstances in the time of its composition, are the substitution of modern and more common expressions for such as had become unusual or obsolete (comp. in the original 1 Chron. x, 12, with 1 Sam. xxxi, 12; 1 Chron. xv, 29, with 2 Sam. vi, 16, etc.), particularly the substitution for the old names of places, those which were in use in the writer's own day; thus, Gezer (1 Chron. xx, 4), instead of Gob (2 Sam. xxi, 18); Abel Maim, Abel on the water [Merom] (2 Chron. xvi, 4), instead of Abel-beth-Maachah (1 Kings xv, 20). So also the omission of geographical names which had become unknown, or had ceased to be of interest, as Helam (2 Sam. x, 16, 17), omitted in 1 Chron. xix, 17; so also Zair (2 Kings viii, 21; comp. with 2 Chron. xxi, 9). See particularly 2 Sam. xxiv, 4-8, compared with 1 Chron. xxi, 4. There is also the endeavor to substitute more definite expressions for such as were indefinite, and so possibly ambiguous (as 2 Chron. xxxviii, 3; comp. with

2 Kings xvi, 8; 2 Chron. xxiv, 24, with 2 Kings xxii, 16).

Other lists occur in Chron., which are given with considerable extension or in a different connection in the earlier books, e. g. the ancestors of David, 1 Chron. ii, 10-12; comp. Ruth iv, 19-22. Still other lists are peculiar to the Chronicles, as ii, 18-53; iii, 16-24; iv, 2-23, 34-43; v, 1-26, 33-36; vi, 1-34. These latter genealogies are obviously transcribed from some register, in which were preserved the genealogies of the tribes and families drawn up at different times. This appears from the very different ages at which different genealogies terminate, indicating of course the particular reign when each was drawn up. Thus, e. g. the line of the high-priests (1 Chron. vi, 1-15) must have been drawn up during the Captivity; that in 50-53, in the time of David or Solomon; those of Heman and Asaph, in the same chapter, in the time of David; that of the sons of Zerubbabel (1 Chron. iii, 19-24) as late at least as the close of the canon, and so on.

The same wide divergence in the age of other materials embodied in the books of Chronicles is also apparent. Thus the information in 1 Chron. i, concerning the kings of Edom before the reign of Saul, was obviously compiled from very ancient sources. The same may be said of the incident of the slaughter of the sons of Ephraim by the Gittites, 1 Chron. vii, 21; viii, 13; and of the account of the sons of Shela, and their dominion in Moab, 1 Chron. iv, 21, 22. The military census of the tribes of Issachar, Benjamin, and Asher, in 1 Chron. vii, evidently formed part of the returns made to David (2 Sam. xxiv, 9). The curious details concerning the Reubenites and Gadites in 1 Chron. v, must have been drawn from contemporary documents, embodied probably in the genealogical records of Jotham and Jeroboam, while other records used by the compiler are as late as after the return from Babylon, such as 1 Chron. ix, 2 sq.; 2 Chron. xxxvi, 20 sq.; and others, as Ezra ii and iv, 6-23, are as late as the time of Artaxerxes and Nehemiah. Hence it is further manifest that the books of Chronicles and Ezra, though put into their present form by one hand, contain, in fact, extracts from the writings of many different writers, which *were extant at the time the compilation was made*. For the full account of the reign of David, he made copious extracts from the books of Samuel the seer, Nathan the prophet, and Gad the seer (1 Chron. xxix, 29). For the reign of Solomon he copied from "the book of Nathan," from "the prophecy of Ahijah the Shilonite," and from "the visions of Iddo the seer" (2 Chron. ix, 29). Another work of Iddo supplied an account of the acts, and the ways, and sayings of king Abijah (xiii, 22); while yet another book of Iddo concerning genealogies, with the book of the prophet Shemaiah, contained the acts of king Rehoboam (xii, 15). For later times the "Book of the kings of Israel and Judah" is repeatedly cited (2 Chron. xxv, 26; xxvii, 7; xxxii, 32; xxxiii, 18, etc.), and "the sayings of the seers," or perhaps of Hozai (xxxiii, 19); and for the reigns of Uzziah and Hezekiah "the vision of the prophet Isaiah" (xxvi, 22; xxxii, 32). In other cases, where no reference is made to any book as containing farther information, it is probable that the whole account of such reign is transcribed. Besides the above-named works, there was also the public national record, called "book of the Chronicles" (סֵפֶר דִּבְרֵי הַיָּמִים), mentioned in Neh. xii, 23, from which doubtless the present books took their name, and from which the genealogies and other matters in them were probably derived, and which are alluded to as having existed as early as the reign of David, 1 Chron. xxvii, 24. These "Chronicles of David" (דִּבְרֵי הַיָּמִים לַמֶּלֶךְ דָּוִיד) are probably the same as those (the דִּבְרֵי דָוִיד) above referred to, as written by Samuel, Nathan, and Gad. From this time the affairs of each king's reign were regularly recorded in a book called at first "the book of the acts of Solomon" (סֵפֶר דִּבְרֵי שְׁלֹמֹה, 1 Kings xi, 41), by the name of the king, as before of David, but afterwards in both kingdoms by the general name of chronicles, as in the constantly-recurring formula, "Now the rest of the acts (הַדְּבָרִים) of Rehoboam, Abijam, etc.; Jeroboam, Nadab, etc., are they not written in the book of the Chronicles of the kings of Judah" *or* "of Israel" (1 Kings xiv, 28; xv, 7, etc.)? This continues to the end of Jehoiakim's reign, as appears from 2 Kings xxiv, 5; 2 Chron. xxxvi, 8. It was doubtless from this common source that the passages in the books of Samuel and Kings identical with the books of Chronicles were derived. All these several works have perished, but the most important matters in them have been providentially preserved to us in the Chronicles.

VII. *Discrepancies and Contradictions.*—The credibility of the books of Chronicles has been greatly contested by rationalistic writers, but by none with more tenacity than De Wette, first in his *Beiträge zur Einleitung* (Halle, 1806, i, 1-132), and subsequently in the successive editions of his *Einleitung*, where he has brought together every sort of difficulty and alleged contradiction, many of which rest only on assumptions which would not be tolerated if applied to any other than a Biblical writer. It indeed cannot be denied that many difficulties do exist in this portion of Scripture, and not a few apparent contradictions between its statements and those of the other historical books, particularly as regards proper names and numbers; but these, even if they cannot be satisfactorily explained, scarcely warrant calling in question the sincerity or the credibility of the writer. Thus, for instance, it is objected that 1 Chron. ii, 6 is a false combination of 1 Kings v, 11 [iv, 31]; but nothing is more common than the recurrence of the same names in different families and tribes, and at different periods; and although Hävernick unnecessarily admits that some of the names in the two passages are identical, it would certainly indicate rare confusion on the part of the writer of the Chronicles to bring together times and persons so far apart from one another. Ethan the Ezrahite, of the family of Merari (1 Chron. vi, 29 [44]), was one of David's masters of song (1 Chron. xv, 17), and the author of Psa. lxxxix. Heman, also an Ezrahite, and author of Psa. lxxxviii, was a leader of David's sacred choir (1 Chron. xv, 17), and it is utterly inconceivable that persons, as it would appear, so well known to the writer of the Chronicles, should so inconsiderately be reckoned among the posterity of Judah, and assigned to a time so long antecedent to that of David. See Heman.

There are, however, real difficulties, particularly in the genealogical tables, and also in various numerical statements, and these, it may be supposed, arose in a great measure from corruption of the text; for it is in such cases that there is the greatest facility for the rise and the perpetuation of false readings, the context affording little aid for their detection, or rectification if detected. The text of the Chronicles furnishes many instances of such corruptions, although in several cases, where it differs from the corresponding passages in the books of Samuel and of Kings, it is just as possible that it shows the true reading. A remarkable case is 1 Chron. vi, 13 [28], "And the sons of Samuel, the first-born Vashni and Abiah," comp. with 1 Sam. viii, 2, "Now the name of his first-born was Joel, and the name of his second Abiah." It is easy to see how this contradiction has arisen. The name Joel had fallen out of 1 Chron. vi, 13, and some transcriber, seeing the necessity for some name after "the first-born," transformed וְהַשֵּׁנִי (*ve-hash-sheni*), "and the second," into a proper name, Vashni. The mistake is as old as the Sept. — ὁ πρωτότοκος Σανὶ καὶ

Αβιά. The Syriac and Arabic read as in Samuel (*Jour. of Sac. Lit.* April, 1852, p. 198).

(1.) Passages where the readings in Chronicles are obviously corrupt; sometimes the work itself showing the erroneousness of the reading, e. g. 2 Chron. iii, 15; iv, 5, compared with 1 Kings vii, 15, 26, etc.

(2.) Passages where the correct reading is that of the Chronicles. The father of Amasa is designated in 1 Chron. ii, 17, "Jether, the *Ishmaelite*;" in 2 Sam. xvii, 25, "Ithra, an *Israelite*." Examples of numerical statements: 1 Chron. xviii, 4, compared with 2 Sam. viii, 4; 1 Chron. xix, 18, comp. with 2 Sam. x, 18; 1 Chron. xxi, 12, with 2 Sam. xxiv, 13; 2 Chron. iii, 15, and 1 Kings vii, 16, with 2 Kings xxv, 17, where the height of the "chapiters" on the brazen pillars, as given in the first two passages, is confirmed by Jer. lii, 22; 2 Chron. ix, 25, compared with 1 Kings iv, 26; 1 Chron. xi, 11, compared with 2 Sam. xxiii, 8; 2 Chron. xxvi, 1, 3, 8, etc. comp. with 2 Kings xv, 1, 6, etc.

(3.) Passages where the correct reading is doubtful: 2 Chron. ii, 2, 17 [18], comp. with 1 Kings v, 30 [16]; 2 Chron. viii, 10, comp. with 1 Kings ix, 23; 2 Chron. viii, 18, comp. with 1 Kings ix, 28, etc. (On the numerical discrepancies, see Reinke, *Beiträge zur Erklärung des alt. Testamentes*, I, i.) See NUMBER. In Movers, Kennicott, and Gramberg, others may be found which are injudiciously brought forward as truly at variance; yet 2 Chron. viii, 18, compared with 1 Kings ix, 28; 1 Chron. xxi, 5, comp. with 2 Sam. xxiv, 9, where the numbers of Judah are different, and other places that might be quoted, present contradictions which evince that the text is corrupt. It is well known, although the cause has not fully hitherto been ascertained, that the text of the books of Samuel, Kings, and Chronicles is in a worse condition than that of the other inspired writings. Jerome (*Præf. ad Paral.*) speaks of the Greek text of Chron. as being hopelessly confused in his days, and assigns this as a reason why he made a new translation from the Hebrew. Many of the names and words that are differently written should be referred to this head. Some omissions and some interpolations also belong to it. But the principal contradictions relate to *numbers*. These seem to have been expressed in various ways; and copyists, having different methods of marking them, were naturally exposed to errors. Sometimes numbers were designated by *letters*, occasionally by *ciphers*, and again they were marked by *words*. See ABBREVIATION.

(4.) Passages erroneously regarded as contradictory: Between 2 Chron. xxviii, 20, and 2 Kings xvi, 7–9, there is no contradiction, as they relate to different stages of the war; and it is quite possible that the mercenary Tiglath-pileser from an ally became an opponent; a fact even intimated in 2 Kings xvi, 18, by Ahaz's removal of a gallery, which might afford access to an enemy. Between 1 Chron. xi, 23, "An Egyptian, a man of great stature, five cubits high, and in the Egyptian's hand was a spear like a weaver's beam," and 2 Sam. xxiii, 21, "An Egyptian, a goodly man, and the Egyptian had a spear in his hand," there is no contradiction; the one passage being more specific, but still in accordance with and its purport implied in the other. The Egyptian's noticeable appearance was his stature, with which also his spear corresponded. 2 Chron. xxxiv, 3–7, places the reformation under Josiah in the twelfth year of his age, while 2 Kings xxii, 3, assigns to it the eighteenth; the former referring only to the beginning of the work, while the other passage points to some great progress in it, the rooting out of idolatry, as is required by 2 Chron. xxxv, 19. Many other passages, which are usually adduced under this head, do not belong to it: e. g. 2 Chron. ix, 25, compared with 1 Kings iv, 26; 2 Chron. xxii, 2, with 2 Kings viii, 26; 1 Chron. xxi, 1, with 2 Sam. xxiv, 1; 1 Chron. xxi, 5, with 2 Sam. xxiv, 9; 1 Chron. xxi, 25, with 2 Sam. xxiv, 24; 2 Chron. xiii, 2, with 1 Kings xv, 10; on the true mode of harmonizing which we refer to Davidson's *Sacred Hermeneutics*, p. 544–554, where they are resolved. A large class of the discrepancies in question, affecting the ages and reigns of the kings, is due simply to the mode of reckoning either (a) according to the civil as distinct from the sacred year, or (b) according to dates of association with the respective fathers on the throne (*Meth. Quart. Rev.*, Oct. 1856, p. 619 sq., where all these are reconciled). See CHRONOLOGY.

Many less important deviations are here passed over, as being referrible to the arbitrary choice of the compiler, such as omissions, additions, difference of order, change of style, etc. Most or all of the real difficulties, with respect to facts, will be examined under the several articles to which they relate. Many of the obscurities, and not a few discrepancies, are apparently insoluble, owing to the loss of the original data, which alone could serve to explain them. These are more numerous and formidable, perhaps, in the Chronicles than in any other book of Scripture; yet the discrepancies, even were there no satisfactory solution, cannot greatly affect the character of the writer of the Chronicles; for the probability as regards correctness will be found on the part of the later writer, who, having the earlier works before him, would not unnecessarily, in matters of fact and plain numerical statements, where differences and contradictions were so easily discernible, vary from the earlier accounts favored by the authority arising from age and prior acceptance. There can be no question, moreover, that many of the discrepancies are owing to the fault of copyists, while in some they are the result of the different views and designs of the respective writers, or the brevity of their statements. In proof, however, of the accuracy of the Chronicles, the following particulars are worthy of consideration:

a. The writer is exceedingly definite in his statements. Thus the time when it occurred to David to build the Temple of the Lord is indicated (2 Sam. vii, 1), "It came to pass *when* (כִּי) the king sat in his house," etc., but more definitely stated in 1 Chron. xvii, 1 (כַּאֲשֶׁר), "*as soon as* he sat," etc. (see Hengstenberg, *Christol.* i, 144, Berlin, 1854); while the omission of the words, "and the Lord had given him rest round about from all his enemies," removes the chronological difficulty in that statement. Of his accuracy, again, in the genealogical notices, the following example may suffice. In 1 Chron. ii, 16, mention is made of two sisters of David, Abigail and Zeruiah, the latter of whom was the mother of Joab, Abishai, and Asahel, who are never designated after their father, but always after their more illustrious mother (2 Sam. ii, 18; xxi, 17, etc.). Amasa is referred to as a blood relation of David (2 Sam. xix, 14); according to 2 Sam. xvii, 25, Amasa was a son of Abigail, and she sister of Zeruiah, the mother of Joab; but the daughter of Nahash, not positively of Jesse, and thus perhaps only the half-sister of David. See NAHASH. Therefore it is that, in the genealogy of Jesse (1 Chron. ii, 13–17), she is not styled his daughter, but only referred to as the sister of David; a distinction which does not at first sight strike the reader, and the force of which could not indeed be learned without the information furnished in the book of Samuel. So also 2 Chron. vii, 7–10 explains the abbreviated statement (1 Kings viii, 65), and the otherwise contradictory expression "the eighth day," verse 66—a proof how many of the discrepancies arise simply from the brevity of the statement.

b. The scrupulous exactness with which the writer excerpts from the original documents is vouched for by the fact of his sometimes retaining the very words, although involving expressions no longer applicable to his own time—a practice which, strange to say, has furnished ground to assail his accuracy. Thus the

Simeonites are said to possess the seats of the Amalekites in Mount Seir, dwelling there "unto this day" (1 Chron. iv, 42, 43), although, long prior to the composition of the history, they had been removed from all their possessions. So also, in the account of the removal of the ark to Solomon's Temple, it is added, "and there it is unto this day" (2 Chron. v, 9).

c. But of more importance is the indirect confirmation given to several statements in the Chronicles by other passages of Scripture. Thus Hezekiah's preparations in fortifying Jerusalem when threatened by Sennacherib—his stopping the fountains and "the brook that ran through the midst of the land" (2 Chron. xxxii, 1-6), are fully confirmed by Isa. xxii, 8-11. Again, Psalm xlviii, 13, etc., probably refers to the victory of Jehoshaphat (2 Chron. xx). A further reference to this victory of Jehoshaphat is found in Joel iv [iii]; the prophetic vision resting on this history, which is thus the foundation of the divine judgment on the enemies of the theocracy. (See Hävernick, *Einleitung*, II, i, 216.) In the reign of Jehoram the Philistines and Arabians invaded Judah, plundered the royal palace, and carried away the king's sons and wives (2 Chron. xxi, 16, 17). To this incident the prophet Joel refers (ch. iv [iii], 5, 6), where the Philistines are threatened for their plundering of the Lord's property and sale of the Israelitish captives; the same also in Amos i, 6. The Philistines again, in the time of Ahaz, invaded the south of Judah, and took several important cities (2 Chron. xxviii, 18). With this agrees the prophecy of Isa. xiv, 28-32, which again finds its fulfilment in 2 Kings xviii, 8.

It is important also to notice how the Chronicles form a commentary on various passages of the other books, and evince the accuracy of such statements as at first sight seem to contain discrepancies. Thus, in 2 Sam. vii, 5, no reason is assigned why David should not build the house of the Lord; and in 1 Kings v, 17 [3], in the message of Solomon to Hiram, an external reason only is assigned, as the heathen prince could not comprehend the deeper one. This, however, is given in David's communication first to Solomon (1 Chron. xxii, 8), and afterwards to Israel in assembly (1 Chron. xxviii, 3). The addition, "But I have chosen Jerusalem, that my name might be there" (2 Chron. vi, 6, comp. with 1 Kings viii, 16), is exceedingly important: the choice of Jerusalem, as the centre of the theocracy, was dependent on the choice of David to be ruler over Israel—the one was included in the other (2 Sam. vii). The truthfulness of the history may be said to be even attested by the names of the exiles born shortly before the restoration, from their so naturally reflecting the hopes which about that time must have been strongly entertained. Thus 1 Chron. iii, 19, 20: Hananiah (*Jehovah's grace*); Berechiah (*Jehovah's blessing*); Hasadiah (*Jehovah's mercy*); and Jushabhesed (*mercy's return*).

VIII. *Exegetical Helps.*—The principal works introductory to these books specially are: Dahler, *De lib. Paralipomenôn auctoritate* (Argent. 1819, 8vo); Gramberg, *Die Chronik nach ihrem geschichtl. Charakter* (Halle, 1823, 8vo); Movers, *Unters. üb. d. Chronik* (Bonn, 1834, 8vo); Keil, *Versuch üb. d. Chronik* (Berl. 1833, 8vo); also De Wette, *Hist.-krit. Unters. üb. d. Bücher d. Chronik*, in his *Beitr. zur Kritik des A. T.* i, 1-152; and against this, Hertz's *Vers. z. Vertheid. d. Chronik* (Altona, 1822, 8vo). Compare the *Einleitungen* of De Wette, Eichhorn, Jahn, Hävernick, Keil, and especially Bleek (1860); also Davidson in Horne's *Introduct.* (new ed. ii, 673-688); finally, the remarks by Gesenius, *Gesch. d. hebr. Sprache* (Lpz. 1815). See INTRODUCTION.

Express *commentaries* on Chronicles are few and defective; in the following list, the most valuable are indicated by an asterisk [*] prefixed: Jerome, *Quæstiones* (in his *Opp.* [*Spuria*], iii, 789); Theodoret, *Quæstiones* (*Opp.* i, pt. 1); Procopius, *Scholia* (in *Opp.* viii, 1); Maurus, *Commentarii* (*Opp.*); Rashi and Kimchi's *Commentaries* (in Buxtorfii *Biblia Hebr.* iv); Sarcer, *Commentarius* (Basil, 1560, 4to); Strigel, *Commentarius* (Lips. 1583, 1591, fol.); *Lavater, *Commentarius* (Zür. 1573; Heidelberg, 1599, fol.); Leonhart, *Hypomnemata* (Erf. 1608, 1614, 8vo); Serrarius, *Commentaria* (Mogunt. 1609-10, 2 vols. fol.); Sanctius, *Commentarii* (Antw. 1624; Lyons, 1625, fol.); Bonfrère, *Commentarius* (Tornaci, 1643, 2 vols. fol.); Jackson, *Annotationes* (Cambr. 1646, 2 vols. 4to); Beck, *Paraphrasis Chaldaica cum notis* (Aug. Vind. 1680, 4to); Wilkins, Rabbi Josephi *Paraphr. Chald.* (Cantab. 1717; Amsterd. 1725, 4to); Corn. a Lapide, *Lib. Paralip.* (in his *Commentaria*); Michaelis and Rambach, in the *Annotationes in Hagiogr.* iii, 245 (Hal. 1720); *Horsley, *Notes* (in the *Bibl. Crit.* i); Jeitteles, תַּרְגּוּם (Vienna, 1835, 8vo); Weisse, תַּרְגּוּם (Prague, 1836, 8vo); Königsfeldt, *Annotationes* (Havn. 1839, 8vo); *Bertheau, *Die Bücher der Chronik erklärt* (Lpz. 1854, 8vo, being Lief. 15 of the *Exeg. Handb.*; also in English, Edinburgh, 1857, 8vo); Rahmer, *Commentar* (Thorn, 1866, 8vo, vol. i). See COMMENTARY.

Chronology, the science which measures time by the succession of events that occur in the heavens or on the earth. Accordingly, chronology may be divided into two kinds, theoretical or technical, and practical or applied; in other words, into *mathematical* and *historical*. The former is, of course, the most trustworthy, as being the result of fixed laws; while the latter is, to a great degree, contingent and irregular. In this article we have to do only with Biblical dates and the method of their determination. See ASTRONOMY.

I. *Elements.*—The knowledge of the Hebrews in chronology rested altogether on appearances; not a trace of anything like a scientific view is to be found in their literature. The books of the Old Testament recognise none of the great æras which other nations have employed. Nor is it until the first book of the Maccabees that any such guide is found. Instead of these, the Hebrew writers usually employ more limited and local or national epochs. (See below.) Genealogical tables, indeed, are not wanting, but they are of little service for the general purposes of chronology. (See below.) Formerly great exactness was hoped for in the determination of Hebrew chronology. Although the materials were often not definite enough to fix a date within a few years, it was nevertheless expected that the very day could be ascertained. Hence arose unsoundness and variety of results, and ultimately a general feeling of distrust. At present critics are rather prone to run into this latter extreme. The truth, as might be expected, lies between these two extreme judgments. The character of the records whence we draw our information forbids us to hope for a perfect system. The Bible does not give a complete history of the times to which it refers; in its historical portions it deals with special and detached periods. The chronological information is, therefore, not absolutely continuous, although often, with the evident purpose of forming a kind of connection between these different portions, it has a more continuous character than might have been expected. It is rather historical than strictly chronological in its character, and thus the technical part of the subject depends, so far as the Bible is concerned, almost wholly upon inference. See HISTORY.

In one particular, however, great care has usually been exercised in the Hebrew records, namely, the prevention of error by the neglect or accumulation of *fractional parts of a year* in the continuous series of generations, dynasties, or reigns. This has been systematically done (as in most other ancient chronologies) by adding these into the beginning of each successive number, i. e. by reckoning, in all cases, from a

fixed point in the calendar, so that the years are always to be accounted "full" unless specified as current. Nevertheless, in consequence of the brief and sometimes double lines of æras, beginning at various seasons of the year, confusion, or at least difficulty, has often crept into the statements, which is enhanced by the fact that the rule here stated is not observed with absolute uniformity. All this is especially illustrated in the parallel lists of the kings of JUDAH and ISRAEL (q. v.).

1. *Generations.*—It is commonly supposed that the genealogies given in the Bible are invariably continuous. When, however, we come to examine them closely, we find that many are broken, without being in consequence *technically* defective as Hebrew genealogies. A notable instance is that of the genealogy of our Saviour given by Matthew, where Joram is immediately followed by Ozias, as if his son—Ahaziah, Joash, and Amaziah being omitted (Matt. i, 8). That this is not an accidental omission of a copyist is evident from the specification of the number of generations from Abraham to David, from David to the Babylonish Captivity, and from the Babylonish Captivity to Christ, in each case fourteen generations. Probably these missing names were purposely left out to make the number for the interval equal to that of the other intervals, such an omission being obvious and not liable to cause error. In Ezra's genealogy (Ezra vii, 1-5) there is a similar omission, which in so famous a line can scarcely be attributed to the carelessness of a copyist. There are also examples of a man being called the son of a remote ancestor, as "Shebuel the son of Gershon [Gershom], the son of Moses" (1 Chron. xxvi, 24). So, in historical narratives, Jehu is called "the son of Nimshi" (1 Kings xix, 16; 2 Kings ix, 20; 2 Chron. xxii, 7), as well as "the son of Jehoshaphat the son of Nimshi" (1 Kings ix, 2, 14). Laban is called "the son of Nahor" (Gen. xxix, 5), for grandson (xxviii, 2, 5; comp. xxii, 20-23). We cannot, therefore, venture to use the Hebrew genealogical lists to compute intervals of time except where we can prove each descent to be immediate, and where the length of each generation is given. See GENEALOGY. Ideler remarks that Moses reckons by generations (*Handbuch*, i, 506); but this is not the manner of Herodotus, who assumes an average of three generations to a century (ii, 142). There is no use of a generation as a division of time in the Pentateuch, unless, with some, we suppose that דּוֹר, a "generation," in Gen. xv, 16, is so used; those, however, who hold this opinion make it an interval of a hundred years, since it would, if a period of time, seem to be the fourth part of the 400 years of verse 13; most probably, however, the meaning is that some of the fourth generation should come forth from Egypt. See GENERATION.

2. *Divisions of Time.* See TIME. (1.) *Hour.*—The hour is supposed to be mentioned in Daniel (iii, 6, 15; iv, 16, 30 [Engl. 19, 33; v, 5]), but in no one of these cases is a definite period of time clearly intended by the Chald. term (שָׁעָה, שַׁעֲתָא, שַׁעְתָּא) employed. The Egyptians divided the day and night into hours like ourselves from at least B.C. cir. 1200 (Lepsius, *Chronologie der Æg.* i, 130). It is therefore not improbable that the Israelites were acquainted with the hour from an early period. The "sun-dial of Ahaz," whatever instrument, fixed or movable, it may have been, implies a division of the kind. See DIAL. In the N. T. we find the same system as the modern, the hours being reckoned from the beginning of the Jewish night and day. See HOUR.

(2.) *Day.*—For the civil day of 24 hours we find in one place (Dan. viii, 14) the term עֶרֶב בֹּקֶר, "evening-morning," Sept. νυχθήμερον (also in 2 Cor. xi, 25, A. V. "a night and a day"). Whatever may be the proper meaning of this Hebrew term, it cannot be doubted here to signify "nights and days." The common word for day as distinguished from night is also used for the civil day, or else both day and night are mentioned to avoid vagueness, as in the case of Jonah's "three days and three nights" (Jon. ii, 1 [A. V. i, 17]; comp. Matt. xii, 40). The civil day was divided into night and natural day, the periods of darkness and light (Gen. i, 5). It commenced with night, which stands first in the special term given above. The night, לַיִל, and therefore the civil day, is generally held to have begun at sunset. Ideler, however, while admitting that this point of time was that of the commencement of the civil day among all other nations known to us which followed a lunar reckoning, objects to the opinion that this was the case with the Jews. He argues in favor of the beginning of deep night, reasoning that, for instance, in the ordaining of the Day of Atonement, on the 10th of the 7th month, it is said "in the ninth [day] of the month at even, from even unto even, shall ye celebrate (literally, *rest*) your Sabbath" (Lev. xxiii, 32); where, if the civil day began at sunset, it would have been said that they should commence the observance on the evening of the 10th day, or merely on the 10th day, supposing the word "evening" (עֶרֶב) to mean the later part of our afternoon. He cites, as probably supporting this view, the expression בֵּין הָעַרְבַּיִם, "between the two evenings" used of the time of offering the passover and the daily evening sacrifice (Exod. xii, 6; Num. ix, 3; xxviii, 4); for the Pharisees, whom the present Jews follow, took it to be the time between the 9th and 11th hours of the day, or our 3 and 5 P.M., although the Samaritans and Karaites supposed it to be the time between sunset and full darkness, particularly on account of the phrase כְּבוֹא הַשֶּׁמֶשׁ, "when the sun is setting," used in a parallel passage (Deut. xvi, 6) (see *Handbuch*, i, 482-484). These passages and expressions may, however, be not unreasonably held to support the common opinion that the civil day began at sunset. The term "between the two evenings" can scarcely be supposed to have originally indicated a long period; a special short period, though scarcely a point, the time of sunset, is shown to correspond to it. This is a natural division between the late afternoon, when the sun is low, and the evening, when his light has not wholly disappeared—the two evenings into which the natural evening would be cut by the commencement of the civil day, if it began at sunset. There is no difficulty in the command that the observance of so solemn a day as that of Atonement should commence a little before the true beginning of the civil day, that due preparation might be made for the sacrifices. In Judæa, where the duration of twilight is very short at all times, the most natural division would be at sunset. The natural "day" (יוֹם) probably was held to commence at sunrise, morning-twilight being included in the last watch of the night, according to the old as well as the later division; some, however, made the morning-watch part of the day. See DAY; NIGHT. Four natural periods, smaller than the civil day, are mentioned. These are עֶרֶב, evening, and בֹּקֶר, morning, of which there is frequent mention, and the less usual צָהֳרַיִם, "the two lights," as though "double light," noon, and חֲצוֹת הַלַּיְלָה, or —חֲצִי, "half the night," midnight. No one of these with a people not given to astronomy seems to indicate a point of time, but all to designate periods, evening and morning being, however, much longer than noon and midnight. The night was divided into watches (אַשְׁמֻרוֹת). In the O. T. but two are expressly mentioned, and we have to infer the existence of a third, the first watch of the night. (In Lam. ii, 19, רֹאשׁ אַשְׁמֻרוֹת of course refers to, without absolutely designating, the first watch.) The middle watch

(הָאַשְׁמֹרֶת הַתִּיכוֹנָה) occurs in Judg. vii, 19, where the connection of watches with military affairs is evident: "And Gideon and the hundred men that [were] with him went down unto the extremity of the camp at the beginning of the middle watch; [and] they had but set the watchmen הַשֹּׁמְרִים." The morning-watch (אַשְׁמֹרֶת הַבֹּקֶר) is mentioned in Exod. xiv, 24, and 1 Sam. xi, 11; in the former case, in the account of the passage of the Red Sea; in the latter, in that of Saul's surprise of the Ammonites when he relieved Jabesh-gilead. Some Rabbins hold that there were four watches (Ideler, *Handbuch*, i, 486). In the N. T. four night-watches are mentioned, which were probably adopted from the Romans as a modification of the old system. All four occur together in Mark xiii, 35: ὀψέ, the late watch; μεσονύκτιον, midnight; ἀλεκτροφωνία, the cock-crowing; and πρωΐ, the early watch. See WATCHES OF NIGHT.

(3.) *Week* (שָׁבוּעַ, a hebdomad).—The Hebrew week was a period of seven days, ending with the Sabbath; therefore it could not have been a division of the month, which was lunar, without intercalation. But there was no such intercalation, since the Sabbath was to be every seventh day; its name is used for week, and weeks are counted on without any additional day or days. The mention together of Sabbaths and new moons proves nothing but that the two observances were similar, the one closing the week, the other commencing the month. The week, whether a period of seven days, or a quarter of the month, was of common use in antiquity. The Egyptians, however, were without it (with Dion Cassius, xxxvii, 19, comp. Lepsius, *Chronol. d. Æg.* i, 131, 133), dividing their month of 30 days into decades, as did the Athenians. The Hebrew week, therefore, cannot have been adopted from Egypt; probably both it and the Sabbath were used and observed by the patriarchs. See WEEK; SABBATH.

(4.) *Month* (יֶרַח, חֹדֶשׁ, חֹדֶשׁ יָמִים).—The months by which the time is measured in the account of the Flood may have been of 30 days each, possibly forming a year of 360 days, for the 1st, 2d, 7th, and 10th months are mentioned (Gen. viii, 13; vii, 11; viii, 14, 4, 5). Ideler, however, contests this, arguing that as the water first began to sink after 150 days (and then had been 15 cubits above all high mountains), it must have sunk for some days ere the ark could have rested on Ararat, so that the second date must be more than 150 days later than the first (*Handbuch*, i, 69, 70, 478, 479). This argument depends upon the meaning of "high mountains," and upon the height of those—"the mountains of Ararat" (viii, 4), on which the ark rested, questions connected with that of the universality of the Flood. See DELUGE. On the other hand, it must be urged that the exact correspondence of the interval to five months of 30 days each, and the use of a year of 360 days, in prophetic passages of both Testaments, are of no slight weight. That the months from the giving of the Law until the time of the Second Temple, when we have certain knowledge of their character, were always lunar, appears from the command to keep new-moons, and from the unlikelihood of a change in the calendar. These lunar months have been supposed to have been always alternately of 29 and 30 days. Their average length would of course be a lunation, or a little (44′) above 29½ days, and therefore they would in general be alternately of 29 and 30 days; but it is possible that occasionally months might occur of 28 and 31 days, if, as is highly probable, the commencement of each was strictly determined by observation; that observation was employed for this purpose is distinctly affirmed in the Babylonian Talmud of the practice of the time at which it was written, when, however, a month was not allowed to be less than 29, or more than 30 days in length. The first day of the month is called חֹדֶשׁ, "new moon;" Sept. νεομηνία, from the root חָדַשׁ, *to be new;* and in speaking of the first day of a month this word was sometimes used with the addition of a number for the whole expression, "in such a month, on the first day," as בַּחֹדֶשׁ הַשְּׁלִישִׁי . . . . בַּיּוֹם הַזֶּה, "On the third new-moon . . . . on that day" (Exod. xix, 1); hence the word came to signify month, though then it was sometimes qualified (חֹדֶשׁ יָמִים). The new-moon was kept as a sacred festival (q. v.). In the Pentateuch and Joshua, Judges and Ruth, we find but one month mentioned by a special name, the rest being called according to their order. The month with a special name is the first, which is called חֹדֶשׁ הָאָבִיב (Sept. μὴν τῶν νέων), "the month of ears of corn," or "Abib," that is, the month in which the ears of corn became full or ripe, and on the 16th day of which, the second day of the feast of unleavened bread, ripe ears, אָבִיב, were to be offered (Lev. ii, 14; comp. xxiii, 10, 11, 14). This undoubted derivation shows how erroneous is the idea that *Abib* comes from the Egyptian *Epiphi*. In 1 Kings three other names of months occur, *Zif*, זִו, or זִיו, the second; Ethanim, אֵיתָנִים, the seventh; and Bul, בּוּל, the eighth. These names appear, like that of Abib, to be connected with the phenomena of a tropical year. No other names are found in any book prior to the Capitivity, but in the books written after the return the later nomenclature still in use appears. This is evidently of Babylonian origin, as the Jews themselves affirm. See MONTH.

(5.) *Year* (שָׁנָה).—It has been supposed, on account of the dates in the narrative of the Flood, as already mentioned, that in Noah's time there was a year of 360 days. These dates may indeed be explained in accordance with a year of 365 days. The evidence of the prophetic Scriptures is, however, decisive as to the knowledge of a year of the former length. The "time, times and a half" of Dan. (vii, 25; xii, 7), where *time* means *year* (see xi, 13), cannot be doubted to be equivalent expressions to the 42 months and 1260 days of Rev. (xi, 2, 3; xii, 6), for $360 \times 3\frac{1}{2} = 1260$; and $30 \times 42 = 1260$. We have also the testimony of ancient writers that such a year was known to some nations, so that it is probable that the year of Noah was of this length, whatever may have been that of the months referred to by Moses in the narrative of the Flood (q. v.).

The characteristics of the year instituted at the Exodus can be clearly determined, though we cannot absolutely fix those of any single year. There can be no doubt that it was essentially tropical, since certain observances connected with the produce of the land were fixed to particular days. It is equally clear that the months were lunar, each commencing with a new moon. It would appear, therefore, that there must have been some mode of adjustment. To ascertain what this was, it is necessary first to decide when the year commenced. On the 16th day of the month Abib, as already mentioned, ripe ears of corn were to be offered as first-fruits of the harvest (Lev. ii, 14; xxiii, 10, 11). The reaping of the barley commenced the harvest (2 Sam. xxi, 9), the wheat following (Ruth ii, 23). Josephus expressly says that the offering was of barley (*Ant.* iii, 10, 5). It is therefore necessary to find when the barley becomes ripe in Palestine. According to the observation of travellers, the barley is ripe, in the warmest parts of the country, in the first days of April. The barley-harvest therefore commences about half a month after the vernal equinox, so that the year would begin at about that tropical point were it not divided into lunar months. We may conclude that the nearest new moon about or after the equinox, but not much before, was chosen as the commencement of the year. Ideler, whom we have thus far followed as to this year, concludes that the right

new moon was chosen through observation of the forwardness of the barley-crops in the warmer districts of the country (*Handbuch*, i, 490). There is, however, this difficulty, that the different times of barley-harvest in various parts would have been liable to cause confusion. It seems, therefore, not unlikely that the Hebrews adopted the surer means of determining their new-year's day by observations of heliacal risings or similar stellar phenomena known to mark the right time before the barley-harvest. Certainly the ancient Egyptians and the Arabs made use of such means. The method of intercalation can only have been that which obtained after the Captivity—the addition of a thirteenth month, whenever the twelfth ended too long before the equinox for the first-fruits of the harvest to be offered in the middle of the month following, and the similar offerings at the times appointed. This method would be in accordance with the permission granted to postpone the celebration of the Passover in the case of any one who was either legally unclean or journeying at a distance, for a whole month, to the 14th day of the second month (Num. ix, 9-13), of which permission we find Hezekiah to have availed himself for both the reasons allowed, because the priests were not sufficiently sanctified and the people were not collected (2 Chron. xxx, 1-3, 15). The later Jews had two beginnings to the year, or, as it is commonly, but somewhat inaccurately said, two years. At the time of the Second Temple these two beginnings obtained, the seventh month of the civil reckoning being Abib, the first of the sacred. Hence it has been held that the institution at the time of the Exodus was merely a change of commencement, and not the introduction of a new year; and also that from this time there were the two beginnings. The former opinion is at present purely hypothetical, and has been too much mixed up with the latter, for which, on the contrary, there is some evidence. See YEAR.

(6.) *Seasons.*—The ancient Hebrews do not appear to have divided their year into fixed seasons. We find mention of the natural seasons, קַיִץ, "summer," and חֹרֶף, "winter," which are used for the whole year (in Psa. lxxiv, 17; Zech. xiv, 8; and perhaps Gen. viii, 22). The former of these properly means the time of cutting fruits, and the latter that of gathering fruits; the one referring to the early fruit season, the other to the late one. Their true significations are, therefore, rather summer and autumn than summer and winter. There can be no doubt, however, that they came to signify the two grand divisions of the year, both from their use together as the two seasons, and from the mention of the "winter-house" (בֵּית הַחֹרֶף) and the "summer-house" (בֵּית הַקַּיִץ, Amos iii, 15). The latter evidence is the stronger, since the winter is the time in Palestine when a palace or house of different construction would be needed from the light summer pavilion, and in the only passage besides that referred to in which the winter-house is mentioned, we read that Jehoiakim "sat in the winter-house in the ninth month;" that is, almost at mid-winter; "and [there was a fire] on the hearth burning before him" (Jer. xxxvi, 22). It is probable, however, that "winter," or חֹרֶף, when used without reference to the year, as in Job xxix, 4, has its original signification. The phrase קֹר וָחֹם, "cold and heat," in Gen. viii, 22, is still more general, and cannot be held to indicate more than the great alternations of temperature, which, like those of day and night, were promised not to cease (Ideler, *Handbuch*, i, 494). There are two agricultural seasons of a more special character than the preceding in their ordinary use. These are זֶרַע, "seed-time," and קָצִיר, "harvest." Ideler makes these equal to the foregoing seasons when similarly used together; but he has not proved this, and the passage he quotes (Gen. *l. c.*) cannot be held to afford any evidence of the kind, until some other two terms in it are proved to be strictly correspondent. See SEASON.

3. *Festivals and Holy Days.*—Besides the Sabbaths and new-moons, there were four great festivals and a fast in the ancient Hebrew year, and a great celebration every seventh and fiftieth year. See FESTIVAL.

(1.) The Feast of the Passover (פֶּסַח) was properly only the time of the sacrifice and eating of the paschal lamb, that is, the evening, בֵּין הָעַרְבַּיִם, "between the two evenings" (Lev. xxiii, 5)—a phrase previously considered—of the 14th day of the first month, and the night following, the Feast of Unleavened Bread (חַג הַמַּצּוֹת) commencing on the morning of the 15th day of the month, and lasting seven days, until the 21st inclusive. The 15th and 21st days of the month were Sabbaths, that is, holy days. See PASSOVER.

(2.) The Feast of Weeks (חַג שָׁבֻעוֹת), or Pentecost, was kept at the close of seven weeks, counted from the day inclusive following the 16th of the 1st month. Hence its name means the feast of seven weeks, as indeed it is called in Tobit (ἁγία ἑπτὰ ἑβδομάδων, ii, 1). As the ears of barley as first-fruits of the harvest were offered on the 16th day of the 1st month, so on this day thanksgiving was paid for the blessing of the harvest, and first-fruits of wheat offered as well as of fruits; hence the names חַג הַקָּצִיר, Feast of the Harvest, and יוֹם הַבִּכּוּרִים, Day of the First-fruits. See PENTECOST.

(3.) The Feast of Trumpets, יוֹם תְּרוּעָה (lit. *day of trumpet-sound*), also called שַׁבָּתוֹן זִכְרוֹן תְּרוּעָה, i. e. "a great festival of celebration by the sound of the trumpet," was the 1st day of the 7th month, the civil commencement of the year. See TRUMPET.

(4.) The Day of Atonement, יוֹם הַכִּפֻּרִים, was the 10th day of the 7th month. It was a Sabbath, that is, a holy day, and also a fast, the only one in the Hebrew year before the Babylonish Captivity. Upon this day the high-priest made an offering of atonement for the nation. This annual solemn rite seems more appropriate to the commencement than to the middle of the year; and the time of its celebration thus affords some evidence in favor of the theory of a double beginning. See ATONEMENT (DAY OF).

(5.) The Feast of Tabernacles, חַג הַסֻּכּוֹת, was kept in the 7th month, from the 15th to the 22d days inclusive. Its chief days were the first and last, which were Sabbaths. Its name was taken from the people dwelling in tabernacles, to commemorate the Exodus. It was otherwise called חַג הָאָסִיף, i. e. "the feast of gathering," because it was also instituted as a time of thanksgiving for the end of the gathering of fruit and of the vintage. See TABERNACLES (FEAST OF).

The small number and simplicity of these primitive Hebrew festivals and holy days is especially worthy of note. It is also observable that they are not of an astronomical character; and that when they are connected with nature, it is as directing the gratitude of the people to him who, in giving good things, leaves not himself without witness. In later times many holy days were added. Of these the most worthy of remark are the Feast of Purim, or "Lots," commemorating the deliverance of the Jews from Haman's plot, the Feast of the Dedication, recording the cleansing and re-dedication of the Temple by Judas Maccabæus, and fasts on the anniversaries of great national misfortunes connected with the Babylonish Captivity. These last were doubtless instituted during that period (comp. Zech. vii, 1-5). See PURIM; DEDICATION.

(6.) *Sabbatical and Jubilee Years.*—The sabbatical year, שְׁנַת הַשְּׁמִטָּה, "the fallow year," or possibly "year of remission," or שְׁמִטָּה alone, also called a "sabbath," and a "great sabbath," was an institution of strictly the same character as the Sabbath—a year

of rest, like the day of rest. It has not been sufficiently noticed that as the day has a side of physical necessity with reference to man, so the year has a side of physical necessity with reference to the earth. Every seventh year appears to be a very suitable time for the recurrence of a fallow year, on agricultural principles. Besides the rest from the labors of the field and vineyard, there was in this year to be remission, temporary or absolute, of debts and obligations among the people. The sabbatical year seems to have commenced at the civil beginning of the year, with the seventh month. Although doubtless held to commence with the first of the month, its beginning appears to have been kept at the Feast of Tabernacles (Deut. xxxi, 10), while that of the jubilee year was kept on the Day of Atonement. This institution seems to have been greatly neglected, as indeed was prophesied by Moses, who speaks of the desolation of the land as an enjoying the sabbaths which had not been kept (Lev. xxvi, 34, 35, 43). The seventy years' captivity is also spoken of in 2 Chron. (xxvi, 21) as an enjoying sabbath; but this may be on account of the number being sabbatical, as ten times seven, which, indeed, seems to be indicated in the passage. After the lapse of seven sabbatical periods, or forty-nine years, a year of jubilee was to be kept, immediately following the last sabbatical year. This was called שְׁנַת הַיּוֹבֵל, "the year of the trumpet," or יוֹבֵל alone, the latter word meaning either the sound of the trumpet or the instrument itself, because the commencement of the year was announced on the Day of Atonement by sound of trumpet. It was similar to the sabbatical year in its character, although doubtless yet more important. In the jubilee year debts were to be remitted, and lands were to be restored to their former owners. It is obvious from the words of the law (Lev. xxv, 8-11) that this year followed every seventh sabbatical year, so that the opinion that it was always identical with a sabbatical year is untenable. There is a further question as to the length of each jubilee period, if we may use the term, some holding that it had a duration of fifty, but others of forty-nine years. The latter opinion does not depend upon the supposition that the seventh sabbatical year was the jubilee, since the jubilee might be the first year of the next seven years after. That such was the case is rendered most probable by the analogy of the weekly Sabbath, and the custom of the Jews in the first and second centuries B.C.; although it must be noted that, according to Maimonides, the jubilee period was of fifty years, the fifty-first year commencing a new period, and that the same writer mentions that the Jews had a tradition that after the destruction of the first Temple only sabbatical years, and no jubilee years, were observed (Ideler, *Handbuch*, i, 503, 504). The testimony of Josephus does not seem to us at all conclusive, although Ideler (*l. c.*) holds it to be so; for his language (*ταῦτα πεντήκοντα μὲν ἐστιν ἔτη τὰ πάντα*, *Ant.* iii, 12, 3) cannot be held to prove absolutely that the jubilee year was not the first year of a sabbatical period, instead of standing between two such periods.—It is important to ascertain when the first sabbatical year ought to have been kept; whether the sabbatical and jubilee periods seem to have been continuous; what positive record there is of any sabbatical or jubilee years having been kept; and what indications there are of a reckoning by such years of either kind. 1. It can scarcely be contested that the first sabbatical year to be kept after the Israelites had entered Canaan would be about the fourteenth (Jennings, *Jewish Antiquities*, bk. iii, cap. 9). It is possible that it might have been somewhat earlier or later; but the narrative will not admit of much latitude. 2. It is clear that any sabbatical and jubilee years kept from the time of Joshua until the destruction of the first Temple would have been reckoned from the first one, but it may be questioned if any kept after the return would be counted in the same manner: from the nature of the institutions, it is rather to be supposed that the reckoning, in the second case, would be from the first cultivation of the country after its reoccupation. The recorded sabbatical years do not enable us to test this supposition, because we do not know exactly the year of return, or that of the first cultivation of the country. The recorded dates of sabbatical years would make that next after the return to commence in B.C. 528, and be current in B.C. 527, which would make the first year of the period B.C. 534-3, which would not improbably be the first year of cultivation; but in the case of so short a period this cannot be regarded as evidence of much weight. 3. There is no positive record of any jubilee year having been kept at any time. The dates of three sabbatical years have, however, been preserved. These were current B.C. 163, 135, and 37, and therefore commenced in each case about three months earlier than the beginning of these Julian years (Josephus, *Ant.* xii, 9, 5; xiii, 8, 1; xiv, 16, 2; xv, 1, 2; *War*, i, 2, 4; and 1 Macc. vi, 49, 53). 4. There are some chronological indications in the O. T. that may not unreasonably be supposed to be connected with the sabbatical system. The prophet Ezekiel dates his first prophecy of those in the book "in the thirtieth year," etc., "which [was] the fifth year of king Jehoiachin's captivity" (i, 2); thus apparently dating in the former case from a better known æra than that of Jehoiachin's captivity, which he employs in later places, without, however, in general again describing it. This date of the 30th year has been variously explained; some, with Usher, suppose that the æra is the 18th year of Josiah, when the book of the law was found, and a great passover celebrated (see Hävernick, *Commentar über Ezech.* p. 12, 13). This year of Josiah would certainly be the first of the reckoning, and might be used as a kind of reformation-æra, not unlike the æra of Simon the Maccabee. Others suppose that the thirtieth year of the prophet's life is meant, but this seems very unlikely. Others again, including Scaliger (*De Emendatione Temporum*, p. 79, 218, ed. 1598) and Rosenmüller (*Schol.* in loc.), hold that the date is from the commencement of the reign of Nabopolassar. There is no record of an æra of Nabopolassar; that king had been dead some years; and we have no instance in the O. Test. of the use of a foreign æra. The evidence, therefore, is in favor of Josiah's 18th year, B.C. 623. There seems to be another reference to this date in the same book, where the time of the iniquity of Judah is said to be 40 years; for the final captivity of Judah (Jer. iii, 30) was in the 41st year of this reckoning. In the same place (Ezek. iv, 5, 6) the time of the iniquity of Israel is said to be 390 years, which sum, added to the date of the captivity of this part of the nation, B.C. 720, goes back to B.C. 1111. This result leads to the indication of possible jubilee dates; for the interval between B.C. 1111 and B.C. 623-2 is 488-9 years, almost exactly ten jubilee periods; and it must be remembered that the seventy weeks of the prophet Daniel seem to indicate the use of such a great cycle. It remains to be asked whether the accounts of Josiah's reformation present any indications of celebrations connected with the sabbatical system. The finding of the book of the Law might seem to point to its being specially required for some public service. Such a service was the great reading of the Law to the whole congregation at the Feast of Tabernacles in every sabbatical year (Deut. xxxi, 10-13). The finding of the book was certainly followed by a public reading, apparently in the first month, by the king to the whole people of Judah and Jerusalem, and afterwards a solemn passover was kept. Of the latter celebration is it said in Kings, "Surely there was not holden such a passover from the days of the Judges that judged Israel. nor in all the days of the kings of Israel, nor of the kings of Judah" (2 Kings xxiii, 22); and in

Chronicles, "There was no passover like to that kept in Israel from the days of Samuel the prophet; neither did all the kings of Israel keep such a passover as Josiah kept" (2 Chron. xxv, 18). The mention of Samuel is remarkable, since in his time the earlier supposed date (B.C. 1111) falls. It may be objected that the passover is nowhere connected with the sabbatical reckoning; but these passovers can scarcely have been greater in sacrifices than at least one in Solomon's reign, nor is it likely that they are mentioned as characterized by greater zeal than any others whatever, so that we are almost driven to the idea of some relation to chronology. See SABBATICAL YEAR; JUBILEE.

4. *Æras.*—There are indications of several historical æras having been used by the ancient Hebrews, but our information is so scanty that we are generally unable to come to positive conclusions. Some of these possible æras may be no more than dates employed by writers, and not national æras; others, however, can scarcely have been used in this special or individual manner from their referring to events of the highest importance to the whole people. See EPOCH.

(1.) The Exodus is used as an æra in 1 Kings vi, 1, in giving the date of the foundation of Solomon's Temple. This is the only positive instance of the occurrence of this æra, for we cannot agree with Ideler that it is certainly employed in the Pentateuch. He refers to Exod. xix, 1, and Num. xxxiii, 38 (*Handbuch*, i, 507). Here, as elsewhere in the same part of the Bible, the beginning of the Exodus-year—not, of course, the actual date of the Exodus (see *Regnal years*, below)—is used as the point whence time is counted; but during the interval of which it formed the natural commencement it cannot be shown to be an æra, though it may have been, any more than the beginning of a sovereign's reign is one. See EXODE.

(2.) The foundation of Solomon's Temple is conjectured by Ideler to have been an æra. The passages to which he refers (1 Kings ix, 10; 2 Chron. viii, 1) merely speak of occurrences subsequent to the interval of 20 years occupied in the building of the Temple and the king's house, both being distinctly specified; so that his reading ("Zwanzig Jahre, nachdem Salomo das Haus des Herrn erbaute") leaves out half the statement, and so makes it incorrect (*Handb.* l. c.). It is elsewhere stated that the building of the Temple occupied seven years (1 Kings vi, 37, 38), and that of Solomon's house thirteen (vii, 1), making up the interval of twenty years. See TEMPLE.

(3.) The æra once used by Ezekiel, and commencing in Josiah's 18th year, we have discussed above. See JOSIAH; EZEKIEL.

(4.) The æra of Jehoiachin's captivity is constantly used by Ezekiel. The earliest date is the 5th year (i, 2), and the latest the 27th (xxix, 17). The prophet generally gives the date without applying any distinctive term to the æra. He speaks, however, of "the fifth year of king Jehoiachin's captivity" (i, 2), and "the twelfth year of our captivity" (xxxiii, 21), the latter of which expressions may explain his constant use of the æra. The same æra is necessarily employed, though not as such, where the advancement of Jehoiachin in the 37th year of his captivity is mentioned (2 Kings xxv, 27; Jer. lii, 31). We have no proof that it was used except by those to whose captivity it referred. Its first year was current B.C. 598, commencing in the spring of that year. See JEHOIACHIN.

(5.) The beginning of the seventy years' captivity does not appear to have been used as an æra; but the destruction of Jerusalem by the Babylonians is occasionally referred to for chronological purposes (Ezek. xl, 1). See CAPTIVITY.

(6.) The return from Babylon does not appear to be employed as an æra; it is, however, reckoned from in Ezra (iii, 1, 8), as is the Exodus in the Pentateuch. See EZRA.

(7.) The æra of the Seleucidæ is used in the first and second books of Maccabees. See SELEUCUS.

(8.) The liberation of the Jews from the Syrian yoke in the first year of Simon the Maccabee is stated to have been commemorated by an æra used in contracts and agreements (1 Macc. xiii, 41). The years 1, 2, and 3 on the coins ascribed to Simon [see MONEY; SHEKEL] are probably of this æra, although it is related that the right of coining money with his own stamp was not conceded to him until somewhat later than its beginning (xv, 6), for it may be reasonably supposed either that Antiochus VII confirmed privileges before granted by his brother Demetrius II (comp. xv, 5), or that he gave his sanction to money already issued (*Encycl. Brit.*, 8th ed., s. v. Numismatics, p. 379, 380). See MACCABEES.

(9.) *Regnal Years.*—By the Hebrews regnal years appear to have been counted from the beginning of the year, not from the day of the king's accession. Thus, if a king came to the throne in the last month of one year, reigned for the whole of the next year, and died in the first month of the third year, we might have dates in his first, second, and third years, although he governed for no more than thirteen or fourteen months. Any dates in the year of his accession before that event, or in the year of his death after it, would be assigned to the last year of his predecessor and the first of his successor. The same principle would apply to reckoning from æras or important events, but the whole stated lengths of reigns or intervals would not be affected by it. See KING; KINGDOM.

II. *Data.*—The historical part of Hebrew chronology is not less difficult than the technical. The information in the Bible is indeed direct rather than inferential, although there is very important evidence of the latter kind; but the present state of the numbers makes absolute certainty in some cases impossible. In addition to this difficulty, there are several gaps in the series of smaller numbers which we have no means of supplying with exactness. When, therefore, we can compare several of these smaller numbers with a larger number, or with independent evidence, we are frequently prevented from putting a conclusive test by the deficiencies in the first series. Lately some have laid great stress upon the frequent occurrence of the number 40, alleging that it and 70 are vague terms equivalent to "many," so that "40 years" or "70 years" would mean no more than "many years." *Primâ facie* this idea would seem reasonable, but on a further examination it will be seen that the details of some periods of 40 years are given, and show that the number is not indefinite where it would at first especially seem to be so. Thus the 40 years in the wilderness can be divided into three periods: 1. From the Exodus to the sending out of the spies was about one year and a quarter (1 year, $1+x$ [2?] months, Num. ix, 1; x, 11; comp. ver. 29, showing it was this year, and xiii, 20, proving that the search ended somewhat after midsummer); 2. The time of search, 40 days (Num. xiii, 25); 3. The time of the wandering until the brook Zered was crossed, 38 years (Deut. ii, 14)—making altogether almost 39½ years. This perfectly accords with the date (yr. 40, m. 11, d. 1) of the address of Moses after the conquest of Sihon and Og (Deut. i, 3, 4), which was subsequent to the crossing of the brook Zered. So, again, David's reign of 40 years is divided into 7 years 6 months in Hebron, and 33 in Jerusalem (2 Sam. ii, 11; v, 5; 1 Chron. iii, 4; but 1 Kings ii, 11, 7 years, omitting the months, and 33). This, therefore, cannot be an indefinite number, as some might conjecture from its following Saul's 40 years, and preceding Solomon's. The last two reigns, again, could not have been much more or less from the circumstances of the history. The occurrence of some round numbers, therefore, does not warrant our supposing the constant use of vague ones. See NUMBER.

The attempt to "correct" or improve the Hebrew chronology by means of the data lately deciphered from the Egyptian and Assyrian inscriptions has been a favorite method of late, as was in previous times a similar comparison with the relics of ancient records in heathen authors. But, unfortunately, these statements are so discrepant with one another, and the results vary so widely, as to be of very little practical value for such a purpose. The hieroglyphical data are too fragmentary and disconnected, as well as too uncertainly translated hitherto, to afford any definite chronological chain; and the cuneiform legends do not rise so early as the disputed part of Biblical chronology. See EGYPT; ASSYRIA.

1. *From Adam to Abram's departure out of Haran.*—All the numerical data in the Bible for the chronology of this interval are comprised in two genealogical lists in Genesis, the first from Adam to Noah and his sons (Gen. v, 3 to the end), and the second from Shem to Abram (xi, 10-26), and in certain passages in the same book (vii, 6, 11; viii, 13; ix, 28, 29; xi, 32; xii, 4). The Masoretic Hebrew text, the Septuagint Version, and the Samaritan Pentateuch greatly differ, as may be seen by the following table, while the parallel causes whatever. As no two of the lists correspond throughout, and as a high degree of antiquity undoubtedly belongs to them all, each has had its advocates as the true original. The cardinal importance of the subject demands a clear, full, and impartial examination of the arguments that bear upon their authority severally, as well as upon the accuracy of particular numbers. As a preliminary, it must be noted that the variations are the result of design, not accident, as is evident from the years before the birth of a son and the residues agreeing in their sums in almost all cases in the antediluvian generations, the exceptions, save one (Lamech), being apparently the result of necessity that lives should not overlap the date of the Flood (comp. Clinton, *Fasti Hell.* n. i, 285). We have no clew to the date or dates of the alterations, except that we can trace the Sept. form to the 1st century of the Christian æra, if not higher, and the Heb. to the 4th century; if the Samar. numbers be as old as the text, we can assign them a higher antiquity than what is known as to the Heb. The little acquaintance most of the early Christian writers had with Hebrew makes it impossible to decide, on their evidence, that the variation did not exist when they wrote; the testimony of Josephus

PATRIARCHS.	Before Birth of Heir				After Birth of Heir.			Total Age.

accounts of Josephus (*Ant.* i, 3, 3, and 4, 9; 6, 5; 7, 1) do not exactly tally with any of them. The Latin Vulgate strictly conforms to the Hebrew. The principal various readings are given between brackets, and the numbers which are *combined* from statements in the text are enclosed in a parenthesis. In this period there are a number of serious difficulties.

(1.) The number of generations in the Sept. is one in excess of the Heb. and Samar., on account of the "Second Cainan," whom the best chronologers are agreed in rejecting as spurious. He is found elsewhere only in some copies at 1 Chron. i, 17, and in Luke iii, 36. Josephus, Philo, and the earlier Christian writers appear, however, to have known nothing of him, and it is therefore probable either that he was first introduced by a copyist into the Gospel and thence into the Sept., or else that he was found in some MSS. of the Sept. and thence introduced into the Gospel, and afterwards into all other copies of the Sept. See CAINAN.

(2.) The remarkable discrepancies in nearly all the names as to the respective ages before and after the birth of the eldest son, while the totals given generally agree, has occasioned greater variety in the schemes of different Biblical chronologers than any or all other is here of more weight, but in his present text it shows contradiction, though preponderating in favor of the Sept. numbers. A comparison of the lists would lead us to suppose, on internal evidence, that they had first two forms, and that the third version of them originated from these two. This supposed later version of the lists would seem to be the Samar., which certainly is less internally consistent, on the supposition of the original correctness of the numbers, than the other two. The cause of the alterations is most uncertain. It has indeed been conjectured that the Jews shortened the chronology, in order that an ancient prophecy that the Messiah should come in the sixth millenary of the world's age might not be known to be fulfilled in the advent of our Lord. The reason may be sufficient in itself, but it does not rest upon sufficient evidence. It is, however, worthy of remark, that in the apostolic age there were hot discussions respecting genealogies (Tit. iii, 9), which would seem to indicate that great importance was attached to them, perhaps also that the differences, or some difference, then existed. The different proportions of the generations and lives in the Sept. and Heb. have been asserted to afford an argument in favor of the former. At a later period, however, when we find instances of longevity

recorded in all versions, the time of marriage is not different from what it is at the present day, although there are some long generations. A stronger argument for the Sept., in view of the unity of the human race, is found in the long period required from the Flood to the Dispersion and the establishment of kingdoms. This supposition would, however, require that the patriarchal generations should be either exceptional or represent periods. For the former of these hypotheses we shall see there is some ground in the similar case of certain generations, just alluded to, from Abraham downwards. With respect to probability of accuracy, arising from the state of the text, the Heb. certainly has the advantage. There is every reason to think that the Rabbins have been scrupulous in the extreme in making alterations; the Sept., on the other hand, shows signs of a carelessness that would almost permit change, and we have the probable interpolation of the post-diluvian Cainan. If, however, we consider the Samar. form of the lists as sprung from the other two, the Sept. would seem to be earlier than the Heb., since it is more probable that the antediluvian generations would have been shortened to a general agreement with the Heb., than that the post-diluvian would have been lengthened to suit the Sept.; for it is obviously most likely that a sufficient number of years having been deducted from the earlier generations, the operation was not carried on with the later. It is noticeable that the stated sums in the post-diluvian generations in the Samar. generally agree with the computed sums of the Heb., and not with those of the Sept., which would be explained by the theory of an adaptation of one of these two to the other, although it would not give us reason for supposing either form to be the earlier. The general presumption, on external grounds, would certainly be in favor of the Heb., both as being unquestionably the original from which the others (except perhaps the Samar., which, singularly enough, is the least probable, on other considerations, of all) are known to have been translated—and a version can never rise higher in authority than its source; and also because of the manifestly greater state of purity in which this text has been transmitted to us, in comparison with either of the others. See SEPTUAGINT; SAMARITAN PENTATEUCH. The text of Josephus is too corrupt in its numbers to be at all relied upon, as may be seen from the slightest comparison of the sums in the title of the chapters with the detailed contents, having doubtless been tampered with by readers who used only the Sept. or Vulg. versions.

There can be no question that the author or last redactor of the book of Genesis intended that the narrative should be connected by this continuous series of time-marks. Jewish and Christian chronographers accepted the statements unquestioned; and held that the series of years of the world thus formed, from the creation of the first man to the death of Joseph, accorded with the truth of facts. The import and the authority of the numerical statements were to them unimpeachable; the only question was that which related to their genuine form. And supposing the inquirer to have decided in favor of the Greek text, even so there are diversities to be discussed, for the Sept. has various readings of some of the numbers both before and after the Flood; in particular, while most of the copies have a second Cainan after Arphaxad, with a descent of 130 years, this addition is ignored by other copies and by important authorities (see Browne, *Ordo Sæcl.* § 307, and note; Mill, *On the Descent and Parentage of the Saviour*, p. 143 sq.). These considerations will account for the enormous discrepancy which appears in the estimates formed by different chronologists of the number of years contained in the book of Genesis. The Hebrew numbers, from Adam to Terah's 70th year, make 1656 *plus* 292 years; the Sept., with its various readings, 2242 or 2262 *plus* 942, or 1042, or 1072, or 1172; the Samaritan, 1307 *plus* 942. This last, however, need not come into consideration, since it is well understood that the Samaritan text, here as elsewhere, is merely fabricated from the Greek (Hengstenberg, *Auth. des Pent.* 1, 32 sq.); and those who treat it as an independent authority (e. g. Lepsius, *Chronol. der Æg.* p. 397 sq.) only show themselves ignorant of the results of criticism on this subject. Of course the Sept., in one or more of its enumerations, would be followed by those early inquirers who had access to that text only; the earliest extant estimate, by Demetrius, an Alexandrine Jew of the third century B.C. (quoted from Alexander Polyhistor by Eusebius, *Præp. Evang.* ix, 21, 12), makes the interval from Adam to the birth of Abraham 2262 *plus* 1072. Josephus certainly did not follow the Sept.; his numbers in the generations before and after the Flood have been forced into conformity with the Greek by a later and unskilful hand, which betrays itself by leaving its work incomplete (Browne, *Ordo Sæcl.* § 319-321). As the chronology of Dr. Hales (which some still accept as authoritative) professes to be based on the Sept., rectified by the aid of Josephus, it ought to be known that the text of this author, besides having been palpably vitiated in this portion of it (*Ant.* i, 3, 4; 6, 5), swarms with gross inconsistencies, caused, it would seem, by his adopting, without reflection, statements belonging to different chronological systems (see Niebuhr, *Geschichte Assurs u. Babels*, p. 347 sq.). Of the Christian writers of the first three centuries Origen alone knew Hebrew, and he first leaves the Sept., but only in part; Jerome, the learned Hebraist, declares for "the Hebrew verity," and as his recension of the old italic version forms the basis of the Sixtine Vulgate, which a canon of Trent declares, under anathema, to be canonical and infallible, the Hebrew chronology is virtually perpetuated in the churches of the Roman obedience. The Greek Church still holds by the Sept. Our own popular Bible chronology (Usher's, which Bishop Lloyd attached to the margin of our Bibles) follows the Hebrew. During the last century there has been a disposition, in some of our own and the Continental writers, to abandon the Hebrew for the Sept., chiefly prompted by the wish to enlarge the period before Abraham, so as to allow more time for the growth of nations after the Flood, and (more recently) to facilitate the "connection of sacred and profane chronology" in the earliest ages of mankind, especially with respect to Manetho's Egyptian chronology. The question of probability and inducement—to enlarge on the part of the Alexandrine Jews (comp. Bunsen, *Æg. St.* v, 68), to contract on the part of the Masoretes—is discussed in Browne's *Ordo Sæclorum*, § 308 sq.; and the artificial processes by which the Sept. numbers are formed from the Hebrew, and not *vice versa*, have been exposed by the same writer, *ib.* § 313 sq., and further in *The Cycles of Egyptian Chronology*, § 72 (Arnold's *Theological Critic*, ii, 145 sq.). The fundamental importance of the subject in Biblical chronology requires a more exact and detailed examination than we find in the Dictionaries of Smith and Kitto, from which the preceding investigations are chiefly taken, as are also portions of subsequent discussions in this article.

(*a.*) *General Internal Evidence.*—It is a noticeable fact that in the antediluvian portion the Heb. is the only list (unless we except that of Josephus, which has no independent value) in which every number is corroborated by the corresponding one in some one or other of the rest; while in the post-dilvuian line, after the exclusion of the second Cainan, it stands almost alone: the preponderance of evidence from this method of comparison is therefore about balanced. Again, it is a most suspicious circumstance in the Samar. that its numbers, where there is any variation, regularly lessen the period prior to parentage, as the lineage descends, by removing the irregular hundred years before the Flood, and annexing it to the ages below that

point; while the Sept. (and Josephus) attain a similar uniformity by adding one hundred years to the deficient numbers throughout; whereas the Heb. exhibits no such marks of gradation, but presents a natural irregularity in this respect, although the numbers, on the whole, decrease as the period of longevity contracts; while, on the other hand, if either of the other lists be assumed as the prototype, no possible reason can be assigned or imagined for the arbitrary enlargement or diminution here and there of a particular number. The briefer scheme of the Heb. post-diluvian genealogy is also exactly sustained by the sum 367 (i. e. the birth of Abram 292 years from the Deluge + 75 years to his departure from Haran) definitely given by Josephus, in opposition to his own magnified numbers in detail, although the weight of this argument is affected by the existence of various readings of that aggregate in his text. We must not omit to observe that those who espouse the schedule transmitted by the Sept. and Josephus, as affording the longer space between the Creation and the Deluge for the extensive propagation of the antediluvian race, and also after the Flood for the dissemination of mankind into powerful nations in the earliest times, herein only defeat their own argument; for it is obvious that, so long as the entire length of each patriarch's life remains unchanged, by whatever amount the period prior to marriage is augmented, just so much time is taken from the remainder for procreation: the earlier the age of paternity, the greater will naturally be the increase of population in a given number of generations. The rapid advance in adolescence after the Deluge, so marked in the Heb. numbers, was doubtless providential for the purpose of replenishing the earth as speedily as possible after that catastrophe.

(*b*.) *Individual Discrepancies.*—In addition to the post-diluvian Cainan noticed above, the following names appear to furnish decided proof of the superior trustworthiness of the Heb. list (see the conclusive treatise of Michaelis on this subject, translated in the *Amer. Bib. Repos.*, 2d ser., vi, 114 sq.; also some judicious remarks by Dr. Pond in the *Meth. Quart. Review*, July, 1867).

[1.] In the cases of Adam and Seth, the addition of 100 years to their age before paternity disturbs the average ratio between the season of growth and the total life, which in man, as in other animals, is a well-established proportion. These two patriarchs passed nearly one quarter of their lives childless, although their immediate successors were blessed with offspring when they had advanced but about one tenth to one twelfth in life. Was the command to "increase and multiply and fill the earth" so much less urgent in the first centuries of the world than subsequently? In the numbers assigned to the first two generations, moreover, the various readings found in the text of Josephus nearly destroy the support which it gives to the Sept., leaving the balance of evidence decidedly in favor of the tallying numbers in the Heb. and Samar.; and in the next three generations there is at least an equipoise between the authorities, which are arrayed in the same manner.

[2.] The Heb. numbers in the case of Jared are sustained by all the other lists except the Samar., which not only deducts the century from his minority, but also arbitrarily curtails his subsequent years by a different amount (25 years), evidently in order to force the total life into conformity with the plan of gradual reduction below the length of the preceding generation. In the next name, that of Enoch, the Heb. and Samar. again appear in unison against the Sept. and Josephus, the testimony of the last being impaired by the corrupt state of his numbers at this point.

[3.] The numbers given under Methuselah and Lamech, however, most decisively betray, according to the settled laws of internal criticism, marks of intentional corruption in all but the Heb. list. Not only are the years of each of the others totally unsupported by one another, where they differ from this, under both these names, and also embarrassed by various readings of a glaring character, but a comparison of them with the date of the Deluge shows unmistakably that they were altered so as to place the demise of these two patriarchs "high and dry" beyond the reach of this event. Those who have sneeringly remarked that, according to the Hebrew chronology of Usher, "Methuselah was drowned in Noah's Flood by act of British Parliament" (which sanctioned that prelate's scheme by authorizing its insertion in the margin of the English Bible), are not only incorrect in that particular (for Methuselah [q. v.], according to the Heb. numbers, died a full month before the Deluge began), but they reason uncritically, inasmuch as so palpable an objection only shows the honesty of the Masoretic editors, who allowed it to remain upon the face of their text, when they might, by a slight alteration, so quietly have obviated it. The ingenious tinkers of the Samar. and Greek chronologies, on the contrary, have carefully attempted to remove this stumbling-block from the way of their version by a violent modification of the numbers in question, docking off here, and splicing on there, to suit circumstances. Yet, like forgers usually, they have, after all, fallen into confusion, and convicted themselves by their own traces; the Samar. and most of the readings of the Greek copies do but make the year of the death of these patriarchs coincide with that of the Flood, while the very suspicious fact remains that the lives of these two alone (besides that of Jared in the Samar.) are abbreviated not only in comparison with the longer and more difficult dates of the other lists, but suddenly, as if for a special purpose, between instances of greater longevity immediately before (excluding Enoch, who was translated alive) and after. The Heb. list can alone be defended at this point on critical grounds.

[4.] The general agreement in greater age assigned to the post-diluvian patriarchs by the Samar. and Greek lists is not more difficult to explain to the advantage of the Heb. If the former be the original form, no reason can be assigned for the change; but if the latter be assumed as giving the genuine numbers, it is easy to perceive how readily they may have been augmented in order to swell the primitive æra of repopulation after the Flood into a nearer conformity with the extravagant mythical periods of early heathen histories. With the Egyptians, among whom the Sept. is known to have originated, the influence of which may plainly be traced in the present account of Josephus (and possibly, through some indirect channel, that of the Samar. also), this temptation would be peculiarly strong. The internal evidence here, however, it must be confessed, is rather in favor of the Samar. numbers, corroborated as they are throughout as to the age of paternity by those of the Sept. and (but less accurately) Josephus; and we might even be inclined to adopt them, as consistent in gradation with those preferred in the antediluvian portion, did not the manifest want of authority in the non-Hebrew schemes for that part cast a strong doubt of accuracy over them in this part likewise. This suspicion is confirmed by the want of harmony between the Samar. and Sept. as to the post-diluvian ages after paternity, the latter list conforming in this respect quite closely to the Heb. If we turn to the evidence of ancient records and tradition, we find the numbers of the Sept. confirmed rather than those of the Heb. The history and civilization of Egypt, as well as of Assyria and Babylonia, reach to a time about as early as the Heb. date of the Flood. Moreover, the concurrent evidence of antiquity carries the origin of Gentile civilization to the Noachian races. On the acceptance, therefore, of the Heb. numbers we must place (as we easily may) the dispersion of nations [see ETHNOLOGY] very soon

after the Deluge. Important aid in this approximation of sacred with profane chronology is afforded by the considerable extension of the Biblical period of the Judges, noticed below, beyond that fixed by Usher.

(3.) An important rectification of the last generation is required in all the lists. According to them, it would appear that Terah was 70 years old at Abram's birth. "Terah lived seventy years, and begat Abram, Nahor, and Haran" (Gen. xi, 26). It is afterwards said that Terah went from Ur of the Chaldees to Haran, and died there at the age of 205 years [Samar. 145] (xi, 31, 32); and the departure of Abram from Haran to Canaan is then narrated (comp. Acts vii, 4), his age being stated to have been at that time 75 years (xii, 1-5). Usher therefore conjectures that Terah was 130 years old at Abram's birth (205 − 75 = 130), and supposes the latter not to have been the eldest son, but mentioned first on account of his eminence, as is Shem in several places (v, 32; vi, 10; vii, 13; ix, 18; x, 1), who yet appears to have been the third son of Noah, and certainly not the eldest (x, 21). To this it has been objected, however, that it seems scarcely probable that if Abram had been born to his father at the age of 130 years, he should have asked in wonder, "Shall [a child] be born unto him that is a hundred years old? and shall Sarah, that is ninety years old, bear?" (Gen. xvii, 17). But the force of this objection is almost entirely obviated when it is considered that Terah had previously had a son, whereas Abraham at the time of his observation was altogether childless. It is better, therefore, to adopt this arrangement, than to make an arbitrary change in the numbers, as the Samar. apparently has done.

2. *From Abram's departure out of Haran to the Exodus.*—The length of this period is stated by Paul as 430 years from the promise to Abraham to the giving of the Law (Gal. iii, 17), the first event being held to be that recorded in Gen. xii, 1-5. The same number of years is given in Exodus (xii, 40, 41), where the Heb. reads, "Now the sojourning of the children of Israel who dwelt in Egypt [was] four hundred and thirty years. And it came to pass at the end of the four hundred and thirty years, even the self-same day it came to pass, that all the hosts of the Lord went out from the land of Egypt." Here the Sept. and Samar. add after "in Egypt" the words "and in Canaan," while the Alexandrian and other MSS. of the former also add after "the children of Israel" the words "and their fathers." It seems most reasonable to regard both these additions as glosses; if they are excluded, the passage appears to make the duration of the sojourn in Egypt 430 years, but this is not an absolutely certain conclusion. The "sojourning" might well include the period after the promise to Abraham, while that patriarch and his descendants "sojourned in the land of promise as [in] a strange country" (Heb. xi, 9), for it is not positively said "the sojourning of the children of Israel in Egypt," but "who dwelt in Egypt." As for the very day of close being that of commencement, it might refer either to Abraham's entrance or to the time of the promise. A third passage is the divine declaration to Abraham of the future history of his children: "Know of a surety that thy seed shall be a stranger in a land [that is] not their's, and shall serve them; and they shall afflict them four hundred years; and also that nation, whom they shall serve, will I judge; and afterward shall they come out with great substance" (Gen. xv, 13, 14; comp. Acts vii, 6, 7). The four hundred years cannot be held to be the period of oppression without a denial of the historical character of the narrative of that time, but can only be supposed to mean the time from this declaration to the Exodus. It is also noticeable that after the citation given above the events of the whole sojourn are repeated, showing that this was the period spoken of, and perhaps, therefore, the period defined (xv, 15, 16) as "the fourth generation."

But the question, From what point of time are these years reckoned? has been variously answered, and chronological schemes vary accordingly. Some, as the Sept., Josephus, the Jewish Chronology, and most Christian writers, assign the period to the entire sojourn in Canaan and Egypt, beginning either with the Call of Abraham (Gen. xii), or the Promise (xv); others date it from the close of the period during which the Promises were made (Perizonius, Schöttgen); some (as Bengel) from the birth of Jacob; while numerous recent writers give the whole period to the sojourn in Egypt, reckoned from the descent of Jacob and the patriarchs into that country (see Knobel, in loc.; Browne, *Ordo Sæcl.* § 284-288). The genealogy of Moses is inconsistent with so long an interval as 430 years between Jacob's 130th and Moses' 80th year; for we learn that between Levi and Moses were only two descents—indeed, by the mother's side (Jochebed, "daughter" of Levi), only one; and as the sum of the lives of Levi, Kohath, and Amram is 137 + 133 + 137, it follows that from the birth of Levi to the birth of Moses must be considerably less than 407 years. So also the other genealogies, in which (with one exception, and that only apparent) we constantly arrive at contemporaries of Moses in the 4th, 5th, and 6th descent from the twelve patriarchs (Browne, *Ordo Sæcl.* § 284-288). Hence we must measure this interval of 430 years (Gal. iii, 17) from the call of Abraham, in his 76th year (Gen. xii, 4), after the death of Terah (Acts vii, 4; Gen. xi, 32), to the Exodus.

The narrative affords the following data, which we place under two periods—that from Abram's leaving Haran to Jacob's entering Egypt, and that from Jacob's entering Egypt to the Exodus.

(*a.*)		Age of Abram on leaving Haran	75 yrs.
		Age of Abram at Isaac's birth	100
		Difference	25
		Age of Isaac at Jacob's birth	60
		Age of Jacob on entering Egypt	130
			215
(*b.*)	(1.)	Age of Levi on entering Egypt	cir. 45
		Residue of his life	92
		Oppression after the death of Jacob's sons (Exod. i, 6, 7 sq.)	?
		Age of Moses at Exodus	80
			172
	(2.)	Age of Joseph on Jacob's entering Egypt	39
		Residue of his life	71
		Oppression	?
		Age of Moses at Exodus	80
			151

These data make up at least 387 or 366 years, to which some addition must be made, since it appears that all Joseph's generation died before the oppression commenced, and it is probable that it had begun some time before the birth of Moses. The sum we thus obtain cannot be far different from 430 years, a period for the whole sojourn that these data must thus be held to confirm.

The genealogies relating to the time of the dwelling in Egypt, if continuous, as there is much reason to suppose that some are, do not seem repugnant to this scheme; but, on the other hand, only one of them, that of Joshua, in 1 Chron. (vii, 23, 25, 26, 27), *if a succession*, can be reconciled with the opinion that dates the 430 years from Jacob's entering into Egypt. Another important historical point of evidence is the increase of the Israelites from the few souls who went with Jacob into Egypt, and Joseph and his sons, to the six hundred thousand men who came out at the Exodus. At the former date the following are enumerated: "besides Jacob's sons' wives," Jacob, his twelve sons and one daughter (13), his fifty-one grandsons and one granddaughter (52), and his four great-grandsons, making, with the patriarch himself, seventy souls (Gen. xlvi, 8-27). See JACOB. The generation to which children would be born about this date may thus be held to have been of at least 51 pairs, since all

are males except one, who probably married a cousin. This computation takes no account of polygamy, which was certainly practised at the time by the Hebrews. This first generation must, except there were at the time other female grandchildren of Jacob besides the one mentioned (comp. Gen. xlvi, 7), have taken foreign wives, and it is reasonable to suppose the same to have been constantly done afterwards, though probably in a less degree. We cannot, therefore, found our calculation solely on these 51 pairs, but must allow for polygamy and foreign marriages. These admissions being made, and the especial blessing which attended the people borne in mind, the interval of about 215 years does not seem too short for the increase.—On the whole, we have no hesitation in accepting the 430 years as the length of the interval from Abram's leaving Haran to the Exodus.

3. *From the Exodus to the Foundation of Solomon's Temple.*—There is but one passage from which we obtain the length of this period as a whole (see Walther, in Baumgarten's *Sammlungen*, 1748, ii, 313–488). It is that in which the Foundation of the Temple is dated in the 480th (Heb.), or 440th (Sept.) year after the Exodus, in the 4th year 2d month of Solomon's reign (1 Kings vi, 1). This sum we have first to compare with the detailed numbers. These are as follows: (*a.*) From the Exodus to the death of Moses, 40 years. (*b.*) Leadership of Joshua, $7+x$ years. (*c.*) Interval between Joshua's death and the First Servitude, y years. (*d.*) Servitudes and rule of Judges until Eli's death, 430 years. (*e.*) Period from Eli's death to Saul's accession, $20+z$ years. (*f.*) Saul's reign, 40 years. (*g.*) David's reign, 40 years. (*h.*) Solomon's reign to Foundation of Temple, 3 years. Sum, $580+x+y+z$ years. It is possible to obtain approximatively the length of the three wanting numbers. (1.) Joshua's age at the Exodus was at least 20 years (Num. xiv, 29, 30), and at his death, 110; therefore the utmost length of his rule must be $110-(20+40)=50$ years. The duration of Joshua's government is limited by the circumstance that Caleb's lot was apportioned to him in the 7th year of the occupation, and therefore of Joshua's rule, when he was 85 years old, and that he conquered the lot after Joshua's death. Caleb cannot be supposed to have been a very old man on taking his portion, and it is unlikely that he would have waited long before attacking the heathen who held it, to say nothing of the portion being his claimed reward for not having feared the Anakim who dwelt there, a reward promised him of the Lord by Moses and claimed of Joshua, who alone of his fellow-spies had shown the same faith and courage (Num. xiv, 24; Deut. i, 36; Josh. xiv, 6 *ad fin.*; xv, 13-19; Judg. i, 9-15, 20). The least length of Joshua's rule would be about 10 years. Josephus (*Ant.* v, 1, 29) fixes it midway between these limits, or at 25 years, which may be adopted as the probable length. (2.) The interval between Joshua's death and the First Servitude is limited by the history of Othniel. After Joshua there is the time of the elders who overlived him, then a period of disobedience and idolatry, a servitude of 8 years, deliverance by Othniel the son of Kenaz, the nephew of Caleb, and rest for 40 years, until Othniel's death. He was already a warrior when Caleb conquered his lot; he lived to deliver Israel from the Mesopotamian oppressor, and died at the end of the subsequent 40 years of rest. Supposing Othniel to have been 30 years old at the time of his first exploits, and 110 years at his death, then $110-(30+18+8+40)=24$ years would remain for the interval in question. Josephus (*Ant.* vi, 5, 4) reasonably fixes it at 18 years, which cannot be far from correct. (3.) The residue of Samuel's judgeship after the 20 years from Eli's death, ending with the solemn fast and victory at Mizpeh, can scarcely have much exceeded 20 years; Josephus (*Ant.* vi, 13, 5) assigns it a length of 12 years. Samuel must have been still young at the time of Eli's death, and he died near the close of Saul's reign (1 Sam. xxv, 1; xxviii, 3). If he were 20 years old at the former date, and judged for 12 years after the victory at Mizpeh, he would have been near 85 years old $(20+20+12+32=84)$ at his death, which appears to have been a long period of life at that time. We thus arrive at the following numbers for the various portions of this period:

	Years.		Years.
Wandering in the Desert.	40	Fifth Servitude	18
Joshua's Rule	25	Jephthah's Judgeship	6
Surviving Elders	18	Ibzan's Judgeship	7
First Servitude	8	Elon's Judgeship	10
Othniel's Judgeship	40	Abdon's Judgeship	8
Second Servitude	18	Sixth Servitude	40
Ehud's Judgeship (including Shamgar's)	80	Samson's Judgeship	20
Third Servitude	20	Eli's Judgeship	40
Barak's Judgeship	40	Seventh Servitude	20
Fourth Servitude	7	Samuel's Judgeship	12
Gideon's Judgeship	40	Saul's Reign	40
Abimelech's Reign	3	David's Reign	40
Tola's Judgeship	23	Solomon's first years	3
Jair's Judgeship	22	Total	648

Two independent large numbers seem to confirm this result. One is in Paul's address at Antioch of Pisidia, where, after speaking of the Exodus and the 40 years in the desert, he adds: "And when he had destroyed seven nations in the land of Chanaan, he divided their land unto them by lot. And after that he gave [unto them] judges about the space of four hundred and fifty years, until Samuel the prophet. And afterward they desired a king" (Acts xiii, 19, 20, 21). This interval of 450 years may be variously explained—as commencing with Othniel's deliverance and ending with Eli's death, a period which the numbers of the earlier books of the Bible, if added together, make 442 years; or as commencing with the First Servitude, 8 years more, which would be exactly 450 years; or with Joshua's death, which would raise these numbers by about 18 years; or again, it may be held to end at Saul's accession, which would raise the numbers given respectively by about 32 years. However explained, this sum of 450 years supports the authority of the detailed numbers as forming an essentially correct measure of the period; and the precise coincidence with one of the foregoing modes of computation seems to show that it was that which Paul adopted. The other large number occurs in Jephthah's message to the king of the Children of Ammon, where the period during which Israel had held the land of the Amorites from the first conquest either up to the beginning of the servitude from which they were about to be freed, or up to the very time, is given as 300 years (Judg. xi, 26). The above detailed numbers, including the uncertain periods, would make these intervals respectively 344 and 362 years. Here, therefore, there appears to be an agreement, although not positive, since the meaning might be either three centuries, as a vague sum, or about 300 years. So far as the evidence of the numbers goes, we must decide in favor of the longer interval, from the Exodus to the building of the first Temple, in preference to the period of 480 or 440 years.

The evidence of the genealogies has been held by some to sustain a different conclusion. These lists, as they now stand, would, if of continuous generations, be decidedly in favor of an interval of about 300, 400, or even 500 years, some being much shorter than others. It is, however, impossible to reduce them to consistency with each other without arbitrarily altering some, and the result, with those who have followed them as the safest guides, has been the adoption of the shortest of the numbers just given, about 300 years. The evidence of the genealogies may therefore be considered as probably leading to the rejection of all numerical statements, but as perhaps less inconsistent with that of 480 or 440 years than with the rest.

The statement in 1 Kings vi, 1, is accepted by Hillel, the author of the modern Jewish chronology, who makes the 480 years one of the elements for the con-

struction of his Mundane æra; by Usher also, by Petavius, who, however, dates the period from the Eisode, and by many others. In more recent times, Hengstenberg (*Authentie des Pentateuchs*, ii, 23 sq.), Hofmann (in the *Studien u. Kritiken*, 1838), Thenius (*On* 1 *Kings* vi, 1), Tiele (*Chronol. des A. T.*), Gehringer (*Ueber die biblische Ære*), Niebuhr (*Gesch. Assurs u. Bab.*), uphold the statement as historical. But though this measure, by bridging over the interval from Moses to Solomon, enables the chronologist, when he has formed his mundane series down to the Exode, to assign the year *anno mundi* of 4 Solomon and so of 1 David, or, having traced the reckoning B.C. up to 1 Solomon, to give the year B.C. of the Exode, the whole tract of time occupied by the Judges is still loose at either end, and needs much management to define its bearings. For the items actually enumerated, being (even if the entire 40 years of Eli and the 20 years of the Ark at Kirjath-Jearim be included in the 390 of the Judges) 47+390+43=480, no room is left for Joshua and the elders, Samuel and Saul. Accordingly, the chronologists who accept this measure are obliged to resort to violent expedients—the assumption that some of the servitudes were contemporary, and others, which it is clearly impossible to exalt above the rank of ingenious conjectures. But the number 480 is, in fact, open to grave suspicion. The Sept. has instead of it 440. Josephus takes no notice of either, and on various occasions makes the interval 592, 612, and 632 years; the early Christian chronographers also ignore the measure—thus Theophil. Antioch. reckons 498 to 1 David; Clem. Alex. to 1 Saul, 490; Africanus, 677 years. Paul's enumeration, in Acts xiii, 18–21, also proves at least this, that Jews in his time reckoned the interval in a way which is inconsistent with the statement in 1 Kings vi, 1. He gives from the Exode to 1 David 40+450+40=530; therefore to 4 Solomon, 578 years. Paul's term of 450 years is evidently the interval from the First Servitude to the end of those 20 years of the Ark, 1 Sam. vii, 2 (composed of 390+40+20). Clinton (*Fasti Hell.* i, 312) dates the 450 from the partition of lands (47th after Exode), *assumes* 20 years for Joshua and the elders, and another term of 12 years between the 20 years of the Ark (1 Sam. vii, 2) and the 40 years which he gives entire to Saul, thus making the sum 612 years. It remains only to state that the text in 1 Kings vi, 1, cannot be impugned on strictly critical grounds, excepting the various reading in the Sept.; the other versions and the Heb. MSS. are uniform in their testimony: that date, therefore, must be summarily rejected as an early interpolation, as is done by most modern chronologers. For a further examination of the period in question, see JUDGES. For the value of Egyptian dates of the Exode, see below. (See also in the *Stud. u. Kritiken*, 1863, iv.)

4. *From the Foundation of Solomon's Temple to its Destruction.*—We have now reached a period in which the differences of chronologers are no longer to be measured by centuries, but by tens of years and even single years, and towards the close of which almost perfect accuracy is attainable. The most important numbers in the Bible are here generally stated more than once, and several means are afforded by which their accuracy can be tested. The principal of these tests are the statement of kings' ages at their accessions, the double dating of the accessions of kings of Judah in the reigns of kings of Israel and the converse, and the double reckoning by the years of kings of Judah and of Nebuchadnezzar. Of these tests the most valuable is the second, which extends through the greater part of the period under consideration, and prevents our making any very serious error in computing its length. The notices of kings of Egypt and Assyria, contemporary with Hebrew sovereigns during this period, are also of importance, and are likely to be more so, when, as we may expect, the chronological places of all these contemporaries are more nearly determined. All records, therefore, tending to fix the chronologies of Egypt and Assyria, as well as of Babylonia, in these times, are of great value, from their bearing on Hebrew chronology. At present the most important of such records is Ptolemy's Canon, from which no sound chronologer will venture to deviate. In the Biblical statements the number and importance of inconsistencies has usually been much exaggerated, since several supposed disagreements depend upon the non-recognition of the mode of reckoning regnal years from the commencement of the year, and not from the day of the king's accession; still a few difficulties cannot be resolved without the supposition that numbers have been altered by copyists. Many of the dates are reckoned from a joint accession of several of the kings with their respective fathers, and a few are even posthumous. Two interregna in the kingdom of Israel have generally been supposed, and none others are necessary; namely, one of 11 years, between Jeroboam II and Zachariah, and the other of 8 years, between Pekah and Hoshea. The former supposition might seem to receive some support from the words of the prophet Hosea (x, 3, 7, and perhaps 15), which, however, may only imply a lax government, and the great power of the Israelite princes and captains, as an absolute anarchy. The following table exhibits the length of this period as thus adjusted, according to the double line of kings; for the details of the chronology, see ISRAEL (KINGDOM OF); JUDAH (KINGDOM OF).

Jehoiakim	11		
Jehoiachin	0		
Zedekiah	10		
Babylonian Captivity	385		
Total..........	422	years of duration of Temple.	

The gross sum total of the regnal years of Judah, to the year of the Assyrian Captivity, is 260, as the numbers stand in the text; of the Ten Tribes, 243; but, as they may be corrected by synchronal data, only 257 and 238 years respectively. This deficit of 19 years has been by most chronologists taken to imply that the two gaps in the Israelite succession, which are brought to light by the synchronisms, were intervals of anarchy, filled up (as above) by interregna—one of 11 years, between the death of Jeroboam II, in 27 Uzziah, and the accession of Zachariah, in 38 Uzziah; the other, of 8 years, between the death of Pekah, in 4 Ahaz, and the accession of Hoshea, in the 12th of the same reign. But later writers prefer to liquidate the reckoning by assuming an error in the regnal years of Jeroboam II and Pekah. Thus Ewald, making the difference 21

years, gives these kings 53 and 29 years respectively, instead of 41 and 20 (*Gesch. des Volkes Isr.* iii, 1, p. 261–313); Thenius (*Die BB. der Könige*, p. 346), by a more facile emendation, makes the numbers 51 and 30 (נא for מא, and ל for כ); J. v. Gumpach (*Zeitrech. d. Bab. u. Assyr.*), though reducing the total amount to 241 years, gives Pekah 29 years and retains the 41 of Jeroboam; Lepsius (*Chronol. der Æg.*) makes the reigns 52 and 30; and Bunsen, *Ægyptens Stelle*, bk. iv, p. 381, 395, 402) makes Jeroboam reign 61 years, and retains for Pekah his 20 years. Movers (*Die Phönizier*, ii, 1, 153), by a peculiar method of treatment, reduces the reigns of Israel to 233 years, and brings the reigns of Judah into conformity with this sum by making Jehoram co-regent with Jehoshaphat 4 years, Uzziah with Amaziah 12, and Jotham with Uzziah 11 years. How arbitrary, and therefore unjustifiable, such reduction of numbers is, must be evident to every critical eye. The supposition of co-regencies is only allowable in order to explain the apparent discrepancies in some of the kings' years, but in no case are they suffered to disturb the length of reigns, as given in the text. See each name in its alphabetical place in this Cyclopædia. (See Wolff, in the *Theol. Stud. u. Krit.* 1858, iv).

5. *From the Destruction of Solomon's Temple to the Return from Babylon.*—The determination of the length of this period depends upon the date of the return to Palestine. The decree of Cyrus leading to that event was made in the first year of his reign (Ezra i, 1), which, if it date from his conquest of Babylon (q. v.), as determined by Ptolemy's Canon, would be B.C. 538; but the decree in question appears to date from his personal supersedure of "Darius the Mede" (q. v.) at Babylon, B.C. 536, where the edict was evidently issued. See CYRUS. Others date the decree from the earlier point, and suppose that so great a migration must have occupied much time; they therefore allow two years as not too long an interval for its complete accomplishment after the promulgation of the decree.

Another method of arriving at the time in question is by means of fixing the termination of the so-called "70 years' captivity." Two numbers, held by some to be identical, must here be considered. One is the period of 70 years, during which the tyranny of Babylon over Palestine and the East generally was to last, prophesied by Jeremiah (xxv), and the other, the 70 years of the city's overthrow and utter depopulation (2 Chron. xxxvi, 21; Dan. ix, 2). The commencement of the former period is plainly the 1st year of Nebuchadnezzar (as viceroy), and 4th (according to Dan. i, 1, the 3d complete) year of Jehoiakim (Jer. xxv, 1), B.C. 606, when the successes of the king of Babylon began (xlvi, 2), and the miseries of Jerusalem (xxv, 22); and its conclusion will be the fall of Babylon (ver. 26). The famous 70 years of captivity would seem to be the same period as this, since it was to terminate with the return of the captives (Jer. xxix, 10). The second period of 70 years dates from the burning of the Temple, late in B.C. 588 (Ezek. xl, 1), and terminates with its complete reconstruction, some time in B.C. 517 (Ezra vi, 15). The two passages in Zechariah, which speak of such an interval as one of desolation (i, 12), and during which fasts connected with the captivity had been kept (vii, 5), are quite reconcilable with this explanation. These two passages are of the 2d and 4th years of Darius Hystaspis, in whose 6th year the Temple was finished.

The details of this period are made up of the following Babylonian reigns, from profane sources:

	Years.	Years.
Nebuchadnezzar (viceroyship)		18
Nebuchadnezzar (residue)	26	27
"Evil-Merodach"	2	2
Nerikolassar	4	4
"Belshazzar," vice Nabonned	17	17
Capture of Babylon		68
"Darius the Mede," or Cyaxares	2	2
Cyrus's *Decree*		70

	Years.
Cyrus (residue)	6
"Ahasuerus," or Cambyses	8
"Artaxerxes," or Smerdis	0
"Darius," i. e. Hystaspis (beginning)	5
Temple rebuilt	70

6. From this point downward, the coincidence with Grecian and Roman annals becomes so clear, to the junction with the Christian æra, that there can be no doubt respecting the chronology as a whole. The prophetic period of Daniel's "Seventy Weeks" (q. v.) covers this period, and accurately sketches the outline of Jewish history. The details will be considered under the special heads to which they belong, e. g. DANIEL; EZRA; NEHEMIAH; MACCABEES; JESUS; ACTS, etc.

III. *Synchronisms with Profane Annals.*—There are a number of leading dates which may be regarded as more or less settled by a comparison of the foregoing Biblical statements with those found in classical, Judæo-ecclesiastical, and monumental history.

1. *The Deluge.*—The Flood, according to the foregoing adjustments, would end near the close of B.C. 2515, and would have begun near the close of B.C. 2516. It is most reasonable to suppose the Noachian colonists to have begun to spread not long after the Flood; scriptural intimations, as commonly interpreted, assign their dissemination to the beginning of the second century after that event. If the Division at Peleg's birth be really the same as the Dispersion (q. v.) after the building of the Tower of Babel, this supposed interval would not necessarily have to be lengthened, for the text of the account of the building of the Tower does not absolutely prove that all Noah's descendants were concerned in it, and therefore some may have previously taken their departure from the primeval settlement. See PELEG. The chronology of Egypt, derived from the monuments and Manetho, is held by some to indicate for the foundation of its first kingdom a much earlier period than would be consistent with this scheme of approximative Biblical dates; but other and more careful authors greatly reduce these computations (see J. C. K. Hofmann, *Ægyptische u. Isr. Zeitrechnung*, Nördl. 1847, 8vo). The Assyrians and Babylonians have not been proved, on satisfactory grounds, to have reckoned back to so remote a time as the Egyptians; but the evidence of their monuments, and the fragments of their history preserved by ancient writers, as in the case of the Egyptians, cannot well be reconciled with the short interval preferred by Usher. The most cautious calculations, based upon independent historical evidence, points to no earlier period than the middle of the 25th century B.C. as the time of the foundation of kingdoms, although the chronology of Egypt reaches to about this period (Osburn, *Monumental Hist. of Egypt*, p. 634, concludes that Menes founded the Egyptian empire at Memphis in B.C. 2429), while that of Babylon and other states does not greatly fall short of the same antiquity, although the Assyrian empire was much later (Layard, *Babylon and Nineveh*, p. 531, dates, according to the latest conclusions from the inscriptions, the reign of the first Ninevite king, Derceto, from B.C. 1250). See NOAH.

2. *The Exodus.*—Arguments founded on independent evidence afford collateral means of deciding which is the most probable computation from Biblical evidence of the date of this event. A comparison of the Hebrew calendar with the Egyptian has led a late writer (Poole, *Horæ Ægyptiacæ*, p. 217) to the following result: The civil commencement of the Hebrew year was the new-moon nearest to the autumnal equinox; and at the approximative date of the Exodus obtained by the reckoning given above, we find that the Egyptian vague year commenced at or about that point of time. This approximative date, therefore, falls about the time at which the vague year and the Hebrew year, as dated from the autumnal equinox, nearly or exactly coincided in their commencements. It may reasonably be supposed that the Israelites in

the time of the oppression had made use of the vague year as the common year of the country, which, indeed, is rendered highly probable by the circumstance that they had to a considerable extent and in no very private manner adopted Egyptian religious customs (Josh. xxiv, 14; Ezek. xx, 7, 8), the celebrations prescribed by which were kept according to this year. When, therefore, the festivals of the Law rendered a year virtually tropical necessary, of the kind either restored or instituted at the Exodus, it seems most probable that the current vague year was fixed under Moses. If this supposition be correct, we should expect to find that the 14th day of Abib, on which fell the full-moon of the Passover of the Exodus, corresponded to the 14th day of a Phamenoth, in a vague year commencing about the autumnal equinox. It has been ascertained by computation that a full moon fell on the 14th day of Phamenoth, on Thursday, April 21st, in the year B.C. 1652. A full moon would not fall on the same day of the vague year at a shorter interval than 25 years before or after this date, while the triple coincidence of the new moon, vague year, and autumnal equinox could not recur in less than 1500 vague years (*Encyclopæd. Brit.*, 8th. ed., s. v. Egypt, p. 458). The date thus obtained is but four years earlier than Hales's, and the interval from it to that of the Foundation of Solomon's Temple, B.C. 1010, would be 642 years, or only six years in excess of that previously obtained from the numerical statements in the Bible. This coincidence is at least remarkable, although the want of exact correspondence in the dates detracts considerably from the force of the argument based upon this comparison. See EXODE.

Setting aside Usher's preference for the 480 years of 1 Kings vi, 1, as resting upon evidence far less strong than the longer computation, we must mention the principal reasons urged by Bunsen and Lepsius in support of the Rabbinical date (see Bunsen, *Bibelwerk*, i, p. ccxi, ccxiii, ccxxiii sq.; Lepsius, *Chronol. der Ægypter*, i, 314 sq.). The reckoning by the genealogies, upon which this date rests, we have already shown to be unsafe. Several points of historical evidence are, however, brought forward by these writers as leading to or confirming this date. Of these the most important is the supposed account of the Exodus given by Manetho, the Egyptian historian, placing the event at about the same time as the Rabbinical date. This narrative, however, is, on the testimony of Josephus (*Apion*, i, 14; also 26, etc.), who has preserved it to us, wholly devoid of authority, being, according to Manetho's own showing, a record of uncertain antiquity, and of an unknown writer, and not part of the Egyptian annals. An indication of date has also been supposed in the mention that the name of one of the treasure-cities built for Pharaoh by the Israelites during the oppression was Raamses (Exod. i, 11), probably the same place as the Rameses elsewhere mentioned, the chief town of a tract so called. See RAMESES. This name is the same as that of certain well-known kings of Egypt of the period to which by this scheme the Exodus would be referred. If the story given by Manetho be founded on a true tradition, the great oppressor would have been Rameses II, second king of the 19th dynasty, whose reign is variously assigned to the 14th and 13th centuries B.C. It is further urged that the first king Rameses of the Egyptian monuments and Manetho's lists is the grandfather of this king, Rameses I, who was the last sovereign of the 18th dynasty, and reigned at the utmost about 60 years before his grandson. It must, however, be observed, that there is great reason for taking the lower dates of both kings, which would make the reign of the second after the Rabbinical date of the Exodus, and that in this case both Manetho's statement must be of course set aside, as placing the Exodus in the reign of this king's son, and the order of the Biblical narrative must be transposed, that the building of Raamses should not fall before the accession of Rameses I. The argument that there was no king Rameses before Rameses I is obviously weak as a negative one, more especially as the names of very many kings of Egypt, particularly those of the period to which we assign the Exodus, are wanting. It loses almost all its force when we find that a son of Aahmes, Amosis, the head of the 18th dynasty, variously assigned to the 17th and 16th centuries B.C., bore the name of Rameses, which name, from its meaning (*son of Ra*, or the sun, the god of Heliopolis, one of the eight great gods of Egypt), would almost necessarily be a not very uncommon one, and Raamses might therefore have been named from an earlier king or prince bearing the name long before Rameses I. The history of Egypt presents great difficulties to the reception of the theory together with the Biblical narrative, difficulties so great that we think they could only be removed by abandoning a belief in the historical character of that narrative; if so, it is obviously futile to found an argument upon a minute point, the occurrence of a single name. The historical difficulties on the Hebrew side, in the period after the Exodus, are on this view not less serious, and have induced Bunsen to antedate Moses's war beyond Jordan, and to compress Joshua's rule into the 40 years in the wilderness (*Bibelwerk*, p. ccxxviii sq.), and so, we venture to think, to forfeit his right to reason on the details of the narrative relating to the earlier period. This compression arises from the want of space for the Judges. The chronology of events so obtained is also open to the objection brought against the longer schemes, that the Israelites could not have been in Palestine during the campaigns in the East of the Pharaohs of the 18th, 19th, and 20th dynasties, since it does not seem possible to throw those of Rameses III earlier than Bunsen's date of the beginning of the conquest of western Palestine by the Hebrews (see the Duke of Northumberland's paper in Wilkinson's *Anc. Egypt.* i, 77–81). There does not, therefore, appear to be any good reason for abandoning the definite statements of the Hebrew records in favor of the yet crude and conflicting constructions of synchronal dates from the Egyptian monuments (see Kenrick's *Egypt under the Pharaohs*, vol. ii). See EGYPT.

3. *Rehoboam and Shishak.*—The Biblical evidence for this synchronism is as follows: Rehoboam came to the throne in B.C. 973. The invasion of Shishak took place in his fifth year, or B.C. 969. Shishak was already on the throne when Jeroboam fled to him from Solomon (1 Kings xi, 40). This event happened during the building of Millo, etc., when Jeroboam was head of the workmen of the house of Joseph (1 Kings xi, 27). The building of Millo and repairing of the breaches of the city of David was after the building of the house of Pharaoh's daughter, that was constructed about the same time as Solomon's house, the completion of which is dated in his 24th year (1 Kings vi, 1, 37, 38; vii, 1; 2 Chron. viii, 1, where 3+20=10+13). This building is recorded after the occurrences of that year of Solomon, for Pharaoh's daughter remained in Jerusalem until the king had ended building his own house, and the Temple, and the wall of Jerusalem round about (1 Kings iii, 1), and Millo was built after the removal of the queen (ix, 24); therefore, as Jeroboam was concerned in this building of Millo and repairing the breaches, and was met "at that time" (xi, 29) by Ahijah, and in consequence had to flee from the country, the 24th or 25th year is the earliest possible date. Thus Shishak appears to have come to the throne at most 21 or 22 years (40−23 [or 24]+4) before his expedition against Rehoboam. An inscription at the quarries of Silsilis, in Upper Egypt, records the cutting of stone in the 21st year of Sheshonk I, or Shishak, for constructions in the chief temple of Thebes, where we now find a record of his conquest of Judah (Champollion, *Lettres*, p. 190, 191).

On these grounds we may place the accession of Shishak at B.C. cir. 990. The evidence of Manetho's lists, compared with the monuments, would place this event within a few years of this date, for they do not allow us to put it much before or after B.C. 1000, an approach to correctness which at this period is very valuable. See SHISHAK.

4. *Josiah and Pharaoh Necho.*—The death of Josiah can be clearly shown on Biblical evidence to have taken place in the 21st year before that in which the Temple was destroyed—that is, in the Jewish year from the spring of B.C. 609 to the spring of 608. Necho's first year is proved by the Apis tablets to have been the Egyptian vague year, either January, B.C. 609-8, or probably B.C. 610-09. The expedition in opposing which Josiah fell (2 Kings xxiii, 29) cannot reasonably be dated earlier than Necho's second year, B.C. 609-8 or 608-7. See NECHO.

5. *Jehoiakim and Nebuchadnezzar.*—In Jer. xxv, 1. the first year of Nebuchadnezzar coincides, wholly or in part, with 4 Jehoiakim; 2 Kings xxiv, 12, the epoch of Jeconiah's captivity and of Zedekiah's reign lies in 8 Nebuchadnezzar; *ibid.* xxv, 8, the 11th of Zedekiah, the 5th month, 10th day, lies in 19 Nebuchadnezzar; and Jer. lii, 31, the 37th of Jeconiah, 12th month, 25th day, lies "in the year that Evil-merodach began to reign." From these synchronisms it follows demonstrably that, in this reckoning, Nebuchadnezzar has 45 years of reign, two years more than are assigned to him in the Astronomical Canon, where his reign of 43 years begins Æ. Nab. 144 = B.C. 604; consequently, that his reign in the Jewish reckoning bears date from the year B.C. 606 (Browne, *Ordo Sæcl.* § 151-171, 438). Hence it results that the year of the taking of Jerusalem and destruction of the Temple is B.C. 588. Those chronologists who, not having carefully enough collated and discussed the testimonies, accept unquestioned the year B.C. 604 as *that* first year of Nebuchadnezzar which coincides with 4 Jehoiakim, place the catastrophe two years later, B.C. 586. With this latitude for difference of views, the synchronism 1 Nebuchadnezzar = 4 Jehoiakim = B.C. 606 or 604, has long been generally taken by chronologists as the connecting link between sacred and profane annals, the *terminus a quo* of the ascending reckoning. See NEBUCHADNEZZAR.

6. *Hezekiah's Synchronisms.*—In 2 Kings xviii, 13; xix, 9, it appears that Sennacherib, king of Assyria, and Tirhakah, king of Ethiopia, were both contemporary with Hezekiah, and at the 14th year of his reign. Now, in the recently-recovered Armenian version of Eusebius's *Chronicle*, we have it on the authority of Berosus (quoted from Polyhistor) that from Sennacherib to Nebuchadnezzar were 88 years (the names and numbers are given, and agree with the expressed sum); this account places the accession of Sennacherib at B.C. 692, which is 20 years later than the lowest date that the Biblical numbers will allow for 14 Hezekiah. Accordingly, Niebuhr (*Kl. histor u. philol. Schriften*, i, 209) proposed to strike out that number of years from the 55 assigned to Manasseh; then the interval to 4 Jehoiakim = 1 Nebuchadnezzar, would be 15 + 35 + 2 + 31 + 3 = 86. Since Niebuhr's time an important Assyrian monument of the time of Sennacherib, interpreted by Rawlinson and Hincks, informs us that the invasion of Judæa, which in the book of Kings is said to have been in the 14th of Hezekiah, took place in Sennacherib's third year. Hence the interval to 4 Jehoiakim becomes 86 years. Of itself this does not prove much, and Ewald, iii, 364; Thenius, p. 410; Bunsen, iv, 398, retain the Biblical number, which also the younger Niebuhr (*Gesch. Assurs u. Babels*, p. 99-105) learnedly upholds against his father's objections. With the assistance, too, of the Canon, and of the extract from Abydenus's account of the same times, it is not difficult to bring the statements of Berosus into conformity with the Biblical numbers, as by Browne (*Ordo Sæclorum*, § 489 sq.); Brandis (*Rerum Assyriarum tempora emendata*, p. 40 sq.; retracted, however, in his later work, *Ueber den hist. Gewinn aus der Entziff. der Assyr. Inschr.* p. 46, 73), and in the work just cited of the younger Niebuhr. On the other hand, Lepsius (*Königs-Buch der Ægypter*), Movers (*Die Phönizier*, ii, 1, 152 sq. [whose arguments A. v. Gutschmid, *Rhein. Mus.*, 1857, thinks unanswerable]), Scheuchzer (*Phul u. Nabonassar*), and J. v. Gumpach (*Abriss der bab.-assyr. Gesch.* p. 98 sq.) contend for the reduced numbers. See TIRHAKAH.

The Tirhakah in question is undoubtedly the Tarkos, Tarakos of Manetho's 25th dynasty, in which, according to the uncorrected numbers, his reign begins 170½ (Africanus), 183 or 188 (Euseb. in Gr.), 185, 187, or 193 (Euseb. Armen.) before Cambyses, B.C. 525; the extremes, therefore, are B.C. 695 and 718 for his epoch. But we are not dependent on the lists for the time of this king *Taharka*. The chronology of the 26th dynasty had already been partially cleared up by funerary inscriptions (now in the museums of Florence and Leyden), which, by recording that the deceased, born on a given day, month, and year of Neko II, lived so many years, months, and days, and died in a given year, month, and day of Amosis, enabled us to measure the precise number of years (41) from the epoch of the one king to the epoch of the other (Böckh, *Manetho*, p. 729 sq.); and now it is placed beyond further question by Mariette's discovery of a number of inscriptions, in each of which the birth, death, day of funeral, and age of an Apis are recorded in just the same way (see Mariette's own account, *Renseignement sur les 64 Apis, trouvés dans les souterrains du Sérapéum—Bulletin Archéol. de l'Athén. Français*, Oct., 1855; and the selection from these by Lepsius, *On the 22d Dynasty*, translated by W. Bell, 1858). There remains only a slight doubt as to the epoch of Cambyses; whether with the canon this is to be referred to B.C. 525 (the usual date), or with De Rougé to 527, for which Von Gumpach also contends, or 528, with Dr. Hincks (*On the Age of the 26th Dynasty*), or even 529 (Böckh, *Manetho*, p. 739 sq.). The main result is, that Psametik I began to reign 138 years before the epoch of Cambyses, therefore B.C. 663 (or at most three years earlier). Now Mariette (No. 2037) records that an Apis born 26 Taharka, died 20 Psametik I, 12th month, 20th day; its age is not given. As the Apis was not usually allowed to live more than 25 years, though some of the inscriptions record an age of 26 years, on this, as an extreme supposition, the interval from 1 Taharka to 1 Psametik will be at most 31 years, and the highest possible epoch for Tirhakah (B.C. 697). This result, in itself, is not necessarily opposed to the Biblical date for 14 Hezekiah; for in the narrative itself, while a "Pharaoh. king of Egypt," is mentioned, xviii, 21, this Tirhakah is styled "king of Ethiopia," and he seems to appear on the scene as an unexpected enemy of Sennacherib (Niebuhr, *ut sup.* p. 72 sq. 178, 458). He may have reigned in Ethiopia long before he became king of Egypt; though, on the other hand, it is clear that this originally Ethiopian dynasty was contemporaneous in its lower part with the 26th, a Saite dynasty of Lower Egypt, and probably in its upper part with the preceding Saite dynasty, as Lepsius makes it. The real difficulty, however, consists in this, that the "So (סוא), king of Egypt," whose alliance against Assyria was sought by Hoshea in his 5th or 6th year (2 Kings xvii, 4), can be no other than one of the two predecessors of Tirhakah, Sebek I or II, to the first of whom Manetho gives 8 (v. r. 12), to the other 14 years of reign. Thus, at the earliest, the former would begin to reign B.C. 723, which is at least one year too low for the Biblical date. As a conjectural remedy for this "desperate state of things," Von Niebuhr, p. 459, suggests that the 50 years of the 25th dynasty were possibly not continuous; failing this, either an error must be assumed in the canon

somewhere between its 28th and its 123d year, both of which are astronomically attested, or else the reign of Manasseh must be reduced. On the whole, it seems best to wait for further light from the monuments. At present these attest the 12th year of Sebek II, but give no dates of his predecessor; the genealogical connection of the two and of Taharka is unknown; of Bocchoris, the only occupant of the preceding dynasty, no monument has been discovered, and but scanty and precarious traces of the Tanite kings of the 23d dynasty, the last of whom, Zet, may even be the Sethos whom Herodotus, ii, 141, makes the hero of the miraculous defeat of Sennacherib's army. Indeed, Isa. xix, 2; xxx, 4, both seem to imply that Zoan (Tanis) was at that time the residence of the Pharaoh of Lower Egypt. Here is ample scope for conjecture, and also for discoveries, which may supersede all necessity for conjecture. See So.

The mention of "Merodach-Baladan, son of Baladan, king of Babylon," apparently in or not long after 14 Hezekiah (2 Kings xx, 12), forms yet another synchronism in this reign. For Sennacherib's inscription records his defeat of this Babylonian king in his first year; a Marudakh-Baldan appears in Polyhistor's extract from Berosus as king in Babylon early in Sennacherib's reign, but with circumstances which make it extremely difficult to make out the identity of the three persons with each other, and with either the *Mardok* Empad, who in the Canon reigns in Babylon from 721 to 709, or the Mesesi *Mordak* of the same document, from 692 to 688. See MERODACH-BALADAN. Here it may be sufficient to mention that Dr. Hincks (*Trans. of Royal Irish Academy*, vol. xxii, 364), retaining the 55 years of Manasseh, proposes to solve the difficulty by placing Sennacherib's invasion of Judæa in Hezekiah's 25th instead of his 14th year, at the date 701 B.C.; Hezekiah's illness remains at its earlier date. Bunsen, tacitly adopting this construction, makes 3 Sennacherib fall in 24 Hezekiah, and imagines that the invasion which terminated disastrously to the Assyrian king was a second, in Hezekiah's 28th year, on which latter occasion it was that Tirhakah came to the relief of Jerusalem (*Æg. St.* b. iv, p. 505). Retaining for this Egyptian king an epoch B.C. 712, which is plainly disproved by the Apis inscriptions (see above), he makes it possible for So=Sevek II to have been contemporary with Hoshea. It must be owned that the received chronology of Hezekiah's reign is beset with difficulties on the side both of Egypt and of Assyria and Babylon. But from neither have we as yet all the facts we need, and the fuller and clearer information which is confidently expected from the cuneiform inscriptions, in particular, will probably make much bright that is now dark. Colonel Rawlinson indeed regards it as "now generally admitted that there were two invasions of Palestine during the reign of Hezekiah; the first in B.C. 701, when Sennacherib overran the country and exacted a heavy tribute, as stated in the inscriptions and 2 Kings xviii, 13-16, and the second some thirteen or fourteen years later, which ended in the discomfiture of the Assyrians" (*London Athenæum*, August 22, 1863, p. 247 *b*). But the learned antiquarian has ignored the fact that the same inscriptions do not speak of two invasions, and the Bible expressly identifies those here assumed as distinct. Indeed, the paper in which this and other wholesale changes of the Biblical numbers are advocated contains in itself abundant evidence of the precarious elements upon which the whole system of reconstructed Assyrian chronology, as drawn from the monuments, is based; and we feel only the more confirmed by its perusal in the belief that we cannot safely correct the definite and consecutive dates of the Biblical accounts by means of such vague and incoherent data. At least the attempt is yet evidently premature, and we are justified, by the changes which these decipherers and collaters of the cuneiform legends are constantly obliged to make in their own computed results, in waiting until they have arrived at some settled and consistent chronology before we adopt it as the basis for rectifying the established points of Scriptural history. See SENNACHERIB.

In connection with this discussion, a passage of Demetrius Judæus has been deemed important (Von Gumpach, *ut sup.* p. 90, 180). He seems to have put forth a chronological account of the Biblical history, from which Eusebius, *Præp. Ev.* ix, 21, 29, gives—quoting it from Polyhistor—what relates to the patriarchs and Moses; another passage, preserved by Clem. Alex. *Strom.* i, § 141, is a summary of the period elapsed from the captivity of the Ten Tribes to his own times. Its substance is as follows: From Sennacherib's invasion of Judah to the last deportation from Jerusalem by Nebuchadnezzar, 128 years 6 months; from the captivity of the Ten Tribes to Ptolemy IV (Philopator), 473 years 9 months (so we must read for 573); from Nebuchadnezzar's deportation from Jerusalem, 338 years 3 months. As the epoch of Ptolemy IV in the Canon is B.C. 222 (24th October), this gives for Nebuchadnezzar's "last deportation" B.C. 560 (July); for Sennacherib's invasion, B.C. 688 (Jan.); and for the captivity of Samaria, B.C. 695 (Jan.). But unless we are prepared to set aside the Astronomical Canon, at least its dates for Nebuchadnezzar and Evil-merodach, the captivity under Nebuchadnezzar, whether it be that in his 19th year (11th Zedekiah), or "the last," in his 23d year, Jer. lii, 30, cannot fall so low as B.C. 560. That the final deportation is meant is plain from the exact correspondence of the sum with the Biblical items—Hezekiah, 15; Manasseh, 55; Amon, 2; Josiah, 31; Jehoiakim, 3; Nebuchadnezzar, 22=128 years. The 6 months over are perhaps derived from the 3 of Jehoahaz and 3 of Jeconiah. M. v. Niebuhr, *ut sup.* p. 102 sq., sets himself to solve the difficulty; but the whole matter may easily be explained by an error in the ordinal of the Ptolemy referred to. Set the goal at Ptolemy III (Euergetes)=B.C. 247, Oct.; then we have for the captivity of the Ten Tribes, 720 (Jan.); for Sennacherib in Judæa, 713 (Jan.); for the deportation in 23 Nebuchadnezzar, 585 (July); and consequently 589 for the destruction of the Temple—very nearly in accordance with the date for the last, assigned by Clement of Alexandria, B.C. 588, *Strom.* i, § 127. In fact, the chronological statements in this portion of the *Stromata* swarm with numerical errors, and a careless scribe might easily misread TETAPTOY for TOYTPITOY. Be that as it may, it is a great mistake to suppose that Demetrius or any other Jew, of his or later times, can be competent to rule a question of this kind for us. He may have been, as M. v. Niebuhr thinks, "a sensible writer" (though others, judging from the fragments preserved by Eusebius, may fairly think otherwise); that "he may have handed down good materials" is just possible; the probability is that he gives us the results of his own inquiries, confined to the text of the sacred books, except that he gathered from the Astronomical Canon the year corresponding to 23 Nebuchadnezzar, the last recorded in the sacred books. See HEZEKIAH.

7. An argument tending to lower the whole time of the kings, and the date of the building of Solomon's Temple, has been deduced from some ancient data of Tyrian chronology. Josephus (*c. Ap.* i, 17) announces that the building of the Temple lies 143 years 8 months before the founding of Carthage; he gives this on the authority of Menander of Ephesus, meaning his own summation of that author's enumeration of reigns professedly copied from public monuments. In proof, he quotes the re nal numbers of the kings from Hirom, the friend of Solomon, to Pygmalion inclusive, eleven in all, making a sum (not however expressed) of 177 years 8 months. He adds, from his author, "It was in the seventh year of Pygmalion that Elisa fled from Tyre, and founded Carthage in Libya;" and *from*

himself, "The sum of years from the reign (epoch) of Hirom to the founding of Carthage is 155 years 8 months; and since it was in 12 Hirom that the Temple was built, the time from thence to the founding of Carthage is 143 years 8 months." (The interval, as the numbers stand in the text, is, in fact, 177 years 8 months, *minus* 12 of Hirom and 40 of Pygmalion, i. e. only 125 years 8 months: it does not concern us here to consider how the missing 18 years may be restored; the number, 143 years 8 months, given twice by Josephus, is not affected by errors that may have crept into the details.) Now the founding of Carthage is placed by Timæus (Dion. Hal. i, 74) 38 years before Ol. 1, i. e. B.C. 814 13; by Trogus (Justin, xviii, 6) 72 years before the building of Rome, i. e. B.C. 825. Niebuhr (the father), accepting the date B.C. 814-13 as indisputable, deduces for the building of Solomon's Temple the year B.C. 957-56 (*Lect. on Anc. Hist.* iii, 159); Movers (*Die Phönizier*, ii, 1, 140 sq.), preferring the other, gets the date B.C. 969. Again, Josephus (*Ant.* viii, 3, 1), after stating that 11 Hirom is 4 Solomon, and the year of the building of the Temple, adds (probably from Menander) that the year in question was 240 years from the building of (New) Tyre. It does not appear that he found the 11 or 12 Hirom expressed by Menander or Dius as answering to the 4 Solomon. Probably he obtained the synchronism from his own investigation of the various places in 2 Samuel, 1 Kings, and 1 Chronicles, where Hiram is mentioned; but the number 240 is probably Tyrian. Now Trogus (Justin, xviii, 3) states that Tyre was founded by the Sidonians in the year before the fall of Troy. Among the numerous ancient dates assigned to that event, one is B.C. 1208 (Ephorus, followed by the *Parian Chron.* and other authorities). But B.C. 1209−240=969, precisely the year which resulted from the former argument. Such is the twofold proof given by Movers, accepted by J. v. Gumpach and others, and highly applauded by A. v. Gutschmid (in the *Rhein. Museum*, 1857). On the other hand, it should be considered—1. That between the flight of Elisa, in Pygmalion's seventh year, which is the goal of these 143-4 years, and the founding of the city, there certainly occurred a train of events (the settlement in Byrsa=*Bozrah*, and the growth around it of the Magalia=*Ma'hal*, which eventually became the New-Town, *Kartharasa*=Carthage) which implies a considerable tract of time; and, 2. That as the ancient dates of the fall of Troy vary over a range of about 180 years, Timæus placing it at 1383, Herodotus at 1270, Eratosthenes at 1183, Aretinus, 1144, besides intermediate dates (Müller, *Fragmenta Chronol.* § 17), the 240 years may be so measured as to fall near enough to the time given to 4 Solomon by the usual chronology. It has generally been received hitherto that the Æra of Tyre dates from cir. B.C. 1250, and there seems to be no sufficient reason to the contrary (Bunsen, iv, 280 sq.). The concurrence of the two lines of argument in the year B.C. 969 is one of those coincidences which are so perpetually occurring in chronological combinations that the practised inquirer at last pays little heed to them. In fact, it may only imply that Justin's author got from Menander the date 384 Tyre=7 Pygmalion, mistakenly, as by Josephus, identified with 1 Carthage; and having also obtained from the same or some other source the year equivalent to 1 Tyre, would so arrive at his datum for 1 Carthage, or, *vice versa*, from the latter would rise to the former. And, after all, when we inquire what is the worth of Josephus as a reporter, and, supposing him accurate, what is the value of the Tyrian annals, the answer is not of necessity unfavorable to the claims of the Biblical chronology of the kings of Judah and Israel. Furnished, as this is, by an annalistic series incomparably more full and exact than any profane records of the same times which have come to us at second hand, it is not to be impeached by any but clear contemporary monumental evidence (such as Mariette's Apis records); and if the entire Hebrew tale of years from 4 Solomon to 11 Zedekiah is to be materially lowered on the scale of the series B.C., this can only be done by proving some capital error in the Astronomical Canon. See TYRE.

8. In fact, an attempt has lately been made in this direction, which, if successful, must set our Biblical chronology adrift from its old bearings. It is contended by Mr. Bosanquet (*Readjustment of Sacred and Profane Chronology*, Lond. 1853) that a lower date than 604-606 B.C. for the accession of Nebuchadnezzar is imperatively demanded by the historical connection of that event with the famous "Eclipse of Thales;" which, according to Herodotus (i, 74, 103), occurring during a pitched battle between the Medes and Lydians, was the occasion of a peace, cemented by marriages, between Cyaxares and Halyattes, after which, as Herodotus seems to imply, the former turned his arms against Assyria, and, in conjunction with Labynetus (the Nabopolassar of Berosus and the Canon), took and destroyed Nineveh. The dates assigned by the ancients to that eclipse lie between Ol. 48 and 50. Kepler, Scaliger, and Sir Isaac Newton made it B.C. 585; Baily (*Philos. Trans.*, 1811) and Oltmanns (*Schr. der Berlin. Akad.* 1812-13) found it 30th Sept. B.C. 610, which date was accepted by Ideler, Saint-Martin, and most subsequent writers. More recently it has been announced by Mr. Airy (*Philos. Mag.* 1853) and Mr. Hind (*Athenæum*, Aug. 1857), as the result of calculation with Hansen's improved tables, that in the eclipse of 610 the moon's shadow traversed no part of Asia Minor, and that the only suitable one is that of 28th May, B.C. 585, which would be total in Ionia, Lydia, Lycia, Pamphylia, and part of Cilicia. It has, indeed, been contended by Mr. Adams that the tables need a further correction, the effect of which (as Mr. Airy remarked, *Athenæum*, Oct. 1859) would be such as to render the eclipse of 585 inapplicable to the recorded circumstances; but it appears that the astronomer-royal no longer entertains any doubts on this point, having quite recently (see *Athen.* Sept. 1861) expressed his "unaltered conviction that the tables of Hansen give the date of the great solar eclipse, which terminated the Lydian war, as the most reliable records of antiquity placed it, in the year 585 B.C." Indeed, however the astronomical question may ultimately be decided, it would appear, from all that is known of the life of Thales, that he could hardly have predicted an eclipse in Ionia so early as B.C. 610 (Röth, *Gesch. unserer abendländischen Philosophie*, ii, 98). But that the "Eclipse of Thales" occurred at the conjuncture indicated by Herodotus rests only on his testimony, and in this he might easily be mistaken. Either he may have confounded with the eclipse predicted by Thales an earlier one occurring during the war of Cyaxares and Halyattes—possibly that of 610, for no locality is mentioned, and there is nothing to forbid our seeking the battle-field in some suitable situation (e. g. with Niebuhr, p. 508, in Atropatene, or with Von Gumpach, *Zeitrechnung der Bab. u. Assyr.* p. 94, in Armenia); or, he may have assigned to that earlier war what really took place during a later war of the Medes and Lydians under *Astyages* and Halyattes. The latter supposition is not without support of ancient authors. Cicero (*de Divinat.* i, 50), from some lost authority, places the eclipse, without date or mention of the war, under Astyages. Pliny (*H. N.* ii, 9), giving the date Ol. 48.4=B.C. 585, says, also without mention of the war, that the eclipse occurred in the reign of Halyattes (this lasted, in the usual chronology, from B.C. 620 to 563). Solinus (c. 15, 16) assigns Ol. 49.1 as date of eclipse and battle, but (c. 20) he speaks of the war as between Halyattes and Astyages. From Eudemus, a much earlier author, Clement of Alexandria (*Strom.* i, 14, § 65) gives the date of the eclipse "about Ol. 50," with the addition that it was the time of the war be-

tween Cyaxares and Halyattes—in which Eudemus, if more than the date be his, merely repeats Herodotus; but the addition is as likely to be Clement's own. The Eclipse of Thales, therefore, is by no means so cardinal an event as has been assumed; and to uphold the loose statement of Herodotus, in connection with the earlier date B.C. 610, is as precarious a proceeding as is the attempt to urge it with the lower, and, in all probability, authentic date, B.C. 585, to the subversion of the received chronology. Mr. Bosanquet, however, holds that from the testimony of this eclipse there is no escape; and supporting by this the arguments described under the above heads, together with others derived from new combinations, he does not hesitate to interpose "25 years of Scythian rule in Babylon" between Nabopolassar and Nebuchadnezzar, thereby lowering the epoch of the latter from B.C. 604 to 579. The effect of this is to bring the destruction of the Temple to B.C. 560; Sennacherib's 3d and Hezekiah's 14th year to 689; and the 4th of Solomon to 989 or 990. Of course this involves the necessity of extensive changes in the history and chronology of the lower portion of the 6th century B.C. Thus Cyrus is made into two persons of the name; the first, beginning to reign in Persia B.C. 559, succeeded by Cambyses as viceroy 535 (which is made the 1st year of Evil-merodach), and as king, B.C. 529, together with a second Cyrus as joint-king of Media in 13 Cambyses = B.C. 523. The length of reign of this Cyrus II is not assigned; he disappears from Mr. B.'s table, together with Cambyses, who, with Smerdis between, is followed at 516 by Darius Hystaspis as king, which Darius had become viceroy in Babylon and Media in B.C. 521. It should be remarked that this "readjustment" of the chronology is proposed with a view to a fulfilment of Daniel's Prophecy of the Seventy Weeks (*Chronol. of the Times of Daniel, Ezra, and Nehemiah*, 1848)—namely, the predicted seventy years of desolation reach from the destruction of the Temple, B.C. 560 to B.C. 490; the date of Daniel's prophecy in the first Babylonian year of Darius Hystaspis, then "62 years old" (Dan. vi, 1), is made B.C. 493, whence to the birth of Christ, which the author places (wrongly) in B.C. 3, are the seventy times seven years foretold; also this year 493 is itself the goal of an earlier period of 490 years, reckoned from B.C. 983, Mr. B.'s date of the dedication of Solomon's Temple. So extensive a refashioning of the history will hardly be accepted on the strength of the alleged proofs, especially as the prophecy of Daniel in question is itself susceptible of a better chronological solution. This view was boldly followed out, in ignorance or scorn of all Gentile chronology, by the framers of the Jewish Mundane Æra. Assuming that a period of 490 years *must* reach from the destruction of the first Temple to that of the second, which latter they set at A.D. 69 (a year too early), they obtained for 19 Nebuchadnezzar = 11 Zedekiah, the year B.C. 422 (which, in profane chronology, lies in the reign of Darius Nothus). On like grounds Lightfoot does not hesitate to place the first year of Cyrus 490 years before the Passion, for which his date is A.D. 33. "From this year [B.C. 458] to the death of Christ are 490 years; and there is no cause, because of doubtful records among the heathen, to make a doubt of the fixedness of the time, which an angel of the Lord had recorded with so much exactness" (*Harmony of the Old Testament*. in *Works*, i, 312). A late noble writer (Duke of Manchester, *Daniel and his Times*, 1845), with the like end in view, identifies the Darius of Ezra, Haggai, and Zechariah, and of Dan. viii, 1 (made different from him of vi, 1), with Darius Nothus; and, in order to this result, sets himself to show that the founder of the Persian monarchy, whom the Greeks call Cyrus, is in fact Nebuchadnezzar I (the Nabopolassar of the Canon), for the "Persians" and the "Chaldæans" are the same people; his son Cambyses is the Nebuchadnezzar of the Bible, destroyer of the Temple; Belshazzar is the last king of the Cyrus dynasty at Babylon; his conqueror, "Darius the Mede," Dan. vi, 1, is Darius Hystaspis; and the Biblical Koresh, the restorer of the Jews (and Cyrus of Xenophon, altogether different from him of Herodotus and Ctesias), is a satrap, or feudatory of Xerxes and Artaxerxes. Strange to say, this wild speculation, with its portentous conglomeration of testimonies, sacred and profane, ancient and modern, genuine and spurious (conspicuous among these the "Philo" and "Megasthenes" of the impudent forger Annius of Viterbo), has not only been gravely listened to by scholars of Germany, but has found among them zealous advocacy and furtherance (Ebrard in the *Theol. Studien u. Kritiken*, 1847; Metzke, *Cyrus der Gründer des Pers. Reiches war nicht der Befreier der Juden sondern der Zerstörer Jerusalems*, 1849). See SEVENTY WEEKS. It should, however, be remarked, that the identification of Ezra's Darius with D. Nothus has commended itself (still with a view to Daniel's prophecy) to more than one eminent writer. Proposed by Scaliger, it is advocated by the late Dr. Mill (in his *Treatise on the Descent and Parentage of our Saviour*, 1842, p. 153). See DARIUS.

9. *Apocryphal Books of the Old Testament.* — (1.) The Book of *Tobit* (q. v.) contains an outline of Assyrian history (from the deportation of the Ten Tribes to the fall of Nineveh), to which the moral fiction is attached (Browne, *Ordo Sæcl.* p. 555, note; Niebuhr, *Gesch. Assurs.* p. 100, note; comp. Fritzsche, *Das Buch Tobi*, 1853, p. 14 sq.; Ewald, *Gesch. des V. Isr.* iv, 233 sq.). To treat it as a narrative of facts, and apply it to purposes of chronological proof, as some, even recent, writers have done (e. g. Von Gumpach, *Babyl. Zeitr.* p. 138), is quite to mistake its character.—(2.) As regards the Book of *Judith* (q. v.), it is surprising that any one conversant with history and criticism should fail to see that this is not a record of facts, but a religious, quasi-prophetical allegory (*Ordo Sæcl.* p. 556, note; Fritzsche, *Das B. Judith*, p. 123 sq.; Ewald, *Gesch. des V. Israel*, iv, 541. See also Movers in the *Bonn. Zeitschr. für kathol. Theologie*, 1835, p. 47). Niebuhr, acknowledging this (*u. s.* p. 212-285), nevertheless finds in its dates, according to the Lat. version, a background of historical truth with reference to the times of Nebuchadnezzar. V. Gumpach (*u. s.* p. 161 sq.) maintains its historical character, and applies it to his own purposes with extraordinary confidence (see also Scholz, *Einl. in die heil. Schriften*, 1845).—(3.) In the books of *Maccabees* (q. v.) the years are regularly counted, under the name ἔτη τῆς Βασιλείας τῶν Ἑλλήνων, meaning the æra of the Seleucidæ, beginning in the autumn of B.C. 312; except that in the first book the epoch is made 1 Nisan of that year, while in the second book it is 1 Tisri of the following year, B. C. 311, i. e. eighteen months later. This, which has been sufficiently proved by earlier writers (see Ideler, *Hdb. der Chronol.* i, 531 sq.; *Ordo Sæcl.* § 440-42), is contested on inadequate grounds by Von Gumpach (*Zwei chronol. Abhandl.* 1854).

IV. *New-Testament Chronology.* — The Gospels and Acts of the Apostles have (with one exception, Luke iii, 1) no express dates; in the absence of these, combinations, more or less probable, are all that the chronologist has to go by.

1. For the *Nativity* (q. v.), the citerior limit is furnished by the death of Herod (Matt. ii, 1, 19; Luke i, 5), the year of which event, as it is nowhere named by Josephus or any other extant historian, has to be determined by various circumstances. These are the mention of an eclipse of the moon not long before it (*Ant.* xvii, 6, 4 fin.), which, by calculation, can only have been that of March 12-13, B.C. 4; the length of Herod's reign, together with the recorded date of its commencement (*Ant.* xvii, 8, 1; comp. xiv, 14, 5; 16, 4), and of that of his sons—Archelaus (*Ant.* xvii, 13, 3; comp. *War*, ii, 7, 3), the consular year of whose de-

posal is given by Dion Cass. lv.; Herod Philip (*War*, xviii, 4, 6, length of reign and year of death); for Herod Antipas, Josephus (*Ant.* xviii, 7, 2) gives the date of deposal, but not length of reign; this, however, is known from coins (Eckhel, *Doct. Num.* iii, 489) to have reached his 43d year. All these indications point to B.C. 4, not long before the Passover, as the time of Herod's death. See HEROD. Those who would impugn this conclusion urge other, discrepant statements in Josephus, or call in question either the fact of the eclipse or its calculated date, or contend that the death of Herod could not have taken place so soon after it. The inducement is that our Lord's age may not exceed thirty years at the time of his baptism, i. e. at the earliest in the 15th year of Tiberius, for if this note of time is to be taken strictly, the earliest date for the Nativity should be the year B.C. 3. The *year* being supposed to be known, it is attempted to approximate to the *day* by calculating the order of the sacerdotal cycle, and finding at what time in the given year "the course of Abijah" (Luke i, 5) entered upon office. The starting-point for the reckoning is furnished by a Jewish tradition (*Mishna*, iii, 298, 3), and it is assumed that the conception of John the Baptist ensued at the expiration of Zechariah's week of service, and the Annunciation five months later (Luke i, 23-26, 36; but in the Church calendars six months). Here it should be observed that we have no reason to suppose the ancients to have been in possession of the true date, either year or day. Having ascertained, as they supposed, the year and day of the Baptism, they counted back 30 years to the Nativity (see a paper by H. Browne, on *S. Clemens Alex. on N.-T. Chronology* in the *Journal of Classical and Sacred Philology*, 1854, i, 327 sq.). Also, it would be well that all such considerations as the "fitness of things" prescribing a particular year, or day of the year, for this or any other event of sacred history, should be banished from chronological investigations. See JESUS.

2. Luke's date, "*15th of Tiberius*" (iii, 1), interpreted by the rule of the imperial annals (and also of the canon), would denote the year beginning August A.D. 28, and ending in the same month of A.D. 29. Referred to the current consular year, it might mean either A.D. 28 or 29. Taken in the Jewish sense, it might be the year beginning either 1 Nisan or 1 Tisri A.D. 28, or even 1 Tisri A.D. 27. The hypothesis of a dating of the years of Tiberius from an epoch earlier by three years than the death of Augustus has, however, been generally adopted from the 16th century downward, and is demanded (see Strong's *Gr. Harmony*, p. 342 sq.) by the age of Jesus at his baptism (30 years), added to the length of his ministry (3 years), as compared with the date of the Crucifixion (see below). In A.D. 11, Tiberius appears to have assumed the government of the provinces, and from this time his reign would naturally be reckoned by the Jews (see Jarvis, *Introd.* p. 229 sq.). This would give Luke's date of John's mission B.C. 27. See TIBERIUS.

3. The note of time (John ii, 10) connected with the *Passover after the Baptism* points, if the "forty and six years" are reckoned from Herod's announcement of his purpose in his eighteenth year (*Ant.* xv, 11, 1) to A.D. 27; if from the actual commencement, after all the materials were provided, it may denote either A.D. 28, or 29, or 30, according to the length of time supposed to be spent in preparation. But here, again, besides discrepant statements in Josephus as to the epoch of Herod's reign, it chances that the earlier account of the same proceedings (*War*, i, 21, 1) dates this undertaking of Herod in his *fifteenth* year. It does indeed admit of proof, even from the context, that the 15th year is too early; but it may, plausibly enough, be urged by those who wish to do so, that, if Josephus is wrong in the one statement, he is just as likely not to be right in the other. See TEMPLE.

4. The *Crucifixion* (q. v.) certainly cannot be placed earlier than A.D. 28, in which year the 15th of Tiberius began, and it has never been proposed by inquirers of any note to place it later than A.D. 33. The astronomical element of the question—namely, that in the year of the Passion the 14th of Nisan fell on a Friday—if it be rigorously applied, i. e. according to a definite rule of Jewish usage and the results of strict lunar calculation, indicates only one of the six years mentioned, viz. A.D. 29, in which 14 Nisan was 18th March and Friday. If a certain laxity as to the rule be allowed, the 14th Nisan may *possibly* have fallen on 3d April, Friday, in A.D. 33. But if, in compliance with the apparent import of the first three Gospels, without explanation from the fourth, it is contended that the Crucifixion took place on the day after the Passover, the year may have been A.D. 30, in which the 15th Nisan fell on Friday, 7th April, or A.D. 33, in which it was (in strictness) Friday, 3d April. Lastly, if it be maintained that the Jewish Passover-day was regulated, not by actual observation of the moon's phases, but by cycles more or less faulty, any year whatever of the series may be available in one form or other of the hypothesis. See PASSOVER.

Ancient testimony, if that is to have weight in this question on the supposition that the year was known, either by tradition or by access to public records (the *Acta Pilati*, to which the ancients so confidently appeal), certainly designates the Passover of the year 29, *coss. duobus Geminis*, the 15th proper year of Tiberius. In the Western Church the consent to this year is all but general; in the Eastern, the same year is either named or implied in the two earliest extant testimonies, Clem. Alex. (*Strom.* i, 21, § 101-143; see *Journ. of Class. and Sacr. Philol. u. s.*) and Julius Africanus. See JESUS.

5. In the *Acts*, the mention of *the death of Herod Agrippa* (xii, 23), interposed between an arrival of Paul at Jerusalem and his return thence to Antioch (xi, 30; xii, 25), would yield a firm resting-point for that portion of the narrative, viz. Easter, A.D. 44 (Josephus, *Ant.* xviii, 8, 2; comp. xix, 5, 1; *War*, ii, 11, 6), could we be certain that the death of Agrippa took place soon after, or even in the same year with the Easter mentioned xii, 3, 4. (The time of Agrippa's death is determinable with high probability to the beginning of August of that year.) But as it is possible that the writer, after his narrative of the acts of this king, thought fit to finish off all that he had to say about him before going on with the narrative about Paul and Barnabas, it may be that their mission to Jerusalem, and return, after the martyrdom of James and deliverance of Peter, took place before the year 44. It might even be inferred from xi, 26 (ἥτις ἐγένετο ἐπὶ Κλαυδίου), that the prophecy of Agabus was delivered before, or quite in the beginning of A.D. 41, as the famine is known to have prevailed at Rome during the first two years of Claudius (A.D. 41, 42; Dion Cass. lx, 11), but that it appears not to have been felt in Judæa till after the death of Agrippa, in the procuratorship of Cuspius Fadus and Tiberius Alexander (A. D. 45-47; Josephus, *Ant.* xx, 2, 5; 5, 2). Conclusive reasons for assigning this second visit of Paul to Jerusalem to the year 44 must be sought elsewhere. (See Lehmann, in the *Stud. u. Krit.* 1858, ii.) See AGRIPPA.

6. In Gal. i, 2, Paul speaks of two visits to Jerusalem, the one (i, 18) "after three years" (viz. from his conversion), the other (ii, 1) "fourteen years afterward" (διὰ δεκατεσσάρων ἐτῶν). The first of these is evidently that of Acts ix, 26; that the other must be the second of those mentioned in the Acts, viz. that of xi, xii, has been understood by many, and probably would have been by all, could it have been made to square with their chronology. The argument, restricted from irrelevant issues, lies in a very narrow compass. To make good his assertion (i, 11 sq.) that he received not his gospel and commission from Peter, or any other man, but direct from Christ himself, the

apostle begins to enumerate *the occasions on which alone he saw and conversed with the other apostles at Jerusalem.* Now, if the visit Gal. ii, 1, be not that of Acts xi, 12, it must be later (no one wishes to put it earlier); but, if so, then it would seem he has not enumerated *all* the occasions on which he saw the other apostles. It is hardly satisfactory (comp. Meyer *on Gal.* p. 41) to allege (with Wieseler, *Chronol. des apost. Zeitalters*, p. 180) that the apostle, not writing a history, is not bound to recite all his visits to Jerusalem, or (with Ewald, *Gesch.* vi, 50) that he is concerned to enumerate only those visits which he made for the purpose of conferring with the apostles. His intention is plainly to state that he had no intervening opportunity of consulting them. Accordingly, Schleiermacher (*Einleit. ins N. T.* p. 569), Neander (*Pflanz. u. Leit.* i, 188 of the 4th ed.), De Wette (*Komm.* in loc.), Meyer (*u. s.* p. 47), find the conclusion inevitable that Luke was misinformed in saying that Paul went up to Jerusalem as related in Acts xi, 30, because the apostle himself declares that between his first visit, which can be no other than that of ix, 26, and the other, which can only have been that to the council, as related in Acts xv, there was none intermediate. But, in fact, the circumstances of the visit, Gal. ii, 1, are perfectly compatible with those of Acts xi, xii, the only difficulty being that which is supposed to lie in the chronology; nor, on the other hand, is the discrepancy between Gal. ii, 1 sq., and Acts xv, such that it is difficult to see how they can relate to the same fact, although the incongruity in the latter case has been deemed by Baur (*Paulus*, p. 120 sq.) so great as to furnish an argument in support of his position that the Book of Acts is the work, not of a companion of Paul, but of some much later hand (in the second century). Wieseler, to evade this conclusion, gives up the assumed identity of Gal. ii, 1, with Acts xv, and labors to show that it was the visit of xviii, 22, a hypothesis which needs no discussion, unless we are prepared to say that the apostle was not even present at the council, Acts xv; for that a council was held is not denied, even by those who contend that the account given of it in the Acts is not authentic; and, if Paul was present at it, it is impossible to explain his passing it by in silence, as if it had no bearing upon the point which he is concerned to substantiate. The time of Acts xii being defined to A.D. 44, a term of 17 years, the sum of the 3 and the 14, supposed to be consecutive, would lead to A.D. 27, which cannot possibly be the year of Paul's conversion; and, if both terms are supposed to be dated from the same epoch, it would follow that the conversion took place A.D. 30, a date still too early for those who assign the Crucifixion to that or to a later year. But it is not too early if the year of the Passion be A.D. 29; and it is in exact accordance with the most ancient traditions recorded by ecclesiastical writers, according to which the martyrdom of Stephen took place within a year after the Ascension, and Paul's conversion, which clearly was not much later, in the year after the Ascension, i. e. in this year 30 (Browne, *Ordo Saecl.* § 102). On the other hand, this date of Paul's conversion is equally compatible with the reference of the second visit in question to Acts xv, which took place A.D. 47; the reckoning of the 14+3 years of Gal. i being in that case continuous from the conversion in A.D. 30. On either view, however, there is clearly an error in the ordinary chronology, which brings down the conversion to A.D. 34, and yet dates the visit of Acts xi in A.D. 44, and that of Acts xv in A.D. 46; a system which there is other and independent reason to suspect (see *Meth. Quart. Review*, July, 1850, p. 500). See PAUL. The chronological difficulty, which would present itself as soon as the ancient date of the Passion was abandoned for a later year, has induced the conjecture, seemingly as early as the *Chron. Pasch.* p. 486, ed. Bonn, that for 14 should be read 4 (ΔΙΑ' Δ' for ΔΙ' ΙΔ'); see Meyer *u. s.* p. 49. On this supposition the conversion might be assigned to A.D. 37, the first visit to A.D. 40, the second to A.D. 44. With this would accord the note of time 2 Cor. xii, 2, according to the *ancient* date of that epistle, viz. A.D. 54, that year being 14 years after the date so assigned to the first visit and the trance (Acts xvii, 17). But there is no need of this conjectural emendation, for the vision of 2 Cor. xii, 2 (which is distinguished from that of Acts xxii, 17, by the fact that the apostle was forbidden to divulge the revelations of the former, whereas he relates what was said to him in the latter) may naturally have happened during the ten years which he spent in his native neighborhood (Gal. i, 21; comp. 2 Cor. xii, 24, 25).

7. The mention of Gallio (xviii, 12) would furnish a note of time, were the date of his proconsulate in Achaia on record. We can only conjecture that it was through the interest of his brother Seneca, who, disgraced and in exile from 41 to 48, thereafter stood in the highest favor with Claudius and Agrippina, that Gallio was presently made consul (suffect) and then proconsul of Achaia (Plin. *H. N.* xxxi, 33; comp Senec. *Ep.* 105). So the date would be not earlier than 49, and not much later. See GALLIO.

8. The decree of Claudius for the expulsion of all Jews from Rome (xviii, 2) is mentioned by Suetonius in a well-known passage (*Claud.* 25), but neither dated nor placed in any discoverable order of time (Dion Cass. lx, 6, relates to merely restrictive measures taken or contemplated in the beginning of the reign). If, as is likely, it formed part of a general measure for the expulsion of the "astrologers" (*Chaldæi, mathematici, astrologi*), its date may be as late as A.D. 52, in which year a severe statute of this nature was enacted ("De mathematicis Italia pellendis factum SC. atrox et irritum," Tacit. *Ann.* xii, 52). But Zonaras (p. 972, ed. Reimar), in the summary compiled from Dion Cass., places an expulsion of the astrologers from Italy immediately after the elevation of Agrippina, A.D. 49, and before the arrival of Caractacus at Rome, A.D. 50; and in Tacitus (*u. s.* 22) we find Agrippina, just after her marriage, accusing her rival Lollia of dealings with Chaldæans and Magi. It is not likely that any general severe measure against the Jews would be taken while the younger Agrippa, a special favorite of Claudius, was still at Rome, as he certainly was to the end of 48, when he succeeded his uncle Herod as king of Chalcis (Josephus, *Ant.* xx, 5, 2; 7, 1; *War*, ii, 14, 4, where for ἑπτακαιδέκατον we must read ἐννεακαιδ.). The insurrectionary movements in Judæa early in A.D. 49 may have been connected with the decree as cause or effect (*Ant.* xx, 5, 3, 4). All these indications point to the year 49, and it is remarkable that that is the year named by Orosius (*Hist.* vii, 6, "ninth year of Claudius"), from some lost source of intelligence ("ut Josephus tradit," he says; but that is a mistake). See CLAUDIUS.

9. The year of the *recall of Felix* and appointment of Festus as his successor (Acts xxiv, 27) is not on record, and the arrival of *Paul at Rome*, in the spring of the following year, has been assigned to every one of the years, from A.D. 56 to 63 inclusive. The earliest is that given by the ancients, and is advocated by Browne, in *Ordo Sæclorum*, § 108 sq. But one principal argument there used is not tenable. From the statement of Josephus (*Ant.* xx, 8, 9), that Felix, on his return to Rome, escaped condemnation upon the charges laid against him before Nero chiefly through the influence of his brother Pallas, whose consideration with that emperor was "just then at its highest" (μάλιστα δὴ τότε διὰ τιμῆς ἔχων ἐκεῖνον), combined with the fact, related by Tacitus (*Ann.* xiii, 14, 15), of Pallas's removal from his office at the head of the *fiscus* shortly before the death of Britannicus, who had nearly completed his 14th year, and with the latter part of the statement in Sueton. (*Claud.* 27), that Britannicus was born "vigesimo imperii die inque secundo consulatu"

(=A.D. 42), Browne inferred that not long before Feb., A.D. 56, Pallas had ceased to be at the height of imperial favor; consequently the recall of Felix could not be placed later than the summer of A.D. 55. This must be rejected; for Tacitus (*u. s.* 15) evidently places the death of Britannicus *early* in 55, the events of which year begin at ch. xi and end with ch. xxv; therefore the former part of Suetonius's statement is alone true—that Britannicus was born on the 20th day of the reign of Claudius, =13th Feb., A.D. 41. Dion Cassius, indeed, mentions the birth under the second year (lx, 10), but not until he has expressly returned to the former year (τῷ προτέρῳ ἔτει). Hence it is clear that if the date of Pallas's loss of office is decisive for the date of his brother's recall, this must have occurred, at latest, in 54, before the death of Claudius (13th Oct. of that year), and no part of the procuratorship of Felix would have been under Nero; a result totally incompatible with the narrative of Josephus (*Ant.* xx, 8; *War*, ii, 13). On the other hand, it is hard to say at what conjuncture in Nero's time Pallas could be said to have been held thus at his highest estimation. At the very beginning of the reign it is noted of him that his arrogance had excited the emperor's disgust (Tacit. *Ann.* xiii, 2); within a month or two he is removed from the *fiscus;* about a year later, when impeached, together with Burrus, his reputation for insolence stood in the way of his acquittal (Tacit. *u. s.* 23); as the ally of Agrippina he was an object more of fear than of favor; and his great wealth caused his removal by death, A. D. 62, as his longevity seemed to preclude the hope of the emperor's otherwise possessing it (*Ann.* xiv, 65). This affords strong reason to suspect that in this matter of Pallas's influence, exercised on behalf of his brother, Josephus was misinformed. Of very material circumstances relative to Felix he certainly was ignorant, unless we are to suppose that Tacitus, on the other hand, had no documentary warrant for the very circumstantial account which he gives under the year 52 (*Ann.* xii, 54); how Felix had then been some time governor of Judæa ("jam pridem Judæa impositus"), holding a divided command with Cumanus, the latter being over the Galilæans, while Felix was over the Samaritans ("ut huic Galilæorum natio, Felici Samaritæ parerent"). He may have mistaken the nature of this divided rule; in fact, there is reason to believe that Felix held a military command, as Suetonius relates (*Claud.* 28: "Felicem legionibus et alis provinciæque Judææ imposuit"), and Victor (in the *Epitome*. p. 361: "Felicem legionibus Judææ præfecit"). Of that associated government, and of Felix's equal share in the wrongs of which Cumanus was accused, Josephus is ignorant; but what he says of Pallas and Felix is far more suitable to that earlier conjuncture, as described by Tacitus, than to the later occasion to which he refers it. At that time, viz. when Cumanus was deposed, "Felix would certainly have suffered for the wrongs done by him to the Jews but for the intercession of his brother Pallas, whom the emperor [Claudius] at that very time held in the highest consideration;" for that Pallas just then had reached the pinnacle of his commanding influence, Tacitus shows in the preceding recital of the public honors decreed to him, and by him recorded as the crowning glory of his life in his own epitaph (Plin. *Ep.* vii, 29; viii, 6). Even in the account Josephus gives of that earlier conjuncture (in which he speaks only of Cumanus and the final hearing before Claudius, *Ant.* xx, 6, 3), he mentions the "very great exertions made by the emperor's *freedmen* and friends for Cumanus and the *Samaritans.*" The absence of dates, of which Josephus is not sparing when he has them, of itself implies that his materials for the account of Felix were scanty; and the way in which Burrus is introduced, after the passage relating to Pallas (*Ant.* xx, 8, 9), strengthens the suspicion raised by the conflicting account in Tacitus, that the Jewish historian in this paragraph is mixing up, with his recital of what took place on the recall of Felix, occurrences of an earlier time. Certainly the accompanying notice (παιδαγωγός), "he was the tutor of Nero," is more appoeite to that earlier conjuncture in the time of Claudius (A.D. 52), when Nero was barely fourteen years old. It might still, in some sense, be notable as the ground of Burrus's influence in the beginning of Nero's reign, when he and Seneca are spoken of having charge of the imperial youth ("rectores imperatoriæ juventæ," Tacit. *Ann.* xiii, 2); but the description is very strange when referred to the year 61, the last of Burrus's life, especially as this is not the first mention of him. See FELIX.

10. The argument for the year 61, as the date of Paul's arrival at Rome, is thus put by Wieseler (*Chronologie des Apost. Zeitalters*, p. 66 sq.). The narrative of Josephus (*Ant.* xx, 8; *War*, ii, 13), from Nero's accession (13th Oct., A.D. 54) to the defeat of the "Egyptian," implies at least two years; this impostor, claiming to be another Moses, would of course make his appearance at the Passover, i. e. at the earliest, that of A.D. 57. That this must have been at least a year before Paul's arrest is implied in the tribune's expression, "before these days" (Acts xxi, 38); therefore the earliest possible date for this arrest is A.D. 58, Pentecost; the "two years" of xxiv, 27, gives A.D. 60 as the *earliest possible* date for the arrival of Festus, and the spring of 61 for the apostle's arrival at Rome. The *latest possible* is given by the liberty allowed Paul (Acts xxviii, 31), for the Neronian persecution began July, A.D. 64. The extreme date hence resulting is limited by further considerations. Pallas and Burrus were living and influential men at the time when Felix was recalled; but Pallas died in the latter half, and Burrus in the first or second month of A.D. 62; consequently Felix arrived in 61 at latest. But Paul was delivered to the *one* præfect of the prætorian guards, τῷ στρατοπεδάρχῳ, who must therefore be Burrus, before and after whom there were *two.* As Burrus died Jan. or Feb., and Paul arrived May or June, the year could not be 62, and the latest possible date would be A.D. 61. Latest possible and earliest possible thus coinciding, the date, Wieseler thinks, is demonstrated. To this it is objected, and justly, that τῷ στρατοπεδάρχῳ of necessity means no more than the præfect concerned (Meyer, *Komm. in Apostelgesch*, p. 19; Lange, *Apost. Zeit.* ii, 9). In favor of the later date (A.D. 62), it is urged that on the hearing before Nero of the complaints relative to Agrippa's building overlooking the Temple (Josephus, *Ant.* xx, 8, 10, 11; *War*, ii, 14, 1), the Jews obtained a favorable judgment through the influence of Poppæa, "Nero's wife." But Poppæa was married May, 62, and undoubtedly Festus's successor, Albinus, was at Jerusalem in the Feast of Tabernacles of the same year (Josephus, *War*, vi, 5, 3). Hence it is argued that unless Josephus's expression, "at that time" (κατὰ τὸν καιρὸν τοῦτον, *Ant.* xx, 8, 11), is taken with undue latitude, Festus cannot have entered upon the province earlier than A.D. 61 (Meyer, *u. s.*). Ewald (*Gesch.* vi, 44) also urges the ἀκωλύτως, "no man forbidding him," of Acts xxviii, *fin.*, for this year 62, and calls attention to the circumstance that the imperial rescript, rescinding the Jewish isopolity, obtained by the Greeks of Cæsarea through the influence of Burrus (Josephus, *Ant.* xx, 8-9), is spoken of as something recent in the beginning of the rebellion (spring of A.D. 66); indeed (in *War*, ii, 14, 4), it seems as if the rescript had but just then reached Cæsarea. Ewald surmises that the death of Festus and of Burrus may have retarded the process. But the fact may be (as was suggested above) that Josephus in that passage has confused some exercise of Burrus's influence in behalf of the Cæsarean Greeks, in the time of Claudius, or early in the time of Nero, with the much later matter of the rescript, which would officially pass through Burrus's hands as secretary for the East (τάξιν τὴν ἐπὶ τῶν Ἑλληνικῶν ἐπιστολῶν πεπιστευμένος), and the opera-

tion of which may have been delayed through the influence of Poppæa (who died Aug., A.D. 65). That Poppæa is spoken of as Nero's "wife," on the occasion above mentioned, may be merely euphemistic anticipation: this woman ("diu pellex, et adulteri Neronis, mox mariti potens," Tacit. *Ann.* xiv, 60) may have befriended the Jews in the former capacity (at any time after A.D. 58, *Ann.* xiii, 45). In fact, the marriage could not have taken place at the time when she is said to have aided them, unless it be possible to crowd the subsequent occurrences of Josephus (*Ant.* xx, 8, 11 and 9, 1) into the space of three or four months (Browne, *Ordo Sæcl.* p. 122). Nor can any certain inference be drawn from the narrative in Josephus (*Life*, 3) of certain priests whom Felix had sent to be tried at Rome, and for whom Josephus, after his own 26th year, which was complete A.D. 64, was enabled, through the good offices of "Cæsar's wife," Poppæa, to obtain their liberty. The men had been prisoners three years at least, and, for aught that appears, may have been so seven or eight years or more. That they were obscure and insignificant persons is evident from the fact that Ismael and Helkias, whom the "devout" Poppæa, two years before, had graciously detained at her court, appear to have made no intercession for their release. See NERO.

But Wieseler (p. 99), after Anger (*De temp. in Act. Ap. ratione*, p. 106), has an argument to which both attach high importance, derived from the notice of a Sunday (Acts xx, 7), the twelfth day after leaving Philippi, which departure was "after the days of Azyma" (15-21 Nisan), and, indeed, very soon after, for the apostle "hasted, if it were possible, to reach Jerusalem for the Pentecost" (verse 16); and of the 43 days which he had before him from 22 Nisan to the day of Pentecost, the days specified or implied in the narrative (Acts xx, xxi), amount to 35 to the landing at Cæsarea (comp. Chrysost. *in Act. Hom.* xlv, 2), leaving but eight days for the stay there (ἡμέρας πλείους, xxi, 10) and the journey to Jerusalem. Wieseler concludes that the departure from Philippi was on the 23d Nisan, which, being twelve days before the Sunday at Troas, would be Wednesday, consequently the 15th Nisan fell on a Tuesday. According to his method of Jewish calendar reckoning, from A.D. 56 to 59 inclusive, the only year in which 15th Nisan would fall on a Tuesday would be 58, which is his date for Paul's arrival at Jerusalem. Were it worth while, the argument might be claimed for the year 55 (the date assigned by the ancients), in which year the day of true full moon = 15 Nisan was 1st April and Tuesday. But, in fact, it proves nothing; the chain is no stronger than its weakest link, and a single "perhaps" in the reckoning is enough to invalidate the whole concatenation. See PASSOVER.

On the whole, it seems that, if not in the Acts (q. v.), then neither in the history of the times from other sources, have we the means of settling this part of the chronology with absolute certainty. Josephus in particular, from whom are derived the combinations which recent German writers deem so unanswerable, is discredited in this part of the history (written probably from his own resources and the inaccurate recollections of his boyhood) by the infinitely higher authority of Tacitus, who drew his information from the public records. Only, in whatever degree it is probable that Paul's first residence at Corinth commenced A.D. 49 (§ 8, above), in the same it is probable that the arrest at Jerusalem belongs to the year 55, six years being sufficient, as nearly all inquirers are agreed, for the intermediate occurrences. Then, if the arrival at Rome took place, as the ancients say, in the second year of Nero, it will be necessary (with Petavius) to refer the "two years" (διετία, xxiv, 27) to the term of Felix's (sole) procuratorship. See CORINTHIANS (EPISTLES TO).

That the two years' imprisonment, with which the narrative in the Acts ends, did not terminate in the apostle's death, but that he was set at liberty, and suffered martyrdom under Nero at a later time, appears to have been the unanimous belief of the ancients (see the testimonies in Browne's *Ordo Sæcl.* § 180). Indeed, in no other way is it possible to find a place for the three pastoral epistles, and especially to account for statements in the Second Epistle to Timothy (q. v.). Wieseler's forced explanations have satisfied and can satisfy no one. (See also Lange, *Apostol. Zeitalter*, ii, 386 sq., and Huther, in Meyer's *Krit. exeg. Komm.* p. 25 sq. Meyer himself, *Römerbr.* Einleit, p. 12 sq., owns that the three pastoral epistles "stand or fall together," and that, if they be genuine, the conclusion is inevitable; which he turns into an argument against their genuineness.) But if, after his release, the apostle visited not only Spain (as Ewald admits, *Gesch.* vi, 631, on the unquestionable testimony of Clemens Rom. c. 5), but Greece and Asia, as is clear from the Epistles to Timothy and Titus, scant room is left for these movements between the late dates assigned, with almost one consent, by recent German writers, to the close of the first imprisonment (A.D. 63 and 64), and the year 65 or 66, which the ancients give as the date of Paul's martyrdom. So far, therefore, it is more probable that the first imprisonment ended in one of the years 58-60. Another consideration points the same way: when Poppæa's influence was established (A.D. 58-65), which, after she became a proselyte or θεοσεβής (i. e. at least as early as 61), was freely used in favor of the Jews, it would certainly have been invoked against the apostle by his enemies (comp. Ewald, vi, 621); and, even if he escaped with life, his confinement would not have been of the mild character described in the concluding verse of the Acts, more especially as his "bonds in Christ were manifest in all the palace" (prætorium), (Phil. i, 13), and among his converts were some "of Cæsar's household" (iv, 22).

We may add that if the Narcissus (q. v.) of Romans xvi, 11, was the celebrated freedman of Claudius, the Epistle to the Romans (q. v.), written shortly before the apostle's last visit to Jerusalem, cannot be placed so late as A.D. 58 or 59, for Narcissus died very soon after Nero's accession (Tacit. *Ann.* xiii, 1). See PAUL.

V. *Results.*—The following table exhibits at one view the Julian or calendar years of the most important Biblical events from the Creation, and also the Vulgar or Christian Æra, according to the preceding investigations (for a complete and self-verifying tabular construction of all the Scriptural dates, with their adjustment to each other and the demands of history, and the authority upon which it rests, see the *Meth. Quart. Review*, October, 1856, p. 601-638). In cases where it is uncertain whether an event occurred in the latter part of one Julian year or in the beginning of the next, the earlier number is set down, and has a star prefixed. In the centuries adjacent to the birth of Christ, many events affecting Palestine are inserted from the Apocrypha, Josephus, and other sources, in addition to those properly Biblical.

72	Fulvius Sylva sent as Roman General into Judæa.
79	Titus Roman Emperor.
81	Domitian Roman Emperor.
96	Banishment of the Apostle John to Patmos.
	Nerva Roman Emperor.
98	Trajan Roman Emperor.
100	Close of the N.-T. Canon.

VI. *Controversies and Literature.*—The distance of the Creation from the Christian æra, which has been stated with about 140 variations, is given in the Indian Chronology, as computed by Gentil, at 6174 years; in the Babylonian, by Bailly, at 6158; in the Chinese, by Bailly, at 6157; in the Septuagint, by Abulfaragius, at 5508; while Jewish writers bring it down below the computation of Capellus, namely, 4000, and one, Rabbi Lipman, to so contracted a sum as 3616.

1. The chronology of the English Bible was regulated by the views of Usher (*Annales Vet. et Nov. Test.* first ed. fol. Lond. 1650, 1654), who followed, in general, the authority of the Hebrew text. Other chronologers have put themselves under the guidance of the Septuagint and Josephus, maintaining that the modern Hebrew text has been greatly vitiated in the whole department of chronology, and more especially in the genealogical tables which respect the antediluvian patriarchs, as well as the ten generations immediately after the Flood. The examination above does not sustain this conclusion. Yet the shortened scheme, adopted by Usher from the Masorite Jews, is recent in its prevalence among Christians when compared with the more comprehensive chronology of the Septuagint.

This last was used before the advent of our Lord, and, being followed by the Greek fathers of the Church, was generally current, till, in the eighth century, a disposition to exchange it for the Rabbinical method of reckoning was first manifested by the venerable Bede. Roman Catholic authors, however, have usually adopted the latter, from the influence of the Latin Vulgate, which strictly follows the Hebrew numbers. Isaac Vossius, in his treatise *De Vera Ætate Mundi* (Hag. 1659, 4to), was the first of any note who forsook the Hebrew dates. Pezron, in his work *L'Antiquité des Tems rétablie et défendue contre les Juifs et les nouveaux Chronologistes* (Amst. 1687, 12mo), produced a great impression in favor of the lengthened period advocated by Vossius. It was not, however, till the middle of the last century that Jackson produced his great work, the *Chronological Antiquities* (Lond. 1752, 3 vols. 4to). He advocated the longer chronology of the Septuagint. In the beginning of the present century Dr. Hales published the first volume of a laborious work entitled *A New Analysis of Chronology*, an undertaking which ultimately extended to four volumes, chiefly in confirmation and illustration of the conclusions of Jackson. Mr. Faber, in his work on pagan idolatry, offers some judicious observations on the chronology of ancient history, treading generally in the footsteps of Hales. The *Origines* of Sir William Drummond proceeds also on the ground supplied by the Septuagint chronology. A detailed statement of grounds for admitting the authority of the Septuagint in preference to that of the original Hebrew may be found in a preliminary dissertation prefixed to the first volume of Dr. Michael Russell's *Connection of Sacred and Profane History, from the Death of Joshua to the Decline of the Kingdoms of Israel and Judah* (Lond. 1827, 3 vols. 8vo).

2. Upon the data we have considered above, three principal systems of Biblical Chronology have been founded, which may be termed the Long System, the Short, and the Rabbinical. All, or almost all, have erred on the side of claiming for their results a greater accuracy than the nature of the evidence upon which they rested rendered possible. Another failing of these chronologers is a tendency to accept, through a kind of false analogy, long or short numbers and computations for intervals, rather according as they have adopted the long or the short reckoning of the patriarchal genealogies than on a consideration of special evidence. It is as though they were resolved to make the sum as great or as small as possible. The Rabbins have in their chronology afforded the strongest example of this error, having so shortened the intervals as even egregiously to throw out the dates of the time of the Persian rule. The German school is here an exception, for it has generally fallen into an opposite extreme, and required a far greater time than any derivable from the Biblical numbers for the earlier ages, while taking the Rabbinical date of the Exodus, and so has put two portions of its chronology in violent contrast. We do not lay much stress upon the opinions of the early Christian writers, or even Josephus: their method was uncritical, and they accepted the numbers best known to them without any feeling of doubt.

The chief advocates of the Long Chronology are Jackson, Hales, and Des Vignoles. They take the Sept. for the patriarchal generations, and adopt the long interval from the Exodus to the Foundation of Solomon's Temple. The Short Chronology has had a multitude of illustrious supporters, owing to its having been from Jerome's time the recognised system of the West. Usher may be considered as its most able advocate. He follows the Hebrew in the patriarchal generations, and takes the 480 years from the Exodus to the Foundation of Solomon's Temple. The Rabbinical Chronology has lately come into much notice from its partial reception, chiefly by the German school. It accepts the Biblical numbers, but makes the most arbitrary corrections. For the date of the Exodus it has virtually been accepted by Bunsen, Lepsius, and Lord A. Hervey. The system of Bunsen we may regard as constituting a fourth class of itself, based upon theories not only independent of, but repugnant to the Bible. For the time before the Exodus he discards all Biblical chronological data, and reasons altogether, as it appears to us, on philological considerations.

	Petavius.	Usher.	Hales.	Jackson.	Bunsen.
	B.C.	B.C.	B.C.	B.C.	B.C.
Creation of Adam....	3983	4004	5411	5426	cir. 20,000
Flood	2327	2348	3155	3170	cir. 10,000
Abram leaves Haran.	1961	1921	2078	2023	
Exodus	1531	1491	1648	1593	1320
Foundation of Temple	1012	1012	1027	1014	1004
Destruction of Temple	589	588	586	586	586

In the post-diluvian period Hales rejects the Second Cainan, and reckons Terah's age at Abram's birth 130 instead of 70 years; Jackson accepts the Second Cainan, and does not make any change in the second case; Usher and Petavius follow the Heb., but the former alters the generation of Terah, while the latter does not. Bunsen requires "for the Noachian period about ten millenia before our æra, and for the beginning of our race another ten thousand years, or very little more" (*Outlines*, ii, 12). These conclusions necessitate the abandonment of all belief in the historical character of the Biblical account of the times before Abraham. The writer does indeed speak of "facts and traditions;" his facts, however, as far as we can perceive, are the results of a theory of language, and tradition is, from its nature, no guide in chronology. It is, however, certain that no Shemitic scholar has accepted Bunsen's theory. For the time from the Exodus to the Foundation of Solomon's Temple, Usher alone takes the 480 years; the rest adopt longer periods, according to their explanations of the other numbers of this interval; but Bunsen calculates by generations. The period of the kings, from the foundation of Solomon's Temple, is very nearly the same in the computations of Jackson, Usher, and Petavius: Hales lengthens it by supposing an interregnum of 11 years after the death of Amaziah; Bunsen shortens it by reducing the reign of Manasseh from 55 to 45 years. The former theory is improbable and uncritical; the latter is merely the result of a supposed necessity.

3. The best authorities on chronology in general are Ideler's thorough *Handbuch d. math. u. technisch. Chronologie* (Berl. 1825, 2 vols.) and *Handbuch d. Chronol.* (Berl. 1831). The methods and results of these works most pertinent to Biblical chronology are also pursued in the first part of Browne's excellent *Ordo Sæclorum* (Lond. 1844). Comp. Matzka, *Chronol. in all. s. Epochen* (Wien, 1844). Jarvis's *Introd. to the History of the Church* (N. Y. and Lond. 1845) is a fundamental investigation of ancient æras with reference to the Christian, and is remarkable for the evidence there given of an error in the Roman annals between B.C. 45 and A.D. 160, in consequence of which the author carries every event between these points one year farther back. A synopsis of the argument is given in Strong's *Harm. and Expos. of the Gospels* (N. Y. 1852), Append. I.

One of the earliest Christian systematic chronologies is the *Pentabiblion* of Julius Africanus (in the 3d cent.), of which only a few fragments remain. Another is the *Chronicon* of Eusebius (4th cent.), of the Latin translation of which by Jerome an edition with notes was published by Scaliger in 1658; and the Armenian version has since been discovered and published, with a Latin translation, at Venice, 1818. There is also a famous Spanish commentary upon this chronicle by Alfonso Fostato (Salamanca, 1506, 5 vols. fol.). The *Chronicon Paschale* (ed. Dufresne, Par. 1689, fol., and by Dindorf, Bonn, 1832) is a Byzantine work ar-

ranged upon the basis of the Easter festival. There is also the Jewish *Chronicon mundi majus et minus*, or *Seder Olam* (סֵדֶר עוֹלָם, in Hebrew, Amsterd. 1711, 4to; in Latin, with a commentary, by J. Meyer, Amsterd. 1649, 4to), the former part of which is reputed to have been composed about A.D. 130, while the latter is of more recent date.

The foundation of the modern science of chronology may be said to have been laid by J. Scaliger, in his work *De Emendatione Temporum* (Par. 1583, fol.; enlarged, Leyd. 1598; also Geneva, 1629). Another important work of that age is that of D. Petavius (or Petau), *De Doctrina Temporum* (Par. 1627, 2 vols. fol.), with its continuation, *Uranologion* (Par. 1630, fol.), and the abridgment, *Rationarium Temporum* (Par. 1630, 8vo, and since). Other important treatises bearing more or less directly on Biblical chronology, besides those mentioned above, are: Calvisii *Opus Chronologicum* (Lips. 1605, and since); Riccioli, *Chronologia Reformata* (Bon. 1669); Florentini, *De anno primitivo* (Aug. Vind. 1621); Labbii et Briettii *Chronologia historica* (Par. 1670); Des Vignoles, *Chronologie de l'Histoire Sainte* (Berl. 1738, 2 vols. 4to), Marsham, *Canon Chronicus* (Lond. 1672; Lpz. 1676; Frcft. 1696); Newton, *Chronology* (Lond. 1728); Blair, *Chronology and History* (London, 1754, 1768); Kennedy, *Astronom. Chronology* (London, 1672); Playfair, *System of Chronol.* (Edinb. 1784); Clinton, *Fasti Hellenici* (Oxf. 1824-30); Clemencet, *L'Art de vérifier les dates* (Par. 1818). More specific are: Vitringa, *Hypotyposis hist. et chronologiæ* (Havn. 1774); Bengel, *Ordo temporum* (2d ed. Stuttg. 1770); Bennigsen, *Biblische Chronologie* (Lpz. 1784); Frank, *Nov. syst. chronologiæ* (Gött. 1788; abridgm. Dess. 1783); Tiele, *Chronol. d. alt. Test.* (Brem. 1839); Archinard, *Chronol. sacrée* (Par. 1841); Seyffarth, *Chronol. sacra* (Lpz. 1846); Akers, *Biblical Chronology* (Cincin. 1855); Anon. *Palmoni* (Lond. 1851); also Capellus, *Chronologia Sacra* (Par. 1655); Allen, *Chain of Script. Chronol.* (Lond. 1659); Bedford, *Script. Chronology* (Lond. 1730); Cunninghame, *Chronology*, etc. (Lond. 1834 sq.); Bosanquet, *Chronology of Dan.* (Lond. 1848); also *Assyr. and Heb. Chronology compared* (in the *Jour. Royal As. Soc.*, Lond. 1864, p. 148 sq.); Fausset, *Sacred Chronology* (Oxf. 1855); with many others of less extent. Compare also Prideaux, *Old and New Testament Connected;* Shuckford, *Sacred and Profane History of the World Connected; Mémoires de l'Académie des Inscriptions et Belles-Lettres;* Michaelis, *Zeitrechnung von der Sündfluth bis Salomo* (in the *Götting. CHRONOLOGY, CHRISTIAN.—The first Christians, in their civil relations, used the civil chronology of the countries they lived in. The ecclesiastical chronology of the early Church was limited to the use of the Jewish week, which began with a work-day and closed with the Sabbath, and in which the several days were not named, but counted. Gradually the day of rest was changed from the last day of the week to the first, and the other days of the week came to have a special ecclesiastical name. Both these changes proceeded from the commemoration of the day of the suffering and the resurrection of Jesus Christ—Sunday being the day of the resurrection, Friday the day of the crucifixion, and Wednesday the day of the trial. The two latter, as days of mourning and fasting, are mentioned by Tertullian (*de jejun.* c. 2) and by Clement of Alexandria (*Strom.* vii, 12, § 75); but they are probably of an earlier origin, for the name *statio* (στάσις), by which they were generally designated at the time of Tertullian, occurs in the *Pastor Hermæ* (lib. 3, simil. 5). Sunday, as a day of rejoicing, is first mentioned in the Epistle of Barnabas (chap. xv), and its celebration seems to reach back to the apostolic age. These three prominent days were called in the Latin Church, *feria quarta*, *feria sexta* or *parasceve*, and *dies dominicus* or *dominica*, and by the Greeks τετράς, παρασκευή, ἡμέρα κυριακή (also abbreviated κυριακή or κυριά), or ἀναστάσεως ἡμέρα. The oldest witnesses for the names of the station-days are again Tertullian and Clement. The former is also the first to mention the name of *dominica*, while κυριακή is first found in the epistles of Ignatius (*ad Magnes.*). The other week-days were designated by the Latins with the same name as the station-days (*feria*), and counted from *feria secunda* to *feria sexta* or *parasceve*, while the Greeks counted from ἡμέρα δευτέρα to ἕκτη or παρασκευή. The last day retained its Jewish name *sabbatum*, and σάββατον or σάββατα. The planetary appellation of days which emanated from the pagan astronomers in Alexandria (see Ideler, *Handbuch der mathem. und techn. Chronologie*, Berlin, 1825) is first mentioned by Tertullian, who mentions the *dies solis* (Sunday) and *dies Saturni* (Saturday); by Justin Martyr, who mentions τοῦ ἡλίου ἡμέρα (Sunday) and κρονική (Saturday); and by Clement of Alexandria, who mentions Ἑρμοῦ (Wednesday), and Ἀφροδίτης (Friday) ἡμέρα. Still another way of designating the week-days is found in the Easter Canon of Hippolytus, which marks the days of the week (beginning with Sunday) by the first letters of the alphabet, A to G.

Among the weeks of the year, the one including the anniversaries of the death and the resurrection of Christ came early to be celebrated with special solemnity. The time on which the former of these anniversaries should be commemorated even became the occasion of one of the greatest ecclesiastical controversies of the ancient Church, one party, which claimed to follow the example of the apostles John, Philip, and Paul, insisting that it should be celebrated on the anniversary day of the month (the full moon's day of the Jewish month of Nisan), and the other party, which appealed to the other apostles as their authorities, urging the celebration on the anniversary day of the week (Friday). The Church of Rome followed the latter, and the churches of Asia Minor the former practice. Both customs required either a compliance with the Jewish Calendar or a special calculation of the Christian Easter. Of the latter class, the most ancient known to us is one found on the marble statue of Hippolytus, and computed to the first year of the emperor Alexander Severus (A.D. 222). It fixes the 18th of March as the time of the equinox, is arranged according to the sixteen years' cycle, and determines the Easter Sundays according to the Latin rule, that, whenever the Easter Sundays fall upon Saturdays, Easter is to be celebrated, not upon the next, but upon the second next Sunday. In the Eastern churches special calculations were made by Dionysius of Alexandria, Anatolius of Laodicea, and others. Gradually the Alexandrine Easter Canon, the authorship of which is ascribed by Jerome and Bede to Eusebius, dislodged all others, and obtained general usage in the Church. It appointed for the celebration of Easter the Sunday following the day of the full moon which falls on or comes next after the equinox. The bishops, by paschal letters, informed the churches of the proper time of Easter in every year. A third, which is mentioned by Tertullian, tried to fix the 14th day of the month of Nisan, in the death-year of Christ (the 25th of March), as the immovable anniversary of the death, and the 16th day of Nisan as the anniversary of the resurrection of Christ. See EASTER.

Constantine the Great, in 321, ordered a civil observance of Sunday by prohibiting all secular business,

and transferred the pagan *Nundinæ* of the old Romans to Sunday. A Roman Calendar, compiled in the middle of the fourth century, divides the whole year, from the 1st of January, according to *Nundinæ* and weeks, by placing in parallel columns the eight Nundinal letters A-H, and the seven week letters A-G. The entire suppression of the Nundinæ is thought to have been effected by the Sunday laws of Theodosius the Great.

But while the week supplanted the *Nundinæ*, the Christian appellation of the week-days gave way gradually, at least in the Western countries, to the pagan planetary names. The change was, however, not effected without considerable resistance. Philastrius (about 387) counts the use of the planetary names for week-days among the heresies. Ambrose and Gregory of Tours (died 594) censure the use of the name Sunday (*dies solis*). A bishop of Iceland, in 1107, suppressed the planetary names and substituted for them numbers. The Spaniard Campanella made an attempt to introduce, in the place of pagan names of the week-days, the names of the seven sacraments, and in place of the usual names of months those of the twelve apostles. In the Eastern churches the planetary names never came into general use. The Slavi, Lithuanians, and Finns count the days of the week, calling Monday the first day (after the Sabbath).

The months of the Christians (except among the Copts and Abyssinians, who still use the old Alexandrine months) are still those of the Julian Calendar. The names of the Roman months have also in most Christian countries come into general use. In the Byzantine empire, the Syro-Macedonian names of the months maintained themselves by the side of the Roman until late in the Middle Ages, and among the Germanic and Slavic nations efforts were made to introduce native names, but the Roman names always prevailed. The Armenian, Syrian, Coptic, and Abyssinian Christians still use the national names of months exclusively. The "Society of Friends" (Quakers) reject both the planetary names of days and the Roman names of months, and simply count both (as "first day," instead of Sunday, and "first month," instead of January).

With the names of the Roman months also the Roman way of dating was extensively used. In the Latin Church it remained in use until the establishment of the modern languages (in Germany until the 14th century). Isolated instances of the present way of counting the days are found in a fragment of a Gothic Calendar in the 4th century; in an Anglo-Saxon Calendar of the 10th century; in the works of Pope Gregory the Great (594-604), and elsewhere. The designation of the days of the months by the names of saints came into use early in the Middle Ages. In the Byzantine Church the Roman way of dating seems to have been supplanted in the 7th century by the present way of counting the days. In Asia, the Roman way of dating was used only by way of comparison with the national method.

The beginning of the year in the Christian countries has remained, as it was fixed in the Julian Calendar, on the 1st of January. Dionysius Exiguus, in order to give the beginning of the year a Christian character, called it the "day of circumcision" (*dies circumcisionis*). Several attempts were made to substitute for the 1st of January another beginning of the year, relating to some prominent event in the history of Christianity. Thus several popes began to use for that purpose the first day of March, probably on the ground that March was the usual month of the Passover, and Venice used in its public documents this day until the downfall of the republic. Another Roman new-year's day was the 25th of March (the festival of the Annunciation), and this was used in Pisa and Florence until 1749. But the most common was Christmas (*a Nativitate Domini*), which was even called *mos*, or *stilus curiæ Romanæ*. It was not until Pope Innocent XII (1691) that this habit was altogether abandoned. In Germany, the calendarium of Charlemagne has the 1st of January; the 25th of March was in frequent use until the 11th century, when it gave way to Christmas, which maintained itself until the peace of Westphalia. France, under the Merovingians, used the 1st of March; under the Carlovingians, Christmas; under the Capetingians, until the 16th century, Easter; the latter was also for a long time in use in Holland and in Cologne. Spain and Portugal long used the 25th of March, and from the 14th to the 16th century, Christmas. The Anglo-Saxons, according to Bede, began the year on Christmas; but gradually three different years were distinguished—the historical, legal or civil, and ecclesiastical. The beginning of the first has long been on the 1st of January; that of the second was the 25th of December until the 13th century, after that the 25th of March until 1752, when it was fixed at the 1st of January. In the Byzantine empire the 1st of January was in the 5th century supplanted by the 1st of September (the epoch of the Indictions), which the Russians abandoned for the 1st of January in 1700, and the kingdom of Greece in 1821. The Chaldæans have adopted the 1st of September, while the Nestorians and Jacobites stick to the 1st of Tishri. The Copts and Abyssinians still adhere to the 1st of Thoth.

Of a special church year there are no traces until the time of Constantine the Great. Its beginning seems at first to have been made with the sun-month corresponding to the Jewish Nisan. Thus the Apostolic Constitutions designate December as the ninth, January as the tenth, and "Xanthicus" (which is usually identified with Nisan) as the first month. Epiphanius follows the same calculation; and Victorius, Dionysius, and Beda speak of the Easter month as the first. The epoch of the first Sunday of Advent originated with the Nestorians, and is first found in the *Responsoriale* of Gregory the Great, but seems to have been general in the Latin churches as early as the 7th century. The Greek Church has retained the 1st of September as the beginning of the church year. See Herzog, *Real-Encyklopädie* s. v. *Zeitrechnung* (which we have chiefly followed in the above article). See also ÆRA; CHURCH-YEAR; CYCLE.

Chrysargўrum (χρυσάργυρον), a tax on trade and commerce under the later Roman emperors, so called because paid in gold and silver; and also *tributum lustrale*, because paid once in every five years (*lustrum*). Even the poorest tradesmen were not exempt from it; and it was called an intolerable tax (φόρος ἀφόρητος, Libanius, *Orat.* 14, cont. Florent.). Yet Constantius freed the lower clergy, who gained their bread by trade or labor, from this tax; and later emperors confirmed the exemption.—Bingham, *Orig. Eccles.* bk. v, ch. iii, § 6.

Chrys'olite (χρυσόλιθος, *golden stone*), the precious stone which garnished the seventh foundation of the New Jerusalem in John's vision (Rev. xxi, 20); according to Schleusner, a gem of golden hue, or, rather, of yellow streaked with green and white (see Plin. xxxvii, 9, 42; Isidor. *Origg.* xvi, 14). It was called by some *chrysophyllum* (χρυσόφυλλον, Epiphan. *De geminis*, x). It was a name applied by the ancients to all gems of a golden or yellow color, but it probably designated particularly the *topaz* of the moderns (see, however, Bellermann, *Urim et Thummim*, p. 62). In the Sept. the word is employed for תַּרְשִׁישׁ, *tarshish'*, the "beryl" of our version (Exod. xxviii, 20; Ezek. x, 9). See BERYL; TOPAZ.

What is usually termed chrysolite is a crystalline precious stone of the quartz kind, of a glossy fracture. In chemical composition it is a ferriferous *silicate of magnesia*. The prevailing color is yellowish-green, and pistachio-green of every variety and degree of

shade, but always with a yellow and gold lustre. There are two particular species of chrysolite: one, called the Oriental chrysolite, of a pistachio-green, transparent, and, when held up to the light in certain positions, often with a cherry-red shade; the other is the granulous chrysolite, of different shades of yellowish-green color, half transparent and nearly pellucid (see the *Penny Cyclopædia*, s. v.). See GEM.

Chrysolŏgus, PETRUS, archbishop of Ravenna, was born at Imola about 400, and was consecrated archbishop about 433. He was noted for strictness of discipline, and especially for eloquence, from which his surname was derived. Eutyches sought to gain the eloquence and reputation of Chrysologus for his party, but the latter not only repelled him, but strenuously opposed his doctrine. He died at Imola, according to one account, Dec. 2, 450; according to another, in 458. A number of *Sermons* (176) are preserved, of which the first edition, by Vincentius, appeared in 1534; another at Venice, 1750, fol. One of the best editions is *Sermones, editio omnium certè castigatissima* (Aug. Vind. 1758, fol.). These and the few letters of his that remain are collected in a complete edition in Migne's *Patrologia* (1846, imp. 8vo).—Migne, *Dict. de Biographie*, iii, 425.

Chrysopra'sus (χρυσόπρασος, mentioned in Rev. xxi, 20, as the tenth row of stones in the foundation of the heavenly Jerusalem), a precious stone of greenish-golden color, or apple-green, passing into a grass-green (Pliny, *Hist. Nat.* xxvii, 20, 21); an Indian translucent gem, so called as resembling in color the juice of the leek (πράσον), with golden spots (χρυσός)—a species of beryl, supposed to be possessed of healing power in diseases of the eyes. Its spotted character may be inferred from the name given to it by Pliny (*Hist. Nat.* xxxvii, c. 8), *pardalios*, or, rather, *pantherion*, from its resembling the leopard-skin (see Braun. *de Vest. Sac. Heb.* ii, c. 9, p. 509). The chrysoprase of the ancients is by some supposed to be identical with the stone now so called, viz. the apple or leek-green variety of agate, or uncrystallized quartz (*London Encyclopædia*, s. v.), which owes its color to oxide of nickel; this stone at present is found only in Silesia; but Mr. King (*Antique Gems*, p. 59. note) says that the true chrysoprase is sometimes found in antique Egyptian jewelry set alternately with bits of lapis-lazuli. See GEM.

In Gen. ii, 12, the Sept. renders the word שֹׁהַם, *sho'ham*, by chrysoprase (λίθος ὁ πράσινος), but they were probably different gems. See BERYL.

Chrysostom, ST., born 347 at Antioch, died in exile 407. His proper name was JOHN, but since the seventh century he is better known as CHRYSOSTOM (Χρυσόστομος), the golden-mouthed pulpit orator of the Greek Church. Like Gregory of Nazianzen, and Augustine, he had a most excellent Christian mother, Anthusa, who, by her exemplary virtue and piety, commanded even the admiration of the heathen. It was with reference to her that Libanius, the most distinguished rhetorician and literary representative of heathenism at the close of the fourth century, felt constrained to exclaim, "Ah, gods of Greece! what wonderful women there are among the Christians!" Anthusa was married to a prominent military officer at Antioch, but became a widow in her twentieth year, and continued in that state, devoting herself exclusively to religion and the education of her children. She planted the seeds of early piety in the soul of Chrysostom, although, like Gregory Nazianzen, Augustine, and other sons of Christian mothers, he was not baptized till mature age. She gave him, at the same time, the benefit of the best intellectual culture of the age in the school of Libanius, who esteemed him his best scholar, and desired him to become his successor as professor of rhetoric or forensic eloquence. Chrysostom entered the career of a rhetorician, but shortly after he broke with the world, and resolved to devote himself exclusively to religion. After the usual course of catechetical instruction, he was baptized by bishop Meletius, of Antioch. His first impulse after his conversion was to embrace the monastic life, which, since St. Anthony of Egypt, the patriarch of monks, had set the example, and such men as Athanasius, Basil the Great, the two Gregories, Ambrose, Jerome, and Augustine had given it the sanction of their great authority, carried away many of the noblest and most earnest youths of the Church, as a mode of life best adapted to secure personal holiness and salvation, and to benefit the world by presenting to it, in bold contrast to its perishing vanities, the beauty and power of heroic self-denial and true happiness in the unbroken communion with God. Anthusa, however, defeated his design for a season. She took him by the hand, led him to her room, and by the bed where she had given him birth, she remonstrated with him in tears and tender entreaties not to forsake her. Like an obedient son, he yielded to her wishes; and although he, after her death, spent some time in monastic retreat, and retained ascetic habits even on the patriarchal throne, yet the greater part of his life was devoted to the active service of the Church in some of her most influential positions. He commenced the clerical career as reader in the church of Antioch under Meletius, and would soon have been promoted to a bishopric, but he evaded the election by a sort of pious ruse, and thrust it upon his friend Basilius (not of Cæsarea, but of Raphanea, in Syria), whom he considered worthier, but who bitterly complained of the deception. Chrysostom defended his conduct, and justified the theory of accommodation, or economy (οἰκονομία), as he called it, wherever it may be practised from pure motives, and as a means to a good end; unwarrantably appealing to Paul, who became a Jew to the Jews, and a Gentile to the Gentiles. Other fathers (e. g. Jerome) had the same lax views on the duty of veracity, which find no support in the Bible, but were universally entertained among the heathen philosophers, especially the Greek sophists. Even Plato vindicates falsehood, and expressly recommends it to physicians as a help to the healing of the sick, and to rulers for the good of the people (*De Republ.* iii, p. 266). No wonder that even to this day strict veracity is so rare in the Oriental churches. This occurrence was the occasion of Chrysostom's famous treatise on the priesthood (Περὶ ἱερωσύνης, *De Sacerdotio, libri vi*), which, notwithstanding the serious defect alluded to, is one of the most useful works on the duties and responsibilities of the holy ministry, and has been often separately edited (by Erasmus, Cave, Bengel, etc.) and translated into modern languages (into English by Hollier, 1740; Bunce, 1759; Mason, 1826 (Phila. 12mo); Marsh, 1844, and B. Harris Cowper, 1866).

After the death of his mother Chrysostom fled from the seductions and tumults of city life to the monastic solitude of the mountains near Antioch, and there spent six happy years in the study of the Bible, in sacred meditation and prayer, under the guidance of the learned abbot Diodorus (afterwards bishop of Tarsus, †394), and in communion with such like-minded young men as Theodore of Mopsuestia, the celebrated father of Antiochian (Nestorian) theology (†429). Monasticism was to him a profitable school of experience and self-government; because he embraced this mode of life from the purest motives, and brought into it intellect and cultivation enough to make the seclusion available for moral and spiritual growth. He thus describes the life of his brethren on the mountain solitude near Antioch: "Before the rising of the sun they rise, hale and sober, sing as with one mouth hymns to the praise of God, then bow the knee in prayer under the direction of the abbot, read the Holy Scriptures, and go to their labors; pray again at nine, twelve, and three o'clock; after a good day's work, enjoy a simple meal of bread

and salt, perhaps with oil, and sometimes with pulse; sing a thanksgiving hymn, and lay themselves on their pallets of straw without care, grief, or murmur. When one dies they say, 'He is perfected;' and they all pray God for a like end, that they also may come to the eternal Sabbath-rest and to the vision of Christ."

In this period he composed his earliest writings in praise of monasticism and celibacy, and his two long letters to the fallen Theodore (subsequently bishop of Mopsuestia), who had regretted his monastic vow and resolved to marry. Chrysostom regarded this small affair, from the ascetic stand-point of his age, as almost equal to an apostasy from Christianity, and plied all his oratorical arts of sad sympathy, tender entreaty, bitter reproach, and terrible warning to reclaim his friend to what he thought the surest and safest way to heaven.

By excessive self-mortification Chrysostom undermined his health, and returned about 380 to Antioch. There he was ordained deacon by Meletius (who died in 381), and presbyter by Flavian in 386. By his eloquence and his pure and earnest character he soon acquired great reputation and the love of the whole church. During the sixteen or seventeen years of his labors in Antioch he wrote the greater part of his Homilies and Commentaries, his work on the Priesthood, a consolatory epistle to the despondent Stagirius, and an admonition to a young widow on the glory of widowhood and the duty of continuing in it. He disapproved second marriage, not as sinful or illegal, but as inconsistent with an ideal conception of marriage and a high order of piety.

Chrysostom was chosen, without his own agency, patriarch of Constantinople. At this post he labored several years with happy effect. By talent and culture he was peculiarly fitted to labor in a great metropolis. He happily avoided the temptation of hierarchical pride and worldly conformity. In the midst of the splendors of New Rome he continued his ascetic habits, and applied all his income to the sick and the poor. He preached an earnest, practical Christianity, insisted on church discipline, and boldly attacked the vices of his age, and the hollow, worldly, and hypocritical religion of the imperial court.

But his unsparing sermons aroused the anger of the empress Eudoxia, a young and beautiful woman, who despised her husband and indulged her passions. His rising fame, moreover, excited the envy of the ambitious patriarch, Theophilus of Alexandria, who could not tolerate a successful rival in Constantinople. An act of Christian love toward the persecuted Origenistic monks of Egypt involved him in the Origenistic controversy, which raged at that time with great violence in Egypt and Syria, and at last the united influence of Theophilus and Eudoxia overthrew him. Persecution and suffering were to test his character and to throw around his memory the halo of martyrdom for the cause of purity and charity. Theophilus first sent the aged Epiphanius, so well known for his orthodox zeal and his hatred of the arch-heretic Origen, to Constantinople, as a tool of his hierarchical plans, in the hope that he would destroy the thousand-headed hydra of heresy, and ruin Chrysostom for his apparent connection with it. Chrysostom, as a pupil of the Antiochian school of theology and as a practical divine, had no sympathy with the philosophical speculations and allegorical fancies of Origen, but he knew how to appreciate the merits of this great man, and was prompted by a sense of justice and Christian love to intercede in behalf of the Origenistic monks, whom Theophilus had unmercifully expelled from Egypt, and he showed them kindness when they arrived at Constantinople, although he did not admit them to the holy communion till their innocence should be publicly established. Epiphanius himself found that injustice had been done to those monks, and left Constantinople with the words, "I leave to you the city, the palace, and hypocrisy." He died on board the ship on his return to Cyprus (403). Theophilus now proceeded to Constantinople in person, and at once appeared as accuser and judge of Chrysostom. He well knew how to use the dissatisfaction of the clergy, of the empress Eudoxia, and of the court, with Chrysostom, on account of his moral severity and his bold denunciations. In Chrysostom's own diocese, on an estate, "at the oak" (synodus ad quercum), in Chalcedon, he held a secret council of thirty-six bishops against Chrysostom, and there procured, upon false charges of immorality, unchurchly conduct, and high treason, his deposition and banishment in 403. Among the twenty-nine charges were these: that Chrysostom called the saint Epiphanius a fool and demon; that he wrote a book full of abuse of the clergy; that he received visits from females without witnesses; that he bathed alone and ate alone.

Chrysostom was recalled, indeed, in three days, in consequence of an earthquake and the dissatisfaction of the people, but was again condemned by a council in 404, and banished from the court, because, incensed by the erection of a silver statue of Eudoxia close to the church of St. Sophia, and by the theatrical performances connected with it, he had, with unwise and unjust exaggeration, opened a sermon, on Mark vi, 17 sq., in commemoration of John the Baptist, with the personal allusion, "Again Herodias rages, again she raves, again she dances, and again she demands the head of John [Chrysostom's own name] upon a charger" (Socrates, *Hist. Eccl.* vi, c. 18). From his exile in Cucusus and Arabissus he corresponded with all parts of the Christian world, took lively interest in the missions in Persia and Scythia, and appealed to a general council. But even the powerful intercession of pope Innocent I and the sympathy of the people at Constantinople were of no avail against the wrath of the court and the envy of a rival patriarch. The enemies of Chrysostom procured from Arcadius an order for his transportation to the remote desert of Pityus. On the way thither he died at Comana in Pontus, Sept. 14, 407, in the sixtieth year of his age, praising God for everything, even for his unmerited persecutions. His last words were: Δόξα τῷ Θεῷ πάντων ἕνεκεν. They express the motto of his life and work.

Chrysostom was venerated by the people as a saint; and thirty years after his death, by order of Theodosius II (438), his bones were brought back in triumph to Constantinople, and deposited in the imperial tomb in the Church of the Apostles. The emperor himself met the remains at Chalcedon, fell down before the coffin, and in the name of his guilty parents, Arcadius and Eudoxia, implored the forgiveness of the holy man. The age could not, indeed, understand and appreciate the bold spirit of Origen, but was still accessible to the narrow piety of Epiphanius and the noble virtues of Chrysostom.

John Chrysostom is the greatest commentator and preacher of the Greek Church, which reveres him above all fathers. He left a spotless name behind him. As a divine, he was eminently sound, moderate, and practical; less profound and original than Athanasius or Augustine, but superior to both as an exegete and sermonizer. He is the best representative of the Antiochian school as distinct from that of Alexandria. He avoided the errors into which his friend Theodore of Mopsuestia, and his successor, the unhappy Nestorius, of the same school, fell soon afterwards. Neander compares him to Spener, the practical reformer of the Lutheran Church in the 17th century. Villemain claims for him "the union of all the oratorical attributes, the natural, the pathetic, and the grand, which have made St. John Chrysostom the greatest orator of the primitive Church, and the most distinguished interpreter of that remarkable epoch." Carl Hase says of him that "he complemented the sober clearness of the Antiochian exegesis and the rhetorical arts of Li-

banius with the depth of his warm Christian heart, and that he carried out in his own life, as far as mortal man can do it, the ideal of the priesthood which, in youthful enthusiasm, he once described" (*Church History*, § 104). Niedner characterizes him thus: "In him we find a most complete mutual interpenetration of theoretical and practical theology, as well as of the dogmatical and ethical elements, exhibited mainly in the fusion of the exegetical and homiletical. Hence his exegesis was guarded against barren philology and dogma, and his pulpit discourse was free from doctrinal abstraction and empty rhetoric. The introduction of the knowledge of Christianity from the sources into the practical life of the people left him little time for the development of special dogmas" (*Geschichte d. chr. Kirche*, 1846, p. 323).

We have from Chrysostom over six hundred homilies, delivered at Antioch and Constantinople, by far the most valuable of his writings. They are consecutive expository sermons on Genesis, the Psalms, and most of the books of the New Testament. They contain his exegesis, and hence are so often quoted by modern commentators, especially the homilies on the Epistles of Paul. Besides them he wrote discourses on special occasions, among which the twenty-one homilies on the Statutes, occasioned by a rebellion at Antioch in 387, are the most celebrated. The other works of Chrysostom are his youthful treatise on the priesthood already alluded to; a number of doctrinal and moral essays in defence of the Christian faith, and in commendation of celibacy and the nobler forms of monastic life; and two hundred and forty-two letters, nearly all written during his exile between 403 and 407. The most important of the letters are two addressed to the Roman bishop Innocent I, with his reply, and seventeen long letters to his friend Olympias, a pious widow and deaconess. They all breathe a noble Christian spirit, not desiring to be recalled from exile, convinced that there is but one misfortune—departure from the path of piety and virtue, and filled with cordial friendship, faithful care for all the interests of the Church, and a calm and cheerful looking forward to the glories of heaven. The so-called *Liturgy* of Chrysostom, which is still in regular use in the Greek and Russian churches, bears the unmistakable marks of a later age.

Literature.—The best edition of the works of Chrysostom in the original Greek, with a Latin translation, is the Benedictine, prepared by Bernard de Montfaucon, first published in Paris 1718-1738, in 13 fol. vols.; reprinted in Venice 1734-'41; in Paris (Gaume), 1834-'39; and in Migne's *Patrologia*, 1859-'60. The Homilies have been often translated into French, German, English, and other languages (English translation in the Oxford library of the Fathers, 1842-'53); so also his youthful work on the Priesthood (see above). On the life and character of Chrysostom see especially the *Vita* in vol. xiii of the *Opera*, p. 91-178; Tillemont, *Mémoires*, vol. xi, p. 1-405: Stilting, *Acta Sanctorum* for Sept. 14; Neander, *Der heil. Chrysostomus* (Berlin, 1821, 3d ed. 1848, in 2 vols. (the first volume translated by Stapleton, Lond. 1838); Villemain, *Tableau de l'éloquence chrétienne au IVe siècle* (Par. 1849, p. 154-217); Perthes, *Life of Chrysostom* (Boston, 1854, 12mo); Abbé Rochet, *Histoire de St. Jean Chrysostome* (Par. 1866). Comp. also Schaff's *Church History*, 1866, vol. iii, p. 702 sq. and 933 sq. (from which a part of the above sketch has been taken).

Chub [pron. *Cub*] (כּוּב, Heb. *Kub*, deriv. uncertain; Sept. apparently *Λίβυες*, but transposes; Vulg. *Chub*), a word occurring only once as the name of a people in alliance with Egypt in the time of Nebuchadnezzar (Ezek. xxx, 5): "Cush, and Phut, and Lud, and all the mingled people (עֶרֶב), and Chub (Sept. *Πέρσαι καὶ Κρῆτες καὶ Λυδοὶ καὶ Λίβυες καὶ πάντες οἱ ἐπίμικτοι ἐπ' αὐτῶν* v. r. *Λίβυες καὶ Αἰθίοπες καὶ Λυδοὶ καὶ πᾶσα ἡ Ἀραβία*), and the children of the land of the covenant shall fall by the sword with them" (i. e. no doubt the Egyptians; see ver. 4). The first three of these names or designations are of African peoples, unless (but this is improbable) the Shemite Lud be intended by the third (see, however, xxvii, 10; xxxviii, 5; Isa. lxvi, 19; Jer. xlvi, 9); the fourth is of a people on the Egyptian frontier; and the sixth probably applies to the remnant of the Jews who had fled into Egypt (comp. Dan. xi, 28, 30, 32, especially the last, where the covenant is not qualified as "holy"), which was prophesied to perish for the most part by the sword and otherwise in that country (Jer. xlii, 16, 17, 22; xliv, 12, 13, 14, 27, 28). This fifth name is therefore that of a country or people in alliance with Egypt, and probably of Northern Africa, or of the lands near Egypt to the south. Some have proposed to recognise *Chub* in the names of various African places—*Cobè* (Κοβή), a port on the Indian Ocean (Ptol. iv, 7, § 10); *Chobat* (Χωβάτ or Χωβάθ), in Mauritania (iv, 2, § 9); and *Cobion* (Κώβιον or Κωβίον), in the Mareotic nome in Egypt (iv, 5)—conjectures which are of no value except as showing the existence of similar names where we might expect this to have had its place. Bochart strangely regards it as the city *Paliurus*, in Marmarica (Strabo, xvii, 838); while Hävernick seeks it in the people called *Kufa* on the Egyptian monuments (Wilkinson, i, 379 sq.). Others, however, think the present Heb. text corrupt in this word. It has been therefore proposed to read *Nub* (נוּב) for *Nubia*, as the Arab. vers. has "the people the *Noobeh*," whence it might be supposed that at least one copy of the Sept. had derived the first letter (ν for the usual λ); one Heb. MS. indeed reads thus (בנוב, Cod. 409, ap. de Rossi). The Arab. vers. is, however, of very slight weight, and we have no authority of this kind for applying the word *Nub* (or *Kenub*, its Egyptian pronunciation; see Bunsen, *Ægypt. Stell.* ii, 6) to *Nubia*, or rather the *Nubæ* (Νοῦβαι, Strabo, xvii, 786, 819; iv, 7, 30; Plin. vi, 35; Steph. Byz. p. 596), the countries held by whom from Strabo's time to our own are by the Egyptian inscriptions included in Keesh or Kesh, that is, Cush; the Nubæ, however, may not in the prophet's days have been settled in any part of the territory which has taken from them its name. Another conjecture (regarded as quite equal in probability by Gesenius, *Thes. Heb.* p. 664) is the emendation which Hitzig proposes (*Begriff der Kritik*, p. 129), namely, *Lub* (לוּב). The *Lubim*, doubtless the Mizraite *Lehabim* of Gen. x, 13; 1 Chron. i, 11, are mentioned as serving with Cushim in the army of Shishak (2 Chron. xii, 2, 3), and in that of Zerah (xvi, 8; comp. xiv, 9), who was most probably also a king of Egypt, and certainly the leader of an Egyptian army. See CUSH; ZERAH. Nahum speaks of them as helpers of Thebes, together with Put (Phut), while Cush and Egypt were her strength (iii, 8, 9); and Daniel mentions the Lubim and Cushim as submitting to or courting a conqueror of Egypt (xi, 43). The Lubim might therefore well occur among the nations suffering in the fall of Egypt. There is, however, this objection, that we have no instance of the supposed form *Lub* in the sing., the noun being always given in the plural—LUBIM (q. v.); hence Hitzig has himself since rejected this view (*Kurzgef. exeget. Hdb. in Ezechiel*, in loc.). The suggestion of Hävernick, that the name Chub is to be connected with *Kufa*, which occurs on the Egyptian monuments as that of a people conquered by the Egyptians (Wilkinson, *Anc. Egypt.* i, 367, 371), would be deserving of notice were it not that it involves the somewhat violent proposition that a people, of whom we only know that they were the allies of the Egyptians, should be identified with a people of whom we only know that they were the conquered enemies of the Egyptians; though it is certainly possible that they who were at an early period foes, may at a later period have be-

come allies. Worthy of notice also is the suggestion of Fürst, who says, "It is possible that it is to be connected with *Coba*, the existing name of an Ethiopian port, and which, perhaps, was formerly the name of a district" (*Hebrew Handbook* s. v.).

Chubb, THOMAS, an English Deist, was born at East Harnham, a village near Salisbury, in 1679. His father dying, left his family poor, and Chubb was apprenticed to a glover in 1694. At this trade, and that of tallow-chandler, he supported himself, and at the same time cultivated his uncommon natural ability by diligent study. He died at Salisbury, Feb. 3, 1746. His first work, which appeared in 1715, was entitled *The Supremacy of the Father asserted* (8vo), and denied the divinity of Christ. It was followed by a series of publications, in which his skepticism was more and more fully developed. Among them are *Inquiries concerning Liberty of Conscience and Sin* (Lond. 1717, 8vo); and a great number of tracts on authority, human nature, miracles, etc. He was largely involved in controversy with Warburton, Stebbing, Fleming, and others. His posthumous tracts were published in 2 vols. 8vo, 1748; and were answered by Fleming, in *True Deism the Basis of Christianity*; or, *Observation on Chubb's posthumous Works*; and by Leland (*View of Deistical Writers*, vol. i). "Chubb was a working man, endowed with strong native sense, who manifested the same inclination to meddle with the deep subject of religion which afterwards marked the character of Thomas Paine and others, who influenced the lower orders later in the century. In his general view of religion, Chubb denied all particular providence, and, by necessary consequence, the utility of prayer, save for its subjective value as having a reflex benefit on the human heart. He was undecided as to the fact of the existence of a revelation, but seemed to allow its possibility. He examined the three great forms of religion which professed to depend upon a positive revelation, Judaism, Mohammedanism, and Christianity. The claims of the first he wholly rejected, on grounds similar to those explained by Morgan, as incompatible with the moral character of God. In reference to the second he anticipated the modern opinions on Mohammedanism by asserting that its victory was impossible if it had not contained truth which the human spirit needed. In examining the third he attacked, like Morgan, the evidence of miracles and prophecy, and asserted the necessity of moral right and wrong as the ground of the interpretation of Scripture" (Farrar, *Critical History of Free Thought*, p. 142). There is a full account of Chubb, with the opinions of various writers concerning him, in the *Biographia Britannica*, iii, 521-532.

Chun [pron. *Cun*] (Heb. *Kun*, כּוּן, deriv. uncertain; Sept. ἐκλεκτός, Vulg. *Chun*), a Syrian city mentioned in connection with Tibhath, as one of the "cities of Hadarezer," from which David procured brass for building the Temple (1 Chron. xviii, 8). In the parallel passage (2 Sam. viii, 8) these two cities are called respectively Betah and BEROTHAI. It is perhaps the same with the *Conna* mentioned in the *Itin. Antonini* as situated between Laodicea and Baalbek. The rendering of the Sept. seems to imply that instead of "from Chun" (מִכּוּן) it had read *Berod* (בְּרוֹד, q. d. בָּכוּר, i. e. בָּחוּר, *choice*); but Josephus supports the present Heb. text (Μάχωνι, *Ant.* vii, 5, 3). See BEROTHAH.

Church. I. *The word Church.*—1. The origin of the word is uncertain. In the Germanic and Slavonic languages it is found as follows: Anglo-Saxon, *cyrica, circ, cyric;* English, *church;* Scottish, *kirk;* German, *kirche;* Low-German, *karke;* Frisian, *tzierke* or *tziurke;* Danish, *kyrke;* Swedish, *kyrka;* Bohemian, *cyrkew;* Polish, *cerkiew;* Russian, *zerkow*. The following derivations have been assigned to the word: (1) Heb. קְרִיָּה and קָרָא; (2) Teutonic, *kōren, karen;* (3) Celtic, *cyrch* or *cylch, cyrchu* or *cylchu;* (4) Latin, *curia;* Greek, κυριακόν (*the Lord's house*, from κύριος, *Lord*). The preponderance of opinion is in favor of the last derivation (Gieseler, *Eccl. Hist.* § 1; Hooker, *Eccl. Pol.* v, 13; Pearson, *On the Creed*, Oxf. 1820, i, 504; and, the principal authority, Jacobson, *Kirchenrechtliche Versuche*, Königsb. 1833, 8vo). On the other hand, Meyrick, in Smith's *Dictionary of the Bible* (iii, Appendix, p. ci), argues at length against this derivation chiefly on the ground (1) that the Greek missionaries, who are supposed to have carried the Word among the Northern tribes, used ἐκκλησία, not κυριακόν; and that Ulphilas uses *aikklēsjō* (Rom. xvi, 23 et al.); (2) that the Roman Church (and the Romanic languages after it) adopted the Greek word ἐκκλησία, not κυριακόν, from its Greek teachers. His conclusion, after dropping the first derivation, is that "it is difficult to say what is to be substituted. There was probably some word which, in the language from which the Teutonic and Slavonic are descended, designated the old heathen places of religious assembly, and this word, having taken different forms in different dialects, was adopted by the Christian missionaries. It was probably connected with the Latin *circus, circulus*, and with the Greek κύκλος. possibly also with the Welsh *cylch, cyl, cynchle*, or *caer*. Lipsius, who was the first to reject the received tradition, was probably right in his suggestion, 'Credo et a circo Kirck nostrum esse, quia veterum templa instar Circi rotunda' (*Epist. ad Belgas*, Cent. iii, Ep. 44)."

2. *N. T. uses of the word Church.*—The Greek word ἐκκλησία in the New Testament (Matt. xvi, 18; xviii, 17; 1 Cor. x, 32; Eph. i, 22), corresponding to the Hebrew קָהָל, עֵדָה, מִקְרָא, is from καλεῖν, to call (κλῆσις, a calling; κλητοί, called), and is rendered by our word church. The meaning of the word would thus seem to be, in the N. T., the whole company of God's elect, those whom he has called to be his people under the new dispensation, as he did the Israelites under the old. Such is the signification in one of the two instances in which Christ uses the word in the Gospels: "Upon this rock I will build my *church*" (Matt. xvi, 18). The other (Matt. xviii, 17) refers to the single congregation. Instead of ἐκκλησία, Christ generally used the terms "kingdom of God," "kingdom of heaven," or simply "kingdom" or thy kingdom, or the Son of Man's kingdom (John iii, 3; Matt. vi, 32; *ib.* iv, 23, etc.; *ib.* xx, 21; *ib.* xiii, 41; xvi, 28). The word "church" is first applied by St. Luke to the company of original disciples at Jerusalem on the day of Pentecost (Acts ii 7), and is afterwards applied (in the Acts, Epistles, d Apocalypse) to, 1. The whole Christian body or society, as the sanctified of God (Eph. v, 27); 2. The whole number of those who profess the Christian religion under pastors, etc. (1 Cor. xii, 18); 3. Particular societies of Christians in particular cities or provinces, e. g. the church in Jerusalem (Acts viii, 1); 4. Religious assemblies of these societies and the places in which they met, e. g. (Rom. xvi, 5), "Greet the church that is in their house," etc. (1 Cor. xi, 18; xiv, 19, 28).

3. *Common uses of the word Church.*—1. The most common sense in which the word church is used is to denote the body of the acknowledged followers of Christ, or his visible body. 2. It is also used to denote the community of true believers, whether known to be such or not. 3. It is used as "church militant" and "church triumphant" to distinguish between believers yet on earth, and still contending with opposition, and believers already glorified in heaven. 4. It is used to designate the house of Christian worship. 5. Any particular denomination of Christian people, as the Lutheran, or the Protestant Episcopal, or Methodist Episcopal Church. 6. A particular congregation of any one denomination of Christians. 7. The religious

establishment of any particular nation or government, as the Church of England. 8. The sum of the various Christian denominations in a country, as the Church in America. These are the ordinary uses of the word, and it is important, in order to a right understanding of its force in any case, to know in which of these senses it is employed. Much confusion might be avoided if disputants would always clearly state in which of all these equally admissible senses they use the word.

II. *Idea of the Church.*—The Christian religion (subjectively considered) is a divine life wrought in the soul of the believer in Jesus by the Holy Ghost, whereby the man is united through Christ unto God, walks before him in holiness, and finally dies in his favor, and is received into his eternal glory. The personal relation lies wholly between the individual and God. But the instinct of this new life is to propagate itself by diffusion, and for this diffusion it must have organization. This organization is found in the Church, whose function it is to make universal the religion of the individual. Moreover, the individual believer, for the nourishment of his own spiritual life, seeks communion with other believers; and this communion is furnished by the Church. "The Christian Church is a religious-moral society, connected together by a common faith in Christ, and which seeks to represent in its united life the kingdom of God announced by Christ" (Gieseler, *Eccl. Hist.* vol. i, § 1). "Christianity contains, on the one hand, a divine philosophy, which we may call its religion, and a divine polity, which is its Church" (Arnold, *Miscell. Works*, N. Y. p. 11). The Church is the particular form or expression of the kingdom of God, the institution through whose agency this spiritual and eternal kingdom is to be made effective among men.

But, although there are elements of truth in the statements already made, it is further true that the Church, under the dispensation of the Spirit, is the necessary form or body of Christianity in the world. Not that the Church *is* Christianity, any more than the body of man is his life. The object of Christianity is the redemption of mankind; and the Church is the divinely constituted means of the ordinary application of redemption to individuals of mankind. It is therefore something altogether more and higher than a mere form of society, or an organization springing, like any merely human society, from the common wants and sympathies of those who unite to form it. It is "the kingdom and the royal dwelling-place of Christ" upon the earth (Neander). It has, therefore, a life of its own, of which Christ is the source, independent of the ordinary life of the order of nature. Christ, indeed, is the central source of life for both kingdoms (the kingdom of nature, and the kingdom of grace), but the mode of his vivifying operation is very different in the one from what it is in the other. But the Romanist view (and so the Greek and High Anglican) assumes that the Church is a form of organic life imposed upon the Christian society in a sort of outward way. The Protestant doctrine, on the other hand, is, that the Church is the divinely inspired organic growth of the Christian life; not, therefore, a merely human society, but the society of the faithful, constituted by the Divine Spirit. The Romanist view makes the outward form of the Church essential, and regards the internal nature as derivative; the Protestant view regards the internal life as the essence, and the outward and visible form as derivative, but both as divinely inspired and constituted (John x, 16; Matt. xvi, 18; xviii, 15-18).

1. *The Scripture Idea.*—In the N. T. the Church denotes "that one mystical body of which Christ is the sole head, and in the unity of which all saints, whether in heaven, or on earth, or elsewhere, are necessarily included as constituent parts." For this Church Christ gave himself (Eph. v, 23). This Church, chosen in him before the foundation of the world (Eph. i, 4; 1 Peter i, 2), he nourisheth and cherisheth as his own flesh (Eph. v, 29, 30). The Church is called the House, the City, the Temple of God. To whom coming—ye are built up a spiritual house, a holy temple (1 Peter ii, 4, 5). This spiritual temple is composed of all God's people, and is his dwelling-place (1 Cor. iii, 17; 2 Cor. vi, 16; Rev. xxi, 3; xxii, 14, 15). The Church is uniformly represented in the N. T. as the company of the *saved;* and they are spoken of as the body of Christ (1 Cor. xii, 27), as one body (Eph. iii, 6; iv, 4; 1 Cor. xii, 13, 20). Of this body Christ is the Saviour (Eph. v, 23). They are also his bride (Eph. v, 31, 32; Rev. xxi, 9, 10), and his fulness (Eph. i, 23). They are termed also the light of the world (Matt. v, 14), and the salt of the earth (Matt. v, 13), as indicating the Church to be the true source of spiritual illumination and the instrument of salvation to the world. For the work which the Church is to accomplish for Christ by teaching, disciplining, comforting, etc., it must necessarily be visible, though all its members may not always be known.

2. *The Creeds and Dogmatic Definitions.*—The Apostles' Creed says, I believe "in the Holy Catholic Church, the communion of saints," to which the Nicene Creed adds apostolicity. The Catechism in use in the Greek Church gives the following definition: "The Church is a divinely-instituted community of men, united by the orthodox faith, the law of God, the hierarchy, and the sacraments" (*Full Catechism of the Orthodox, Catholic, Eastern Church*, Moscow, 1839). In speaking of the unity of the Church, Platon says: "From this unity of the Church all those have separated who either do not receive the divine word at all, or mix with it their own absurd opinions" (see *Bibliotheca Sacra*, xxi, 827). The Roman Catholic Church (*Catechism of Trent*) says, "The Church is one, because, as the apostle says, there is 'one faith, one Lord, one baptism;' but more especially because it has one invisible Ruler, Christ, and one visible, viz., the occupant for the time being of the chair of St. Peter at Rome." . . . . "The Church is holy, first, because it is dedicated to God; secondly, because the Church, consisting of good and evil mixed together, is united to Christ, the source of all holiness; thirdly, because to the Church alone has been committed the administration of the sacraments, through which, as efficient instruments of divine grace, God makes us holy; so that whoever is truly sanctified must be found within the pale of the Church. The Church is catholic or universal because it is diffused throughout the world, embracing within its pale men of all nations and conditions, and also because it comprehends all who have believed from the beginning, and all who shall believe henceforward to the end of time. The Church is termed apostolic, both because it derives its doctrines from the apostles, whereby it is enabled to convict heretics of error, and because it is governed by an apostolic ministry, which is the organ of the Spirit of God" (*Catechism, Conc. Trid.* c. x, § 1). Bellarmine defines the Church thus: "It is a society of men united by a profession of the same Christian faith, and a participation of the same sacraments, under the government of lawful pastors, and especially of the one vicar of Christ upon earth, the Roman pontiff." The Lutheran Church defines the Church to be "a congregation of saints, in which the Gospel is purely preached and the sacraments are rightly administered" (*Confession of Augsburg*, sec. vii). "The sum of what we here profess to believe is therefore this: I believe that there is upon earth a certain community of saints, composed solely of holy persons, under one Head, collected together by the Spirit; of one faith and one mind, endowed with manifold gifts, but united in love, and without sects or divisions" (Luther's *Larger Catechism*). The Reformed Confessions.—The Church of England: "A congregation of faithful men, in which the pure word of God is preached, and the sacraments be duly administered according to

Christ's ordinance in all those things that are of necessity requisite to the same" (art. xix).—The same definition is given by the Methodist Episcopal Church.—"The Church is a community of believers or saints, gathered out of the world; whose distinction it is to know and to worship, through the Word and by the Spirit, the true God in Christ our Saviour, and by faith to participate in all the blessings freely given to us through Christ. Those are all citizens of one polity, subjects of the same Lord under the same laws, and recipients of the same spiritual blessings" (*Helvetic Confession*, 1566).—"The Catholic Church is the community of all true believers, viz., those who hope in Christ alone for salvation, and are sanctified by his Spirit. It is not attached to any one place or limited to particular persons, the members of it being dispersed throughout the world" (*Belg. Confession*, sec. 27, 29).—The Scotch Confession (*Conf. Scot.* art. xvi) defines the Church "to be a society of the elect of all ages and countries, both Jews and Gentiles; this is the catholic or universal Church. Those who are members of it worship God in Christ, and enjoy fellowship with him through the Spirit. *This Church is invisible, known only to God, who alone knows who are his*, and comprehends both the departed in the Lord and the elect upon earth."—The Confession of Polish churches: "There are particular churches and the Church universal. The true universal Church is the community of all believers dispersed throughout the world, who are and who remain one catholic Church so long as they are united by subjection to one Head, Christ, by the indwelling of one spirit and the profession of the same faith; and this though they be not associated in one common external polity, but, as regards external fellowship and ecclesiastical regimen, be not in communion with each other."—"A true particular Church is distinguished from a false one by the profession of the true faith, the unmutilated administrations of the sacraments, and the exercise of discipline" (*Declaratio Thoruniensis*).—Dr. Gerhart, speaking for the German Reformed Church of America in its later form of thought, under the influence of the so-called Mercersburg theology, says: "The Christian Church is a divine-human constitution in time and space: divine as to its ultimate ground and interior life, and human as to its form; brought into existence by the miraculous working of the Holy Ghost on the day of Pentecost, who is sent by Christ as the bearer of his incarnate life and salvation, in order to continue and develop this life and salvation, according to the law of the Spirit, in its membership down to the end of time uninterruptedly. As such, it is not a collection of units, but an objective organism that has a principle, a unity, a law, organs, and resources of power and grace, which are in it and its own absolutely" (*Bibliotheca Sacra*, 1863, p. 53, 54. See also Dr. Nevin, in *Mercersburg Review*, vol. ix [articles on "Hodge on Ephesians"]; vol. x ["Thoughts on the Church," two articles]).

Such is the notion of the Church as presented in the great leading symbols of the principal churches and by their representative men. The subject is one beset with difficulties, because of the failure always to discriminate between the visible and invisible Church, and because every denomination, in order to render itself powerful and practical, must assume the form of *a* Church, and is consequently driven to define the Church to suit its own position and history. The distinction between the visible and invisible Church was recognised by Augustine; in his controversy with the Donatists, who held that to predicate catholicity of the Church it was necessary it should have subjective purity in its members, and that, so soon as it allowed corrupt and unworthy members, it ceases to be catholic, he maintained, "Many, by partaking of the sacrament, are *with* the Church, and yet are not *in* the Church." Further: "Those who appear to be the Church, and to contradict Christ, therefore do not belong to that Church which is called the body of Christ" (see Neander, *Christian Dogmas*, ii, 395). That there is one visible Church all these Confessions concede; but whether or not there be a visible Church on earth entitled to be called the true Church, and the only true Church, is the question at issue between Romanists and Protestants. Certainly, "if we judge of the various churches into which Christendom is divided by their conforming in all respects by the principles and requirements of the Gospels, we cannot allow that any one of them is the perfect representation of that ideal state at which they all aim; nor, on the other hand, can we entirely deny the name of a Christian Church to any one which professes to be built on the Gospel of Christ. They have all so much in common in this religious faith and life, and so much which distinguishes them from all other religious societies, as to justify us in considering them as one whole, and calling them, in a wide sense, The Christian Church" (Gieseler, *Church History*, vol. i, § 1).

3. *Notes, Faith, and Attributes of the Church.*—(1.) The *notes* of the Church are the signs by which the visible Church is distinguished, and differ according to the views which are held in the definition of the Church. (*a*) The Roman Catechism states them to be unity, sanctity, catholicity, and apostolicity (*Cat. Conc. Trid.* p. 80, 81). Bellarmine assigns, in addition to these, antiquity, uninterrupted duration, amplitude, agreement in doctrine with the primitive Church, sanctity of doctrine, efficacy of the doctrine, the glory of miracles, the light of prophecy, the confession of adversaries, the unhappy end of the Church's enemies, and temporal felicity (*Bellarmine's Notes of the Church examined and refuted by eminent English Divines*, Lond. 1840). The "unhappy end of the Church's enemies" and "temporal prosperity" are rejected by Tournely, Bailly, and generally by modern Romish theologians (see Palmer, *On the Church*, i, 27). (*b*) The Church of England has no authoritative declaration beyond its xixth article—the preaching of the pure word of God and the due administration of the sacraments, etc.; but the proper administration of the sacraments by ministers regularly authorized has led to a difference of opinion in determining these notes, which has become a wide divergency, the one side adhering to a free interpretation, in common with all Protestants, and the other approaching to the stricter Roman Catholic view. The strict, so-called, churchly interpretation begins with the inclusion of apostolicity (Palmer), and extends to truth of doctrine, use of means (as well as sacraments) instituted by Christ, antiquity without change of doctrine, lawful succession without change of doctrine, and universality in the *successive* sense, i. e. the prevalence of the Church successively in all nations (Dr. Field). This tendency towards Romanizing views has culminated in what is, for convenience, termed the High-Church, or Sacramentarian party, some of whom openly advocate a union of the Church of England with the Church of Rome and the Greek Church, in order to realize their note of the visible unity of the Church. "It is worthy of remark," says Litton, "that every theory of the Church, whether it profess to be Romanist or not, which teaches that the true being thereof lies in its visible characteristic, adopts instinctively the Romish notes, and rejects the Protestant." (*c*) The distinctively "Protestant notes"—the preaching of the pure word of God and the right administration of the sacraments—are applicable not to the mystical body of Christ, but to the visible Church, or, rather, to churches or congregations of believers. "The Protestant says, in general, the church (or a part of it) is there where the Word and the sacraments are; and the society in which the one is preached and the other administered is a legitimate part of the visible Catholic Church" (Litton, *On the Church*, Phila. p. 254). "Some formularies, e. g. the Scotch Conf. (art.

18) add the exercise of discipline" (*ibid.*); and this it does very properly, for if purity of doctrine and life is to be maintained, it must always be a mark of a true Church that there be discipline. But inasmuch as it is impossible to discern always who are inwardly pure, and also perfectly to enforce discipline, the visible Church will always be liable to the intrusion of the wicked, and hence cannot claim to be identical with the mystical body of Christ in any one place, but may claim to be a part of it, so far as in its doctrine and life it conforms to the requirements of the Gospel. "As notes" (the sacraments and the ministry of the Word), "therefore, serve to assure us of the existence of that mystical body which in itself is an object not of sense, but of faith; by which the charge brought of old against Protestant doctrine—that its invisible Church is a fiction of the imagination—is abundantly refuted" (Litton, p. 257).

(2.) *Faith.*—The faith of the Church is given, in authoritative, though not in dogmatical form, in the Word of God. "The Church, as the body of believers in Christ, existed before the New Testament was written. It was to the Church that the Word was addressed. It is by the Church that the authenticity of the Word has been witnessed from the beginning. But the Word was given to the Church as its test and standard of faith. The 'faith' was in the Church before the Word was written; but the Word was given to be the norm of faith, by which the Church might and should, in all ages, test the faith, or any proposed modifications or developments of the faith."

The Church's faith, as drawn from, and resting on, the Word of God, is expressed in her creeds or confessions. At successive periods, as the exigencies of the times have required, or have seemed to require, its leading minds have convened, sometimes by civil, sometimes by ecclesiastical authority, at other times by both, in general councils, when, by consent, the doctrines of the Church have been thrown into the form of confessions or symbols. In these symbols, the floating, undefined, but current beliefs of the general Church have crystallized, and thus have been transmitted to us. The first is the Apostles' Creed. This is universally accepted in the Church, and is of highest authority. Though the most ancient of all the formularies of belief, there is no evidence that the apostles composed it as it now reads; the best explanation is that it grew into shape from the common and general confession of faith in the primitive Church until it very early assumed the form it now has. It is the germ of all subsequent creed development. The next is the Nicæno-Constantinopolitan symbol, commonly called the Nicene Creed, which was the work of two œcumenical councils in 325 and 381. This has always been of great weight, as chiefly settling the doctrine of the Trinity, and expresses the general view of the Church to this day. The Chalcedon symbol followed in 451; and then the Athanasian Creed, called after Athanasius, though it is doubtful if he was the author. There were no other confessions until the Reformation, since which we have the Lutheran symbols (7); the Reformed (18); the papal (Canones et Decreta Concilii Tridentini, 1545; Professio fidei Tridentina of Pope Pius IV, etc.); confessions of the Greek Church; Arminian and Socinian confessions; but none of these are of universal authority, as are the original four of the early Church.

(3.) The *attributes* of the Church are unity, holiness, catholicity, and apostolicity. These also are explained differently, according to the theory of the Church maintained. Protestants generally find these attributes only in the invisible Church. There is evidently a unity of faith (Eph. iv, 13), a unity of love (1 Cor. xiii, 13), one spirit (Eph. iv, 4), one hope (*ibid.* 12), one body (Rom. xii, 5), one head (Eph. iv, 15), and one object of worship (Eph. iv, 6). That this unity is under one common earthly head is held by Roman Catholics, but denied by Protestants. By these a spiritual unity is affirmed to exist, even where there is not uniformity of Church polity, nor entire agreement of doctrine, nor, indeed, any internal bond save that of the "communion of saints." Holiness is ascribed to the Church as expressing the moral purity of its members; they are addressed in the N. T. as "saints," "sanctified," by reason of their union with Christ as their living head, and the possession of the Holy Ghost, the Sanctifier (1 Cor. i, 2; vi, 19). Because this holiness is a personal work in the hearts of believers *as such*, it can be predicated strictly only of the invisible Church, but it ought to be manifested in the individual and corporate life of the Church, in order that she may fulfil its original constitution. Catholicity was first applied to the Christian Church to designate not only its universality as embracing all true believers, but also the oneness of those believers as excluding all heretics. In modern times it is used to mean the universally diffused nature of the Church by its presence, without respect to local or national boundaries. The Romanist claims that all, and those only, who are united to the pontiff at Rome belong to the Catholic Church; while Protestants admit it to be the whole body of Christians, in whatever visible communion they may be: hence composed of all the churches of all nations (Mark xv, 15; Acts x, 34, 35), the same in all time (Matt. xxviii, 20), and possessed, by reason of the presence of its great head, of the means of saving grace (*ibid.*; Eph. i, 22). Apostolicity is not insisted upon by Protestants; when used, however, by them, it means the possession by the Church of true apostolic doctrine, spirit, and life; while by Roman Catholics it means having a ministry regularly and *visibly* succeeding to the apostles.

The attributes (unity, holiness, catholicity, perpetuity) are unquestionably essential to the true Church, and are ascribed to her in the New Testament. But neither the N. T. nor the Apostles' Creed define the Church as a visible organization, but as the "communion of saints." This Church has always existed; but no visible corporation or society on earth has ever been endowed with the attributes above named. See this argument well stated in the *Princeton Review* (Oct. 1853); compare Barrow, *Sermon on the Unity of the Church*, iii, 311 (N.Y. 1845).

III. *History of the Doctrine of the Church.*—The apostles and their immediate successors were too much engrossed with the work of spreading the Gospel to pause to prescribe the nature of an institution which was sure to grow into shape as the necessities of the case required. The apostles themselves were too earnestly employed in fulfilling the command of Christ to disciple all nations, and those directly following them partook too largely of their spirit, and understood too fully their mind, to be turned aside by the necessity of explaining what they knew to be a fact. Hence "no exact definitions of the Church are found previous to the time of Cyprian" (Hagenbach, *History of Doctrines*, i, 193). The definitions of the latter (Cyprian) make an epoch in the history of this doctrine. The first difficulty arose as to the unity of the Church, in confounding the inward with the outward. "Irenæus shows the first germs of this perversion; it was matured by Cyprian" (Neander, *Christian Dogmas*, vol. i, p. 220). "Thus the Jewish stand-point (a theocracy), which at first had been overcome, made its way into the Church in another form" (*ibid.*). Irenæus says the Church alone contains all the riches of truth; Clement describes the Church as a mother, both as a mother and virgin, as the body of the Lord; Origen, though usually mild towards heretics, knows of no salvation out of the Church; Tertullian claimed that whoever separated from the connection with the outward communion, which was of apostolic origin, and had at its head the *sedes apostolicæ*, in so doing renounced Christ, though after joining the Montanists he essentially changed his

opinion. It is of no avail, says Cyprian, what a man teaches; it is enough that he teaches out of the Church; where the bishop is, there is the church, etc. The roots of the extreme church doctrine are to be traced thus early. A reaction, however, soon took place, growing out of a more scientific discernment of the spiritual idea of the Church. Clement calls the Church a community of men led by the divine *Logos*, an invincible city upon earth, which no force can subdue, where the will of God is done as it is in heaven. Others combated the outward unity of the Church as unscriptural. Montanism insisted that the unity is inward; it regarded the internal fact of possessing the Spirit as the fundamental thing—not the ordinary influence of of the spirit in sanctification, but his extraordinary power in giving new revelations, which were the sources of authority and unity in the Church. A farther reaction of separatism against the Catholic idea took place in Novatian and his followers. They insisted that the Catholic Church is essentially holy in all its members, and hence must exclude from its communion all unworthy members, and never readmit them, otherwise it would lose its catholicity. They consequently withdrew, and claimed to be the Catholic Church. "The false idealism of the Gnostics, and the subjective, heretical, and schismatical tendencies of separate sects, especially of the Montanists and the followers of Novatian (the primitive Puritans), form a striking contrast with this false external unity of the Catholic Church" (see Hagenbach and Neander). "Two causes contributed (in the second period of the Church history) to determine about the Church: 1. The external triumph of the Church itself in its victory over Paganism, and its rising power under the protection of the state. 2. The victory of Augustinism over the doctrines of the Pelagians, Manichæans, and Donatists, which in different ways threatened to destroy ecclesiastical unity. In opposition to the Donatists, Augustine asserted that the Church consists of the sum total of all who are baptized, and that the (ideal) sanctity of the Church is not impaired by the impure elements externally connected with it. The bishops of Rome impressed upon this catholicism the stamp of the papal hierarchy by claiming for themselves the primacy of Peter. But, whatever variant opinions were held respecting the seat and nature of the true Church, the proposition that *there is no salvation out of the Church* was firmly adhered to, and carried out in all its consequences" (Hagenbach, vol. i, p. 352). It is worthy of note that at this period Jovinian taught that "the Church is founded on Faith, Hope, and Love. In this Church there is nothing impure; every one is taught of God; no one can break into it by violence or steal into it by artifice." "As Jovinian taught the Pauline doctrine of faith, so he did the Pauline idea of the invisible Church, while Augustine obstructed his similar fundamental idea by a mixture of the Catholic idea of the Church." "Here again we have a sign of the Protestant element in Augustine" (his comment on the "Thou art Peter"), "that all religious consciousness is immediately to be traced up to Christ, and that with him the community originates which is called the Church" (Neander, *Christian Dogmas*, vol. ii, p. 397, 398).

Until the 14th century the Roman hierarchy had comparatively no opposition in carrying out supremacy in the West to its fullest extent; at this time a freer spirit began to show itself. Even on the Catholic stand-point a difference was stirred respecting the relation of the changeable and unchangeable in the development of the Church; on the position of the papacy in respect of the Church; whether the pope was to be regarded as its representative or sovereign head; whether the general councils or the pope stood highest. The University of Paris, with chancellor Gerson at its head, led on this controversy. See GERSON. "The mystical idea of the Church and the notion of a universal priesthood, which was intimately connected with it, was propounded, with more or less accuracy of definition, by Hugo of St. Victor, as well as by the forerunners of the Reformation, Wycliffe, Matthias of Janow, Huss, John of Wesel, Wessel, and Savonarola" (Hagenbach). These tendencies were fully developed in the Reformation and in its results. The Western religious world became divided in the statement of the Church dogma, as it looked at the question of salvation. The Protestant, regarding the doctrine of justification by faith as fundamental, said the Church is approached through it; the Romanist, still adhering to the Church as the fountain of spiritual life, affirmed that justification is obtained through the Church. Protestants assert that the Church consists in the invisible fellowship of all those who are united by the bonds of true faith, which ideal union is but imperfectly represented by the visible Church, in which the true Gospel is taught and the sacraments are rightly administered; the Roman Catholics, that the Church is a visible society of all baptized persons who adopt a certain external creed, have the same sacraments, and acknowledge the pope as their common head.

The recent controversies concerning the idea and nature of the Church all revolve about the one point, viz., whether the Church of which Christ is the "Head" is, or is not, a visible corporation here on earth, entitled to the promises, privileges, and authority which the Scriptures assign to the spiritual Church. Protestants generally deny; the Romanists, the High-Anglicans, and a few writers in other branches of the Protestant Church, affirm. The so-called New-Lutheran divines of Germany have developed a theory of the Church in which the Protestant idea gives way to the hierarchical; in which the sacraments are not merely notes of the true Church, but the real guards of its continued life. The profound and mysterious synthesis of the divine and human is found in faith, according to the old Protestant system; according to the new, it is found in the sacraments (compare Schwartz, *Zur Geschichte d. neuesten Theologie*, bk. iii, ch. iii). Rothe has developed, with his usual vigor, a theory of the Church akin to that of Arnold, viz., that the Church is indispensable to the moral education of humanity; but that, as humanity improves, the necessity for the Church diminishes; and, finally, the state will become religious (a real theocracy), and the Church will become absorbed in the state.

IV. *Constitution of the Church.*—Christ did not so much create a Church during his sojourn on earth as implant principles which would be subsequently developed into a Church. Whilst he was yet with his disciples, they needed no other bond to hold them together than his person. The founder of the new manifestation of the kingdom of God seemed not to design to collect about him numerous adherents, but to implant deeply into the minds of a few the higher animating spirit of this kingdom, which through their lives should work out into a complete and effective organization. He found those whom he called for this work Jews; he associated with and instructed them after the customs of Judaism. He distinctly told them, however, that they, in their persons, faith, life, and teaching, were to constitute the beginning and the agency of a new order of things. They were commanded to go forth after his death and disciple all nations, and to baptize them in the name of the Father, the Son, and the Holy Ghost, and thus bring all people into the kingdom of God. It is thus clear that the religion of Christ was designed by him to supersede all others, not only by its spirit and essence, but also in the particular method or form of its manifestation. He made provision for this result by constituting apostles, who should authoritatively command and teach, should open and shut the kingdom of heaven, bind and loose on earth, and so render visible and powerful his Word among men.

Before entering upon their mission, they were to tarry in Jerusalem until endued with power from on high (Luke), which power they were assured would come not many days after the ascension of their Lord. That they already recognised themselves as chosen for a high especial work is evident by their filling up the vacancy in their number caused by the apostasy and death of Judas Iscariot with the selection of another, Matthias, to fill his place (Acts i, 15, 26). Thus complete, they continued to wait and pray for the space of seven days. When the day of Pentecost had fully come, "while the apostles and disciples, a hundred and twenty in number, were assembled in or near the Temple for the morning devotions of the festal day, and were waiting in prayer for the fulfilment of the promise, the exalted Saviour poured down from his heavenly throne the fulness of the Holy Ghost upon them, and founded his Church upon earth" (Schaff, *Church History*, vol. i, p. 59). The day of Pentecost may be regarded as the birthday of the Christian Church. Then it was formed; thence its gradual development proceeded. There is a diversity of opinion as to the internal polity it assumed, as might be expected; but it must be conceded by all that the apostles would have "sufficient guidance" as to the manner in which it was to be organized. This guidance does not imply that its *particular form* must have been given to them by Christ, but only such direction as would lead them to pursue the wisest methods. Consequently they began by preaching; and, as converts were made, by baptizing them, and then taking them into a closer fellowship for the celebration of the Lord's Supper, spiritual instruction, and worship (Acts iii, 42, etc.). As they were Jews, it was likely they would adopt the methods of worship, government, etc., to which they were accustomed. Archbishop Whately says (*Kingdom of Christ delineated*, p. 88): "It appears highly probable, I might say morally certain, that the synagogue was brought—the whole or chief part of it—to embrace the Gospel. The apostles did not, then, so much form a Christian Church (or congregation, *ecclesia*) as make an existing congregation Christian by introducing the Christian sacraments and worship, and establishing whatever regulations were necessary for the newly-adopted faith, leaving the machinery (if I may so speak) of government unchanged; the rulers of synagogues, elders, and other officers, whether spiritual or ecclesiastical, or both, being already provided in the existing institutions." Vitringa (see his *De Synagoga Vetere*), Neander, Litton, and many others, agree in this opinion, that the synagogues were the pattern which the apostles proposed to themselves, though it is by no means certain that they adopted any model.

1. All that can be done in the determination of the polity of the *apostolic Church* is to trace the practice of the apostles as recorded in their acts and writings. This polity is not presented as legislative enactments, but simply as facts, showing how the apostles acted in given cases. In the first account we find the Church composed of the apostles and other disciples, and then of the apostles and "the multitude of them that believed." Hence it appears that the Church was at first composed entirely of members standing on an equality with one another, and that the apostles alone held a higher rank, and exercised a directing influence over the whole, which arose from the original position in which Christ had placed them in relation to other believers (Neander, *Planting and Training*, p. 82). The apostles, as necessity required, created other offices, the first of which we have mention is that of *deacon* (διακονία) (Acts vi, 1), followed soon after by that of *elder* (πρεσβύτερος) (Acts xi, 30). The time of the creation of the office of elder or presbyter is not given, from which it is not clear whether it arose before or after the diaconate. The first reference to elders assumes their existence. The office of elder and that of bishop are generally conceded to be identical. The apostles, deacons, and elders, with the whole body of believers in every place, constituted the membership and government of the Church. See Bishop. The deacons were overseers of the poor, and probably conducted religious worship and administered the sacraments (Acts viii, 38). The clerical function of the deacon is disputed (see *American Presb. and Theol. Review*, vol. v, p. 134). The elders were appointed not only to teach and administer the sacraments, but also to govern the Church or churches in the absence of the apostles (Acts xx, 28, etc.). The ministry, however, was not confined to these orders; it was rather a gift which any one possessing could exercise under due regulations. By reference to 1 Cor. xii, 4 12, also 28, it will be seen that "apostles," "prophets," "helps," and "governments," all pertain to the ministry; also in the corresponding passage, Ephes. iv, 11, 12, the ministerial office is ascribed to the direct agency of the Holy Ghost: "He gave some, apostles; and some, prophets; and some, evangelists; and some, pastors and teachers; for the perfecting of the saints, for the work of the ministry, for the edifying of the body of Christ." "These passages establish nothing respecting the ministerial *offices* of the apostolic age; what they do teach us is that the spiritual endowments necessary for the office of an apostle, a pastor, a teacher, or a governor of the Church, whether these functions were united in the same person or not, flow directly from Christ, and are a part of the standing spiritual constitution of the Church" (Litton, p. 374). The manifold gifts of the Spirit were termed generically *charismata* (χαρίσματα), and were either a natural endowment, sanctified and applied under the influence of the Holy Spirit to the edifying of the Church, or a supernatural gift of a miraculous character, in the exercise of which the divine agent was more conspicuous than the human. Another division is into those which displayed themselves in *word*, and those which had a more particular reference to action (Litton; Neander, *Planting and Training;* Olshausen, Hooker, etc.). These gifts, it appears, were not confined to any particular class, but were bestowed as the Spirit saw fit to distribute them. See Gifts, Spiritual. The *priestly* function pertained to the ministerial office only in the sense that all believers were priests, to offer up spiritual sacrifices to God by Christ (1 Peter ii, 4, 5, etc.); and in no sense was there a sanctity attaching to the minister which did not attach to the ordinary believer, except, perhaps, to the apostles, whose office was not to be permanent in the Church. No human mediation is represented in the New Test. as necessary to the soul seeking the forgiveness of sins and the fruits of the Spirit except such as may *assist* knowledge and faith, but never as *indispensable*. Christ and his salvation are equally accessible to minister and people, and on the same terms.

The *discipline* of the apostolic Church comprehended four particulars in its exercise: 1. Nothing scandalous or offensive unto any, especially unto the Church of God, could be allowed (1 Cor. x, 32); 2. All things were to be done with seemliness and in order (1 Cor. xiv, 40); 3. All unto edification (1 Cor. xiv, 26); 4. All unto the glory of God (1 Cor. x, 31). The *sphere* of its government was strictly spiritual. The apostles honored the civil authority as a divine institution, and enjoined obedience in the days of Claudius and Nero, as did our Saviour in all temporal matters render obedience to Herod, and command that "the things which belong to Cæsar should be rendered to Cæsar." But in the spiritual calling the rule was "to obey God rather than man," and for this principle they were ready to die.

Since the apostolic times the Constitution of the Christian Church has undergone various modifications. The first of these changes is the distinction be-

tween *bishop* and *elder*. It is maintained by extreme advocates of Episcopacy that St. Paul, in empowering Timothy at Corinth, and Titus in Crete, in the capacity of presbyters, to ordain elders in every city, and to exercise jurisdiction over officers of that class, as well as those who held the office of deacon, appointed them thus to be permanent, and so created the office known in after times as the local bishop. The moderate Episcopalians and the Presbyterians hold that the mission of Titus and Timothy was peculiar, contemplating a special work, and that the mission ceased with its accomplishment. On the whole, on this case, as well as on that of St. James at Jerusalem, and the angels of the apocalyptic churches, Litton says, "Respecting the origin of the episcopal order, Scripture leaves us very much in the dark. No order of ministers other than these three—apostles, presbyters, and deacons—are mentioned in the New Testament as forming part of the then existing polity of the Church; for every attempt to establish a distinction between the presbyter and the bishop of Scripture will prove fruitless, so abundant is the evidence which proves they were but different appellations of one and the same office (p. 412)." As to the rise of episcopacy, it is said "to these successors of the apostolic delegates" (such as Timothy) "came to be appropriated the title of bishop, which was originally applied to presbyters. At the commencement of the second century and thenceforward, bishops, presbyters, and deacons are the officers of the Church wherever the Church existed. Ignatius's epistles (in their unadulterated form), and the other records which are preserved to us, are on this point decisive. . . . They (the bishops) retained in their own hands authority over presbyters and the functions of ordination, but with respect to each other they were equals" (Smith's *Dict. of Bible*, art. CHURCH). Dr. Hitchcock (*Am. Presbyt. and Theol. Rev.* vol. v, no. 17) affirms, "Thus throughout do we find in Clement the original New Testament polity (identity of presbyters and bishops) as yet unchanged" (p. 137). "In short, the Ignatian Episcopacy, instead of having the appearance of a settled polity, handed down from the apostles, has the appearance of being a new and growing institution, unlike what went before, as well as what was coming after it" (*ibid.* p. 146). "The wavering terminology of Irenæus is indicative not of apostolic tradition, but of later genesis and growth, and that growth not yet completed" (*ibid.* 147). "No hesitation in Tertullian in accepting the Episcopal regimen. Evidently this had become the settled polity. The maturity of the system is indicated by entire steadiness in the use of terms" (*ibid.* 148). "In Cyprian of Carthage, between 248-258, we find the system fully matured. Now these are tokens of growth, and are inconsistent with the idea of apostolic tradition" (*ibid.* 153). There is but little doubt the bishops at first succeeded to office by seniority, and afterwards, as the difficulties of the office increased, A.D. 200, they became elective (Hilary). As the Church multiplied and expanded, the older churches and the most numerous became relatively more important and influential, and their bishops more powerful; hence we find the episcopacy undergoing marked changes: 1. The bishoprics at Jerusalem, Rome, Antioch, Alexandria, Ephesus, and Corinth are termed by pre-eminence *sedes apostolicæ*, without, however, the concession of superior authority; 2. Consequent upon provincial synods the metropolitan dignity arose; also, 3. The patriarchal; and 4, finally, the papacy. Cyprian allowed that "precedency should be given to Peter, 'that the Church of Christ may be shown to be one.'" "The same propension to monarchical unity, which created out of the episcopate a centre, first for each congregation, then for each diocese, pressed on towards a visible centre for the whole Church. Primacy and episcopacy grew together" (Schaff, *History of the Christian Church*, vol. i, p. 427). The high antiquity of the Roman Church; the missionary labors at Rome of Peter and Paul, the two leading apostles; the political pre-eminence of the metropolis of the world; the executive wisdom and orthodox instinct of the Roman Church, and other secondary causes, favored the ascendency of the Roman see (*ibid.*). The early fathers, as Ignatius, Irenæus, Tertullian, Hippolytus, Cyprian, etc., concede precedence to the Church at Rome, but only in honor, not in jurisdiction. After the conversion of Constantine, and the removal of the Roman capital to Byzantium (afterwards called Constantinople), the see of the new capital boldly disputed the supremacy with the see of Rome, from which time, as new agitations arose in the Church, and the empire gradually fell to decay, the two great divisions into the Eastern or Greek, and Western or Roman Catholic took place, and became the settled forms and sources of ecclesiastical dominion.

Additional and inferior orders of the ministry rapidly multiplied in the Church. These were, archdeacons, deaconesses, subdeacons, acolytes, exorcists, lectors or readers, ostiarii or door-keepers, psalmists or singers, copiatæ or fossarii, catechists, defensores or syndics, œconomi or stewards, besides others (Bingham's *Antiquities of Christ. Ch.* vol. i, p. 126). There were four several ways of designating persons to the ministry in the apostolic and primitive Church: 1. By casting lot; 2. By choice of the first-fruits of the Gentiles; 3. By particular direction of the Holy Ghost; 4. By common suffrage and election. Ordination was first by the laying on of the hands of the apostles or elders, and afterwards of a bishop or bishops (see *ibid.*).

As to the powers of the clergy in the government of the Church, two principal, distinct, and opposite theories obtain. The Roman Catholic is, that "the government of the Church is a hierarchy, or the relation of the clerical body to the Christian people is that of a secular magistracy to its subjects, and Christian ministers are mediators between God and man—that is, are priests in the proper sense of the word" (Litton, p. 395). "The hierarchism of Rome is the natural and inevitable consequence of the doctrine that the clergy are *κατ' ἐξοχήν*, the Church" (*ibid.* 297). Bellarmine sums up the Romish doctrine thus: "It has always been believed in the Catholic Church that the bishops in their diocese, and the Roman pontiff in the whole Church, are real ecclesiastical princes; competent by their own authority, and without the consent of the people or the advice of presbyters, to enact laws binding upon the conscience, to judge in causes ecclesiastical like other judges, and, if need be, to inflict punishment" (Bellarm. *De Rom. Pont.* b. iv, c. 15). The Protestant theory is that all believers are a spiritual priesthood, and, as such, constitute the Church, and that the *whole* Church, thus composed of believers differing in gifts according to the operation of the Spirit, is the fountain of authority in the administration of government. "In short, no principle of ecclesiastical polity is more clearly deducible from Scripture than that the sovereignty of a church resides not in the people apart from their pastors. This, however, being admitted, the converse also remains true, that the sovereignty of a church is not in the pastors exclusively of the people" (Litton, p. 399). Dr. Schaff says, in reference to the first council of Jerusalem, "though not a binding precedent, (it) is a significant example, giving the apostolic sanction to the synodical form of church government, in which all classes of the Christian community are represented in the management of public affairs and in settling controversies respecting faith and practice" (*Ch. Hist.* vol. i, p. 136). By many Protestants this view of the council is questioned, and the right of laymen to an equal participation in church government, from this and other apostolic examples, denied; so that, to this day, the relative powers of ministry and laity, in the administration of ecclesiastical government, remain undefined among some of the great Protestant churches.

Membership of the Church.—"Church members are those who compose or belong to the visible church. As to the real church, the true members of it are such as come out from the world, 2 Cor. vi, 17; who are born again, 1 Peter i, 23; or made new creatures, 2 Cor. v, 17; whose faith works by love to God and all mankind, Gal. v, 6; James ii, 14, 26; who walk in all the ordinances of the Lord blameless. None but such are members of the true church; nor should any be admitted into any particular church without evidence of their earnestly seeking this state of salvation.

Fellowship.—"Church fellowship is the communion that the members enjoy one with another. The ends of church fellowship are, the maintenance and exhibition of a system of sound doctrine; the support of the ordinances of evangelical worship in their purity and simplicity; the impartial exercise of church government and discipline; the promotion of holiness in all manner of conversation. The more particular duties are, earnest study to keep peace and unity; bearing of one another's burdens, Gal. vi, 1, 2; earnest endeavors to prevent each other's stumbling, 1 Cor. x, 23-33; Heb. x, 24-27; Rom. xiv, 13; steadfast continuance in the faith and worship of the Gospel, Acts ii, 42; praying for and sympathizing with each other, 1 Sam. xii, 23; Eph. vi, 18. The advantages are, peculiar incitement to holiness; the right to some promises applicable to none but those who attend the ordinances of God, and hold communion with the saints, Psalm xcii, 13; cxxxii, 13, 16; xxxvi, 8; Jer. xxxi, 12; the being placed under the watchful eye of pastors, Heb. xiii, 7; that they may restore each other if they fall, Gal. vi, 1; and the more effectually promote the cause of true religion" (Watson, s. v.).

Literature. — Besides the works already cited, see Hooker, *Ecclesiastical Polity*, i, 346; ii, 226, 345; iii, 442 (Oxford, 1793, 3 vols. 8vo); Calvin, *Institutes*, bk. iv, ch. i; Pearson, *Exposition of the Creed*, art. ix; Cranmer, *Works;* Burnet, *On the* 39 *Articles*, art. xix; Browne, *On the* 39 *Articles*, art. xix; Palmer, *Treatise of the Church* (Anglican: N. Y. 1851, 2 vols. 8vo); Litton, *The Church of Christ* (Protestant view: London, 1851, 8vo; Philadelphia, revised ed. 1868, 8vo); Stone, *The Church Universal* (Protestant: N. Y. 1846; new ed. 1867); Watson, *Theological Institutes*, pt. iv, ch. i; Schaff, *Apostolical Church*, ch. ii; Rothe, *Die Anfänge d. christlichen Kirche* (vol. i, 1837). In the Romanist view, Perrone, *Prælectiones Theologicæ*, i, 181 sq.; Möhler, *Symbolism*, p. 330 (N. Y. 1844, 8vo). CHURCH, ABYSSINIAN. See ABYSSINIAN.

CHURCH AND STATE. 1. *Pagan Nations.*—In the Pagan states the religious life has been, on the whole, part of the political, and religion an affair of the state. In general, the priestly dignity was vested in the chief of the state government. In Athens and other Greek republics the popular assemblies had the final decision on religious affairs. In Rome the priestly dignity was originally united with the person of the kings; after the establishment of the republic, the Senate had supreme control of religious affairs; on the establishment of the empire, the emperor became *Pontifex Maximus.*

2. *Among the Jews.*—Among the Jews, the whole government of the state was based upon the idea that Jehovah was the ruler of the people. All the national institutions were destined to promote the worship of the King of Israel, and to make the people obedient to his precepts as they were laid down in the Old Testament. God, the king of Israel, ruled the people through the organs which he appointed—through Moses, Aaron and his descendants, Joshua and the judges, and the prophets. The demand of the Jews for a king was therefore censured by Samuel as a weakening of the perfect theocracy; but even the king always remained in the Jewish law the earthly representative of Jehovah, and he had no right to give new laws, but simply to execute and enforce the laws given directly by Jehovah. See THEOCRACY.

3. *Teaching of Christ and the Apostles.*—The teaching of Christ on the relation of the Church founded by him to the state was very plain. He distinctly recognised the absolute law-giving power of the state governments in all secular affairs, and enjoined upon his followers to obey the state laws in everything that was not opposed to the precepts of their religion. His reply to the Pharisees, "Render unto Cæsar the things which are Cæsar's, and unto God the things that are God's" (Matt. xxii, 21), distinctly pronounces the separation between the Church and the State. He declares the powers of the civil rulers to be of divine authority by saying to Pilate, "Thou couldest have no power at all against me except it were given thee from above." The apostles enjoin upon Christians obedience to the existing state governments: thus Paul, in the Epistle to the Romans (xiii, 1, 2), "Let every soul be subject to the higher powers. For there is no power but of God; the powers that be are ordained of God. Whosoever, therefore, resisteth the power, resisteth the ordinance of God; and they that resist shall receive unto themselves damnation." Similar precepts are given in 1 Tim. ii, 1, 2; 2 Titus iii, 1; 1 Pet. ii, 13. Only in case of demands directly contrary to the Christian religion, obedience was to be refused. Thus Peter and the other apostles, when commanded not to teach in the name of Jesus, answered, "We ought to obey God rather than men" (Acts v, 29).

4. *Christianity in the Time of Constantine.*—In compliance with these teachings of Christ and the apostles, the first Christians conformed themselves to all secular laws; and only when things were demanded of them contrary to Christian law, such as the open renunciation of their faith, they refused obedience, but submitted to the penalties imposed upon them. The persecutions which the Christians had to suffer during the first three centuries arose not from any active opposition on their part to the Roman laws, but chiefly from the application of the ancient laws, which forbade any Roman citizen to worship divinities not recognised by the state, and any conquered nation to propagate its religion in other parts of the empire. Hence the more the outward distinction of the Christians from the Jews became apparent, the more they exposed themselves to the application of the Roman law. Most of the persecutions were, however, of short duration, and some of the emperors even showed themselves favorable to the Christians. As civil and military offices frequently brought the occupants into situations in which they had to pay some homage, direct or indirect, to the pagan state religion, the Christians naturally regarded it as dangerous to perform the duties of such offices. The fact, however, that Christian senators and Christian soldiers are mentioned in the early history of the Church, shows that the holding of such offices was, in itself, not deemed incompatible with the religious duties of a Christian.

5. *From Constantine to Charlemagne.*—A new era in the history of the relation between Church and State

begins with the reign of Constantine the Great. In the years 312 and 313 full freedom was guaranteed to the Christian Church throughout the empire. Soon imperial edicts granted many privileges to the clergy. They received the same immunities which were possessed by the pagan priests, and soon were preferred to the latter; the particular churches obtained the right of receiving legacies; the bishops received some kind of independent jurisdiction. The emperor, in conferring these rights, acted from the old Roman standpoint of chief of the state in matters religious as well as secular. Thus the first exhibition of a Christian state churchism was a direct emanation from pagan views transferred to the Christian Church. The emperor retained the *insignia* and the name of *Pontifex Maximus*. Gratian was the first who laid aside the *insignia*, but the name was retained much longer. On the coins Constantine placed the cross, as a symbol of Christianity, by the side of the sun-god, as the representative of the old religion. The emperors thus from the start began to view themselves more as patrons than as members of the Christian Church, and the chiefs of the Church were, on the whole, well pleased with the privileges which were conferred upon them, and thought little of disputing the influence which the emperor gradually claimed to exercise upon Church affairs. In the East, this subjection of the ecclesiastical authorities to the state governments went much further than in the West, and has remained a characteristic of the Eastern churches up to the present day. The emperors convoked the synods, and claimed the right of sanctioning their resolutions. Even doctrinal formulas were sometimes drawn up by the emperors, and only promulgated by the bishops. The banishment of bishops for not concurring in the resolutions passed by synods convoked by the emperors, and frequently acting under the direct influence of the emperors, began even during the reign of Constantine.

In the western countries of the empire, the prominent position which was early awarded the bishop of Rome, and subsequently the local separation from the seat of the empire, weakened the power of the emperor in Church affairs. Some of the most prominent bishops and priests (Ambrose, Jerome, etc.) repelled in energetic language the right claimed by the emperors to decide Church questions. Several of the Eastern emperors thought it, moreover, in their interest to gain the friendship of the Roman bishops by making to them large concessions, and thus encouraged the aspirations of the latter to a supreme power in the Church. The Roman bishop Gelasius, in 494, claimed a superiority of the ecclesiastical over the secular power, and a synod convoked by the Roman bishop Symmachus, in 502, condemned the encroachment of king Odoacer upon the rights of the Church. When the German tribes, and in particular the Franks, became Christians, their kings gave to the clergy great privileges, and a great influence upon the administration of national affairs, but in return claimed the supreme power in ecclesiastical as well as secular affairs. Meetings of the clergy could not take place without royal permission, and all their resolutions needed, before being promulgated, the sanction of the kings. Even the appointment of the bishops soon came to be regarded as a royal prerogative. Charlemagne, who was crowned by Pope Leo III as Roman emperor, conceived the bold idea of a universal Christian monarchy. In his opinion, it was the chief duty of the emperor to defend the Church of Christ everywhere against pagans and infidels, and to extend her territory. The Church, on the other hand, was to aid in the execution of this plan by spiritual means. The pope, in his eyes, was the first clergyman of the empire, whose election, as well as that of the bishops, had to be ratified by the emperor. He was anxiously intent upon avoiding all conflicts between Church and State, but reorganized the whole ecclesiastical constitution of the empire, and even issued decisions on doctrinal questions, as, for instance, the heresy of the Adoptianists.

6. *From Charlemagne to the Reformation.*—The weak successors of Charlemagne were not able to carry through the ideas of the great emperor; and the natural tendency of the Church, and in particular of the popes, to elevate their dignity at the expense of that of the emperors, met with but little resistance. The synods of this time generally propounded the doctrine that the pope held the highest position in the government of the Christian Church, and the emperor the highest position in the secular government of the Christian world; but that the Church was more important than the state, and the dignity of the pope higher than that of the emperor. This doctrine was in particular propagated by the pseudo-Isidorian decretals, which about this time obtained a leading influence upon Church legislation. The independence of the imperial power found, however, some very energetic champions even among the bishops; as, for instance, Hincmar of Rheims († 881). During the ninth and tenth centuries the authority of the papal see greatly suffered from the immoral character of some of its occupants, and it was therefore easy for the great German emperors of this time to increase the imperial power at the expense of the papal. The emperors still deemed it their duty to execute the laws of the Church, and excommunication was frequently followed by the ban; but, at the same time, the emperors recovered their former influence upon the election of the popes. This lasted until the middle of the 11th century, when the papal see, under the influence of the monk Hildebrand, began to exhibit greater strength, and put forth more exorbitant claims than ever before. In 1059 Nicholas II annulled the direct power of the emperors in the election of popes, which was transferred to the College of Cardinals, while to the emperor only the confirmation of the pope elect was left. When Hildebrand himself, in 1073, under the name of Gregory VII, ascended the papal throne, he boldly and vigorously proclaimed a new theory of the relation between Church and State. He claimed for the Church alone a divine origin, ascribing to all secular institutions, and in particular to the state itself, a human origin. The Church, therefore, was to be the highest power in society, and the state, for its legal existence, required the sanction of the Church. In the Church he enforced the law of celibacy, in order to separate the clergy entirely from the laity, and the absolute subordination of priests to bishops, and of both to the pope, in order to concentrate all power in the hands of the latter, and to make him the real head of the universal Christian monarchy. Gregory and his successors had an unceasing conflict with the German emperors with regard to this theory, and in particular as to the appointment of bishops and other ecclesiastical dignitaries by the secular power. Many bishops and priests took sides with the emperors, who repeatedly caused the election of anti-popes. Nevertheless, the theory which maintained the superiority of the Church to the state continually gained ground. The views of Gregory VII were further developed by Alexander III and Innocent III. The latter maintained that the State and the world had not the nature of a divine institute, but were the products of human power and will. The Church, which is of divine origin, is therefore higher than the state. The state, in itself, is only a body which is dead until a soul is infused into it. This soul is the Church. The state is like the moon, an opaque body, which needs to be illumined by the Church. Christ gave to Peter the government over all the world, and the pope is the legitimate successor of Peter. To him, therefore, belongs the final decision in all affairs, and in particular the decision as to who is to govern the states. All the decrees of secular rulers require the sanction of the popes. But neither Innocent nor any of the following popes suc-

ceeded in carrying out these theories fully in practice. The emperors and kings, aided in general by the laity and a large number of the clergy, opposed the papal claims, in spite of all the excommunications which were hurled against them. Even men like Bernard of Clairvaux expressed their dissent from these ultra-papal theories. The last pope who endeavored to enforce these claims was Boniface VIII, who, in his notorious bull, *Unam Sanctam*, maintained it to be necessary for salvation to believe that the Roman popes had power over everything on earth. Boniface had to pay for this extraordinary assumption of power with imprisonment and ill-treatment which caused his death. The transfer of the papal see to Avignon, and subsequently the Great Schism, were fatal blows to the practical execution of the mediæval theory of Church and State, although the theory itself was never formally renounced, and the notorious bull, *Unam Sanctam*, of Boniface VIII, which, as far as France was concerned, had been revoked by one of the Avignon popes (Clement V), was formally restored by Leo X in 1516. But the popes had not sufficient power to prevent the emperors and kings from passing laws by which the rights of the state governments were enlarged, and many salutary reforms introduced into the churches.

7. *From the Reformation to the present Time.*—The great reformers of the 16th century—Luther, Calvin, Zwinglius, Melancthon, and others—were all agreed in condemning the confusion by the Church of Rome of spiritual and secular power. They all insisted on keeping the two powers apart, and especially in their earlier writings favored the self-government of the Church. But these views were not consistently carried through. As all the bishops opposed the reform of the Church, the princes and the municipal governments were invited by the reformers to see to the execution of the Church reform, and to the reconstruction of the Reformed churches. No provision being made for a common bond of union between the Reformed churches in different countries, the power of the state government in each particular country over the Church grew almost without opposition. To this must be added that most of the reformers adhered to the idea of a Christian state whose authorities were invested with the right to punish those who denied the fundamental doctrines of Christianity. See SERVETUS. Thus State-Churchism was established in all the Lutheran and Reformed countries, and developed the more rapidly, as the churches had never so powerful a representative as the Church of Rome had had during the Middle Ages. The constant efforts of the Roman Catholic states to root out Protestantism by force naturally led to retaliatory measures on the part of Protestant princes, and thus the dangerous principle came gradually to be developed, *Cujus regio ejus religio* (the religion of a country must conform to that of the prince). The application of this principle led, on the one hand, to many and bloody wars, but, on the other, it induced the Roman Catholic princes to claim, like the Protestant princes, a greater influence over religious affairs than the popes had ever conceded during the Middle Ages. The success of the Reformation had shown the weakness of the popes, and their opposition to the radical changes in the relation of the Church of Rome to the states was more nominal than efficient. The last coronation of an emperor of the West by the pope was that of Charles V in 1530. The popes protested in 1648 against the peace of Westphalia, in 1701 against the creation of a kingdom of Prussia, and in 1815 against the treaty of Vienna, but all these and similar acts had no influence whatever.

The growth of rationalism and infidelity in the 17th and 18th centuries accustomed princes and statesmen to regard the churches as part of the state organism, and just as absolutely subject to the government of every territory as the civil administration. This is the æra of the territorial system, the period of the greatest debasement of the Christian churches. Nearly all the Church assemblies, viz. the convocations in England; the national synods and general assemblies of the Protestant churches in France, Germany, and other countries; the national, provincial, and diocesan synods of the Church of Rome, were forbidden, or fell into general disuse. In the Church of Rome, during this period, the claims of the pope were not only denied by the state governments, but strenuous efforts were made in France, Germany, Italy, and other countries to reduce the papal prerogatives in matters purely ecclesiastical, and to increase that of the bishops and of the national churches. These efforts, however, were less successful than those of the state governments.

The French Revolution of 1789 shook the structure of society of Europe, political as well as ecclesiastical, to its very foundations. The principles of the Revolution did not prevail, but the governments of Europe saw the necessity of reconstructing the administration of the states. Several important changes date from the Congress of Vienna in 1815. The long alliances of Protestant and Roman Catholic governments in the war against France, and the territorial changes introduced by the Congress of Vienna, led to an interchange of toleration, as far as the Lutheran, Reformed, and Roman Catholic churches were concerned. Some states recognised all three as state churches, entitled to support by the state governments; and in most of the others there was at least a gradual approach to giving to the members of the three churches equality of political rights. The relation of the Roman Catholic Church, in both Roman Catholic and Protestant countries, to the pope was regulated by concordats and conventions [see CONCORDATS], which stipulated what rights the state governments should allow the pope to exercise upon the Church of a particular country, and what influence the state governments (even the Protestant) should have upon the election of bishops, the appointment of other ecclesiastical dignitaries, the direction of Roman Catholic schools, the management of Church property, and other denominational affairs. In the Protestant churches, a consciousness awoke of the unworthy servitude into which the Church had been forced in the 17th and 18th centuries, and the demand grew stronger and stronger for the restoration of at least a part of the self-government of the churches, by means of convocations, synods, assemblies, and councils. A new impulse was given to these demands by the revolutionary movements of the year 1848, and by the agitation for political reforms which has since been going on in nearly all the European states. The regular convocation of elective Church assemblies, and the transfer to them of a greater or lesser part of the government of the Church, has, since 1848, been the general tendency in all the Protestant churches of Europe. As regards the Church of Rome, public opinion more and more declared itself against the conclusion of concordats, and in favor of a regulation of the Roman Catholic affairs of every particular country by special laws, due regard being had to the recognition by the Roman Catholics of the pope as the head of the Church.

While the Lutheran and Reformed churches assumed almost from their very beginning the character of state churches, a number of minor sects sprang up in the 16th and the following centuries, which, meeting, on the hand of the state governments, with nothing but persecution, were led to demand from the state not only toleration for themselves, but freedom of religious belief in general. Especially was this the case in England, where the Nonconformists gained greater strength and influence than any dissenters on the Continent of Europe, and became true pioneers of the principle of a complete separation between Church and state. Persecution drove many of the dissenters to the New World, and here their principles found a genial soil. In some of the colonies Church and State

were united, more or less closely, until after the Revolution. At the declaration of independence, the United States established the absolute separation of Church and State, and the legal equality of all forms of belief, as fundamental institutions. The United States have always remained true to this principle, and in the several states of the Union it is now practically carried out. The prosperous growth of the free American churches, and their influence upon society, has had great effect upon opinion in the Old World. The experience of America has largely added to the number of the friends of free churches in Europe. The number of dissenting churches which claim absolute independence of the state is everywhere on the increase, and with them sympathize a large political party of Radicals, who make entire separation between Church and State a part of their political platform. In 1848, the principle of separation of Church and State was formally acknowledged in the new constitutions of France, Austria, Prussia, and other states. This triumph of the American principle was of only short duration; but none of the European countries have since ceased to have a large political party which aims at conforming legislation on Church affairs to that of the United States, and at carrying through the principle of entire separation between Church and State. It is a very remarkable fact that even men like Dr. Pusey have of late shown themselves favorable to the separation of Church and State, in order to put an end to the servile condition of the Church. One of the most prominent Protestant statesmen and writers of France, Count de Gasparin, speaks on the subject as follows: "Let no one be surprised at the extreme importance I attach to the separation of Church and State. For two centuries past the Church and society have been at war. In abolishing the unjust and worn-out pretences of both Church and State, their separation would give both to the Church and to society the peace they require. It would seem nowaday as though the citizen and the Christian were two different persons, having different rights and different duties. The Christian is taught to curse liberty as the poisonous fruit of philosophy and revolution; the citizen is taught to look upon the Church as the natural enemy of modern institutions. Thus arises a sullen enmity, a deep-rooted anxiousness in the minds of the people, and, so to speak, two nations within the same society. Yet nothing would be more erroneous than this distinction. Christianity is so far from being the enemy of free institutions, that these institutions have never existed but in Christian countries; the nations which obey the law of Brahma, of Buddha, and of Mohammed, know of no other form of government than despotism. Liberty is the fruit of the Gospel; it proceeds from the only religion which intrusts the individual with the care and the salvation of his own soul; materialism kills it, faith makes it live; and, in return, by an intimate and mysterious connection, despotism kills faith, liberty nourishes it. What is this opposition which divides the Church and society? Nothing but a misunderstanding, whose mist shall disappear before the sun of liberty. The ideal of the Christian is also the ideal of the citizen. The state would gain no less than the Church by their mutual independence. We never attempt with impunity to rule that which God has created to be free. For two centuries the state has dragged on the Church, or has been dragged by it; the result was mutual suffering and mutual servitude. Separation restores each to its proper place. The state has no longer but citizens to deal with; it has no longer to fear the murmurs of conscience, or those invisible enemies which sap and weaken its foundations. Free in its action, authority gains both in strength and in respect; the vestry-quarrels, which are the plague of all state religions, are at an end. Union made the Church the enemy of the state, separation makes them friends. Conscience revolts against the hand of the state, it loves a power which guarantees it freedom." See TOLERATION.

Among the Liberal party of the Roman Catholic countries of Europe the principle of a separation between Church and State has likewise found many advocates. Of the great statesmen of Europe in modern times, few have given so cordial an adhesion to the principle as count Cavour, who, during his whole political career, stood up for a free Church in a free state; and baron Ricasoli, whose famous letter to the Italian bishops, dated Nov. 26, 1866, is a complete commentary on the subject, and a document which, in the history of European State-Churchism, will remain of lasting importance. We give the following extract from it: "The decisions adopted by the government arise from the desire that perfect liberty in the relations between Church and State should pass from the abstract religion of principle in which it had hitherto remained into the reality of fact. The government, therefore, desires that Italy may very soon enjoy the magnificent and imposing religious spectacle now afforded to the free citizens of the United States of America by the National Council of Baltimore, wherein religious doctrines are freely discussed, and whose decisions, approved by the pope, will be proclaimed and executed in every town and village without *exequatur* or *placet*. It is liberty which has produced this admirable spectacle; liberty, professed and respected by all, in principle and in fact, in its amplest application to civil, political, and social life. In the United States every citizen is free to follow the persuasion that he may think best, and to worship the Divinity in the form that may seem to him most appropriate. Side by side with the Catholic Church rises the Protestant temple, the Mussulman mosque, the Chinese pagoda. Side by side with the Romish clergy the Genevan consistory and the Methodist assembly exercise their office. This state of things generates neither confusion nor clashing. And why is this? Because no religion asks either special protection or privileges from the state. Each lives, develops, and is followed under the protection of the common law, and the law, equally respected by all, guarantees to all an equal liberty. The Italian government wishes to demonstrate as far as possible *that it has faith in liberty*, and is desirous of applying it to the greatest extent compatible with the interests of public order. It therefore calls upon the bishops to return to their sees whence they were removed by those very motives of public order. It makes no conditions save that one incumbent upon every citizen who desires to live peaceably—namely, that he should confine himself to his own duty and observe the laws. The state will insure that he be neither disturbed nor hindered; but let him not demand privileges if he wishes no bonds. The principle of every free state, that the law is equal for all, admits of no distinctions of any kind. The government would be glad to cast off all suspicion and abandon every precaution, and if it does not now wholly act up to this wish, it is because the principle of liberty which it has adopted and put into practice is not equally adopted and practised by the clergy. Let your lordships remark the difference between the condition of the Church in America and the condition of the Church in Europe. In those virgin regions the Church is established amid a new society, but which *carried with it from the mother country all the elements of civil life*. Representing the purest and most sacred of the social elements, the religious feeling which sanctions right, and sanctifies duty, and carries human aspirations far above all earthly things, the Church has here sought only the empire pleasing to God, the empire of souls. Companion of liberty, the Church has grown beneath its shelter, and has found all that sufficed for free development and the tranquil and fecund exercise of its ministry. It has never sought to deny to others the liberty which it enjoyed, nor to turn to its exclusive advantage the in-

stitutions which protected it. In Europe, on the other hand, the Church arose with the decadence of the great empire that had subjugated the earth. It was constituted amid the political and social cataclysms of the barbarous ages, and was compelled to form an organization strong enough to resist the shipwreck of all civilization amid the rising flood of brute force and violence. But while the world, emerging from the chaos of the Middle Ages, re-entered the path of progress marked out by God, the Church impressed upon all having any relation with it the immobility of the dogma intrusted to its guardianship. It viewed with suspicion the growth of intelligence and the multiplication of social forces, and declared itself the enemy of all liberty, denying the first and most incontestable of all, the liberty of conscience. Hence arose the conflict between the ecclesiastical and the civil power, since the former represented subjection and immobility, and the latter liberty and progress. The conflict, from peculiar circumstances, has greater proportions in Italy, because the Church, thinking that a kingdom was necessary to the independent exercise of its spiritual ministry, found that kingdom in Italy. The ecclesiastical power, from the same reason, is here in contradiction not only with the civil power, but national right. The bishops cannot be considered among us as simple pastors of souls, since they are at the same time the instruments and defenders of a power at variance with the national aspirations. The civil power is therefore constrained to impose those measures upon the bishops which are necessary to preserve its rights and those of the nation. How is it possible to terminate this deplorable and perilous conflict between the two powers—between Church and state? Let us 'render unto Cæsar the things that are Cæsar's, and unto God the things that are God's,' and peace between Church and state will be troubled no more."

See Herzog, *Real-Encyklop.* vol. xix (Supplem.), s. v. *Staat und Kirche;* a complete history of the relation of the Christian Church to the state was begun by Riffel (Rom. Cath.), but not completed (*Geschichtliche Darstellung der Verhältnisse zwischen Kirche und Staat*, vol. i, Mainz, 1836, embracing the time from the foundation of Christianity to Justinian I); Vinet, *Essai sur la manifestation des convictions réligieuses et sur la séparation de l'église et de l'état envisagée comme conséquence nécessaire et comme guarantie du principe* (Paris, 1842; translated into English, Lond. 1843, 12mo); Laurent, *L'Église et l'État;* Hundeshagen, *Ueber einige Hauptmomente in der geschichtlichen Entwickelung des Verhältnisses zwischen Staat und Kirche*, in Dove's *Zeitschrift für Kirchenrecht*, vol. i (Berlin, 1861); Roscovány (Rom. Cath.), *Monumenta Catholica pro independentia ecclesiæ ex potestate civili*, tom. i (Quinque Ecclesiis, 1847); Richter, *Geschichte der evangel. Kirchenverfassung in Deutschland* (Leipzic, 1851); the manuals of Church law (*Kirchenrecht*) by Richter, Walter, Philips, and others. Lord Montague pleads for the State Church in *The Four Experiments in Church and State* (London, 1863), maintaining that only four forms of Church and State are possible: 1. When the Church is identical with the state, i. e. when it is a national Church; 2. When the Church is under the state; 3. When the Church overrides the state; 4. When there is no Church at all. In the author's opinion, the national is the only normal form of Church and state. In each of the other forms the Church and state are depraved. See also Dupin, *Traité de la Puissance ecclés. et temporelle* (Paris, 1707); Dupin's *Manuel du Droit Ecclésiastique* (Paris, 4th ed. 1845; claiming the rights of Roman Catholic state governments over the Church of Rome); Zachariæ, *Einheit des Staats und der Kirche* (1797); De Maistre, *Du Pape* (the most celebrated defense of ultra-papal theories); Archbishop Wake, *The Authority of Princes;* Warburton, *Alliance of Church and State* (1786); Hobbes, *Leviathan* (1608); Gladstone, *State in Relation to Church* (2 vols. 4th ed. 1841); Pusey, *Royal Supremacy* (1847); Coleridge, *Constitution of Church and State* (1830); Chalmers, *National Churches* (1838); Vincent, *Protestantisme en France*, p. 190; Brownson's *Review* (Rom. Cath.), Oct. 1854; Dexter, *Congregationalism* (Bost. 1865), p. 209; D'Aubigné, *Essays* (N. Y. ed.), p. 239; Palmer, *On the Church*, ii, 291 sq.; *Church of England Quarterly*, Jan. 1855, art. vi; Schaff, *Church History*, ii, 90, 356; Calvin, *Institutes*, bk. iv, ch. 20; *English Review*, vol. xi and foll. (many articles); *Catholic World*, April, 1867, art. i; Wardlaw, *On Church Establishments* (London, 1839, 8vo); Noel, *On the Union of Church and State* (N. CHURCH CONGRESS, a name given to free gatherings of ministers and laymen of the Established Church of England, which since 1861 have annually been held for the purpose of discussing important religious and ecclesiastical questions. The first congress was convoked by a self-constituted committee, which invited men of all theological parties to be present. In order to maintain the neutral character of the Church Congress, no resolutions were to be passed. Although this original plan has been adhered to, the High-Church party has been in an unmistakable ascendency at all the congresses, and the Low-Church party, on that account, in 1866, formed a design (not yet executed) of calling a separate Low-Church Congress. The congresses held from 1861 to 1866 were as follows: 1861, Canterbury; 1862, Oxford; 1863, Manchester; 1864, Bristol; 1865, Norwich; 1866, York. At each of these congresses the bishop of the diocese presided. The attendance in every case was large, and a number of bishops, and prominent clergymen and laymen, took part in the proceedings. A curious difficulty stood in the way of the congress of 1865, which deserves mention, as it shows the relation of the bishops of England to these meetings. When it was resolved by the congress of 1864 (at Bristol) to hold the next one at Norwich, it was understood that the sanction and co-operation of the bishop of that city had been obtained. But this proved to be a mistake; and when the bishop was applied to by the official residuum of the congress, he did not consider the authority of the persons constituting it sufficient to entitle them to his consideration. The request from a public meeting, and a vote taken in the diocese of Norwich on the subject, was deemed no more sufficient. Only when the chapter of Norwich (including the honorary canons) had declared in favor of the congress, the bishop consented to preside. See Rivington's *Ecclesiastical Year-book for* 1865 (London, 1866. The "Year-book" gives, at p. 135 to 172, a full account of the Congress of Norwich). The full proceedings of each meeting of the congress have been published in a special report.

CHURCH DIET (*Kirchentag*), a name given to free gatherings of clergymen and laymen of the German Protestant state churches, held since 1848 for the discussion of religious and ecclesiastical questions. The Church Diets were called into existence in consequence of the revolutionary movements of the year 1848, which appeared to tend to a separation between Church and State, and to endanger the influence of the evangelical Church upon society. Members of

the Lutheran, the Reformed, and the United Evangelical churches took part, and the High Church "Confessionalists," under Stahl and Hengstenberg, worked hand in hand with the Evangelical party, under men like Nitzsch, Bethman-Hollweg, and others, at the first annual meetings of the Diet of Wittenberg (1848 and 1849), Stuttgardt (1850), Elberfeld (1851), Bremen (1852), Berlin (1853), Frankfurt (1854), Lübeck (1856), Stuttgardt (1857), Hamburg (1858). But in 1860 the former party did not appear, because the executive committee had refused to put the Dissenter and the Civil Marriage questions on the programme of the meeting. Consequently, at the assembly of Barmen (1860), and the following ones at Brandenburg (1862) and Altenburg (1864), the Evangelical party (the "Consensus" party) was alone represented. Simultaneously with every meeting of the Church Diet has been held an assembly of the Congress for Home Missions. See HOME MISSIONS. The full proceedings of each meeting of the diet have been published in a special report. A briefer account is given in the annual *Kirchliche Chronik* by Matthes. See also Dorner, *Reform d. evangel. Landeskirchen* (1848); *Entstehung und Gesch. des Kirchentages* (1853).

CHURCH EDIFICES. Under *Architecture* (q. v.) a brief history has been given of the development of ecclesiastical architecture. The present article will contain various particulars concerning the history of some of the most prominent churches, their names, form, site, position, the arrangement of the interior, the outer buildings connected with the Church service, etc.

I. *History of the Erection of Churches.*—Until the second century Christians were not permitted to erect churches, but were compelled to worship in private houses, in the open fields, or, to escape persecution, in the Catacombs (q. v.) and other concealed places. On the suspension of persecution, we find, from A.D. 202 and forwards, notices of Church edifices in Nicomedia, Edessa (Odessa), and other cities. Diocletian issued an edict (A.D. 305) ordering all Christian churches to be razed to the ground. Under Constantine these were rebuilt, and great numbers of new ones erected over the whole Roman empire. Chief among them were the magnificent basilicas [see BASILICA] of St. Peter, St. Paul, and Maria Maggiore in Rome. The form of the buildings and the contamination of idolatry prevented the general changing into Christian houses of worship of the old pagan temples, many of which were destroyed. Still some of them were thus converted, especially after the time of Theodosius I, and the materials of others were largely used. Justinian I (A.D. 565) rebuilt twenty-four churches in Constantinople alone, and many other churches, cloisters, resting-places for pilgrims, and other religious buildings, over the entire empire of the Orient, and especially in Palestine. The church of St. Sophia (q. v.) he rebuilt with great beauty and splendor. This served as a pattern for Church edifices through the whole Christian world. Such was the splendor of the new St. Sophia that Justinian exclaimed, Νενίκηκά σε, Σολομών, "I have surpassed thee, O Solomon!" The emperor appointed for the service of this church sixty presbyters, one hundred deacons, forty deaconesses, ninety sub-deacons, one hundred and ten readers, twenty-five singers, one hundred door-keepers, making five hundred and twenty-five of the clergy and attendants. From the death of Justinian (A.D. 575) to the eighth century but few Church buildings of great note were erected. During the reign of Charlemagne many churches were erected in North-western Europe. The belief that the world was to be destroyed in the year A.D. 1000 paralyzed all energy, and it was not till that year had passed that the great revival of all departments of human activity called forth the spirit of princes and cities, as well as of the clergy, to the erection of the many grand monuments of ecclesiastical architecture that adorn the history of the Middle Ages. This zeal in church-building became so modified into a spirit of pride, ambition, and corruption during the fifteenth and sixteenth centuries as to become one of the chief causes that produced the Reformation. The system of selling indulgences to raise money for building churches, first introduced in the eleventh century, was carried to such excess in raising funds for rebuilding the gorgeous St. Peter's (q. v.), that the reformers had in this a most powerful argument in their contest with the Romish Church. In Europe, the building, repairing, and maintaining of edifices for the national churches is provided for entirely, or at least to a great extent, from the general national taxes. Other churches build their edifices by voluntary contributions. This is universally the case in the United States of America.

In the remainder of this article we chiefly follow Bingham, *Orig. Eccles.* bk. viii, ch. i), making use of Farrar's abridgment, with modifications and additions.

II. *The ancient Names of Churches.*—The word *dominicum, or domus Dei*, the Lord's house, occurs in the 4th century. Cyprian uses it to denote the Lord's day, and also the Lord's Supper; yet it is used by Jerome for a building set apart for divine worship. It answers to the Greek κυριακόν. See CHURCH. *Domus Dei, domus ecclesiæ, domus divina*—that is, "the Lord's house," "the house of the church," "the house of God"—are expressions in frequent use from the third century. In Eusebius we have οἶκος ἐκκλησίας, *the house of the church*. *Domus divina*, the house of God, was a term employed to designate the palace of the Roman emperor; but the Christians transferred the appellation to their churches. Tertullian uses the name *domus columbæ*, the house of the dove, or, as Mede explains it, the house of the dove-like religion, or the house of the dove-like disciples of Christ. As the Temple of God at Jerusalem is frequently in Scripture styled the house of prayer, so Christian churches are called προσευκτήρια, or οἶκοι εὐκτήριοι, *oratories*, or *houses of prayer*. In later times these titles were appropriated to smaller or domestic chapels. Some early writers distinguish between ἐκκλησιαστήριον and ἐκκλησία, the former signifying the *building*, and the latter the *congregation*; but in the writings of Ignatius, Clement of Alexandria, Tertullian, Cyprian, and others, the word ἐκκλησία usually means the *building*, and at length became the current expression. *Basilica* was originally applied to the imperial palace, or public halls, and was not used to designate places of worship until Christian emperors had appropriated such buildings to the use of the Church. See BASILICA. Ἀνάκτορον is synonymous with *basilica*, and was occasionally applied to places of divine worship built by emperors. Churches were sometimes called *tituli* (τιτλοι), either from the inscription of dedication, or from the sign of the cross. The term τρόπαια, *tropæa*, occurs in Eusebius. The reason of this name is sought in the reported appearance of the cross to Constantine, and the *Labarum*, on which, according to Eusebius, was inscribed τοῦ σταυροῦ τρόπαιον. Μαρτύριον, or *memoria*, denoted a church dedicated to the memory of a martyr. If the person in memory of whom the church was built was a prophet or an apostle, then the church respectively took the name ἀποστολεῖον and προφητεῖον. In addition, we find at different times, and for various reasons, the following names given to Christian churches: σκηνή, *concilia, concil'abula, conventicula, casæ*, σύνοδοι, μοναστήριον, κοιμητήριον, *corpus Christi*, ναός, νῆσος, and many others. The titles *fanum* and *delubrum* were at all times rejected as profane.

Names of individual Churches.—Individual churches were, soon after the time of Constantine(?), dedicated to

certain saints, and called by the names of those saints. Some of the Protestant denominations name their church edifices after the apostles, but only for the purpose of distinction from each other. Puritans, and the churches influenced by them, name their churches by their ordinal numbers, as the first, second, etc., or by the street on which they are located. In the Methodist Church the names of the apostles are often used; and church edifices are sometimes named in honor of Wesley or some other distinguished leader in the Church.

III. *Forms of Churches.*—The earliest ground-forms were oblong. The basilicas (q. v.) were fashioned after the analogy of a ship, or perhaps, rather, after the oblong form had been settled upon by other influences—as of architectural convenience, etc.—that part of the church to receive believers was called the nave (*navis*, ship). This was afterward connected with allegorical or mystical meanings; e. g. to denote the dangers to which the Church was exposed, and the safety which it offered to its members. The boat of Peter and the ark of Noah were explained as emblematic of the Church in these two respects. On the other hand, the Byzantine churches, and many that were influenced by them, were *round.* During the *Lombard,* or *early Round-arch* period of architecture, the churches assumed the form of a cross. In the late Gothic they had the head of the cross bent, to represent the bowing of the head of the Saviour when he died: thus at Rouen (St. Ouen). The transepts of the cross often did not extend beyond the walls, not appearing at all in the external architecture.

IV. *The Site.*—This was generally chosen on the summit of a mountain or other elevated place, for two reasons, viz. security and retirement from the bustle of the world, and a notion that elevated places were specially holy. The Temple of Solomon had been built on a hill; and the Christians remembered the expression, "I will lift up mine eyes to the hills, from whence cometh my help." At first, exposed situations were avoided; but when the impediment arising from persecution was removed, they were preferred. At other times they erected their churches over the graves of martyrs; and occasionally the cemeteries were used for devotional purposes. In the tenth and eleventh centuries there were many places of this kind called *κρυπταί, cryptæ.*

V. *Aspect.*—The earliest churches faced eastward; at a later period (4th or 5th century) this was reversed, and the sacramental table was placed at the east, so that, in facing it in their devotions, they were turned towards the east. The Jewish custom was to turn to the west in prayer. "As the Jews began their day with the *setting sun,* so the followers of Christ began theirs with the *rising sun.* The eye of the Christian turned with peculiar interest to the east, in remembrance of the Morning Star, the Saviour, the Sun of Righteousness. This idea was mixed up with many religious observances. After baptism the newly-admitted members of the church were turned with their faces eastward; and the dead were usually buried in the same position, under the conviction that Christ at His second coming should appear in the east."

VI. *Internal Arrangement.*—No particular structure or arrangement of the interior prevailed during the first three centuries. From the fourth century we find uniformity prevailing in the *basilicas* both of the East and West. The body of the church was divided into three parts, corresponding with the threefold division of the Christians—into *clergy,* including the servants of the congregation; *faithful,* or *believers;* and *catechumens.* This arrangement was also in conformity with the division of the ancient Temple—into the holy of holies, the sanctuary, and the court. The three parts were: 1. The *bema,* or sanctuary, in which the clergy officiated. 2. The *naos,* or nave, appropriated to the faithful, the lay-members of the church. 3. The *narthex,* or ante-temple, the place of penitents and catechumens. Sometimes four or five divisions are enumerated: this arises from subdividing the narthex into outer and inner, and also reckoning the *exedræ,* or outer buildings, a portion of the church.

1. *The Bema, or Sanctuary.*—The inner part of the church appropriated to the clergy: from *βαίνειν,* for *ἀναβαίνειν, to ascend.* This name was sometimes given to the raised platform which supported the throne or chair of the bishop and the seats of the presbyters, and sometimes to the whole of that part of the church in which the platform and the altar stood. It was also called *ἅγιον, ἁγίασμα, ἅγιον ἁγίων, the holy,* or *the holy of holies; ἱερατεῖον* and *πρεσβυτήριον, presbytery,* because it was the place in which the presbyters sat and discharged their duties; *θυσιαστήριον,* because the altar stood here; *ἄδυτον, ἄβατον,* or more commonly in the plural, *ἄδυτα, ἄβατα, places not to be entered or trodden,* because laymen and females were not allowed to enter. Because kings and emperors were privileged with a seat within this inclosure, it was called *ἀνάκτορον, royal palace.* The platform of this part of the church was an elliptical recess, with a corresponding arch overhead, and separated from the nave by a rail curiously wrought like net-work, called *cancelli,* chancel. Within were the bishop's throne, and subordinate seats right and left for the lower clergy. The bishop's throne was usually covered with a veil, and for this reason was called *cathedra velata.* In the middle stood the altar, in such a position as to be easily encompassed on every side. On one side of it was a small table for receiving oblations; on the other a recess, called *σκευοφυλάκιον,* into which the vessels were conveyed after the sacrament.

2. *The Nave.*—This was the main body of the church, and called by different names, derived from the uses to which it was applied. It was called the oratory of the people, because they there met for religious worship, reading the Scriptures, prayer, and hearing the word. It was also called the place of assembly, and the quadrangle, from its quadrangular form, in contrast with the elliptical form of the chancel. In a central position stood the *ambo, suggestum lectorum,* or reader's desk, elevated on a platform above the level of the surrounding seats. This was sometimes called the pulpit, and the tribunal of the church, in distinction from the *βῆμα,* or tribunal of the choir. The choristers were provided with seats near this desk. The seats on either side, in front, were occupied by the faithful, or the communicants. The gospels and epistles were chanted from before the altar. The sermon was also delivered by the preacher standing on the platform of the sanctuary, or on the steps leading to it. But when large churches were erected, it became difficult for the preacher to make himself heard from this position. To remedy this inconvenience, a platform was erected for him in front of the *bema,* within the body of the nave. The rules of the primitive churches required the separation of the sexes, and this was generally observed. The men occupied the left of the altar, on the south side of the church, and the women the right, on the north. They were separated by a veil, or lattice. In the Eastern churches the women occupied a gallery, while the men sat below. The catechumens occupied a part near to the believers, arranged in their several classes; but they were required to withdraw at the summons of the deacons—*Ite, catechumeni!* In the rear of the catechumens sat the penitents, who had been allowed a place again within the church. The walls of the church were surrounded by antechambers and recesses for the accommodation of the assembly, for meditation, reading, and prayer. There were aisles surrounding the nave which separated it

from the chambers. It was separated from the chancel by a partition or lattice-work, with a curtain, and the entrance to the choir was by folding-doors in this partition. These doors were provided with curtains, which, as well as the larger curtain, called *καταπέτασμα* and *καταπέτασμα μυστικόν*, were drawn aside during the celebration of the Eucharist, and during the delivery of the sermon.

3. *The Narthex*, or *Ante-temple*.—This was the outer division within the walls. It was called *πρόναος*, *ante-temple; πρόπυλα, portico;* and *νάρθηξ*, or *ferula*. The latter name is supposed to have been given it in consequence of its oblong shape, resembling in this respect a *ferula*, or rod. It was an oblong section of the building, extending quite across the front of the church. It was entered by three doors leading from the outer porch. The great entrance was at the west, opposite to the altar; it was called (after the corresponding part of the temple) *ὡραία* or *βασιλική*, the *beautiful* or *royal gate*. The *vestibule*, or *πρόναος*, in the stricter sense, was allotted to the catechumens and penitents. Heretics and unbelievers were also allowed a place here, though this was forbidden by some Eastern synods. The *πρόπυλα*, or *portico*, was chiefly used for the performance of funerals. But, in the larger churches, meetings on ecclesiastical affairs were held in it. The primitive Christians were accustomed to wash before entering a church, as a symbol of the purity becoming that holy place. In due time the vessel used for that purpose was introduced into the porch. The vessel

LOCUS HYEMANTIUM.

Plan of an ancient Basilica, with its Exedræ.

1. *Propylæum*, or *vestibulum magnum*, the great porch, or first entrance into the area before the church. 2. The *atrium*, or area leading from the porch to the church. 3. *Cantharus*, or *phiala*: the fountain of water in the middle of the square. 4. The porticoes, or cloisters about the area, otherwise called the exterior *narthex* of the church, and place of mourners. 5. The great gate into the church. 6. The two smaller gates on each side of the other. 7. The northern and southern gates. 8. The cloisters on the north and south sides of the church. 9. The inner *narthex*, where the catechumens and hearers stood. 10. The place of the *substrati*, behind the *ambo*. 11. The *ambo*, or reading-desk. 12. The ascent on both sides of the *ambo*. 13. The inner porticoes, or cloisters for men below. 14. The *catechumenia*, or *hyperoa*, upper galleries for women, above the portions of the men, upon pillars. 15. *Cancelli bematis*, the rails of the chancel. 16. *Bema*, or chancel. 17. The altar, or communion-table. 18. The arched canopy over the altar. 19. The bishop's throne. 20. The seats of presbyters, in a semicircle about the altar. 21. *Diaconicum minus*, the inner vestry. 22. *Prothesis*, or *paratorium*. 23. *Diaconicum magnum*, the great repository, or greeting-house. 24. The baptistery. 25. The font. 26. *Pastophoria*, dwelling-houses, libraries, school-rooms, etc. 27. *Exedræ*, outer buildings. 28. Περίβολος, the outermost boundary allowed for refuge, or sanctuary.

was called κρήνη, φιάλη, φρέαρ, κολυμβεῖον, λεοντάριον, *cantharus*.

VII. *The outer Buildings*, or *Exedræ*.—All the buildings attached to the church, such as courts, side-buildings, wings, and other erections and places in the area connected with it, were called *exedræ*. The enclosure around the church was known by the names περίβολος, στοαί, περιστῷον, τετραστῷον, τετράστυλον, *ambitus*, *peristylia*. The open space between the extreme circumference and the church is called by Eusebius αἴθρον, *impluvium*, but is no other than the Latin *atrium*, and is synonymous with the word *area*. In this space stood the energumens, and that class of penitents called προςκλαίοντες, or *flentes*. They were also called χειμάζοντες, or χειμαζόμενοι, from the circumstance of their standing in the open air, exposed to all the changes of the weather. The most important of the exedræ were the *baptisteries*. In these places the candidates were instructed and prepared for baptism, and there were separate apartments for men and women: here also councils and ecclesiastical meetings were held, and hence it may be inferred that they were of capacious dimensions. These baptisteries were not attached to all churches, but were generally erected adjacent to cathedral churches, denominated, on this account, *baptismal* and *central* churches. There were also several other smaller buildings, such as the *diaconicum magnum*, in which the sacred utensils, and the ornaments and robes of the clergy, were kept. This was called κειμηλιαρχεῖον, γαζοφυλάκιον, σκευοφυλάκιον. Here the clergy were accustomed to retire for private exercises preparatory to the public services: hence it was called *secretum*, or *secretarium*. It was also a general audience-room, and denominated *salutatorium*, *receptorium*. Many are of the opinion that the building was used as a *prison* for the confinement of delinquent clergymen. There was another class of buildings called *pastophoria*. This is a word borrowed from the Septuagint translation of Ezek. xl, 17, where it denotes the chambers in the outer courts of the Temple. Learned men are divided in opinion as to the uses of the *pastophoria:* some suppose them to have been watch-houses, others apartments for the accommodation of the clergy. Libraries were attached to many churches. In these collections were included not only the liturgical and other church-books, and the manuscript copies of the holy Scriptures, in the original languages and translations, but also homilies, *catecheses*, and other theological works. From the libraries of Jerusalem and Cæsarea, both Eusebius and Jerome chiefly derived the materials for their writings. Schools were, in later times, established in connection with some churches. If no building was provided for the purpose, the catechumens, or younger clergy, were taught in the baptistery or vestry. Other buildings were οἶκοι βασίλειοι, *the habitations of the bishop and clergy;* λουτρά, *baths;* ἀνακαμπτήρια, *lodging-places*, supposed by some to have been a kind of inn, by others a common place of resort for rest or recreation.

Doors.—Churches were usually provided with three doors, in imitation of the Temple. The principal entrance was called πύλη, and πύλη ὡραία or βασιλική. They were sometimes made of brass, and often richly ornamented. The date of the building or dedication of the church was usually inscribed on the door. Sometimes a motto was affixed, a doctrinal sentiment, a prayer, or doxology. Later, the doors were often of bronze, ornamented with Biblical scenes, etc. In the early Round-arch period (A.D. 700-1000) the columns beside the doors usually rested on the backs of crouching lions, griffins, or other real or imaginary animals, who symbolized a guardianship of the entrance to the church.

The doorway was often highly ornamented with clusters of beautifully-wrought columns, and with a correspondingly decorated arched way overhead. This arch later contained angels or saints sculptured in the stone.

Pavements.—From the fourth century downwards, great attention was paid to the pavement of the church. In large churches, the narthex had a pavement of plaster; the nave one of wood; and the sanctuary, or part immediately around the high altar, was adorned with a tesselated pavement of polished and parti-colored marble, constituting a rich mosaic work.

Windows.—The Christian churches from the first were well provided with windows. It is customary to refer the origin of glass to the third century; but this is incorrect. The Phœnicians, Egyptians, Greeks, and Romans used glass long before the Christian æra. (See GLASS.) In France, windows of both colored and cut glass were in use in the sixth century.

The following statement with regard to the mediæval and more modern churches and cathedrals is taken from Chambers, *Encyclopædia*, s. v.

"In the larger and more complete churches, the nave, and frequently also the choir, are divided longitudinally by two rows of pillars into three portions, the portion at each side being generally somewhat narrower and less lofty than that in the centre. These side por-

Plan of Durham Cathedral.

tions are called the aisles of the nave, or of the choir, as the case may be. In some churches the aisles are continued along the transepts, thus running round the whole church; in others there are double aisles to the nave, or to both nave and choir, or even to nave, choir, and transept. Behind, or to the east of the choir, is situated the 'Chapel of the Virgin,' with sometimes a number of altars; and it is not unusual for side chapels to be placed at different places along the aisles. These usually contain the tombs of the founder, and of other benefactors to, or dignitaries connected with, the church. The extent to which these adjuncts exist depends on the size and importance of the church, and they are scarcely ever alike in two churches, either in number, form, or position. Vestries for the use of the priests and choristers generally exist in connection with the choir. Along the sides of the choir are ranged richly-ornamented seats or stalls, usually of carved oak, surmounted with tracery, arches, and pinnacles; and among these seats, in the case of a bishop's church, the highest and most conspicuous is the so-called *cathedra*, or seat for the bishop, from which the cathedral takes its name. The larger English cathedral and abbey-churches have usually a chapter-house attached to them, which is of various forms, most commonly octagonal, and is often one of the richest and most beautiful portions of the whole edifice. On the Continent, chapter-houses are not so common, the chapter (q. v.) being usually held in the cathedral itself, or in one of the chapels attached to it. Cloisters (q. v) are also frequent, and not unusually the sides of those which are farthest removed from the church or chapter-house are enclosed by other buildings connected with the establishment, such as a library, and places of residence for some of the officials of the cathedral. It is here that, in Roman Catholic churches, the hall, dormitories, and kitchens for the monks are commonly placed. Beneath the church there is frequently a crypt (q. v.). In some cathedral churches, the crypt is in reality a second underground church of great size and beauty. The baptistery (q. v.) is another adjunct to the church, though frequently forming a building altogether detached. Most of the parts of the church which we have mentioned may be traced on the annexed ground-plan of Durham Cathedral, but it must not be supposed that their position is always that which is there represented. The position of the nave, choir, or chancel, aisles and transepts, are nearly invariable, but the other portions vary, and are scarcely alike in two churches." Modern Church edifices vary greatly in form, structure, and arrangements. See Bingham, *Orig. Eccles.* bk. viii; Coleman, *Christian Antiquities*, ch. xiii; also Siegel, *Handbuch der christlich-kirchlichen Alterthümer*, ii, 366, 427, and references there. CHURCH OF GOD, a denomination of Baptists in the United States, organized in 1830 by John Winebrenner, formerly a minister of the German Reformed Church at Harrisburg, Pa.

I. *History.* — During the period of Winebrenner's pastorate, revivals of religion were frequent within the bounds of his charge, and extended from it gradually to other churches and congregations, although some ministers of the German Reformed Church opposed the movement. As, in the mean time, Mr. Winebrenner's sentiments in regard to theology and church government underwent a change, and other preachers were raised up from among the converts whose views agreed with his, a call was made in 1830 for a Convention to organize an association. Mr. Winebrenner was chosen moderator of the Convention, and it was resolved to form a separate denomination, under the name "*Church of God.*" The Church took root chiefly in Pennsylvania and the Western States, having (in 1867) no eldership in the New England States and in New York, and but one eldership in the Southern—Texas. The latter, at the beginning of the war, separated from the General Eldership because of the anti-slavery doctrines professed by it. At an annual meeting held in 1866, the Texas eldership expressed a desire to reunite with the General Eldership, but no definite resolutions were passed.

The eighth triennial General Eldership of the Church was held at Decatur, Illinois, on May 31, 1866, and the following days. The following Annual Elderships were represented: East Pennsylvania, West Pennsylvania, East Ohio, West Ohio, Indiana, Southern Indiana and Illinois, Iowa, German, Michigan. A. F. Shoemaker was elected speaker. Centralia College, in Kansas, was recognised as an institution of the Church, and it was resolved to establish another college in Ohio, West Pennsylvania, Indiana, or Illinois. The subscription list of the weekly denominational organ, the *Church Advocate*, was reported to be 2700, and resolutions were passed in favor of the establishment of a Sunday-school paper by the Board of Publication, and of a German paper by Rev. J. F. Weishampel. A series of resolutions was also adopted on the duty of loyalty, against slavery, and in favor of equal rights of all men, irrespective of color.

II. *Doctrines.*—(Gorrie, cited below.) The following is a full statement of the views of the denomination:

1. She believes the Bible, or the canonical books of the Old and New Testament, to be the Word of God, a revelation from God to man, and the only authoritative rule of faith and practice.

2. She believes in one Supreme God, consisting of Father, Son, and Holy Spirit, and that these three are co-equal and co-eternal.

3. She believes in the fall and depravity of man; that is to say, that man by nature is destitute of the favor and image of God.

4. She believes in the redemption of man through the atonement, or vicarious sacrifice of Jesus Christ.

5. She believes in the gifts and office-work of the Holy Spirit; that is, in the enlightening, regenerating, and sanctifying influence and power of the Spirit.

6. She believes in the free moral agency of man; that he has moral ability, because commanded to repent and believe, in order to be saved; and that the doctrine of unconditional election and reprobation has no foundation in the oracles of God.

7. She believes that man is justified by faith in Christ and not by the works of law, or by works of his own righteousness.

8. She believes in the necessity of regeneration, or the new birth; or in the change of man's moral nature, after the image of God, by the influence and power of the word and Spirit of God, through faith in Christ Jesus.

9. She believes in three positive ordinances of perpetual

standing in the Church, viz. Baptism, Feet-washing, and the Lord's Supper.

10. She believes two things essential to the validity of baptism, viz. faith and immersion—that faith should always precede immersion; and that where either is wanting there can be no scriptural baptism.

11. She believes that the ordinance of feet-washing, that is, the literal washing of the saints' feet, according to the words and example of Christ, is obligatory upon all Christians, and ought to be observed by all the churches of God.

12. She believes that the Lord's Supper should be often administered, and, to be consistent, to Christians only, in a sitting posture, and always in the evening.

13. She believes in the institution of the Lord's day, or Christian Sabbath, as a day of rest and religious worship.

14. She believes that the reading and preaching of God's word, the singing of psalms and hymns and spiritual song, and the offering up of prayers, are ordained of God, and ought to be regularly and devoutly observed by all the people and churches of God.

15. She believes in the propriety and utility of holding fast-days, experience meetings, anxious meetings, camp-meetings, and other special meetings of united and protracted efforts for the edification of the Church and the conversion of sinners.

16. She believes that the Gospel ministry, Sabbath-schools, education, the religious press, the Bible, missionary, temperance, and all other benevolent causes, ought to be heartily supported.

17. She believes that the Church ought to relieve and take care of her own poor saints, superannuated ministers, widows, and orphans.

18. She believes that the manufacture, traffic, and use of ardent spirits as a beverage or common drink, is injurious and immoral, and ought to be abandoned.

19. She believes the system or institution of involuntary slavery to be impolitic or unchristian.

20. She believes that all civil wars are unholy and sinful, and in which the saints of the Most High ought never to participate.

21. She believes that civil governments are ordained of God for the general good; that Christians ought to be subject to the same in all things, except what is manifestly unscriptural; and that appeals to the law, out of the Church, for justice and the adjustment of civil rights, are not inconsistent with the principles and duties of the Christian religion.

22. She believes in the necessity of a virtuous and holy life, and that Christ will save those only who obey him.

23. She believes in the visibility, unity, sanctity, universality, and perpetuity of the Church of God.

24. She believes in the personal coming and reign of Jesus Christ.

25. She believes in the resurrection of the dead, "both of the just and the unjust;" that the resurrection of the just will precede the resurrection of the unjust.

26. She believes in the creation of new heavens and a new earth.

27. She believes in the immortality of the soul; in a universal and eternal judgment; and in future and everlasting rewards and punishments.

III. *Church Government.*—"In church government this body is independent and congregational; yet the members of all churches, when duly organized, are subject to the supervision of a Church Council, composed of the preachers in charge and the elders and deacons of each church, all of whom are elected by the members. In addition to the councils of each local church, they have a confederation of churches called an 'Eldership,' consisting of all the pastors within certain bounds, and an equal number of ruling elders as delegates. She has, in addition to her local churches or stations, larger fields of operation, called circuits. Hence her ministers are some of them stationed, and others travel on circuits, and others are missionaries at large." The elderships meet annually. The General Eldership, which consists of delegates from Annual Elderships, is held every three years. The General Eldership owns and controls all the common property of the Church. No minister can be delegated to it who has not held a preacher's appointment for five years previous (Gorrie, cited below).

IV. *Statistics.*—The Church has a domestic and foreign missionary society and a printing establishment, all which are under the control of the General Eldership. A weekly paper, the *Church Advocate* (in 1867, 32d volume), and a Sunday-school paper, called the *Gem* (established in 1867), are published at Lancaster, Pa. The denomination in 1889 had 11 elderships, about 475 churches, 450 ministers, and 29,683 members. See Gorrie, *Churches and Sects;* Winebrenner, *History of Religious Denominations; American Baptist Almanac; Annual American Cyclopædia* for 1866, p. 112.

CHURCH OF JESUS CHRIST OF THE LATTER-DAYS SAINTS. See MORMONS.

CHURCH OF THE MESSIAH, a religious sect established in 1863, in Maine, by a person named Adams, who previously had been a Mormon elder. The founder of the sect claimed to have visions and special inspirations. Among the peculiar points of the new faith were, that its members are of the tribe of Ephraim, and that, "as the curse was now taken off from Palestine," the time had come for the lost ten tribes to return to the land of their fathers. They anticipated the re-establishment at Jerusalem of the throne of David in greater than Solomon's splendor. In expectation of the near advent of the Messiah, 156 members of the sect from the State of Maine went in 1866 to Palestine, and established a colony at Jaffa, the sea-port of Jerusalem, with one president (Adams) and two bishops as its leaders. Through the efforts of the American and English consuls in Jerusalem, they met with a kind reception on the part of the Turkish pacha and the people of Jaffa. Land had been secured for them before their arrival, through the American vice-consul at Jaffa. The colonists built quite a number of houses and a three-story hotel, having brought the lumber all the way from Maine. Complaints made by the colonists of the hardships they were forced to endure induced the government of the United States to send, at the beginning of 1867, an agent (the Rev. Dr. Bidwell, of New York) to Jaffa, in order to make a thorough examination into the affairs and prospects of the colony. In the course of the year 1867, a considerable number of the colonists became dissatisfied with their condition and the rule of president Adams, and returned home. The remainder have gradually dispersed.

CHURCH, STATES OF THE (*Patrimonium Petri*), the territory governed by the Pope as secular prince.

I. *History.*—The Church of Rome, which became at an early date one of the chief Christian churches of the world, received in 321, by a special edict of the emperor Constantine, the right to accept legacies. The story, however, that Constantine presented bishop Sylvester and the Roman Church with the city of Rome and other territories is an invention, and the pretended document of donation is a late forgery, taken from the so-called *Constitutum Sylvestri*, which was compiled from the *Gesta beati Sylvestri* (see Münch [Rom. Cath.], *Ueber die erdichtete Schenkung Constantin des Grossen*, Freiburg, 1824; Biener, *de donatione a Constantino M. imperatore in Sylvestrum pontificem collata*, in his work *de collectionibus canonum ecclesiæ Græcæ*, Berlin, 1827). Under the later emperors, a large amount of property of every description, including many landed estates in various parts of Italy and France, was presented to the Roman Church; and, moreover, the emperors conferred upon the bishops of Rome many lucrative privileges, as Gratian upon Damasus in 378, Valentinian upon Leo the Great in 445, etc. The ecclesiastical prerogatives which the popes claimed as heads of the Church, and which were gradually conceded by the emperors and acquiesced in by the bishops, greatly enlarged the secular power and

wealth of the popes. Under Gregory I the landed property belonging to the Roman Church was very extensive, especially in Sicily and Gaul. But until the eighth century the Roman bishops held all this landed property subject to the sovereign authority of the emperors. The first independent possession of the popes was the town of Sutri, which Gregory II, in 728, obtained from the Longobardian king Luitprand, who had wrested it, with other territories, from the Byzantine emperors. The friendly relations between the Roman See and Luitprand ceased under Gregory III (731–741), and most of the papal terrritory was reoccupied by the Longobardians. The pope invoked the intercession of Charles Martel, in consequence of which Luitprand, in 742, restored to Pope Zachary not only the former property of the Roman bishops, but also the four Byzantine towns of Amelia, Orta, Bomarzo, and Bieda. The pope even succeeded in disposing the king amicably toward the exarch, in reward for which he received from the Byzantine emperor two villas. King Aistulph conceived the plan of conquering and annexing all Italy, and thus forced Pope Stephen II (752–757) to invoke again the aid of the Franks. Pepin, who owed his crown partly to the influence of the pope, twice (754 and 755) undertook a campaign into Italy, declined the demand of the Byzantine emperor to restore to him his former Italian possessions, gave to the pope, in addition to his former possessions, the Exarchate and the Pentapolis (the five cities of Rimini, Pesaro, Fano, Sinigaglia, and Ancona), and assumed himself the title of patricius (patron) of Rome. The original document of donation is no longer extant. The Longobardian king Desiderius found means to put off the complete execution of the stipulations made by Pepin, and ultimately new hostilities broke out, which induced Adrian I to invoke the aid of Charlemagne, who in 744 put an end to the Longobardian kingdom, and enlarged the donations of his fathers. As the original deeds of these donations are lost, their extent can no longer be fixed with entire accuracy. The extant document in which Louis le Débonnaire sanctions the donations of Charlemagne is a forgery. In consequence of the coronation of Charlemagne as emperor by Leo III, in 800, the connection of the pope with the Eastern empire entirely ceased, and the papal documents were henceforth dated after the beginning of the reign of the new emperor. The king of the Franks, as Roman emperor, had thus become the real sovereign of Rome, who had to sanction the election of a pope. The temporal power of the popes rapidly increased under the weak Carlovingians, after whose extinction (888) the imperial dignity was, until 923, conferred upon Italian grandees, and subsequently was for some time discontinued altogether. When Otto I, in 952, reassumed the dignity of Roman emperor, he at once confirmed the papal possessions (the original document is lost, but a copy somewhat modified in the eleventh century is extant). A document containing a donation from Otto III to Sylvester II is a forgery, and there are no other reasons for the existence of that pretended donation. In 1052 the Roman See obtained feudal right over Benevento. The countess Matilda of Tuscany promised to the pope to bequeath to him her extensive territory; but on her death the property became the subject of a violent and protracted dispute, and the claims of the popes were not recognised until 1201, by Otto IV. In the agreement between Otto and the pope the following territory was designated as papal possessions: the country from the defiles of Ceperano (on the frontier of Naples), as far as the fort of Radicofano (on the Tuscan frontier), the exarchate of Ravenna, the Pentapolis (see above), the Marches, the duchy of Spoleto, the possessions of the countess Matilda, the county of Brittenorium, with other adjacent lands expressly mentioned in the documents of the emperors from the times of Louis (which latter clauses recognised the contents of a number of spurious documents). Otto IV also promised to defend the claims of the pope to the kingdom of Sicily. Thus the States of the Church were firmly established, and as, since 1059, the election of the pope had been independent of the emperor, the high political position of the popes in the Christian world was confirmed.

During the following centuries the popes were more intent upon preserving than upon enlarging their possessions. In 1273, Philip III presented to Gregory X the county of Venaissin, and in 1348 Clement VI purchased Avignon from Joanna, queen of Sicily and countess of Provence. During the residence of the popes at Avignon, and during the schism, the popes had to concede extensive privileges to various cities. Other parts were given as fiefs to Italian princes: thus, in 1443, Alphonso I of Naples was made papal vicar of Benevento and Terracina; but Nicholas V (1447–1455), Pius II (1458–1464), and Sixtus IV (1471–1484) reconsolidated the papal possessions. Julius II (1503–1512) reconquered from the Venetians all the places which had formerly belonged to the pope, and even added to his territory Parma, Piacenza, and Reggio, thus giving to the States of the Church the most extensive frontier they have ever had. Parma and Piacenza were soon lost again, but in their place Camerino and Nepi were obtained. Reggio had to be abandoned in 1523, and Modena in 1527; but, on the other hand, a number of republican communities were fully subjected, as Ancona in 1532, Perugia in 1540, and the feudal relations of others, as Ferrara (1598), Urbino (1636), and the duchy of Castro (the dispute concerning which lasted until 1735), were abolished. About fifty years later the States of the Church entered into a period of rapid decline. In 1783 the government of Naples declared the feudal relation in which that kingdom had stood to Rome as terminated. In 1792 Avignon and Venaissin were annexed to France, and in 1796 another considerable tract of territory was lost. At the peace of Tolentino, Feb. 19, 1797, Pius VI had to cede all the papal possessions situate in France, and to agree that the districts of Ferrara, Bologna, and Romagna should be incorporated with the new Transpadan Republic. On the 15th of February the republic was proclaimed in the city of Rome, the papal government was declared abolished, and the pope himself was carried into captivity. The treaty of Vienna, in 1815, restored to the pope the Marches, with Camerino, the duchy of Benevento, with the principality of Ponte-Corvo, the legations of Ravenna, Bologna, and Ferrara; and gave to the emperor of Austria the right of garrisoning Ferrara and Commacchio. Nothing was said in the treaty of Vienna about the papal claims to Avignon and Venaissin, on which account the pope protested against the portion of the treaty relating to the States of the Church.

Certain acts of Leo XII (1824) created general indignation among the inhabitants of the papal territory. In February, 1831, an insurrection broke out in Bologna, which soon spread through the whole province, and from there through the larger portion of the States of the Church. A provisional government was established, and on the 26th of February an assembly of deputies declared the abolition of the temporal power of the popes. The intervention of Ausrtia put, however, an end to the insurrection. The representatives of the great powers found the civil administration so unsatisfactory that they urgently recommended the introduction of reforms. As these were not granted, a new insurrection occurred, which caused another intervention of Austria, and the occupation of Bologna by Austrian troops. This was at once followed by an occupation of Ancona by France, which was unwilling to leave the pope under the sole patronage of Austria. Both occupations lasted until 1838. Gregory XVI (1831–1846) convoked an assembly of deputies, in order to learn the wishes of the people, but it led to no reforms of any account. The discontent of the people contin-

ued, and showed itself in repeated revolutionary outbreaks. Pius IX (elected June 16, 1846) began to introduce important changes into the public administration (*motu proprio* of 2d and 14th of October, 1847, fundamental statute of 14th of March, 1848, etc.), and thus gave an impulse to a political movement which he soon found himself unable to control. He had to grant, on the 14th of March, 1848, a constitutional form of government, which was soon followed by the appointment of a liberal ministry (Mamiani) and the convocation of a Constituent Assembly. An attempt to curb the liberal movement by the appointment of a conservative ministry (Count Rossi) failed, and the pope was compelled to consent to the appointment of a democratic ministry. On the 25th of November the pope fled from Rome in disguise, and took up his residence at Gaeta, in the kingdom of Naples. In consequence of this movement a provisional government was established at Rome, which declared the temporal power abolished, and proclaimed the republic (February, 1849). This led to a new intervention of Austria (after the defeat of Sardinia) in the legations, and to the landing in the Papal States of a French army, under Oudinot, in April, 1849. The city of Rome surrendered on the 2d of July, the papal rule was restored, and all the reforms of the first years of the reign of Pius were abolished. The political and financial condition of the States of the Church after the restoration of the pope was most deplorable, and the people continued to be dissatisfied with the papal rule. When, in 1859, in consequence of their defeat at Magenta, the Austrians had to withdraw their troops from Central Italy, Bologna and the neighboring legations (the Romagna) at once shook off the papal rule, and, together with Parma and Modena, organized them, under the name of Emilia, into a provisional state under the dictatorship of Farini. After the treaty of Zurich (Nov. 10, 1859), Austria and France proposed the convocation of a congress for the regulation of the Italian affairs, but the pope refused to take part in it, as the great powers did not agree to guarantee to him the restoration of the Romagna. Victor Emmanuel consequently, by a decree of the 18th of March, 1860, after a popular vote had declared in favor of annexation, incorporated the Romagna with the kingdom of Italy. The papal government now tried to organize a powerful army, chiefly of foreign volunteers, under the French general Lamoricière. When, after the conquest of Naples by Garibaldi, a part of the old Neapolitan army had been united with the papal troops, the Italian government demanded the discharge of the foreign volunteers as menacing the unity of Italy, and, when the papal government refused to comply with this request, the king marched troops into the papal territory, defeated the papal troops at Castelfidardo on the 18th of September, and captured the remainder at Ancona. Umbria and the Marches now declared at once in favor of annexation, and, a popular vote having been taken, were incorporated with Italy by decree of the 17th of December. As, after the fall of Gaeta, Rome became the refuge of the expelled king of Naples, and the centre of all plots against Italian unity, the Italian Party of Action loudly demanded the conquest of Rome, and in March, 1861, even the Italian Parliament declared the city of Rome the natural and indispensable capital of the kingdom. Attempts made by the Italian prime minister Cavour to prevail upon the pope to consent to a separation between his temporal and ecclesiastical power failed; and the same was the case with a proposition of Louis Napoleon to bring about a reconciliation between the Italian and the Roman governments on the basis of the existing extent of the papal territory. In 1862, Garibaldi made an attempt, at the head of an army of volunteers, to conquer Rome, and deliver Italy both from the rule of the pope and that of the French, but this movement was promptly suppressed by the Italian government. On the 15th of September, 1864, France concluded with the government of Italy a convention, by which France promised to withdraw its army of occupation from Rome within two years, while Italy, on the other hand, promised not to attack the papal territory, and even to protect it against any foreign attacks, to assume a proportional part of the papal debt, and not to oppose the organization of a papal army, provided the latter should not threaten the safety of Italy. In accordance with the provisions of this convention, the city of Rome and the papal territory were evacuated by the French troops in December, 1866. The pope has, up to this time, persistently declined all proposals to abandon his claims to the provinces which have been incorporated with the kingdom of Italy, and still more to renounce the temporal power altogether. See TEMPORAL POWER.

II. *Ecclesiastical Statistics.*—The Papal States had in 1853 an area of 17,494 square miles, and, according to the census, a population of 3,124,668 souls, among whom were 9237 Israelites and 263 Protestants, while the rest were Roman Catholics. They had nine archbishoprics, viz., Rome (whose metropolite is the pope himself, represented through a cardinal vicar), Benevento, Fermo, Ferrara, Ravenna, Urbino, Bologna, Camerino, Spoleto—the last three without suffragans. The number of bishoprics was seventy-nine, of which, however, many had been permanently united, so that the actual number of bishops amounted only to fifty-eight. All the eight archbishoprics and most of the bishoprics lie in the provinces which in 1859 were annexed to Sardinia. The States of the Church, thus reduced, had in 1867 about 700,000 inhabitants. The city of Rome had, in 1866, 210,701 inhabitants, among whom were 4567 Israelites and 429 Protestants. Convents are very numerous. There were, in 1845, 1824 convents of monks and 612 of nuns. The secular clergy were estimated at 35,000, monks 10,000, nuns 8000. The former belong to 50, the latter to 21 different orders. The total number of clerical persons in the city of Rome was (in 1866) 7378. The superiors of most of the orders reside in Rome. See MONACHISM. As the seat of the central government of the Roman Catholic Church, the States of the Church (more particularly Rome) have a number of ecclesiastical offices and boards, which are treated of in separate articles. See POPE; CARDINAL; CONGREGATION; CURIA ROMANA. See Herzog, *Real-Encyklop.* vii, 676 sq.; Wetzer und Welte, *Kirchen-Lexikon*, vi, 175; Sugenheim (Protest.), *Geschichte der Entstehung und Ausbildung des Kirchenstaats* (Leipzig, 1854); Scharpff (Roman Catholic), *Entstehung des Kirchenstaats* (1854; transl. Baltimore, 1860); Döllinger (Rom. Cath.), *The Church and Churches* (Munich, 1861; transl. 1863); Brockhaus, *Conversations-Lexikon*, viii (11th edition, 1866), 823 sq. See ITALY.

CHURCH, UNITED PRESBYTERIAN. See PRESBYTERIAN (UNITED) CHURCH.

CHURCH-WARDENS, officers in the Church of England, whose business is to look to the church, church-yard, and to observe the behavior of the parishioners; to levy a shilling forfeiture on all such as do not go to church on Sundays, and to keep persons orderly in church time, etc. By Canon 89, church-wardens or questmen in every parish are required to be chosen by the joint consent of the minister and the parishioners, if it may be; but if they cannot agree upon such a choice, then the minister shall choose one and the parishioners another, and without such a joint or several choice none shall take upon them to be church-wardens. But if the parish is entitled by custom to choose both church-wardens, then the parson is restrained of his right under this canon. The duties of English church-wardens are laid down in Prideaux, *Practical Guide to the Duties of Church-wardens* (10th ed. Lond. 1835, 12mo). In the Protestant Episcopal Church in America, their duties in general are to protect the church building, to see that worship is duly

provided for and performed, and to represent the body of the parish when occasion may require. They are chosen, with the vestrymen, "annually in Easter-week, according to the canons of the various dioceses." Their duties are enjoined by diocesan, not by general canons. — Hook, *Church Dictionary*, s. v.; Staunton, *Ecclesiastical Dictionary*, s. v.

CHURCH-YARD, a piece of ground adjoining a church, set apart for the interment of the dead. During the first three centuries of our æra the Christians followed the law of pagan Rome, according to which every one could select his burying-place outside of the towns. The Christians generally preferred to be buried near the graves of the martyrs, and thus they early obtained common burying, or, as they called them, sleeping-places (*cœmeteria*, *dormitoria*), which were sometimes above the ground (*area*), and sometimes in subterranean caves. See CATACOMBS. When the persecution of Christianity ceased, and the relics of the martyrs were transferred to the churches within the towns, the places around the churches, or the vestibules of the churches, were commonly selected for burying the dead; for a burial in the church itself was strictly forbidden, and only granted as a special distinction to bishops, princes, and other persons of high ecclesiastical or political position. Thus gradually the church-yards became an established institution in connection with the church. In large cities every particular church had its church-yard, and not until the 14th century are the church-yards to be found without the town. Gradually it became general to close the church-yards in the towns, and to remove them out of the towns, until ultimately the governments of most of the states enforced this rule from sanitary reasons.

In the Church of Rome, church-yards are consecrated with great solemnity. If a church-yard which has been thus consecrated shall afterwards be polluted by any indecent action, or profaned by the burial of an infidel, a heretic, an excommunicated or unbaptized person, it must be *reconciled;* and the ceremony of the reconciliation is performed with the same solemnity as that of the consecration! (Buck). See CONSECRATION.

In the Protestant churches of Germany and other countries, church-yards were set apart by praying and reading of the Scriptures; in England and Sweden a formal consecration is still in use.

In England the church-yard is the freehold of the parson; but it is the common burial-place of the dead, and for that reason it is to be fenced at the charge of the parishioners, unless there is a custom to the contrary, or for a particular person to do it, in respect of his lands adjoining to the church-yards; and that must be tried at common law (Hook). See BURIAL; CEMETERY.

The control of the church-yards has given rise to many conflicts between Church and State. The Church of Rome forbids the burial of heretics, suicides, excommunicated persons, and unbaptized children upon the Roman Catholic cemetery; while the state governments, both Protestant and Roman Catholic, regarding the cemetery as public and not ecclesiastical property, have frequently endeavored to compel the burying of all dead without distinction in the same cemetery. In the United States the government does not meddle with the places and modes of burial, and religious bodies, as well as single congregations and individuals, can make any provisions they please for the burial of their dead.—Wetzer u. Welte, *Kirchen-Lex.* vi, 201; Herzog, *Real-Encyklop.* vii, 706.

CHURCH-YEAR. Neither the New Testament nor the Church literature of the first three centuries contain any intimation that the Christians of that time viewed the year from any other stand-point than that of subjects of the Roman emperor or other princes. See CALENDAR; CHRONOLOGY, CHRISTIAN. The first impulse to the idea of a church year distinct from the civil year was given by the establishment of anniversaries of prominent events in the life of Christ. The most ancient of these anniversaries were those of his death and resurrection [see EASTER]; gradually were added to them those of his birth [see CHRISTMAS], of the outpouring of the Holy Ghost [see PENTECOST], of the circumcision [see EPIPHANY], of the ascension [see ASCENSION DAY]. Christmas, Easter, and Pentecost came each to be regarded as the centre of a cycle, the three cycles together embracing a commemoration of every thing memorable in the life of the Redeemer. When the worship of the Virgin Mary and of the saints was developed in the Church of Rome, a number of festivals commemorating events in the life of the Virgin Mary, and the death-days of the apostles, martyrs, and saints, were added to the ecclesiastical calendar. This combination suggested to the writers of the Church the idea that the church-year is to celebrate, within the compass of a civil year, the commemoration of all the memorable events in the life of the Church, from the birth of, or, rather, the announcement of the birth of Christ to the death of the last saint. The habit of beginning this year with the first Sunday of Advent is first found among the Nestorians, and was only gradually adopted by the Church of Rome. There are, in all, four Sundays of Advent, intended to prepare the mind for the proper celebration of Christmas (25th of December). Christmas, like Epiphany, Easter, Ascension, and Pentecost, were each followed by an "octave" (commemorative services referring to the great festival during eight days, the chief festival itself being counted in), the Sunday immediately following the festival being denominated the Sunday "within the octave." The Sundays following the "Sunday within the octave of Epiphany" were called the "second, etc., Sunday after Epiphany," until the Sunday Septuagesima began the Easter cycle. It was followed by the Sundays Sexagesima, Quinquagesima, four Sundays of Lent, Palm Sunday, and Easter Sunday; Sunday within the octave of Easter ("Low Sunday"), second, third, etc., Sundays after Easter, until the Sunday within the octave of Ascension forms the boundary-line between the Easter and the Pentecost cycles. Whitsunday (Pentecost) opens the Pentecost cycle; and the following Sundays are called the first (festival of the "most Holy Trinity"), second, etc., Sunday after Pentecost. They run on until the close of the church-year, when the recurrence of the first Sunday of Advent opens the new year. The last festival which Rome added to her church-year was that of *Corpus Christi* (q. v.), to be an annual celebration of the doctrine of transubstantiation. According to the importance attributed to the several festivals, the Church of Rome makes the distinction of "simple," "semi-double," and "double" festivals; the latter being again subdivided into "double second class" and "double first class" (the highest festivals). The Church books, as Missal and Breviary, have special services for each particular festival, and for each class of festivals. See BREVIARY and MISSAL. Roman Catholic writers have often dwelt on a mysterious correspondence between the seasons of the church-year and those of the natural year (Christmas, the appearance of Christ in the lost world in winter, when nature appears to be dead; Easter, in spring, when nature seems to revive; Pentecost, in summer, when every thing is in highest bloom), entirely forgetting that this correspondence holds good only of the northern hemisphere. Other writers have more reasonably traced in this correspondence an influence of pagan festivals, in which this kind of correspondence can be traced to a very large extent, upon the doctrines and institutions of the Church of Rome; but although in some instances the influence is undeniable, it is difficult to say how far it extended. The chief features of the church-year were fully developed when the separation between the Latin

and Greek churches took place, and there is, therefore, but little difference in the church-year of the two churches. The Greeks begin their year on the 1st of September, and have, of course, none of the saints of the Roman Church who either lived or were canonized after the separation, while the Latins do not recognise the few saints which the Greek Church has added to the catalogue of the ancient saints.

Luther and the Lutheran Church retained, on the whole, the Roman Catholic idea of the church-year. They rejected the Corpus Christi festival and the days of the saints, but retained most of the festivals of Mary as being based upon events mentioned in the Bible, and the celebration of the days of the apostles and the angels. In the conflict between High-Church and Low-Church Lutherans in the 19th century, the former party strongly insisted upon retaining every thing to which Luther and the other fathers of the Lutheran Church had not objected, and some leading men of the school even showed a disposition to strain every thing in common between the early Lutheran and the Roman Catholic churches as far as their membership in the Lutheran Church would possibly admit. This tendency shows itself also with regard to Church festivals and the idea of a church-year. The Reformed churches desired to return to the form of divine worship as it existed in the primitive service, and therefore showed a tendency to reject the whole idea of a church-year. In Geneva, at the time of Calvin, only the Sunday was celebrated, and the same habit prevailed in most of the Reformed churches of Switzerland. In Germany the opposition of the Reformed to the church-year was not so thorough. In modern times the celebration of Good Friday has been introduced into most of the Reformed churches (in Geneva since 1820). In the Church of England, the High-Church party retained much more of the Latin church-year than was done by the Lutherans; and in modern times efforts have even been made to conform the Anglican church-year in almost every particular to that of the Church of Rome. The Dissenting churches of England and the Protestant churches of the United States have generally rejected the idea of a church-year, with its system of peculiar festivals. Easter and Good Friday, however, are celebrated by church services in many of the Dutch and German Reformed and Methodist churches, and some others; and in the German Reformed Church the idea of a church-year, as it was developed in the Latin Church of the Middle Ages, has found many defenders. See Herzog, *Real-Encyklopädie*, vii, 643 sq.; Wetzer u. Welte, *Kirchen-Lexikon*, vi, 161 sq. The most important Roman Catholic works on the church-year are Gretser, *De Festis Christianorum;* Benedict XIV, *De Festis;* Staudenmaier, *Geist des Christenthums;* Nickel, *Die hist. Zeiten;* Binterim, *Denkwürdigkeiten*. Protestant works: Strauss, *Das evangel. Kirchenjahr* (Berlin, 1850); Bobertag, *Das evangel. Kirchenjahr* (Breslau, 1853).

Church, John Hubbard, D.D., a Congregational minister, was born at Rutland, Mass., March 17, 1772. He graduated at Harvard 1797, and was installed pastor in Pelham, N. H., Oct. 31, 1798. He died in June, 1840. Dr. Church was trustee of Dartmouth College, President of N. H. Bible Society, and filled several other honorable stations. He published a number of occasional sermons.—Sprague, *Annals*, ii, 445.

Church, Thomas, D.D., a divine of the Church of England, was born 1707, and educated at Brazenose College, Oxford. In 1740 he was made vicar of Battersea, and afterwards prebend of St. Paul's. He died in 1756. Among his publications are, *Essay on the Demoniacs of N. T.* (Lond. 1737, 8vo); *Doctrine of the Church of England on Regeneration* (Lond. 1739, 8vo); *Vindication of the miraculous Powers of the Church in the first three Centuries* (answer to Middleton [Lond. 1750, 8vo]). He wrote also several tracts against Wesley and the Methodists, notices of which may be found in Wesley's *Journals* (*Works*, v, 265, vi, 145).

Churching OF WOMEN, a form of *public thanksgiving* for women after *child-birth*, used in the Greek and Roman churches, in the Church of England, and in the Protestant Episcopal Church. "It is in all probability of Jewish origin, and derived from the rite of purification enjoined in the twelfth chapter of Leviticus. The rubric [of the English Church] commands that the office be used only in the church. Churching in private houses is inconsistent with the very name of the office, and with the devotions prescribed by the office." The Roman Catholic Church allows, in exceptional cases, churching in private houses, and the churching of mothers of illegitimate children.—Edeh, *Churchman's Dictionary*, s. v.; Procter *On Common Prayer*, p. 427; Brownell, *Comm. on Prayer-book*, p. 490; Wetzer u. Welte, *Kirchen-Lexikon*, i, 552 (s. v. *Aussegnung*).

Churl (כִּילַי, *kilay'*, Isa. xxxii, 5; or כֵּלַי, *kelay'*, ver. 7), a *deceiver* (as it should have been rendered); while CHURLISH is the proper rendering (of קָשֶׁה, *kasheh'*, *rough*, as often elsewhere rendered) for a coarse, ill-natured fellow (1 Sam. xxv, 3; compare 2 Macc. xiv, 20; Ecclus. xviii, 18; xlii, 14), like Nabal (q. v.).

Churning (מִיץ, *mits*, *squeezing*) signifies the act of pressing (Prov. xxx, 33), being the same word rendered "wringing" and "forcing" in the same verse, and agrees with the Eastern mode of making butter (see Thomson, *Land and Book*, i, 393). See BUTTER.

Churton, RALPH, a minister of the Church of England, was born near Bickley, Cheshire, Dec. 8, 1754. He was educated at Malpas Grammar-school, and at Brazenose College, Oxford, where he was entered in 1772, and became fellow in 1778. In 1785 he delivered the Bampton lecture *On the Prophecies respecting the Destruction of Jerusalem* (Oxf. 1785, 8vo). In 1792 he became rector of Middleton Cheney; in 1805 he was made archdeacon of St. David's. For forty years he labored diligently and faithfully as a parish priest, and was engaged also in frequent and useful literary labors. He died March 23, 1831. Besides the Bampton lecture, he published *Memoir of Archdeacon Townson* (1778, 1828, 1830); *Lives of Bishop Smith and Sir Richard Sutton* (1800, 8vo); *Life of Dean Nowell* (1809, 8vo); and numerous detached sermons and pamphlets.—*Annual Biography and Obituary* (Lond. 1832), xvi, 273.

Chu'shan-rishatha'im (Heb. *Kushan' Rishaatha'yim*, כּוּשַׁן רִשְׁעָתַיִם, Sept. Χουσαρσαθαίμ, Vulg. *Chusan-Rasathaim*), the king of Mesopotamia who oppressed Israel during eight years (B.C. 1575-1567) in the generation immediately following Joshua (Judg. iii, 8). The name, if Hebrew, would signify *Cush* (comp. CUSHAN, Hab. iii, 7) *of* the *two wickednesses*; but Fürst (*Heb. Handwörterb.* s. v.) compares the Arabic signification, *chief of two governments* (see Abulf. *Ann.* ii. p. 100), with reference to the twofold form of Aram-Naharaim (q. v.). Josephus (*Ant.* v, 3, 2) calls him "*Chusarthus* (Χούσαρθος), king of the Assyrians." The seat of his dominion was probably the region between the Euphrates and the modern Khabour, to which the name of Mesopotamia always attached in a special way. In the early cuneiform inscriptions this country appears to be quite distinct from Assyria; it is inhabited by a people called *Nairi*, who are divided into a vast number of petty tribes, and offer but little resistance to the Assyrian armies. No centralized monarchy is found, but as none of the *Assyrian* historical inscriptions date earlier than about B.C. 1100, which is some centuries later than the time of Chushan, it is, of course, quite possible

that a very different condition of things may have existed in his day. In the weak and divided state of Western Asia at this time, it was easy for a brave and skilful chief to build up rapidly a vast power, which was apt to crumble away almost as quickly. Bunsen, however, calls him merely "a Mesopotamian satrap," assuming that he must have been posterior to the Assyrian supremacy (*Egypt*, iii, 272). Chushan-Rishathaim's yoke was broken from the neck of the people of Israel at the end of eight years by Othniel, Caleb's nephew (Judg. iii, 10), and nothing more is heard of Mesopotamia as an aggressive power. The rise of the Assyrian empire, about B.C. 1270, would naturally reduce the bordering nations to insignificance (see Rawlinson, *Histor. Evidences*, p. 300). See MESOPOTAMIA.

Chu'si (Χουσεί v. r. Χούς, Vulg. omits), a place named only in Judith vii, 18, as near Ekrebel, and upon the brook Mochmur. If the history be at all genuine, this was doubtless in Central Palestine, but all the names appear to be very corrupt, and are not recognisable. See JUDITH.

Chu'za [pron. *Cúza*] (rather *Chuzas*, Χουζᾶς, for Chald. חוּזָא, i. e. אַחוּזָא, *possession*), the "steward" (ἐπίτροπος) of Herod (Antipas), whose wife Joanna (q. v.), having been cu ed by our Lord either of possession by an evil spirit or of a disease, became attached to that body of women who accompanied him (A.D. 27) on his journeyings (Luke viii, 3); and, together with Mary Magdalen and "Mary the mother of James," having come early to the sepulchre on the morning of the resurrection (A.D. 29), to bring spices and ointments to complete the burial, brought word to the apostles that the Lord was risen (Luke xxiv, 10). These circumstances would seem to imply that she was at this time a widow.

Chytræus, DAVID (properly *Kochhafe*), one of the most eminent of the Lutheran theologians of the second half of the sixteenth century, was born at Ingelfingen, Feb. 26, 1530. Having studied the ancient languages at Tübingen, he went to Wittenberg about 1545, and became a pupil of Melancthon in theology. In 1548 he began to lecture at Wittenberg on physics, and also on theology. After an extended journey in Germany, Switzerland, and Italy, he was called in 1551 to Rostock; and his character for scholarship and wisdom gained him great influence in Mecklenburg, and also in wider spheres. He was employed by Maximilian II to arrange ecclesiastical affairs in Austria. He was principal author of the statutes of the University of Helmstädt, and was one of the authors of the *Formula of Concord* (q. v.). He died June 25, 1600. Among his writings are, *Historia Confessionis Augustanæ* (Frankfort, 1578, 8vo); *De Morte et Vita Æterna* (Rostock, 1590, 8vo). His works were collected and printed in 2 vols. folio (Leipzig, 1599; Hanover, 1604). A biography of Chytræus, with a selection from his works, was published by Pressel in the 8th vol. of the work, *Leben u. ausgewählte Schriften der Väter der luth. Kirche* (Elberfeld, 1863). See Schutzius, *De Vita D. Chytræi* (Hamburg, 1720-28, prefixed to the writings of Chytræus, 3 vols. 8vo); Melchior Adam, *Vitæ Theologorum* (Francfort, 1705), p. 323; Herzog, *Real-Encyklopädie*, ii, 701.

Ciborium (κιβώριον, *a cup*), a large chalice (a species of pyx, q. v.) or cup, often of gold or silver, with a cover, surmounted commonly by a cross. It is used to contain the host, or consecrated wafer, in the mass. The name *ciborium* was also given to a canopy on the altar, supported by four columns, to which the cup, in the shape of a dove, was attached by chains, containing the wafer for the communion of the sick.—Wetzer u. Welte, *Kirchen-Lexikon*, ii, 545.

Ciccar (כִּכָּר, *kikkar'*, *circuit*, esp. of the Jordan). See TOPOGRAPHICAL TERMS; TALENT.

Cieling. See CEILING.

Cili'cia (Κιλικία; on the deriv., see below), a maritime province in the south-eastern part of Asia Minor, bounded on the west by Pamphylia; separated on the north from Cappadocia by the Taurus range, and on the east by Amanus from Syria; and having the Gulf of Issus (Iskenderoon) and the Cilician Sea (Acts xxvii, 5) on the south. These lofty mountain barriers can be surmounted only by a few difficult passes, the latter by the Portæ Amanides, at the head of the valley of the Pinarus, the former by the Portæ Ciliciæ, near the sources of the Cydnus; towards the south, however, an outlet was afforded between the Sinus Issicus and the spurs of Amanus for a road, which afterwards crossed the Portæ Syriæ in the direction of Antioch (hence the close connection which existed between Syria and Cilicia, as indicated in Acts xv, 23, 41; Gal. i, 21). The sea-coast is rock-bound in the west, low and shelving in the east; the chief rivers—Sarus, Cydnus, and Calycadnus—were inaccessible to vessels of any size from sand-bars formed at their mouths. By the ancients the eastern part was called *Cilicia Propria* (ἡ ἰδίως Κιλικία, Ptolemy), or the *level* Cilicia (ἡ πεδιάς, Strabo); and the western, the *rough* (ἡ τραχεῖα, Strabo, xiv, 5), or *mountainous* (ἡ ὀρεινή, Herod. ii. 34). The former was well-watered, and abounded in various kinds of grains and fruits (Xenoph. *Anab.* i, 2, § 22; Ammianus Marcell. xiv, 8, § 1). The chief towns in this division were *Issus* (Xenoph. *Anab.* i, 4), at the south-eastern extremity, celebrated for the victory of Alexander over Darius Codomanus (B.C. 333), and not far from the passes of Amanus (τῶν Ἀμανίδων λεγομένων Πυλῶν, Polyb. xii, 8); *Solæ*, originally a colony of Argives and Rhodians, the birthplace of Menander, the comic poet (B.C. 262), the Stoic philosopher Chrysippus (B.C. 206), and of Aratus (q. v.), author of the astronomical poem τὰ Φαινόμενα (B.C. 270); and *Tarsus*, the birthplace of the apostle Paul (q. v.). Cilicia Trachēa furnished an inexhaustible supply of cedars and firs for shipbuilding; it was also noted for a species of goat (Martial, xiv, 138), of whose skins cloaks and tents were manufactured. Its breed of horses was so superior, that 360 (one for each day of the year) formed part of the annual tribute to the king of Persia (Herod. iii, 90). The neighborhood of Corycus produced large quantities of saffron (Plin. *Nat. Hist.* xxi, 17).. Josephusi dentified Cilicia with the *Tarshish* of Gen. x, 4 (*Ant.* i, 6, 1). Herodotus says that the first inhabitants of the country were called *Hypachæi* (Ὑπαχαιοί); and derives the name of Cilicia from *Cilix*, son of Agenor, a Phœnician settler (vii, 91). This is confirmed by Phœnician inscriptions, on which the name is written *Chalak* (חלך, Gesenius, *Monum. Phœn.* p. 279). Herodotus also states that the Cilicians and Lycians were the only nations within the Halys who were not conquered by Crœsus (i, 28). Though partially subjected to the Assyrians, Medes, Persians, Syrians, and Romans, the Eleuthero- (or free) Cilicians, as the inhabitants of the mountainous districts were called, were governed by their own kings ("Reguli," Tacit. ii, 78), till the time of Vespasian. The sea-coast was for a long time occupied by pirates, who carried on the appropriate vocation of slave-merchants, and found ample encouragement for that nefarious traffic among the opulent Romans (Mannert, *Geogr.* vi, 1; Strabo, xiv, 5); but at last their depredations became so formidable that Pompey was invested with extraordinary powers for their suppression, which he accomplished in forty days. He settled the surviving freebooters at Solæ, which he rebuilt and named Pompeiopolis. Cicero was proconsul of Cilicia (B.C. 52), and gained some successes over the mountaineers of Amanus, for which he was rewarded with a triumph (*Epist. ad Fam.* xv, 3). As the more level portion was remarkable for its beauty and fertility, as well as

for its luxurious climate, it became a favorite residence of the Greeks after its incorporation into the Macedonian empire, and its capital, Tarsus (q. v.), was elevated into the seat of a celebrated school of philosophy. The connection between the Jews and Cilicia dates from the time when it became part of the Syrian kingdom (see 1 Macc. xi, 14; 2 Macc. iv, 36; comp. Judith i, 7, 12; ii, 21, 25). Antiochus the Great is said to have introduced 2000 families of the Jews into Asia Minor (Josephus, *Ant.* xii, 3, 4), many of whom probably settled in Cilicia (Philo, *De legat. ad Caium*, 30). In the apostolic age they were still there in considerable numbers (Acts vi, 9). Cilician mercenaries, probably from Trachea, served in the body-guard of Alexander Jannæus (Joseph. *Ant.* xiii, 13, 5; *War*, i, 4, 3). The synagogue of "them at Cilicia" (Acts vi, 9) was a place of Jewish worship in Jerusalem, appropriated to the use of the Jews who might be at Jerusalem from the province of Cilicia. See SYNAGOGUE. Cilicia was, from its geographical position, the high road between Syria and the West, and it was also the native country of Paul; it was visited by him, first, soon after his conversion (Gal. i, 21; Acts ix, 30), on which occasion he probably founded the Church there (Neander, *Planting and Training*, i, 114; Conybeare and Howson, *St. Paul*, i, 17-25, 249), and again in his second apostolical journey, when he entered it on the side of Syria, and crossed Anti-Taurus by the Pylæ Ciliciæ into Lycaonia (Acts xv, 41). Christianity continued to flourish here until the 8th century, when the country fell into the hands of the Saracens, by whom, and by their successors the Turks, the light of true religion has been almost extinguished. According to the modern Turkish divisions of Asia Minor, Cilicia Proper belongs to the pashalic of Adana, and Cilicia Trachea to the Liwah of Itchil in the Mousselimlik of Cyprus (see *Penny Cyclopædia*, s. v.; Smith, *Dict. of Class. Geogr.* s. v.; Vict. Langlois, *Voyage dans la Cilicie*, Par. 1861). See ASIA MINOR.

Cimeliarch. See CEIMELIARCHÆ; SACRISTAN.

Cinnamon (קִנָּמוֹן, *kinnamon'*; Gr. κιννάμων; a word, according to Herodotus [iii, 111], of Phœnician origin; according to Gesenius [*Thes. Heb.* p. 1223], from קָנַן, to *stand* upright) occurs first in Exod. xxx, 23, where it is enumerated as one of the ingredients employed in the preparation of the holy anointing oil: "Take thou also unto thee powerful spices, myrrh, and of sweet *cinnamon* half as much (i. e. 250 shekels), together with sweet calamus and cassia." It is next mentioned in Prov. vii, 17: "I have perfumed my bed with myrrh, aloes, and *cinnamon*." Again, in Cant. iv, 14: "Spikenard and saffron, calamus and *cinnamon*, with all trees of frankincense; myrrh and aloes, with all the chief spices." In Rev. xviii, 13, among the merchandise of Babylon (Rome), we have "*cinnamon*, and odors, and ointments, and frankincense." Also in Ecclus. xxiv, 15, "I gave a sweet smell, like *cinnamon* and aspalathus." Cinnamon was probably an article of commerce in ancient Babylon. The Hebrews received this Indian production through the Midianites and Nabathæans, who brought it from the Arabian Gulf. It seems that the Arabians at an early period had commercial intercourse with Ceylon and Continental India, as they were the first navigators of the Indian Ocean (Gen. xxxvii, 25). Many writers have doubted whether the *kinnamon* of the Hebrews is the same article that we now call cinnamon. Celsius quotes R. Ben-Melech (*ad Cant.* iii, 14) and Saadias (Exod. xxx) as considering it the *Lign Aloe*, or *Agallochum*. Others have doubted whether our cinnamon was at all known to the ancients. But the same thing has been said of almost every other drug which is noticed by them. The word κιννάμωμον occurs in many of the Greek authors, as Herodotus, Hippocrates, Theophrastus, Dioscorides, Galen, etc. The first of these, writing 400 years before the Christian æra, describes Arabia as the last inhabited country towards the south, and as the only region of the earth which produces frankincense, myrrh, cinnamon, cassia, and ledanum (iii, 107). He states, moreover, that the Arabians were unacquainted with the particular spot in which it was produced, but that some asserted it grew in the region where Bacchus was educated. From all this we can only infer that it was the production of a distant country, probably India, and that it was obtained by the route of the Red Sea. Theophrastus (ix, 5) gives a fuller but still fabulous account of its production; and it is not until the time of Dioscorides, Galen, and the Periplus of the Erythræan Sea, that we get more definite information. Galen says that cassia and cinnamon are so much alike that it is not an easy matter to distinguish the one from the other. Cinnamon of the best quality is imported in the present day from Ceylon, and also from the Malabar coast, in consequence of the cinnamon plant (*Cinnamomum Zeylanicum*) having been introduced there from Ceylon. An inferior kind is also exported from the peninsula of India, the produce of other species of *cinnamomum*, according to Dr. Wight. From these countries the cinnamon and cassia of the ancients must most likely have been obtained, though both are also produced in the islands of Sumatra and Borneo, in China, and in Cochin China. Cinnamon is imported in bales and chests, the bundles weighing about 1 lb. each. The pieces consist of compound quills, are about three feet long, slender, and inclose within them several smaller quills. These are thin, smooth, of a brownish color, of a warm, sweetish, and agreeable taste, and fragrant odor; but several kinds are known in modern markets, as they were in ancient times. In Ceylon cinnamon is carefully cultivated, the best cinnamon-gardens being on the south-western coast, where the soil is light and sandy, and the atmosphere moist from the prevalent southern winds. This little tree belongs to the laurel family, and the leaf is not unlike the laurel, though of a lighter green. The white blossom comes out with great profusion, and for many miles around Colombo brightens all the landscape in its season, although it diffuses hardly any perceptible odor through the air. The tree is about twenty feet in height, and spreads into numerous branches; the fruit or nut is about the size of a damson, and when ripe is of a black color. The plants begin to yield cinnamon when about six or seven years old, after which the shoots may be cut every three or four years. The best kinds of cin-

Cinnamomum Zeylanicum.

namon are obtained from twigs and shoots; those less than half an inch, or more than two or three inches in diameter, are not peeled. "The peeling is effected by making two opposite, or, when the branch is thick, three or four longitudinal incisions, and then elevating the bark by introducing the peeling-knife beneath it. In twenty-four hours the epidermis and greenish pulpy matter are carefully scraped off. In a few hours the smaller quills are introduced into the larger ones, and in this way congeries of quills are formed, often measuring forty inches in length. The bark is then dried in the sun, and afterwards made into bundles, with pieces of split bamboo twigs" (Percival's *Account of Ceylon*, p. 336-351). Besides cinnamon, an oil of cinnamon is obtained in Ceylon, by macerating the coarser pieces of the bark, after being reduced to a coarse powder, in sea-water for two days, when both are submitted to distillation. A fatty substance is also obtained by bruising and boiling the riper fruit, when an oily body floats on the surface, which, on cooling, concretes into a dirty-whitish, rather hard, fatty matter. As this oil burns with a delightful fragrance, when receiving ambassadors and on high state occasions, the kings of Candy used to have lamps of it burning in their audience-chamber. The wood itself is pervaded by the same grateful perfume, and walking-sticks of cinnamon-wood are highly prized, as well as little articles of cabinet-work. Some camphor may be procured from the roots. Cassia bark, as we have seen,

Kinnamomum Cassia.

was distinguished with difficulty from cinnamon by the ancients. In the present day it is often sold for cinnamon; indeed, unless a purchaser specify *true* cinnamon, he will probably be supplied with nothing but cassia. It is made up into similar bundles with cinnamon, has the same general appearance, smell, and taste; but its substance is thicker and coarser, its color darker, its flavor much less sweet and fine than that of Ceylon cinnamon, while it is more pungent, and is followed by a bitter taste; it is also less closely quilled, and breaks shorter than genuine cinnamon. Its decoction gives a blue color when treated with tincture of iodine, which the true cinnamon does not. "The great consumers of cinnamon are the chocolate-makers of Spain, Italy, France, and Mexico, and by them the difference in the flavor between cinnamon and cassia is readily detected. An extensive dealer in cinnamon informs me that the Germans, Turks, and Russians prefer cassia, and will not purchase cinnamon, the delicate flavor of which is not strong enough for them. In illustration of this, I was told that some cinnamon (valued at 3*s*. 6*d*. per lb.), having been by mistake sent to Constantinople, was unsalable there at any price, while *cassia lignea* (worth about 6*d*. per lb.) was in great request" (Pereira's *Materia Medica*, p. 1306). From the various sources, independently of the different qualities, it is evident, as in the case of cinnamon, that the ancients might have been, as no doubt they were, acquainted with several varieties of cassia. These, we have no doubt, are yielded by more than one species. Besides cassia bark, there is also a cassia oil and cassia buds, supposed to be produced by the same tree. There can be no reasonable doubt, as cinnamon and cassia were known to the Greeks, that they must have been known to the Hebrews also, as the commerce with India can be proved to have been much more ancient than is generally supposed. (See the *Penny Cyclopædia*, s. v. Cinnamon; Celsii *Hierobot.* ii, 350 sq.; Bodæi a Stapel, *Comm. in Theophr.* p. 984; Knox, *Travels in Ceylon*, p. 32; also Ritter, *Erdk.* VI, iv, pt. ii, p. 123 sq.; Geiger, *Pharmac. Botan.* i, 330 sq.; especially Nees v. Esenbeck, *De Cinnamomo* [Bonn, 1823], and Blume in Wiegmann's *Archiv für Naturgesch.* 1831, i, 116 sq.; Martius, *Pharmakogn.* p. 132, 141; Smith's *Dict. of Class. Antiq.*, Amer. ed., s. v. Cinnamomum.) Comp. CASSIA.

Cin'nereth (Heb. *Kinne'reth*, כִּנֶּרֶת, a *harp;* Sept. Χενέρεθ, Vulg. *Cenereth*, Auth. Vers. "Chinnereth;" Num. xxxiv, 11; Deut. iii, 17; Josh. xiii, 27; xix, 35), or **Cin'neroth** (Heb. *Kinneroth'*, כִּנְּרוֹת, *harps;* Josh. xi, 2, Sept. Χενερώθ, Vulg. *Ceneroth*, Auth. Vers. "Chinneroth;" Josh. xii, 3, Sept. Χενέρεθ, Vulg. *Ceneroth*, Auth. Vers. "Chinneroth;" 1 Kings xv, 20, Sept. Χενέρεθ, Vulg. *Cenneroth*, Auth. Vers. "Cineroth"), one of the "fenced cities" of the tribe of Naphtali (Josh. xix, 35; compare Deut. iii, 17; Josh. xi, 2; 1 Kings xv, 20). In the last two of the texts cited it seems to indicate a *district*, since it is named with the "land of Naphtali" and other northern places as having been laid waste by Benhadad, king of Damascus, the ally of Asa, king of Judah (1 Kings xv, 20). It probably took its name from the adjacent city or lake of the same name, and was possibly the small enclosed district north of Tiberias, and by the side of the lake, afterwards known as "the plain of Gennesareth." The expression "All Cinneroth" is unusual, and may be compared with "All Bithron"—probably, like this, a district and not a town. It is also the earlier name of the lake *Gennesareth* (which is supposed to be a corruption of *Cinnereth*, Lightfoot, *Works*, i, 496), from which we may collect that the town lay on the western border of the lake, and was of sufficient consequence to give its own name to it (Josh. xii, 3; xiii, 27; Num. xxxiv, 11). Jerome says, but merely on rumor ("ferunt," *Onomast.* s. v. Chennereth), that Tiberias was originally called Cinnereth; which Reland disputes (*Palæst.* p. 161), as being opposed to Matt. iv, 13 The Jewish Rabbins, moreover, identify (Lightfoot, *Works*, ii, 223) Tiberias with the Rakkath (q. v.) of Josh. xix, 35-38. See CHINNERETH. M. de Saulcy thinks he has identified the village of *Abu Shuheh*, lying on the western edge of the plain el-Ghuweir, on an eminence about at its midlength, at the entrance of wady Rubuduyeh, with the site of Cinnereth (*Narrative*, ii, 359, 364). See GENNESARET.

Cippus (Lat. a *post*), a small, low column used by the ancient Romans as a mile-post, or to mark divisions of land; also a tomb-stone of small dimensions, containing a diminutive orifice or place to receive the ashes of the dead, being thus the original of the modern tomb-stone.

Cir'ama, a place whose people (ἐκ Κιραμᾶς; Vulg. *Gramas*), together with those of Gabdes, came up with Zorobabel from Babylon (1 Esdr. v, 20); for which the Heb. texts (Ezra ii, 26; Neh. vii, 30) have RAMAH (q. v.).

Circle (חוּג, *chug*), any part of a curve, an arch. The word is applied (Job xxii, 14, where, however, it is translated "circuit") to the *heavens*, which the ancients supposed to be a hollow sphere. They imagined

that the sky was solid, and extended like an arch over the earth. The word is also referred to the *earth* in Isa. xl, 22, and to the surface of the *ocean* in Prov. viii, 27, where it is rendered "compass;" in both which passages it still seems to mean the celestial vault, as spanning these. In Wisd. xiii, 2, the Greek term *κύκλος* is so rendered, with reference to the path of the stars. See CIRCUIT.

Circuit (תְּקוּפָה, *tekuphah'*) signifies the act of going round, as, for example, the apparent diurnal revolution of the sun around the earth (Psa. xix, 6); it is also used with reference to the completion of a year in the original of 2 Chron. xxiv, 23; Exod. xxxiv, 22 (in which passages it is rendered "end"); or of the term of pregnancy in 1 Sam. i, 20 ("when . . . was come about"). The Scriptures, however, afford us very little information as to the astronomical knowledge of the Jews. See ASTRONOMY. In Job xxii, 14, the Heb. word is different. See CIRCLE. In 1 Sam. vii, 16, and Eccles. i, 6, also, a different form of expression is used in the original to signify, in the former passage (סָבַב, elsewhere usually rendered "compass"), a regular tour of inspection, and in the latter (סְבִיב) the periodical series of gyrations, or, rather, directions of the winds, which in the East are quite regular in their seasons. In Ecclus. xxiv, 5, the original word is *γῦρος*, the *rotation* of the heavens; but in 2 Macc. vi, 4, it is simply *περίβολος*, an *enclosure*, e. g. of the Temple.

CIRCUIT. In the Methodist Episcopal Church, a single church, supplied by a pastor, is called a *station;* but when two or more appointments, within a definite territory, are united into one charge, under one or more ministers, it is called a "circuit." The English minutes of 1746 give "the first intimation of definite circuits, though it is supposed they existed before. All England was mapped into seven of these itinerant districts." In America the circuit system was universal in the beginning of Methodism, and it is still widely in use in rural districts and in the Western States.—Stevens, *History of Methodism*, i, 318. See METHODIST EPISCOPAL CHURCH.

Circumcellians, a fanatical sort of Donatists in the fourth century, of uncertain origin. From their wandering habits, they were called *Circumcelliones* (from *cellæ*, the cottages of the peasants around which they hovered, *cellas circumientes rusticorum*). They rambled up and down, plundering, burning houses, and murdering all who resisted them, professing to seek the crown of martyrdom. They called themselves *Milites Christi Agonistici.* There is no evidence to show that their conduct was approved by the Donatists, but their proceedings brought great odium on that party.—Mosheim, *Ch. Hist.* cent. iv, pt. ii, ch. v, and cent. v, pt. ii, ch. v; Gieseler, *Ch. History*, per. ii, div. i, § 84; Gibbon, *Decline and Fall*, ch. xxi, xxiii. See DONATISTS.

Circumcision (מוּלָה, *mulah';* Sept. and N. T. technically *περιτομή*, which is translated by the Latin *circumcisio*, i. e. a *cutting around*), a custom among many Eastern nations of cutting off part of the prepuce, as a religious ceremony. The Jews, through Abraham, received the rite from Jehovah; Moses established it as a national ordinance; and Joshua carried it into effect before the Israelites entered the land of Canaan (see generally Michaelis, *Laws of Moses*, iv, 30 sq.). Males only were subjected to the operation, and it was to be performed on the eighth day of the child's life; foreign slaves also were forced to submit to it on entering an Israelite's family. Those who are unacquainted with other sources of information on the subject besides the Scriptures might easily suppose that the rite was original with Abraham, characteristic of his seed, and practised among those nations only who had learned it from them. This, however, appears not to have been the case (Celsus, ap. Orig. *contra Celsum*, i, 17, 250; Julian, ap. Cyril, *contra Julian.* x, 354; compare Marsham, *Canon Chron.* p. 73 sq.; Bauer, *Gottesdienstl. Verfass.* i, 37 sq.; Jahn, I, ii, 277 sq.; see Borheck, *Ist die Beschneidung ursprünglich hebräisch?* [Duisb. and Lemgo, 1793]).

1. *Pagan Circumcision.*—First of all, *the Egyptians* were a circumcised people. Vonck (*Observ. miscell.* c. i, p. 66), followed by Wesseling (*ad Herod.* ii, 37) and by numerous able writers, alleged that this was not true of the whole nation, but of the priests only; that at least the priests were circumcised is beyond controversy. No one can for a moment imagine that they adopted the rite from the despised shepherds of Goshen; and we are immediately forced to believe that Egyptian circumcision had an independent origin. A great preponderance of argument, however, appears to us to prove that the rite was universal among the old Egyptians, as long as their native institutions flourished, although there is no question that, under Persian and Greek rule, it gradually fell into disuse, and was retained chiefly by the priests, and by those who desired to cultivate ancient wisdom (see Origen, *ad Jer.* iv, 19; *Ezech.* xxxi, 18; xxxii, 19; and *ad. Rom.* ii, 13; Jerome *ad Gal.* iv, p. 477; Horapoll. *Hierogl. Æg.* i, 14, p. 13, ed. Paun; Clem. Alex. *Strom.* i, 130). Herodotus distinctly declares that the Egyptians practised circumcision; and that he meant to state this of the whole nation is manifest, not only since he always omits to add any restriction, but because, immediately following his first statement of the fact, he annexes this remark: "The *priests*, moreover, shave their whole body every other day," etc. (Herod. ii, 37). It is difficult to suppose that the historian could have been mistaken on this point, considering his personal acquaintance with Egypt. (Artapanus, however, makes a distinction between Jewish and Egyptian circumcision, ap. Euseb. *Præp. Ev.* iv, 27.) Further, he informs us that the Colchians were a colony from Egypt, consisting of soldiers from the army of Sesostris. With these he had conversed (ii, 104), and he positively declares that they practised circumcision. Yet if the rite had been confined to the priestly caste of Egypt, it could hardly have been found among the Colchians at all. The same remark will apply to the savage Troglodytes of Africa, every branch of whom except one (the Kolobi), as Diodorus informs us (iii, 31), was circumcised, having learned the practice from the Egyptians. The Troglodytes appear to have been widely diffused through Libya, which argues a corresponding diffusion of the rite; yet, from the silence of Diodorus concerning the *other* savage nations whom he recounts as African Ethiopians, we may infer that it was *not* practised by them. The direct testimony of Diodorus (i, 28), Philo (*Opp.* ii, 310), and Strabo (xii, 824; comp. Agatharch. ed. Hudson, i, 46) is to the same effect as that of Herodotus respecting Egypt; yet this can hardly be called confirmatory, since in their days the rite was no longer universal. Josephus (*contra Ap.* ii, 13) speaks of it as practised by the priests only; he, however, reproaches Apion for neglecting the institutions of his country in remaining uncircumcised. Origen, in the passage above referred to, confirms the statement of Josephus. In Kenrick's *Herodotus* (ii, 37), the French commissioners who examined some Egyptian mummies are quoted as establishing from them the fact of Egyptian circumcision. Herodotus, moreover, tells us (ii, 104) that the Ethiopians were also circumcised; and he was in doubt whether they had learned the rite from the Egyptians, or the Egyptians from them. By the Ethiopians we must understand him to mean the inhabitants of Meroë or Sennaar. In the present day the Coptic Church continues to practise it, according to C. Niebuhr (quoted by Michaelis); the Abyssinian Christians do the same (Ludolf. *Hist. Ethiop.* i, 19, and *Comment.* p. 268 sq.); and that it was *not* in-

troduced among the latter with a Judaical Christianity appears from their performing it upon both sexes. (It is scarcely worth while to invent a new name, recision, or resection, for accuracy's sake.) Oldendorp describes the rite as widely spread through Western Africa—16° on each side of the line—even among natives that are not Mohammedan. In later times it has been ascertained that it is practised by the Kafir nations in South Africa, more properly called Kosa or Amakosa, whom Prichard supposes to form "a great part of the native population of Africa to the southward of the equator." He remarks upon this: "It is scarcely within probability that they borrowed the custom from nations who profess Islám, or we should find among them other proofs of intercourse with people of that class. It is more probable that this practice is a relic of ancient African customs, of which the Egyptians, as it is well known, partook in the remote ages" (Prichard, *Physical Hist. of Man*, 3d ed. ii, 287). Traces of the custom have even been observed among the natives of some of the South Sea Islands (Pickering, *Races of Men*, p. 153, 199, 200, etc.).

How far the rite was extended through the Syro-Arabian races is uncertain (but see Strabo, xvi, 776; Epiphan. *Hær.* ix, 30; Origen ad *Gen.* i, 10). In the 9th section of the Epistle of Barnabas (which, whether genuine or not, is very old), the writer comments as follows: "But you will say the Jews were circumcised for a sign. And so are all the Syrians, and the Arabians, and the idolatrous priests; . . . and even the Egyptians themselves are circumcised." This language is vague and popular; yet it shows how notorious was the wide diffusion of the custom (see Hug, in the *Freib. Zeitschrift.* iii, 213). The Philistines, in the days of Saul, were, however, uncircumcised; so also, says Herodotus (ii, 104), were all the Phœnicians who had intercourse with the Greeks. That the Canaanites, in the days of Jacob, were not all circumcised, is plain from the affair of Dinah and Shechem. The story of Zipporah (Exod. iv, 25), who did not circumcise her son until fear came over her that Jehovah would slay her husband Moses, proves that the family of Jethro, the Midianite, had no fixed rule about it, although the Midianites are generally regarded as children of Abraham by Keturah. On the other hand, we have the distinct testimony of Josephus (*Ant.* i, 12, 2) that the Ishmaelite Arabs, inhabiting the district of Nabathæa, were circumcised after their 13th year: this must be connected with the tradition, which no doubt existed among them, of the age at which their forefather Ishmael underwent the rite (Gen. xvii, 25). St. Jerome also (quoted by Michaelis) informs us that, to his day, "*usque hodie*," the tribes dwelling round Judæa and Palestine were circumcised, "especially all the Saracens who dwell in the desert." Elsewhere he says that, "except the Egyptians, Idumæans, Ammonites, Moabites, and Ishmaelites of the desert, of whom *the greater part* are circumcised, all other nations in the world are uncircumcised." A negative argument is more or less dangerous; yet there is something striking in the fact that the books of Moses, of Joshua, and of Judges never bestow the epithet *uncircumcised* as a reproach on any of the seven nations of Canaan, any more than on the Moabites or Ammonites, the Amalekites, the Midianites, or other inland tribes with whom they came into conflict. On the contrary, as soon as the Philistines become prominent in the narrative, after the birth of Samson, this epithet is of rather common occurrence. The fact also of bringing back as a trophy the foreskins of slain enemies never occurs except against the Philistines (1 Sam. xviii). We may perhaps infer, at least until other proof or disproof is attained, that while the Philistines, like the Sidonians and the other maritime Syrian nations known to the Greeks, were wholly strangers to the practice, yet among the Canaanites, and all the more inland tribes, it was at least so far common that no general description could be given them from the omission. It appears from Josephus (*Ant.* xiii, 9) that when Hyrcanus subdued the Idumæans, he forced them to be circumcised on pain of expatriation. This shows that they had at least disused the rite. But that is not wonderful, if it was only a custom, and not a national religious ordinance; for, as Michaelis observes, the disuse of it may have dated from the edict of Antiochus Epiphanes, of which it is said (1 Macc. i, 41, 42), "The king Antiochus wrote to all his kingdom that all should be one people; and that all should keep the ordinances of his country; and all the nations acquiesced according to the word of the king." The rather obscure notices which are found in Jeremiah and Ezekiel of the circumcision of the nations who were in immediate contact with Israel admit of a natural interpretation in conformity with what has been already adduced (Jer. ix, 25; Ezek. xxxi, 18; also xxxii, 19, *et passim*). The difficulty turns on the new *moral* use made of the term "uncircumcised," to mean simply *impure.* The passage in Jeremiah is thus translated by Ewald: "Behold, the days come that I visit all the uncircumcised circumcised ones; Egypt and Judah, Edom, and the children of Ammon and Moab; and all the dwellers in the wilderness that are shaven on the temples: for all the heathen are uncircumcised, and so is all the house of Israel uncircumcised in heart." The shaving of the temples appears to be a religious custom of the same kind: Herodotus (iii, 8) ascribes it to the Arabs generally, and Josephus rather strangely regards the epithet τροχοκούριδες, in the ancient Greek poet Chœrilus (*c. Ap.* i, 22), as a description of his own countrymen. Knowing that the Egyptians were circumcised, it no longer remains doubtful how *the reproach of Egypt* (Josh. v, 9) should be interpreted.

How far the rite of circumcision spread over the south-west of Arabia no definite record subsists. The silence of the Koran confirms the statement of Abulfeda (*Histor. Ante-Islamica*, p. 180, ed. Fleischer, 1831) that the custom is older than Mohammed, who, it would appear, in no respect regarded it as a religious rite. Nevertheless it has extended itself with the Mohammedan faith, as though it were a positive ordinance. Pococke (*Specimen Hist. Arab.* p. 309) cites a tradition, which ascribes to Mohammed the words, "Circumcision is an ordinance for men, and honourable in women." This extension of the rite to the other sex might, in itself, satisfy us that it did not come to those nations from Abraham and Ishmael. We have already seen that Abyssinian circumcision has the same peculiarity; so that it is every way probable that Southern Arabia had the rite from the same source or influence as Ethiopia. In fact, the very closest relations are known to have subsisted between the nations on the opposite coasts of the Red Sea. Another passage of Abulfeda (*Annales Muslemici*, i, 92) gives specific information on this subject. In the battle of Ohod, in the third year of the Hegira, "Hamza, the uncle of the Prophet, committed great slaughter. When Sabba' ben-Abd-ul-Uzzâ, whose mother was a circumciser in Mecca, passed by him, Hamza called out, Come on, you son of a she-circumciser [*resectricis nympharum*]!" The form of the word proves that this was strictly the trade of the old woman, and that the custom, as applied to females, was no innovation of those days. Niebuhr had ocular demonstration of female circumcision in Arabia (*Travels*, ii, 251).

Pococke quotes the ecclesiastical historian Philostorgius for the fact that the Himyarite Arabs circumcise their children on the *eighth day.* He adds a passage from Al Gazzâli, in which the writer says that the Arabs differ from the Jews as to the time; for they postpone it until the child has teeth, which he thinks safer. Finally, he cites Ibn Athir, who, writing of the times antecedent to Mohammed, says that the Arabs were accustomed to circumcise between the tenth and

fifteenth years. The origin of the custom amongst this large section of those Gentiles who follow it is to be found in the Biblical record of the circumcision of Ishmael (Gen. xvii, 25). Josephus relates that the Arabians circumcise after the thirteenth year, because Ishmael, the founder of their nation, was circumcised at that age (*Ant.* i, 12, 2; see Lane's *Mod. Eg.* ch. ii). Though Mohammed did not enjoin circumcision in the Koran, he was circumcised himself, according to the custom of his country; and circumcision is now as common amongst the Mohammedans as amongst the Jews.

The statement of Philostorgius may receive light from the Arab historians, who relate (Jost, *Geschichte der Israeliten*, v, 236 sq.) that about a century before the Christian æra, several Jewish sovereigns reigned in the region called Sheba by the Jews, and Yemen by the moderns, where the Himyarites (or Homeritæ) dwelt. The few facts preserved show that they were not close observers of the Mosaic law, and the suspicion might arise that they were called Jews chiefly from their having received Jewish circumcision. We have, however, a collateral evidence of much importance, to prove that the influence acting on them had really come from Judæa; namely, it is well known that in Abyssinia a nation called the Falasha still exists, which has very thoroughly adopted the Jewish religion, insomuch as to have invented legends that allege their descent from the Hebrews. They possess the Old Testament in the Gheez language and character, but their own language is said to be quite alien from the Hebrew; facts which prove that they were really *proselyted* by the Jews at some early period. See ABYSSINIA. At that same time, it is credible, the Hebrew faith met with similar success on the opposite coast of the Red Sea. Jost believes that, during the war of the Maccabees, great numbers of Jews migrated into Arabia; and it is certain that in later times they were very numerous in Yemen, and their influence great. Wherever they were settled proselytes must have been made; and great zeal was doubtless used to induce them to circumcise their childern duly according to the Mosaic rite. We can then quite understand Philostorgius's fact, if we are allowed to suppose that he spoke loosely of "the Himyarites" doing that which was done by a great many of them. An interesting story is told by Josephus—the date so late as the reign of the Emperor Claudius (*Ant.* xx, 2)—how Izates, the young king of Adiabene, and his mother Helena, were converted by Jewish teachers to a belief in the one true God, the God of the Hebrews: and how, when Izates was desirous of being circumcised, and his mother dreaded that it would alienate his subjects, his Jewish instructor Ananias warmly seconded her views, with a heart like that of Paul; telling him that if he was resolved to imitate Jewish institutions, he could, without being circumcised, adore the true divinity; and that this was far more important than circumcision. At the time he satisfied the young monarch; but afterwards, another Jew, named Eleazar, came from Galilee, and inveighed so strongly on the impiety of his disobedience, that, without more delay, Izates submitted to the rite. It is evident that, in a controversy of this sort, the more narrow-minded teacher had the advantage; and, in consequence, it appears that "proselytes of righteousness" were always circumcised (Judith xiv, 10, and Tacit. *Hist.* v, 5). The facility with which whole nations have adopted the practice from the Mohammedans proves that it is not so serious an obstacle to the spread of a religion as some have thought it (see the *Penny Cyclopædia*, s. v.).

II. *Jewish Circumcision*.—1. *History*.—When God announced to Abraham that he would establish his covenant with him, he said to him, "This is my covenant, which ye shall keep between me and you, and thy seed after thee: Every man-child among you shall be circumcised. And ye shall circumcise the flesh of your foreskin; and it shall be a token of the covenant betwixt me and you" (Gen. xvii, 10, 11). It was also ordained that this should be extended to servants belonging to Abraham and his seed, as well as to their own childern; and that in the case of children it was to be done on the eighth day after birth. This was appointed as an ordinance of perpetual obligation in the Abrahamic family, and the neglect of it entailed the penalty of being cut off from the people (12-14). In compliance with this, Abraham, though then ninety-nine years of age, was himself circumcised and all his household, including Ishmael. On the birth of his son Isaac, the rite was attended to with regard to him (Gen. xxi, 4); and it continued to be observed by his posterity, and distinctively to characterize them from the people amidst whom they dwelt (Gen. xxxiv, 14, 15). The usage thus introduced by Abraham was formally enacted as a legal institute by Moses (Lev. xii, 3; comp. John vii, 23). Slaves, whether home-born or purchased, were circumcised (Gen. xvii, 12, 13); and foreigners must have their males circumcised before they could be allowed to partake of the passover (Exod. xii, 48), or become Jewish citizens (Judg. xiv, 10. See also Esth. viii, 17, where for Heb. מִתְיַהֲדִים, "became Jews," the Sept. has *περιετέμοντο καὶ Ἰουδάϊζον*). In short, it was appointed to be observed in relation to all who became proselytes from heathenism to Judaism (comp. Judith xiv, 10; Maimonides, *Issure B'ah*, c. 13, cited by Lightfoot, *Harmoniæ Evang.* sec. 12). The penalty of death for a neglect of this ordinance appears in the case of Moses to have actually been demanded of the father, when the Lord "sought to kill him" because his son was uncircumcised (Exod. iv, 24-26). During the passage through the wilderness the practice fell into disuse, so that of those who entered Canaan none had been circumcised. As this was fatal to their title under the covenant to take possession of the land, Joshua, in obedience to God's command, caused all the males to be circumcised (Josh. v, 2-9). The most satisfactory explanation of this neglect appears to be, that the nation, while bearing the punishment of disobedience in its forty years' wandering, was regarded as under a temporary rejection by God, and was therefore prohibited from using the sign of the covenant. This agrees with the mention of their disobedience and its punishment, which immediately follows in the passage in Joshua (verse 6), and with the words (verse 9), "This day have I rolled away the reproach of Egypt from off you." The "reproach of Egypt" was the threatened taunt of their former masters that God had brought them into the wilderness to slay them (Exod. xxxii, 12; Num. xiv, 13-16; Deut. ix, 28), which, so long as they remained uncircumcised and wanderers in the desert for their sin, was in danger of falling upon them. (Other views of the passage are given and discussed in Keil's *Commentary on Joshua*, p. 129.) From this time forward it became the pride of the nation to observe this ordinance; on all those people who did not observe it they looked down with contempt, not to say abhorrence (Judg. xiv, 3; xv, 18; 1 Sam. xiv, 6; xvii, 26; 2 Sam. i, 20; Isa. lii, 1; Ezek. xxxi, 18; Ephes. ii, 11, etc.); and so much did it become a rite distinctive of them, that their oppressors sought to prevent their observing it—an attempt to which they refused to submit, though threatened with the last penalties in case of disobedience (1 Macc. i, 48, 50, 60 62). The introduction of Christianity was the signal for the abolition of this rite in the Church of God; as the old covenant had waxed feeble and was passing away, that which was the token of it also ceased to be binding; the rule was proclaimed that "in Christ Jesus neither circumcision availeth anything nor uncircumcision, but a new creature" (Gal. vi, 15; Col. iii, 11), though among the Jewish Christians were still found many who clung tenaciously to

their ancient distinctive rite, and would have imposed it even on the Gentile converts to Christianity (Acts xv, 1; Gal. vi, 12, etc.). Our Lord himself was circumcised, because it became him who was of the seed of Abraham according to the flesh to fulfil all righteousness, and because he was "a minister of the circumcision for the truth of God, to confirm the promises made unto the fathers" (Rom. xv, 8); and Paul caused Timothy to be circumcised to avoid offence to the Jews, his mother being a Jewess; but the spirit of Christianity was averse from such institutions (Acts xv, 1-11; Gal. ii, 3, etc.)—for the outward carnal circumcision it sought to substitute that of the heart (Rom. ii, 28, 29), "the circumcision not made with hands in putting off the sins of the flesh, even the circumcision of Christ" (Col. ii, 11).

Among the ancient Jews, the rule that circumcision should take place on the eighth day after birth was rigidly followed (Luke i, 59; ii, 21; Phil. iii, 5), save in such very exceptional cases as those mentioned Exod. iv, 25; Josh. v, 5. Even their reverence for the Sabbath did not prevent the Jews from observing it on that day (John vii, 22, 23); according to the Rabbins circumcision "pellit Sabbatum" (Lightfoot, *Hor. Heb. in Joan* vii, 22). The operation might be performed by any Israelite, but usually it was performed by the father of the child; in special cases women might perform it (Exod. iv, 25). The instrument used in the earlier times was a sharp stone or a knife of flint (Exod. iv, 25; Josh. v, 2, 3; comp. the λίθος Αἰθιοπικός, used by the Egyptians in preparing bodies for embalming, Herod. ii, 86). See KNIFE. The operation was a painful one, at least to grown persons (Gen. xxxiv, 25; Josh. v, 8), and requires about three days for the inflammation to subside (Arvieux, iii, 146). It was usual to connect the naming of the child with the circumcision (Gen. xxi, 3, 4; Luke i, 59; ii, 21), a practice which probably had respect to the fact that it was in connection with the institution of the rite that God gave to the ancestor of the race his name of Abraham (Gen. xvii, 5). See NAME.

2. *Obliteration by apostate Jews.*—Some of the Jews in the time of Antiochus Epiphanes, wishing to assimilate themselves to the heathen around them, built a gymnasium (*γυμνάσιον*) at Jerusalem, and, that they might not be known to be Jews when they appeared naked in the games, "made themselves uncircumcised" (1 Macc. i, 15, ἐποίησαν ἑαυτοῖς ἀκροβυστίας; Vulg. *fecerunt sibi præputia;* Joseph. *Ant.* xii, 5, 1, τὴν τῶν αἰδοίων περιτομὴν ἐπικαλύπτειν). Sometimes this was done by a surgical operation, such as Celsus describes (*De Medic.* vii, 25; comp. Galen, *Meth. Med.* xiv, 16; Paul Ægin. vi, 53; Epiphanius, *De pond. et mens.* p. 538, ed. Basil. 1544), sometimes by other means (Dioscor. iv, 157). The term for this was ἐπισπᾶσθαι (Talm. מָשַׁךְ עָרְלָה), i. e. *drawing over again*, sc. the prepuce (4 Macc. vii; see Bartholin. *Morb. bibl.* xxvi). Against having recourse to this practice from an excessive anti-Judaistic tendency, the apostle Paul cautions the Corinthians in the words, "Was any one called being circumcised, let him not become uncircumcised" (μὴ ἐπισπάσθω, 1 Cor. vii, 18). See the Essay of Groddeck, *De Judæis præputium attrahentibus* (Lips. 1699); also in Schöttgen's *Hor. Hebr.* ii; and in Hasæi et Ikenii *Nov. Thes.* ii, 793 sq.; and in Ugolini *Thesaur.* xxii; Engel. *De Judæorum præp. attrah.* (Lips. 1699); Lossius, *De epispasmo Judaico* (Jen. 1665); also in Schlægeri *Diss. rar.* (Helmst. 1743, ii, 89 sq.); Wedell, *Exercitt. med. philol.* I, v, 1 sq.; Ludolf, *Comm. in Hist. Æth.* p. 270; Lübkert in the *Stud. u. Krit.* 1835, iii, 657; comp. Fabricii *Bibliogr. Antiq.* p. 546 sq. See FORESKIN.

3. *Figurative Use of the Term.*—The moral meaning of the word "uncircumcised" was a natural result of its having been made legally essential to Hebrew faith. "Uncircumcised in heart and ears" was a metaphor to which a prophet would be carried, as necessarily as a Christian teacher to such phrases as "unbaptized in soul," or "washed by regeneration." It was a well-known and readily understood *symbol of purity.*

4. *Modern Usages.*—The ceremony of circumcision, as practiced by the Jews in our own times, is thus: If the eighth day happens to be on the Sabbath, the ceremony must be performed on that day, notwithstanding its sanctity. When a male child is born, the godfather is chosen from amongst his relations or near friends; and if the party is not in circumstances to bear the expenses, which are considerable (for after the ceremony is performed a breakfast is provided, even amongst the poor, in a luxurious manner), it is usual for the poor to get one amongst the richer, who accepts the office, and becomes a godfather. There are also societies formed amongst them for the purpose of defraying the expenses, and every Jew receives the benefit if his child is born in wedlock. The ceremony is performed in the following manner, in general.

The circumcisor being provided with a very sharp instrument, called the circumcising knife (see Quandt, *De cultris circumcisoriis Judæorum*, Regiom. 1713), plasters, cummin-seed to dress the wound, proper bandages, etc., the child is brought to the door of the synagogue by the godmother, when the godfather receives it from her and carries it into the synagogue, where a large chair with two seats is placed; the one is for the godfather to sit upon, the other is called the seat of Elijah the prophet, who is called the angel or messenger of the covenant. As soon as the godfather enters with the child, the congregation say, "Blessed is he that cometh to be circumcised, and enter into the covenant on the eighth day." The godfather being seated, and the child placed on a cushion in his lap, the circumcisor performs the operation, and, holding the child in his arms, takes a glass of wine into his right hand, and says as follows: "Blessed be those, O Lord our God, King of the Universe, Creator of the fruit of the vine. Blessed art thou, O Lord our God! who hath sanctified his beloved from the womb, and ordained an ordinance for his kindred, and sealed his descendants with the mark of his holy covenant; therefore for the merits of this, O living God! our rock and inheritance, command the deliverance of the beloved of our kindred from the pit, for the sake of the covenant which he hath put in our flesh. Blessed art thou, O Lord, the Maker of the Covenant! Our God, and the God of our fathers! preserve this child to his father and mother, and his name shall be called in Israel, A, the son of B. Let the father rejoice in those that go forth from his loins, and let his mother be glad in the fruit of her womb; as it is written, 'Thy father and mother shall rejoice, and they that begat thee shall be glad.'"

The father of the child says the following grace: "Blessed art thou, O Lord our God, King of the Universe! who hath sanctified us with his commandments, and commanded us to enter into the covenant of our father Abraham." The congregation answer, "As he hath entered into the law, the canopy, and the good and virtuous deeds." (See Buxtorf, *Synagoga Judaica*, ch. ii.)

III. *Design of the Institution.*—Herodotus long ago declared that it was adopted by the Egyptians for cleanliness (καθαριότητος εἵνεκα); and a slight acquaintance with the ideas of the Turks concerning personal defilement will make it easy to believe that an idea of cleanliness continued the practice among nations which had once become habituated to it. In the ancient Egyptians this Turkish spirit was carried to a great height; nor is it wonderful that in hot climates detailed precepts of cleanliness form a very large part of primitive religion. But we can hardly rest in this as a sufficient account of the *origin* of the rite (see

Deyling, *Observatt.* ii, 88 sq. [also in Ugolini *Thesaur.* xxii]; Buddei *Hist. Eccl.* V, I, i. 175 sq.; Meyer, *De tempp. et fest. Hebr.* ii, 7, p. 512 [Ugolini *Thesaur.* i]; Grappii *Diss. an circumcisio ab Æg. fuerit derivata* [Jen. 1722]; Witsii *Æeg.* iii, 6, p. 233 sq.; Bynæus, *De circumcis. Christi* [Amst. 1689], p. 27 sq.; Carpzov, *Appar.* p. 602 sq.; Sturz, *Circumcisio a barbaris gentibus translata* [Ger. 1790]). It is more important to state that an adequate physical reason for performing the operation on females of several African races has been fully substantiated. The curious reader will find in Laurence's *Lectures* (chap. v) the decisive testimony of Mr. Barrow and Dr. Somerville on this point, with an allusion to the efforts of the Romish missionaries to forbid the practice in Abyssinia, and the unexpected consequences which thwarted them. No positive evidence has yet been obtained that the operation is equally expedient for the males in any of the same races; yet the analogy of the two cases forces us to believe that in both the custom has a physical or medical ground, especially when it is remarked to predominate so much in Africa, where alone (as far as yet appears) such physical peculiarities of structure exist. It was practised, moreover, by the males of African tribes so savage, and so little addicted to religious ceremonialism, that a broader ground must be sought for it than simple cleanliness. We have already named the Troglodytes. Strabo mentions two other tribes of Africa, whom he calls Kreophagi and Kolobi (xvi, 4, p. 387–390, 392, ed. Tauch.), who practised on themselves a yet more shocking mutilation (κολοβοὶ τὰς βαλάνους), ascribed to the Kolobi by Diodorus also. The fact, also, that most of these nations performed whatever operation it was, not on infants, but on those who were advancing towards marriageable age, conspires to indicate that some physical inconvenience gradually showed itself (as with the Bushmen females), of which they desired to get rid. Jost looks upon *infant* circumcision as the distinguishing mark of Judaism; and this may be nearly correct, though we have seen that, according to Abulfeda, some Arabs delayed it only till after teething. In fact, Diodorus (iii, 31), when speaking of that branch of the Troglodyte nations which was called Kolobi, declares that they were subjected to the operation in infancy (ἐκ νηπίου). Their unnatural and cruel custom is possibly to be referred to superstition. Some, indeed, have looked on circumcision itself as a softened form of the barbarous rite by which the Galli, or priests of Cybele, were qualified for their office. The Kolobite custom might, on the contrary, be a carrying out of that barbarity to the extremest point possible, short of exterminating the population of a tribe. Traditionary or superstitious reasons certainly can alone explain the presence of the custom among the Sandwich Islanders (Michaelis, *Orient. Biblioth.* xiv, 50 sq.), and aboriginal Americans (Gumilla, *Histoire de l'Oroque*, Avign. 1708, i, 183 sq.), for physiological considerations, seem to fail (see Burdach, *Physiol.* iii, 386). If an independent and human origin has been discovered for Egyptian circumcision, the thought of necessity arises that the Israelites must have had it from the same sources as the nations around them, and it has been discussed (Spencer, *De Leg. Heb.* I, iv, 4, p. 70 sq.) whether they even borrowed it from the Egyptians. (Movers thinks [*Phönic.* i, 362] that the latter borrowed it from the Phœnicians, resting on the myth of Saturn, in Sanchoniatho, *Fragm.* p. 36.) The idea has naturally given much offence; but, in truth, the question involves no peculiar difficulty; it is only a part of another far wider inquiry. It is notorious that many other ancient nations had various ceremonies and institutions in common with the Jews, and that the Hebrew law is by no means in all points original. That sacrifice pre-existed is on the surface of the Bible history. The same, however, is true of temples, tabernacles, priests, ever-burning fire, oracles, etc. The fact has been often denoted by saying that the Jewish institutions are a selection, revision, and re-enactment of an older patriarchal religion. Other treatises on the Gentile origin of circumcision are by Hofmann (Altdorf, 1771), Rus (Jen. 1707), Zeibich (Ger. 1770), Anton (Lips. 1682).

Circumcision, then, as practised by the Gentiles, was simply an expedient to promote health, facilitating cleanliness, and preventing certain painful afflictions, such as that of the *gonorrhœa spuria* (from *phymosis*, or stricture), and especially the ἄνθραξ, or "carbuncle," to which, in hot climates, men are subject (Josephus, *cont. Apion.* ii, 14; Niebuhr, *De l'Arabie*, ch. xix), or an unusual prolongation of the part in question (Thevenot, i, 58; Haquet, in Voigt's *Magaz. für Phys.* vi, 443; but see Danz, in Baldinger's *Magaz. für Aerzte*, xiv, 416 sq.). In so far as it served this end, the Israelites had, of course, the benefit of it; but that this formed the reason and design of its appointment by God, though asserted by some men of learning and ability, seems utterly untenable; for, in the first place, this opinion is without the slightest support from Scripture; often as the subject is referred to there, we find no hint as to this being the purpose of the observance; 2dly, This hypothesis is quite opposed to the account given by Moses of the introduction of the rite among the Israelites; 3dly, It is absurd to suppose that a mere prophylactic usage should by God be elevated to the solemnity of a religious ordinance; 4thly, Whatever advantages in a hygienic respect might accrue from the practice, these were confined to individuals; circumcision is not necessary for health to men generally in hot climates (Niebuhr, loc. cit.); and therefore to oblige the whole male community to undergo this process in infancy for purposes of health would have been to act as unwise a part as if it had been enjoined that every one should lose a limb, because it was possible that some one might contract severe disease in that limb if allowed to remain; and, 5thly, If circumcision was a mere hygienic precaution, why should it have been abolished by Christianity? why should the apostles have held it to be so hostile to Christianity? and why should the difficulty of becoming a Christian have been increased by the prohibition to those who embraced Christianity of a necessary condition of their children's health? See Philo, *De Circumcis.* in *Opp.* ii, 210 sq.; Ackermann, in Weise's *Materialien für Gottesgelartheit* (Gera, 1784), i, 50 sq.; Schulz, *Exercitatt.* i, ii; Michaelis, *Orient. Bibl.* xxii, 8 sq.; Rust, *Handb. d. Chirurgie*, v, 30; Hoffmann, *De causa fœcunditatis gentis circumcisæ* (Lips. 1739); Wolfsheimer, *De causis fœcunditatis Hebræor.* (Hal. 1742); Vogel, *Dubia de usu circumcisionis medico* (Gott. 1763); Meiners, *De circumcis. origine et causis* (in the *Comment. Soc. Gott.* xiv, 207 sq.; and his *Krit. Gesch. d. Relig.* ii, 473 sq.). On the supposed tendency of the custom to prevent excessive venery (Michaelis in Bertholdt's *Journ.* iv, 356), especially onanism (Buxtorf, *Lex. Chald.* col. 112 sq.), see Schneider in Henke's *Zeitschrift f. Staatsarzneik.* V, iv, 223. For other reasons, see Photius, *Ep.* 205.

When first appointed by God, circumcision was expressly set forth as a token of the covenant which God had made with Abraham; and the apostle tells us that Abraham received "the sign of circumcision as a seal of the righteousness of that faith which he had, being yet uncircumcised" (Rom. iv, 11); so that to Abraham it was not only a sign or token of God's covenant, but also an obsignation or certificate that he was in a state of acceptance before he was circumcised. As a Mosaic institution, it was also the sign of the covenant which God made with Israel, which is hence called the "covenant of circumcision" (Acts vii, 8). In consequence of this, it became the medium of access to the privileges of the covenant, and entailed on all who received it an obligation to fulfil the duties which the covenant imposed (Rom. ii, 25; iii, 1; Gal. v, 3). In a word, it was the token which assured to Abraham

and his descendants the promise of the Messiah (Gen. xvii). It was thus made a necessary condition of Jewish nationality. Circumcision served also to separate the people of the Jews from the rest of the nations, as a people set apart to God. These were its *uses*. As respects its *meaning*, that was symbolical, and the things which it symbolized were two: 1. Consecration to God; and, 2. Mental and spiritual purification (Exod. vi, 12; Lev. xix, 25; Deut. x, 16; xxx, 6; Isa. lii, 1; Jer. iv, 4; vi, 10; Rom. ii, 25-29; Col. ii, 11, etc. Compare Philo, *De Circumcisione;* Jones, *Figurative Language of Scripture*, Lecture v, p. 135). "There was thus involved the concept of *consecration*, and along with this that of reconciliation, in circumcision; and it was thereby, as Ewald rightly remarks (*Alterth.* p. 95), an offering of the body to Jehovah, which, according to the true meaning of all the offerings, as fully developed and raised to their true elevation by the prophets, had to be presented to him as an offering of the soul. Only as this inner offering was perfectly presented could the obligation to be a priestly kingdom and a holy people be fulfilled" (Vaihinger in Herzog's *Real-Encykl.* ii, 110).—Kitto, s. v.

On this subject in general, see Spencer, *De Legibus Heb. ritualibus*, i, 5; Michaelis, *Commentaries on the Laws of Moses*, iii, 58-93; Witsius, *De Fœdere*, bk. iv, 6, 8; Lokevitz, *De circumcisione Judæorum* (Vitemb. 1769-80); Smeets, *De circumcisione Abrahamo divinitus data* (Franec. 1690); Bergson, *Beschneidung vom historischen, krit. u. med. Standpunkt* (Berlin, 1844); Brescher, *Die Beschneidung der Israeliten von der hist., praktisch-operativen u. ritualen Seite* (Vienna, 1845); Heymann, *Die Beschneidung in pathol. Bedeutung* (Magdeb. 1844); M. G. Salomon, *Die Beschneidung, hist. u. medicinisch beleuchtet* (Braunschw. 1844); S. Salomon, *Phimosis nebst Beschneidung* (Hamb. 1838); Schmid's ed. of Maimonides, tract מִילָה (Strasb. 1661, 1700); Wolfers, *Die Beschneidung der Juden* (Lamförd. 1831).

IV. *Christian Views on the Subject.*—"The attitude which Christianity, at its introduction, assumed towards circumcision was one of absolute hostility, so far as the necessity of the rite to salvation, or its possession of any religious or moral worth were concerned (Acts xv; Gal. v, 2). But while the apostles resolutely forbade its imposition by authority on the Gentiles, they made no objection to its practice, as a mere matter of feeling or expediency. Paul, who would by no means consent to the demand for Titus, who was a Greek, to be circumcised (Gal. ii, 3-5), on another occasion had Timothy circumcised to conciliate the Jews, and that he might preach to them with more effect as being one of themselves (Acts xvi, 3). The Abyssinian Christians still practice circumcision as a national custom (see Gibbon, *Decline and Fall*, N. Y. edition, iv, 565). In accordance with the spirit of Christianity, those who ascribed efficacy to the mere outward rite are spoken of in the N. T. almost with contempt as 'the concision' or 'amputation' (τὴν κατατομήν); while the claim to be the true circumcision is vindicated for Christians themselves (Phil. iii, 2, 3). An ethical idea is attached to circumcision in the O. T., where uncircumcised lips (Exod. vi, 12, 30), or ears (Jer. vi, 10), or hearts (Lev. xxvi, 41) are spoken of, i. e. either stammering or dull, closed as it were with a foreskin, or rather rebellious and unholy (Deut. xxx, 6; Jer. iv, 4), because circumcision was the symbol of purity (see Isa. lii, 1). Thus the fruit of a tree is called uncircumcised, or, in other words, unclean (Lev. xix, 23). In the N. T. the ethical and spiritual idea of purity and holiness is fully developed (Col. ii, 11, 13; Rom. ii, 28, 29)."

V. *Relation to Christian Baptism.* — 1. The ethical and spiritual value of circumcision did not depend on its existence or use prior to its adoption by God as a symbol of true religion. The condescension of Christ consecrated and elevated old rites to new spheres, upon the principle that "what God hath cleansed, that call not thou common." On this principle he elected the baptismal purification, and the simple elements of his Supper. When the covenant with Abraham had reached its full development, including all the seminal elements for the future growth of his Church in the world, God ratified it by the seal of circumcision. Whatever was afterwards added to the polity of the Church or nation worked no modification of the great principles involved, but was rather called into being by the exigencies of times and circumstances. This rite, as a symbol, bespoke the consummation of the Abrahamic covenant in all its power and fulness of temporal, as well as eternal and heavenly interests.

2. This ordinance included in its significance, as a fitting and most impressive emblem, deep spiritual truths. The history of circumcision, in its connection with the Abrahamic covenant and religion, clearly exhibits the nature of the things it symbolized by the direction of its figurative applications. In involving and engaging moral and mental purity, through faith and worship towards Abraham's God, it became the token of spiritual blessings to the pious Israelite in whatever foreign regions he might dwell, notwithstanding he might never be permitted to behold Palestine or the holy city. For he alone was a Jew and a real son of Abraham, entitled to the immunities of the Covenant, whose circumcision was "of the heart; in the spirit, and not in the letter; whose praise is not of men, but of God" (Rom. ii, 28, 29). Profligacy in the national government, though it might bring afflictions, could not nullify the spiritual law, or make void the seal upon the faithful. "All are not Israel which are of Israel" (Rom. ix, 6). The Περιτομὴ καρδίας, ἐν πνεύματι—"*Circumcision in heart, in spirit*"—was then, as it is now, the only means of union with the Messiah; and, regarding the nation, therein was Abraham's seed an *imperium in imperio*.

3. The relation, therefore, of CIRCUMCISION to CHRISTIAN BAPTISM is manifest. Both are initiations into peculiar religious privileges and immunities, the emblems of inward cleansing, the signs and seals of consecration to and faith in the God of Abraham. Baptism follows and succeeds to the ancient rite, not because of external likeness, but on account of identity of offices and import, in sealing and imaging the same spiritual truths. For the saving economy of Jehovah has been the same from the beginning; only the instruments, furniture, and external appliances have undergone change. The Zion of the old is the Zion of the newly-arranged Church; the גֹּרֶן—ἅλων—has only been purged, its arena enlarged, and the machinery of the garnering process changed from a specific to a general object, from the national to the cosmical. The pious patriarch was a Christian in everything but name and extent of privilege. The longitude of the atonement is for all time, and the existence of the blessed; its latitude the breadth of the race. The change of the symbolic seal adapts it to a wider sphere, yet it is only in the visible form, not in the substance; it becomes a new and more eligible likeness of the same things. "Circumcision and baptism correspond in meaning. They both relate to the renewal of the heart" (Carson, p. 367). It was a mark of distinction made upon those entering into covenant with God for worship and salvation; can baptism be either less or more? Compare Andrew Fuller, *Lect. Gen.* xvii; Dr. L. Chase, *Design of Baptism*, in *Bapt. Tracts for the Times*, p. 26.

4. The writers of the N. T. bear testimony to the view here presented. St. Paul uses the very impressive words "buried with him" (Christ) "in baptism"—συνταφέντες αὐτῷ ἐν τῷ βαπτίσματι (Col. ii, 12), as synonymous with and explanatory of ἡ περιτομὴ τοῦ Χριστοῦ, "the circumcision of Christ." Whatever in-

tensity there is in the words "buried with him," it was only the effort of the apostle to show how "baptism into Christ" was like circumcision; it "put off the body of the sins of the flesh." Had such not been the scriptural meaning of circumcision, Paul would never have thus reasoned. What better testimony could be desired to prove the relation of the two rites, and that the one had succeeded the other? Objections from a want of external agreement or circumstances of administration can be of no force. The Greek *περιτομη*, the Latin *circumcisio*, are etymological parities, but they are neither of them analogical forms with the Heb. מוּל, employed as a *technic* in Gen. xvii. Yet the idea of the rite is, perhaps, as perfect under the Shemitic as under the European form.

5. The early ecclesiastical writers universally held the views here given. Their doctrine, made dependent on John iii, 5, that *βάπτισμα ἐξ ὕδατος καὶ πνεύματος*, *baptism of water and the Spirit*, was equivalent to *ἀναγέννησις ἐξ ὕδατος καὶ πνεύματος*, *regeneration* by water and the Spirit, caused them to speak of baptism as *ἡ περιτομὴ πνευματική*, *spiritual circumcision*, because the Spirit was always joined with the water in the baptism of an infant, or a converted, believing adult.

6. In Justin Martyr baptism is very frequently alluded to as the "true circumcision," of which the ancient rite was a type (Apol. i, 61; Dial. c. Trypho. 41). "*God commands you to be washed with this purification, and to be circumcised with the true circumcision*" (*λούσασθαι ὑμῖν τοῦτο τὸ λουτρὸν κελεύει ὁ Θεός, καὶ περιτέμνεσθαι τὴν ἀληθινὴν περιτομήν*) (Dial. c. Trypho. § 18). He says that Christians "had not received the fleshly circumcision, but the spiritual one, which Enoch and those like him made use of; and we received it—*διὰ τοῦ βαπτίσματος*—*through baptism*," etc. (*ib.* § 43; comp. § 19). In § 29 of this dialogue he speaks of circumcision under the law as baptism. He says, "What need have I for circumcision who have the testimony of God in my favor?" (*Τίς ἐκείνου τοῦ βαπτίσματος χρεία ἁγίῳ πνεύματι βεβαπτισμένῳ;*) "What need have I of that other baptism, who have been baptized with the Holy Ghost?" This must be esteemed as a remarkable identification of the two rites, for we should not forget that, as the ordinance of baptism was to Justin "the water of life" (Dial. c. Trypho. § 14), so to receive it was to be baptized with the Holy Ghost. From the same point of view Basil asks certain ones who delayed baptism, "Do you put off the *circumcision made without hands*—*ἀχειροποιήτην περιτομήν*—in putting off the flesh, *which is performed in baptism?*" (*ἐν τῷ βαπτίσματι τελειουμένην*), *Orat. exhort. ad Bapt.* t. ii, ed. Ben. (Par. 1721). Cyprian and his council, Ep. lxiv, ad Fid., held in the baptism of infants that the analogy then followed of ancient circumcision should not be binding (Nec spiritalem circumcisionem impediri carnali circumcisione debere): "Nor ought the spiritual circumcision" (baptism) "to be hindered by the carnal circumcision." On the principle that Christ was the real baptizer in the Christian rite, Tertullian calls Christ *Novæ circumcisionis Purgator*, "the PURIFIER of the new circumcision" (*adv. Jud.* 3, 4; comp. Ambrose, lib. ii, *De Abrahamo Patr.* c. 11; Irenæus, *Hær.* lib. iv, 30).

7. It remains to be observed, briefly, that the objection to circumcision (Acts xv; Gal. v, 2) was not to the rite itself, which was a seal of the covenant of promise, not of law, and must stand till abrogated by the perfection of the seed in Christ, and a new symbol be adopted in its stead. As the objects of the covenant were to be attained not by seminal propagation, but by moral and spiritual means, among all nations, it was fitting that the seal should correspond to these in its import. The "hostility," therefore, was not to circumcision, but to the claim of salvation through the keeping of the law which it enjoined. In this, Christ would be set aside. Circumcision, in its proper sphere, was not "worthless," or it never had been "the seal of the righteousness of faith." The ancient symbol was gradually to melt away in the affections of the Jew, and by a wise moderation the apostles saw it accomplished. See, on this subject, Wardlaw, *Diss. on the Script. Authority of Infant Baptism*, p. 29 37; Hibbard, *Christian Baptism*, p. 61–63; Pond, *On Baptism*, p. 82–85; Rice, *On Baptism of Infants*, ch. iii; Fairbairn's *Typology of Scripture*, i, 274 277; Dwight, *Theology*, Serm. cxlviii; Watson, *Institutes*, ii, 616 626; Wesley, *Works*, N. Y. ed. vi.; Buchanan, *On Justification*, Edinb. 1867, p. 68–73.

CIRCUMCISION, FESTIVAL OF THE, a festival celebrated in the Roman and English churches on the 1st of January, in commemoration of the circumcision of Christ. After the introduction of the festival of Christmas, the 1st of January was distinguished as *octava natalis Domini*, the octave of the nativity, as Christ was circumcised on the eighth day. "At first it was observed rather as a day of humiliation than of feasting; and this was designed to mark the difference between the manners of Christians and those of the heathen, who celebrated the kalends of January, as the chief day of their saturnalia, with great licentiousness" (Farrar, s. v.). The festival originated, probably, in the 7th century.—Siegel, *Handbuch d. kirchlich-christlichen Alterthümer*, i, 207, and references there.

Cis (*Κίς* v. r. *Κείς*), the Græcized form (Acts xiii, 21) of the name of KISH (q. v.), the father of king Saul.

Ci'sai (rather *Cisæus*, *Κισαῖος*), another Græcized form (Esth. xi, 2) of the name of KISH (q. v.), the great-grandfather of Mordecai (Esth. ii, 5).

Cisneros. See XIMENES.

Cistercians (or CISTERTIANS), an order of monks founded in the year 1098 by Robert, a Benedictine, and abbot of Molême, in Burgundy. Finding it impossible to preserve discipline in his convent, he retired, with twenty of his best monks, to Citeaux, in the diocese of Chalons, where he laid the foundations of the famous order named from the place. Robert, being ordered by the pope to resume the government of the abbey of Molême, was succeeded in that of Citeaux by Alberic; and pope Paschal II, by a bull of the year 1100, took Citeaux under his protection. Alberic drew up the first statutes for the monks of Citeaux, or Cistercians, in which he enjoined a strict observance of the rules of St. Benedict. The habit of the order was a white robe in the form of a cassock: it was at first black; but they pretend that the holy Virgin, appearing to Alberic, gave him a white habit, and from this time they changed the black for white, retaining the black scapular and hood: their garment was girt with a black girdle of wool: in the choir they had a white cowl, and over it a hood, with a rochet hanging down before to the waist, and in a point behind to the calf of the leg. In memory of the change of habit, a festival was observed on the 5th of August, called "The descent of the blessed Virgin at Citeaux, and the miraculous changing from black to white." The order made surprising progress. "From the very first, the Cistercians were the spoiled children of the apostolic see, and every conceivable privilege and exemption was heaped upon them" (*Christian Remembrancer*, July, 1867, p. 4). About 1128 the first Cistercian abbey in England was founded by Giffard, bishop of Winchester, at Waverley, Surrey. The order spread in England rapidly, and accumulated vast estates. Eighty-five abbeys in various parts of England owned the maternity either of Citeaux or Clairvaux. Fifty years after its institution the order had five hundred abbeys; and one hundred years after it boasted of one thousand eight hundred abbeys, most of which had been founded before the year 1200.

The government of the order was in the hands of twenty-five *definitores*, the first of whom was the abbot of Citeaux, who, as abbot general, was the head of the whole order. Next to him in dignity were the abbots La Ferté, Pontigny, Clairvaux, and Morimond, the four oldest convents after Citeaux. The abbot of Citeaux appointed four other *definitores*. The abbots of La Ferté, Pontigny, Clairvaux, and Morimond nominated together twenty (five each), four of whom, i. e. one of each nomination, were rejected by the abbot general. The legislative assembly, called the General Chapter, met originally annually. They did not settle in any diocese before the bishop had accepted the Charta Charitatis, the fundamental law of the order, which had been given in 1119 by abbot Stephen of Citeaux. In 1143 the king of Portugal imposed upon his whole kingdom the duties of vassalage towards the abbey of Clairvaux, so that (in 1578) claims were laid by the latter to all Portugal. The decay of the Cistercians began with the rise of the mendicant orders. Their history consists mostly in efforts of popes and some abbots to stay the flood of corruption which early overflowed the whole order. These efforts were usually unsuccessful, but led to the establishment of a number of reformed congregations, which received from the popes the privilege of an independent organization. The most important are those founded in Spain in 1469, in Tuscany in 1497, and that founded by pope Urban VIII in 1630. The present number of abbeys is very limited. There were in 1843 16 abbeys, with 499 members, in Austria; 9 in Italy, several of which have since been suppressed by the Sardinian government; 3 in Switzerland, of which one has since been suppressed; 1 in Belgium; and 1 in Poland. Since then they have re-established themselves also in England, at St. Susan's, Lullworth, and Mount St. Bernard, in Leicestershire. Several other monastic organizations owe their origin directly or indirectly to the Cistercians. The Templars received their rule from St. Bernard of Clairvaux. The Spanish knights of Calatrava, Alcantara, and Montesa, and the Portuguese of Avis and Christ, were affiliated to the Cistercians. The Feuillants took their origin in 1574 in the reformed Cistercian abbey of Feuillans, near Toulouse. The austerest congregation that sprung from them are the Trappists, founded in 1662. See Fehr, *Geschichte der Mönchsorden*, i, 90 sq.; *A concise History of the Cistercian Order* (London, 1852, sm. 8vo); Maillard, *Dark Ages*, p. 358; Luard, *Annales Monastici*, vols. i, ii (Lond. 1864, 1865); *Christian Remembrancer*, July, 1867, art. i. See TRAPPISTS.

CISTERCIAN NUNS (*Bernardines*), a religious order founded in 1120 by abbot Stephen of Citeaux for the convent of Tarb. They followed the rule of Citeaux under the superintendence of the abbot general of the Cistercians. Later, they were frequently subjected to the jurisdiction of the bishops. Their habit was white, with a black veil, scapular, and girdle. They gradually amassed immense riches, and numbered as many as 6000 convents. In Germany some of the abbesses were raised to the dignity of princesses of the empire, and remained so until 1803. Among all their convents, that of *Port Royal* (q. v.), in France, became the most celebrated. Only a few convents are left, viz. in Switzerland (which has now by far the largest number), in Italy, Bavaria, Saxony, and France. See TRAPPISTS.

Cistercian Monk and Nun.

Cistern (באֹר or בּוֹר, *bor′*, from בָּאַר, to *dig* or *bore*, Gesenius, *Thes. Heb.* p. 176; Sept. usually λάκκος; Vulg. *cisterna* or *lacus;* A. V. generally "pool"), a receptacle for water, either conducted from an external spring, or proceeding from rain-fall (Jer. ii, 13; Prov. v, 15; Eccles. xii, 6; Jer. xxxvi, 16; a *pit*, is often rendered; the mod. Arab. *birkeh*). Thus the cistern is essentially distinguished from the living spring עַיִן, *a'yin;* but from the well בְּאֵר, *beër′*, only in the fact that *beër* is almost always used to denote a place ordinarily containing water rising on the spot, while בּוֹר, *bor*, is often used for a dry pit, or one that may be left dry at pleasure (Stanley, *Palest.* p. 512, 514). See AIN. But the pit into which Joseph was cast by his brethren (Gen. xxxvii, 24) was a *beër* or dry well (Thomson, *Land and Book*, i, 442).

The dryness of the summer months between May and September in Syria, and the scarcity of springs in many parts of the country, make it necessary to collect in reservoirs and cisterns the rain-water, of which an abundance falls in the intermediate period (Shaw, *Travels*, p. 335; Jerome, quoted by Harmer, i, 148; Robinson, ii, 98; Kitto, *Phys. Geogr. of Palest.* p. 302, 303). See WELL. Hence the frequent mention of cisterns in Scripture, and more especially of those which are found in the open country. These were, it seems, the property of those by whom they were formed (Num. xxi, 22). They are usually little more than large pits (see Ecclus. i, 3), but sometimes take the character of extensive subterraneous vaults, open only by a small mouth, like that of a well. They are filled with rain-water, and (where the climate allows) with snow during winter, and are then closed at the mouth with large flat stones, over which sand is spread in such a way as to prevent their being easily discovered (comp. the "sealed fountain" of Cant. iv, 12). If by any chance the waters which the shepherd has thus treasured up are lost by means of an earthquake or some other casualty, or are stolen, both he and his flocks are exposed to great and imminent danger, as are also travellers who hasten to a cistern and find its waters gone (comp. Judith vii, 21). For this reason a failure of water is used as the image of any great calamity (Isa. xli, 17, 18; xliv, 3). There is usually a large deposit of mud at the bottom of these cisterns, so that he who falls into them, even when they are without water, is liable to perish miserably (Gen. xxxvii, 22 sq.; Jer. xxxviii, 6; Lam. iii, 53; Psa. xl, 2; lxix, 15). In cities the cisterns were works of much labor, for they were either hewn in the rocks or surrounded with subterraneous walls, and lined with a fine incrustation. See BETHESDA. The system which in this respect formerly prevailed in Palestine is doubtless the same that exists at present; and indeed there is every probability that most of the cisterns now in use were constructed in very ancient times. Dr. Robinson assures us that "the main dependence of Jerusalem at the present day is on its cisterns; and this has probably always been the case" (*Researches*, i, 480). Both large and small cisterns are frequent throughout the whole of Syria and Pales-

tine, and for the construction of them the rocky nature of the ground affords peculiar facilities, either in original excavations or by enlargement of natural cavities. Dr. Robinson remarks that the inhabitants of all the hill country of Judah and Benjamin are in the habit of collecting water during the rainy season in tanks and cisterns, in the cities and fields, and along the high roads, for the sustenance of themselves and their flocks, and for the comfort of the passing traveller. Many of these are obviously antique, and exist along ancient roads now deserted. On the long-forgotten way from Jericho to Bethel "broken cisterns" of high antiquity are found at regular intervals. Jerusalem, described by Strabo as well supplied with water, in a dry neighborhood (xvi, 760), depends mainly for this upon its cisterns, of which almost every private house possesses one or more, excavated in the rock on which the city is built. The following are the dimensions of four belonging to the house in which Dr. R. resided: 1, 15×8×12 feet deep; 2, 8×4×15; 3, 10×10×15; 4, 30×30×20. The cisterns have usually a round opening at the top, sometimes built up with stone-work above, and furnished with a curb and a wheel for the bucket (Eccl. xii, 6), so that they have externally much the appearance of an ordinary well. The water is conducted into them from the roofs of the houses during the rainy season, and with care remains sweet during the whole summer and autumn. In this manner most of the larger houses and public buildings are supplied (*ib.*). Josephus (*War*, iv, 4, 4) describes the abundant provision for water supply in the towers and fortresses of Jerusalem, a supply which has contributed greatly to its capacity for defence, while the dryness of the neighborhood has in all cases hindered the operations of besiegers. Thus Hezekiah stopped the supply of water outside the city in anticipation of the attack of Sennacherib (2 Chron. xxxii, 3, 4). The progress of Antiochus Sidetes (B.C. 134) was at first retarded by want of water, though this want was afterwards unexpectedly relieved (Joseph. *Ant.* xiii, 8, 2; Clinton, iii, 331). Josephus also imputes to divine interposition the supply of water with which the army of Titus was furnished after suffering from want of it (*War*, v, 9, 4). The Crusaders also, during the siege A.D. 1099, were harassed by extreme want of water, while the besieged were fully supplied (Matth. Paris, *Hist.* p. 46, 49, ed. Wat.). Benjamin of Tudela says very little water is found at Jerusalem, but the inhabitants drink rain-water, which they collect in their houses (Bohn's ed. of *Early Travels*, p. 84). Barclay gives the most complete description of the subterranean reservoirs of Jerusalem, particularly those under the Haram enclosure (*City of the Great King*, p. 226, etc.). See JERUSALEM. The defense of Masada by Joseph, brother of Herod, against Antigonus was enabled to be prolonged owing to an unexpected replenishing of the cisterns by a shower of rain (Josephus, *Ant.* xiv, 15, 2), and in a subsequent passage he describes the cisterns and reservoirs by which that fortress was plentifully supplied with water, as he had previously done in the case of Jerusalem and Machærus (*War*, iv, 4, 4; iv, 6, 2: vii, 8, 3). Burckhardt mentions cisterns belonging to private houses, among other places, at Sermein, near Aleppo (*Syria*, p. 121), El Bara, in the Orontes valley (p. 132), Dhami and Missema in the Lejah (p. 110, 112, 118). Tiberias (p. 331), Kerek in Moab (p. 377), Mount Tabor (p. 334). Of some at Hableh, near Gilgal, the dimensions are given by Robinson (*Later Researches*, p. 137): 1, 7×5×3 feet deep; 2, nearly the same as 1; 3, 12×9×8. They have one or two steps to descend into them, as is the case with one near Gaza, now disused, described by Sandys as "a mighty cistern, filled only by the rain-water, and descended into by stairs of stone" (Sandys, p. 150; but see Robinson, ii, 376). Of those at Hableh, some were covered with flat stones, resting on arches, some entirely open, and all evidently ancient (Robinson, new ed. iii, 137). Dr. Olin (*Travels*, ii, 84) describes something of a better sort near Hebron: "Just without the city are some cisterns, which probably belong to a very early age. A large basin, forty-seven paces square, stands outside the gate by which we entered the city. It was nearly full of greenish water, and has been repaired at a period apparently not very remote. It is of very solid workmanship, built of hewn limestone, and may be eighteen or twenty feet deep. The descent is by flights of stairs situated at the four corners, by which the water is brought up in vessels and skins, and poured into troughs for the flocks, or carried away for domestic uses. It was not at this time fit for drinking. Another pool, of smaller dimensions, occupies higher ground on the north side of the city. These reservoirs are filled by the rains, and are unconnected with any perennial fountain." Vitruvius (viii, 7) describes the method in use in his day for constructing water-tanks, but the native rock of Palestine usually superseded the necessity of more art in this work than is sufficient to excavate a basin of the required dimensions. The city of Alexandria is supplied with water contained in arched cisterns supported by pillars, extending under a great part of the old city (Van Egmont, *Travels*, ii, 134). See POOL.

Empty cisterns were sometimes used as prisons and places of confinement. Joseph was cast into a "pit" (בּוֹר, Gen. xxxvii, 22), and his "dungeon" is called by the same name (xli, 14). Jeremiah was thrown into a miry though empty cistern, whose depth is indicated by the cords used to let him down (Jer. xxxviii, 6). To this prison tradition has assigned a locality near the gate called Herod's gate (Hasselquist, p. 140; Maundrell, Bohn's ed. of *Early Travels*, p. 448). See PRISON. According to Thomson (*Land and Book*, ii, 262-4), dry cisterns are often used in Palestine for granaries, and are very liable to be plundered of their wheat by ants. See GRANARY.

Various allusions by way of figure are made to cisterns in Scripture. The breaking of the wheel at the cistern—the wheel that was used to send down and pull up again the bucket which drew water from the larger cisterns—is used in Eccles. xii, 6, as an image of the breaking up of the animal economy, which perpetually sends, while it is at work, the flow of vital blood from the heart to the extremities. To drink waters out of one's own cistern is a proverbial expression (Prov. v, 15) for confining one's self to the legitimate sources of pleasure which God has associated with our state, as contradistinguished from those which are the property of others. But the merely human and artificial nature of cisterns, which are of man's workmanship, and have no living spring within them, serve as a fit emblem of the insufficiency of creature confidences, and of the folly of preferring these to the infinite and everflowing fulness of God—as in the solemn charge of the prophet, "My people have committed two evils: they have forsaken me, the fountain of living waters, and hewed them out cisterns, broken cisterns that can hold no water" (Jer. ii, 13). See WATER.

Cistertians. See CISTERCIANS.

Citeaux. See CISTERCIANS.

Cithern (κιθάρα, 1 Macc. iv, 54, i. e. *cithara* or *guitar*), a musical instrument most probably of Greek origin, employed by the Chaldæans at balls and routs, and introduced by the Hebrews into Palestine on their return thither after the Babylonian captivity. The cithern was of the guitar species, and was known at a later period as the *cittern*, under which name it is mentioned by the old dramatists as having constituted part of the furniture of a barber's shop. Of the same species is the *Cither* or *Zither* of Southern Germany, the Tyrol, and Switzerland.

With respect to the shape of the cithern or cithara mentioned in the Apocrypha, the opinion of the learned is divided: according to some, it resembled in form the Greek delta, Δ; others represent it as a half-moon; and others, again, like the modern guitar. In many Eastern countries it is still in use with strings, varying in number from three to twenty-four. Under the name of *Koothir*, travellers describe it as a wooden plate or dish, with a hole beneath, and a piece of skin stretched above like a drum. Two sticks, joined after the manner of a fan, pass through the skin at the end, and where the two sticks stand apart, they are connected by a transversal piece of wood. From the upper end of this wooden triangle to the point below are fastened five chords, which, at a little distance above their junction, pass over a bridge, like the strings of a violin. The chords are made to vibrate by means of a leather thong fastened to one of the lateral sticks of the triangle (see Mendelssohn's edition of the *Psalms*, 2d Pref.).

Modern Oriental Cithara.

The cithara, if it be not the same with, resembles very closely the instruments mentioned in the book of Psalms, under the denominations of כִּנּוֹר, נֵבֶל, עֻגָב, respectively rendered in the A. V. "harp," "psaltery," "organ." In Chaldee, *cithara* is transferred as קַתְרוֹס, the *Keri* for קִיתָרוֹס (Dan. iii, 5), in the A. V. rendered "harp," and the same Engl. word is employed instead of *cithern* (1 Macc. iv, 54) in Robert Barker's edition of the *English Bible* (London, 1615). Gesenius (*Thes. Heb.* p. 215) considers cithara as the same with harp; but Luther translates κιθάραις by *mit Pfeifen*, "with pipes." See HARP.

Cities. See CITY.

Cit'im (Κιτιέοι v. r. Κιτιαῖοι, Vulg. *Cetei*, A. V. "Citims"), a nation whose king Perseus is mentioned (1 Macc. viii, 5) as having been defeated by the Romans; evidently the CHITTIM (q. v.), or Macedonians.

Citizenship, the rights and privileges of a native or adopted citizen (πολίτης, 2 Macc. iv, 50; v, 6; ix, 15, 19; Luke xv, 15; xix, 14; Acts xxi, 39), in distinction from a foreigner. The laws in this respect are very different in different ages and countries. See ALIEN.

I. *Hebrew.*—Under the Mosaic constitution, which was framed on a basis of religious rather than of political privileges and distinctions, the idea of the commonwealth (πολιτεία, Eph. ii, 12) was merged in that of the congregation, to which every Hebrew, and even strangers under certain restrictions, were admitted. See CONGREGATION. Strict isolation did by no means, as some suppose, form the leading principle in the system of theocracy as laid down by Moses, since even non-Israelites, under various names [see STRANGER], not only were allowed to reside in Palestine, but had the fullest protection of the law equally with the native Israelites (Exod. xii, 19; Lev. xxiv, 22; Num. xv, 15; xxxv, 15; Deut. i, 16; xxiv, 17: the law of usury, Deut. xxiii, 20, made, however, an exception), and were, besides, recommended in general terms by Moses to humanity and charity (Exod. xxii, 21; xxiii, 9; Lev. xix, 33, 34; Deut. x, 18; comp. Jer. vii, 6; Mal. iii, 5; see Josephus, *Apion*, ii, 28), as well as to a participation in certain prerogatives granted to the poor of the land, such as a share in the tithe and feast-offering, and the harvest in the jubilee-year (Deut. xiv, 29; xvi, 10, 14; xxvi, 11; Lev. xxv, 6). In return, it was required on the part of non-Israelites not to commit acts by which the religious feelings of the people might be hurt (Exod. xx, 10; Lev. xvii, 10; xviii, 26; xx, 2; xxiv, 16; Deut. v, 14. The eating of an animal which had died a natural death, Deut. xiv, 21, seems to have been the sole exception). The advantage the Jew had over the Gentile was thus strictly spiritual, in his being a citizen, a member of the theocracy (the קְהַל יְהוָֹה, *community of Jehovah*, Num. xvi, 3; Deut. xxiii, 2), on whom positive laws were enjoined. But even to this spiritual privilege Gentiles were admitted under certain restrictions (Deut. xxiii, 1 9); thus we find among the Israelites, Doeg, an Edomite (1 Sam. xxi, 8), as also Uriah, a Hittite (a Canaanite). The only nations that were altogether excluded from the citizenship of the theocracy by especial command of the Lord were the Ammonites and Moabites, from a feeling of vengeance against them; and in the same situation were all castrated persons and bastards, from a feeling of disgrace and shame (Deut. xxiii, 1-6). In the time of Solomon no less than 153,600 strangers were resident in Palestine (2 Chron. ii, 17). See GENTILE.

II. *Roman.*—The right of citizenship (πολιτεία, "freedom," Acts xxii, 28, i. e. to be considered as equal to natives of the city of Rome, *jus civitatis, civitas*) was granted in the times of the emperors to whole provinces and cities (Dio Cass. xli, 25; Suet. *Aug.* 47), as also to single individuals (Tacit. *Annal.* i, 58; Sueton. *Nero*, 12; Dio Cass. xliii, 39; Appian, *Civ.* iii, 26), for some service rendered to the state (Cic. *Balb.* 22) or the imperial family (Sueton. *Aug.* 47), sometimes through mere favor (Tacit. *Hist.* iii, 41), or even for a certain sum of money (Acts xxii, 28; Dio Cass. xli, 24; see Heinecc. *Antiq. jur. Rom.* i, 1, 11 sq.). The apostle Paul was a Roman citizen (*civis natus*, Sueton. *Calig.* 38; see Amtzen, *De civitate Rom. apost. Pauli*, Utr. 1725) by family (Acts, l. c.) [see TARSUS], and hence his protesting against corporal or capital punishment (Acts xvi, 37; comp. Cic. *Verr.* v, 57, 65; Euseb. *Hist. Eccles.* v, 1, etc.). It appears from a variety of passages in the classic writers that a Roman citizen could not legally be scourged (*virgis* or *flagellis cædi*); this punishment being deemed to the last degree dishonorable, and the most daring indignity and insult upon the Roman name. Such was the famous "*Porcia Lex.*" "A Roman citizen, judges," exclaims Cicero, in his oration against Verres, "was publicly beaten with rods in the forum of Messina; during this public dishonor, no groan, no other expression of the unhappy wretch was heard amid the cruelties he suffered, and the sound of the strokes that were inflicted, but this: 'I am a Roman citizen!'" Neither was it lawful for a Roman citizen to be bound, or to be examined by the question, or torture, to extort a confession from him. These punishments were deemed servile; torture was only inflicted upon slaves; freemen were exempted from this inhumanity and ignominy. The right once obtained descended to a man's children (Acts xxii, 28; see Zimmern, *Gesch. des röm. Privatrechts*, I, ii, 441). The Jews had rendered signal services to Julius Cæsar in the Egyptian war (Josephus, *Ant.* xiv, 8, 1 and 2), and it is not improbable that many obtained the freedom of the city on that ground; certain it is that great numbers of Jews who were Roman citizens were scattered over Greece and Asia Minor (*Ant.* xiv, 10, 13 and 14). Among the privileges attached to citizenship, the most noteworthy was the above, that a man could not be bound or imprisoned without a formal trial (Acts xx, 29), still less be scourged (Acts xvi, 37; Cic. *Verr.* v, 63, 66); the simple assertion of citizenship was sufficient to deter a magistrate from such a step (Acts xxii, 25; Cic. *Verr.* v, 62), as any infringement of the privilege was visited with severe punishment. A Jew could only plead exemption from such treatment before a Roman magistrate; he was still liable to it from Jewish authorities (2 Cor. xi, 24; Selden, *Syn.* ii, 15, § 11). Another privilege attaching to citizenship was the appeal from a provincial tribunal to the emperor at Rome (Acts xxv, 11). See APPEAL. The rights of the Roman citizen included several other important privileges: he had a full right over his property, his children, and

his dependents; he had a voice in the assemblies of the people, and in the election of magistrates; and his testament had full authority after his death. See Smith's *Dict. of Class. Antiq.* s. v. Civitas; Sigon. *De antiquo jure civ. Roman.* (Par. 1572; Hal. 1715; also in Grævii *Thesaur.* i); Spanheim, *Orbis Rom.* (London, 1703; Hal. 1728); Cellarii *Dissertatt.* p. 715 sq.; also Büttner, *De c'v. Rom. virgidemiis exempt.* (Jen. 1672); Lange, *De immunitate civ. Roman.* (Hafn. 1710). See FREEMAN.

Citron (*κίτριον*, the *tree* is *κιτρία* or *κιτρέα*, but was long without a special name among the Greeks, although they were well acquainted with it; see Smith, *Dict. of Class. Antiq.* s. v. Citrus). In his account of Alexander Jannæus, Josephus tells us, "His own people were seditious against him; for at a festival which was then celebrated, when he stood upon the altar and was going to sacrifice, the nation rose upon him, and pelted him with citrons, for the law of the Jews required that at the festival of tabernacles every one should have branches of the palm-tree and citron-tree"

Citron Flower and Fruit.

(*Ant.* xiii, 13, 5). The late Lady Callcott, in her *Scripture Herbal*, mentions that, as the modern Jews still use citrons at the feast of tabernacles, "in London considerable sums of money are expended in importing them of the best kind for the purpose. They must be without blemish, and the stalk must still adhere to them. After the feast is over, the citrons are openly sold, and the money produced by the sale is placed in the common treasury, as part of the provision for the poor of the congregation." Their anxiety to obtain them with the stalk still adhering is no doubt a faint effort to secure the "thick" branches and "boughs of goodly trees" required for that festival (Lev. xxxiii, 40). But the chief importance of this fruit is its supposed identity with the תַּפּוּחַ, *tappu'-ach*, or "apple" of the Bible, a conclusion, however, which has been ably disputed. See APPLE. The citron, or *Citrus med'ca*—so called because it was from Media that the Romans first received it—belongs to the natural order of Auruntiaceæ, a delightful group, including the orange, the lime, the lemon, and the shaddock (see the *Penny Cyclopædia*, s. v. Citrus). With its dark, glossy, laurel-looking leaves, its evergreen branches, often bearing simultaneously ripe fruits and newly-opened flowers, and thus vouchsafing to the pilgrim who rests in its deep shadow the two-fold refreshment of a delicious banquet and a fragrant breeze, the citron may well claim pre-eminence "among the trees of the wood" (Can. ii, 3). Abounding

Citron-Tree.

in malic and citric acid, the juice of the orange and its congeners is one of the most agreeable antidotes which the Creator's bounty has provided against the exhausting thirst and incipient fever of sultry climes. A settler in the torrid swamps of the Amazon will devour a dozen oranges before his morning meal (*Voyage up the Amazon*, in the "Home and Colonial Library"), and in tropical regions such acidulous fruits are invaluable on account of their anti-febrile virtues. These were doubtless well known to the Hebrews, and, in common with all antiquity, they greatly prized the pleasant pungent odor emitted by the rind. Macrobius speaks of "citrosa vestis," showing that it was usual to keep citrons in wardrobes for the sake of their perfume; and, like the modern Oriental ladies, whose favorite vinaigrette is a citron, in England two or three centuries ago an orange was so commonly used as a scent-bottle that it may often be seen in old pictures of their queens and peeresses. It was also believed to have a disinfecting potency; and during the plague of London, people walked the streets smelling at oranges. Understood as belonging to this beautiful family, there is a peculiar felicity in the comparison, "A word fitly spoken is like citrons of gold in salvers (or baskets) of silver" (Prov. xxv, 11). The famous golden apples which grew in the gardens of the Hesperides were unquestionably either citrons or oranges. See BOTANY.

City. The Heb. term most frequently thus rendered is עִיר (*ir*, literally something *raised up*, i. e. having walls *reared;* or from עוּר, to *keep guard* [Gesenius, *Thes. Heb.* p. 1004]; Sept. and N. T. *πόλις*), a word of very extensive signification, embracing not only the idea of an encampment, as a nomade hamlet (Gen. iv, 17), but also that of small fortifications, as watch-posts or watch-towers (comp. Numb. xiii, 19; 2 Kings xvii, 9; Isa. i, 8), and thence extended to regular towns. Nearly equivalent to this is קִרְיָה (*kiryah'*), which, with a few exceptions (Deut. ii, 26; 1 Kings i, 41, 45), is found only in the poetic style; and analogous (in sense, as probably also in derivation) to this

last is קֶרֶת (*ke'reth*), found only in Job xxix, 7; Prov. viii, 3; ix, 3, 14; xi, 11. The word rendered "city" in Ruth iii, 11, is שַׁעַר (*sha'ar*), properly *gate* (as it is elsewhere rendered), and there means those assembled in the *forum* or place of public business at the town gates. The second of these terms (perhaps from קָרָה, to *approach* as an enemy, or rather [Gesenius, *Thes. Heb.* p. 1236] to *fortify*), is often "prefixed to the names of towns on both sides of the Jordan existing before the conquest, as Kirjath-Arba, probably the most ancient name for city, but seldom used in prose as a general name for town (Stanley, *Palest.* App. § 80). The classification of the human race into dwellers in towns and nomade wanderers (Gen. iv, 20, 22) seems to be intimated by the etymological sense of both words, *Ar*, or *Ir*, and *Kirjath*, as places of security against an enemy, distinguished from the unwalled village or hamlet, whose resistance is more easily overcome by the marauding tribes of the desert. See IR-; KIRJATH. This distinction is found actually existing in countries, as Persia and Arabia, in which the tent-dwellers are found, like the Rechabites, almost side by side with the dwellers in cities, sometimes even sojourning within them, but not amalgamated with the inhabitants, and in general making the desert their home, and, unlike the Rechabites, robbery their undissembled occupation (Judg. v, 7; Jer. xxxv, 9, 11; see Fraser, *Persia*, p. 366, 380; Malcolm, *Sketches of Persia*, p. 147-156; Burckhardt, *Notes on Bedouins*, i, 157; Wellsted, *Travels in Arabia*, i, 335; Porter, *Damascus*, ii, 96, 181, 188; Vaux, *Nineveh and Persepolis*, c. ii, note A; Layard, *Nineveh*, ii, 272; *Nin. and Bab.* p. 141)." See VILLAGE.

1. Towns are a natural result of the aggregative principle in human nature. Necessity led the early races of men to build their towns on lofty spots, where, with the aid of the natural advantages of the ground, they could easily protect themselves against beasts of prey and human foes. A town, and a stronghold or fort, would thus be originally identical. As population increased and agriculture spread, so some degree of security came, which permitted the inhabitants of the castle to diffuse themselves over the hill-side, and take up their abode in the valley, and by the side of the stream that lay nearest their acropolis; still the inhabitants kept at no great distance from the centre of strength, in order not to be deprived of its protection. The town, however, would thus be enlarged, and as the necessity for self-defence still existed, so would the place soon be surrounded with walls. Thus there would be outer and inner bulwarks, and in some sort two species of community—the townspeople, who tilled the ground and carried on trade, and the soldiers, whose business it was to afford protection: these two, however, in the earliest stages of civilization, were one, the peasant and tradesman taking arms when the town was put in danger. How early towns were formed cannot be determined by any general principle: they were obviously a work of time. The primary tendency in population was to diffuse itself. Aggregation on particular spots would take place at a later period. When, then, Cain is said to have built a city (Gen. iv, 17), we have evidence which concurs with other intimations to show that it is only a partial history of the first ages that we possess in the records of the book of Genesis. In the time of the Patriarchs we find towns existing in Palestine which were originally surrounded with fortifications, so as to make them "fenced cities." (See below.) In these dwelt the agricultural population, who, by means of these places of strength, defended themselves and their property from the nomad tribes of the neighboring desert, who then, as they do now, lived by plunder. Nor were works of any great strength necessary. In Palestine at the present day, while walls are in most parts an indispensable protection, and agriculture can be advantageously prosecuted only so far as sheltered by a fortified town, erections of a very slight nature are found sufficient for the purpose, the rather because the most favorable localities offer themselves on all sides, owing to the natural inequality of the ground. Hence we find that hills or eminences were almost invariably chosen as sites for this purpose, a fact which even grew into a proverb—"a city upon a hill." (See Hackett's *Illustra. of Script.* p. 70.)

Of the ancient method of building in towns and cities we have no accurate knowledge, any farther than we may gather information from the ruins which still lie on the soil of Palestine. But these ruins can afford only general notions, as, though they are numerous, and show that the Land of Promise was thickly peopled and highly flourishing in its better days, the actual remains of ancient towns are to be ascribed to different and very distant periods of history. The Crusades left many strongholds which are now in a state of dilapidation; but the Crusades are of modern days compared with the time of the Saviour, which itself is remote from the proper antiquity of the nation. The law of sameness, however, which prevails so rigidly in Eastern countries, gives us an assurance that a modern town in Palestine may be roughly taken as a type of its ancient predecessors. (See Olin's *Travels*, ii, 423.) To distinguish cities that bore the same name, the name of the tribe was added. In "the latter days," especially under the Herods, it was the fashion to give to ancient towns new Greek names, as Diospolis, Neapolis, Sebaste, Cæsarea, Tiberias. Jerusalem, at a later period, was denominated Ælia Capitolina. These innovations indicated the slavish disposition of the age, and were tokens of the bondage in which the nation was held.

Palestine underwent constant changes in regard to its towns from the earliest ages; one consequence of which is, that there are names of towns that belong exclusively to certain eras. The period of the Roman domination gave existence, as to structures of great splendor, so to many towns and fortified places. Galilee was especially rich in towns and villages, which, according to Josephus (*Life*, 45), amounted in all to the number of 204. The names of the Palestinian cities, for the most part, have meaning, reference being made to the nature of the locality or the character of the inhabitants. The population of towns cannot now be ascertained with any degree of accuracy, for the materials are not only scanty and disconnected, but in a measure uncertain. See CENSUS.

2. The earliest notice in Scripture of city-building is of that of the city called Enoch (q. v.) by Cain, in the land of his "exile" (*Nod*, Gen. iv, 17). After the confusion of tongues, the descendants of Nimrod founded Babel, Erech, Accad, and Calneh, in the land of Shinar; and Asshur, a branch from the same stock, built Nineveh, Rehoboth-by-the-river, Calah, and Resen, the last being "a great city." A subsequent passage mentions Sidon, Gaza, Sodom, Gomorrah, Admah, Zeboim, and Lasha, as cities of the Canaanites, but without implying for them antiquity equal to that of Nineveh and the rest (Gen. x, 10-12, 19; xi, 3, 9; xxxvi, 37). Sir H. Rawlinson supposes, (1.) that the expedition of Chedorlaomer (Gen. xiv) was prior to the building of Babylon or Nineveh, indicating a migration or conquest from Persia or Assyria; (2.) that by Nimrod is to be understood, not an individual, but a name denoting the "settlers" in the Assyrian plain; and (3.) that the names Rehoboth, Calah, etc., when first mentioned, only denoted sites of buildings afterwards erected. He supposes that Nineveh was built about B.C. 1250, and Calah about a century later, while Babylon appears to have existed in the 15th century B.C. If this be correct, we must infer that the places then attacked, Sodom, Gomorrah, etc., were cities of higher antiquity than Nineveh or Babylon, inasmuch as when they were destroyed a few years later

they were cities in every sense of the term. The name Kirjathaim, "double city" (Gesenius, *Thesaur. Heb.* p. 1236), indicates an existing city, and not a site only. It may be added that the remains of civic buildings existing in Moab are evidently very ancient, if not, in some cases, the same as those erected by the aboriginal Emim and Rephaim. (Compare also the name Avith, "ruins," Gesenius, *ib.* p. 1000; Gen. xix, 1, 29; xxxvi, 35; Isa. xxiii, 13; see Wilkinson, *Anc. Egypt.* i, 308; Layard, *Nin. and Bab.* p. 532; Porter, *Damascus*, i, 309; ii, 196; Rawlinson, *Outlines of Assyr. Hist.* p. 4, 5.) But though it appears probable that, whatever dates may be assigned to the building of Babylon or Nineveh in their later condition, they were in fact rebuilt at those epochs, and not founded for the first time, and that towns in some form or other may have occupied the sites of the later Nineveh or Calah; it is quite clear that cities existed in Syria prior to the time of Abraham, who himself came from "Ur," the "city" of the Chaldæans (Gesenius, *ib.* p. 55; Rawlinson, p. 4).

The earliest description of a city, properly so called, is that of Sodom (Gen. xix, 1-22); but it is certain that from very early times cities existed on the sites of Jerusalem, Hebron, and Damascus. The last, said to be the oldest city in the world, must, from its unrivalled situation, have always commanded a congregated population; Hebron is said to have been built seven years before Zoan (Tanis) in Egypt, and is thus the only Syrian town which presents the elements of a date for its foundation (Num. xiii, 22; see Stanley, *Palest.* p. 409; Josephus, *Ant.* i, 6, 4; Conybeare and Howson, *St. Paul*, i, 94, 96). But there can be no doubt that, whatever date may be given to Egyptian civilization, there were inhabited cities in Egypt long before this (Gen. xii, 14, 15; see Martineau, *Eastern Life*, i, 151; Wilkinson, i, 307; Smith, *Dict. of Class. Geog.* s. v. Tanis). The name, however, of Hebron, Kirjath-Arba, indicates its existence at least as early as the time of Abraham, as the city, or fortified place of Arba, an aboriginal province of Southern Palestine (Gen. xxiii, 2; Josh. xiv, 15). The "tower of Edar," near Bethlehem, or "of flocks," indicates a position fortified against marauders (Gen. xxxv, 21). Whether "the city of Shalem" be a site or an existing town cannot be determined; but there can be no doubt that the situation of Shechem is as well identified in the present day, as its importance as a fortified place is plain from the Scripture narrative (Gen. xxxiii, 18; xxxiv, 20, 26; see Robinson, iii, 114). On the whole, it seems plain that the Canaanite, who was "in the land" before the coming of Abraham, had already built cities of more or less importance, which had been largely increased by the time of the return from Egypt. Even before the time of Abraham there were cities in Egypt (Gen. xii, 14, 15; Num. xiii, 22; see Wilkinson, i, 4, 5). The Israelites, during their sojourn there, were employed in building or fortifying the "treasure cities" of Pithom (Abbasieh) and Raamses (Exod. i, 11; Herod. ii, 158; see Robinson, i, 79); but their pastoral habits make it unlikely that they should build, still less fortify, cities of their own in Goshen (Gen. xlvi, 34; xlvii, 1-11). Meanwhile the settled inhabitants of Syria on both sides of the Jordan had grown in power, and in number of "fenced cities." In the kingdom of Sihon are many names of cities preserved to the present day; and in the kingdom of Og, in Bashan, were sixty "great cities with walls and brazen bars," besides unwalled villages; and also twenty-three cities in Gilead, which were occupied, and perhaps partly rebuilt or fortified, by the tribes on the east of Jordan (Num. xxi, 21, 32, 33, 35; xxxii, 1-3, 34, 42; Deut. iii, 4, 5, 14; Josh. xi, xiii; 1 Kings iv, 13; 1 Chron. ii, 22; see Burckhardt, *Syria*, p. 311, 457; Porter, *Damascus*, ii, 195, 196, 206, 259, 275). On the west of Jordan, whilst 31 "royal" cities are enumerated (Josh. xii), in the district assigned to Judah 125 "cities" with villages are reckoned (Josh. xv); in Benjamin, 26; to Simeon, 17; Zebulun, 12; Issachar, 16; Asher, 22; Naphtali, 19; Dan, 17 (Josh. xviii, xix). But from some of these the possessors were not expelled till a late period, and Jerusalem itself was not captured till the time of David (2 Sam. v, 6-9). From this time the Hebrews became a city-dwelling and agricultural rather than a pastoral people. David enlarged Jerusalem; and Solomon, besides embellishing his capital, also built or rebuilt Tadmor, Palmyra, Gezer, Beth-horon, Hazor, and Megiddo, besides store-cities (2 Sam. v, 7, 9, 10; 1 Kings ix, 15-18; 2 Chron. viii, 6). To Solomon also is ascribed by Eastern tradition the building of Persepolis (Chardin, *Voyage*, viii, 390; Mandelslo, i, 4; Kurân, c. xxxviii). The works of Jeroboam at Shechem (1 Kings xii, 25; Judg. ix, 45), of Rehoboam (2 Chron. xi, 5-10), of Baasha at Rama, interrupted by Asa (1 Kings xv, 17, 22), of Omri at Samaria (xvi, 24), the rebuilding of Jericho in the time of Ahab (xvi, 34), the works of Jehoshaphat (2 Chron. xvii, 12), of Jotham (2 Chron. xxvii, 4), the rebuilding of Jerusalem, and, later still, the works of Herod and his family, belong to their respective articles.

3. Collections of houses in Syria for social habitation may be classed under three heads: (1.) cities; (2.) towns, with citadels or towers for resort and defence; (3.) unwalled villages. The cities may be assumed to have been in almost all cases "fenced cities," i. e. possessing a wall with towers and gates (Lev. xxv, 29; Deut. ix, 1; Josh. ii, 15; vi, 20; 1 Sam. xxiii, 7; 1 Kings iv, 13; 2 Kings vi, 26; vii, 3; xviii, 8, 13; Acts ix, 25); and that, as a mark of conquest was to break down a portion at least of the city wall of the captured place, so the first care of the defenders, as of the Jews after their return from captivity, was to rebuild the fortifications (2 Kings xiv, 13, 22; 2 Chron. xxvi, 2, 6; xxxiii, 14; Neh. iii, iv, vi, vii; 1 Macc. iv, 60, 61; x, 45; Xen. *Hell.* ii, 2, 15). But around the city, especially in peaceable times, lay undefended suburbs (1 Chron. vi, 57 sq.; Num. xxxv, 1-5; Josh. xxi), to which the privileges of the city extended. (See below.) The city thus became the citadel, while the population overflowed into the suburbs (1 Macc. xi, 61). The absence of walls as indicating security in peaceable times, combined with populousness, as was the case in the flourishing period of Egypt, is illustrated by the prophet Zechariah (ii, 4; 1 Kings iv, 25; see Martineau, *East. Life*, i, 306).

According to Eastern custom, special cities were appointed to furnish special supplies for the service of the state: cities of store, for chariots, for horsemen, for building purposes, for provision for the royal table. Special governors for these and their surrounding districts were appointed by David and Solomon (1 Kings iv, 7; ix, 19; 1 Chron. xxvii, 25; 2 Chron. xvii, 12; xxi, 3; 1 Macc. x, 39; Xen. *Anab.* i, 4, 10). To this practice our Lord alludes in his parable of the pounds, and it agrees with the theory of Hindoo government, which was to be conducted by lords of single townships, of 10, 100, or 1000 towns (Luke xix, 17, 19; see Elphinstone, *India*, ch. ii, i, 39, and *App.* v, p. 485). To the Levites 48 cities were assigned, distributed throughout the country, together with a certain amount of suburban ground, and out of these 48, 13 were specially reserved for the family of Aaron, 9 in Judah and 4 in Benjamin, and 6 as refuge cities (Josh. xxi, 13, 42), but after the division of the kingdoms the Levites in Israel left their cities and resorted to Judah and Jerusalem (2 Chron. xi, 13, 14). (See below.)

4. The internal government of Jewish cities was vested before the Captivity in a council of elders, with judges, who were required to be priests: Josephus says seven judges, with two Levites as officers, ὑπηρέται (Deut. xxi, 5, 19; xvi, 18; xix, 17; Ruth iv, 2; Josephus, *Ant.* iv, 8, 14). Under the kings a president or governor appears to have been appointed (1 Kings

xxii, 26; 2 Chron. xviii, 25); and judges were sent out on circuit, who referred matters of doubt to a council composed of priests, Levites, and elders at Jerusalem (1 Chron. xxiii, 4; xxvi, 29; 2 Chron. xix, 5, 8, 10, 11). After the Captivity, Ezra made similar arrangements for the appointment of judges (Ezra vii, 25). In the time of Josephus there appear to have been councils in the provincial towns, with presidents in each, under the directions of the great council at Jerusalem (Josephus, *Ant.* xiv, 9, 4; *War*, ii, 21, 8; *Life*, 12, 13, 27, 34, 57, 61, 68, 74). See SANHEDRIM.

In many Eastern cities much space is occupied by gardens, and thus the size of the cities is much increased (Niebuhr, *Voyage*, ii, 172, 239; Conybeare and Howson, i, 96; *Eöthen*, p. 240). The vast extent of Nineveh and of Babylon may thus be in part accounted for (Diod. ii, 70; Quint. Curt. v, i, 26; Jonah iv, 11; see Chardin, *Voy.* vii, 273, 284; Porter, *Damascus*, i, 153; P. della Valle, ii, 33). In most Oriental cities the streets are extremely narrow, seldom allowing more than two loaded camels, or one camel and two foot passengers to pass each other, though it is clear that some of the streets of Nineveh must have been wide enough for chariots to pass each other (Nah. ii, 4; see Olearius, *Trav.* p. 294, 309; Burckhardt, *Trav. in Arabia*, i, 188; Buckingham, *Arab Tribes*, p. 330; Mrs. Poole, *Englishwoman in Egypt*, i, 141). The word for "streets" used by Nahum—(רְחֹבוֹת, from רָחָב, *broad*, πλατεῖαι)—is used also of streets or broad places in Jerusalem (Prov. i, 20; Jer. v, 1; xxii, 4; Cant. iii, 2); and it may be remarked that the thoroughfares (πλατεῖαι) into which the sick were brought to receive the shadow of Peter (Acts v, 15) were more likely to be the ordinary streets than the special *plazze* of the city. It seems likely that the immense concourse which resorted to Jerusalem at the feasts would induce wider streets than in other cities (see 1 Kings xx, 34). Herod built in Antioch a wide street paved with stone, and having covered ways on each side. Agrippa II paved Jerusalem with white stone (Josephus, *Ant.* xvi, 5, 2 and 3; xx, 9, 7). The streets of most cities of Palestine would not need paving, in consequence of the rocky nature of the foundations on which they lay. The Straight Street of Damascus is still clearly defined and recognisable (Irby and Mangles, v, 86; Robinson, new ed. of *Res.* iii, 454, 455). In building Cæsarea, Josephus says that Herod was careful to carry out the drainage effectually (Josephus, *Ant.* xv, 9. 6). The internal commerce of Jewish cities was probably carried on as now by means of bazaars (q. v.); for we read of the bakers' street (Jer. xxxvii, 21), and Josephus speaks of the wool market, the hardware market, a place of blacksmiths' shops, and the clothes market, at Jerusalem (*War*, v, 8, 1). See STREET.

The open spaces (πλατεῖαι) near the gates of towns were in ancient times, as they are still, used as places of assembly by the elders, of holding courts by kings and judges, and of general resort by citizens (Gen. xxiii, 10; Ruth v, 1; 2 Sam. xv, 2; xviii, 24; xxi, 12; 2 Kings vii, 1, 3, 20; 2 Chron. xviii, 9; xxxii, 6; Neh. viii, 1, 13, 16; Job xxix, 7; Jer. xvii, 19; Matt. vi, 5; Luke xiii, 26). They were also used as places of public exposure by way of punishment (Jer. xx, 2; Amos v, 10). See GATE. Prisons were, under the kingly government, within the royal precinct (Gen. xxxix, 20; 1 Kings xxii, 27; Jer. xxxii, 2; Neh. iii, 25; Acts xxi, 34; xxiii, 35).

Great pains were taken to supply Jerusalem with water, both by tanks and cisterns for rain-water, and by reservoirs supplied by aqueducts from distant springs. Such was the fountain of Gihon, the aqueduct of Hezekiah (2 Kings xx, 20; 2 Chron. xxxii, 30; Isa. xxii, 9), and of Solomon (Eccl. ii, 6), of which last water is still conveyed from near Bethlehem to Jerusalem (Maundrell, in Bohn's ed. of *Early Trav.* p. 457; Robinson, i, 514 sq.; Olin, ii, 129 sq.). Josephus also mentions an attempt made by Pilate to bring water to Jerusalem (*Ant.* xviii, 3, 2). See CONDUIT. Other cities appear to have been mostly contented with the fountains whose existence had probably led to their formation at the first. See WATER.

Burial-places, except in special cases, were outside the city (Num. xix, 11, 16; Matt. viii, 28; Luke vii, 12; John xix, 41; Heb. xiii, 12). See GRAVE.

5. A city and its inhabitants are frequently described in the sacred writings under the similitude of a mother and her children; hence the phrase "Children of Zion" (Joel ii, 23). Cities are also characterized as virgins, wives, widows, and harlots, according to their different conditions. Thus Jerusalem is called a virgin (Isa. xxxvii, 22); and the term harlot is used of Jerusalem (Isa. i, 21), also of Tyre (Isa. xxiii, 16), of Nineveh (Nah. iii, 4), and of Samaria (Ezek. xxiii, 5).

FENCED CITY (seldom simply מְצוּרָה, *metsurah'*, a *mound* or intrenchment of besiegers; "mount," Isa. xxix, 3; "munition," Nah. ii, 1), a town with walls of fortification (2 Chron. xi, 11; oftener with עָרֵי, *cities of*, 2 Chron. xiv, 5; or both words in the plur., xi, 10, 11, 23; xii, 4; xxi, 3). From the foregoing remarks, it will be understood how the phrases to *build* a city, and to *fortify* or *fence* it, in the Oriental idiom, mean generally the same thing. See FORTRESS. The fencing or fortification was usually with high walls, and watch-towers upon them (Deut. iii, 5). See FORTIFICATION. The walls of fortified cities were formed, in part at least, of combustible materials (Amos i, 7, 10, 14), the gates being covered with thick plates of iron or brass (Psa. cvii, 16; Isa. xlv, 2; Acts xii, 10). There was also within the city a citadel or tower, to which the inhabitants fled when the city itself could not be defended (Judg. ix, 46-52). They were often upon elevated ground, and were entered by a flight of steps (2 Kings x, 2; Isa. xxxvi, 1). See WALL.

CITY WITH SUBURBS (in the plur. עָרֵי מִגְרָשִׁים, *arey' migrashim'*, *cities of pastures*, 1 Chron. xlii, 2), i. e. a town surrounded by open pasture-grounds or commons. The forty-eight cities which were given to the Levites were thus denominated; the extent of the suburbs appertaining to each city is accurately defined in Num. xxxv, 1-8; Josh. xxi, 41, 42. They were evidently the surrounding districts to which the city gave the means of protection and safety. See SUBURB.

CITY OF REFUGE (usually in the plur. עָרֵי הַמִּקְלָט, *arey' ham-miklat'*, from קָלַט *contracted*, Gesenius, *Thes. Heb.* p. 1216; Sept. πόλεις τῶν φυγαδευτηρίων, φυγαδευτήρια, φυγαδεῖα; Vulg. *oppida in fugitivorum auxilia, præsidia, separata*, or *urbes fugitivorum*).

1. Among the Hebrews, six Levitical cities specially chosen for refuge to the involuntary homicide until released from banishment by the death of the high-priest (Num. xxxv, 6, 13, 15; Josh. xx, 2, 7, 9). See BLOOD-REVENGE. There were three on each side of Jordan. 1. KEDESH, in Naphtali, now *Kedes*, about twenty miles E.S.E. from Tyre, twelve S.S.W. from Banias (1 Chron. vi, 76; see Robinson, iii, 355; Benj. of Tudela, in the *Early Trav.* p. 89). 2. SHECHEM, in Mount Ephraim, *Nâbulus* (Josh. xxi, 21; 1 Chron. vi, 67; 2 Chron. x, 1; see Robinson, iii, 113). 3. HEBRON, in Judah, *el-Khŭlîl*. The last two were royal cities, and the latter sacerdotal also, inhabited by David, and fortified by Rehoboam (Josh. xxi, 13; 2 Sam. v, 5; 1 Chron. vi, 55; xxix, 27; 2 Chron. xi, 10; see Robinson, i, 314; ii, 454). 4. On the E. side of Jordan—BEZER, in the tribe of Reuben, in the plains of Moab, said in the Gemara to be opposite to Hebron, perhaps the later *Bosor*, and the present *Burazin* (Deut. iv, 43; Josh. xx, 8; xxi, 36; 1 Macc. v, 26; Josephus, *Ant.* iv, 7, 4; see Reland, p. 662). 5. RAMOTH-GILEAD, in the tribe of Gad, supposed to be on

or near the site of *es-Szalt* (Deut. iv, 43; Josh. xxi, 38; 1 Kings xxii, 3; see Reland, p. 966). 6. GOLAN, in Bashan, in the half-tribe of Manasseh, a town whose site has not been ascertained, but which doubtless gave its name to the district of Gaulonitis, *Jaulan* (Deut. iv, 43; Josh. xxi, 27; 1 Chron. vi, 71; Josephus, *Ant.* iv, 7; see Reland, p. 815; Porter, *Damascus*, ii, 251, 254; Burckhardt, *Syria*, p. 286). The Gemara notices that the cities on each side of the Jordan were nearly opposite each other, in accordance with the direction to divide the land into three parts (Deut. xix, 2; Reland, p. 662). Maimonides says all the forty-eight Levitical cities had the privilege of asylum, but that the six refuge-cities were required to receive and lodge the homicide gratuitously (Calmet *On Num.* xxxv).

The directions respecting the refuge-cities present some difficulties in interpretation. The Levitical cities were to have a space of 1000 cubits (about 583 yards) beyond the city wall for pasture and other purposes. Presently after, 2000 cubits are ordered to be the suburb limit (Num. xxxv, 4, 5). The solution of the difficulty may be, either the 2000 cubits are to be added to the 1000 as "fields of the suburbs" (Lev. xxv, 34), as appears to have been the case in the gift to Caleb, which excluded the city of Hebron, but included the "fields and villages of the city" (Josh. xxi, 11, 12, Patrick), or that the additional 2000 cubits were a special gift to the refuge-cities, while the other Levitical cities had only 1000 cubits for suburb. Calmet supposes the line of 2000 cubits to be measured parallel, and the 1000 perpendicular to the city wall; an explanation, however, which supposes all the cities to be of the same size (Calmet *On Numbers*, xxxv).

2. Places of refuge where, under the cover of religion, the guilty and the unfortunate might find shelter and protection were not unknown among the ancient heathen. The *jus asyli*, or right of shelter and impunity, was enjoyed by certain places reputed sacred, such as groves, temples, and altars. This protective power commonly spread itself over a considerable district round the holy spot, and was watched over and preserved by severe penalties. Among the Greeks and Romans the number of these places of asylum became in time very great, and led, by abuse, to a fresh increase of criminals (Tacitus, *Ann.* iii, 60, 63). Tiberius, in consequence, caused a solemn inquiry into their effects to be made, which resulted in a diminution of their number and a limitation of their privileges (Suetonius, *Tib.* 37, compared with Ernesti, *Excursus ad h. l.*; Osiander, *De Asylis Gentium*, in Gronov. *Thesaur.* t. vi). In the Apocrypha (2 Macc. iv, 33) mention is made of a city having the jus asyli—"Onias withdrew himself into a sanctuary at Daphne that lieth by Antiochia." The temple of Diana at Ephesus (Acts xix, 27) was also a heathen asylum, whose privileges in this respect increased with the progress of time.

This pagan custom passed into Christianity. As early as Constantine the Great, Christian churches were asylums for the unfortunate persons whom an outraged law or powerful enemies pursued (Smith's Gibbon, c. xx). Theodosius, in 431, extended this privilege to the houses, gardens, and other places which were under the jurisdiction of the churches, and the synod of Toledo, in 681, widened the right of asylum to thirty paces from each church. Since then this ecclesiastical privilege prevailed in the whole of Catholic Christendom, and was preserved undiminished, at least in Italy, so long as the papal independence remained (Hallam's *Middle Ages*, c. ix, pt. i). The right acted beneficially in ages when violence and revenge predominated, and fixed habitations were less common than now; but its tendency to transfer power from the magistrate to the priesthood was injurious to the inviolability of law and the steady administration of justice. It has accordingly in recent times been abrogated by most governments (*Conversations-Lexikon*, s. v.).

3. Among the Jews, the "cities of refuge" bore some resemblance to the asylum of the classic nations, but were happily exempt from the evil consequences to which reference has been made, and afford, even to the present day, no mean proof of the superior wisdom and benignant spirit of the Jewish laws. The institution was framed with a view to abate the evils which ensued from the old-established rights of the blood-avenger [see AVENGER OF BLOOD], and thereby to further the prevalence in the nation of a mild, gentle, and forgiving spirit. An inspection of the map will show how wisely these places were chosen so as to make a city of refuge easy of access from all parts of the land. To any one of these cities a person who had unawares and unintentionally slain any one might flee, and, if he reached it before he was overtaken by the avenger of blood, he was safe within its shelter, provided he did not remove more than a thousand yards from its circuit, nor quit the refuge till the decease of the high-priest under whom the homicide had taken place. If, however, he transgressed these provisions, the avenger might lawfully put him to death. The roads leading to the cities of refuge were to be kept in good repair. Before, however, the fugitive could avail himself of the shelter conceded by the laws, he was to undergo a solemn trial, and make it appear to the satisfaction of the magistrates of the place where the homicide was committed that it was purely accidental. Should he, however, be found to have been guilty of murder, he was delivered "into the hand of the avenger of blood, that he might die." The benefit of the protection afforded was common to strangers and sojourners with native Israelites.

According to the Rabbins, in order to give the fugitive all possible advantage in his flight, it was the business of the Sanhedrim to make the roads that led to the cities of refuge convenient by enlarging them, and removing every obstruction that might hurt his foot or hinder his speed. No hillock was left, no river was allowed over which there was not a bridge, and the road was at least two-and-thirty cubits broad. At every turning there were posts erected bearing the words *Refuge, Refuge*, to guide the unhappy man in his flight; and two students in the law were appointed to accompany him, that, if the avenger should overtake him before he reached the city, they might attempt to pacify him till the legal investigation could take place. When once settled in the city of refuge, the manslayer had a convenient habitation assigned him gratuitously, and the citizens were to teach him some trade whereby he might support himself. To render his confinement more easy, the mothers of the high-priests used to feed and clothe these unfortunate fugitives, that they might not be impatient and pray for the death of their sons, on whose decease they were restored to their liberty and their property. If the slayer died in the city of refuge before he was released, his bones were delivered to his relations, after the death of the high-priest, to be buried in the sepulchre of his fathers (Lewis, *Origines Hebraicæ*). If the homicide committed a fresh act of manslaughter, he was to flee to another city; but if he were a Levite, to wander from city to city. An idea prevailed that when the Messiah came three more cities would be added—a misinterpretation, as it seems, of Deut. xix, 8, 9 (Lightfoot, *Cent. Chor.* clii, 208). Jerusalem, to some extent, possessed the privilege of asylum under similar restrictions—a privilege accorded to Shimei, but forfeited by him (1 Kings ii, 36, 46).

That the right of asylum among the Jews was in later periods of their history so extended as to open the door to great abuses may be inferred from 1 Macc. x, 43, where unqualified impunity and exemption from both liabilities and penalties are promised, under the influence, not of the Mosaic law, but of heathen morals

and ambition, to "whosoever they be that flee unto the Temple at Jerusalem, or be within the liberties thereof." In the words now cited, reference appears to be made to a custom which prevailed from very early times, both among the chosen people and the nations of the world, of fleeing, in case of personal danger, to the altar. With the Jews, it was customary for the fugitive to lay hold of the horns of the altar, whether in the tabernacle or Temple; by which, however, shelter and security were obtained only for those who had committed sins of ignorance or inadvertence (Exod. xxi, 14; 1 Kings i, 50; ii, 28). From the last two passages, it seems that state criminals also sought the protection of the altar, probably more from the force of custom than any express law. Their safety, however, depended on the will of the king; for in the passages referred to it appears that in one case (that of Adonijah) life was spared, but in the other (that of Joab) it was taken away even "by the altar." Compare Matt. xxiii, 35. A similar instance is found in Grecian history, in the case of Pausanias, who fled from the populace, incensed on account of his public treachery, to the temple of Minerva, where he was starved to death by order of the Ephori, by blocking up the entrance and taking off the roof (compare Smith's *Dict. of Class. Antiq.* s. v. Asylum). See ASYLUM.

CITY OF DAVID, a section in the southern part of Jerusalem, embracing Mount Zion, where a fortress of the Jebusites stood. See JEBUS. David reduced the fortress, and built a new palace and city, to which he gave his own name (1 Chron. xi, 5). Bethlehem, the native town of David, is also called, from that circumstance, the city of David (Luke ii, 11).

CITY OF GOD, one of the names of ancient Jerusalem (Psa. xlvi, 4), and its appropriateness is evident from Deut. xii, 5.

HOLY CITY. The sacredness of the Temple extended itself in some measure over the city, and hence Jerusalem itself was called the *Holy City*, and is so distinguished in the East at the present day (Neh. xi, 1; Dan. ix, 24). See JERUSALEM.

LEVITICAL CITY. See LEVITE.

CITY OF PALM-TREES. See IR-HATTEMARIM.

SACERDOTAL CITY. See PRIEST.

CITY OF SALT. See IR-HAMMELAH.

TREASURE-CITY (in the plur. עָרֵי מִסְכְּנוֹת, *cities of provisions*, "store-cities," 1 Kings ix, 19). Pithom and Raamses (q. v.) are mentioned in Exod. i, 11, as treasure-cities built by Pharaoh by the unpaid labor of the Hebrews; they were probably magazines or dépôts for the royal revenue (which was doubtless paid in kind), such as are intimated in Gen. xli, 48; see xlviii, 26. The Jewish kings had similar places of public deposit (2 Chron. viii, 4, 6; xvi, 4; xvii, 2). See TREASURE.

Civil Administration OF THE HEBREWS. See GOVERNMENT (OF THE HEBREWS).

Clagett, WILLIAM, D.D., a divine of the Church of England, was born at St. Edmundsbury, Suffolk, 1646; entered Emmanuel College, Cambridge, 1659; and took his degrees there, the final one of D.D. in 1683. After preaching seven years in his native town he became preacher of Gray's Inn, London, and rector of Farnham Royal in 1683. He died March 28, 1688. Among his writings are, *A Discourse concerning the Operations of the Holy Spirit*, against Dr. Owen (Lond. 1680, 2 vols. 8vo); *Sermons* (Lond. 1704-1720, 4 vols. 8vo); and several pamphlets on the Romish controversy.—Kippis, *Biographia Britannica*, iii, 592 sq.; Darling, *Cyclopædia Bibliographica*, i, 666.

Claggett, THOMAS JOHN, D.D., a bishop of the Protestant Episcopal Church, was born in Prince George County, Md., on the 2d of October, 1743, and graduated at Princeton 1764. He went to England for ordination in 1767, and on his return to America became rector of All Saint's parish, Md. On the breaking out of the Revolution he retired to Prince George's, and in 1779 began to officiate there in St. Paul's parish. In 1792 he was elected to the episcopate, being the first bishop that was consecrated on this side the Atlantic. In 1800 he was chaplain to the Senate of the United States; in 1808 he became rector of Trinity Church, Upper Marlborough, Md. He died on the 2d of August, 1816.—Sprague, *Annals*, v, 252.

Clairvaux (CLARAVALLIS), the name of a celebrated Cistercian abbey, in a valley of the Department Aube, in France. Bernard became its abbot in 1115, and the monastery was the model of monasticism in the 12th and 13th centuries.—Neander, *Ch. History*, iv, 254. See BERNARD; CISTERCIANS.

Clap, THOMAS, a Congregational minister, was born at Scituate, Mass., June 26, 1703, and graduated at Harvard 1722. He was ordained pastor at Windham, Aug. 3, 1726; was elected to the rectorship of Yale College in 1739, and entered upon the duties of the office April 2, 1740. He devoted himself energetically to the work of the college; framed its code of laws (1748, Latin, "the first book ever printed in New Haven"); improved its library, and in various ways strengthened the institution. He was especially noted for his knowledge of mathematics and physics, and constructed the first orrery made in America. His opposition to Whitefield, and other causes, raised up a party against him, and in 1765 he resigned his office; the corporation, however, passing a vote "expressive of their high estimation of his character and services." He died in New Haven, January 7, 1767. President Clap published *An Introduction to the Study of Philosophy, exhibiting a general View of all the Arts and Sciences* (1743); *The Religious Constitution of Colleges, especially of Yale College, New Haven* (1754); *A brief History and Vindication of the Doctrines received and established in the Churches of New England, with a Specimen of the new scheme of Religion beginning to prevail* (1755); *An Essay on the Nature and Foundation of moral Virtue and Obligation* (1765); *Annals or History of Yale College* (1766); *Conjectures upon the Nature and Motions of Meteors which are above the Atmosphere* (post, 1781).—Sprague, *Annals*, i, 348; Allen, *American Biography*, s. v.

Clara, or **Clare**, a saint of the Roman Catholic Church, was born at Assisi, Italy, 1193, of a noble family. She abandoned her home in 1212, and was received by Francis of Assisi, who cut off her hair, and replaced her fine clothing by a piece of sackcloth tied about her with a cord. Her parents strenuously resisted this step; but, under the guidance of Francis, she disobeyed them, and devoted herself to monastic life. She practised unheard of austerities, mournful to read of as described by Butler (cited below). Clara was the founder of the Clarisses, or nuns of St. Clara (q. v). See Butler, *Lives of Saints*, August 12; Lewis, *Bible, Missal, and Breviary*, i, 110.

Clara. See ABRAHAM À SANCTA CLARA.

Clare, St., NUNS OF, an order sometimes called Clarisses or Clarissines, from their founder St. Clara (q. v.). The reputation of St. Clara soon gained her a large number of followers, for whom several monasteries were built in various parts of Italy. In the year 1219 the order passed into Spain, and soon after into France. The rules of the order were drawn up by St. Francis of Assisi in 1224: the Clarisses were forbidden to have any possessions, and silence was enjoined upon them from the compline till the tierce of the following day. Their habit was three tunics and a mantle. After the death of the founder the order made still greater progress, and counted for some time 2000 convents, with 54,000 nuns. After the Reformation there remained in Europe 900 convents, with about 25,000 nuns. In Italy there are monasteries of Clarisses, some of which take

the name of "Nuns of the Strict Observance," others that of "Solitaries of the Institution of St. Peter of Alcantara." After Cortez had conquered Mexico, Isabella of Portugal, wife of Charles V, sent thither some nuns of the order of St. Clara, who made several settlements there. Near their monasteries were founded communities of Indian young women, to be instructed by the Clarisses in religion, and such works as were suitable to persons of their sex. When Pope Urban IV mitigated the original rule, those who adopted the mitigated rule were called Urbanists, while the name of Clarisses remained to those who adhered to the original rule. A still stricter rule was observed by the *Congregation of St. Colette*, founded by St. Colette, who died in 1447, which was again surpassed in austerity by the discalceate Congregation of the Strictest Observance, founded in 1631 in Italy, and the Hermitesses of St. Peter of Alcantara (or Alcantarines), founded in 1676. According to the statistics of 1862, convents were found in Italy, France, Austria, Bavaria, Switzerland, Poland, Belgium, Holland, England, Scotland, Spain, Prussia, Ireland, at Macao and Manilla in Asia, in Mexico, and in Central and South America. The number of members was about 6000.—Fehr, *Geschichte der Mönchsorden*, i, 456 sq. See FRANCIS OF ASSISI.

Clarenbach. See KLARENBACH.

Clarendon Constitutions, 1164. A struggle between the crown and the hierarchy in England began with the elevation of Thomas à Becket to the archiepiscopal chair (June, 1162). The pomp-loving courtier, brave warrior, and powerful statesman, the favorite and confidant of Henry II, had become a severe ascetic, a zealous hierarch, and the opponent of the king. At the council held by Alexander III in May, 1163, at Tours, Becket, with other English prelates, appeared, and was received with distinction by the pope. As soon as he returned, he attempted to execute the resolutions of the council in his province. He claimed certain possessions, which, as he asserted, had been long alienated from the see of Canterbury, and protested against the levy of a universal tax on real estate which the king demanded for state purposes. This already had occasioned a contest with the king, and a breach was almost effected at the Imperial Diet in Westminster, called by the king to reform the abuses of the ecclesiastical courts, which were made inaccessible to the arm of justice. Cases of this kind had often occurred within a few years, and the archbishop now again opposed the demands of the king and the barons, while almost all the bishops answered in the affirmative to the question of the king if they would further support the "old customs of the kingdom," but with the addition of the dangerous clause, *salvo ordine suo et jure ecclesiæ*. At the prayers of the bishops and others high in office, perhaps also under admonitions from the pope, Becket also yielded at length.

To ratify the concessions made by the bishops with due solemnity, and in general to settle the points at issue between Church and crown, the king, in January, 1164, summoned an assembly of prelates and barons at Clarendon, a royal summer residence near Salisbury. The attendance was large. Becket appeared, but only to revoke the concessions he had made, and to declare them treason to the inalienable rights of the Church. But at last, overwhelmed by prayers and threats, Becket once more pledged his priestly word to support faithfully the ancient customs. The conferences were soon ended. Their results were the *Clarendon Constitutions*, or, as they were called, *consuetudines recognitæ*, in sixteen chapters, the contents of which are substantially the following (with the judgment of the pope upon them appended in italics):—1. Disputes concerning the right of patronage between laymen, or between clergymen and laymen, or between clergymen only, shall be discussed and settled at the court of the king. (*Condemned by the pope.*) 2. Churches belonging to the king's fief cannot be given permanently away without his consent. (*Tolerated.*) 3. Clergymen accused of any crime must, upon a summons from a royal judge, appear at the king's court, where it will be decided whether the matter is to be handed over to a civil or ecclesiastical court; in the latter case, a delegate appointed by the king's judge is to be present at the trial. If the accused is found guilty, or confesses, the Church shall not further protect him. (*Condemned.*) 4. Archbishops, bishops, or high officials of the kingdom shall not leave the kingdom without the king's permission; and, even in case of permission, must give security that on their journey they will undertake nothing to the disadvantage of the king or the kingdom. (*Condemned.*) 5. Excommunicated persons need not give bonds to remain where they are, nor to promise by oath to do so, but only to give bonds or a pledge to abide by the decision of the Church, that they may be absolved. (*Condemned.*) 6. Laymen can only be accused by trustworthy and legitimate witnesses in the presence of the bishop, yet so that the archdeacon does not lose his right. In cases where no one appears as the accuser, the sheriff, at the command of the bishop, is to assemble twelve respectable men from the neighborhood, who are to swear before the bishop to tell the truth according to their best understanding. (*Tolerated.*) 7. Vassals of the crown, and the officers of their households, shall not be excommunicated, nor their lands laid under interdict, without previous notice to the king or his judges, that they may decide if the case is to be handed over to a civil or ecclesiastical tribunal. (*Condemned.*) 8. Appeals are to be made from the archdeacon to the bishop, from the bishop to the archbishop, and from him to the king, upon whose command the matter shall then be settled in the archiepiscopal court of justice. No further appeal allowed without the king's leave. (*Condemned.*) 9. In case of any dispute between a layman and clergyman concerning a tenement which the latter declares to be a lay fee, if it prove upon trial before twelve respectable men to be a *lay* fee, and not an ecclesiastical fee, the cause to be finally tried in the king's court, unless both claim tenure under the same bishop or baron, in which case the plea shall be in his court. (*Condemned.*) 10. If any one belonging to a royal court or demesne is summoned by an archdeacon or a bishop on account of some misdemeanor for which he is amenable to them, and he appear not, he may be put under an interdict, but under the ban only after a previous notification of the royal official of the place, and after the latter has vainly attempted to induce the accused to give the Church satisfaction. (*Condemned.*) 11. Archbishops, bishops, and vassals of the crown must, as holders of royal fiefs, appear before the judges and officers of the king, and preserve all the privileges and customs of the crown-fief, and be present also, like the other barons, at the proceedings of the royal court of justice, except at capital trials. (*Tolerated.*) 12. In case of a vacancy of an archbishopric, bishopric, an abbey, or a priorate, the revenues shall accrue to the king. At the reappointment, the king shall assemble the ecclesiastical dignitaries; the election shall take place in the royal chapel, with the king's consent, and the advice of the grandees of the kingdom assembled by him. In the same place the elect shall, while preserving his ecclesiastical state, take the oath of fealty to the king, his feudal lord, before he is consecrated. (*Condemned.*) 13. If any baron or tenant *in capite* should encroach upon the rights or property of a prelate, the king shall see justice done, and if any one encroach upon the possessions of the king, the prelates shall treat with that person that he may give satisfaction. (*Tolerated.*) 14. Forfeited possessions the Church dare not refuse to make over to the king, as such belong to him, whether they be inside or outside of the Church. (*Tolerated.*) 15. Pleas of debt are to be

made in the king's court, whether due upon contract or not. (*Condemned.*) 16. Sons of peasants cannot be ordained without the consent of their feudal lords. (*Tolerated.*)

The high importance of these decrees of the Diet, for those times, is very obvious. On the one hand, the king intended by them to make the dignitaries of the Church as dependent upon the crown as the barons, and not only to put a limit to their jurisdiction, but also to secure the election and investiture of the prelates, and, by limitations of the appeals to the pope, to preserve his own paramount rights. On the other hand, his aim was to put the exercise of justice upon a sure footing, by subjecting the whole clergy to the common law of the country. The Constitutions contain the germs of the highly important institution of the wandering assizes, founded by him twelve years later at the Diet in Northampton. The barons willingly gave their consent to this improvement of the administration of justice, and still more to the limitation of the powers of the Church, but Becket did everything in his power to destroy the effect of the Constitutions. Above all, the sixteenth article was directed against the lower clergy, who were his principal support. When the Constitutions were submitted to him that he might put his seal to them, as all the other prelates did in token of their consent, he refused. Afterwards, when one of the three copies made of the document was handed to him for his seal and signature, he seems to have yielded, after some resistance, to the command of the king; but he had scarcely left Clarendon when he showed the bitterest repentance. He suspended himself from all his clerical functions for forty days, until he had received from the pope absolution for his oath, and the condemnation of the Constitutions. After twice vainly attempting to fly across the sea, he was accused of the violation of the Constitutions at the Diet in Northampton, in October of the same year, and was commanded to give an account of the expenditure of considerable sums he had been intrusted with during his administration as lord chancellor. The crucifix in his hand, he declared that he would not listen to the sentence, and left the chamber, followed by calumnies, but received outside with enthusiasm by the people. A few days later he had fled to Flanders. After an exile of six years, he returned to England on the 1st of December, 1170, as, apparently at least, a reconciliation had been effected between him and the king. But only four weeks later he was assassinated in his cathedral. The consequences of this murder are well known. In October, 1172, at Avranches, the king had to take an oath of purification before the papal legate, and revoke all which displeased the pope in the Clarendon Constitutions.—Herzog, *Real-Encyklopädie*, Supplement, i, 327 (from which this article is translated); Wilkins, *Concilia Magnæ Britanniæ*, i, 435; Landon, *Manual of Councils*, p. 132; Mosheim, *Church History*, cent. xii, bk. iii, pt. ii, ch. ii, § 12; Hume, *Hist. of England* (Harpers' ed.), i, 303-306.

Clarenines, a monastic order founded in the neighborhood of Ancona in 1302 by Angelo di Cordova, after the suppression of the Celestins (q. v.), of which he had been a member. Angelo was cited before pope John XXII as a separatist in 1317, but was acquitted. He died at Naples 1340. After his death the Clarenines submitted themselves to the ordinaries, and made great progress in several dioceses of Italy. In 1472, however, a large number of them joined the Minorites (q. v.). Finally, when pope Julius II reorganized the Franciscans (q. v.), dividing them into Observants and Conventuals, the Clarenines, after inclining for a while toward the latter, at last connected themselves with the Observants. See Wadding, *Annal. Minor; Henrion;* Fehr, *Allg. Gesch. der Mönchsorden*, i, 285; Wetzer u. Welte, *Kirchen-Lexikon*, ii, 567.

Clario, or Clarius, Isidore, a Benedictine monk, bishop, and writer, was born at the castle of Clario, near Brescia, 1495, and at an early age entered the monastery of Monte Cassino, where he studied especially the original languages of Scripture. Paul III sent him to the Council of Trent, where he greatly distinguished himself, especially in the discussions in the Vulgate. The pope made him bishop of Foligno. He died May 28, 1555. His chief literary labor was a correction of the Vulgate, with annotations (*Vulgata editio V. et N. T.*, Venice, 1542, 1557, 1564, fol.). He asserts that he had corrected 8000 places; and his first edition (1542) was put into the Index Expurgatorius. He borrowed largely, in his notes, from Sebastian Münster (q. v.).—Hoefer, *Nouvelle Biog. Générale*, ix, 662; Hook, *Eccl. Biog.* iv, 77.

Clark, Daniel A., A.M., a Congregational and Presbyterian minister, was born at Rahway, N J., March 1, 1779, and graduated at Princeton in 1808. While a student at Andover Theological Seminary he was licensed by the Presbytery of New Jersey, and in 1812 he was ordained and installed pastor of the Congregational Union Ch. of Braintree and Weymouth, Mass. Thence he removed in 1815 to Hanover, N. J., and in 1816 to Southbury, Conn., where, in addition to his work as a minister, he taught gratuitously "with a view of elevating the standard of education." In 1820 he was installed pastor of the west parish of Amherst, Mass., where he was involved in certain difficulties, and in 1826 he accepted a call to Bennington, Vt., where he was very active and useful. Leaving Bennington in 1830, he supplied Dr. Beman's pulpit in Troy, labored for a time in Utica, N.Y., and was installed pastor in Adams, Jefferson Co., N. Y., in 1832. In 1833 his health obliged him to withdraw from the ministry. He devoted the remainder of his days to literary pursuits, and died March 3, 1840. "Though practically a Congregationalist while he exercised his ministry in New England, he always retained his preference for the Presbyterian form of Church government, and resumed his relations with the Presbyterian Church as soon as he had the opportunity." Dr. Osgood (in Sprague, cited below) says: "The published sermons of Mr. Clark, I believe it is generally admitted, take rank with the ablest sermons which our country has produced." For his publications, see *His Complete Works, with a Biographical Sketch*, etc., by Rev. Geo. Shepard, D.D. (1846, 2 vols. 8vo); 5th edit. edited by his son J. H. Clark, M.D. (N. Y. 1855, 2 vols. 8vo).—Sprague, *Annals*, iv, 460.

Clark, John, a Baptist minister, was born near Inverness, Scotland, Nov. 29th, 1758. Having from his early boyhood a strong propensity for a seafaring life, he was for about one year on board of a privateer, afterwards sailed as second mate to the West Indies, and arriving at Barbadoes, was impressed into the British navy. Here he deserted, and the next vessel on which he engaged being captured by the Spaniards, he was for nineteen months a prisoner of war at Havana. Soon after his exchange he was a second time impressed, and, deserting again, reached Charleston, S. C. In 1785 he taught school in the back settlements of Carolina. Revisiting England, he became acquainted with Mr. Wesley, and after his return to this country in 1789 he became an itinerant preacher in Georgia. Finally he became a Baptist, and a member of the so-called "*Baptized Church of Christ*," or "*Friends of Humanity*," on account of their opposition to slavery. Remaining a few months in the "Florida Parishes," Louisiana, where he preached almost daily and with great acceptance, he travelled to Illinois on foot, and in 1811 revisited Louisiana, preaching wherever he had an opportunity, and travelling great distances, always on foot. He died in St. Louis Co., Mo., Oct. 11th, 1833.—Sprague, *Annals*, vi, 490.

Clark, John, a Methodist Episcopal minister, was born in Washington County, N. Y., July 30, 1797; was

converted in 1817, and in 1820 entered the New York Conference of the Methodist Episcopal Church as an itinerant. Having labored within its bounds for sixteen years, he was in 1836 transferred to the Illinois Conference, and in 1841 to Texas. In 1844 he was a delegate to the General Conference of that year, and at its close was at his own request transferred to the Troy Conference. He was again transferred, in 1852, to the Rock River Conference, and stationed in Chicago, where he died of cholera, July 11, 1853. In all parts of the country he was eminently well received, and wherever he was stationed he left behind him the reputation of an able and earnest Christian minister. His frontier labors, full of toil and peril, which he met with abounding courage and energy, are amply described in Hall's *Life of Rev. John Clark* (N.Y. 8vo). See also *Minutes of Conferences*, v, 485; Sprague, *Annals*, vii, 626; *Methodist Quarterly*, Jan. 1857, p. 148.

Clark, John Alonzo, D.D., a Protestant Episcopal minister, was born in Pittsfield, Mass., May 6, 1801, and graduated in Union College, July, 1823. He studied in the General Theological Seminary, New York, and was ordained deacon April 12, 1826, when he took charge of a missionary station at Palmyra, N.Y. In 1829 he became assistant of Christ Church, New York City. In 1832 he accepted the rectorship of Grace Church, Providence R.I., and in 1835 became rector of St. Andrew's, Philadelphia, where he labored for ten years with great acceptance and usefulness. His health failing, he made a visit to Europe, and on his return published *Glimpses of the Old World* (2 vols. 12mo, 1838). In 1843 he was compelled by the decline of his health to resign his rectorship, and on the 27th of November of that year he died. His publications, besides the *Travels* named above, are the following: *Christian Experience as displayed in the Life and Writings of St. Paul*; *The Pastor's Testimony* (1835); *The Young Disciple, or a Memoir of Anzonetta R. Peters* (12mo, 1836); *Gathered Fragments* (12mo, 1836); *A Walk about Zion* (12mo, 1836); *Gleanings by the Way* (12mo, 1842); a posthumous volume of sermons, entitled *Awake, thou Sleeper* (12mo).—Sprague, *Annals*, v, 674.

Clark, Peter, a Congregational minister, was a native of Watertown, Mass., born 1693, graduated at Harvard 1712, and was ordained pastor in Salem village (now Danvers) June 3, 1717. He published several controversial pamphlets concerning "Original Sin" in opposition to the Rev. Samuel Webster and Dr. Chauncy (1757-1760); *Scripture Grounds of the Baptism of Christian Infants asserted and defended in a Letter, etc.* (1735); also several occasional sermons. He died in June, 1768.—Sprague, *Annals*, i, 291.

Clark, Samuel, a Methodist Episcopal minister, was born about 1800, in Frederick County, Va., of pious parents; entered the Baltimore Conference in 1821, located in 1834; entered the Ohio Conference in 1836, located in 1841, and emigrated to Iowa (then a Territory); entered the Iowa Conference in 1844,, and, after various relations to this conference, died at his post, in Van Buren County, Iowa, Feb. 9, 1857. "This venerable man of God . . . . had gone up and down for nearly forty years, preaching 'Christ and the resurrection' to thousands, from the Atlantic to the western borders of civilization." He was formidable in debate, and ranked high as a minister and public speaker.—*Minutes of Conferences*, 1859, p. 243.

Clarke, Adam, LL.D., a Wesleyan Methodist minister, distinguished as a divine, an antiquarian, and an Oriental scholar, was born at Moybeg, Londonderry Co., Ireland, in 1760 or 1762 (his own mother could not fix the date). His father, who was a classical teacher, was a member of the Church of England, but his mother, who was of Scottish origin, was a Presbyterian. Adam, when a boy, was remarkable for physical vigor, but seemed rather stupid than otherwise, until about his eighth year, when the sarcasms of a schoolfellow upon his dulness seemed to rouse him from a lethargy. From that time he made rapid progress in learning, especially in the Latin language. In his 17th year his mind was brought, by the ministry of Mr. Brettell and Mr. Barber (Methodist preachers), under religious impressions, and in 1778 he joined the Methodist society at Mullica Hill, near Coleraine. He soon became a class-leader and home-missionary. Having been recommended to the notice of Wesley, he was sent by him in 1782 to Kingswood School, where he did not remain long. His sufferings there are amusingly detailed in his autobiography. While digging one day in the garden at Kingswood he found a half guinea, with which he bought a Hebrew Bible; and this (he says in his *Autobiography*) "laid the foundation of all his knowledge of the sacred writings of the Old Testament." Towards the end of 1782 he was sent out by Wesley as an itinerant preacher, and he remained in this laborious work with few interruptions until 1815. A more earnest, faithful, and diligent preacher never lived, and few more popular have ever appeared in England. To the last the chapels where he preached were filled to overflowing. Every part of Great Britain and Ireland, as well as Guernsey, Jersey, and the Shetland Islands, shared in his toils as preacher and missionary. In 1795 he was appointed to London, and again in 1805; and he now remained in the metropolis ten years, full of labors in the pastoral work, in the benevolent enterprises of the day, and in literary pursuits. He was thrice elected (1806, 1814, 1822) president of the British Conference.

While a travelling preacher, he found time for much study, especially in Oriental literature. In 1802 he published a *Bibliographical Dictionary* (6 vols. 12mo), which at once gave him a literary reputation. Before this, as early as 1798, he began to gather materials for a *Commentary on the Bible*, the first part of which was published in 1810, and the last in 1825. "In this arduous work," he says, "I have had no assistants, not even a single week's help from an amanuensis; no person to look for commonplaces, or refer to an ancient author, to find out the place and transcribe a passage of Latin, Greek, or any other language (which my memory had generally recalled), or to verify a quotation, the help excepted which I received in the chronological department from my own nephew, Mr. John Edward Clarke. I have labored alone for twenty-five years previously to the work being sent to the press, and fifteen years have been employed in bringing it through the press, so that nearly forty years of life have been so consumed" (*Autobiography*).

His literary labors in London from 1805 to 1815 (during which he "was abundant also in labors as pastor and preacher") were enormous. Soon after his settlement in the city he was called into the committee of the British and Foreign Bible Society, and for years he directed largely its publications in Oriental languages. In 1806 he published *The Bibliographical Miscellany* (2 vols.), a supplement to his Bibliographical Dictionary. In 1807 the University of Aberdeen gave him the degree of M.A., and in 1808 that of LL.D. In 1808 also appeared his *Succession of Sacred Literature*, vol. i (vol. ii by his son, J. B. B. Clarke, 1830, 8vo). At the end of that year the Bible Society requested that the rule of the Conference under which Dr. Clarke would be compelled to leave London might be suspended in his case, in order that he might remain in their service longer. The request was granted. In the same year the British government intrusted to him the arrangement, for publication, of old state papers, in continuation of Rymer's *Fœdera*. On this laborious and comparatively unprofitable task he spent the best part of ten years, being relieved from it in 1819. After the organization of the Wesleyan Missionary Society in 1814, he preached, spoke, and travelled largely in its service. During all this time he

was working on his *Commentary*, and in studying for it made himself more or less completely master, not only of Greek and Hebrew, but also of the Oriental languages. He had long been acquainted with the languages of modern Europe. These varied and extraordinary labors at length injured his health, and in 1815 he withdrew from London to a small estate at Millbrook, Lancashire. Here he continued to prosecute his literary labors, and especially his *Commentary*, which was now in an advanced state of preparation. In 1823 he returned to the vicinity of London, and fixed his residence at Haydon Hall, where he spent the remainder of his days, engaged in literary labor, and also in the service of the Church in various ways. Among his most important labors of this period was the organization of Methodism in the Shetland Islands, to which he made two missionary journeys (1826 and 1828). During the summer of 1832 he exerted himself too much, and died at Bayswater, Middlesex, August 26 of that year, of cholera.

Dr. Clarke's life was one of almost unparalleled industry as preacher, pastor, student, and author. His literary reputation rests chiefly upon his *Commentary* (last ed. Carlton and Porter, N. Y. 1866, 6 vols. 8vo), which has had a wider circulation than any other in the English language, except, perhaps, Matthew Henry's. It is now superseded by later works, but will always be cited with respect for its multifarious learning, and for the frequent originality and acuteness of its annotations. As a theologian, Dr. Clarke was an Arminian, and held the Wesleyan theology entire, with the exception of the doctrine of the Eternal Sonship of Christ. His error on this point drew out those admirable works, Watson's *Remarks on the Eternal Sonship* (*Works*, Lond. ed. vol. vii), and Treffry's *Inquiry into the Doctrine of the Eternal Sonship* (3d ed. Lond. 1849).

Besides the works mentioned, Dr. Clarke also published *Discourse on the Eucharist* (Lond. 1808, 8vo); *Memoirs of the Wesley Family* (Lond. 8vo, N. Y. 12mo, several editions). He also edited, with numerous additions, Baxter's *Christian Directory*, Fleury's *Manners of the Israelites*, Shuckford's *Sacred and Profane History*; Sturm's *Reflections on the Being and Attributes of God*; and Harmer's *Observations on various Passages of Scripture* (1808, 4 vols. 8vo). His contributions to periodicals, and his minor writings, pamphlets, etc. are too numerous to be mentioned. His *Miscellaneous Works* have been collected since his death (Lond. 13 vols. 8vo). See Clarke, J. B. B., *Life of A. Clarke* (Lond. 3 vols. 8vo); Southey, *Quarterly Rev.* li, 117; Etheridge, *Life of A. Clarke* (Lond. 1858, N. Y. 1859. 12mo); Everett, *Adam Clarke portrayed* (Lond. 1843; 2d ed. 1866, 2 vols.); Stevens, *History of Methodism*, ii, 291, et al. A monument to the memory of Dr. Clarke was erected at Port Rush, Ireland, in 1859, by contributions from both the Old and the New World.

Clarke, Edward Daniel, LL.D., an English divine, of note as a writer of travels, was born at Willingdon, Sussex, in 1769, and was educated at Jesus College, Cambridge. From 1790 to 1799 he acted as tutor and travelling companion in several families, travelling in France, Italy, Switzerland, and Germany. "In 1799 he set out on an extensive tour with Mr. Cripps, a young man of fortune; they traversed Denmark, Norway, Sweden, Lapland, Finland, Russia, the country of the Don Cossacks, Tartary, Asia Minor, Syria, Egypt, Greece, and did not return to England till 1802." He was ordained in 1805, and received the college living of Harlton; in 1809 he was presented to the living of Yeldham by his father-in-law. His *Travels* appeared between 1810 and 1819 (5 vols.). A sixth volume, edited by Robert Walpole, was brought out after his death, 4to (also in 11 vols. 8vo, 1816). In 1803 he published *Testimonies of different Authors respecting the colossal Statue of Ceres*, and in 1805 *A Dissertation on the Sarcophagus in the British Museum*. He died at London, March 9th, 1822 (*English Cyclopædia*, s. v.). See Otter, *Life and Remains of Edward Daniel Clarke* (Lond. 1825, 2 vols. 8vo).

Clarke, John, a distinguished Baptist minister, was born in England, Oct. 8, 1609. He practised medicine in London for some time, and came to Boston as a physician (date unknown). Dissatisfied with the management of the colony of Massachusetts, he left it, and with others purchased Aquetneck of the Indians, and called it Rhode Island. The deed dates March 24, 1638. In 1639 he, with eight others, founded Newport, R. I. It is not known when he became a Baptist or a preacher, but in 1644 he became first pastor of the Baptist church in Newport. In 1651 he visited a friend (William Witter) at Lynn, Mass.; held a religious meeting there; was arrested and fined by Judge Endicott twenty pounds, under penalty of public whipping in case the fine was not paid. Some of Mr. Clarke's friends paid his fine, but one of his companions (Mr. Holmes) was severely whipped. In 1651 he went to England to promote the interests of religious freedom in R. Island, and to have Mr. Coddington's commission as governor revoked. He accomplished this object. While in England he published *Ill News from New England, or a Narrative of New England's Persecution; wherein it is declared, that while Old England is becoming New, New England is becoming Old*; also, *Four Proposals to Parliament and Four Conclusions, touching the Faith and Order of the Gospel of Christ out of his last Will and Testament*, 4to, p. 76. In 1664 he returned to Newport, where he remained as pastor and physician until his death, April 20, 1676.—Backus, *Church History of New England*, vol. iii; Benedict, *History of the Baptists*, vol. i; Allen, *Am. Biog. Dictionary*, s. v.; Sprague, *Annals*, vi, 21.

Clarke, John, dean of Sarum (brother of Dr. Samuel Clarke), was born at Norwich, and bred a weaver, but was afterwards educated at Cambridge, where he received the degree of D.D. He obtained a prebend at Norwich, was appointed chaplain to the king, and, finally, dean of Salisbury. He died in 1759. His principal writings are, *An Inquiry into the Cause and Origin of Evil* (Boyle Lecture, Lond. 1720-21, 2 vols. 8vo); a *Demonstration of Newton's Philosophy* (Lond. 1730, 8vo). His translation of *Grotius de Veritate* is still reprinted. He furnished the notes to Wharton's *Religion of Nature*.

Clarke, Samuel, a Nonconformist, was born in Warwickshire, 1599; educated at Emmanuel College, Cambridge, and after preaching as an evangelist at Shotwick, and Coventry, and at Warwick (where he was chaplain to the earl), he became minister of Bennet Fink, London. He was ejected in 1662, and lived in studious retirement until his death in 1682. His chief works are *Marrow of Ecclesiastical History* (Lond. 1675, 2 vols. fol.); *A General Martyrology* (Lond. 1677, 3d ed. fol.); *Mirror for Saints and Sinners* (Lond. 1671, 2 vols. fol.); *Medulla Theologiæ* (1659, fol.).—Hook, *Eccles. Biography*, iv, 79; Calamy, *Nonconformists' Memorial*, i, 83.

Clarke, Samuel, D.D., a celebrated English divine and metaphysician, was born at Norwich, October 11, 1675. He received his first education in the free-school of Norwich, but was entered at 1691 in Caius College, Cambridge. (The following account, so far as the facts of Clarke's life are concerned, is modified from the *English Cyclopædia*, which is based on the *Biographia Britannica*.) At twenty-one, after closely studying and justly appreciating the reasonings of Newton's "Principia," which had then just appeared, he published a new version of the text of Rohault's *Physics*, with numerous critical notes, added with the view of bringing the Cartesian system into disrepute by exposing its fallacies. After passing through four editions as the University text-book, it gave place, as Clarke desired, to the adoption of undisguised New-

tonian treatises. He now went through a diligent course of Biblical reading in the original languages, in the course of which he carefully studied the early Christian fathers. On his ordination he was introduced to Dr. More, bishop of Norwich, by Whiston, whom he succeeded as domestic chaplain to that bishop for twelve years. In 1699 he published three essays on *Confirmation*, *Baptism*, and *Repentance*, together with *Reflections on Toland's Amyntor*, concerning the uncanonical Gospels. Two years afterwards followed his *Paraphrase on the Four Gospels*, which induced Bishop More to present him with the living of Drayton, near Norwich. In 1704 he was appointed to preach the Boyle lecture at Oxford, when he chose for his subject *The Being and Attributes of God.* The satisfaction which he gave on this occasion led to his reelection the following year, when he read a series of lectures on the *Evidences of natural and revealed Religion.* These discourses passed through several editions. Clarke's argument for the being of God "rests upon the fact that we have the conceptions of *time* and *space*, expressive of certain attributes or qualities—the one eternal, the other illimitable in its nature. But every quality must have a coexistent subject to which it belongs, and therefore, he argues, there must exist a *being* who possesses these attributes of infinity—that is, there must be a God. The similarity between Clarke's argument and that of Spinoza, in many points, is at once evident. They both started with the idea of necessary *existence*, showing that if any thing exist *now*, *something* must have existed from eternity. The distinction between the two arguments arises from their different determination of the *absolute idea* from which our reasoning must commence. Clarke affirmed the idea of infinite *attributes* to be fundamental, and then inferred an infinite substance. Spinoza began with the infinite substance, and inferred the attributes. The result was that the latter rested finally in the notion of substance as identical with God, and reduced the common theism to pantheism; the former, reasoning from the attributes, was open upon other evidence to conceive of them as existing in a divine personality—in the God of Christianity. The clearness, however, with which both grasped the idea of *the infinite*, as one of the necessary conceptions of the human mind, is in either case abundantly manifest" (Morell, *History of Modern Philosophy*, chap. ii, § 2).

Numerous replies and objections to this *à priori* argument appeared at the time of its first publication. (See a list in Kippis's *Biog. Britannica*, and the correspondence between Butler, afterwards bishop of Durham, and Clarke, printed at the end of Bishop Butler's Works.) One of the principal was 'An Inquiry into the Ideas of Space, Time,' etc., by Bishop Law. The *Evidences* also met with strong opposition. See GOD; NATURAL THEOLOGY. The foundation of morality, according to Clarke, consists in the immutable differences, relations, and eternal fitness of things. The last expression, being of frequent occurrence in this discourse, acquired a fashionable usage in the ethical vocabularies of the day. Regardless of moral sentiment, so fully developed since by Shaftesbury, Hutcheson, and Adam Smith, Clarke insists solely upon the principle that the criterion of moral rectitude is in the conformity to, or deviation from, the natural and eternal fitness of things; in other words, that an immoral act is an irrational act—that is, an act in violation of the actual ratios of existent things. The endeavor to reduce moral philosophy to mathematical certainty was characteristic of that age, and led to the formation of theories remarkable perhaps more for their ingenuity than utility. Dr. Price is an apologist for the moral theory of Clarke, and among its oppugners we may instance Sir James Mackintosh, *Progress of Ethical Philosophy*, p. 78 sq.; see also Whewell, *Hist. of Moral Philosophy*, lect. v.

In 1706 Clarke obtained the rectory of St. Bennett's, in London. He published in the same year an answer to the treatise of Dr. Dodwell "On the Soul," in which that divine contends that it is not immortal until made so by baptism. Several rejoinders followed on each side. His patron, Dr. More, next procured for him the rectorship of St. James's and a chaplaincy to Queen Anne, which induced him to take his degree of D.D. In 1712 appeared his *Scripture Doctrine of the Trinity*, a work which involved him for the remainder of his life in a controversy, in which his principal adversary was Dr. Waterland. A full account of the controversy may be found in Van Mildert's *Life of Waterland* (see also WATERLAND). The Lower House of Convocation, in 1714, complained to the bishops of the heterodox and dangerous tendency of its Arian tenets, and Clarke was prevailed upon to apologize, and to declare his intention not to write any more upon the Trinity. A circumstantial account of this proceeding is given in the *Apology for Dr. Clarke*, 1714.

"Clarke's views were, in reality, a reproduction of the Origenistic and High-Arian doctrine of subordination, as distinguished from the Athanasian. His positions were the following: The supreme and only God is the Father—the sole origin of all being, power, and authority. 'Concerning the Father, it would be the highest blasphemy to affirm that he could possibly have become man, or that he could possibly have suffered in any sense, in any supposition, in any capacity, in any circumstance, in any state, or in any nature whatever.' With the Father there has existed 'from the beginning' a second divine Person, who is called his Word or Son; who derives his being or essence, and all his attributes, from the Father, not by *mere necessity of nature, but by an act of the Father's optional will.* It is not certain whether the Son existed from all eternity, or only before all worlds; neither is it certain whether the Son was begotten from the same essence with the Father or made out of nothing. 'Both are worthy of censure who, on the one hand, affirm that the Son was made out of nothing, or, on the other, affirm that he is the self-existent substance.' Clarke will not be positive upon these points, because of the danger of presuming to be able to define the particular metaphysical manner of the Son's deriving his essence from the Father. With the Father a third Person has also existed, deriving his essence from him through the Son. This Person has higher titles ascribed to him than to any angel, or other created being whatsoever; but is nowhere called God in Scripture, being subordinate to the Son, both by *nature* and by the *will* of the Father. The error of Clarke originated in his failure to discriminate carefully between the essence and the hypostasis. Hence, in quoting from the Scriptures and the fathers, he refers to the *essential nature* phraseology that implies subordination, and which was intended by those employing it to apply only to the *hypostatical character*. He even cites such high Trinitarians as Athanasius and Hilary as holding and teaching that the subordination of the Son to the Father relates to the Son's *essence*. The term 'unbegotten' he also held, as did the Arians, to be a synonym with 'uncreated,' so that the term 'begotten' must necessarily signify 'created.' Thus, misconceiving the Nicene use of these two terms, he endeavors to prove that the Nicene Trinitarians taught that the Father alone possesses necessary existence, while the Son exists contingently. But both of these terms, as we have seen, were limited by the Council of Nice to the Person, and have no relation to the essence. The essence, as such, neither begets nor is begotten. They merely indicate the peculiar manner in which the first and second hypostasis participate in one and the same eternal substance or nature. In this use of the terms, consequently, 'begotten' signifies 'uncreated' as much as does 'unbegotten.' The Begotten Son is as necessarily existent as the Unbegotten Father, because the essence is the seat and

source of necessary existence, and this is possessed alike by both—in the instance of the first Person by paternity, and of the second by filiation" (Shedd, *History of Christian Doctrine*, i, 386-388).

"The point on which Clarke's philosophical fame chiefly rests, and to which he devoted a very considerable portion of his life, was his controversy upon *Liberty and Necessity*—a controversy in which he stood opposed to Leibnitz and Collins, and by which he endeavored to overturn, finally, the fatalistic conclusions of Spinozism. Throughout this contest, the victory in which was claimed on both sides, Clarke maintained most powerfully the doctrine of Free-will, and, accordingly, here also manifested his opposition to the philosophy which tends to merge the idea of self either into that of nature or of God. Of the three fundamental conceptions, therefore, from which all philosophy springs, those of finite self and the infinite held in the writings of Clarke by far the most prominent place, so that we may properly regard him as the chief representative of the idealistic tendency during the age immediately succeeding Locke, as Cudworth was during the age that immediately preceded him" (Morell, *History of Modern Philosophy*, pt. i, ch. ii, § 2).

In 1724 Clarke obtained the mastership of Wigston Hospital, and published a volume of sermons. He died rather suddenly in May, 1729. His *Exposition of the Church Catechism* and *Sermons* were published after his death (London, 1730, 10 vols. 8vo). In the *Catechism* he teaches that worship should be paid to the Father only, through the Son, and in the Holy Spirit. The moral character of Clarke is praised by all his biographers. His principal works were translated into German by Semler, and prepared the way for German Rationalism. "He was a wary and very skilful disputant, well disciplined in the scholastic logic. Inferior to Locke in comprehensiveness and originality, he was greatly superior to him in acquirements, being eminent as a divine, a mathematician, a metaphysician, and a philologist" (*English Cyclopædia*). His *Works* were published in 1738, in 4 vols. fol., of which the first contains his Life (by Hoadley), and 114 Sermons, published from his MS.; the second contains 76 Sermons and the Boyle Lectures; the third, a paraphrase of the Four Evangelists, with minor pieces; the fourth, the *Scripture Doctrine of the Trinity*, and a number of controversial tracts. Of the separate works numerous editions have been published. See, besides the writers already cited, (especially) Fairbairn's *Appendix to Dorner's Person of Christ* (Edinburgh translation, div. ii, vol. iii, 370 sq.); Hoadley, *Life of Clarke* (prefixed to *Works*, 4 vols.); Hook, *Eccles. Biography*, iv, 88; Watson, *Theological Institutes*, i, 331 (N. Y. ed.); Hagenbach, *History of Doctrines* (ed. by Smith), § 234, § 262.

Claromontānus, CODEX. See CLERMONT MANUSCRIPT.

Clarkson, THOMAS, was born March 26, 1760, at Wisbeach, Cambridgeshire, where his father, a clergyman, was master of the free grammar-school. He studied at St. John's College, Cambridge, and became a promoter of the anti-slavery agitation in Great Britain by a Latin prize-essay which he wrote in 1785, on the question, "Is it right to make slaves against their will?" In order to pursue the agitation of the question, he relinquished his chances of advancement in the Church, for which he was intended, and in which he had taken deacon's orders. His essay was translated into English, and had an extensive circulation. Thenceforth his life was devoted to the anti-slavery cause. He labored indefatigably to bring to light the iniquities and cruelties of the slave-trade, travelling some years thousands of miles in furtherance of his benevolent designs, and publishing on the subject almost every year. He lived to see not only the slave-trade abolished (in 1807), but the abolition of slavery itself in the British West Indies in 1833. He also took an active part in other benevolent schemes, particularly in the establishment of institutions for seamen. He died Sept. 26, 1846. His principal writings are, *History of the Abolition of the Slave-trade* (2 vols. 8vo, 1808; new ed., with Preface by Brougham, 1839); *A Portrait of Quakerism*, 1807; and a *Life of William Penn*, 1813. See Taylor, *Biog. Sketch of T. Clarkson* (Lond. 1847, 12mo).

Class-leader. See CLASS-MEETINGS.

Class-meetings. In the Methodist Episcopal Church, and indeed in all Methodist churches throughout the world, each congregation is divided into smaller companies, called *classes*. One of the more experienced members is appointed by the pastor to be *leader* of the class. "It is his duty," in the Methodist Episcopal Church, "I. To see each person in his class once a week at least; in order (1.) To inquire how their souls prosper. (2.) To advise, reprove, comfort, or exhort, as occasion may require. (3.) To receive what they are willing to give towards the relief of the preachers, church, and poor. II. To meet the ministers and the stewards of the society once a week; in order (1.) To inform the minister of any that are sick, or of any that walk disorderly, and will not be reproved. (2.) To pay the stewards what they have received of their several classes in the week preceding" (*Discipline*, pt. i, ch. ii, § 1).

A rudiment of the "class-meeting" may perhaps be found in the *Prophesyings* begun at Northampton. These were religious meetings for discussions on the Scriptures, prayer, and mutual instruction, conducted by clergymen under fixed rules. Bishop Grindal, Bishop Parkhurst, and other bishops highly approved them, but Queen Elizabeth prohibited them (May 7, 1577; Wilkins, *Concil.* iv, 289); they were, however, kept up in many places until Whitgift (who became archbishop of Canterbury in 1583) succeeded, in his violent way, in putting them down. Marsden (*Churches and Sects*, i, 250) remarks that these meetings gave Wesley "the idea of those social meetings in which the laity were to sustain an important part, though still under the guidance of their pastors, and in which the strength of Methodism consists" (see also Grant, *History of the English Church*, i, 426, London, 1811). A nearer approach to the "class-meeting" is to be found in the "*religious societies*" so widely diffused in the Church of England toward the close of the 17th century. According to Woodward (*Rise and Progress of the Religious Societies*, etc., Lond. 1744), it was "about 1666 that several young men in London, being brought to serious convictions by the preaching of their clergy, and applying to their ministers for religious counsel, were advised by them to meet together once a week, and apply themselves to good discourse and things wherein they might edify one another." These societies soon multiplied, and in 1678 a digest of rules for their conduct was adopted. Horneck, Beveridge, Stillingfleet, and Tillotson were among the promoters of these societies. By 1691 there were forty of these religious societies in London, and many in other parts of England. For their rules see Woodward (cited above), and also Hook, *Ecclesiastical Biography*, ii, 363; vi, 166. Dr. Clarke (*Memoirs of the Wesley Family*, Lond. 1848, vol. i, p. 144) gives a letter from Samuel Wesley, *Concerning the Religious Societies* (1699), in which they are named as supplying the lack of confraternities, sodalities, etc., in the Church of England, and their objects and methods are highly commended. On the Continent of Europe, the *Collegia Pietatis*, begun by Spener at about the same time, had ends and methods somewhat like those of the later class-meeting (see PIETISM; SPENER). Woodward's book was translated into German by the excellent D. E. Jablonski (q. v.), and similar societies were formed in various parts of Germany (*Christian Remembrancer*, July,

1854, 200). The nearest approach to the "class-meeting" in the Roman Church is perhaps to be found in the "Society of St. Vincent de Paul," which is composed of laymen, whose objects are mutual edification at periodical meetings, and the promotion of active charity. See VINCENT DE PAUL, SOCIETY OF.

When Wesley commenced his itinerant labors, the *religious societies* "received Mr. Wesley with open arms" (Coke and Moore, *Life of Wesley*, 1792, p. 6, 7). It is not at all unlikely that Wesley's views as to the true "social" life of Christianity received an impulse from these organizations. But, according to his own account, the "class-meeting" arose out of what was at first a merely fiscal plan to pay a church debt in Bristol (1742). "It was agreed (1.) That every member of the society that was able should contribute a penny a week; (2.) That the whole society should be divided into little companies or classes, about twelve in each class; and (3.) That one person in each should receive that contribution of the rest, and bring it in to the stewards weekly. Thus began that excellent institution, merely upon a temporal account, from which we reaped so many spiritual blessings that we soon fixed the same rule in all our societies" (Wesley, *Works*, N. Y. ed., vii, 350). Some time after, complaints being made to Wesley of the conduct of some members of the societies, it struck his mind, "This is the very thing we need. The leaders are the persons who may not only receive the contributions, but also watch over the souls of their brethren" (Wesley, *Works*, vii, 350). All Mr. Wesley's societies were soon divided into these classes, under rules which are still substantially observed (see above).

Much of the energy, unity, and stability of Methodism is due to the class system. The most intelligent and advanced Methodists hold it in high esteem. "Methodism holds that the communion of saints is part of a man's duty before he can claim to be a partaker of the body and blood of Christ, which is the public sign of fellowship with the whole body; and it says to a man that we hold that it is part of God's will that we should exhort one another, edify one another, confess our faults one to another, commune one with another on God's dealings with us and our walk with God. I am prepared to stand before members of the Lutheran Church, members of Presbyterian or Episcopal churches, and say, as I constantly do, You omit from your Church organization a vital part of New Testament Christianity. Your Church provides for the individual life; it provides for the public life of the Church, but it altogether leaves out the social life of the Church; and that is in the New Testament as I hold" (Arthur, *Speech at Wesleyan Conference, Sheffield*, 1863). "Nothing is so little understood amongst Christians as the nature of the 'communion of saints,' and its vitalizing influence in the conservation of religious life, and the enlargement of the kingdom of Christ. The class-meeting amongst the Methodists is nothing but the realization of this idea; it is the concert of souls actuated by religious feeling to carry out the great purpose of their 'high calling.' It has been the true life of every thing in Methodism, in every part of the world, like those agencies of nature which lie out of sight, but, by their penetrating influence, give vitality alike to the flower and the forest tree" (*Lond. Quar. Review*, Oct. 1854, p. 131). "Even if the class-meeting were less inseparably bound up with the entire disciplinary and financial economy of Methodism, still its advantages are so numerous that to sever it from the Methodistic system would be to inflict a paralyzing stroke, if not a death-blow. It affords opportunity for instruction more individual and personal than can be offered from the pulpit, for Christian fellowship more intimate than can be enjoyed in the congregation, for the needful outpourings of a mind burdened either with sorrow or with joy, for watching the progress of young disciples, for preventing backsliding by timely admonition, and for special oversight of the sick and the poor." See Keys, *Class-leaders' Manual* (N. Y. 1851, 18mo); Miley, *Treatise on Class-meetings* (Cincinnati, 1851, 18mo); Rosser, *On Class-meetings* (Richmond, 1855); Fish, *On Class-meetings* (Lond. 1850, 18mo); Wesley, *Works* (N. Y. edit.), v, 179, and often; Porter, *Compendium of Methodism*, 47, 458; Stevens, *History of Methodism*, ii, 430, 452; *Wesleyan Methodist Magazine*, July, 1863, p. 619; August, 1855, p. 704; Smith, *History of Wesleyan Methodism*, i, 660-672 (Lond. 1857, 8vo); *Meth. Quar. Rev.* 1862, 559, 662; *Life of Father Reeves, the Class-leader* (N. Y. Carlton and Porter).

Clau'da (Κλαύδη), a small island off the S.W. coast of Crete, which Paul passed on his tempestuous voyage to Rome (Acts xxvii, 16); called also *Gaudos* by Mela (ii, 7) and Pliny (*Hist. Nat.* iv, 42), *Claudus* (Κλαῦδος) by Ptolemy (iii, 7), and *Claudia* (Κλαυδία) in the *Stadiasmus Maris Magni*: it is still called *Clauda-nesa*, or *Gaudonesi*, by the Greeks, which the Italians have corrupted into *Gozzo* of Candia, to distinguish it from another island of the same name (anciently likewise called Claudos) near Malta. It is said to have been the Calypso's isle of mythic fame (Callin. ap. Strabo, p. 299). According to Pococke, it is now inhabited only by some thirty families (*East*, ii, 347; Prokesch, *Denkwürd.* i, 598). This otherwise insignificant islet is of great geographical importance in reference to the removal of some of the difficulties connected with Paul's shipwreck at Melita. The position of Clauda is nearly due W. of Cape Matala, on the S. coast of Crete [see FAIR HAVENS], and nearly due S. of Phœnice (q. v.). (See Ptol. iii, 17, 1; *Stadiasm.* p. 496, ed. Gail.) The ship was seized by the gale a little way after passing Cape Matala, when on her way from Fair Havens to Phœnice (Acts xxvii, 12-17). The storm came down from the island (κατ' αὐτῆς, v, 14), and there was danger lest the ship should be driven into the African Syrtis (v, 17). It is added that she was driven to Clauda, and ran under the lee of it (v, 16). We see at once that this is in harmony with, and confirmatory of, the arguments derivable from all the other geographical circumstances of the case (as well as from the etymology of the word Euroclydon, or Euro-Aquilo), which lead us to the conclusion that the gale came from the N.E., or, rather, E.N.E. This island is about seven miles long and three broad. Its W. shore, which trends in a N.W. direction, and is prolonged by "some rocks adjacent," would "afford the advantage of comparatively smooth water for some twelve or fifteen miles" (Adm. Penrose's MS. in Conybeare and Howson's *St. Paul*, ii, 827) to a ship "caught," as Paul's was, with "a tempestuous wind" from the N.E. Accordingly, under the lee shore of Clauda were taken those skilful precautions of "hoisting in the boat," "undergirding [or frapping] the ship," and making her snug by "lowering the gear;" which kept the ship (q. v.) from foundering under the pressure of a fortnight's "gale in Adria," and preserved her for the rough remedy of a wreck on the island of Melita (Smith, *Voy. and Shipwreck of St. Paul*, 2d ed. p. 92, 98, 106, 253). See SHIPWRECK.

Claude, JEAN, one of the most eminent of French Protestant divines, was born at La Sauvetat, near Agen, in the south of France, in 1619. He studied theology at Montauban, was ordained in 1645, and began his pastoral labors at La Trègue in the same year. In 1654 he was called to the church at Nismes, where he also taught in the theological school. In 1661 he was interdicted from his functions by the government, as a penalty for opposing, in the provincial synod, a project of union between Romanists and Protestants proposed by the governor of Languedoc. He went to Paris to have this penalty revoked, and while there was prevailed upon by Madame Turenne (who wished

to save her husband from Romanism) to write against Arnauld on the Eucharist, which led to a controversy of great note. Claude's tractate was circulated in MS.; but in 1664 Arnauld published his celebrated *Perpétuité de la Foi*, etc. [see ARNAULD], to which Claude replied in 1667 in his *Réponse au Traité de la Perpétuité de la Foi*, etc. (see an account of the controversy in Bayle, translation of 1736, 10 vols., iv, 366). He had previously been appointed minister at Montauban (1662), and also professor of theology. In 1666 he was interdicted again, and in that year he became pastor of the Reformed church at Charenton, near Paris. Here he remained, popular and useful, regarded as the chief literary defender of French Protestantism, until 1685. The eminent Port-Royalists, Arnauld and Nicole, found him a capable and worthy opponent. "In 1673 appeared his *Défense de la Réformation, ou Réponse aux Préjugés légitimes de Nicole* (latest ed. Paris, 1844, 8vo). In 1681 Claude had a controversial conference with Bossuet, after which he published *Réponse à la Conférence de Bossuet* (La Haye, 1683, 8vo). The conference, as usual, led to no approximation between the contending parties." In 1685 the revocation of the edict of Nantes by Louis XIV obliged Claude to seek refuge in Holland, where he was well received, on account both of his talents and his personal character, and the prince of Orange granted him a pension. He died Jan. 13, 1687. His *Plaintes des Protestans cruellement opprimés dans le Royaume de France* was published after his death (best ed. by Basnage, Cologne, 1763, 8vo). His style, though simple, was vigorous, being sustained by logical skill and erudition. La Devèze wrote a biography of Claude (Amsterdam, 1687)" (*Eng. Cyclopædia*). Several of his works are translated, viz. Townsend, *Claude's Historical Defence of the Reformation, with Life of Claude* (Lond. 1815, 2 vols. 8vo):—*Essay on the Composition of a Sermon* (latest ed. N. Y. 1853, 12mo):—*Account of the Complaints of the Protestants* (London, 1707, 12mo).—Haag, *La France Protestante*, iii, 473; Mosheim, *Ch. Hist.* cent. xvii, sec. ii, pt. i, ch. i, § 12, note; Bayle, l. c. On Claude's qualities as a preacher, and his homiletical services, see Vinet, *Histoire de la Prédication*, p. 303 sq. (Paris, 1860, 8vo).

Claude OF TURIN. See CLAUDIUS, CLEMENS.

Clau'dia (Κλαυδία, fem. of *Claudius*), a Christian female mentioned in 2 Tim. iv, 21, as saluting Timotheus, A.D. 64. She is thought to have become the wife of Pudens, who is mentioned in the same verse (although Linus is named between). It has been supposed that this Claudia was a British maiden, daughter of king Cogidunus, an ally of Rome (Tacitus, *Agricol.* 14), who took the name of his imperial patron, Tiberius Claudius. Pudens, we gather from an inscription at Chichester, and now in the gardens at Goodwood, was at one time in close connection with king Cogidunus, and gave an area for a temple of Neptune and Minerva, which was built by that king's authority. Claudia is said in Martial (xi, 53) to have been of British extraction (*cæruleis Britannis edita*). Moreover, she is there also called *Rufina*. Now Pomponia, wife of the late commander in Britain, Aulus Plautius, under whom Claudia's father was received into alliance, belonged to a house of which the Rufi were one of the chief branches. If she herself were a Rufa, and Claudia her protegée, the latter might well be called Rufina; and we know that Pomponia was tried for having embraced a foreign religion (*superstitionis externæ rea*) in the year 57 (Tacitus, *Ann.* xii, 32), so that there are many circumstances concurrent tending to give verisimilitude to the conjecture. On the other hand, it may be said that the attempt to identify this Claudia with the British lady Claudia, whose marriage to Pudens is celebrated by Martial (*Epig.* iv, 13), rests on no foundation beyond the identity of the names of the parties, and the fact that Martial calls Pudens "sanctus," and says he was a corrector of his verses. But the identity of names so common as Pudens and Claudia may be nothing more than a mere accidental coincidence; as for the term "sanctus," it is precisely one which a heathen would *not* have applied to a Christian, whom he would have regarded as the adherent of a "prava superstitio" (Pliny, *Ep. ad Traj.*); and as respects Pudens's correction of Martial's verses, until we know whether that was a correction of their style or a correction of their morals (in which case Pudens really must have done his work very badly), we can build nothing on it. On the other hand, the immoral character of Martial himself renders it improbable that he should have had a Christian and a friend of Paul among his friends. Further, Paul's Pudens and Claudia, if husband and wife, must have been married before A.D. 67, the latest date that can be assigned to Paul's writing. But Martial's epigram must have been written after this, perhaps several years after, for he came to Rome only in A.D. 66; so that, if they were married persons in 67, it is not likely Martial would celebrate their nuptials years after this. In fine, if Paul's Pudens and Claudia were unmarried at the time of his writing, they must at least have been persons of standing and reputation among the Christians; and, in this case, can it be supposed that a poet meaning to gratify them would invoke on them the favor of heathen deities, whom they had renounced with abhorrence? See Archdeacon Williams's pamphlet, *On Pudens and Claudia* (Lond. 1848); an article in the *Quart. Rev.* for July, 1858, entitled "The Romans at Colchester;" and an Excursus in Alford's *Greek Testament* (vol. iii, prolegg. p. 104), in which the contents of the two works first mentioned are embodied in a summary form. See also Conybeare and Howson's *St. Paul*, ii, 484 n.

Claudiānus Mamertus, a presbyter of Vienne, 5th century (died about 470), was a man of speculative talent, and well acquainted with the theology of Augustine. He wrote a treatise, *De statu Animæ* (*Bib. Max. Patr.* vi; *Bib. Patr. Galland.* x) against the anthropomorphism of Faustus of Rhegium (q. v.). He shows that "thought is inseparable from the essence of the soul, and that its spiritual activity is indestructible" (Neander, *History of Dogmas*, ed. Ryland, i, 340). For an analysis of the tract, see Dupin, *Eccles. Writers*, ii, 150 (Lond. 1693), and Clarke, *Succession of Sacred Literature*, ii, 249. Certain Latin hymns are attributed to Claudius, viz., *Contra Poetas vanos* (in the *De Statu* above), and *Pange lingua gloriosi*, which last, however, is more properly ascribed to Venatius Fortunatus. Sidonius Apollinaris, to whom the *De Anima* is dedicated, gives a glowing panegyric upon the talents of Claudianus.

Clau'dius (Κλαύδιος, for Lat. *Claudius*, perh. from *claudus*, *lame*), the name of two Romans mentioned in the N. T. See also FELIX.

1. The fourth Roman emperor (excluding J. Cæsar), who succeeded Caligula Jan. 25, A.D. 41. His full name was TIBERIUS CLAUDIUS DRUSUS NERO CÆSAR AUGUSTUS GERMANICUS. He was the son of Drusus and Antonia, and was born Aug. 1, B.C. 10, at Lyons, in Gaul. Losing his father in infancy, he was abandoned to the care and society of domestics, and despised by his imperial relatives (Tacitus, *Ann.* vi, 46, 1; Suetonius, *Claud.* 2). Notwithstanding the weakness of intellect resulting from this neglect, he devoted himself to literary pursuits, and was the author of several treatises. On the murder of Caligula, he hid himself through fear of sharing his relative's fate, but was found by a soldier, at whose feet he fell a suppliant, but who saluted him emperor; and he was thus unexpectedly, and almost by force, hurried into the popular assembly, and constituted emperor chiefly by the Prætorian Guards, under promise of a largess to

each soldier (Suetonius, *Claud.* 10). According to Josephus (*Ant.* xix, 2, 1, 3 and 4), the throne was in a great measure finally secured to him through the address and solicitations of Herod Agrippa I (q. v.). This obligation he returned by great and peculiar favors to that personage, for he enlarged the territory of Agrippa by adding to it Judæa, Samaria, and some districts of Lebanon, and appointed his brother Herod to the kingdom of Chalcis (Josephus, *Ant.* xix, 5, 1; Dion Cassius, lx, 8), giving to this latter also, after his brother's death, the presidency over the Temple at Jerusalem (Josephus, *Ant.* xx, 1, 3). Indeed, the Jews were generally treated by him with indulgence, especially those in Asia and Egypt (*Ant.* xix, 5, 2, 3; xx, 1, 2), although those in Palestine seem to have at times suffered much oppression at the hands of his governors (Tacitus, *Hist.* v, 9, etc.); but about the middle of his reign those who abode at Rome were all banished thence (Acts xviii, 2; see Hebenstreit, *De Judæis Roma exule*, Lips. 1714). From the language of Suetonius in relating this event (*Claud.* 25), it is evident that the Christians were also indiscriminately included in the execution of the edict as a sect of the Jews, if, indeed, they were not the more numerous part of that portion of the inhabitants: "Judæos, impulsore *Chresto* [i. e. *Christo*, see Rossal, *De Christo, in Chrestum commutato*, Grön. 1717] assidue tumultuantes, Româ expulit" ("He banished the Jews from Rome on account of the continual disturbances they made at the instigation of one Chrestus"). See CHRESTUS. The historian has evidently, in his ignorance of the merits of the case, attributed the proverbial insurrectionary spirit of the Jews to the influence of Christianity, a confusion which the disputes between the Jews and Christians on the subject of the Messiah may have contributed to increase. Suetonius does not give the exact year of this event, nor can it be made out from any other classical authority; he mentions it, however, in connection with other events which are known to have taken place at different dates between A.D. 44 and 53: a comparison of the associated events in the Acts appears to fix it in the year A.D. 49. Orosius (*Hist.* vii, 6) fixes it in the ninth year of Claudius, A.D. 49 or 50, referring to Josephus, who, however, says nothing about it. Pearson (*Annal. Paul.* p. 22) thinks the twelfth year more probable (A.D. 52 or 53). Anger remarks (*De ratione temporum in Actis App.* p. 117) that the edict of expulsion would hardly be published as long as Herod Agrippa was at Rome, i. e. before the year 49. The Jews, however, soon returned to Rome. Several famines occurred under Claudius from unfavorable harvests (Dion Cass. lx, 11; Euseb. *Chron. Armen.* i, 269, 271; Tacit. *Ann.* xii, 43), one of which, in the fourth year of his reign, under the procurators Cuspius Fadus and Tiberius Alexander (Joseph. *Ant.* xx, 2, 6; 5, 2), extended to Palestine and Syria, and appears to be that which was foretold by Agabus (Acts xi, 28; see Biscoe, *On Acts*, p. 60, 66; Lardner, *Credibility*, i, 11; Kitto, *Daily Bible Illust.*, last vol., p. 229-232; compare Kuinöl, in loc.; also Krebs, *Obs. in N. T.* p. 210). The conduct of Claudius during his government, in so far as it was not under the influence of his wives and freedmen, was mild and popular, and he made several beneficial enactments (see Merivale, *Romans under the Empire*, v, 474 sq.). He also erected numerous public buildings, and carried out several important public works. Having married his niece Agrippina, she prevailed upon him to set aside his own son Britannicus in favor of her own son Nero by a former marriage; but, discovering that he regretted this step, she poisoned him on the 13th of October, A.D. 54. (See Smith's *Dictionary of Classical Biography*, s. v.) During the reign of Claudius several persecutions of Christians by Jews took place in the dominions of Herod Agrippa, and in one of them the apostle James was executed. These dominions embraced by far the largest number of Christian congregations which were established up to the time of his death (A.D. 44). After his death, most of the territory over which he had ruled was reincorporated with the Roman empire, his son, Agrippa II, receiving only Trachonitis and Gaulonitis. Thus the Christian congregations began to attract to a larger degree the attention of the Roman authorities. At the same time, the apostle Paul began to establish congregations in many of the larger cities of the empire, while those of earlier origin assumed much larger dimensions. Nevertheless, the difference between Jews and Christians was not generally understood by the Roman authorities, and this circumstance had some beneficial, but also some injurious consequences as regarded the Christians. On the one hand, the missionary activity of the apostles and their helpers met with no opposition on the part of the Roman state (see Kraft, *Prolus. II de nascenti Christi ecclesia sectæ Judaicæ nomine tuta* [Erlang. 1771], and J. H. Ph. Seidenstücher, *Diss. de Christianis ad Trajanum usque a Cæsaribus et Senatu Romano pro cultoribus religionis Mosaicæ semper habitis* [Helmstädt, 1790]); on the other hand, many who might have been willing to join the Christian Church were deterred from doing so by the fear that the yoke of all the Jewish law would be placed upon them. (See Wetzer und Welte, *Kirchen-Lexikon*, s. v.)

Coin of Claudius.

Obverse: TI. CLAVD. CAESAR· AVG. P· M. TRP. VIIII· IMP. XVI (Tiberius Claudius Cæsar Augustus Pontifex Maximus, Tribunicia Potestate VIIII. Imperator XVI.); head, laureate, right. *Reverse:* Triumphal arch, on which equestrian figure and two trophies, inscribed DE BRITANN (De Britannis).

2. CLAUDIUS LYSIAS (Acts xxiii, 26). See LYSIAS.

Claudius, Clemens, bishop of Turin, sometimes called the "first Protestant Reformer," was born in Spain about the close of the eighth century, and educated under Felix of Urgel, whom he accompanied into France, Germany, and Italy, but whose errors there is no evidence that he adopted (Neander, *Church History*, iii, 430, Torrey's). Called to the court of Louis le Débonnaire to expound the Scriptures, he was sent by that monarch, when emperor, to the see of Turin (an event variously dated from 814 to 823) in order to oppose the prevailing tendency to image-worship. Not only against this form of idolatry, but against the worship of saints, of relics, and of the cross, against the abuse of pilgrimage, against the rising claims of tradition, prelacy, and the Romish see, he maintained a vigorous and able opposition till his death in 839, with such success and such results as usually attend those whose errors fall on the side of boldness rather than of timidity. Pope Paschal I reproved Claudius; he replied that so long as "the pope did the works of an apostle, he recognised his apostolical character, but otherwise, then Matt. xxiii, 2, 3, applied to him." His writings are chiefly commentaries on several books of Scripture, composed principally of extracts from the fathers, and especially from Augustine. Many remain in MS. in various French libraries. His *Comm. in Galatas*, and excerpts from his *Apologeticum*, are given in Bibl. Max. Patr. xiv. See Neander, *Ch. Hist.* iii, 429 sq.; Gieseler, *Ch. Hist.* per. iii, div. i, § 12; Hagenbach, *Hist. of Doctrines*, ii, 422; Murdoch's Mosheim, *Ch. Hist.* i, 218, 225; Rudelbach, *Claud. Taur. Episcop. inedit. opp. specimina* (Copenhagen, 1824, 8vo); Schmidt, in *Zeitschrift für die hist. Theol.* 1843.

Claudius, Matthias, better known under the

nom de plume of *Asmus*, or *Der Wandsbecker Bote* (the Wandsbeck Messenger), a German writer, was born at Rheinfeld, in Holstein, Jan. 2, 1740. He studied law at Jena, and, after having held for a short time an office at Darmstadt, became, in 1778, "revisor" at the Schleswig-Holstein Bank in Altona. He resided at the village of Wandsbeck, near Altona (hence his *nom de plume*), where he spent the greater part of his life. He died on the 21st of January, 1815, at Hamburg, in the house of his son-in-law, the publisher, Frederick Perthes. Claudius is still regarded as one of the most gifted popular writers of Germany, and his books had a very large circulation during his lifetime. He was on terms of intimacy with Voss, Herder, Jacobi, Hamann, Lavater, Stollberg, and many other prominent literary men of his times. In the Church history of Germany he bears an honorable name as one of the most effective opponents of the vulgar rationalism which at that time threatened to obtain absolute sway over the whole of Protestant Germany. In his earlier writings, he, on the whole, confined himself to ridiculing the arrogance and intolerance of the Rationalists; but he steadily grew warmer and more emphatic in his opposition to rationalism, and in his attachment to a strict Lutheranism, and on that account fell out with some of his former friends, as Voss and Jacobi. Claudius began in 1765 a complete edition of his works, under the title *Asmus omnia sua secum portans*, 8 vols., to which some addition was made in 1812 (latest edition, 1844). A biography of Claudius has been written by Herbst (Gotha, 1857).—Herzog, *Real-Encyklop.* ii, 712; Brockhaus, *Conversations-Lexikon*, iv, 547.

Claudius of Savoy, a Unitarian of the sixteenth century, who, in a disputation at Berne, 1534, maintained that Christ was a man, who "was called God inasmuch as he had received the fulness of the divine Spirit beyond all other beings. The Father dwelt in him through the divine Spirit, and all through him might be animated by the Father" (Neander, *History of Dogmas*, Ryland's transl., ii, 647). He was expelled from Berne, imprisoned at Strasburgh, returned to Switzerland, and recanted at Lausanne, 1537. See Schelhorn, *De Mino Celso et Claudio Allobroge* (Ulm, 1748, 8vo); Mosheim, *Ch. Hist.* iii, 223; Trechsel, *die protest. Antitrinitarier*, i, 55.

Claustrum. See Cloister.

Clausūra (Lat.), the enclosure of a monastic establishment, usually square, and surrounded by a wall. Ordinarily monks or nuns are not allowed to go beyond this space, or to receive a visit within it, without the especial permission of the head of the establishment.

Claw (פַּרְסָה, *parsah'*, *cleft*, i. e. cloven foot), prop. a *hoof* (as usually rendered) of a bifurcated animal (Exod. x, 26; Mic. iv, 13; Ezek. xxxii, 11), or of a solid-footed quadruped (e. g. a horse, Isa. v, 28; Jer. xlvii, 3); hence for the distinctive mark of a clean (q. v.) creature ("claw," Deut. xiv, 16), or the sharp weapons of a beast of prey ("claw," Zech. xi. 16), or the talons of a predatory bird ("claw," Dan. iv, 33). In one passage (Psa. x, 10) the powerful, clawed paw of a lion (q. v.) is poetically denoted by the term עֲצוּמִים, "*strong* ones."

Clay is the rendering of several words, more or less accurately, in certain passages in the English Bible: טִיט, *tit*, prop. *mud* (Psa. xl, 2), i. e. mire (as often rendered), hence potter's *clay*, as being trodden fine (Isa. xli, 25; Nah. iii, 14); corresponding to the Gr. *πηλός* (John ix, 6, 11, 14, 15; Rom. ix, 21; Wisd. vii, 9; xv, 7, 8; Ecclus. xxxiii, 13; xxxviii, 30; Bel 7), as soiling or plastic; and חֹמֶר, *cho'mer*, reddish *loam* (Job iv, 19; xiii, 12; xxvii, 16; xxxiii, 67), e. g. potter's clay (Isa. xxix, 16; xlv, 9; Jer. xviii, 4, 6), as used for sealing (Job xxxviii, 14), or for cement of building ("mortar," Gen. xi, 3), so for making brick (Exod. i, 14; "mortar," Isa. xli, 25; Nah. iii, 14); also common street "mire" (Isa. x, 6; Job xxx, 19; "clay," Job x, 9). Other terms so rendered less correctly are: מֶלֶט, *me'let*, *mortar* for plastering (Jer. xliii, 9); and the Chald. חֲסַף, *chasaph'*, *sherd*, of burnt clay-ware (Dan. ii, 23). The word עָב, *ab* ("clay," 2 Chron. iv, 17), or מַעֲבֶה, *maăbeh'* ("clay," 1 Kings vii, 47), denotes *darkness* or *density* of soil, i. e. perh. depth of earth; and the merely apparent compound עַבְטִיט, *abtit'* ("thick clay"), in Hab. ii, 6, signifies rather a *pledging* of goods to an extortioner. See Mineralogy.

"Clay is a sedimentary earth, tough and plastic, arising from the disintegration of felspar and similar minerals, and always containing silica and alumina combined in variable proportions. As the sediment of water remaining in pits or in streets, the word is used frequently in the O. T. (e. g. Isa. lvii, 20; Jer. xxxviii, 6; Psa. xviii, 42), and in the N. T. (John ix, 6), a mixture of sand or dust with spittle. It is also found in the sense of potter's clay (Isa. xli, 25), the elegant and useful forms assumed by the rude material under his hands supplying a significant emblem of the Divine power over the destinies of man (Isa. lxiv, 8; Jer. xviii, 1-6; Rom. ix, 21). The alluvial soils of Palestine would no doubt supply material for pottery, a manufacture which we know was, as it still is, carried on in the country (Jer. xviii, 2, 6); but our knowledge on the subject is so small as to afford little or no means of determining, and the clay of Palestine, like that of Egypt, is probably more loam than clay (Birch, *Hist. of Pottery*, i, 55, 152). See Pottery. Bituminous shale, convertible into clay, is said to exist largely at the source of the Jordan, and near the Dead Sea, also near Bethshan (Burckhardt, ii, 593; Russegger, iii, 278, 253, 254). The great seat of the pottery of the present day in Palestine is Gaza, where are made the vessels in dark blue clay so frequently met with. The Talmud (*Aboda Sara*, ii, 3) mentions a peculiar kind of luteous material called 'Hadrian's clay' (חרס הדרייני). The use of clay in brick-making was also common. See Brick. Another use of clay was in sealing (Job xxxviii, 14). The bricks of Assyria and Egypt are most commonly found stamped either with a die or with marks made by the fingers of the maker. Wine-jars in Egypt were sometimes sealed with clay; mummy-pits were sealed with the same substance, and remains of clay are still found adhering to the stone door-jambs. Our Lord's tomb may have been thus sealed (Matt. xxvii, 66), as also the earthen vessel containing the evidences of Jeremiah's purchase (Jer. xxxii, 14). So also in Assyria, at Kouyunjik, pieces of fine clay have been found bearing impressions of seals with Assyrian, Egyptian, and Phœnician devices. The seal used for public documents was rolled on the moist clay, and the tablet was then placed in the fire and baked. The practice of sealing doors with clay to facilitate detection in case of malpractice is still common in the East (Wilkinson, *Anc. Egypt.* i, 15, 48; ii, 364; Layard, *Nin. and Bab.* p. 153, 158, 608; *Herod.* ii, 38; Harmer, *Obs.* iv, 376)" (Smith, s. v.). Norden and Pococke observe that the inspectors of the granaries in Egypt, after closing the door, put their seal upon a handful of clay, with which they cover the lock. See Seal. Clay was also used, no doubt, in primitive times for *mortar*, for the same term is employed for both (Gen. xi, 3). Houses are built of clay mixed with sand in countries where stones are not to be found. See Mortar. In Job iv, 19, it is said of mankind that they dwell in huts of clay, either alluding to such dwellings, or to the "clay tenements" of the body (compare 2 Cor. v, 1). Our Saviour anointed the eyes of the blind man with a salve made of clay and spittle (John ix, 6), a simple

preparation, which, it would be manifest to all, could have in itself no curative virtue. The "clay ground" (literally *thickness of soil*) in which Solomon caused the large vessels of the Temple to be cast (1 Kings vii, 46; 2 Chron. iv, 17) was a compact loam, of a quality or rather extent (depth some 28 feet; see JACHIN) not to be found elsewhere in Palestine, which is generally rocky or sandy. See METALLURGY.

Clayton, ROBERT, born in Dublin in 1695, was a disciple of Dr. S. Clarke, became bishop of Killala, of Cork, and finally of Clogher, and published several works, none of which have gained lasting celebrity but his *Essay on Spirit* (1751), a treatise maintaining Arian views, of which, though not actually his composition, he bore the expense and assumed the responsibility. A powerful reply from Jones of Nayland did not hinder his proposing in the Irish House of Lords (2d Feb. 1756) the omission of the Nicene and Athanasian Creeds from the liturgy of the Church of Ireland; and at last, the third part of his *Vindication of the Histories of the Old and New Testament* gave occasion to legal proceedings, arrested only by his death on Feb. 26th, 1758. Among his other publications are *The Chronology of the Hebrew Bible Vindicated* (Lond. 1747, 4to); *A Dissertation on Prophecy* (Lond. 1749, 8vo).—Kippis, *Biographia Britannica*, iii, 620.

Clean (טָהוֹר, *tahor'*, καθαρός) and UNCLEAN (טָמֵא, *tame'*, ἀκάθαρτος). These words are of frequent occurrence and obvious meaning in the sacred writings; but it is in their peculiar application, by the Mosaic law, to persons, animals, and things, that they are now to be considered. In order to partake of the privileges of the Jewish Church, and to engage acceptably in its outward worship, the individual must not only be circumcised, but he must be ceremonially pure or clean; that is, he must be free from uncleanness. How the various kinds of uncleanness were contracted, what time it continued, and what was the process of purification, we find particularly described in Lev. xi-xv; Num. xix. See PURIFICATION.

The division of animals into clean and unclean existed before the Flood (Gen. vii, 2), and was probably founded upon the practice of animal sacrifice. The regulations concerning clean and unclean animals are chiefly recorded in Leviticus, ch. xi, and Deuteronomy, ch. xiv, where the following animals are pronounced unclean, and are consequently interdicted to be used as food: (1.) Quadrupeds which do not ruminate, or which have uncloven feet. (2.) Serpents and creeping insects; also certain insects which sometimes fly and sometimes advance upon their feet; but locusts, in all their four stages of existence, are accounted clean. (3.) Certain species of birds; but no particular characters are given for dividing them into classes, as "clean" or "unclean." Judging from those that are specified, as far as the obscure character of the Hebrew names will admit, it will be found that birds of prey generally are rejected, whether they prey on lesser fowls, or on animals, or on fish; while those which eat vegetables are admitted as lawful; so that the same principle is observed, in a certain degree, as in distinguishing quadrupeds. (4.) Fish without scales, and also those without fins. (5.) Animals of any kind which had either died of disease, or had been torn by wild beasts (Exod. xxii, 31). See ANIMAL.

The animal substances interdicted to the Hebrews were: (1.) Blood (Levit. xvii, 10; xix, 26; Deut. xii, 16, 23; xv, 23). (2.) The fat covering of the intestines, termed the net or caul. (3.) The fat upon the intestines, called the mesentery, etc. (4.) The fat of the kidney. (5.) The fat tail or rump of certain sheep (Exod. xxix, 13, 22; Levit. iii, 4-9; ix, 19). See FOOD.

What was the design of these distinctions, and how they were abolished, may be learned with sufficient accuracy from a comparison of various passages of Scripture (Lev. xx, 24-26; Acts x, 9-16; xi, 1-28; Heb. ix, 9-14). See DECREE (*of the Apostles*). It has been observed that one object of these appointments may have been to make the Jews suspicious of Gentile customs and entertainments, and so induce them to abstain from all intercourse with them. We find in the New Testament that *eating* with Gentiles was regarded as a peculiar aggravation of the offence of associating with them (Matt. ix, 11; Acts xi, 3). It may be remarked, also, that the flesh of many of the animals interdicted was unwholesome, and others were objects of idolatrous worship among the heathen. The chief design of the regulation, however, appears to have been, to establish a system of regimen which should distinguish the chosen people from all other nations. See the treatises *De animalibus esu interdictis*, by Danz (Jen. 1687) and Münster (in Menthenii *Thes. diss.* ii, 477 sq.); also Neumann, *Ueb. d. Kusten Noah* (Wittenb. 1741). See UNCLEANNESS.

Cleanse. See PURIFICATION.

Clear-story (or CLERE-STORY), the upper part of the central aisle of a church, raised above the roofs of the adjoining side aisles, with windows to light the nave below. In many cases the clear-story is evidently a subsequent addition to the original design, especially when the high-pitched roof, which included the body and aisles in its span, gave way to a flat roof covering the nave only. The walls were then raised over the arches of the nave to receive the clear-story windows.

Clear-story. (Parker's *Glossary*.)

Cleaveland, JOHN, a Congregational minister, was born in Canterbury, Conn., April 11, 1722. He was expelled from Yale College for attending a Separatists' meeting, but his degree was afterwards given to him, and his name appears as a graduate of 1745. He was installed pastor over a newly-organized church in Chebacco, Feb. 25, 1747; acted as chaplain at Ticonderoga in 1758; served in the same capacity at Cambridge in 1782, and in New York in 1776. He died April 22, 1799. His church at Chebacco was formed by a secession from Mr. Pickering's, who refused to allow Whitefield to preach in his pulpit. Mr. Pickering issued a pamphlet soon after Mr. Cleaveland's organization, to which he replied in *A plain Narrative by the new Church*. He also published *Chebacco Narrative rescued from the Charge of Falsehood and Partiality* (1748); an *Essay to defend some of the most important Principles in the Protestant Reformed System of Christianity, more especially Christ's Sacrifice and Atonement, against the injurious Aspersions cast on the same by Dr. Mayhew, in a Thanksgiving Sermon* (1763), which elicited from Mayhew a sharp rejoinder in *A Letter of Reproof to John Cleaveland; Justification of his Church from the Strictures of the Rev. S. Wigglesworth, of the Hamlet, and the Rev. Richard Jaques, of Gloucester* (1765); with several other controversial pamphlets and a few sermons.—Sprague, *Annals*, i, 458; Allen, *Am. Biog. Dictionary*, s. v.

Cleft (בְּקִיעַ, *beki'a*, a *gap* in a building, Amos vi, 11; "breach," Isa. xxii, 9; שֶׁסַע, *she'sa*, a *split* in the hoof of an animal, Deut. xiv, 6; also נְקָרָה, *neka-*

rah', a *fissure* in a rock, Isa. ii, 21; חֲגָוִים, *chagavim'*, *refuges* in the crags, Cant. ii, 14; Jer. xlix, 16; Oba. 3), or CLIFT (נְקָרָה, *nekarah'*, *crevice* in a rock, Exod. xxxiii, 22; סְעִיף, *seiph'*, a rock *fissure*, Isa. lvii, 5; "top" of the rock, Judg. xv, 8, 11; Isa. ii, 21). See CAVE; ROCK.

Cleland, THOMAS, D.D., an eminent Presbyterian divine, was born in Fairfax County, Va., May 22, 1778, and removed to Marion County, Ky., in 1789. Having developed extraordinary gifts as an exhorter in the great revival of 1801, he was urged by the Presbytery of Transylvania to become a preacher, and was licensed April 14, 1803. His first charge was Union Church, in Washington County. In 1813 he was settled over New Providence and Cane Run (now Harrodsburg) churches, where he labored during the rest of his life with remarkable success, being blessed with numerous revivals. He was one of the most popular and useful preachers in Kentucky. Sixteen young men studied divinity under him. He was appointed one of the synodical commission in the Cumberland Presbyterian difficulties. Dr. Cleland was withal a diligent student, and wielded his pen with signal ability against the Newlights and Campbellites. His principal printed works, besides *Occasional Sermons*, were, *A brief History of the Action of the Synod in the Case of the Cumberland Presbyterians* (1823, p. 29, 8vo):—*The Socini-Arian Detected* (1815, p. 101, 12mo):—*Unitarianism Unmasked* (1825, p. 184, 12mo):—*Narrative of the Bodily Exercises*, in *Bibl. Repertory* for July, 1834:—*Letters on Campbellism:*—*A Hymn-book*, for prayer-meetings and revivals, extensively used in the West. Dr. Cleland died Jan. 31, 1858, in the eightieth year of his age.—Davidson's *Hist. Presb. Ch. in Kentucky*, p. 354; *Memoirs, compiled from private Papers*, by Prof. Humphrey and Rev. Thos. H. Cleland.

Clémanges (*Clamengis* or *Clemangis*), NICOLAS DE, one of the ablest writers of the Roman Catholic Church during the Middle Ages. He was born about 1360 in the village of Clémanges, in the province of Champagne, and educated in the College of Navarre at Paris. As early as 1381 he gave public lectures as *Magister Artium.* In 1386 he began, in the same institution, to study theology under Pierre d'Ailly, who exercised a great influence upon him, and always remained his friend. In 1391 he became bachelor of theology, and began to give theological lectures. Being possessed of rare talents, and thoroughly familiar with the works of the ancient writers, he was soon regarded as the most eloquent member of the University of Paris, which in 1393 elected him rector. Henceforth Clémanges took the most active part in the efforts of the University in behalf of a thorough reformation, which constitute so important a part of mediæval Church history. Most of the letters addressed by the University to the popes and kings of this time emanated from his pen. In the same year in which he was elected rector (1393) he addressed, in the name of the University, an energetic memoir to Charles VI of France, in order to induce him to put an end to the schism in the Church. In 1394 he compiled a second memorial on the basis of the opinions of all the prominent members of the French clergy, which had been solicited by the Sorbonne. In accordance with these opinions, he proposed, in a letter to Clement VII, three measures for the reorganization of the Church: first, the abdication of both the popes; secondly, the election of arbiters; thirdly, the convocation of a general council. Another letter to the pope, much more severe in its language, was not sent off because Clement VII died (September, 1394). Charles VI, following the advice of the University, requested the cardinals of Avignon not to proceed to the election of a new pope until they had come to an understanding with the cardinals of Rome, and with Boniface IX; and Clémanges sent a letter of the same character to Avignon. But the cardinals of Avignon nevertheless hastened to elect Petrus de Luna, who assumed the name Benedict XIII. After being elected, Benedict secured recognition by Charles VI and the Paris University, but Clémanges was instructed to request him to do all that might be in his power to end the schism. To the same end he had to write to the king of Aragon. In his own name Clémanges sent to Benedict an eloquent epistle on the duties of the head of the Church, and recommended to him his friend Pierre d'Ailly as chief adviser. Benedict appreciated the learning of Clémanges, and prevailed upon him to accept the office of secret secretary of the pope. As the king of France and the Sorbonne, supported, in 1395, by the resolution of a national council, declared in favor of an abdication of both the popes, Clémanges, who was now a decided champion of the claims of Benedict, fell out with many of his former friends. In 1407 the French government withdrew its recognition of Benedict, whereupon the latter laid the ban upon king and country. Clémanges was charged with being the author of the bull of excommunication, but denied the charge, left his position at the papal court, and withdrew to Langres, where he had been appointed canon a short time before. His opponents persisted in calling him the author of the bull of excommunication; he was accused of high treason, and threatened with imprisonment. In order to escape this danger, he concealed himself in a Carthusian convent at Valprofonds, and subsequently in a convent of the same order at Fontaine-du-Bosc. In this retirement he devoted his attention to the Bible, which, as he states, had until then been neglected by him, and which now became his favorite study. Besides a number of letters to his friends D'Ailly, Gerson, and others, he wrote at Fontaine-du-Bosc several works full of reformatory ideas as regarded both the prevailing corruptions of his Church and some of the doctrines. The most important of these are *De fructu eremi* (on the value of retired life); *De fructu rerum adversarum* (on the spiritual profit to be derived from adversity); *De novis festivitatibus non instituendis* (complaining of the excessive number of holidays, which promote dissipation instead of edification, and cause the Bible to be forgotten over the stories of saints). In all these works Clémanges recommended the Bible as the purest and richest source of Christian knowledge and Christian life. The decay of the Church he attributed to the neglect of the Bible; the councils, in his opinion, could claim regard for their decisions only if the members were really believers, and if they were more concerned for the salvation of souls than for secular interests. His views on general councils were fully set forth in a little work, entitled *Disputatio de concilio generali*, which consists of three letters, addressed, in 1415 or 1416, to a professor at the Paris University (printed apparently at Vienna in 1482). He not only places the authority of general councils over the authority of the popes, but the authority of the Bible over the authority of the councils. He doubts whether at all the former œcumenical councils the Holy Spirit really presided, as the Holy Spirit would not assist men pursuing secular aims. He denies that a council composed of such men represents the Church, and asserts that God alone knows who are his people and where the Holy Ghost dwells, and that there may be times when the Church can only be found in one single woman (*in sola potest muliercula per gratiam manere ecclesiam*). Other works, in which he expressed himself even more freely, have been lost, and perhaps suppressed. Chiefly against the immoral life of the higher clergy he wrote, about 1411, his treatise *De presulibus Simoniacis.* He also urgently recommended to the secular authorities of his country the teaching of the Bible as the only safe remedy against the continual civil wars and disturb-

ances, and he counseled duke Philip of Burgundy to convoke the General Estates for the restoration of law and justice. He also wrote, while at Fontaine-du-Bosc, several poetical pieces, which are distinguished for the brilliance of their Latinity.

Of the latter years of his life but little is known. The canonry at Langres he exchanged for one at Bayeux. Other ecclesiastical dignities which were offered to him he refused, as his conscience did not allow him to accept more benefices than one. In 1421 he defended at Chartres the liberties of the Gallican Church. In 1425 he again began to give theological lectures in the college at Navarre, and his connection with this school continued until his death. The year of his death is not known. Even his epitaph (which was destroyed in 1793) did not state it.

A work entitled *De ruina Ecclesiæ*, or *De corrupta Ecclesiæ statu*, which, since Trithemius (*Catal. Script. Eccles.*), is usually classed among the writings of Clémanges, cannot be from him. Its language is more violent than Clémanges ever indulged in. It abounds in attacks upon Benedict XIII at a time when Clémanges was his secretary and eloquent champion. It was undoubtedly the work of some member of the Paris University. Equally certain is the spuriousness of the work *Apostoli* (i. e. *litteræ dimissoriæ*) *et responsio per nationem gallicanam dominis cardinalibus*, etc., which was written at Constance during the session of the council. Most of his works were published by Lydius (Leyden, 1613, 2 vols. 4to), but some of them still lie as unedited MSS. in libraries. See Herzog, *Real-Encyklop.* ii, 717 sq.; Wetzer u. Welte, *Kirchen-Lexikon*, ii, 574 sq.; Neander, *Ch. Hist.* v, 58 sq.; Mosheim, *Ch. Hist.* i, 422, and a monograph of Müntz, *Nicolas Clémanges, sa vie et ses écrits* (Strasb. 1846, 8vo); Gieseler, *Ch. Hist.* per. iii, div. iv, § 113; Hase, *Ch. History*, p. 325, 344; *Presbyterian Quart. Review*, March, 1857.

Clemens, Titus Flavius, surnamed Alexandrinus, was a native of either Athens or Alexandria, and flourished in the reigns of Severus and Caracalla (the date of his birth being placed about A.D. 160, and that of his death from A.D. 215 to 220). He was in early life an ardent student of literature and philosophy, especially of the Stoic and Platonic schools, and was led by his studies to Christianity. To master its history and doctrines he visited different countries, and received instruction from various masters, of whom he himself speaks thus: "Those vigorous and animated discourses which I was privileged to hear, and of blessed and truly remarkable men. Of these, the one in Greece, an Ionic; the other in Magna Græcia; the first of them from Cœle-Syria, the second from Egypt, and others in the East. The one was born in the land of Assyria, and the other a Hebrew in Palestine. When I came upon the last (he was the first in power), having tracked him out concealed in Egypt, I found rest. He, the true, the Sicilian bee, gathering the spoil of the flowers of the prophetic and apostolic meadow, engendered in. the souls of his hearers a deathless element of knowledge" (*Strom.* lib. i, ch. i, p. 355, vol. i, of translation in "Anti-Nicene Christian Library").

This last teacher was (according to Eusebius) Pantaenus, head of the catechetical school at Alexandria, by whose influence some suppose Clemens, as yet only a sincere inquirer, was led fully to embrace the Christian faith. He is called a presbyter by early Christian writers, having probably been appointed to that office by the Church at Alexandria, and about 190 became, according to some the assistant, according to others the successor to Pantaenus, when the latter set out on his missionary tour to the East. He continued in that office until the persecution under Severus, A.D. 202, compelled him to leave Alexandria. The writers of the articles in Smith's *Dict. of Greek and Rom. Biog. and Mythol.* and the *New Amer. Cyclopædia* state that Clemens returned to Alexandria before A.D. 211, and then became the master of the school as successor of Pantaenus; but the weight of authority favors the earlier date, and his return to that place is doubtful. We know scarcely anything of the closing years of his life. He appears to have been about 210 or 211 in Jerusalem, for he is mentioned by Eusebius (lib. vii, ch. ii) as the bearer of a letter from Alexander, bishop of Jerusalem, then himself a prisoner for the Gospel's sake, to the Church at Antioch. This Alexander and the more famous Origen are reckoned among his pupils.

Of the early Christian writers, Clemens was the most learned in the history, philosophy, and science of the nations of his day, and the influence of his studies is apparent in his writings, which display rather the speculative philosopher than the accurate theologian—more the fanciful interpreter than the careful expounder of the Scriptures on true exegetical principles. Many of his works have been lost, but those extant are the largest belonging to that early period, and very valuable for the light they throw on the social condition of the Roman Empire in his day, and for the information which they contain in regard to the systems of ancient philosophy, the heresies and schisms in the primitive Church, as well as for the numerous extracts from non-extant authors. His three chief writings form a series, and were written apparently with a common object, viz. to convert the heathen and educate them in the principles and practice of the Christian life. They are, 1. λόγος προτρεπτικὸς πρὸς Ἑλλῆνας, *Cohortatio ad Hellenes* (Appeal to the Greeks), an apologetic work, in which the absurdity, obscenity, cruelty, impostures, and sordidness of heathen worship are clearly set forth in contrast with the simplicity and purity of Christian faith and practice. 2. Παιδαγωγός, *Pædagogue* (Instructor), a treatise on Christian education, in three books, addressed to those who had been converted from heathenism. In Book I we have set forth the function, the means, methods, and ends of the "Instructor," who is Christ, leading the believers "through paths of virtue and truth" to salvation, not through fear as he did the Israelites, but by love, the guiding principle of the new and better covenant. Book II contains rules for the regulation of life, embracing minute details as to food, drink, behavior, etc., recommending temperance, purity, modesty, and frugality. Book III begins with an examination of the grounds of true beauty, showing it to be intellectual, and founded on reason and love; then, in considering the various modes in which men have sought to add to beauty, strongly reprobates luxurious dress and living, etc. Its satire of the follies and vices of the times is caustic and humorous. 3. Στρωματεῖς or Στρώματα, in eight books, of which the eighth is lost (the imperfect treatise on logic, standing at present as such, belonging to some other work). The word *stromateis*, meaning patch-work (*opus varie contextum*), is significant of the miscellaneous character of the work, which is discursive and unmethodical, and not unaptly likened by its author to "a thickly-planted mountain, where fruit and other trees are confusedly grouped together, so as to baffle the plunderer, while the careful husbandman would find and transplant in fitting order such as were desirable for fruit or ornament; so the mysteries of Christian faith, veiled herein from impertinent or ignorant curiosity, will discover their rich treasures to the honest and intelligent seeker of the truth" (*Strom.* lib. vii, p. 766, Potter's ed.). The object of the work is "to furnish materials for the construction of a true gnosis," or "Christian philosophy, on the basis of faith," for those who had been trained for it by the preceding works. Book I, of which the beginning is lost, descants on the utility of philosophy, as preparing the heathen for the reception of the Gospel, and Christians for the defence of their faith, maintaining that the good in heathen philosophy was derived from the Hebrews. Book II treats first of faith

and repentance, combating the errors of the Basilidians and Valentinians, asserts the freedom of man's will, and presents the views of different philosophers in regard to marriage, which Clemens defends on the grounds of the natural conformation of the sexes, the command of God (Gen. i, 28), and the mutual aid in sickness and age rendered by husband and wife, and parents and children. In Book III, continuing the same subject, he condemns the opinions of the Marcionites, Carpocratians, and other heretics who opposed marriage for different and contradictory reasons, alleging in support of it the words of St Paul (1 Tim. iv, 1-3), and the examples of the apostles Peter and Philip, who were married and had children. Book IV discourses of Christian perfection as exemplified in the Christian martyr, who is led to martyrdom not through fear of punishment or hope of reward hereafter, but from love to Christ, and who does not needlessly provoke his fate, but only accepts it cheerfully when called upon to be in that way a witness for the truth. The chief aim of Book V is to prove that the Greeks derived most of their wisdom from those called by them barbarians, and especially from Moses and the Hebrew prophets; but it also enters upon a long and interesting digression on the origin and use of symbols, and makes many valuable statements in regard to the Egyptian hieroglyphics, and the dress and ceremonial services of the Hebrew priests. This episode is one of the most curious relics of antiquity, and the book abounds in quotations from ancient authors. Books VI and VII portray the true Gnostic, the perfect Christian, who is presented as a "complete model of moral conduct," not so much desirous of living as of living rightly, controlling his passions and regulating his desires in conformity with the laws of Christ.

A small work, Τίς ὁ σωζόμενος πλούσιος; (*What rich man may be saved?*) is also attributed to Clemens. This treatise is an examination of the words of Christ (Matt. xix, 24; Luke xviii, 25), and aims to show that these words do not require the renunciation of worldly goods as a condition of salvation; that the disposition of the soul is the essential thing, and that riches may be the materials and instruments of good works for those who rightly use them.

The following works of Clemens are not extant (the fragments which have been collected are found in the edition of Potter, vol. ii, in Fabricius's *Hippolytus* at the end of vol. ii; and in Galland's *Biblioth. Patr.* and Migne's *Patrologia*): Ὑποτυπώσεις; Περὶ τοῦ πάσχα; Περὶ Νηστείας; Περὶ καταλαλιᾶς; Προτρεπτικὸς εἰς Ὑπομονήν; Κανὼν Ἐκκλησιαστικός; εἰς τὸν Προφήτην Ἀμώς; Περὶ προνοίας; Ὅροι διαφόροι. Clemens refers to some other treatises as either written or intended to be written by him, but we have no mention of them elsewhere.

The first edition of the three principal works of Clemens was made by Petrus Victorius (Florence, 1550, fol.; a Latin translation in 1551). It was followed by an edition by Fr. Sylburg (Heidelberg, 1592, fol.). A Greek-Latin edition was published by D. Heinsius (Leyden, 1616, fol.; reprinted Paris, 1629, Paris, 1641, Cologne, 1688). The best edition of all the works of Clemens, genuine and doubtful, is that by the Anglican Bishop Potter (2 vols. fol. Oxford, 1715, with valuable notes and a commentary to Clemens by Gentianus Hervetus; reprinted at Venice, 1757, 2 vols. fol., and [without the notes and the commentary] by Oberholzer, at Wurzburg, 1778-79, 3 vols. 8vo). New editions are by Klotz (Leips. 1831-34, 4 vols. 8vo) and by Abbé Migne (in his *Patrologia*). An excellent translation in English of the *Appeal*, the *Pædagogue*, and the first book of the *Stromateis* (the remainder of the work to follow in a subsequent volume), is found in vol. iv of the *Ante-Nicene Christian Library* (Edinb. 1867).—Schaff, *Ch. Hist.* i, 205 et al.; Neander, *Ch. Hist.* i, 691 sq., and *Hist. Dogmas*, i, 63 et al.; Gieseler, *Ch. Hist.* per. i, div. ii, chap. iii, § 62; Lardner, *Works*, vol. ii (Lond. 1838, p 220-259; Clarke, *Sac. Literature* (N. Y 1839) p. 109-118, Eusebius, *Histor. Eccles.* lib. v et vi, *Journal of Sacred Lit.* Oct. 1852, p. 129: Reinkens, *De Clemente Presbytero Alexandrino, Homine, Scriptore, Philosopho, Theologo* (Vratislav, 1851, 8vo); Hoefer, *Nouv. Biog. Gén.* s. v.; Freppel, *Clément d'Alexandrie* (Paris, 1866); Kaye, *Writings and Opinions of Clemens of Alexandria* (Lond. 1835, 8vo).

Clement (Κλήμης for Lat. *clemens, merciful*), a person (apparently a Christian of Philippi) mentioned by Paul (Phil. iv, 3) as one whose name was in the book of life (q. v.), A.D. 57. This Clement was, by the ancient Church, identified with the bishop of Rome of the same name (Euseb. *Hist. Eccles.* iii, 4; *Constitut. Apost* vii, 46, Origen, vol. i, p. 262, ed. Lommatzsch; and Jerome, *Scriptor. Eccl.* p. 176, a); and that opinion has naturally been followed by Roman Catholic expositors. It cannot now be proved incorrect; and, in fact, it is not improbable in itself. There are essays on his life, identity, and character as a teacher, by Feuerlein (Altorf, 1728), Freudenberger (Lips. 1755), Frommann (Cobl. 1768), Roudinini (Rom. 1606). See CLEMENT OF ROME.

Clement OF ROME (CLEMENS ROMANUS). One of the early presbyters of the Church in Rome; probably a presiding presbyter, *primus inter pares*, afterwards called bishop. Irenæus, in his *adv. Hær.* (iii, 3, 3), written between 182-188 A.D., makes him the third in order after the apostles Peter and Paul, Linus being the first, and Cletus or Anacletus the second. The *Clementines* give a different order, which was followed by Tertullian. But Eusebius, who appears to have taken great pains to be accurate, and had access to authorities no longer extant, preferred the order of Irenæus. He also adds the dates. Clement, he says (*Hist.* iii, 34), died in the third year of Trajan, "having for nine years superintended the preaching of the Divine Word." As Trajan became emperor on the death of Nerva, Jan. 28, 98 A.D., the so-called episcopate of Clement will have for its termini 91 or 92—100 or 101 A.D. Irenæus speaks of him as "having seen and conversed with the blessed apostles" who "founded the Church in Rome," i. e. Peter and Paul. Origen (*Comment. in Joan.* vi, 36) identifies him with the Clement of Philippians iv, 3. This may have been only a conjecture, or it may have been a tradition. It was, at any rate, the opinion of Eusebius and the early writers, and is in itself not at all improbable. Thirty years would certainly be time enough for a prominent Philippian to become a prominent Roman. Modern attempts to make out his origin from the epistle which bears his name have failed. Judging from the epistle, he may have been either a Jew, as Tillemont argues, or a Roman, as Lipsius argues, and the one about as probably as the other. Rufinus, who died 410 A.D., was the first to call him a martyr. The language of Eusebius implies that he died a natural death, which is altogether likely to have been the case if his dates have been correctly given. *The Martyrdom of St. Clement*, in the first volume of the *Patres Apostolici* of Cotelerius, is a puerile fabrication of no great antiquity. Its story is that Clement was first banished by Trajan to Chersonesus, and afterwards drowned in the Black Sea. On reaching his place of exile, he found two thousand Christians condemned to work in a marble quarry. As the water they used had to be fetched six miles, Clement caused a spring to break forth close to the quarry. This led to the conversion of a great multitude in the province, and the building in one year of seventy-five churches. And this, in its turn, led to Clement's martyrdom. An anchor was fastened to his neck, and he was cast into the sea. The people, bewailing him, prayed God to discover to them his remains. In answer to their prayer, the sea receded, and the people, going in on dry ground, found the body of the holy martyr buried with the anchor in a marble tomb, but were not permitted to remove it. Every

year, on the anniversary of the martyrdom, the sea repeats this miracle of receding for seven days. Another fable confounds Clement the presbyter with *T. Flavius Clemens*, the consul, and cousin to the emperor Domitian, by whom he was put to death on a charge of "atheism," one of the charges then current against Christians. Such fables, in the absence of authentic memorials, are not to be wondered at. The wonder is that the authentic memorials are so meagre; that of the real Clement—a man so conspicuous, able, and influential—there is so little known.

Of the writings falsely ascribed to Clement of Rome notice is taken in another article. See CLEMENTINES. The only genuine document is his *Epistle to the Corinthians*, commonly called the *First*, but improperly, since the so-called *Second Epistle* is not his, and is not an epistle, but only the fragment of a homily, later, perhaps, by nearly a hundred years. The only known manuscript of this epistle is the one appended to the Alexandrian Codex of the Scriptures sent by Cyril Lucar to Charles I in 1628, and now the property of the British Museum. Throughout the manuscript are many *lacunæ*, generally, however, of only single words or syllables. The only considerable gap, occasioned apparently by the loss of a leaf, is near the end of the epistle, between chapters 57 and 58. Here may have belonged certain ancient citations from Clement which cannot now be verified. Some expressions, like λαϊκός in the 40th chapter, have a suspicious look; but of the substantial integrity of the epistle there is no good reason for serious doubt. That it came from the pen of Clement, though his name is not in the epistle, is now generally conceded. It appears to have been in the hands of Polycarp of Smyrna when writing to the Philippians as early, perhaps, as 115, certainly not much later than 150 A.D. It is referred to as the work of Clement by Dionysius of Corinth in a letter to Soter of Rome, which must have been written between 170-176 A.D. Irenæus, in the section already cited (*adv. Hær.* iii, 3, 3), speaks of it as a very able epistle, sent to the Church in Corinth by the Church in Rome under the episcopate of Clement. Origen, who died 254 A.D., speaks of it as written by Clement. So also Clement of Alexandria [† 220], who frequently and freely quotes from it, and even calls the author of it "the *apostle* Clement." Eusebius, whose History was written about 325 A.D., ascribes it to Clément, and speaks of it as having been "publicly read in very many churches both in former times and in our own" (*Hist.* iii, 16). Jerome († 420), in his *De Viris Illustribus*, § 15, reports it as still "publicly read in some places." But no one of these writers anywhere speaks of it as an inspired book. Though highly prized, neither this, nor the Epistle of Barnabas, nor the Shepherd of Hermas, was ever included in any ancient list of authoritative books. (See Westcott, *Canon of the New Testament*, Appendix B.)

This epistle, as we now have it, consists of fifty-nine short chapters—some of them very short—whose total bulk is about one third greater than that of the sixteen chapters of St. Paul's First Epistle to the Corinthians. Presbyters of the Church in Corinth had been unjustly deposed from office; a bitter dissension had broken out, and this epistle was written by Clement in the name of the Church in Rome, in order, if possible, to end the strife. It was sent by the hands of three messengers, Claudius Ephebus, Valerius Biton, and Fortunatus, who, it was hoped (chap. lix), might bring back the good news of peace and harmony restored. In form it resembles the Canonical Epistles, beginning with a salutation and concluding with a benediction. In the first three chapters, the Corinthians are first praised for their former virtues, and then sharply rebuked for the scandals which had occurred. The next nineteen chapters are devoted to historical illustrations, drawn from the Old and New Testaments, of the evils flowing from jealousy and envy; followed by exhortations to repentance, humility, and meekness. In the next fourteen chapters, the exhortations are continued in view of the promised coming of Christ and their own resurrection; salvation by grace through faith is taught; and good works, in their proper relation to faith, are strongly insisted upon. Twenty-one chapters are then devoted to the special purpose of the epistle, discussing the general subject of ecclesiastical organization and order, and urging the Corinthians to put an end to their grievous sedition. The last two chapters contain a prayer for helping grace, with a benediction.

As to the *date* of this epistle, Hefele, who agrees with Cave, Dodwell, Fleury, and others in assigning the episcopate of Clement to the years 68-77 A.D., refers it to the time of Nero But the mention made in the first chapter of "sudden and successive trials" which had befallen the Roman Church seems to require a later date. The Tübingen school put it into the second century. But recent critical authority preponderates decidedly in favor of 95-98 A.D. Falling thus within the apostolic age, and yet of considerably later date than the great bulk of the New Testament, special interest attaches to this epistle. It may be considered:

1. In comparison with the canonical books. It is evidently modelled after the canonical epistles, and yet is decidedly inferior to them. In regard to language, three words used by Clement are found only in the First Epistle of Peter; eleven only in the epistles of Peter and Paul; and twelve only in the epistles of Paul. (See Westcott, p. 30.) The book of which it most reminds us is the Epistle to the Hebrews. Hence an ancient tradition, reported by Eusebius (*Hist.* vi, 25) on the authority of Origen, that Clement was the author also of that epistle. But besides the many points of dissimilarity which discredit this particular tradition, there is a marked inferiority pervading the epistle of Clement as compared not only with the Epistle to the Hebrews, but with all the rest of the New Testament, which reacts powerfully as an argument for the inspiration of the canonical books. The Old Testament quotations are more extended; fanciful interpretations are given, as of the scarlet cord let down by Rahab typifying the blood of Christ; fables are introduced, as of the phœnix in treating of the resurrection; attempts are made at fine writing, as in the twentieth chapter, devoted to a description of the order and harmony of nature; with a tendency throughout to expatiation, which stands in strong contrast with the soberness, simplicity, terseness, and vigor of the apostolic epistles. A line has thus been deeply drawn between the inspired and uninspired documents of the early Church.

2. With respect to the canon itself. Of the Old Testament but little needs to be said. In the way either of express citation or of marked resemblance, nearly every book is recognized. Two at least of the apocryphal books are quoted. Clement made use of the Septuagint, and quotes more accurately than some of the fathers, indicating that he either referred to a manuscript or had a better memory than common. The text employed by him, Hilgenfeld says, accords neither with the Alexandrian nor the Vatican Codex, but, where these are at variance, steers between them, agreeing sometimes with the one, sometimes with the other. In quoting from the New Testament, Clement never calls it "Scripture" or "Scriptures," as he does the Old Testament; but individual writers are either quoted or referred to, and in a way which implies his belief that they had an authority above his own. Apologizing for the attitude he assumes, he exhorts the Corinthians, as though that must end all controversy, to "take in their hands the epistle of the blessed apostle Paul." Besides the Gospels of Matthew and Luke, the books indicated are Romans, 1 Corinthians, Ephesians, Hebrews, and James; perhaps also

1 Timothy and Titus. In short, the usage is precisely what we should expect while the canon was not yet formed, but only silently forming.

3. With respect to the polity of the early Church. The object aimed at in the epistle called for certain definite statements on this point. And these are in complete accordance with the representations of the inspired books. In Clement, as in the Acts and Epistles of the New Testament, several features are palpable. No distinction is made between bishops and presbyters. For the local Church only two orders are recognised: presbyter-bishops and deacons. And they were appointed at first by the apostles, afterwards by these rulers themselves, though not to the exclusion of the brotherhood. The *initiative* was not with the congregation, but with its elders, "the whole Church *consenting*." Such is the representation in the forty-fourth chapter; and it accords with what is related of Paul and Barnabas, who, instead of merely *ordaining*, as our version appears to teach, "had *appointed* them elders in every church" (Acts xiv, 23). The New Testament representations are thus not only corroborated, but also elucidated.

4. In relation to doctrine. The orthodoxy of Clement, as of the earlier fathers in general, has been repeatedly called in question, but without good reason. Doctrinal discussion, in the style of the Epistle to the Romans, is certainly not attempted. But the leading features of the Gospel economy come clearly out. The divinity of Christ is taught quite as distinctly as in the Epistles to the Colossians and Hebrews. And so likewise are the atonement and justification by faith. If good works are strongly emphasized, so also are they strongly emphasized not only by James in his epistle, but by Paul himself. And as there is no contradiction between Paul and James, there is none between Paul and Clement.

The *Literature* of the subject is abundant. Of the text there have been three recensions. The epistle was first published by Junius, at Oxford, in 1633; again, more accurately, by Wotton, at Cambridge, in 1718; and, lastly, by Jacobson, at Oxford, in four successive editions, 1838, 1840, 1847. and 1866. Jacobson's text is now the standard, and is as nearly perfect as critical acumen and diligence could make it. Of earlier editions, embracing all the apostolical fathers, the best are those of Cotelerius, Paris, 1672, as improved by Clericus (Antwerp, 1698), and again improved (Amsterdam, 1724), and of Ittigius, with a valuable dissertation (Leipsic, 1699). Of later editions, the best are those of Jacobson, already named; of Hefele (Tübingen, 1839, 1842, 1847, 1855); and of Dressel (Leipsic, 1856, 1863). Of treatises, the most valuable are those of Lechler, *Das apostolische und das nachapostolische Zeitalter* (Haarlem, 1851; Stuttgardt, 1857); Hilgenfeld, *Apostolische Väter* (Halle, 1853); Lipsius, *De Clementis Romani Epistola ad Corinthios Priore Disquisitio* (Leipsic, 1855); and Donaldson, *Critical History of Christian Literature and Doctrine from the Death of the Apostles to the Nicene Council* (vol. i, London, 1864). Of English translations, the earliest was by Burton (London, 1647); the next was that of Archbishop Wake (London, 1693, frequently republished; admirably though inaccurately done); the next was anonymous (Aberdeen, 1768); then Chevallier (London, 1833, 1851, on the basis of Wake); and, lastly, Roberts and Donaldson (Edinburgh, 1867, vol. i of the "Ante-Nicene Library"). This last has not the scriptural tone of Wake, but is greatly superior to it in accuracy of rendering.

Clement I. See CLEMENT OF ROME.

II, Pope (*Suidger*, bishop of Bamberg), was placed in the papal see Dec. 25, 1046, after the Synod of Sutri, by the Emperor Henry III, in the room of Gregory VI, who abdicated. He crowned this emperor, and held in Jan. 1047, a synod at Rome for the suppression of simony. He died, as some think, by poison, Oct. 9, 1047. He was the first of the German popes, and retained the diocese of Bamberg even during his pontificate. He put the city of Benevento under the interdict because it had refused to receive the Emperor Henry.—Neander, *Ch. Hist.* iii, 378; Gieseler, *Ch. Hist.* per. iii, div. ii, § 22; Hoefler, *Teutsche Päpste*, 1 *Abtheil.* 233-288; Wetzer u. Welte, *Kirchen-Lex.* ii, 590.

III, Anti-Pope (*Guibert*, archbishop of Ravenna), was chosen pope at the Synod of Brixen in 1080, by the party of the Emperor Henry IV, with the view of supplanting Gregory VII. After being repeatedly placed in the Roman see by violence, and expelled from it by the same means, he submitted to Paschal II in 1099, and died in the following year.—Neander, *Ch. Hist.* iv, 118 sq.; Gieseler, *Ch. Hist.* per. iii, div. iii, chap. i, § 47, 48.

III, Pope (*Paolo*, cardinal bishop of Rome), was a native of Rome. He was chosen pope at Pisa on the 19th of Dec. 1187, in the place of Gregory VIII, who had died in the same city two days before. The chief concern of the new pope was the speedy organization of a third crusade, as the news of the conquest of Jerusalem by Saladin (Oct. 3d, 1187) had just been received. He wrote at once to all the Christian princes, and succeeded in calling forth an unprecedented enthusiasm. The aged emperor Frederick Barbarossa (67 years old), who had had a violent conflict with the predecessor of Clement on account of the possessions of the Countess Matilda, made peace with the pope and took the cross. Peace was also restored between Venice and the king of Hungary, and between the king of France and the king of England, and all these states, joined by Leopold of Austria and others, were induced to take part in the crusade. The pope had the grief of learning the death of Frederick in the River Kalicadnus, and the dissensions between the princes besieging Acco, but he did not live to see the unfortunate end of the crusade.

Clement again secured for the popes the secular rule over the city of Rome, which during forty-nine years had been left by the popes. Tired of their civil wars, the Romans conceded to Clement the right of sovereign. A conflict with the king of Scotland, who had appointed of his own accord a bishop for St. Andrew's, terminated favorably to the pope. The king yielded when the pope threatened with the interdict. In reward for this concession, the pope (by a bull of March 13, 1189) exempted all Scotland from the jurisdiction of the archbishop of York, made it an immediate dependency of the papal see, and provided that henceforth no one should be a papal legate in Scotland who was not either a Scotchman or an officer of the Church in Rome. On the death of King William II of Sicily (Nov. 1, 1189), a dangerous conflict arose between the son of Frederick Barbarossa, Henry (subsequently emperor Henry VI), whose wife was the nearest relation to the late king, and the pope, who claimed feudal rights over Sicily, and hastened to invest with its government Tancred, an illegitimate son of duke Roger of Sicily. Henry, after the death of his father, was marching upon Rome, when Clement died, on March 25, 1191. The personal life of this pope is said to have been blameless. Seven letters and many decrees issued by Clement are given by Mansi (xxii, 543–574).—Herzog, *Real-Encyklop.* ii, 730; Wetzer u. Welte, *Kirchen-Lexicon*, ii, 591; Neander, *Ch. Hist.* iv, 417; Gieseler, *Ch. Hist.* per. iii, div. iii, chap. i, § 53.

IV, Pope (*Gui Fulcodi*, according to others, *Guido Foulquois le Gros*), was a native of France, first a soldier, then a lawyer, married, and on his wife's death entered the Church, and became in succession bishop of Puy, archbishop of Narbonne, and (1261) cardinal bishop of Sabina. He was chosen pope at the beginning of 1265, while he was absent from Italy as papal legate, and solemnly crowned on the 22d of February,

at Viterbo, where he took up his residence on account of the disturbances prevailing in Rome. During the whole time of his pontificate he was occupied with the contest concerning the government of Sicily. His predecessor, Urban IV, has invited Charles of Anjou to take possession of Sicily, which was then ruled by Manfred, an illegitimate son of Emperor Frederick II. When Charles appeared in Rome (May 21, 1265), five cardinals, in the name of the pope, concluded between him and the papal see a treaty which gave to Charles the whole of the Apulian Empire, while Charles, on the other hand, pledged himself to pay a certain tribute, and to abolish the ecclesiastical decrees of Frederick II. The arrogance of Charles, his want of money, and the outrages committed by French soldiers, disposed the pope favorably toward Manfred, but the latter died before the reconciliation had taken place. The cruelty of Charles against the family and the adherents of Manfred, and his violation of the treaty, filled the pope with indignation. Nevertheless, when young Conradin, the grandson of Frederick II, appeared in Italy, the traditional hostilities of the popes toward the Hohenstaufens induced the pope to excommunicate him. Conradin was received with enthusiasm by the Ghibelline opponents of the pope, and, in particular, by the people of Rome, and the pope naturally rejoiced at his defeat and capture. It cannot, however, be proved that he knew of, and much less that he approved of his execution. Clement survived exactly one month after the last scion of the Hohenstaufens Conradin was beheaded, dying at Viterbo Nov. 29, 1268. He was an able ruler, and resolutely hostile to nepotism. Many of his letters have been published by Martene and Durand in their *Thesaurus Novus Anecdotorum* (Paris, 1717, 5 vols. fol.), and by D'Achery in his *Spicilegium*. He wrote several works, among which was a life of St. Hedwig, duchess of Poland, who was canonized by him in 1267. On works falsely attributed to Clement, see Cave, *Hist. Lit. ad annum* 1265. A special work on the life and writings of Clement was published in 1623 at Lyons by the Jesuit Claudius Clemens. See Herzog, *Real-Encyklop.* ii, 732; Wetzer u. Welte, *Kirchen-Lexicon*, ii, 594; Neander, *Church Hist.* iv, 289, 424; Gieseler, *Church Hist.* per. iii, div. iii, chap. i, § 57.

V, Pope (*Bertrand d'Agoust*), was born at Uzeste about 1264. He was appointed bishop of Comminges by Boniface VIII in 1295, and was one of the few French bishops who obeyed the summons of the pope to visit Rome, notwithstanding the prohibition of Philip the Fair. In 1299 he was appointed archbishop of Bordeaux. During the conclave following the death of Boniface VIII in 1305 he was gained over by Philip the Fair, and when a compromise had been adopted between the party of Boniface and the French party, in virtue of which the French cardinals had to choose the pope among three candidates proposed by the party of Boniface, he was elected, being still regarded as a friend of Boniface. At a secret interview which he had had with Philip before the election he had promised to reconcile the king with the Church, to leave to him during five years the tithe for military wants, to condemn the memory of Boniface, and to create a number of new French cardinals. All these conditions were promptly fulfilled except the one relating to Boniface, which the pope tried to escape. He instituted a committee to investigate the charges brought against Boniface, but ultimately (1311) declared him free from the stain of heresy. On the other hand, he yielded to the demand of Philip for the abolition of the order of the Templars. He summoned the grand master of the order, under false pretexts, to his court; issued in 1308 a bull against the order, in which he brought against it the most unfounded and absurd charges; and finally, at the General Council of Vienne (in 1312), pronounced its abolition. The pope raised no objection to the appropriation of most of the possessions of the order by Philip, and to the burning of the grand master and of many leading members. Clement was the first pope who fixed his residence at Avignon, thus beginning what has been styled the Babylonian Captivity of the popes. He published a large number of constitutions based upon the decrees of the Council of Vienna, which still form, under the name of "Clementines" (q. v.), the seventh book of the Decretals. He died April 20, 1314. The contemporaneous writers accuse him of licentiousness, nepotism, simony, and avarice. See Wetzer u. Welte, *Kirchen-Lex.* ii, 594 sq.; Herzog, *Real-Encyklop.* ii, 732; Neander, *Ch. Hist.* iv, 70, 341; Gieseler, *Ch. Hist.* per. iii, div. iii, ch. i, § 59, and div. iv, ch. i, § 95; Landon, *Manual of Councils*, s. v. Vienne.

VI, Pope (*Pierre Roger*), was a native of Limousin, in France. After having been a Benedictine monk in Chaise-Dieu, professor at Paris, bishop of Arras, archbishop of Sens and Rouen, and (1338) cardinal, he was elected pope on the 7th of May, 1342. He had a protracted quarrel with Edward III, king of England, on the subject of ecclesiastical benefices, over which Clement claimed an absolute right. He issued a frightful bull of excommunication against Louis IV of Germany (see Raynald, *ad annum* 1346), when the latter and the German Diet refused to promise that the king should do nothing without the consent of the pope, and induced five of the German electors to elect Charles, the son of the king of Bohemia, as German emperor. By a contract of June 9, 1348, he purchased from Joanna, queen of Naples, the city of Avignon and some adjoining territory for 80,000 gold florins, which, however, were never paid. Previously the queen, who personally appeared before him, had been acquitted of the charge of having murdered her husband. An urgent invitation from the Romans (among whose ambassadors was Petrarch) to return to Rome was sent to the pope, but he continued at Avignon. By a bull of April 10, 1349, he reduced the interval between the years of jubilee [see JUBILEE] from 100 to 50 years, and celebrated the jubilee in 1350 with extraordinary pomp. In the bull of Clement the angels are commanded to introduce into Paradise without delay any one who should die during his stay at Rome. His efforts to bring about a union of the Greek Church with the Roman were fruitless, although the emperor Johannes Cantacuzenus declared in favor of the union. More successful were similar efforts with regard to the Armenians, who, at a council held in 1342, condemned those heresies with which they were charged. In 1345 Clement brought about a new crusade against the Turks, in which the king of Cyprus, the grand master of Rhodes, and the republics Venice of and Genoa took part, which, however, led to no result. He showed a great severity against the Flagellants. See FLAGELLANTS. Most of the new cardinals created by this pope were Frenchmen, and among them were a considerable number of his own relatives, who scandalized the Church by their licentious lives. Clement died in 1352. Petrarch praises the generosity and eloquence of this pope; but he gave, on the other hand, great offence by his extravagance and by his private life. Of his writings there are still extant several sermons, a treatise on the poverty of Christ and the apostles, a volume of letters, etc. See Wetzer u. Welte, *Kirchen-Lex.* ii, 596 600; Herzog, *Real-Encyklop.* ii, 733, 734; Hoefer, *Biog. Générale*, x, 765; Neander, *Church Hist.* x, 41, 43, 412; Gieseler, *Ch. Hist.* per. iii, div. iv, ch. i, § 97, 100.

VII, Anti-pope at Avignon (*Robert of Geneva*), with whom the great papal schism commenced, took this title on his election in 1378. He resided at Avignon, was acknowledged at once in Naples and France, and at a later period by Scotland, Savoy, and Lorraine, as well as by Castile, Aragon, and Navarre. He died without reputation in 1394.—Neander, *Church Hist.* v, 475, 565, 164, 232; Gieseler, *Ch. Hist.* per. iii.

div. vi, ch. i, § 101; Hase, p. 275. See AVIGNON; URBAN VI.

VII, Pope (*Giulio*, illegitimate son of Giuliano de Medicis), became pope in 1523; one of the weak and wavering men whose selfish policy in critical times makes their prominence in history a prominence of disgrace. He entered the Maltese order, and became grand prior of Capra. When his cousin Leo X ascended the papal throne he was at once appointed archbishop and cardinal. Subsequently he acted as cardinal legate of Tuscany. He was elected pope on the 19th of Nov. 1523. On May 2, 1524, he issued a bull for the reformation of abuses prevailing in Italy. In the same year he sent a legate, Campeggio, to the Diet of Nuremberg, in order to bring about a suppression of the Reformation in Germany. The pope and his legate greatly offended the German princes by their arrogance, but succeeded, nevertheless, in effecting an alliance against the Protestants between Austria, Bavaria, and twelve princes of South Germany. Notwithstanding the zeal of the emperor for the defence of the Church of Rome, the pope was prevailed upon by the king of France to join the alliance of France, England, Venetia, and other Italian states against Charles. After the siege and capture of Rome by the imperial army, the pope was compelled to capitulate (Jan. 5, 1527); but, being unable to fulfil the conditions of the capitulation, he escaped, disguised as a merchant, on Dec. 9, 1527, and fled to Orvieto. Soon after he concluded a peace with Charles (1529), and crowned him emperor at Bologna (1530); while, on the other hand, Charles restored the papal possessions, and made Alessandro of Medicis (a reputed son of the pope) sovereign of Florence. The demand of Charles and the German princes for the convocation of an œcumenical council, which was to reform abuses in the Church and restore its unity, he did not fulfil, making his consent contingent upon conditions which he knew to be unacceptable to Charles. In the suit of Henry VIII of England for divorce from his wife, Catharine of Aragon, the pope, after long hesitation, decided against the king, and thereby precipitated the separation of the Anglican Church from the Church of Rome. He sanctioned the new monastic orders of the Capuchins, Theatines, Somaskians, and Recollects, enlarged the library of the Vatican, and was in general a patron of literature. He died Sept. 25, 1534. The *Bullarium Romanum* (ed. Lugd. 1692, i, 636-694) contains 41 constitutions and decrees of this pope. The life of Clement has been written by Onufrio Panvini and Jacob Ziegler (in Schelhorn, *Amoen. hist. eccl.* tom. ii). See Wetzer u. Welte, *Kirchen-Lex.* ii, 600-602; Herzog, *Real-Encykl.* ii, 734-736; Hoefer, *Biog. Générale*, x, 766; Ranke, *Hist. Papacy*, bk. i, ch. iii; Hase, *Ch. History*, p. 376, 390, 421, 450.

VIII, Anti-pope (*Ægidius Muñoz*), took this title in 1421 on being elected by three cardinals at Peniscola, after the death of Benedict XIII. He resigned to Martin V in 1429, and thus terminated the great Western schism.—Migne, *Dict. Biog.* s. v. Mugnoz; Gieseler, *Ch. Hist.* per. iii, div. v, ch. i, § 130.

VIII, Pope (*Ippolito Aldobrandini*), was born in 1536, at Fano; became first a lawyer, subsequently consistorial advocate, auditor of the Rota (see ROTA), datarius (q. v.), and, in 1585, cardinal, and legate in Poland. He was elected pope Jan. 30, 1592. He was a cautious and politic ruler. He mediated the peace of Vervins between France and Spain. In the civil war of France he sided, like his predecessors, with the league against Henry IV. Even after the latter had joined the Church of Rome the pope hesitated to recognise him, and it was not until nearly the whole of France had recognised him that the pope consented to a solemn absolution of Henry (Dec. 17, 1597). Henry supported the annexation of Ferrara to the papal states, and reintroduced the Jesuits into France, while, on the other hand, the pope abstained from openly opposing Henry's edict of toleration. During his pontificate the king of Poland prevailed upon the metropolitan of Kiev and seven of the Ruthenian bishops to unite with the Church of Rome, and ambassadors arrived at Rome from the Coptic patriarch of Alexandria to negotiate a union of the Copts with the Church of Rome. He issued new editions of the Vulgate, the Roman Breviary, Missal, and of the Index. In order to settle the dogmatical controversy between Jesuits and Dominicans on divine grace, he instituted in 1597 the *Congregatio de auxiliis divinæ gratiæ*. A dispute with the republic of Venice was amicably settled. He died on March 5, 1605. Baronius and Bellarmin were among the cardinals appointed by him. One hundred and twenty-three constitutions and decrees of this pope are contained in *Bullar. Rom. Magnum*, tom. iii, 1-170. His life was written by Cicarella.—Ranke, *Hist. Pap.* b. vi; Hase, *Ch. Hist.* p. 456, 466 sq.; Wetzer u. Welte, *Kirchen-Lex.* ii, 603-640; Herzog, *Real-Encyklop.* ii, 136.

IX, Pope (*Giulio Rospigliosi*), was born in 1600 at Pistoja. He was in succession auditor of the Rota, secretary of Sixtus IV, and cardinal, and was elected pope in 1667. He mediated a peace between Louis XIV and Spain, at Aix-la-Chapelle, in 1668. He was upright in his intentions, but easy in disposition. He left his name to the *Clementine Peace*, a brief pause in the struggle between the Jansenists and Jesuits. He is said to have died of grief at the taking of Candia by the Turks, 1669.—Ranke, *Hist. Pap.* b. viii; Hase, *Ch. Hist.* p. 512, 518; Wetzer u. Welte, *Kirchen-Lexikon*, ii, 605.

X, Pope (*Emilio Altieri*), was born at Rome on the 13th of July, 1590, and held the papal chair from 1670 to 1676. Eighty years old at his accession, he was completely governed by his relations, one of whom, Cardinal Paluzzi, was called by the Romans pope *de facto*. He was always eager to mediate peace between the Roman Catholic states, and supported the Poles with money against the Turks. In his reign commenced the dispute with Louis XIV of France concerning the rights claimed by the French kings, during the vacancies of episcopal sees, to dispose of the ecclesiastical benefices, and to receive the revenue.—Ranke, *Hist. Pap.* b. viii; Hase, *Ch. History*, p. 512; Wetzer u. Welte, *Kirchen-Lexikon*, ii, 608.

XI, Pope (*Giovanni Francesco, count of Albani*), was born at Pesaro July 22, 1649. He was secretary of the secret briefs under Innocent XI, Alexander VIII, and Innocent XII, and, as such, wrote, among others, the celebrated bull of Alexander VIII (1691) against the Gallican liberties adopted by a national convention of the French bishops in 1682. He became cardinal deacon in 1690, and cardinal priest in 1700. He was raised to the popedom in 1700 on account of his energy and ability, and displayed abundance of the former quality, but with singular want of success. He opposed the elevation of Prussia to a kingdom, and thus made himself ridiculous in Germany. In the war of the Spanish succession he voluntarily acknowledged Philip V, the grandson of Louis XIV of France, but was compelled by the imperial forces threatening Rome to recognise Charles III, the brother of Joseph I of Austria, as king of Spain. He lost Parma and Placentia, and was totally disregarded at the peace of Utrecht (1713). By this peace Sicily was given to Duke Victor Amadeus of Savoy, who denied the papal claim to Sicily, and when the pope had recourse to ban and interdict, expelled nearly all the priests from Sicily, and transported them to the papal states. The pope did not repeal ban and interdict until 1719, when Sicily fell to the power of the emperor of Austria. In the long controversy between the Dominicans and Jesuits concerning the observance of the pagan customs of China by converts, in

which Innocent X had decided in favor of the Dominicans, and Alexander VII in favor of the Jesuits, Clement again declared against the Jesuits, who apparently submitted, but continued the controversy. In the Jansenistic controversy this pope took very decisive action by the bull *Vineam Domini* (July 16, 1705), which demanded a strict adherence to the decrees of Innocent X and Alexander VIII against the book of Jansenius. Of still greater importance was the celebrated bull *Unigenitus* (Sept. 8, 1713) against Quesnel's (q. v.) work on the New Testament, which produced an extraordinary commotion in the Gallican Church. The *Bullar. Rom. Contin.* P. II (1727), contains 123 bulls, constitutions, letters, and briefs of Clement; and *Contin.* P. VI (1739), 183 constitutions. The life of Clement XI was written by Polidoro (Urbino, 1727), Lafiteau (Pad. 1752, 2 vols.), Reboulet (Avignon, 1752, 2 vols.), and by the Protestant Buder, *Leben u. Thaten des klugen Papstes Clementis XI* (3 vols. Frankf. 1720). He died 1721. His works (Homilies) were published (2 vols. fol.) in Rome, 1729.—Ranke, *Hist. Pap.* b. viii; Hase, *Ch. Hist.* p. 513, 518; Wetzer u. Welte, *Kirchen-Lex.* ii, 609, 612; Herzog, *Real-Encyklop.* ii, 737.

XII, Pope (*Lorenzo Corsini*), was born at Florence in 1652. He was appointed cardinal May 17, 1706, cardinal bishop of Frascati in 1725, and became pope July 12, 1730, when 78 years old. Immediately upon his accession to the papal chair, he instituted a trial against Coscia, the favorite of his predecessor, Benedict XIII, for extortion. Coscia was sentenced to eight years' imprisonment, and a fine of 40,000 ducats. In 1732 he issued a papal "constitution" for a better regulation of the conclave; by a brief of 1736 he suppressed the sect of the Cocchiari, and in 1738 he condemned the Free-masons. He took a special interest in the union of the Greek Church with the Roman, and in 1734 founded the "Corsinian" ecclesiastical seminary for young Greeks at Bissignano, in Calabria; but the endeavors of the Jesuits to gain over the patriarch of Constantinople were fruitless. Equally inefficient were special efforts made for winning over the Protestants of Saxony and Silesia. His relations to the Roman Catholic states were, in general, not friendly. Parma, which he claimed after the death of the last Farnese (1731), was occupied by Austria. Spain, against the consent of the pope, made enlistments in the papal states, and placed garrisons in several towns. Portugal claimed the cardinal's hat for a favorite of the king (Bicchi), and the pope, in 1731, yielded. Charles Emanuel of Sardinia was threatened with the ban for occupying several places in Piedmont which the pope claimed as fief. The little republic of San Marino, which Cardinal Alberoni, in 1739, had rashly annexed to the papal states, soon recovered its independence. He supported the emperor of Austria with money in his war against the Turks. He promoted the study of Oriental languages, especially the Syriac, and sent Assemani on his second journey to the East, to collect Oriental manuscripts for the library of the Vatican. His private life was austere, and he was rigid in the enforcement of ecclesiastical discipline. He died Feb. 6, 1740. The *Bullarium Rom. Cont.* P. VIII (Luxemb. 1740), contains 277 constitutions of this pope.—Hase, *Ch. History*, p. 514; Ranke, *Hist. Pap.* b. viii; Wetzer u. Welte, *Kirchen-Lex.* ii, 611; Hoefer, *Biogr. Générale*, x, 769.

XIII, Pope (*Carlo della Torre di Rezzonico*), was born at Venice March 7, 1693; became governor of Fano in 1721, auditor of the Rota in 1729, cardinal-deacon in 1737, bishop of Padua in 1743, cardinal-priest in 1747. He ascended the papal chair July 6, 1758. He owed his elevation to the Jesuits, whom he supported with an earnestness and perseverance that fully displayed the feebleness of the popedom. By autograph letters to the kings of France, Portugal, and Spain, he endeavored to avert the destruction of the order in those three states. But in vain. The Portuguese government suppressed all the convents in 1759 and 1760, imprisoning a number of members under the charge of being accomplices of a plot against the life of the king, and transporting most of them into the papal states "as a present to St. Peter." In 1764 the Jesuits were exiled from France. In reply, Clement issued the bull "*Apostolicum pascendi*," in which he again confirmed the order; but the French Parliament forbade the publication of the bull. In April, 1767, the Spanish government embarked all the members of the order in Spain in order to transport them to the papal states. On the 30th of January, 1768, the pope issued a brief, in which he annulled, as head of the Church and as feudal sovereign of Parma, a number of reformatory measures which the duke of Parma had issued in 1765 and 1766, pronouncing the severest censures of the Church against all who had aided in the drawing up, publication, and execution of these decrees, and releasing the subjects of the duke from the duty of obeying them. This bull produced the greatest indignation at all the Bourbon courts. Parma expelled the Jesuits (in 1768), France occupied Avignon and Venaissin, and Naples took possession of Benevento and Pontecorvo. In addition to these troubles, a conflict arose with the republic of Venice, which had issued some laws restricting the privileges of the clergy, and in particular that of accumulating property. The republic of Genoa offered a reward of 6000 scudi for the capture of a papal delegate to the island of Corsica, which had risen in insurrection against the Genoese. In January, 1768, the pope protested against the resolution of the Polish Diet, which, although recognising the Church of Rome as the state Church, made some concessions to the dissidents. Besides these conflicts with the state governments, Clement had a hard struggle against an Episcopal movement in the Church of Rome, which demanded a restriction of the papal prerogatives and an enlargement of the powers of the metropolitans, and the chief representative of which was the German bishop Febronius (q. v.). The *Congregation of the Index* forbade the possession and circulation of the book under penalty of the galleys; but this rigorous measure, as well as letters to the bishops of Germany to use the utmost efforts for the suppression of the dangerous book, remained useless. Some of the bulls issued by Clement (as *Animarum Saluti* and *Aliud ad Apostolatus*), in vindication of the claims of the papacy, offended even the most zealous partisans of the pope. Even the cardinals became dissatisfied, and a change of policy was seriously contemplated when the pope died on February 3, 1769. Clement restricted the right of asylum, forbade the clergy from engaging in mercantile pursuits, and conferred upon Maria Theresa the title of apostolic majesty.—Ranke, *Hist. Pap.* bk. viii; Hase, *Church Hist.* p. 524 sq.; Wetzer u. Welte, *Kirchen-Lexikon*, ii, 613–618; Herzog, *Real-Encyklop.* ii, 738–740.

XIV, Pope (*Giovanni Vincente Antonio Ganganelli*), was born at San Arcangelo, near Rimini, October 31, 1705. After receiving an education in the institutions of the Jesuits at Rimini and the Piarists at Urbino, he entered, on May 17, 1723, the order of the Minorites, exchanging his baptismal Christian name for that of Lorenzo. He soon distinguished himself both as a pulpit orator and as a theologian, and taught theology in several of the institutions of his order. When, on May 20, 1741, Pope Benedict XIV presided at the general chapter of the Minorites, which was to elect a new general of the order, Ganganelli, in the name of the chapter, addressed the pope in a speech which gained to him the full confidence of Benedict. He was in 1745 appointed assistant, and in 1746 consultor at the Sant' Uffizio (the Congregation of the Inquisition), and in this office won general respect by his moderation, amiable character, and scholarship.

On September 24, 1759, he was appointed cardinal-priest by Clement XIII upon the recommendation of the general of the Jesuits. The pope intrusted to him several important missions; but when it was found that he disapproved the uncompromising opposition of the pope to the Bourbon courts, he fell into disfavor, and was deprived of all influence. The conclave, after the death of Clement XIII, lasted over three months. The ambassadors of the Bourbon courts, aided by the youthful Archduke Joseph of Austria (subsequently Joseph II), made the utmost exertions to secure the election of a liberal pope. Ganganelli finally was agreed upon by a compromise of the two parties. The one regarded him as sufficiently flexible and liberal, while the Jesuits' party held that, though opposed to the late pope's policy, he was not hostile to the order of the Jesuits. Thus he was elected by both parties on May 19, 1769. As he was not yet a bishop, he received the episcopal consecration on the 28th of May, and was crowned pope on the 4th of June. He opened his pontificate by making reforms in the administration of the papal states, showed himself a patron of science and art, and endeavored to gain the confidence of the Roman people. But his chief care was to restore the good relations between the papal and the Bourbon courts. He opened a personal correspondence with the Bourbon princes, and carefully avoided everything that could give offence. He abandoned the papal claims to the duchy of Parma; offered himself to the court of Madrid as godfather for the new-born son of the princess of Asturia; conciliated the king of Portugal and his prime minister Pombal (who threatened a complete separation of Portugal from the Church of Rome) by appointing Pombal's brother a cardinal, and confirming the episcopal nominations which had been made by the king. This conciliatory policy secured the restoration to the papal government of Avignon, Venaissin, Benevento, and Pontecorvo. But the chief demand of the Bourbon courts, the suppression of the order of the Jesuits, he tried to escape as long as possible. He had held himself aloof from the Jesuits from the first day of his pontificate, and had forbidden the admission of the General of the order to the Vatican. He appointed a committee of jurists to examine the subject; acquainted himself personally with all that had been written for or against the order; and took great care to prepare public opinion gradually for its suppression. In a letter to the king of Spain he publicly admitted the necessity of suppressing the order, as the members had deserved this fate by their intrigues. The bishops of the papal states were authorized to examine the houses of the Jesuits, and to secularize those members who desired it. On June 25, 1773, the seals were put on the archives of the novitiate of the order at Rome, and the cardinal of Aragon was directed to possess himself of all their possessions within his legation. A similar order was given to the bishop of Montalto. Finally, on July 21, 1773, the famous brief "*Dominus ac Redemptor Noster*," by which the whole order was suppressed, was signed. It was published on the 16th of August. On the whole, the decree was carried out with great regard to the individual members, but the general, father Ricci, was arrested. The brief states, as a reason for the suppression, that the Church no longer derived from the order the advantages which were expected from it at the time of its foundation; it refers to the suppression of other monastic orders by former popes; claims for the pope the right of suppressing an order without previous trial, and explains his long hesitation to take this step from his earnest desire of thoroughly considering the matter. The measure naturally produced an extraordinary excitement; the Jesuits everywhere submitted, but some violent books against the acts of the pope were published by the members or friends of the order, and prophecies from a Dominican nun, Anna Theresa Poli, and from a certain Bernardina Renzi, announcing the imminent death of the pope, were widely circulated. Some months after the suppression of the order the health of the pope began to fail, and he died September 22, 1774. An opinion that he had been poisoned found many believers, and is still defended by a number of writers, but a majority of the best historians have declared it not sufficiently supported. Special works on Clement are, Caraccioli, *Vie de Clement XIV* (1775; German translation, Frankfort, 1776); *Leben des P. Clemens XIV* (Berlin, 1774-75, 3 vols.); Cretineau-Joly, *Clément XIV et les Jésuites* (Paris, 1847, on the side of the Jesuits); *Ganganelli, Papst Clemens XIV; seine Briefe und seine Zeit* (Berlin, 1847); Theiner, *Histoire du Pontificat de Clément XIV* (Paris, 1853, 3 vols.; German edit. Leipzig). Father Theiner, who was a prefect-coadjutor of the archives of the Vatican, consultor of the Congregation of the Index and other congregations, a member of the special Congregation on the Immaculate Conception, etc., at Rome, made use of many unprinted documents in the archives of the Vatican. He tried to exalt Clement as one of the greatest popes, and, in order to achieve this, came out very severely against the Jesuits of that time. His work led to a lively controversy. The French historian of the order, Cretineau-Joly, undertook the defence of the Jesuits, but his book was put on the Index. The general of the order, P. Roothan, fearing that the controversy might turn out badly for the order, declined all responsibility for Cretineau-Joly's work, but at the same time induced P. de Ravignan, the celebrated Jesuit preacher at Paris, to take up the defence of the order. Ravignan accordingly wrote and published *Clément XIII et Clément XIV* (Paris, 1854, 2 vols., p. 574 and 502), in which he tries to justify both the Jesuits and the pope who suppressed them. See Herzog, *Real-Encyklop.* ii, 740-742; Wetzer u. Welte, ii, 618-622; Hoefer, *Biog. Générale*, x, 770-776; Ranke, *Hist. Pap.* bk. viii; Hase, *Church Hist.* § 525; Hook, *Eccles. Dict.* s. v. Ganganelli.

Clementines, I. (Κλημέντια, Κλημέντινα, or pseudo-Clementines), are the several writings, partly orthodox, partly heretical, falsely ascribed to Clement, one of the apostolic fathers, and bishop of Rome from A.D. 92-102, for the purpose of giving them greater weight and currency. These works are

1. A Second Epistle to the Corinthians, extant only in fragments. These fragments are found, together with Clement's genuine or first Epistle to the Corinthians [see Clement of Rome], at the close of the Alexandrian Codex of the Bible (called Cod. A), dating from the fifth century, and preserved in the British Museum. The earliest mention of such an epistle we meet in Eusebius, who says (*Hist. Eccl.* iii, 38), "We must know that there is also a second Epistle of Clement; but we do not regard it as being equally notable with the former, since we know of none of the ancients that have made use of it."

The catalogue of writings contained in the Alexandrian MS. ascribes it to Clement; but this, in the absence of other evidence, external and internal, is not of great weight, since Codex A cannot be traced beyond the fifth century. A closer examination of the fragments shows that they are not an epistle, but a homily, containing general exhortations to active Christianity, and to fidelity in persecution, with polemical references to the Gnostic denial of the resurrection. The document differs so much in style and doctrinal importance from the genuine epistle of Clement that it has been generally assigned by critics to a later date. It is orthodox in sentiment. The very beginning contains a distinct confession of the divinity of Christ, who is called "God, and the Judge of the living and the dead." Otherwise it is of no special account.

2. Two encyclical LETTERS TO VIRGINS, first discovered by Wetstein in 1752, in a Syriac translation, and appended to his edition of the Greek Testament. They commend celibacy, and contain exhortations and rules of discipline for monks and nuns.

3. Five DECRETAL LETTERS, which pseudo-Isidore has placed at the head of his collection of decretals of Roman popes. Two of them are addressed to James, bishop of Jerusalem, and are older than the pseudo-Isidore of the eighth or ninth century; the three others were fabricated by him.

4. The APOSTOLICAL CONSTITUTIONS and CANONS, including the LITURGY of St. Clement, which is a part of the eighth book of the Constitutions. This is a collection of ecclesiastical laws and usages which grew up gradually during the first four centuries, and is valuable chiefly as a rich source of information concerning ancient Church government, worship, and practice. The work professes to be a bequest of all the apostles handed down through the Roman bishop Clement, or dictated to him. It begins with the words, "The apostles and elders to all who among the nations have believed in the Lord Jesus Christ. Grace be to you and peace," etc. It contains, in eight books, a collection of moral exhortations, ecclesiastical laws, and liturgical formularies. The object of the compiler was to establish the episcopal hierarchy, and to furnish the clergy with a convenient guide in worship and discipline. The first six books were written at the end of the third century, the remaining two at the beginning of the fourth; at all events, before the Council of Nicæa (325). The APOSTOLICAL CANONS are appended to the eighth book of the Constitutions, and pretend to be likewise of apostolical origin. They consist of 85, or, in other copies, 50 brief rules for the conduct of the clergy and laity, borrowed in part from the Pastoral Epistles, partly from decrees of early councils, and partly from oral tradition. They are also found separately in Greek, Syriac, Ethiopic, and Arabic manuscripts. They were collected by some unknown hand about the middle of the fourth century. The Greek Church in 692 adopted the whole collection of 85 canons; the Latin retained only 50, which Dionysius Exiguus translated into Latin about A.D. 500.

The Apostolical Constitutions and Canons are found in the larger editions of the works of the apostolic fathers, by Cotelier and Clericus (1672, 1698, 1700, 1724), in the first volume of Mansi's, and also of Harduin's *Collection of Councils*, and have been separately edited by Guil. Ueltzen, *Constitutiones apostolicæ* (Rostochii, 1853), and by P. A. de Lagarde, *Constitutiones apostolorum* (Lips. 1862). Among the many treatises on the Apost. Const. we mention Krabbe, *Ueber den Ursprung und Inhalt der apost. Constitutionen* (1829); S. von Drey, *Neue Untersuchungen*, etc. (1832); Chase, *Constitutions of the holy Apostles, including the Canons* (1848); comp. Hefele, *Conciliengeschichte*, i, 767 sq.; Schaff, *Church History*, i, 440 sq.; Bunsen, *Hippol.* i, 319 sq.

5. The pseudo-Clementine HOMILIES, to which the title *Clementines* (*τὰ Κλημέντια, Clementina*) is more particularly applied, and the RECOGNITIONS (*Ἀναγνωρισμοί, Recognitiones Clementis Rom.*), which resemble the former in form and contents. To these must be added the EPITOME DE GESTIS PETRI, which is a summary of the Homilies. The HOMILIES are twenty in number, but the last has only recently been discovered. They figure very prominently in the history of the ancient heresies. They are a most curious philosophico-religious romance. Clement, an educated Roman, and kinsman of the emperor Domitian, dissatisfied with heathenism and thirsting after truth, travels to Judæa, meets the apostle Peter, and is converted by him to the Christian faith. He accompanies him on his missionary journeys, and takes down in writing the substance of the sermons and disputations with Simon Magus. Simon Peter is thus the proper hero of the romance, and appears as the champion of pure, primitive Christianity, in contrast with Simon Magus, the great deceiver and arch-heretic. The apostle Paul is not mentioned, but is perhaps attacked under the name of Simon. The doctrinal system which is skilfully interwoven with this narrative stands by itself as a peculiar and confused mixture of Ebionistic and Gnostic ideas and fancies. It is a speculative form of Ebionism, rather than (as Baur treats it) a school of Gnosticism. It is essentially Judaizing in spirit and aim, though influenced by heathen philosophy. It is bitterly hostile to the theology of Paul, and forms in this respect the opposite extreme to the Gnosticism of Marcion and his school. It presents Christianity as the restoration simply of the primitive religion of Adam, Enoch, Noah, Abraham, and Moses, which was corrupted by dæmons, until Christ purged it of all false additions. The apostle Peter defended it against the new corruptions of Simon Magus. James, the brother of Christ, is made the general vicar of Christ, the pope to whom even Peter is amenable, and Jerusalem is the centre of Christendom. The *Epitome* is only a poor abridgment of the Homilies. The *Recognitions* of Clement, in 10 books, are an orthodox recension of the Homilies, and were probably written in Rome. They exist only in a Latin translation.

The *Homilies* and *Recognitions* are incorporated in the large editions of the apostolic fathers by Cotelier and Clericus. The former were separately edited by Schwegler, 1847 (incomplete); better by Alb. Dressel, who first discovered the 20th homily in the Vatican library (Gött. 1853); and by P. de Lagarde (Leipsig, 1865). On the system of the pseudo-Clementine Homilies, compare the works of Neander and Baur on Gnosticism, the learned monograph of Schliemann (*Die Clementinen nebst den verwandten Schriften*, Hamb. 1844), Hilgenfeld (*Die Clementinischen Recognitionen und Homilien*, Jena, 1848, and also his work on the apostolic fathers, 1853, p. 289-306), Uhlhorn (*Die Homilien und Recognitionen des Clemens Rom.*, Göttingen, 1854, and an article by the same in Herzog's *Encykl.* ii, 744), Schaff (*Church History*, i, 215 sq.), and an article of Steitz in the *Studien und Kritiken* for 1867, No. III, p. 545 sq. Dr. Steitz derives the German story of Faust from the pseudo-Clementine fiction of Simon Magus. There are some points of resemblance, but not sufficient to establish such a connection. A translation of the *Recognitions* (by the Rev. T. Smith) is given, with an introduction on the literature, in the *Ante-Nicene Library*, vol. iii (Edinburgh, 1867).

II. A part of the canon law prepared by pope Clement V (1305–1314), and consisting of the decrees issued by the Council of Vienna (1311–1312), as well as his own constitutions. This collection was to follow the five books of decretals collected by Gregory IX in 1234, and the *liber sixtus* prepared in 1298 by Boniface VIII, under the name of *Liber septimus;* it is, however, more commonly known under the name of Clementines. Like the two previous collections, it is divided into five books—*Judex, Judicium, Clerus, Connubia, Crimen;* and even the series of titles and the headings fully correspond with those of the collection of Gregory IX. Clement made his collection known to the consistory of cardinals in 1313, and in the following year sent it to the University of Orleans. His successor, John XXII, sent it also to the universities of Paris and Bologna. The first *glossa* (commentary) to it was written about 1326 by Joannes Andreæ, and it soon obtained the authority of a *glossa ordinaria.* It was revised by cardinal Zabarella († 1417). The first editions of the Clementines were published at Mainz in 1460, 1467, and 1471. See Wetzer u. Welte, *Kirchen-Lex.* ii, 628; Hase, *Ch. Hist.* § 286. See also CANON LAW.

III. A sect whose members reject most of the forms and ceremonies of the Romish Church, but adhere to its distinguishing doctrines, such as the sacrifice of the

mass, the necessity of confession, etc. Their name is said to be derived from that of a priest, their first leader. The sect has never been numerous; but a few members, it is thought, may still (1867) be found in the Pyrenæan provinces of France.

Cleobians, a branch of the Simonians (q. v.), in the first century, extinguished almost at its rise.

Cle'ŏpas (Κλεόπας, contr. for Κλεόπατρος, *of a renowned father*), one of the two disciples who were going to Emmaus on the day of the resurrection, when Jesus himself drew near and talked with them (Luke xxiv, 18), A.D. 29. Eusebius and Jerome (*Onomast.* s. v. Ἐμμαούς, *Emaus*) make him (Κλεώπας, *Cleophas*) a native of Emmaus. It is a question whether this Cleopas is to be considered as identical with the CLEOPHAS (q. v.), or rather *Clopas* of John xix, 25, or the ALPHÆUS (q. v.) of Matt. x, 3, etc. Their identity was assumed by the later fathers and Church historians (Thiess, *Comment.* ii, 2:0 sq.). But Eusebius (*H. E.* iii, 11) writes the name of Alphæus, Joseph's brother, Clopas, not Cleopas; and Chrysostom and Theodoret, on the Epistle to the Galatians, call James the Just the son of Clopas. Besides this, Clopas, or Alphæus, is an Aramaic name, whereas Cleopas is apparently Greek. Again, as we find the wife and children of Clopas constantly with the family of Joseph at the time of our Lord's ministry, it is probable that he himself was dead before that time. On the whole, then, it seems safer to doubt the identity of Cleopas with Clopas, notwithstanding the similarity of names. (See Rus, *Harmon. evang.* III, ii, 1272 sq.; Wieseler, *Chronol. Synopse*, p. 431; Clemens, in the *Zeitschr. f. wiss. Theol.* iii, 356 sq.)

Cleŏpa'tra (strictly *Cleop'atra*, Κλεοπάτρα, *of a renowned father*), a Greek female name occurring as early as Homer (*Il.* ix, 556), and borne especially by the Egyptian princesses after the times of Alexander (see Smith's *Dict. of Class. Biog.* s. v.). The following, being members of the line of the Ptolemies, who frequently intermarried with the Seleucidæ of Syria, are mentioned in the Apocrypha and Josephus, or alluded to in the Scriptures.

1. A daughter of Antiochus III (the Great), who was married to Ptolemy V (Epiphanes), B.C. 193 (see Dan. xi, 13, 16), Cœle-Syria being given as her dower (Josephus, *Ant.* xii, 4, 1; Appian, *Syr.* 5; Livy, xxxvii, 3), though Antiochus afterwards repudiated this arrangement (Polyb. xxviii, 17). See ANTIOCHUS, 2.

2. A daughter by the preceding match, who became "the wife of Ptolemy" (Esth. xi, 1) VI (Philometor), her own brother, on whose death (B.C. 146) she was violently persecuted by his successor (her own brother likewise, and for a time husband) Physcon, or Ptolemy VII, or Euergetes II (Justin. xxxviii, 8, 9; xxxix, 1, 2; Livy, *Ep.* 59; Diod. Sic. ii, 602, ed. Wess.) She is mentioned by Josephus as having joined her first husband in the letter addressed to Onias (q. v.) in favor of reconstructing the Jewish temple at Leontopolis (*Ant.* xiii, 3, 2), and as befriended in her distress by Onias (*Apion*, ii, 5). See PTOLEMY PHILOMETOR.

3. A daughter of the preceding by her first husband; married first (B.C. 150) to Alexander (q. v.) Balas, the Syrian usurper (1 Macc. x, 58; Josephus, *Ant.* xiii, 4, 1 and 5), and on his death (B.C. 146) to Demetrius (q. v.) Nicator (1 Macc. xi, 12; Josephus, *Ant.* xiii, 4, 7). During the captivity of the latter in Parthia, B.C. 141 (1 Macc. xiv, 1 sq.), she married his brother Antiochus (Josephus, *Ant.* xiii, 7, 1) VII (Sidetes), out of jealousy on account of Demetrius's connection with the Parthian princess Rhodogune, and also murdered Demetrius on his return (Appian, *Syr.* 68; Livy, *Ep.* 60), although Josephus (*Ant.* xiii, 9, 3) and Justin (xxxix, 1) represent her as only refusing to receive him. She also murdered Seleucus, her son by Nicator, who on his father's death assumed the government without her consent (Appian, *Syr.* 69). Her other son by Nicator, Antiochus VIII (Grypus), succeeded to the throne (B.C. 125) through her influence; but afterwards, finding him not disposed to yield her all the power she desired, she attempted to poison him, but was anticipated by him, and compelled to drink the poison herself (Justin, xxxix, 2), B.C. 120. See ANTIOCHUS, 6 and 7.

Coin of Cleopatra and her son Antiochus Grypus.

4. A sister of the preceding, and the rival of her own mother (No. 2) in the affections of Ptolemy Physcon, by whose will she was left in supreme power, in connection with whichever of her own sons she might choose. She was compelled by her people to set up the eldest, Ptolemy VIII (Lathyrus); but she soon prevailed upon them to expel him, and make room for her younger and favorite son Alexander (Pausan. viii, 7), and she even sent an army against Lathyrus to Cyprus, an effort in which the Jews became involved (Josephus, *Ant.* xiii, 12, 2 sq.; 13, 1) through the intervention of Alexander Jannæus (q. v.). Her son Alexander retired through fear of her cruelty, but was recalled by his mother, who attempted to assassinate him, but was herself put to death (B.C. 89) before she could effect her object (Justin, xxxix, 4). See PTOLEMY LATHYRUS.

5. The second daughter of the name by the preceding marriage, and married to her own brother Lathyrus after her sister's divorce, from whom she is usually distinguished by the surname of *Selenè* (Σελήνη, *the moon*). After his exile she married Antiochus XI (Epiphanes), and on his death Antiochus X (Eusebes). She was besieged by Tigranes in Syria or Mesopotamia, and either taken and killed by him (Strabo, xxi, p. 749), or, according to Josephus (*Ant.* xiii, 16, 4; comp. *War*, i, 5, 3), relieved by Lucullus's invasion of Armenia. See ANTIOCHUS, 9 and 10.

6. The last queen of Egypt, was the daughter of Ptolemy Auletes, born B.C. 69, and celebrated for her beauty and accomplishments, as also for her voluptuousness and ambition. She had various amorous and political intrigues, first with Julius Cæsar (Dion Cass. xliii, 27; Sueton. *Cæs.* 35), whom she even accompanied to Rome; and finally with Marc Antony (q. v.), who became so completely enamored of her as to commit suicide when falsely informed of her death, which she presently actually accomplished, it is said by causing herself to be bitten by an asp, on the capture of Alexandria by Octavianus, afterwards called Augustus, B.C. 30 (see Liddell's *Hist. of Rome*, chap. lxx).

Coin of Antony and Cleopatra.

Josephus often refers to her profligate conduct (see *Ant.* xiv, 13, 1) as well as her artful cruelty (*Ant.* xv, 3, 5 and 8; *War*, i, 19, 1), and narrates her unsuccessful attempt to draw even Herod into an amour (*Ant.* xv, 4).

7. One of Herod's wives, a native of Jerusalem, and mother of his sons Herod and Philip (Josephus, *Ant.* xvii, 1, 3; *War*, i, 28, 4).

8. The wife of Gessius Florus, procurator of Judæa; she was a favorite with Nero's wife (Josephus, *Ant.* xx, 11, 1).

Cle'ŏphas, or rather CLOPAS (Κλωπᾶς), the husband of Mary (q. v.), the "sister" of Christ's mother (John xix, 25); probably a Græcized form of the name elsewhere (Matt. x, 3; Mark iii, 18; Luke vi, 16; Acts i, 13; comp. Mark xv, 40) called ALPHÆUS (q. v.), perhaps in imitation of the name *Cleopas* (q. v.). See the *Theol. Stud. u. Krit.* 1840, iii, 648.

Clerc, Le (CLERICUS), JEAN, a learned critic and theologian, was born at Geneva March 19, 1657. He studied theology at his native town, and in 1679 passed a brilliant examination for admission into the ministry of Geneva, but had before this fallen out with strict Calvinism, chiefly under the influence of the Saumur theses (*Syntagma thesium theol. Salmurii*, 1655), and the writings of his grand-uncle Curcellæus and of Episcopius. As early as 1679 he published a pseudonymous work on the difference between strict Calvinists and Remonstrants, in favor of the latter (Liberii *de sancto amore epistolæ theologicæ*, Saumur, 1679). In 1682 he openly joined the Remonstrants, and in 1684 the Rotterdam Synod gave to him the professorship of philosophy and ancient languages at the Arminian college of Amsterdam. Here he at once began to exhibit his marvellous literary activity. After publishing some exegetical treatises of his uncle David le Clerc, and his father Stephen le Clerc, and a dogmatical treatise on predestination, and the nature and limits of human knowledge (*Entretiens sur diverses matières de théologie*, Amsterdam, 1685), he attracted general attention by his literary controversy with the learned oratorian Richard Simon (*Origeni Adamantino Critobulus Hieropolitanus*, 1684, pseudonym.; *Sentimens sur l'hist. critique du V. T. composée par le P. R. Simon*, Amsterd. 1685, *and Défence des Sentimens*, etc. Amsterd. 1685). In the same year he established with F. Cornand de la Croze a literary journal, under the title *Bibliothèque universelle et historique*, which, besides reviews and extracts from new books, contains many essays by Le Clerc (25 vols. 1686–1693). He also took an active part in the publication of the four editions of Moreri's *Dictionnaire* (4 vols. fol. 1691–1702). He defended Episcopius against the charge of Socinianism (*Lettre à M. Jurieu sur la manière dont il a traité Episcopius*, 1690), and translated three works of Burnet into French, and part of the history of ancient philosophy by Th. Stanley into Latin. From 1692–1695 he wrote several compends of philosophy (*Opera philosophica*, 4 vols. 1698; later editions contain a 5th volume, with a life of the author). In 1698 he began the publication of his Latin translation of and commentary on the Old Testament (Genesis, 1693; the four last books of the Pentateuch, 1696; the other historical books, 1708; the remainder, 1731), in which he developed some latitudinarian views on Biblical miracles and scriptural interpretation. In 1696 he published his *Ars Critica* (2 vols. Amsterd.), one of his most important works, of which the *Epistolæ Criticæ et Ecclesiasticæ* (1700, against Cave) are a continuation. He translated into Latin and added valuable notes to Hammond's New Testament (1698, 2 vols. fol.; 2d edit. Frankfort, 1714), and in the same year published a new edition of the *Patres Apostolici* by Cotelier, with notes and additions (Amsterd. 1698; 2d ed. 1724). A work against some anti-Christian views in Bayle's *Dictionary* (*Parrhasiana*, Amsterd. 1699) involved him in a controversy with Bayle which lasted until the death of the latter. He prepared an appendix to the Amsterdam reprint of the Maurine edition of the works of St. Augustine (*Appendix Augustiniana*, Amsterd. 1703); published a French translation of the New Test. (Amsterd. 1703, 2 vols.), with notes, which again brought him into the suspicion of Socinianism, and published new editions, with notes, of Petavius, *De theologicis dogmatibus* (6 vols. fol. Amsterd. 1700), and *doctrina temporum* (Amsterd. 1703, 3 vols. fol.), of the complete works of Erasmus of Rotterdam (Lugd. Bat. 10 vols. fol. 1703–6), of Hugo Grotius, *De Veritate Religionis Christianæ* (Amsterd. 1709), and of many others. He also continued his literary journal under the title *Bibliothèque choisie* (1703–13, 27 vols.). In 1712, on the death of Limborch, he was appointed his successor as professor of Church History at the college of Amsterdam. His new office induced him to write a Church History of the first two centuries (*Hist. Eccles. duorum prim. sæc.*, Amsterd. 1716). He also prepared several editions of Latin and Greek classics, a history of the Netherlands, and carried on a very extensive correspondence with scholars in various countries. In 1728 he suddenly lost, in consequence of a paralytic stroke, the use of language, and, to a large extent, his memory, and his condition became still worse after a new attack in 1732. He died January 8, 1736. Le Clerc was one of the most prolific writers of modern times, but more critical than productive. Though always in ecclesiastical communion with the Remonstrants, he undoubtedly leaned towards Socinianism.—See Wetzer u. Welte, *Kirchen-Lex.* ii, 630 sq.; Herzog, *Real-Encyklop.* ii, 766; Ersch u. Gruber, *Encyklop.* vol. xviii, s. v.

Clerestory. See CLEAR-STORY.

Clergy, the general name given to those who are set apart by *ordination* (q. v.) for the performance of Christian worship and teaching, and who are therefore said to be in orders (q. v.).

1. *Origin and Meaning of the Word.*—The word is by some supposed to be derived from κλῆρος (*lot*), as if the minister were, in a special sense, κλῆρος τοῦ Θεοῦ, specially consecrated to God. Others (Augustine, *Expos. in Ps.* 67; Isidor, *De Off. Eccles.* ii, c. i) maintain that it indicates that the lot by which Matthias was chosen apostle gave the first general name for the chiefs of the Church as a class. Jerome says they were called clergy, either because they were chosen by lot to be the Lord's, or because the Lord is their lot or heritage (Deut. xviii, 2). More recently both these derivations have been abandoned, and one proposed by Baur (*Ursprung des Episcopats*, p. 93 sq.; *D. Christenthum u. die christl. Kirche der drei ersten Jahrhund.* p. 245) and by Ritschl (*Entsteh. der altkath. Kirche*, p. 245) has met with general favor. According to it, the word κλῆρος is in the N. T. (Acts i, 17, 25; 1 Pet. v, 3), as well as in the language of the ancient Church, commonly used in the signification of "rank," "degree." The "faithful" (*fideles*) and catechumens were called κλῆροι (ordines, ranks), just as well as bishops, presbyters, deacons. Gradually—the exact point of time cannot be fixed—the ecclesiastical officers were exclusively called "*the* rank," κλῆρος, a transition which was very natural when the difference between the officers of the Church and the bulk of the people was emphasized. The earliest writer in which the name "clergy" (κλῆρος) in the restricted sense occurs is Clement of Alexandria. "It is clear from the N. T. that there were men separated to the work of the Christian ministry. Some of these appear to have been *extraordinary*, such as *apostles*, who had been selected by Christ himself without any intermediate authority; *evangelists*, such as Timothy and Titus; *prophets*. See 1 Cor. xiv, 3, 22–24. These probably continued only during the lifetime of the apostles and those on whom they laid hands. Others were *ordinary* ministers, denominated elders or

presbyters, pastors, bishops, and teachers. See 1 Pet. v, 1-4; Acts xiv, 23; xv, 6; Titus i, 5. These were divinely called and appointed to their work (Acts xx, 28); they were solemnly set apart; they were entitled to be supported by the churches to whom they ministered; their duties were to feed the flock, to take care of and govern the Church of God, and to watch for souls (1 Thess. v, 12, 13; Heb. xiii, 7, 17)" (Coleman, *Christian Antiquities*, ch. iii).

2. *Distinction of Clergy and Laity.*—In the apostolical Church no abstract distinction of clergy and laity, as to privilege or sanctity, was known; all believers were called to the prophetic, priestly, and kingly offices in Christ (1 Pet. v, 3). The Jewish antithesis of clergy and laity was at first unknown among Christians; and it was "only as men fell back from the evangelical to the Jewish point of view" that the idea of the general Christian priesthood of all believers gave place, more or less completely, to that of the special priesthood or clergy (Neander, *Church History*, Torrey's ed., i, 194 sq.; Schaff, *History of the Christian Church*, i, ch. v; Gieseler, *Church History*, i, § 52). So Tertullian, even (*De Baptismo*, c. 17, before he became a Montanist): "The laity have also the right to administer the sacraments and to teach in the community. The Word of God and the sacraments were by the grace of God communicated to all, and may therefore be communicated by all Christians as instruments of the divine grace. But the question here relates not barely to what is permitted in general, but also to what is expedient under existing circumstances. We may here use the words of St. Paul, 'All things are lawful for men, but all things are not expedient.' If we look at the order necessary to be maintained in the Church, the laity are therefore to exercise their priestly right of administering the sacraments only when the time and circumstances require it." From the time of Cyprian († 258), the father of the hierarchical system, the distinction of clergy and laity became prominent, and very soon was universally admitted. Indeed, from the third century onward, the term *clerus* (κλῆρος, *ordo*) was almost exclusively applied to the ministry to distinguish it from the laity. As the Roman hierarchy was developed, the clergy came to be not merely a distinct order (which might consist with all the apostolical regulations and doctrines), but also to be recognised as the only priesthood, and the essential means of communication between man and God (Vinet. *Past. Theol.* Introd.).

3. *Classification.* — Simultaneously with the introduction into the Church of a distinction between clergy and laity, a division of the clergy into classes of different rank was gradually developed. The earliest and most important of those distinctions was that between bishop and presbyter (see BISHOP). To these were added, in the course of time, deacon, subdeacon, archbishop, primate, patriarch, pope, and a number of officers preceding the subdiaconate. Each class was initiated into office by a special ordination (see ORDERS). In general, the various classes, according to the higher and lower dignity of the orders, were divided into the *higher* and *lower* clergy, the latter embracing the *ostiarii*, *lectores*, *exorcistæ*, and *acolythi*, the former the subdeacons, deacons, priests, bishops. Up to the 13th century the subdeacons were counted among the lower clergy. The canon law very frequently applies the name *clerici* exclusively to the lower classes of the clergy, designating each higher class (subdeacons, deacons, priests, bishops) by its special name. *Higher* (or *high*) clergy is commonly understood to mean bishops or prelates (q. v.), and *lower* (or *low*) clergy the others.

In those churches which have monastic institutions, the clergy are also divided into *regular* and *secular* clergy, regular being members of orders and congregations who bind themselves to common rules, and secular those who have charge of parishes. In the Church of Russia the common name of the regular clergy is the *black* clergy, out of which the higher ecclesiastical dignitaries are chosen, while the secular clergy (priests, deacons, readers, and sacristans) are called *white* clergy.

4. *Exemptions and Privileges.*—"By laws made by Constantine, and confirmed by Valentinian IV, Gratian, and Theodosius the Great, the clergy were exempted, (1.) From all civil and municipal offices, that they might give themselves to their religious duties. (2.) From contributions to public works. (3.) From a variety of taxes and imposts. (4.) From military service, though this is not stated in so many words. (5.) From appearance in civil courts. A bishop could not be forced to give public testimony; but it might be taken in private, though the bishop was not obliged to take formal oath, but only had the Gospels before him. Scourging and torture, which might be applied to other witnesses, could not be inflicted on the clergy. Nor could the civil courts take cognizance of purely ecclesiastical causes (Theodos. *Cod.*. lib. xvi, tit. 2, leg. 23; Justinian, *Novel.* 83), though they could interfere in criminal matters, and in cases between a clergyman and a layman; for the layman was not bound to obey an ecclesiastical tribunal. Bishops were often arbiters in disputes, but only when both parties agreed to lay the matter before them, and then the episcopal sentence could be put in force by the civil power. In cases of life and death, clerical intervention was strictly prohibited."

The privileges which the clergy enjoyed under the ancient municipal laws of England were numerous; but being much abused by the popish clergy, they were greatly curtailed at the Reformation. "Those which now remain are personal, such as clergymen not being compelled to serve on juries, or to appear at the sheriff's, or consequently at the court-leet, or view of frankpledge. Clergymen are exempt also from temporal offices, in regard to their continual attendance on their sacred functions. While attending divine service they are privileged from arrest in civil suit, stat. 50 Edward III, chap. v, and 1 Richard II, ch. xv. It has been adjudged that this extends to the going to, continuing at, and returning from celebrating divine service. The ecclesiastical goods of a clergyman cannot be levied by the sheriff; but on his making his return to the writ of *fieri facias*, that the party is a clergyman *beneficed*, having no lay-fee, then the subsequent process must be directed to the bishop of the diocese, who, by virtue thereof, sequesters the same. So in an action against a person in holy orders, wherein a *capias* lies to take his person, on the sheriff's making the same return, further process must issue to the bishop, to compel him to appear; it is otherwise, however, unless the clergyman is *beneficed*. In cases of felony, benefit of clergy is extended to them without being branded, and they are entitled to it more than once. Clergymen labor also under certain disabilities, such as not being capable of sitting as members in the House of Commons. This, however, though a received opinion, was not restricted by law till so late as the 41 George III, chap. lxiii, which was passed in consequence of John Horne Tooke, then in deacon's orders, being returned, and sitting in Parliament for Old Sarum. It was then enacted that no priest, nor deacon, nor minister of the Scotch Church, shall be capable of serving in Parliament; that their election shall be void, and themselves liable to a penalty of £500 a day in the event of their either sitting or voting. It would seem, therefore, as in the case of the bishop of Exeter against Shore, that no one can denude himself of holy orders. Various acts of Parliament have also, from the time of Henry VIII, been passed to prevent clergymen from engaging in trade, holding farms, keeping tan or brew houses, all of which are stated, explained, and consolidated by the 57 George III, ch. xcix" (Eadie, *Eccles. Dict.* s. v.). For a peculiar privilege, see CLERGY, BENEFIT OF.

In the 4th century it became a law that clergymen were to bring suits only in ecclesiastical courts (i. e. before bishops or synods). Justinian ordained that even laymen should bring suit against clergymen, monks, and nuns only before the bishop of the diocese, and against a bishop only before his metropolitan. Thus the privileged jurisdiction of the clergy came to be a general law, which was sanctioned and more fully defined by many imperial and canonical decrees, and which no individual member had a right to renounce. The privileged jurisdiction referred, however, to personal suits only, not to real and feudal (see Wetzer u. Welte, *Kirchen-Lexikon*, iv, 460, s. v. Gerichtsbarkeit, Geistliche).

A peculiar privilege of the clergy of the Roman Church is the one called *privilegium canonis*. It consists in a canonical provision that every one who inflicts upon a clergyman (including monks and nuns) a bodily injury (embracing spitting, kicking, etc.), incurs by the fact itself excommunication. It was first enacted by the Council of Rheims in 1131 (in the canon which begins *Siquis suadente diabolo clericum percusserit*, "if any one, at the instigation of the devil, shall strike a clergyman"), and was made a general Church law in 1139 by Innocent II. It provided that absolution from the excommunication thus incurred should only be given in the hour of death, or if the culprit shall personally go to Rome. The law still exists, but if the injury be a small one, the bishop may dispense from the Roman journey (see Wetzer u. Welte, *Kirchen-Lex.* viii, 782, s. v. Privilegium Canonis).

5. *Special Discipline, Duties, Disabilities.*—"In the early Church the clergy were placed under strict discipline. The crimes leading to punishment were simony, heresy, apostasy, neglect of duty, immorality, and violation of clerical etiquette. Punishments were various: (1.) *Corporeal castigation*, which Augustine speaks of as not unfrequent, the delinquent being first deprived of his clerical rank, and then scourged as a layman. *Decanica*, or prisons, were attached to many churches. (2.) *Degradation*—that is, the offender was put down to a lower rank or grade of office, and that to all appearance permanently. (3.) *Suspension*—either *a beneficio*, from his income, or *ab officio*, from his office. (4.) *Deprivation*—either forbidden from the Lord's Supper altogether, and treated as a stranger (*communio peregrina*), or allowed to communicate only with the laity (*communio laica*). (5.) *Excommunication*—the final cutting off of the offender from clerical office, and the denial of all hope of restoration to it, even though he should be restored to the fellowship of the Church. We subjoin a few of the more characteristic of the ancient canons concerning the clergy, as showing the spirit of the age, and revealing some of its tendencies and usages: Thus, in the Apostolical Canons, '5. Let not a bishop, presbyter, or deacon turn away his wife, under pretence of religion; if he do, let him be suspended from the communion (ἀφοριζέσθω), and deposed (καθαιρείσθω) if he persist. 6. Let not a bishop, presbyter, or deacon undertake any secular employ, upon pain of deposition. 17. He who, after his being baptized, has been involved in two marriages, or has kept a concubine, cannot be a bishop, or a presbyter, or a deacon, or at all belong to the sacerdotal catalogue. 18. He that marries a widow, or one that is divorced, or a harlot, or a servant, or an actress, cannot be a bishop, or a presbyter, or a deacon, or at all belong to the sacerdotal catalogue. 19. He that marries two sisters, or his niece, cannot be a clergyman. 20. Let the clergyman who gives security for any one be deposed. 51. If any bishop, presbyter, deacon, or any of the sacerdotal catalogue, do abstain from marriage, and flesh, and wine, not for mortification, but out of abhorrence, as having forgotten that all things are very good, and that God made man male and female, and blasphemously reproaching the workmanship of God, let him amend, or else be deposed, and cast out of the Church; and so also shall a layman.' In the Canons of Laodicea, '54. That they of the priesthood and clergy ought not to gaze on fine shows at weddings or other feasts; but before the masquerades enter, to rise up and retreat. 55. That they of the priesthood and clergy, or even laity, ought not to club together for great eating and drinking bouts.' The duties of the various ranks of the clergy were strictly defined, and firm laws laid down for their guidance. They were not allowed to leave their station without permission, but were to reside in their cure, deserters being condemned by a law of Justinian to forfeit their estates; but they could resign in certain circumstances, and a retiring or canonical pension was sometimes granted. They could not remove from one diocese to another without letters dimissory, nor could they possess pluralities, or hold office in two dioceses. It was forbidden them to engage in secular employments, or attend fairs and markets, nor could they become pleaders in courts of law. They were expected to lead a studious life, their principal book being the Scriptures, while heathen and heretical treatises were only allowed them as occasion served. Bishops could not be 'tutors and governors,' but the inferior clergy might, under certain limitations. After the example of Paul, some of the lower clergy might support themselves, or fill up their leisure by some secular occupation. Severe laws were passed against what are called wandering clergy—*vacantivi*, who appear to have been often fugitives from discipline, without character or certificate. If a clergyman died without heirs, his estates fell to the Church, so the Council of Agde in 500 ruled. By a law of Theodosius and Valentinian III, the goods of any of the clergy dying intestate went in the same way" (Eadie, s. v.).

6. *Election of the Clergy.*—"Some assume that in the early Church the people had no other power than to give their testimonials to the persons elected, or to make exceptions if they had any just and reasonable objections to urge; others say that the people were absolute and proper electors, and this from apostolical right, and that they enjoyed this for a succession of ages. That the people had a voice in the elections is evident from several circumstances. No bishop could be intruded upon a Church against the consent of the members: in case the majority of a Church consisted of heretics or schismatics, the practice differed. In many instances recorded in ecclesiastical history the voices of the people prevailed against the bishops themselves. In addition, we have the words used by the people in the decision, such as ἄξιος or ἀνάξιος, *dignus* or *indignus*; and instances in which persons were brought by force to the bishop to be ordained, or were elected to the office by acclamation. It was decided by the fourth Council of Carthage that as the bishop might not elect clerks without the advice of his clergy, so likewise he should secure the consent, co-operation, and testimony of the people. The popular elections, however, became scenes of great disorder and abuse. A remarkable passage from Chrysostom (*De Sacerd.*) has been frequently quoted, and applies more or less to such elections, not only in Constantinople, but also in Rome, Alexandria, Antioch, and other large cities. He says: 'Go and witness the proceedings at our public festivals, in which, more especially, according to established rule, the elections of ecclesiastical officers take place. You will find there complaints raised against the minister as numerous and as various in their character as the multitude of those who are the subject of church-government. For all those in whom the right of election is vested split into factions. It is evident that there is no good understanding, either among themselves, or with the appointed president, or with the presbytery. One supports one man, and one another. And the reason of this is, that they all neglect to look at that point which

they ought to consider, namely, the intellectual and moral qualifications of the person to be elected. There are other points by which their choice is determined. One, for instance, says, "It is necessary to elect a person who is of a good family." Another would choose a wealthy person, because he would not require to be supported out of the revenues of the Church. A third votes for a person who has come over from some opposite party. A fourth uses his influence in favor of a relative or friend. While another lends his influence to one who has won upon him by fair speeches and plausible pretensions.' In order to set aside these abuses, some bishops claimed an exclusive right of appointing to spiritual offices. In this way they gave offence to the people. In the Latin and African churches an attempt was made to secure greater simplicity in elections by introducing *visiters*. This did not, however, long continue. Another plan was to vest the election in members of the lay aristocracy. But the determining who these should be was left to caprice or accident; and the result was that the right of election was taken out of the hands of the people, and vested partly in the hands of the ruling powers and partly with the clergy, who exercised their right either by the bishops, their suffragans and vicars, or by collegiate meetings, and this very often without paying any regard to the Church or diocese immediately concerned. Sometimes the extraordinary mode of a bishop's designating his successor was adopted; or some one unconnected with the diocese, to whom a doubtful case had been referred for decision, was allowed to nominate. But in these cases the consent of the people was presupposed. Patronage has prevailed since the fifth century; but the complete development of this system was a work of the eighth and ninth centuries" (see PATRONAGE).—Coleman, *Christian Antiquities*, ch. iii; Farrar, *Eccles. Dictionary*, s. v. Election; Bingham, *Orig. Eccles.* bk. iv, chap. ii; Henry, *Ch. Antiq.* bk. ii, ch. i; Wetzer u. Welte, *Kirchen-Lex.* i, 630; Herzog, *Real-Encyklop.* s. v. Geistliche. See ECCLESIASTICAL POLITY.

CLERGY, BENEFIT OF, an ancient privilege whereby the persons of clergymen were exempted from criminal process before the secular judges in particular cases, and consecrated places were exempted from criminal arrests. See SANCTUARY. "This privilege was originally confined to those who had the *habitum et tonsuram clericalem*, but in time every one was accounted a clerk who could read; so that after the dissemination of learning by the invention of printing, it was found that as many laymen as divines were admitted to this privilege, and therefore the stat. 4 Henry VII, ch. xiii, distinguishes between lay scholars and clerks in holy orders, and directs that the former should not claim this privilege more than once, and, in order to their being afterwards known, they should be marked with a letter, according to their offence, on the brawn of the left thumb. After this burning, the laity, and before it the real clergy, were discharged from the sentence of the law in the king's court, and delivered over to the ordinary for canonical purgation. This purgation, having given rise to various abuses and prostitution of oaths, was abolished at the Reformation; and accordingly by the stat. 18 Elizabeth, ch. vii, it was enacted that every person having benefit of clergy should not be delivered over to the ordinary, but after burning in the hand should be delivered out of prison, unless the judge thought it expedient to detain him there for a limited period. It will be collected from the above statement that the parties entitled to this privilege are clerks in holy orders, without branding, or any of the punishments subsequently introduced in its place; lords of Parliament, peers, and peeresses for the first offence; commoners not in orders, whether male or female, for clergyable felonies, upon being burnt in the hand, whipped, fined, imprisoned, or transported. It is a privilege peculiar to the clergy that sentence of death cannot be passed upon them for any number of clergyable offences committed by them (Blackstone, *Comm.* iv, 374)."—Eadie, *Eccles. Dict.* s. v.

Clerici REGULARES et SECULARES. See CANONS and REGULARS.

Clericus. See CLERC, LE.

Clerk (Acts xix, 35). See TOWN-CLERK.

CLERK, originally and properly the name for one of the clergy (q. v.), and still the common appellation by which clergymen of the Church of England distinguish themselves in signing any legal instrument. It came afterwards, by an obvious transition, to signify a "learned man." Its most usual application in England is to that officer, now a layman, but once, in all probability, an ordained functionary, who leads the responses of the congregation. Properly speaking, in the Church of England, the clerk is not an original functionary of the congregation in the eye of the Church, which, in her rubrics, speaks mostly, if not always, of "clerks" (ordained persons); and it is certain that several duties are by custom yielded to the clerk which properly belong to the clergyman, such as the giving out of the Psalms to be sung, and the publication of notices. (See Rubric after Nicene Creed.) The appointment of parish clerks properly belongs to the incumbent. They should be licensed by the ordinary, and take an oath to obey the minister, with whom properly rests the power of removing the clerk from his office, though if he be displaced without sufficient cause a "mandamus" may restore him. By the Church Temporalities' Act for Ireland, the parish clerk is removable for any misconduct, by the minister with the consent of the bishop.

CLERKS, APOSTOLICAL. See JESUITS.

CLERKS, MINOR. See FRANCISCANS.

CLERKS OF ST. MAJOLUS, a religious order of the sixteenth century in Italy, founded by Jerome Æmilianus, and approved by Paul III in 1540 and by Paul IV in 1542. They gave themselves to the religious instruction of the young and the ignorant. See SOMASCHIANS.

CLERKS OF ST. PAUL. See BARNABITES.

CLERKS, REGULAR. See CANONS and REGULARS.

CLERKS, THEATINE. See THEATINES.

Clermont, a city of Auvergne, France, where a council was held in 1095 and 1096, confirming the councils of Pope Urban. A crusade was also recommended, and King Philip excommunicated. The council was attended by 4 archbishops, 225 bishops, and an immense number of lower clergy and laity.

CLERMONT MANUSCRIPT (CODEX CLAROMONTĀNUS, known as Cod. D of the Pauline Epistles, No. 107 of the Imperial Library at Paris), an uncial MS., with the Greek and Latin on opposite pages, containing Paul's fourteen epistles, with a few hiatus, most of which have been supplied at various dates. The Epistle to the Colossians stands before that to the Philippians, and Hebrews after the Pastoral Epistles. The MS. is stichometrically arranged, with twenty-one lines on almost every page. The citations from the O. T. are written in red, except in Hebrews. It seems to belong to the sixth century. It probably came from a Latin scribe, with a Greek copy. The original writer made several alterations, then the whole of the Greek text was corrected (apparently in the seventh century) by the first reviser. Two others (in different handwriting) made a few changes, one of them only in the Greek text. But the fourth corrector went over the whole text, adding the breathings and accents, and erasing whatever displeased him. Besides these there are occasional alterations and *restorations* by later hands.

Beza says that he procured this MS. from Clermont, in the diocese of Beauvais (whence its name), a state

ΜΗΑΙCΧΡΟΚΕΡΔΗ | NONTURPILUCRUM
ΑΛΛΑΦΙΛΟΞΕΝΟΝ | SEDHOSPITALEM
ΦΙΛΑΓΑΘΟΝCΩΦΡΟΝΑ | BENIGNUMSOBRIUM
ΔΙΚΑΙΟΝΟCΙΟΝ | IUSTUMSANCTUM
ΕΝΚΡΑΤΗ | CONTINENTEM
ΑΝΤΕΧΟΜΕΝΟΝ | ADPECTENTEM

Specimen of the Codex Claromontanus (Tit. i, 8, 9: μὴ αἰσχροκερδῆ | ἀλλὰ φιλόξενον | φιλάγαθον σώφρονα | δίκαιον ὅσιον | ἐγκρατῆ | ἀντεχόμενον || non turpilucrum | sed hospitalem | benignum sobrium | justum sanctum | continentem | adspectentem).

ment which Wetstein unnecessarily impugns. After Beza's death, it passed into the library of the brothers Jacques and Pierre du Puy, the former of whom being librarian to the king of France, and dying in 1656, it was purchased and deposited in the Royal Library at Paris. In the early part of the eighteenth century, 35 leaves were cut out of this MS. by John Aymon, an apostate priest, who sold one of them to Stosch in Holland, and the others fell into the hands of the bibliographical Earl of Oxford. Both these purchasers, on learning the theft, restored the leaves to their proper place.

Beza made some use of this document; Walton's *Polyglott* inserted 2245 readings sent by the Du Puys to Usher (Mill, *N. T.* proleg. § 1284); Wetstein collated it twice (1715-16); Tregelles examined it in 1849; and Tischendorf published the text entire in 1852. It is one of the most valuable in sacred criticism.—Scrivener, *Introd. to N. T.* p. 130 sq. See MANUSCRIPTS, BIBLICAL.

Cletus, the name of one said to have been a bishop of Rome in the first century, but whether the same with Anacletus or not, and what his position in the order of succession, are points wholly unsettled.—Migne, s. v. Anaclet.; Wetzer u. Welte, *Kirchen-Lex.* ii, 625; Herzog, *Real-Encyk.* ii, 157; Gieseler, *Ch. Hist.* per. i, div. i, ch. iii, § 34, n. 10. See ANACLETUS.

Climate. See PALESTINE; WEATHER.

Clinic BAPTISM. Baptism on a sick-bed was so called, from κλίνη, a bed, and was allowed in the case of one already a candidate for baptism whose life was endangered; but if he recovered, he was not held eligible to orders. The first instance of clinic baptism is found in a letter from the Roman bishop Cornelius (about 250) to Bishop Fabius at Antioch, in which it is stated that "when Novatian, who had only received the *baptismus clinicorum*, and without a subsequent imposition of hands by the bishop, had been ordained priest by a predecessor of Cornelius, the whole clergy and the people had protested on the ground that it was not permitted to ordain any one a clergyman who, like him (Novatian), had received baptism only upon the sick-bed; that, however, the bishop had asked to allow an exception in this case" (Euseb. *Hist. Eccl.* i, 643). The same principle was expressed in 314 by the Synod of Neo-Cæsarea, and reasserted by a Paris synod in 829. Bishop Cornelius, in the letter above referred to, even hesitated to consider a clinic baptism as valid and efficient; "*if*," he says, "of such a one (*clinicus*), it can be said at all that he has received baptism." Similar doubts were expressed by others; but, on the other hand, Cyprian strongly insisted that a clinic baptism was just as valid and efficient as any other (*Epist.* 76). Wetzer u. Welte, *Kirch.-Lex.* ii, 636; Herzog, *Suppl.* ii, 595; Bergier, s. v. Cliniques; Bingham, *Orig. Eccl.* b. xi, ch. ii, § 5; Mosheim, *Commentaries*, cent. iii, § 15.

Clitus (Κλεῖτος), a rash young man, who was compelled by Josephus, when commander in Galilee, to cut off one of his own hands, as a punishment for exciting a revolt in Tiberias (Joseph. *Life*, § 34; *War*, ii, 21, 10).

Cloak (מְעִיל, *meil'*, Isa. lix, 17, elsewhere rendered in our version "robe," or "mantle") was an upper garment or robe (of cotton ?), which extended below the knees, open at the top, so as to be drawn over the head, and having arm-holes. It was worn by the high-priest under the ephod (Exod. xxviii, 31); also by kings and persons of distinction (1 Sam. xv, 27; Job i, 20; ii, 12), and by women (2 Sam. xiii, 18). See APPAREL.

So, in the New Testament, the word ἱμάτιον, rendered "cloak" in Matt. v, 40, is in its plural form taken for garments in general in other places (Matt. xvii, 2; xxvi, 65; Acts vii, 58; ix, 39). The cloak, or *pallium* (Acts ix, 39), was the outer garment (different from the "coat" or *tunic*, χιτών), and it seems to have been a large piece of woollen cloth nearly square, which was wrapped round the body, or fastened about the shoulders, and served also to wrap the wearer in at night. It might not be taken by a creditor (Exod. xxii, 26, 27), though the tunic could (Matt. v, 40), which fact gives peculiar force to the injunction of our Lord. See CLOTHING.

The φελόνης, rendered "cloak" in 2 Tim. iv, 13, was the Roman *pænula*, a thick upper garment, used chief-

ly in travelling, instead of the toga, as a protection from the weather. It seems to have been a long cloak without sleeves, with only an opening for the head. Others suppose it to have been a travelling-bag or portmanteau for books, etc. Discussions *de palo Pauli* have been written by Brenner (Giess. 1734), Heinse (Viteb. 1697), Lakemacher (Helmst. 1722), Rusmeier (Gryph. 1731), Vechner (s. l. 1678). See DRESS, etc.

Clod, גּוּשׁ, *gush*, or גִּישׁ, *gish*, Job vii, 5, a *lump* of earth; מֶגְרָפָה, *m^egraphah'*, Joel i, 17, a *spadeful* of earth; רֶגֶב, *re'geb*, Job xxi, 33; xxxviii, 38, a *mass* of earth; שָׂדַד, *sadad'*, to "break clods," Isa. xxviii, 24; Hos. x, 11; to "harrow," Job xxxix, 10, prop. to *level* the ploughed field. See AGRICULTURE.

Cloister (Lat. claustrum, *an enclosure*). This term is often applied to a *monastery* (q. v.). It was originally applied to the porch of the *atrium* or *paradise* (q. v.) of a church [see plan of ancient church under CHURCH EDIFICES], in which interments were made before it became usual to bury in the church itself. The term *cloister* is now more usually used in English to indicate the arcade surrounding the court enclosed by the buildings of a monastic establishment. This enclosed space was generally a garden, ornamented with a fountain and shrubbery, but it often served also as a burial-place for leading members of the brotherhood. The arcade (or cloister), in the first, or first and second stories of the buildings facing the court, served, especially during bad weather, for processions, and as a promenade for the monks while saying prayers, meditating, or studying, and for health, recreation, and conversation. In the Benedictine monasteries there was read in the cloisters each day a portion of the regulations of the order, and the entire body of the regulations before the assembled brotherhood four times a year. Stone seats were usually placed before the windows, and cells or stalls for study set into the wall of the building, off from the cloister. Relics and other objects of worship were sometimes placed in the cloister or the court. The cloisters had often great architectural beauty, and some of them are very important in their bearing on the history of architecture. Large monasteries often had several cloisters. The term *claustrum* was in them applied also to the covered passage-way leading from one part of a monastic establishment to another.—Wetzer u. Welte, *Kirchen.-Lex.* vi, 228.

CLOISTER-GARTH, the court or open space enclosed by a cloister (q. v.).

Cloke. See CLOAK.

Clonites. See METHODISTS, PRIMITIVE WESLEYAN, OF IRELAND.

Close Communion. See COMMUNION.

Closet (חֻפָּה, *chuppah'*, a *covering*, Joel ii, 16), a bridal couch, with curtains, rendered by our translators "chamber" in Psa. xix, 5. See BED. The Jews still employ the same word to designate the canopy under which, among them, the nuptial ceremony is performed. See MARRIAGE.

The word in the N. T. rendered "closet" is ταμεῖον, signifying properly a *store-house* (as in Luke xii, 24); hence any place of privacy and retirement (Matt. vi, 6; Luke xii, 3). See PRAYER.

Clothing (garment, לְבוּשׁ, *lebush'*, ἔνδυμα). Immediately after the Fall, our first parents clothed themselves with the leaves of the fig-tree; afterwards with the skins of animals. Subsequently some method, we may suppose, was discovered for matting together the hair of animals and making a sort of felt-cloth. Later still the art of weaving was introduced, and a web was formed combining the hair of animals with threads drawn from wool, cotton, or flax. The art of manufacturing cloths by spinning and weaving is of very great antiquity (Gen. xiv, 23; xli, 42; Job vii, 6). The Egyptians were celebrated for such manufactures. The Hebrews, while dwelling among them, learned the art, and even excelled their teachers (1 Chron. iv, 21). See WEAVING. While wandering in the Arabian wilderness, they prepared the materials for covering the tabernacle, and wrought some of them with embroidery. Cotton(?) cloth was esteemed most valuable, next to that woolen and linen. That which was manufactured from the hair of animals was considered of least value. Silk is not mentioned at a very early period, unless it be so in Ezek. xvi, 10, 13. This, however, is clear, that Alexander found silks in Persia, and it is more than probable that the Median dress adopted by the Persians under Cyrus was silk. It was not introduced among the nations of Europe until a late period. (See these various materials in their alphabetical order.) Garments woven or dyed of various colors were much esteemed in the East. They were generally made by women, and were occasionally tastefully embroidered (Gen. xxvii, 3; Exod. xxviii, 4-8; xxxix, 3; Judg. v, 30; Prov. xxxi, 21-24). The Asiatic modes of dress are nearly the same from age to age, and hence much light is thrown by modern observation on the subject of the clothing of the Hebrews. See COSTUME. The principal articles of dress, with men, were the "cloak," "robe," or "*mantle*," constituting the ordinary outer garment; the "shirt," or *tunic*, forming the inner dress; the "*turban*" for the head; the "girdle" for confining the garments at the waist; and the "*sandals*" for the feet. To these were added, in the case of females, the "*veil*" for concealing the face, and, as a matter of ornament, the showy "head-dress," the "necklaces," "bracelets," and "anklets," the jewelled rings for the ears and nose, with other occasional articles of effeminacy, as in Isa. iii. (See each of these words in its place.) See ATTIRE.

CHANGE OF CLOTHING. See GARMENT.

RENDING OF CLOTHES. To rend or tear the garments was from the earliest period an action expressive of the highest grief (Gen. xxxvii, 29). Jacob and David did it on various occasions; and so did Joshua, Hezekiah, and Ezra (2 Sam. xiii, 31; Josh. vii, 6; 2 Kings xix, 1; Ezra ix, 3). The high-priest was forbidden to rend his clothes (Lev. x, 6; xxi, 10), probably meaning his sacred garments: perhaps those referred to in Matt. xxvi, 65, were such as were ordinarily worn, or merely judicial, and not pontificial garments. Sometimes it denoted anger, or indignation mingled with sorrow (Isa. xxxvi, 22; xxxvii, 1; Acts xiv, 14). See RENDING.

Cloud (properly עָנָן, *anan*, as *covering* the sky, νεφέλη). The allusions to clouds in Scripture, as well as their use in symbolical language, must be understood with reference to the nature of the climate, where the sky scarcely exhibits the trace of a cloud from the beginning of May to the end of September, during which period clouds so rarely appear, and rains so seldom fall, as to be considered phenomena—as was the case with the harvest-rain which Samuel invoked (1 Sam. xii, 17, 18), and with the little cloud, not larger than a man's hand, the appearance of which in the west was immediately noticed as something remarkable not only in itself, but as a sure harbinger of rain (1 Kings xviii, 44). As in such climates clouds refreshingly veil the oppressive glories of the sun, clouds often symbolize the Divine presence, as indicating the splendor, insupportable to man, of that glory which they wholly or partially conceal (Exod. xvi, 10; xxxiii, 9; Num. xi, 25; xxi, 5; Job xxii, 14; Psa. xviii, 11, 12; Isa. xix, 1). The shelter given, and refreshment of rain promised by clouds, give them their peculiar prominence in Oriental imagery, and the individual cloud in that ordinarily cloudless region becomes well defined, and is dwelt upon like the individual tree in the bare landscape (Stanley, *Syria and Palestine*, p. 140). Similarly, when a cloud appears, rain is ordi-

narily apprehended, and thus the "cloud without rain" becomes a proverb for the man of promise without performance (Prov. xvi, 15; Isa. xviii, 4; xxv, 5; Jude 12; comp. Prov. xxv, 14). The cloud is, of course, a figure of transitoriness (Job xxx, 15; Hos. vi, 4), and of whatever intercepts divine favor or human supplication (Lam. ii, 1; iii, 44). Being the least substantial of visible forms, undefined in shape, and unrestrained in position, it is the one among material things which most easily suggests spiritual being. Hence it is, so to speak, the recognised machinery by which supernatural appearances are introduced (Isa. xix, 1; Ezek. i, 4; Rev. i, 7, et passim), or the veil between things visible and invisible; but, more especially, a mysterious or supernatural cloud is the symbolical seat of the Divine presence itself—the phenomenon of deity vouchsafed by Jehovah to the prophet, the priest, the king, or the people (Psa. lxviii, 34; lxxxix, 6; civ, 3; Nah. i, 3). Sometimes thick darkness, sometimes intense luminousness, often, apparently, and especially by night, an actual fire is attributed to this glory-cloud (Deut. iv, 11; Exod. xl, 35; xxxiii, 22, 23; 2 Sam. xxii, 12, 13). Such a bright cloud, at any rate at times, visited and rested on the Mercy-seat (Exod. xxix, 42, 43; 1 Kings viii, 14; 2 Chron. v, 14; Ezek. xliii, 4), and was named Shekinah (q. v.) by late writers (see Tholemann, *De nube supra arca*, Lips. 1771-1752; Stiebritz, *De arca fœderis*, Hal. 1753). Thus Jehovah appeared at Sinai in the midst of a cloud (Exod. xix, 9; xxxiv, 5); and when Moses had built and consecrated the tabernacle, the cloud filled the court around it, so that Moses could not enter (Exod. xl, 34, 35). The same happened at the dedication of the Temple by Solomon (2 Chron. v, 13; 1 Kings viii, 10). So Christ, at his second advent, is described as descending upon clouds (Matt. xvii, 5; xxiv, 30, etc.; Acts i, 9; Rev. i, 7; xiv, 14, 16). To come in the clouds, or with the clouds of heaven, was among the Jews a known symbol of Divine power and majesty; and Grotius observes that a similar notion obtained among the heathen, who represented their deities covered with a cloud. (See the treatises on the symbolical nimbus or halo by Nicolai [Jen. 1699], Reiske [*Dissert.* ii, No. 4].) Hence "clouds and darkness" appear to be put as representing the mysterious nature of the Divine operations in the government of the world (Psa. xcvii, 2). Clouds are also the symbol of armies and multitudes of people (Jer. iv, 13; Isa. lx, 8; Heb. xii, 1); a figure referring to the effects of a large and compact body of men, moving upon the surface of an extensive plain, like a cloud in the clear sky. A day of clouds is taken for a season of calamity (Ezek. xxx, 3; xxxiv, 12). Peter compares false teachers to clouds carried about with a tempest (2 Pet. ii, 17). Solomon compares the infirmities of old age, which arise successively one after another, to "clouds returning after rain" (Eccles. xii, 2). The favor of a king is compared to "a cloud of the latter rain," refreshing and fertilizing the earth (Prov. xvi, 15). The sudden disappearance of threatening clouds from the sky is employed by Isaiah as a figure for the blotting out of transgressions (xliv, 22).

Pillar of Cloud (עַמּוּד הֶעָנָן, *column of the cloud*, Exod. xxxiii, 9, 10), otherwise called *Pillar of Fire* (עַמּוּד הָאֵשׁ, Exod. xiii, 22), was the active form of the symbolical glory-cloud, betokening God's presence to lead his chosen host, or to inquire and visit offences, as the luminous cloud of the sanctuary exhibited the same under an aspect of repose. The cloud, which became a pillar when the host moved, seems to have rested at other times on the tabernacle, whence God is said to have "come down *in* the pillar" (Num. xii, 5; so Exod. xxxiii, 9, 10). See Pillar. It preceded the host, apparently resting on the ark, which led the way (Exod. xiii, 21; xl, 36, etc.; Num. ix, 15-23; x, 34). So by night the cloud on the tabernacle became fire, and the guiding pillar a pillar of fire. See Beacon. Modern Germans explain it of a natural appearance, or of the holy fire carried before the host from off the altar; but it is clearly spoken of as miraculous, and gratefully remembered in after ages by pious Israelites (Psa. cv, 39; lxxviii, 14; Wisd. x, 17) as a token of God's special care of their fathers. Isaiah has a remarkable allusion to it (iv, 5), as also Paul (1 Cor. x, 4, 2; see Pfau, *De nube Israëlitas baptizante*, Viteb. s. a.). A remarkable passage in Curtius (v, 2, § 7), descriptive of Alexander's army on the march, mentions a beacon hoisted on a pole from head-quarters as the signal for marching ("a fire was observed by night, a smoke in the day-time"). This was probably an adoption of an Eastern custom. See also an account of an appearance of fire by night in the expedition of Timoleon to Italy (Diod. Sic. xvi, 66). Similarly the Persians used, as a conspicuous signal, an image of the sun enclosed in crystal (Curtius, iii, 3, § 9). Caravans are still known to use such beacons of fire and smoke, the cloudlessness and often stillness of the sky giving the smoke great density of volume and boldness of outline. See Exode.

Clough, Benjamin, a Wesleyan Methodist missionary, was born at Bradford, England, 1791, and united with the Wesleyan Church in 1808. In a few years he was licensed as a local preacher, and in 1813 was sent with Dr. Coke, as one of his helpers, in his mission to India. In Ceylon he was soon regarded as one of the most successful students and teachers. He compiled two dictionaries—English and Singhalese, and Singhalese and English—which were published at the expense of the colonial government, and have been of incalculable value to his successors in the mission. He was one of the translators of the Holy Scriptures of the Old and New Testaments into the Singhalese language; and he assisted in preparing for the press a translation of the New Testament into the Pali, the sacred language of the Buddhists. As a preacher to the natives he was most zealous and successful. "During the first year of his labors, he won the confidence and convinced the judgment of many distinguished men among the heathen, and assisted to form that system of evangelization which has blessed many thousands of persons in the island of Ceylon." In 1838, failing health compelled him to return to England. He died in London, April 31, 1853.—*Wesleyan Minutes*, 1853, p. 18.

Clout is given in Josh. ix, 5 as the rendering of the Heb. verb טָלָא (*tala'*, elsewhere rendered "spotted"), which properly means to *patch*, and denotes that the sandals of the Gibeonites were mended, as if old and worn by a long journey. The "cast clouts" (סְחָבָה, *sechabah'*, literally a *tearing* in pieces) put under Jeremiah's arms to prevent the cords by which he was drawn out of the dungeon from cutting into the flesh (Jer. xxxviii, 11, 12) were old torn clothes or *rags*.

Clovis (old Ger. *Chlodwig*, i. e. "famous warrior;" modern Ger. *Ludwig*, Fr. *Louis*), the first Christian king of the Franks, was born A.D. 465, and by the death of his father, Childeric, became king of the Salian Franks, whose capital was Tournay. After having overthrown the Gallo-Romans under Syagrius, near Soissons, he took possession of the whole country between the Somme and the Loire, and established himself in Soissons. In 493 he married Clotilda, daughter of a Burgundian prince. His wife was a Christian, and earnestly desired the conversion of her husband, who, like most of the Franks, was still a heathen. In a great battle with the Alemanni at Tolbiac [Zülpich], near Cologne, Clovis was hard pressed, and, as a last resource, invoked the God of Clotilda, offering to become a Christian on condition of obtaining

the victory. The Alemanni were routed, and on Christmas day of the same year Clovis and several thousands of his army were christened by Remigius, bishop of Rheims. The reception of Clovis into the Church by a bishop in connection with Rome tended greatly to secure the supremacy of orthodoxy over Arianism, to which, at that time, most of the Western Christian princes belonged. Pope Anastasius, who fully appreciated the importance of this gain, saluted Clovis as the "most Christian king." In 507, love of conquest concurring with zeal for the orthodox faith, Clovis marched to the south-west of Gaul against the heretic Visigoth, Alaric II, whom he defeated and slew at Vouglé, near Poitiers, taking possession of the whole country as far as Bordeaux and Toulouse; but he was checked at Arles, in 507, by Theodoric, king of the Ostrogoths. Clovis now took up his residence in Paris, where he died in 511. Clovis, in several instances, used the Arianism of other Christian princes as a pretext for war and conquest, and he stained his name by cruelly murdering a number of his relations whom he looked upon as dangerous rivals; but the writers of the Romish Church assert that he was chaste, and just toward his subjects.—See Chambers, *Encycl.* s. v.; Wetzer u. Welte, *Kirchen-Lex.* ii, 490.

Cloyne, an ancient episcopal town in the south-east of Cork county, fifteen miles east by south of Cork. The bishopric was founded in the 6th century by St. Colman, the abbey in 707, and the cathedral in the 13th century. Near the cathedral is a round tower 92 feet high. About 1430 the episcopate was united to that of Cork, separated in 1678, and reunited in 1835. See CORK. Berkeley, the celebrated philosopher, was born here, and was bishop of Cloyne in 1678. Brinkley, the astronomer, who died in 1835, was also bishop of Cloyne. Population 1126. Cloyne is also the seat of a Roman Catholic bishop, who belongs to the ecclesiastical province of Cashel.—Chambers, *Encyclopædia*.

Club (only once in the plur., and that in the Apocrypha, 2 Macc. iv, 41, ξύλων πάχη, *thicknesses of sticks*, i. e. stout pieces of wood).

Clugny, Congregation of, a congregation of Reformed Benedictine monks, established in 909 at Clugny (now Cluni, a town of France, Department of Saône and Loire, eleven miles north-west of Mâcon) by Duke William of Aquitania and Berno, abbot of the Benedictine monasteries of Gigny and Baume. William gave to the new convents all the lands, forests, vineyards, mills, slaves, etc., of the domain of Clugny. The convent was to be always open for the poor, needy, and travellers, and to pay a small annual tribute to Rome; it was to be exempt from ducal and episcopal jurisdiction, being subject to the pope and the abbot only. William himself went to Rome to obtain the papal sanction. The convent began with twelve monks, under Berno as its first abbot. Under his successor Odo (q. v.), one of the most influential men of his time, numerous French convents subordinated themselves to Clugny, thus forming the "Congregation of Clugny," which soon extended from Benevento to the Atlantic Ocean, and embraced the most important convents of Gaul and Italy. Under the administration of his successors Aymard, Maïeul (Majolus), and St. Odilo, the congregation steadily extended, many bishops and princes placing their convents under Clugny. A large synod of French bishops at Anse, during the time of Odilo, declared the exemption of Clugny invalid; but under Odilo's successor, St. Hugo (died 1109), the old privilege was recovered. The reputation of Clugny at this time greatly increased in consequence of three monks of the congregation ascending, within a brief space of time, to the papal chair—Gregory VII, Urban II, and Pascal II. Hugo, in 1089, began the construction of the basilica of Clugny, which at that time was the largest in the world, and subsequently only a little surpassed by St. Peter's Church at Rome. Under Hugo the congregation numbered about 10,000 monks. His successor, Pontius de Melgueil, received the right of exercising the functions of a cardinal, and assumed the title of Archiabbas. His ambition having involved him in great difficulties, he resigned, and undertook a pilgrimage to Jerusalem; but a few years after he returned, took forcible possession of Clugny, of which at that time Peter Maurice, of Montboissier, generally called Peter the Venerable, was abbot, and squandered the treasures of the Church. He was arrested and imprisoned at Rome, where he died excommunicated. Under Peter the Venerable, Clugny reached the most brilliant point in its history, more than 2000 convents belonging to the congregation. Soon after it began to decline, especially in consequence of the rise of the mendicant orders and of the immense riches of the congregation. Several abbots endeavored to restore a strict discipline, and abbot Ivo of Vergy, in 1269, established the College of Clugny in Paris, in order to inspire the monks with greater interest in literary pursuits; but all these efforts led to no permanent improvement. Gradually the abbey fell under the rule of the French kings, and in the 16th century it became a "commend" (q. v.) of the cardinals and prelates of the family of Guise, and was on that account several times devastated during the civil wars in France. Clugny lost many of its convents in consequence of the Reformation, and because foreign governments objected to the continuance of a connection of convents in their countries with a French abbey. In 1627, Cardinal Richelieu made himself abbot of Clugny, and united it with the Congregation of the Maurines. This led to violent dissensions among the monks of Clugny, and the union had after a time to be repealed. The corruption after this time steadily increased, and Clugny, as a monastic institution, was only a wreck, when the French Constituent Assembly, on February 13, 1790, suppressed all the convents. The last abbot of Clugny, Cardinal Dominique de la Rochefoucauld, died in 1800. The property of the convent was confiscated, and the church sold for 100,000 francs to the town, which broke it down. Only a few ruins are left. See Lorain, *l'Abbaye de Clugny* (Dijon, 1839); Wetzer u. Welte, *Kirchen-Lex.* ii, 641; Herzog, *Real-Encyklop.* ii, 759; Hase, *Church Hist.* p. 226; Neander, *Church Hist.* iii, 417; iv, 249, 263. See BENEDICTINES.

Cluster. See BITTER; BSHCOL; GRAPE.

Clysma (Κλῦσμα), the name given by Eusebius (*Onomast.* s. v. Βεελσεφών) to the head of the Heeroopolitan or western gulf of the Red Sea, through which the Israelites passed on dry land; according to Philostorgius (*Hist. Eccl.* iii, 5), from a town of that name (comp. Epiphanius, *adv. Haer.* ii, p. 618), apparently corresponding nearly to the modern site of Suez (Reland, *Palæst.* p. 471), a little to the north of which are some mounds still known by the Arabs as *Tell Kolzum* (Wilson, *Lands of Bible*, i, 137). See EXODE.

Cni'dus (Κνίδος, of unknown etymol.; by the Romans often called *Gnidus*) is mentioned in 1 Macc. xv, 23, as one of the Greek cities which contained Jewish residents in the second century before the Christian era, and in Acts xxvii, 7, as a harbor which was passed by Paul after leaving Myra, and before running under the lee of Crete. It was a city of great consequence, situated at the extreme southwest of the peninsula (Mela, i, 16, 2) of Doris (Ptolemy, x, 2, 10), in Asia Minor [see CARIA], on a promontory which projects between the islands of Cos and Rhodes (Pliny, v, 29; see Acts xxi, 1); in fact, an island, so joined by an artificial causeway to the main land as to form two harbors, one on the north, the other on the south (see Smith's *Dict. of Class. Geogr.* s. v.). All the remains of Cnidus show that it must have been a city of great magnificence (see Mannert, VI, iii, 284 sq.). Its inhabitants were originally Lacedæmonian colonists (Herod. i, 174). It

Plan of Cnidus and Chart of the adjoining Coast.

was celebrated for the worship of Venus, whose famous statue, executed by Praxiteles, stood in one of her three temples there (Strabo, xiv, p. 965; Plin. *Hist. Nat.* xxxvi, 15; Hom. *Odyss.* i, 30), and was the birthplace of Etesias and other noted ancients (Pausanias, i, 1, 3). It is now a mere heap of ruins, and the modern name of the promontory is Cape *Krio* (Clarke's *Travels*, iii, 261). The place has been fully illustrated by Beaufort (*Karamania*, p. 81), Hamilton (*Researches*, ii, 39), and Texiar (*Asie Mineure*); see also Leake (*Northern Greece*, ii, 177; *Asia Minor*, p. 226), with the Drawings in the *Ionian Antiquities*, published by the Dilettanti Society, and the English *Admiralty Charts*, Nos. 1533, 1604.

Coin of Cnidus.

Coadjutor, in the churches of Rome and England, an assistant, appointed by competent authority, to any bishop, dignitary of a cathedral, or incumbent who is disabled by age or infirmity from the personal discharge of his duties. Such coadjutor may be either permanent or temporary, and in the former case may be appointed either with or without the right of succession. In the 3d century Bishop Narcissus, of Jerusalem, received as coadjutor Alexander of Cappadocia, and in the 4th century St. Augustine was appointed coadjutor of Valerius of Hippo. The first instance of the bishops of Rome having claimed any influence upon the appointment of coadjutors is found in a letter from Pope Zacharias to St. Boniface, in which permission is given to the latter to consecrate a coadjutor. The provincial councils, however, continued to claim this right, until in 1298 Boniface VIII reserved it as a *causa major* for the papal chair. The laws of the Church of Rome strictly forbade the appointment of coadjutors with the right of succession. The Council of Trent forbade it absolutely, with regard to lower benefices, but in the case of bishops and superiors of monasteries provided that, from important reasons, the popes might make an exception. The popes, however, disregarded this law, as well as so many others given by the councils, and appointed coadjutors for lower offices no less than for episcopal sees. See Wetzer u. Welte, *Kirchen-Lex.* ii, 646; Herzog, *Real-Encyklopädie*, ii, 739; Eden, *Theol. Dictionary*, s. v.

Coal (Sept. and N. T. ἄνθραξ) is a translation usually of one or the other of two Heb. words, viz., גַּחֶלֶת (*gache'leth*, literally a *kindling*, *pruina*), which signifies an ignited or *live coal*, and is of frequent occurrence (2 Sam. xiv, 7; xxii, 9; Job xl, 21; Psa. xviii, 8; cxx, 4; Isa. xliv, 19; xlvii, 14; Ezek. xxiv, 11), often with the emphatic addition of "burning" or of "fire" (Lev. xvi, 12; 2 Sam. xxii, 13; Psa. xviii, 12, 13; cxl, 10; Prov. vi, 28; xxv, 22; xxvi, 21; Ezek. ii, 13; x, 2), and פֶּחָם (*pecham'*, literally *black*, *carbo*), which properly signifies a coal quenched and not reignited, or *charcoal* (Prov. xxvi, 21, where the distinction between this and the former term is clearly made, "as *coals* [*pecham*] are to burning *coals* [*gacheleth*]"), and hence an ignited coal (Isa. xliv, 12; liv, 16). See Fuel. Two other Heb. terms (erroneously) rendered "coal" are רִצְפָּה (*ritspah'*, "live coal," Isa. vi, 6, literally a *pavement*, as elsewhere rendered), which appears to have been a *hot stone* used for baking upon; רֶשֶׁף (*re'sheph*), properly *flames* (to which jealousy is compared, Cant. viii, 6), and hence pestilential *fever* (Hab. iii, 5; "burning heat," Deut. xxii, 24; elsewhere a "*spark*," Job v, 7; "*thunderbolt*," Psa. lxxviii, 48); and רֶצֶף (*re'tseph*, spoken of a cake "baken on the coals"), which appears to be cognate to both the preceding words and to combine their meaning, and may thus designate (as explained by the Rabbins a *coal*, Sept. ἐγκρυφία, Vulg. *subcinericus*) a loaf baked *among the embers*. See Bread. In Lam. iv, 8, "their visage is blacker than a *coal*," the word is שְׁחוֹר (*shechor'*), which simply means *blackness*, as in the margin. In the New Testament, the "fire of coals" (ἀνθρακία, John xviii, 18) evidently means a mass of live charcoal, used in a chafing-dish for warming in the East, and so explained by Suidas and parallel instances in the Apocrypha (Ecclus. viii, 10; xi, 32). The substance indicated in all the foregoing passages is doubtless *charcoal*, although anthracite or bituminous coal has been found in Palestine in modern times (see Browning's *Report;* also Elliot, ii, 257). See Mineral.

"In 2 Sam. xxii, 9, 13, 'coals of fire' are put metaphorically for the lightnings proceeding from God (Psa. xviii, 8, 12, 13; cxl, 10). In Prov. xxv, 22, we have the proverbial expression 'Thou shalt heap coals of fire upon his head,' which has been adopted by Paul in Rom. xii, 20, and by which is metaphorically expressed the burning shame and confusion which men must feel when their evil is requited by good. (See the essays on this text by Heinrich [Lug. d. B. 1716], Wühner [Gott. 1740].) In like manner, the Arabs speak of *coals of the heart*, *fire of the liver*, to denote burning care, anxiety, remorse, and shame (Gesen. *Thesaur. Heb.* p. 280). In Psa. cxx, 4, 'coals' = burning brands of wood (not 'juniper,' but broom), to which the false tongue is compared (James iii, 6). In 2 Sam. xiv, 7, the quenching of the live coal is used to indicate the threatened destruction of the single remaining branch of the family of the widow of Tekoah suborned by Joab; just as Lucian (*Tim.* § 3) uses the word ζώπυρον in the same connection." See Fire.

Coast, an inaccurate rendering in the A. V. of various terms (usually גְּבוּל, חֶבֶל, etc., Gr. ὅριον) signifying *border* (q. v.), boundary, or extremity, except in the expression "sea-coast" (חוֹף, *choph*, Ezek. xxv, 16; παράλιος, Luke vi, 17; παραθαλάσσιος, Matt. ix, 13). See Sea.

Coat (כְּתֹנֶת, *ketho'neth*, or כֻּתֹּנֶת, *kutto'neth*, prob-

ably meaning *covering;* hence Greek χιτών) is the word employed by our translators for the ancient *tunic* (q. v.), which was in modern phrase a *shirt* worn next to the skin (Lev. xvi, 4), by females as well as males (Cant. v, 3; 2 Sam. xiii, 18), and especially by the priests and Levites (Exod. xxviii, 4; xxix, 5; Neh. vii, 70, 72). The same term is used of the "coats of skins" prepared by the Almighty for the first human pair (Gen. iii, 21), which were probably nothing more than aprons, or a short skirt bound at the waist. The tunic was commonly (at least with males) without sleeves, and usually reached to the knees. It was generally made of linen, but for the winter was frequently made of wool; and the rich no doubt wore tunics of *byssus* ("fine linen," i. e. [?] *cotton*, then very rare). It was sometimes woven entire without a seam, like the modern hose (John xix, 23). It was also occasionally of a gay pattern; such was "Joseph's coat of many colors" (Gen. xxxviii), that is, of different colored threads in stripes or plaided. Sometimes two tunics seem to have been worn at once, either for ornament or luxury, for the term is frequently used in the plural of an individual (Matt. x, 10; Mark, vi, 9; Luke iii, 11). In that case the outer one probably supplied the place of the "cloak" or pallium. See CLOTHING; DRESS, etc. The "fisher's coat" (ἐπενδύτης) mentioned in John xxi, 7, was evidently an outer garment or cloak, and Peter is said to be "naked" before throwing it about him, as having on only the tunic, or perhaps no more than a strip of cloth about the loins, like the modern Arabs. The little "coat" made by Hannah for the young Samuel (1 Sam. ii, 19) was the מְעִיל (*meil'*), or outer dress, elsewhere rendered "robe," "mantle," or "cloak" [q. v.]. The "coats" of the three Hebrew children in the furnace (Dan. iii, 21, 27) are called in the original Chaldee סַרְבָּלִין (*sarbalin'*, Sept. σαράβαρα), thought by some to be the Persian name for long and wide *trowsers*, whence Greek σαράβαλλα, Lat. *sarabala*, etc., but by others, with greater probability, to be kindred with the Arabic name for a long shirt or *cloak*, which is corroborated by the Talmudic interpretation of *mant'es*, i. e. the *pallium* or outer dress. (See Smith's *Dict. of Class. Antiq.* s. v. Tunica, etc.) See ATTIRE.

COAT OF MAIL (שִׁרְיוֹן, *shiryon'*, *glittering*) occurs in the description of Goliath's armor (1 Sam. xvii, 5), and also of Saul's (ver. 38). See ARMOR. The plural forms are found in Neh. iv, 16; 2 Chron. xxvi, 14; where they are translated "habergeons" (q. v.). The kindred terms שִׁרְיָה (*shiryah'*, "habergeon," Job xli, 26), שִׁרְיָן (*shiryan'*, "harness," 1 Kings xxii, 34; 2 Chron. xviii, 33; "breast-plate," Isa. lix, 17), and סִרְיוֹן (*siryon'*, "brigandines," Jer. xlvi, 4; li, 3), were probably less complete kinds of the same, i. e. *corslets*. See also MAIL.

Cobb, SYLVANUS, D.D., a Universalist minister and writer, was born at Norway, Maine, July, 1788. His first education was under orthodox influences, but early in life he became a Universalist. He preached his first sermon at the age of twenty-one, but was not ordained until 1821. He was settled as minister in succession at Waterville, Maine, at Malden, Waltham, and (since 1849) at East Boston. While at Waltham he established the *Christian Freeman*, which in 1862 was united with the *Trumpet*. In 1864 he retired from editorial life, after a service of about thirty years. In the same year he received from Tufts College the honorary degree of doctor of divinity. He died October 31, 1866. Dr. Cobb was a voluminous writer. Many of his earlier controversial sermons were published and widely circulated in Maine and elsewhere. His *Discussions* with Dr. Adams and Mr. Hudson, involving the subjects of everlasting punishment and the annihilation of the wicked, were also put into book form, after appearing in the columns of the *Freeman*. His *Compend of Divinity* is recognised as a standard in the denomination. He also wrote a *Commentary on the New Testament.*—*Universalist Register for* 1867, p. 81 sq.

Cobbet, THOMAS, a Congregational minister, was born at Newbury, Berkshire, Eng., in 1608, and served in the ministry of the Church of England for a short time. Ejected for nonconformity, he came to New England, arriving June 26, 1637. He served for twenty years as collegiate pastor in Lynn, and removed to Ipswich, where he died Nov. 5, 1685. He published *A Vindication of the Covenant of the Children of Church Members* (1643):—*A Defence of Infant Baptism* (1645):—*The civil Magistrate's Power in Matters of Religion modestly debated*, etc. (1653):—*A practical Discourse on Prayer* (1654):—*A Treatise on the Honor due from Children to their Parents* (1656).—Sprague, *Annals*, i, 102

Cobbs, NICHOLAS HANMER, D.D., a bishop of the Protestant Episcopal Church of the United States, was born February 5, 1795. He was the first bishop of the diocese of Alabama, being consecrated October 20, 1844. He died January 11, 1861.

Cobham, Lord (Sir *John Oldcastle*), a Lollard martyr of the fifteenth century. Of his early life little is known. He was born in the reign of Edward III; married the niece of Henry, lord Cobham, and obtained his title. He entered the military life, and gained great distinction. According to Bayle, "in all adventurous acts of worldly manhood he was ever fortunate, doughty, noble, and valiant." By his military talents he acquired the esteem both of Henry IV and Henry V. In conjunction with Sir Richard Story, Sir Thomas Latimer, and others, he drew up a number of articles, which, in the form of a remonstrance against the corruptions of the clergy, they presented to the House of Commons. He put himself to great expense in collecting, transcribing, and dispersing the works of Wycliffe. He also furnished Lollard itinerant preachers with shelter at his mansion at Cowling Castle, in Kent. These proceedings made him very obnoxious to the clergy. During the first year of the reign of Henry V, the principal subject of debate was the growth of heresy. Thomas Arundel (q. v.), archbishop of Canterbury, requested the king to send commissioners to Oxford to inquire into the growth of heresy. The commissioners reported to the archbishop, who informed the Convocation that the increase of heresy was especially owing to lord Cobham, who encouraged scholars from Oxford and other places to propagate heretical opinions throughout the country. The archbishop, accompanied by a large body of the clergy, waited upon Henry, and, having laid before him the offence of lord Cobham, begged, in all *humility* and *charity*, that his majesty *would suffer them, for Christ's sake, to put him to death.* To this humane request the king replied that he thought such violence more destructive of truth than of error; that he himself would reason with lord Cobham; and, if that should prove ineffectual, he would leave him to the censure of the Church. Henry endeavored to persuade lord Cobham to retract, but he returned the following answer: "I ever was a dutiful subject to your majesty, and I hope ever shall be. Next to God, I profess obedience to my king. But as for the spiritual dominion of the pope, I never could see on what foundation it is claimed, nor can I pay him any obedience. As sure as God's word is true, to me it is fully evident that he is the great Antichrist foretold in holy writ." This answer so displeased the king that he gave the archbishop leave to proceed against lord Cobham "according to the devilish decrees which they call the laws of the holy Church" (Bayle). On the 11th of September, the day fixed for his appearance, the primate and his associates sat in consistory; when, lord Cobham not appearing, the archbishop excommunicated him. Cobham now drew up a confession of

faith, which he presented to the king. Being again cited to appear before the archbishop, and refusing compliance, he was committed to the Tower by the king's order. "Upon the 25th of September, 1413, he was brought again by the lieutenant of the Tower before the archbishop, the bishops of London, Winchester, and Bangor sitting upon the bench with him. The archbishop desired Sir John to move for the absolution of the Church in the customary form. He replied he would beg absolution of none but God Almighty. After this, the archbishop desired him to make an express declaration concerning the sacrament of the altar. To which he gave this answer: that as Christ, when upon earth, consisted of the divine and human nature, his divinity being concealed under his humanity, so in the sacrament of the altar there is both a real body and real bread; that the bread is the object of our sight, but that the body of Christ, contained or shrouded under it, is imperceptible to our senses. When he was pressed closer to the point of transubstantiation, he declared expressly against it, adding withal that the common belief in this article was a contradiction to the holy Scriptures; that the decision was modern, and that the Church did not vary thus from the old standard till she was poisoned by being endowed. And as to penance and confession, he affirmed that if any person happened to be under the misfortune of any great crime, and was not in a condition to disentangle himself, he conceived it would be advisable to make use of the direction of some holy and discreet priest. But then he did not think there was any necessity of confessing to the parish curate, or any other of that character; for that in this case there was needed no more than contrition to cancel the fault and restore the penitent. Touching the worshipping the cross, he maintained that only the body of Christ, which hung upon the cross, ought to be adored. And being further interrogated what regard was to be paid to the resemblance of that cross, to this he replied directly that all the reverence he could pay was only to clean it and keep it handsomely. Being interrogated further about the power of the keys, and what his opinion was of the character and authority of the pope, of the archbishops, and bishops, he made no scruple to declare that the pope was downright Antichrist, and the head of that party; that the bishops were the members, and the friars the hinder parts of this anti-Christian society; that we ought to obey neither pope nor prelates any further than their virtue and probity could command; and that unless they imitated our Saviour and St. Peter in the sanctity of their lives, the pretence of their commission was not to be regarded; that he who was most unblemished in his conduct, most remarkable for his sanctity, was St. Peter's successor, and that all other titles to Church authority signified nothing" (Hook, *Eccl. Biography*, i, 817). Having remained six months in the Tower, he escaped into Wales. In 1414 the king set a price of a thousand marks upon the head of Cobham; and for four years he continued in exile in Wales; but at length his enemies engaged the lord Powis in their interest, who, by means of his tenants, secured and delivered him up. He received sentence of death both as a heretic and a traitor. On the day appointed for his execution (Christmas, 1417) he was brought out of the Tower with his arms bound behind him, but with a cheerful countenance. Arrived at the place of execution, he devoutly fell upon his knees, and implored of God the forgiveness of his enemies. He was hung up alive by the middle, with iron chains, on the gallows which had been prepared, under which, a fire being made, he was burned to death.—Jones, *Christian Biography*, s. v.; Middleton, *Memoirs of the Reformers* (3 vols. Lond. 1829), i, 98 sq.; *England and France under the House of Lancaster* (London, 1852) p. 60–87; *Eclectic Review*, 4th series, xvi, 249; Milner, *Church History* (Lond. 1829, 4 vols.), iii, 307–329.

Cocceius, John, one of the most distinguished theologians and Biblical interpreters of the 17th century, was born in Bremen July 30 (or August 9, N. S.), 1603. The family name was *Cock* (according to others *Koch*), but he and his brother Gerhard having been in their youth called *Coccei*, ever afterwards retained that appellation. The family was an ancient and honorable one in Bremen, many members of it having filled high offices in Church and State. He was brought up with great moral and religious strictness, for he relates in a short autobiography, which he left unfinished, that having been chastised at school for some boyish falsehood, he ever from that time despised lying, and had such a reputation for truthfulness as never to be compelled to take an oath; and that, having once been struck on the mouth by his father with a spoon for the irreverent use of God's name at the table, he never again took it in vain. He was put to the best schools in his native city, and became, while still a boy, so great a proficient in Greek as to read with delight its historians and poets. He learned from his brother the rudiments of Hebrew, and afterwards obtained the Lexicons of Munster and Pagninus, and studied them with great industry of his own accord for the investigation of the themes of the language. To the Hebrew he added Chaldee and Arabic, and gave his attention also to Rabbinical literature. Although most strongly drawn to philological studies, because, as he says, he was persuaded that the Scriptures could not be rightly understood without a knowledge of the original languages, he did not neglect other branches of learning, but studied physics and metaphysics with Gerhard Neufville, and theology with Martinius and Crocius. While still a student he wrote a Greek oration on the religion of the Turks, reading the Koran for that purpose. At the age of 22 he went to Hamburgh, at the suggestion of Martinius, to prosecute his Rabbinical studies with the Jews of that city. On his return he went to Franeker, in Friesland, preferring the Belgic schools to those of Germany, which, he says, were in bad repute (*quod de his non bonus rumor esset*). There he formed the acquaintance of an eminent Rabbinical scholar, Sixtinus Amama, and with him studied the Talmud. At his request he published a treatise *De Synedrio*, which was highly commended by such scholars as Heinsius, Rivetus, Grotius, Selden, and Salmasius. While at Franeker he also became intimately acquainted with Maccovius and the celebrated Puritan divine William Ames. On his return to Bremen he was made, at the age of 27, professor of sacred philosophy, and began to lecture on the books of the Old Testament. In the following year he published a Commentary on Ecclesiastes. In 1636 he removed to Franeker, to be professor of Hebrew in the newly-revived academy in that city; and in 1643 he was also appointed to the theological chair. He remained at Franeker until 1650, giving himself with great diligence to the study and public exposition of the Scriptures. Amongst the fruits of these labors were a Commentary on Job, Lectures on the Minor Prophets, and on the Epistles to the Hebrews and the Colossians, an *Exercitatio de Principio Epistolæ ad Ephesios*, and a theological treatise, *De Fœdere et Testamento Dei*, to which he added a brief *Analysis Temporum Novi Testamenti*. After fourteen years of laborious and successful teaching at Franeker, he was invited to Leyden, to succeed the celebrated Frederick Spanheim as professor of theology; and at his inauguration in October, 1650, he delivered an oration *De causis Incredulitatis Judæorum*. He soon began to lecture on Isaiah; but the death of one of his colleagues (Triglandius) made a new division of labors necessary, and he afterwards devoted himself to the exposition of the New Testament. In 1652 his Commentary on the Minor Prophets was printed by the famous Elzevir, and in 1654 he published his *Consideratio Principii*

Evangelii S. Johannis, an elaborate examination of the first 18 verses of that Gospel, with especial reference to the misinterpretations of Socinus, Schlichtingius, and others of that school. The writings of the Socinians having been disseminated through Holland and other provinces, the Synods of North and South Holland presented to the States a petition that they might be restrained of this liberty, and an edict was accordingly issued in 1658 forbidding the printing and publishing of Socinian books, and the preaching of their doctrines. This was done in accordance with the opinion of the theological faculty of Leyden, which the States had asked for; and when an Apology against the edict was written by *Eques Polonus* (believed to be the Socinian Jonas Schlichtingius), the task of answering it was committed to Cocceius, who fulfilled the duty so ably as to receive the thanks of the Synods of Dort and of North Holland. In 1656 he was drawn into a controversy with his colleague Hoornbeek on the divine authority of the Sabbath, which became so warm that the States interposed and put an end to it. Cocceius, recoiling from the rigid Judaizing view, went to the opposite extreme, and maintained that the Sabbath was a Jewish institution, not binding upon the Christian Church, although he was in favor, on grounds of expediency, of observing the Lord's day by public services of worship and preaching. The following year he began to write his Hebrew Lexicon, at the request of her highness the princess Maria Eleonora of Brandenburg; but, owing to his many other labors and cares, he did not finish it till a little before his death in 1669. He never intermitted his work as an interpreter of the Scriptures, but sent forth one commentary after another till he had almost gone through with the sacred books. The most elaborate of these are on the Psalms, Job, the Song of Solomon, and the prophetical books of the Old Testament, and on the Epistles of the New Testament, particularly those of Paul, and on the Apocalypse; but there are many valuable notes on the Pentateuch. He was also much occupied with the controversies of his time, and wrote with great learning and ability against Jews, Socinians, and Papists. He defended the integrity of the Jewish Scriptures against Isaac Vossius, who maintained that they had been corrupted, and that the translation of the Seventy had divine authority. In addition to his treatise *De Fœdere*, he wrote a much larger work with the title *Summa Theologiæ ex Scripturis repetita*, the form of which was more in harmony with the systematic theology of his time. But while thus laboriously occupied, and in the full maturity of his powers, he was suddenly seized with a fever. and, after a sickness of nineteen days, died on the 4th of November, 1669, at the age of 66.

As an interpreter of Scripture, Cocceius had many of the highest qualifications. He was a man of great learning, the worthy compeer of the mighty scholars of which Holland could boast in the 17th century. In the range and thoroughness of his acquirements he was not inferior to such men as Grotius, Heinsius, Buxtorf, and Vossius. But it was in his *principles of interpretation* that his unrivalled gift was chiefly seen. He held that the Scriptures are the source of all sound doctrine; that they have not been exhausted by previous interpreters; that they are to be regarded as one organic whole, the Old Testament containing every where the hidden, and the New the unfolded Gospel; that they are to be interpreted according to the analogy of the faith or the scope of the one great revelation; that their meaning is to be determined by a careful examination of each passage as to the force of its words and phrases, and its relations to the context, or that which is derived *ex tota compage sermonis;* that the interpreter is not to force his own opinions into the Scriptures, but to submit his mind to their teachings; and that Christ is the great subject of divine revelation, as well in the Old Testament as in the New. It was his holding up of the Scriptures as the living fountain of theology which drew on him the bitter opposition of the scholastic theologians of his day, who would not go beyond what the Reformers had attained to, and used the Bible only as a storehouse of proof texts for doctrines which they had learned from the symbolic writings of the Reformation. Against that dry and hard scholasticism Cocceius set himself with uncompromising boldness; and he did as much as any man of his time to reinstate the Scriptures in their true place of authority, and to make interpretation to be the drawing of fresh streams from the inexhaustible well-spring of divine truth.

He has been accused of being *fanciful* as an interpreter, but, in the sense in which it is commonly understood, no charge could be more groundless. His fundamental principle was that "of those things which Christ and the apostles spake, the foundation, cause, and prescribed formula existed in the writings of Moses and the prophets, and, in truth, that Christ and the apostles accomplished that preaching concerning the kingdom of God which had been promised to Israel," and therefore that "what is to be believed concerning Christ and his righteousness, what in the New Testament is explained more succinctly and clearly, that ought to be demonstrated from the Old Testament, since both the apostles appealed to its testimony, and the Saviour himself charged the Jews to search it as testifying concerning himself." He would bring men to "the examination of all Scripture, to the perpetual analogy of promise, prophecy, and Gospel, and so of all the revelations of God's Testament."

In the application of this principle he often erred by going beyond the bounds of clear and definite knowledge, by forcing events into the mould of prophecy, and also by too great subtlety in tracing out analogies; but his errors were those of a man of penetrating insight and robust judgment, and not of weak and childish fancies. No one has seen more clearly or more sharply defined the true province and methods of the interpreter, "adding nothing to, and taking away nothing from the words of God; leaving those things which are said in a general way to be interpreted generally; giving force to the propriety and emphasis of phrases, and the analogy of sacred speech."

No one now will doubt that the one great object of divine revelation, both in the Old and New Testaments, is to unfold "the mystery of godliness, God manifest in the flesh." In all his interpretations of Scripture he was struggling towards this end; and, notwithstanding his many failures, which were inevitable at the time and under the circumstances in which he lived, his writings are full not only of grand and far-reaching principles, but of striking examples of prophetic insight in the application of them. He gave a great impulse and a right direction to Biblical studies in Holland. Amongst his pupils the famous Vitringa is to be numbered.

As a theologian, Cocceius, while conscientiously adhering to the doctrines of the Reformed (Calvinistic) Church, gave to them a more scriptural and less scholastic form, in consequence of his free and profound study of the Bible. His favorite method of setting forth theology was the *historical*, as the unfolding of the successive stages of the covenant entered into before all worlds by the Father and the Son. After the Fall, by which the covenant of works, under which Adam in his state of innocence had been placed, was abrogated, the way was opened for the establishing of the covenant of grace, which was the manifestation of that which had existed in the eternal councils of the Godhead, of which the second Person was the mediator and surety. Of these there are three dispensations—that of the Promise during the time of the patriarchs, that of the Law given from Sinai, and that of the Gospel; although the two former are also class-

ed as one, as preceding the advent of the Redeemer. The fall of man was self caused, and not necessitated by any act of God (*Bona enim operatur in nobis Deus non mala*), but all his posterity were involved with Adam in the guilt and curse of his sin. This required a Mediator who could not be of the number needing redemption, and yet must be a partaker of their nature; a problem that was solved by the Son of God being made man. He, standing as the sponsor of the eternal covenant, gave unto the Father the obedience that was due from men, and also endured the penalty of death, the curse for sin, thereby making a true expiation and atonement.

Cocceius limits the death of Christ in its full force to the elect, but he asserts that Christ was "a victim of so great preciousness and sufficiency that the whole world, and all men without exception coming to him, can find sure and perfect salvation in him."

In respect to most doctrines he does not depart from the Reformed Church; but there is a spiritual life and power in his handling of them which takes them out of the sphere of a cold and lifeless orthodoxy. He was a man mighty in the Spirit, and far in advance of most men of his time in his apprehension of the work of God in Christ. Where he fails in clear sight, we still feel that noble instincts are working in him. His errors, as in regard to the Lord's day, were partly the fruit of his desire to vindicate for the Church her Christian liberty of walking always in the Spirit. He saw clearly the bondage under which the Law brought men, and he looked upon the Sabbath given from Sinai as a yoke to which those whom Christ has made free should not be in subjection. In this, as in many things, he held but half the truth, not discerning the freedom of divine ordinances; but he is not to be ranked with the lawless spirits who would break down all restraints upon the licentiousness of the flesh. He was among the the first in modern times to teach the doctrine of a spiritual dispensation of glory, in distinction from a visible kingdom of Christ, and so far did he carry it as to find nothing of the resurrection in the last chapters of the Apocalypse. But he firmly held the faith of the Church as to the final resurrection of the body and the awards of the judgment.

The views of Cocceius were adopted and further developed by a number of prominent theologians of the Reformed Church of Holland and other countries. His followers were commonly designated by the name Coccejans. The foremost among the writers of this school in the province of systematic theology are Momma, Witsius, Burmann, and Van Til (see these articles); in exegetical literature, the greatest and most celebrated member of the school was Vitringa (q. v.), while the pious hymnologist Jodokus von Todenstein and Dr. F. A. Lampe exercised a considerable influence upon the practical life of the Church of their times. His *Opera Theologica*, including his *Summa doct. de fœdere et testamento* (Leyd. 1648), his *Lex. Hebr. et Chald. V. T.*, and other writings, were published at Amsterdam (1676–78, 8 vols. fol.; 2d ed. 10 vols. fol., 2 vols. *Opera ἀνέκδοτα*, 1701). His *Life* by his son, J. H., is given in vol. viii. See Herzog, *Real-Encyklop.* ii, 765; Wetzer u. Welte, *Kirchen-Lex.* ii, 646; Mosheim, *Church Hist.* cent. xvii, pt. ii, ch. ii; Gass, *Prot. Theologie*, ii, 258; Hagenbach, *Hist. of Doctrines*, vol. ii; Dorner, *Geschichte der Protestant. Theologie*, p. 452 sq.; Fairbairn, *Typology;* Fairbairn, *Hermeneutical Manual*.

Cochin-China. See ANAM.

Cochlæus, JOHANNES (proper name *Döbneck*), was born in 1479 at Wendelstein, near Nürnberg; became rector in Nürnberg, 1511; in 1527, dean at Frankfort; finally, canon of Breslau, in which office he died, 1552. He was one of the most violent opponents of the Reformation. He attended the Diet of Worms (1522), where he became a sort of volunteer aid to Alexander, the papal nuncio. He is charged with having sought to induce Luther to give up his safe-conduct, in order to put him in the power of the legate; but Cochlæus afterwards denied that this was his purpose. He was also present at the Diets of Ratisbon, 1526, and of Augsburg, 1530. At the latter, with Eck, Faber, and Wimpina, he undertook to refute the Augsburg Confession. His "refutation" was read before the Diet August 3. On the death of Eck (1543), Cochlæus took his place as the leading champion of the anti-Reformers. He wrote a tirade against Melancthon, entitled *Philippicæ*, addressed to the emperor. In 1546 he was active at the colloquy of Ratisbon, against Bucer and Major. His numerous pamphlets are full of violence and personalities. Among them are *Bockspiel Martini Luthers* (Mainz, 1531); *Lutherus Septiceps* (Mainz, 1529); *Historia Hussitarum* (Mainz, 1549; *De actis and scriptis Lutheri* (1549, fol.); *Speculum circa Missam; De emendanda Ecclesia*, 1539, 8vo. —Dupin, *Eccles. Hist.* cent. xvi, p. 456; Wetzer u. Welte, *Kirchen-Lex.* ii, 647; Pierer, *Universal-Lexikon*, iv, 270; Ranke, *History of the Reformation*, iii, 306; Hoefer, *Nouv. Biog. Générale*, x, 955.

Cock (ἀλέκτωρ, literally *wakeful*). It is somewhat singular that this bird (and poultry in general) should not be distinctly noticed in the Hebrew Scriptures, especially as rearing gallinaceous fowls was an object of considerable economical importance in Egypt, and their flesh one of the principal resources for the table in every part of Southern and Western Asia. It is true, the date when the practice of obtaining them by artificial heat commenced in Egypt is sufficiently disputable, and birds of the genus Gallus, properly so called, are not indigenous in Western Asia, but belong in their original condition to lower India, Indo-China, and the great islands of Austral-Asia. Several species, apparently distinct, are still found wild in the forests and jungles of India, and two at least, *Gallus Sonneratii* and *G. Stanleyi*, are abundant in the woods of the Western Ghauts, to which our familiar fowl bear so close a resemblance that naturalists consider the former to be their original. Domestic poultry have existed in Hindoostan from the remotest antiquity; probably much earlier than the twelfth century B.C.; for in the *Institutes of Menu*, which Sir William Jones assigns to that age, we read of "the breed of the town-cock," and of the practice of cock-fighting (v, 12; ix, 222). When the cock found its way to Western Asia and Europe we have no record. Fowl of plumage so gorgeous, of size so noble, of flesh so sapid, of habits so domestic, of increase so prolific, would doubtless early be carried along the various tracks of Oriental commerce. There is no trace of it, so far as we are aware, on the monuments of Pharaonic Egypt, but we find the cock figured in those of Assyria. In a hunting

Ancient Assyrian Game-cock.

and shooting scene depicted at Khorsabad (Botta, pl. cviii–cxiv), the scene is laid in a forest whose characteristics seem to indicate a mountain region, such as Media or Armenia. Much game is represented, including many kinds of birds, one of which seems to be the pheasant. But the most interesting is a large bird, which appears from its form, gait, and arching tail to be our common cock; it is walking on the ground amidst the trees. So far as this is evidence,

it would go to prove that the fowl, in a wild state, existed at that period in Western Asia, though now unknown on this side the Indus. The cock and hen are distinctly represented in the Xanthian sculptures, of an era probably contemporaneous with the Khorsabad palace of Nineveh. They appear also on Etruscan paintings, having probably a much higher antiquity (Mrs. Gray's *Etruria*, p. 28, 45). The early Greeks and Romans figure them on their coins and gems, and speak of them as perfectly familiar objects, with no allusion to their introduction. They had even found their way into Britain at some unknown period long anterior to the Roman invasion, for Cæsar tells us with surprise that the Britons did not think it right to eat the goose or the hen, though they bred both for the pleasure of keeping them (*Bell. Gall.* lib. v). This is a very interesting allusion, since we are compelled to refer their introduction into that island to the agency of the Phœnicians, who traded to Cornwall for tin centuries before Rome was built. Under these circumstances, their absence from Egypt, where in modern times they have been artificially bred to so immense an extent, becomes a remarkable and unaccountable fact. They were, indeed, it may be surmised, unknown in Egypt when the Mosaic law was promulgated, and, though imported soon after, they always remained in an undetermined condition, neither clean nor unclean, but liable to be declared either by decisions swayed by prejudice, or by fanciful analogies; perhaps chiefly the latter; because poultry are devourers of unclean animals, scorpions, scolopendra, small lizards, and young serpents of every kind. But, although the rearing of common fowls was not encouraged by the Hebrew population, it is evidently drawing inferences beyond their proper bounds when it is asserted (see COCK-CROWING) that they were unknown in Jerusalem, where civil wars and Greek and Roman dominion had greatly affected the national manners. See FOWL.

In the denials of Peter, described in the four Gospels, where the cock-crowing (see below) is mentioned by our Lord, the words are plain and direct; not, we think, admitting of cavil, or of being taken to signify anything but the real voice of the bird, the ἀλεκτοροφωνία, as it is expressed in Mark xiii, 35, in its literal acceptation, and not as denoting the sound of a trumpet, so called because it proclaimed a watch in the night; for to what else than a real hen and her brood does our Saviour allude in Luke xiii, 34, where the text is proof that the image of poultry was familiar to the disciples, and consequently that they were not rare in Judæa? To the present time in the East, and on the Continent of Europe, this bird is still often kept, as amongst the Celtæ (Cæsar, *Bell. Gall.* iv, 12), not so much for food as for the purpose of announcing the approach and dawn of day. See HEN.

COCK-CROWING (ἀλεκτοροφωνία). "The cock usually crows several times about midnight, and again about break of day. The latter time, because he then crows loudest, and his 'shrill clarion' is most useful by summoning man to his labors, obtained the appellation of *the* cock-crowing emphatically, and by way of eminence, though sometimes the distinctions of the *first* and *second* cock-crowing are met with in Jewish and heathen writers (Bochart, iii, 119). These times, and these names for them, were, no doubt, some of the most ancient divisions of the night adopted in the East, where 'the bird of dawning' is most probably indigenous. The latter 'cock-crow' was retained even when artificial divisions of time were invented. In our Lord's time the Jews had evidently adopted the Greek and Roman division of the night into four periods or watches, each consisting of three hours, the first beginning at six in the evening (Luke xii, 38; Matt. xiv, 25; Mark vi, 48)" (Kitto, s. v.). This watch (the third of these divisions, comprehending the space between the two cock-crowings) seems to have been about three in the morning, and was known to the Hebrews as קְרִיאַת הַגֶּבֶר (*keriath' hag-ge'ber*), and was termed by the Romans *gallicinium;* and it has been supposed that Jerusalem being a military station of the Romans, the custom of that nation concerning the placing and relieving of the guard was in force there. These watches, or guards, were declared by the sound of a trumpet; and whenever one guard relieved another, it was always done by the military signal. The whole four watches were closed by the blowing of a shrill horn. Drakenborch says, the last trumpet, which blew at three in the morning, was sounded three times, to imitate the crowing of a cock. See WATCH.

"It has been considered a contradiction that Matthew (xxvi, 34) records our Lord to have said to Peter, 'Before the cock crow, thou shalt deny me thrice,' whereas Mark (xiv, 30) says, 'before the cock crow twice.' But Matthew, giving only the *general sense* of the admonition (as also Luke xxii, 34; John xiii, 38), evidently alludes to that only which was *customarily* called *the* cock-crowing; but Mark, who wrote under Peter's inspection, more accurately recording *the very words*, mentions the two cock-crowings (Wetstein on Mark xiv, 30; Scheuchzer, *Phys. Sacr.* on Mark xiii, 35; Whitby's *Note* on Matt. xxvi, 34). Another objection to this part of the Evangelical history has been founded upon an assertion of the Mishna (*Baba Kama*, vii, 7), 'They do not breed cocks at Jerusalem because of the holy things,' i. e., as it is interpreted, cocks turn up the dung-hills, and set free the reptiles by which the sacrifices might be polluted which were eaten as food; and that, consequently, Peter could not *hear* one crow. But this is sufficiently answered above. Even the traditions themselves on this subject are not uniform; witness the story (in *Erubin*, p. 26, 1) of a cock which killed a child, and was stoned by order of the council. Other instances are given by Reland, which show that the cock might crow, though *not in the city*, and yet be heard by Peter in the stillness of the night, especially as the palace of Caiaphas (according to the modern tradition) stood on an elevated situation, at the distance of scarcely 400 yards from the city walls." In the modern East the barn-door fowl is a common appendage to every household, and the cock-crowing is a universal signal of morning in Palestine (Thompson, *Land and Book*, ii, 552).

COCK, the, as a Christian symbol. (1.) On tombs the cock is a symbol of the resurrection—the *præco diei*, or herald of the light, after the night of death. (2.) The cock is also a symbol of vigilance.—Martigny, *Dict. des Antiquités Chrétiennes*, s. v. Coq.

Cockatrice, properly a fabulous serpent supposed to be hatched from a cock's egg, is the rather fanciful translation in our version of צֶפַע (*tse'pha, hissing*, Isa. xiv, 29) and צִפְעֹנִי (*tsiphoni'*, Isa. xi, 8; lix, 5; Jer. viii, 17). The latter word also occurs in Prov. xxiii, 32, where it is translated "adder." Aquila and the Vulg. understand the *basilisk*, a fabulous serpent of antiquity, identified by many moderns with the *basilicus regulus*, a small and exceedingly venomous viper of Africa. By others, however, the *cerastes*, or "horned viper" (*coluber cerastes* of Linn., *coluber cornutus* of Hasselquist), has been more definitely fixed upon as the animal intended, a very poisonous serpent of Egypt and Palestine, about a foot long, brown on the back and sides, with a white belly, about as thick as the finger, and having two knob-like projections upon the head (comp. Pliny, xi, 45), which were anciently compared to horns (Ælian, *Anim.* i, 57; Pliny, viii, 35; comp. Herod. ii, 74). It buries itself in the sand, from which it is scarcely distinguishable in color, with the horns projecting out like feelers, whence it suddenly darts forth and seizes its prey (Diod. Sic. iii, 50). (See Bochart, *Hieroz.* iii, 205 sq.; Hasselquist, *Trav.* p. 365

sq.; Belon, in Paulus's *Samml.* i, 206; ii, 258; Bruce, *Trav.* vii, pl. 40; Wilkinson, 2d ser. ii, 245 sq.; Prosp. Alp. *Rer. Ægypt.* iv, 4, p. 210, pl. 5, 6.) Others, again, refer this last to the "adder," i. e. viper (q. v.), of Gen. xlix, 17. See SERPENT.

Cocker, an old English term, used but once in the A. V. of the Apocrypha (Ecclus. xxx, 9, τιθήνησον, *tend* as a nurse), in the sense of *fondle*, or treat gently.

Cockle (בָּאְשָׁה, *boshah'*, an *offensive* plant, q. d. stink-weed; Sept. βάτος, i. e. bramble) occurs only in Job xxxi, 40: "Let thistles grow instead of wheat, and *cockle* instead of barley." It is probably a mere general term signifying *weed*, perhaps like the *darnel* (ζιζάνια, "tares") of Matt. xiii, 30. Celsius (*Hierobot.* ii, 199) would identify it with the *aconite*, but Gesenius questions this (*Jesaia*, i, 230; ii, 364), as the word must not be confounded with the plur. form (בְּאֻשִׁים, *beüshim'*), "wild grapes" (q. v.), in Isa. v, 2, 4. See BOTANY.

Codex Alexandrinus, etc. See ALEXANDRIAN MANUSCRIPT, etc.

Codex Canonum Ecclesiæ Universæ is the name of a work published at Paris in 1610 by Christ. Justeau (Justellus), which undertook to give the canons of the first councils in a shape as conformable as possible to the collection of canons which the Council of Chalcedon (451) was supposed to have made. This *codex canonum*, etc., was reprinted in the *Bibl. jur. can. vet.* (tom. i, p. 29), published by Justellus and Voëllus. The supposition which led to the compilation of this work, that the Council of Chalcedon had made or ordered to be made such a collection of canons, is erroneous. It is true that the resolutions of the ancient Church councils were early collected and circulated among the bishops, and that at the Council of Chalcedon many of the bishops had with them collections containing the canons of the five synods of Nice, Ancyra, Neo-Cæsarea, Gangra, and Antiochia, from which many passages were read. But it appeared that in the arrangement of the canons the collections widely differed, and it is not known that the council took any action with regard to the matter.—Wetzer u. Welte, *Kirchen-Lex.* ii, 649.

Codex Justinianeus, a code composed by order of the Emperor Justinian, and intended to embrace all that was still available of former collections of imperial manuscripts and edicts, as well as of edicts then recent. The previous collections were, 1. The *Codex Gregorianus*, compiled by Gregorianus, who lived about the middle of the fourth century. It contained the "Constitutions" (the collective name for the "*Rescripta*," or replies to particular inquiries and requests, and the "*Edicta*," or orders on general questions) of the emperors up to the time of Constantine; 2. The *Codex Hermogenianus*, compiled by Hermogenes, likewise about the middle of the fourth century, and containing the "Constitutions" of Diocletian and Maximinian; 3. The *Codex Theodosianus*, compiled in the first half of the fifth century by order of the Emperor Theodosius II, by a committee of sixteen jurists, and containing the Constitutions of the emperors from Constantine to Theodosius. It was promulgated by Theodosius in 438 in the Eastern empire, and in the same year by Valentinian in the Western. It was divided into sixteen books, of which the first five and the former part of the sixth are lost. All these three codes are found in the *Corpus Juris Antejustinianei*, published by Hänel. In Feb. 528 the Emperor Justinianus ordered the preparation of a new code, which was to embrace all that was still of practical value of the three previous collections, and, in addition, all the constitutions issued since the publication of the Theodosian Code. This new collection was published in April, 529. After the publication of the Pandects (a compilation of the writings of former Roman jurists) and the *Institutiones* (an introduction to the study of the Roman law), another revision was made in 534 by Tribonianus. This new revision (*Codex repetitæ prælectionis*) still forms an important portion of the *Corpus Juris Civilis*, while the first revision (*Codex vetus*) is lost. In its last revision, the *Codex Justinianeus* consists of twelve books, each book containing a number of titles in chronological order. Up to the time of Constantine nearly all the constitutions are *rescripta* (rescripts); after that we meet with numerous *edicta* (edicts). The code of Justinian is of great importance for Church history and Church law, as a great many edicts of the Christian emperors concerned religious questions. In quoting the code of Justinian, first the number of the constitution is given, next the special code (Greg., Herm., Th., Just.) from which it is taken; and finally the title; thus, *c.* 45. *C. Just.* i, 3, *de episc. et cler.*, which means constitution 45 of the Justinianean code (that is, the entirely new portion of it), book i, title 3, which treats *de episcopis et clericis.*—Wetzer u. Welte, *Kirchen-Lexikon*, ii, 650.

Codman, JOHN, D.D., a Congregational minister, was born in Boston Aug. 3, 1782; graduated at Harvard 1802, and studied law until the death of his father, when he commenced theology, and completed his studies at Edinburgh. After preaching a year in Great Britain, he came back to America, and was ordained pastor in Dorchester, December 7, 1808. In 1834 he went to England as delegate to the Congregational Union of England and Wales. He died Dec. 23, 1847. He was made D.D. by the college of New Jersey, 1822, and by Harvard, 1840. Dr. Codman published a *Visit to England* (1835); *Sermons* (1834, 8vo); and a number of occasional discourses.—Sprague, *Annals*, ii, 492.

Cœlestine (Pope). See CELESTINE.

Cœlestins. See CELESTINS.

Cœlestius, a native of Ireland (or of Bretagne?) of noble birth. According to Marius Mercator (*Commonitorium*, 2), he was a law student at Rome when Pelagius arrived there. Embracing the views of Pelagius, he accompanied him in 408 (or 409) to Sicily, and in 411 to Africa. By his character and talents he succeeded, even better than Pelagius, in diffusing the views which they held in common. He was accused of heresy before the bishop of Carthage, A.D. 412, and condemned. He appealed to Rome; and on his way stopped at Sicily, and there spread his opinions very successfully. Thence it is supposed that he went to Ephesus, where he was ordained presbyter. In 417 Pope Zozimus, at Rome, was so far satisfied by the explanations of Cœlestius that he recommended the African bishops to restore him. In 418 he was condemned by a synod at Rome, and went to the East for safety; but about 429 he was banished from Constantinople by order of the emperor. The Council of Ephesus condemned him A.D. 431. His later years are involved in obscurity. "He wrote a *Confessio Fidei Zozimo Papæ oblata*, and various epistles and appeals, the substance of most of which can be gathered from the excerpts given by Augustine and Jerome; but none of his writings have come down to us entire. Cœlestius was a man of pure morality, and more zealous and active (perhaps more honest) than Pelagius as a controvertist. Jerome says of him (in an epistle to Ctesiphon, A.D. 415), 'Although a scholar of Pelagius, he is yet leader and master of the whole host.'" —Cave, *Hist. Lit.* Anno 407, i, 246; Murdoch's Mosheim, *Church History*, N. Y., 3 vols., i, 370; Wiggers, *Augustinism and Pelagianism*, Emerson's transl., p. 40 sq.; Schaff, *History of the Christian Church*, iii, § 147. See PELAGIUS.

Cœlè-Syria (ἡ κοίλη Συρία; Vulg. *Cœlesyria*), "the *hollow* Syria," was (strictly speaking) the name given by the Greeks, in the times of the Seleucidæ, to the remarkable valley or hollow (κοιλία) which inter-

venes between Libanus and Anti-Libanus, stretching from lat. 33° 20′ to 34° 40′, a distance of nearly a hundred miles. As applied to this region the word is strikingly descriptive (see Dionysius, *Perieg.* 899 900). Thus a modern traveller observes: "We finally looked down on the vast green and red valley—green from its yet unripe corn, red from its vineyards not yet verdant—which divides the range of Lebanon and Anti-Lebanon; the former reaching its highest point in the snowy crest to the north, behind which lie the Cedars; the latter in the still more snowy crest of Hermon—the culmination of the range being thus in the one at the northern, in the other at the southern extremity of the valley which they bound. The view of this great valley is chiefly remarkable as being *exactly to the eye what it is on maps*—the 'hollow' between the two mountain ranges of Syria. A screen through which the Leontes (Litany) breaks out closes the south end of the plain. There is a similar screen at the north end, but too remote to be visible" (Stanley's *Palestine*, p. 399). The plain gradually rises towards its centre, near which, but a little on the southern declivity, stand the ruins of Baalbek or Heliopolis. In the immediate neighborhood of Baalbek rise the two streams of the Orontes (Nahr-el-Asy) and the Litany, which, flowing in opposite directions to the north-west and the south-east, give freshness and fertility to the tract enclosed between the mountain ranges. *Amyce*, the name of the plain through which the Orontes flowed (τὸ Ἀμύκης πεδίον, Polyb. v, 59), is derived by Bochart from the Syriac עמירקא, *Amica*, which means *deep*, and is nearly synonymous with the Greek *Cœle* (*Geogr. Sac.* I, i, 1).

The term Cœle-Syria was also used in a much wider sense. In the first place it was extended so as to include the inhabited tract to the east of the Anti-Libanus range, between it and the desert, in which stood the great city of Damascus; and then it was further carried on upon that side of Jordan, through Trachonitis and Peræa, to Idumæa and the borders of Egypt (Strab. xvi, § 21; Polyb. v, 80, § 3; Josephus, *Ant.* i, 11, 5). Ptolemy (v. 15) and Josephus (*Ant.* xiii, 13, 2) even place Scythopolis in Cœle-Syria, though it was upon the west side of Jordan; but they seem to limit its extent southwards to about lat. 31° 30′, or the country of the Ammonites (Ptol. v, 15; Josephus, *Ant.* i, 11, 5). Ptolemy distinctly includes in it the Damascus country. In the time of David, Cœle-Syria was probably included in "Syria of Damascus," which was conquered by that monarch (2 Sam. viii, 6), but recovered from Solomon by Rezon, the son of Eliadah (1 Kings xi, 24). The possession of it was an object of many struggles between the Seleucidæ and the kings of Egypt (Polyb. i, 3; ii, 71; iii, 1; v, 40; xvi, 39; xxvii, 17).

There can be little doubt that a part at least of Cœle-Syria was included in that "Valley of Lebanon" (בִּקְעַת הַלְּבָנוֹן) mentioned by Joshua (xi, 17; xii, 7), the extent of which has been too much restricted by recent geographers. The name "Valley of Lebanon" could scarcely be applied with propriety *exclusively* to that section of the great valley which lies at the base of Hermon, at a considerable distance from the range of Lebanon. Doubtless Baal-Gad was situated "under Mount Hermon;" but we have reason to believe that the "Valley of Lebanon" includes the whole of that valley which separates the ridge of Hermon from that of Lebanon. It seems that at a subsequent period this valley was called by Amos, apparently in contempt, "the valley of idols" (בִּקְעַת אָוֶן, chap. i, 5). See Aven. The name was most appropriate. The whole sides of the valley are thickly studded with old heathen temples. Mr. Porter visited no less than fourteen of them, and he heard of several others. Some of them were of great size and splendor, such as those of Baalbek, Mejdel, Niha, and Hibbariyeh. This appears, in fact, to have been the chosen house of idolatry (Porter's *Damascus*, i, 12; ii, 320; *Hand-book of S. and P.* p. 568, 570; Robinson, *Later Bib. Res.* p. 438, 492, 520). The modern name of the valley confirms the above view. It is called *el-Bukaa*, which is strictly the same as the Heb. *Bikah* (בִּקְעָה).

In the apocryphal books there is frequent mention of Cœle-Syria in a somewhat vague sense, nearly as an equivalent for Syria (1 Esdr. ii, 17, 24, 27; iv, 48; vi, 29; vii, 1; viii, 67; 1 Macc. x, 69; 2 Macc. iii, 5, 8; iv, 4; viii, 8; x, 11). In all these cases the word is given in the A. V. as "Celo-Syria," i. e. Cœlo-Syria. In Esdr. vi, 3, it is called simply "Syria." Under the emperor Diocletian, Phœnice and Cœle-Syria formed one province, called Phœnicia Libanica. Under the present Turkish government the western part of Cœle-Syria is in the pashalic of Saide, and the eastern in the pashalic of Damascus. See Syria.

Cœlicŏlæ ("worshippers of heaven"), the name of an African sect in the 4th century, who appear to have blended together some parts of Judaism and Paganism with Christianity. An edict of Honorius (A. D. 408) forbids their assemblages and demands their disbandment. As they are counted in this edict among the heretics, and as they were not subject to the jurisdiction of the Jewish patriarch, but had their own chiefs, called majores, and as they had a kind of baptism, they are by some regarded as a Christian sect. By others they are regarded as an offshoot of the Essenes. See Schmid, *Historia Cœlicolarum* (Helmst 1704).—Gieseler, *Church History*, i, § 78; Bingham, *Orig. Eccl.* xvi, 6, 2.

Cœlln. See Cölln.

Cœmeteria. See Cemeteries.

Cœna Domini, the Lord's Supper. See Lord's Supper.

CŒNA DOMINI, Bull of. See Bull; and In Cœna Domini.

Cœnobites, monks who formed a community living in a fixed habitation (*cœnobium*) under a chief (abbot or father). Their name is derived from κοινός, *common*, and βίος, *life;* and they are opposed to hermits, who live in solitude. Pachomius is admitted to be the institutor of the *cœnobite* life, as being the first that gave a rule to any community.—Bingham, *Orig. Eccl.* vii, 2; Coleman, *Ancient Christianity*, ch. vii, § 5. See Monachism.

Coffee (drunk in the East). See Cup.

Coffer (אַרְגָּז, *argaz′*; Sept. θέμα, Vulg. *capsella*), the receptacle (apparently a customary appendage to a cart, from the use of the *article* in every occurrence) which the Philistines placed beside the ark when they sent it home, and in which they deposited the golden mice and emerods that formed their trespass-offering (1 Sam. vi, 8, 11, 15). The root seems to signify to be *shaken* about; and Gesenius and Lee agree in regarding it as the same, or nearly the same thing, as the Arabian *rijaza*, which Jauhari describes as "a kind of wallet, into which stones are put: it is hung to one of the two sides of the haudaj [a litter borne by a camel or mule] when it inclines towards the other." Dr. Lee, however, thinks that the Hebrew word de-notes the wallet itself; whereas Gesenius is of opinion that it means a *coffer* or small box, to which, from its analogous use, the same name was applied. See Ark.

Coffin (אָרוֹן, *aron′*, a box for *gathering* articles; Sept. σορός) is used with reference to the burial of Joseph (Gen. l, 26): "They embalmed him, and he was put in a *coffin* in Egypt." This was undoubtedly a *mummy-chest*, such as are now found in the tombs of the same country, and frequently exhibited in modern museums [see Mummy]—a mode of burial peculiarly favorable to the removal of that patriarch's remains to

Different Forms of Mummy-cases.
1, 2, 4, of wood; 3, 5, 6, 7, 8, of stone; 9, of wood, and of early time—before the 18th dynasty; 10, of burnt earthenware.

Palestine (ver. 25, where the term "bones" is evidently used in this general sense). See BURIAL; SEPULCHRE.

The same word is spoken in the original of a "money-chest" (2 Kings xii, 10, 11) [see TREASURY], but most frequently of the sacred "ark," in which were deposited the tables of the law. See ARK. It has been thought by some that the iron "bedstead" of Og (Deut. iii, 11) was rather his coffin. See GIANT.

Numerous coffins of earthenware were disinterred by Loftus at Wurka and by Layard at Niffer, varying in length from three to six feet, and closed by an oval lid; the corpse having been swathed in linen and then smeared with bitumen, except the features (Layard, *Nin. and Bab.* p. 474 sq.).

Ancient Babylonian Coffin.

COFFIN (prob. from Saxon *Cofa*=a cave). "The slight wooden case in which bodies are now interred appears to be of comparatively recent origin; in earlier ages the graves were sometimes lined with slabs of stone, but usually a stone coffin formed of a single block was used, and the body placed in it, either en-

Bishop Ralph, 1123, Chichester Cathedral.

veloped in grave-clothes, or clad in some particular dress: ecclesiastics were generally buried in the habit of the order to which they belonged, the dignitaries of the Church frequently in their official robes and accompanied with the ensigns of their office, and sovereigns in their robes of state. Numerous stone coffins exist in this country which appear to be as old as the eleventh and twelfth centuries; they are formed of a single block of stone hollowed out to receive the body, with a small circular cavity at one end to fit the head. and they are usually rather wider at this end than at the other; there are generally one or more small holes in the bottom to drain off moisture: these coffins were never buried deeply in the ground; very frequently they were placed close to the surface, so that the lid was visible, and when within a church formed part of the paving; sometimes, in churches, they were placed entirely above the ground."

Coffin, CHARLES, D.D., a Presbyterian minister, was born at Newburyport, Mass., Aug. 15, 1775, and graduated with distinction at Harvard in 1793. Having completed his theological studies, and taught for some time in Phillips Academy, he was licensed in 1799. He now visited the Southern states for his health, and, after spending some time in Virginia, was appointed vice-president of Greenville College, Tenn., in 1803. Returning to New England in 1804, he was ordained as an evangelist, and removed with his family to Greenville in 1805. In connection with his college duties, he had charge of the Harmony Church, and supplied for many years the churches in Hawkins County, at Rogersville, and at Jonesborough. In 1810 he was elected president of Greenville College, and served till 1827, when he was called to the presidency of the East Tennessee University, Knoxville. He resigned in 1833, and returned to Greenville, where he died June 3, 1853.—Sprague, *Annals*, iv, 246.

Cogan, THOMAS, M.D., an English Unitarian writer, was born at Rowell, Northamptonshire, in 1736. He officiated for some time as a Presbyterian minister at Amsterdam, but finally studied medicine, and practised in London. He died in 1818. He published (1) *A Treatise on the Passions* (Bath, 1802, 8vo; and 2d part, Bath, 1807-10):—(2) *Theological Disquisitions on Natural Religion and Jewish Morals* (Lond. 1812, 8vo):—(3) *Characteristic Excellencies of Christianity* (Lond. 1813, 8vo):—(4) *Letters to Wilberforce, on the Doctrine of Hereditary Depravity* (Lond. 1815, 8vo):—(5) *Ethical Questions* (Lond. 1817, 8vo).—Darling, *Cyclopædia Bibliographica*, i, 714.

Cogitation (Chald. רַעְיוֹן, *rayon'*, *thought*, Dan. vii, 28), an earnest action of the mind, elsewhere translated simply "thought."

Cogswell, WILLIAM, D.D., a Congregational minister, was born in Atkinson, N. H., June 5, 1787, and graduated at Dartmouth in 1811. He was ordained pastor in Dedham April 20, 1815, and resigned in 1829 to accept the situation of general agent of the American Education Society, of which, in 1832, he was chosen secretary and director. In April, 1841, he resigned, and was elected professor of history and national education in Dartmouth. In January, 1844, he went to Gilmanton as president of the theological seminary. He died April, 1850. Dr. Cogswell published *A Catechism on the Doctrines and Duties of Religion* (1818):—*Assistant to Family Religion* (1826):—*Theological Class-book* (1831):—*Harbinger of the Millennium* (1833):—*Letters to Young Men preparing for the Ministry* (1837); and several occasional sermons. He was editor of the *Amer. Quart. Register*, of the *N. H. Repository*, of the 1st vol. of the *New England Hist. and Genealog. Register*, and some other works.—Sprague, *Annals*, ii, 605.

Cohabitation. The delicacy of this subject did not prevent its being a subject of Mosaic legislation. See CHILDBIRTH. The following are some of the most important Scriptural notices respecting it. See MARRIAGE; CONCUBINE.

1. Every *concubitus*, even conjugal and legitimate, subjected both parties to a state of ceremonial impurity until evening (Lev. xv, 18; Joseph. *Apion.* ii, 24; comp. Strabo, xvi, 745), a regulation which certainly served not merely to restrain polygamy, but was also useful in a sanitary point of view. A similar statute originally prevailed among the Babylonians (Herod. i, 198; see Wesseling, in loc.). See UNCLEANNESS.

2. Whoever corrupted a maiden, either by deceit or force, was compelled to marry her, and pay her father a fine (properly 50 shekels, Deut. xxii, 28 sq.); the latter must still be paid even when the father refused to permit the marriage (Exod. xxii, 17; comp. Philo, *Opp.* ii, 311; Mishna, *Chetub.* iii). If the man used violence he forfeited the right of divorcing the woman ever after (the Egyptian law was still more severe on this point, Diod. Sic. i, 78). See TRESPASS.

3. In the case of seduction or rape occurring to a betrothed female in an inhabited spot, she must cry for help, or be considered as assenting to the debauchment, and thus subjected to the same punishment of stoning as the male party; but if she was in a lonely field, where her screams for assistance could be of no avail, she was presumed to have been forced, and the ravisher alone was stoned (Deut. xxii, 23 sq.; comp. Joseph. *Ant.* iv, 8, 23; Philo, ii, 312); yet even in these cases the later interpreters of the law understood a repudiation by a bill of divorce as allowable (comp. Matt. i, 19; see Paulus, *Comment.* i, 123). A priest's daughter thus playing the courtesan was (stoned and) burnt (Lev. xxi, 9). (See generally Michaelis, *Mos. Recht.* ii, 315 sq.; iv, 298 sq.; v, 303 sq.) See FORNICATION.

Cohort (*cohors*), a military term used by the Romans to denote a company generally composed of 600 foot soldiers; a legion consisted of ten cohorts, every cohort being composed of three maniples, and every maniple of 200 men; a legion, consequently, contained in all 6000 men. Others allow but 500 men to a cohort, which would make 5000 in a legion. It is probable that cohorts among the Romans, as companies among the moderns, often varied as to their number. See ARMY. Besides the regular legionary cohorts, there were certain others separate and distinct from any legion, as the *Cohortes Urbanæ* and *Prætoriæ*. Such appears to have been the "Italian band" mentioned in Acts x, 1, which was in attendance on the Roman governor, who at that time was residing at Cæsarea. Of the same description also was the "Augustan band" or cohort (Acts xxvii, 1), which most probably derived its name from Sebaste, the capital of Samaria. The commanding officer of an ordinary cohort was called *Tribunus Cohortis* if it was composed of Roman citizens, or *Præfectus Cohortis* if composed of auxiliary troops. See BAND.

Coin. Before the Babylonian exile (see Deyling, *Observ.* iii, 222 sq., also in Ugolini *Thesaur.* xxviii) the Hebrews had and knew no regularly stamped money, but generally made use of a currency in traffic consisting of uncoined shekels (or talents) of silver, which they *weighed out* to one another (Gen. xxiii, 16; Exod. xxii, 17; 2 Sam. xviii, 12; 1 Kings xx, 39; Jer. xxxii, 9 sq.; comp. Pliny, xxxiii, 13), just as among other nations in most ancient times uncoined metal served for money (Ælian, *Var. Hist.* xii, 10; Strabo, iii, 155), and even to this day the Chinese make their commercial transactions by means of silver bars (Rosenmüller, *Morgenl.* i, 98; see Sperling, *De nummis non cusis*, in Ugolini *Thesaur.* xxviii). Among the earliest Hebrews, but not afterwards (Crusius, *De originib. pecuniæ a pecore ante nummum sign.* Petropol. 1748), an ox or other animal (comp. Pliny, xxxiii, 3) was traded instead of cash (see Michaelis, *De s'clo ante exil. Babyl.* in the *Comment. Soc. Gott.* ii, 1752, § 1). Yet already in the time of Abraham there circulated in hither Asia, as it seems, silver ingots (קְשִׂיטָה, Gen. xxxiii, 19; Josh. xxiv, 32; see Gesenius, *Thes. Heb.* p. 1241; Bertheau, p. 24; Tuch, *Gen.* p. 399, 472) of a determined weight, which was probably indicated by marks (Gen. xxiii, 16; xliii, 21) stamped upon them (so the Targum of Jonathan explains the former passage by פרקמטיא, i. e. πραγματεία). See KESITAH. Even under the regularly organized Hebrew state small silver pieces (comp. ἀργύρια, *silverling*) may have passed in exchange (as among their Phœnician neighbors; but see Herod. i, 94; Philostr. *Her.* x, 1), although destitute of national authority (see 1 Sam. ix, 8; comp. Exod. xxx, 13; Lev. xxvii, 3 sq.; Deut. xiv, 26), the bars being weighed only in payment of large sums (comp. 2 Kings xii, 4), although modern Oriental merchants weigh out even regularly coined money (Volney, *Voyage*, ii, 315). See MERCHANT. For transportation and preservation, money, as at this day in the East, was deposited in bags (2 Kings v, 23; xii, 10; see Harmor, *Observ.* iii, 262). See, generally, Bertheau, *Gesch. d. Isr.* p. 14 sq.) See BAG.

After the exile Persian money was most current, especially the *daric* (q. v.), then Græco-Syrian of the Seleucidæ (q. v.), till the time (B.C. 143) of prince Simon (q. v.) the Maccabee, who secured from the Syrian monarchs the right of a native coinage (1 Macc. xv, 6), and issued shekels (q. v.), both whole and half, of which several (some eight) are still extant. The following coin has on one side, in Samaritan, the name of Simon, and some emblems, upon which it is very difficult to pronounce, and on the other "The Deliverance of Jerusalem," with the palm-tree and two vases. There are other coins, bearing on one side the

Coin of Simon Maccabæus.

inscription, in Samaritan, "Simon," on the other, "Deliverance of Jerusalem," which are supposed to have

Probable Coin of Simon Bar-cochebas.

been struck by Simon Barcochab, not by Simon Maccabæus. There are marks on these coins of their having been struck twice, once by the Roman authorities, and again by the Jews; there are also examples of

Early Jewish Coin of uncertain Date.

Greek and Roman coins of these double types applied one upon the other. A leaf and vase appear to be the general symbols of the coins struck in Judæa during the dominion of the high-priests, and the coins themselves are for the most part indifferently executed. Those of Alexander Jannæus are all of bronze, as are also the coins of Antigonus; these last bear the symbol of a cornucopia, the type invariably found upon the coins of this prince. From the inscriptions on the

Coins of Antigonus.

above coins, it is supposed that Antigonus wished to declare that it was in the capacity of descendant of Mattathias that he was high-priest. The coins of the

Judæan kings, from Herod the First, are all of bronze, with the exception of a silver one assigned to Herod the Third, which is supposed to be unique. Of Agrippa the Second there are many coins, struck after the destruction of Jerusalem, which present on their reverses portraits of the reigning emperors. The dates on these coins denote the year of the prince's reign. (See each of the kings in their order.) Eventually, however, these Maccabæan shekels passed out of circulation on account of foreign traffic (being especially supplanted by Tyrian mintage, according to Bertheau, p. 45 sq.). See MONEY-CHANGERS. In the time of Christ Greek currency had mostly prevailed (computed, probably, at a depreciated rate), of which the following pieces are mentioned: the *drachma* (q. v.), which was the unit of value; the *didrachma* (q. v.), or double drachm (*δίδραχμον*, Matt. xvii, 24); and the *stater* (q. v.), or tetradrachm. The smallest coin was the *lepton* (*λεπτόν, scale*, "mite," Mark xii, 42; Luke xii, 59), which was the seventh part of a gold piece (*χαλκοῦς*), or half the Roman quadrans or "farthing." See MITE. Under the Roman rule the imperial currency naturally obtained in Palestine (see Matt. xxii, 17-21), so that thenceforth the Roman becomes the standard (so in the Mishna, *Baba Mezia*, iv) of Jewish valuation (see Strong's *Harm. and Expos. of the Gospels*, Append. i). Single coins of this currency named in the N. T. are the following: (*a*) The *denarius* (q. v.), in Greek *denarium* (*δηνάριον*, Talm. דִּינָר, A. V. incorrectly "penny"), the usual unit of popular estimation, corresponding about to the modern *shilling;* (*b*) The *assarius* (from *as* [i. e. *aes*, brass], which was strictly the basis of the Roman monetary system, like the modern *penny*), in Greek *assarium* (*ασσάριον*, Talmudic usually אִיסָּר), of copper (Matt. x, 29; Luke xii, 6), originally $\frac{1}{10}$, then $\frac{1}{16}$ the denarius; it bore the effigy of the emperor during whose reign it was struck. See PENNY. (Comp. Kype, *Observ.* i, 57 sq.; Barth, *Das röm. As und seine Theile*, Lips. 1834.) (*c*) The *quadrans* (or quarter), in Greek *kodrantes* (*κοδράντης*, Matt. v. 26; Mark xii, 42), which was $\frac{1}{4}$ the as, a copper coin. See FARTHING. The Attic drachma passed as equivalent to the Roman denarius. There are also occasional references to other and smaller coins (see the Mishna, *Maaser Sheni*, ii, 9; iv, 8; *Kiddushin*, i, 1; ii, 1), e. g. the *obolus* (מְעָא, *meā´*)=4 assaria; the *pondium* (פּוֹנְדְּיוֹן) =2 assaria; besides certain antique values, e. g. the *zuz* (זוּז) = $\frac{1}{4}$ shekel, or $\frac{1}{8}$ the stater; the *perutah´* (פְּרוּטָה)=piece of money in general, etc. (see Buxtorf, *Lex. Talm.* col. 175, 1235, 1754, 1812; Waserus, *De nummis Hebræor.* l. ii, c. 28). Coins were punctured and hung as nowadays around children's necks for ornament (Mishna, *Chelim*, xii, 7). (See Otho, *Lex. Rabb.* p. 431 sq.; Klemm, *De nummis Hebræor.* Tübing. 1730; Eisenschmidt, *De ponderib. et mensuris vett. Rom. Græc. et Heb.* ed. 2, Argent. 1737; Wurm, *De ponderum, nummorum et mensura. rationib. ap. Rom. et Græc.* Stuttg. 1821.) See MONEY.

The intrinsic *worth* of money in the various periods of the Hebræo-Jewish antiquity is very difficult to estimate from the occasional intimations of mercantile value (see Michaelis, *De pretiis rer. ap. Hebr. ante exil.* in the *Comment. Soc. Gott.* iii, 145 sq.), especially as the measure and quality of articles thus estimated is also uncertain (see Böckh, *Metrolog. Untersuch.* p. 420 sq.). See METROLOGY. Examples somewhat indicative of this point, however, are the following: in times of plenty, 1 ephah of wheat sold for 1 shekel, and 2 ephahs of barley for 1 shekel (2 Kings vii, 8; comp. Polyb. i, 15); an Egyptian horse in Solomon's time was worth 150 shekels (1 Kings x, 29); 30 shekels were generally given for a slave (Exod. xxi, 32; comp. Gen. xxxvii, 28); for 10 shekels a chaplain could be hired in the times of the Judges (Judg. xvii, 10). But in flush times prices were often much higher, e. g. a choice vine-stock was held at 1 shekel (Isa. vii, 23); a threshing-floor, with the oxen, cost David 50 shekels (2 Sam. xxiv, 24); a single vineyard brought Solomon in 1000 shekels yearly (Cant. viii, 11). Other less definite values may be collected as to fancy matters (Judg. xvii, 4; 1 Sam. ix, 8; Neh. v, 15). In later times a learned slave might be bought (according to Greek and Roman money) for 1 (Alexandrian) talent (Joseph. *Ant.* xii, 4, 9); a farm-laborer's daily wages was 1 denarius (Matt. xx, 2); and the charge for more than a single day's tending of an invalid in a caravanserai was 2 denarii (Luke x, 35). (For other instances of expense, see Josephus, *Ant.* xiv, 2, 2; *War*, i, 33, 5; *Life*, xiii, 44.) The comparative cheapness of living among the Israelites (as among the ancients generally, see Böckh, *Staatshaush.* i, 65) is evident, owing, however, rather to the greater rarity of the precious metals as a circulating medium than to anything else. See NUMISMATICS.

Coislin Manuscript (so called from the library of Coislin, bishop of Metz, which originally contained most of the leaves), a name applied to two very different Greek uncial MSS.

1. CODEX COISLINIANUS, the great copy of the Sept. Octateuch, first made known by Montfauçon (*Biblioth. Coislin.* 1715), and illustrated by a *fac-simile* in Silvestre's *Paléogr. Univ.* No. 65. It contains 227 leaves in two columns, 13 inches by 9: the fine massive letters of the sixth or seventh century are much like those of the Alexandrian MS. In the margin, *primâ manu*, Wetstein found Acts ix, 24, 25, and so inserted this as Cod. F in his list of MSS. of the Acts. In 1842 Tischendorf observed nineteen other passages of the N. T., which he published in his *Monumenta Sacra Inedita* (p. 400 sq.), with a *fac-simile*. These texts are Matt. v, 48; xii, 48; xxvii, 25; Luke i, 42; ii, 24; xxiii, 21; John v, 35; vi, 53, 55; Acts iv, 33, 34; x, 13, 15; xxii, 22; 1 Cor. vii, 39; xi, 29; 2 Cor. iii, 13; ix, 7; xi, 33; Gal. iv, 21, 22; Col. ii, 16, 17; Heb. x, 26. These portions of the MS. are designated as F[a] of the Gospels, etc.—Scrivener, *Introd. to N. T.* p. 105.

2. FRAGMENTA COISLINIANA, a relic of only fifteen leaves, written stichometrically, with a subscription referring to a comparison with the the copy at Cæsarea, which had been written by Pamphilus himself. The letters are large and square. When somewhat faded, the whole (except the subscriptions, which were written in vermillion) was gone over again, most coarsely, by a corrector, who added the accents and breathings, but reblackened the letters in such a manner as thoroughly to destroy their elegance. Fourteen of these leaves were published by Montfauçon (*ut sup.*), who ascribed the MS. to the fifth or sixth century. These sheets were used at Mt. Athos in 1218 as part of the covers of another book, which at length fell into European hands, and was saved; the rest of the MS. had probably perished previously, or been destroyed in a similar manner. After the fire of St. Germain des Prex, where the fragments were preserved, twelve leaves only were found, which are now in the Imperial Library at Paris, and contain 1 Cor. x, 22-29; xi, 9-16; 1 Tim. iii, 7-13; Tit. i, 1-3; i, 15-ii, 5; iii, 13-15; Heb. ii, 11-16; iii, 13-18; iv, 12-15. Two other leaves, however, were transferred to the Imperial Library at St. Petersburg, and contain Gal. i, 4-10; ii, 9-14. Tischendorf has lately recovered another sheet from Mt. Athos, containing Col. iii, 4-11. These fragments are known as H of the Pauline Epistles.—Tregelles, in Horne's *Introd.* new ed. iv, 194. See MANUSCRIPTS, BIBLICAL.

Coke, THOMAS, LL.D., first bishop of the Methodist Episcopal Church, was born at Brecon, Wales, Sept. 9, 1747; became a gentleman commoner of Jesus College, Oxford, in his 17th year, and after his graduation had charge of South Petherton parish, Somerset-

shire. While there he came under the influence of Methodism, and the increased fidelity and earnestness of his ministry excited so much opposition that he abandoned the place and joined Wesley, whom he equalled, if he did not surpass, in itinerant ministerial labors. In 1784 Wesley consecrated him a bishop for the Methodists in America, and in the same year he presided at the organization of the Methodist Episcopal Church at Baltimore, Md., and consecrated Francis Asbury a bishop. If we except some local consecrations in the Moravian settlements, Coke was the first Protestant bishop of the Western hemisphere. For many years he visited Ireland annually, and presided in its Conferences; he was repeatedly president of the English Conference; he traversed England, Scotland, Wales, and America throughout his long life. He was especially the "foreign minister" of Methodism. His stature was small, his voice feminine, but his soul was as vast as ever dwelt in a human frame. Though he became the first bishop of Methodism in the United States, he found not in a diocese coextensive with the new republic room for his energies. He was continually contriving new measures for the extension of the Gospel. His plans, had he been a man of ordinary abilities, would have entitled him to the name of fanatic; but he was one of those rare spirits whose greatest conceptions and schemes are the legitimate products of their energies. He crossed the Atlantic eighteen times at his own expense. To the end of his life he had charge of the Methodist missions throughout the world. He founded the negro missions of the West Indies, which have exerted an important influence on the history of those islands. They included 17,000 members at the time of his death. He not only visited his missions, but spent almost the whole of his patrimonial fortune in their support, preached for them, and begged for them from door to door. The missionary spirit was with him "as a burning fire shut up in his bones;" and during his life it was not deemed necessary to organize a missionary society among the Wesleyans, for he embodied that great interest in his own person. When a veteran of almost seventy years, he presented himself before the Wesleyan Conference as a missionary for the East Indies. The Conference objected on account of the expense, but Coke offered to pay the charges of the outfit himself to the amount of $30,000, and so prevailed over all objections, and embarked with a small band of laborers. He died on the voyage, May 3, 1814, and was buried in the sea; but the undertaking succeeded, and the Wesleyan East India missions are the result. It has been justly asserted that, except Wesley, no man was ever connected with the Methodist body who contributed more to extend the blessings of Christianity. His colleague in the episcopacy of the American Church would not allow of even this exception; "a minister of Christ," said Asbury, when the news of his death arrived—"a minister of Christ, in zeal, in labors, and in services, the greatest man of the last century." Wesley used to say that Coke was a right hand to him. Withal he was a voluminous writer, publishing *A Sermon on Education*, 1773; *An Address to the Inhabitants of Bristol*, 1782; his ordination sermon at Baltimore, 1784; and many other sermons on the *Divinity of Christ*, *The Witness of the Spirit*, and three funeral discourses on the deaths of Wesley, Rev. Mr. Richardson, and Hester Ann Rogers; four sermons on the *Christian Ministry; A Discourse on the Seventh Chapter of the Epistle to the Hebrews*. He also issued *An Address to the Societies in England on the Settlement of the Chapels*, 1795; *An Address to the Weepers*, on a pamphlet of William Hammet, of South Carolina; *Letters to the Societies*, in reply to Rev. Melville Horne, 1810; *Life of Wesley*, prepared jointly with Henry Moore; *History of the West Indies*, in 3 vols. 1808; numerous reports and addresses on the missionary cause; *Commentary on the Holy Scriptures*, 6 vols. 4to, completed in 1807; and, subsequently, *Recent Occurrences of Europe considered in Relation to such Prophecies as are now fulfilling or remain yet to be fulfilled;* and the *Cottagers' Bible*, with reflections at the end of the chapters for family reading. See *London Review*, Oct. 1860, art. iii; Drew, *Life of Coke* (New York, 1837); Etheridge, *Life of Coke* (Lond. 1860); Sprague, *Annals*, vii, 130; Benson, *Life of Coke* (N. Y. 8vo); Stevens, *History of Methodism*, vols. ii and iii passim, and *Hist. of the Methodist Episcopal Church*, 4 vols. passim.

Co'la (Χωλά, v. r. Κωλά and Κειλά), a place named only in the Apocrypha (Judith xv, 4) in connection with Chobai (q. v.), as one of the cities to which Ozias sent orders to expel the enemies of the Jews after the death of Holofernes. Simonis (*Onom. N. T.* p. 170) suggests Abel-me*cholah*. Reland, however (*Palæst.* p. 729), thinks it may be the CULON (q. v.) inserted by the Sept. among the cities of Judah (Josh. xv, 60).

Colarbasians. See COLARBASUS.

Colarbasus, the name of a Gnostic mentioned by Hippolytus (*Elenchos*, iv, 13; vi, 5, 55), Epiphanius (*Hær.* 35), Theodoretus (*Hæret. fabul.* i, 12), Tertullian (*adv. Valentin.* 4, and in the appendix to the *Præscripta*, c. 50), and Augustine (*de Hær.* c. 15), and whose system, according to these writers, was akin to that of Valentinus, and still more to that of Marcus, representing likewise the emanation of æons according to the order of the letters of the alphabet and of numbers. According to these writers, in the system of Colarbasus, the first emanation (the "Ogdoas" of Valentinus) did not signify eight different substances, but only eight different relations and effects of the one God, which, according to their different signification, received different names. In the system ascribed to Colarbasus, the æons were not successively begotten, but all simultaneously brought into existence. To the λόγος and the ζωή a place was assigned in this system after the ἄνθρωπος and the ἐκκλησία, an order differing from that in the system of Valentinus. Dr. Volkmar, in an essay entitled *Die Kolarbasus-Gnosis* (in Niedner's *Zeitschrift für hist. Theol.* 1855), undertook to show that all the accounts of Colarbasus in the writers above mentioned can be traced to the description by Irenæus (i, 12, 3 sq.) of the system of the Gnostic Marcus and some modified systems; that the word Colarbasus with Irenæus (i, 14, 1) is nothing but the mystical designation of the personified number Four (כֹּל עַרְבַּע) of the highest æons, the holy τετρακτύς; and that all the subsequent accounts arose from an erroneous confusion of the two statements. This view of Volkmar has been adopted by most of the recent writers on Gnosticism.—Herzog, *Real-Encyklop.* viii, 19 (of which our article is a free translation); Wetzer u. Welte, *Kirchen-Lex.* ii, 691.

Colbert, Charles-Joachim, a relative of the great Colbert, was born at Paris, June 11, 1667, became vicar of Rouen, and general agent of the French clergy. In 1797 he was made bishop of Montpellier, and devoted himself a great deal to induce the Reformed to apostatize. It was under his episcopate that the noted catechism called *Catéchisme de Montpellier* was drawn up by father Poujet. Colbert, in several pastorals and *mandements*, opposed the bull *Unigenitus* (q. v.). Some of his writings (3 vols. 4to, 1740) were condemned at Rome. He died April 8, 1738.—Hoefer, *Nouvelle Biog. Générale*, xi, 114.

Colbert, Jacques Nicolas, Roman Catholic archbishop of Rouen, of the same family, was born at Paris in 1654, was made archbishop at an early age, and was noted in his administration for his tolerance of the Reformed. He was one of the first members of the Academy of Inscriptions and Belles-Lettres. He died Dec. 10, 1707.—Hoefer, *Nouvelle Biographie Générale*, xi, 112.

Specimen of the Codex Colbertinus (Coloss. i, 24, 25: παθήμασιν ὑπὲρ ὑμῶν· καὶ ἀνταναπληρῶ τὰ ὑστερήματα τῶν θλίψεων τοῦ χ̅υ̅ ἐν | τῇ σαρκί μου ὑπὲρ τοῦ σώματος αὐτοῦ ὅ ἐστιν ἡ ἐκκλησία· ἧς ἐγενόμην ἐγὼ παῦλος διά).

Colbert Manuscript (Codex Colbertīnus), the latest critical designation of a beautiful cursive Greek MS. of the N. T., now deposited in the Royal or Imperial Library at Paris, of which it is No. 14 (Colbert. 2844); usually designated as 33 of the Gospels, 13 of the Acts and catholic Epistles, and 17 of the Pauline Epistles. It is very important in Biblical criticism, being styled by Eichhorn "the queen among the MSS. in cursive letters" (*Einleit. ins N. T.* v, 217). It contains all the Greek Test. except the Apocalypse, and includes a portion of the Sept. version of the Prophets. The order of the books is now much confused, but from the writing they appear once to have been arranged as usual. The edges of nearly all the leaves are torn, or cut away, or have otherwise decayed. The MS. has been much injured by exposure to dampness, and the ink has *set off* on the opposite page, especially in the Acts, so that it is very difficult to read (Tregelles, *Account of the Printed Text of the Greek N. T.*, p. 162). In this way, however, by reading *backward* the parts thus transferred, many passages have been recovered of which the original writing has become totally effaced, or even the material containing it has perished. It is written on vellum, in folio form, with 42 long lines in each page, in a fine round hand (which undergoes a gradual change in the course of the work), the accents sometimes neglected. Larroque first collated it, but very negligently, and his readings, as communicated by Allix, were inserted in Mill's edition of the New Testament, whence they were transferred to Wetstein's. Griesbach re-examined it in part; then Begtrup to some extent; and Scholz fully, but it would seem cursorily; Tregelles carefully collated it in 1850. "Its text was published by Sabatier" (Davidson, *Treatise on Biblical Criticism*, ii, 246). It evidently belongs to the eleventh century, and remarkably confirms the readings of the oldest codices, especially those known as B, D, and L, leaning chiefly to the Alexandrian recension.—Scrivener, *Introduction to the Criticism of the N. Test.*, p. 145; Tregelles, in Horne's *Introduction*, new ed. iv, 209. See Manuscripts, Biblical.

Colbert, William, a pioneer of the Methodist Episcopal Church in Western New York, was a native of Maryland. He was admitted on trial into the Philadelphia Annual Conference in 1790. In 1792 we find him at the General Conference in the city of Baltimore; he then became connected with the circuits of Tioga and the lake country (a perfect wilderness at the time), and here he labored faithfully and uncomplainingly, notwithstanding the difficulties of all kinds which he had to encounter, until 1811, when he located. In 1826 he was readmitted as a supernumerary, which relation he retained until his death in 1833.—*Minutes of Conferences*, ii, 281; Peck, *Early Methodism*, p. 89, 121, 272.

Cole, Henry, D.D., an English Romanist divine, and opponent of the Reformation, was born at Godshill, Isle of Wight, and was educated at Winchester School and New College, Oxford, where he became fellow in 1523. In 1540 he became rector of Chelmsford; in 1542, warden of New College. On the accession of Edward VI, Dr. Cole inclined to the Reformation, but afterwards returned to his original views, and after Queen Mary's accession he became a zealous Romanist. When Cranmer was burnt, Cole preached a violent sermon at the execution. In 1557 he was made "vicar-general of spiritualities" under Cardinal Pole. He was prominent in "all the proceedings against Protestants in those dreadful times." In the first year of Elizabeth he was fined 1000 marks "for contempt of the queen's majesty," and in May, 1560, he was sent to the Tower, where he did not remain long. He died in London in 1579. Among his writings are, *Disputation with Cranmer and Ridley*, 1554; *Funeral Sermon at the burning of Cranmer* (both in Fox's *Acts and Monuments*); *Letters to Bishop Jewell*, Lond. 1560, 8vo.—Strype, *Annals;* Burnet, *History of the Reformation;* Hook, *Eccles. Biography*, iv, 126.

Cole, Thomas, an English Nonconformist, was educated at Westminster School, and at Christ Church. Oxford. In 1656 he became principal of St. Mary's Hall, where he was tutor to John Locke. In 1660 he was ejected from Oxford by the king's commissioners for nonconformity, and opened an academy at Nettlebead, Oxfordshire. Thence he removed to London, where he became pastor of a large congregation, and one of the lecturers at Pinner's Hall. He was a strong opponent of the Neonomian (q. v.) doctrine. He died in September, 1697. Among his writings are, *A Discourse on Regeneration, Faith, and Repentance*, Lond. 1689, 8vo; *A Discourse of the Christian Religion; Imputed Righteousness for Justification incomprehensible by human Reason.*—Calamy, *Nonconformist's Memorial*, i, 196.

Coleridge, Samuel Taylor, was born at Ottery St. Mary, in Devonshire, of which parish his father was the vicar, on the 21st of October, 1772. An orphan at the age of nine, he was sent to Christ's Hospital, where Charles Lamb was among his contemporaries. Here he made very great progress in classical knowledge, and at an early age plunged deeply into metaphysics. Speaking of himself in the *Biographia Literaria* (vol. i, p. 15), he says: "At a very premature age, even before my fifteenth year, I had bewildered myself in metaphysics and in theological controversy. Nothing else pleased me. History and particular facts lost all interest in my mind. Poetry itself, yea, novels and romances, became insipid to me." In 1791 he entered Jesus College, Cambridge, but in the second year of his residence he suddenly left the University in a fit of despondency, occasioned, it is said, by unrequited love; and after wandering for a while about the streets of London in extreme pecuniary distress, terminated this adventure by enlisting in the 15th Dragoons, under the assumed name of Comberbatch. One of the officers, questioning him in a friendly manner, and eliciting his real history, communicated Coleridge's situation to his friends, who forthwith effected his discharge. Coleridge now betook himself to Bristol, where he joined with three other young and clever men, like himself of ardent poetic temperaments, and imbued with strong but vague ideas of universal brotherhood—Southey, George Burnet from Oxford, and Lovell, a young Quaker. They formed a scheme for emigrating to the banks of the Susquehanna in North America, to form a social colony, where selfishness was to be proscribed. But money was needed to establish this "pantisocracy," as they

termed it, and Coleridge had not enough to furnish him with daily subsistence. Joseph Cottle, a benevolent bookseller at Bristol, finding that he had written enough poems to make up a small volume, offered him thirty guineas for them. The volume was published in 1794, and other literary schemes were projected. In 1795 Coleridge married Miss Sarah Fricker, of Bristol, a sister of the wife of his friend Charles Lloyd. In 1796 he published a volume of poems, the greater number of which had been written at earlier periods, interspersed with some by Charles Lamb; and in 1797 a second edition appeared, with the addition of some poems by Charles Lloyd.

Coleridge was at this period of his life a Unitarian. He says of himself, "I was at that time, and long after, though a Trinitarian (i. e. *al normam Platonis*) in philosophy, yet a zealous Unitarian in religion; more accurately, I was a *psilanthropist*, one of those who believe our Lord to have been the real son of Joseph, and who lay the main stress on the resurrection rather than the crucifixion" (*Biog. Lit.* i, 168). In 1798 Coleridge visited Germany, and went through a course of German literature. On his return to England he went to live at the Lakes, where Southey and Wordsworth had then settled, the one at Keswick, and the other at Grasmere. The appellation of "Lake-poets" was given to these three writers after the publication of the *Lyrical Ballads*. Coleridge now became connected with the *Morning Post*, and wrote both on politics and literature. From about 1808 to about 1814 he contributed to the *Courier*. In 1809 he edited the *Friend*, first published as a periodical at the Lakes. He left the Lakes in 1810, and did not afterwards return to them; his wife and children remained in the house of Southey, and wholly dependent on him. On Coleridge's first arrival in London he resided with Mr. Basil Montagu, and in 1816 he became the guest of Mr. Gillman at Highgate, in whose house he died. The many friendships which Coleridge attracted to himself through life, the sincerity and constancy of which were abundantly shown, place in a striking light the amiability of his character; his neglect of his family and extreme carelessness respecting the obligations, both personal and pecuniary, which devolved upon him, as strikingly illustrate its weakness. It was not before the commencement of his residence in London that he formed any very extensive acquaintance with the writings of the later German metaphysicians, by the adoption of whose method and terminology, rather than by any development of a system, in his subsequent publications, he came to be accounted the representative of German metaphysics in England. He published successively, between the years 1817 and 1825, the *Lay Sermons*, the *Biographia Literaria*, the bound volume of the *Friend*, the *Constitution of the Church and State according to the Idea of each*, and the *Aids to Reflection*. During most of his life Coleridge was poor and dependent, from careless improvidence. He suffered also from chronic ill health, combined with, and to a certain extent caused by, a habit of using opium. He died July 25, 1834.—*English Cyclopædia.*

Of Coleridge as a *poet* we do not here speak. As a metaphysical theologian, his influence upon his own age, and especially upon its younger men of genius, was greater than that of any other Englishman. His mental attributes were of a high order, strangely blended, and thoroughly cultivated. To a subtlety which would have distinguished him in the age of scholasticism, he added a great compass of thought. The devotional and expository writings of the best English divines, such as Hooker, Taylor, Baxter, Leighton, and Wesley, were congenial food for his mystical and religious nature. With his enlarged knowledge he abandoned Unitarianism, and formed for himself a half-complete theology, partly orthodox, partly mystical, and partly (though unconsciously) pantheistic. "It was one of his most cherished schemes—his favorite vision in cloudland—to compose a work of colossal proportions which should embrace the whole range of mental philosophy taken in its widest meaning, including, of course, theology and religion. He really only wrote a few disconnected fragments of his mighty task. But these fragments have proved of immense suggestiveness to younger intellects," and *Coleridgeans* may be found now among every class of English divines, from the Broad Church to the highest Puseyites. The condition of the English mind at the time of Coleridge's appearance is to be noted, as accounting for the wonderful influence he gained. "The received philosophy was sensationalism in intelligence and thought, and utilitarianism in morals; and the received theology contented itself with dealing forth, when didactic, the dry husks of a powerless moralism, and, when argumentative, with insisting upon the external evidences of Christianity. Grotius and Paley (whose *Moral Philosophy* was a text-book at Cambridge) were the oracles on the subject of the Christian evidences. Arianism and Unitarianism, always found alongside of sensationalism and materialism, had crept like a fog-blight over half the face of British Christianity. In such a state of things, it is easy to understand how the appearance of a teacher like Coleridge would be welcomed. He was the declared enemy of the sensational and utilitarian philosophers. He was reputed to have mastered the German philosophy, to have abstracted from it what was sound and true, and to have attained to a clear vision, from the utmost height of human thought, of the ultimate unity, the perfect and vital harmony, of philosophy and theology, of the revelation of reason and the revelation of God. He professed himself a devout and orthodox Christian believer. Most of all, he impressed and attracted the young men of his time by his noble ideal of thought and purpose, his reverent spirit, his far-seeing, practical wisdom, his critical and intuitive sagacity, his union of deep learning, fine taste, and recluse habits, with philosophic breadth of view and wide human sympathies.

"One main point, perhaps *the* main point, of Coleridge's *Philosophy* was the Kantian distinction between the reason and the understanding. Upon this distinction Coleridge grafted his peculiar, and, as we think, unchristian doctrine of the Logos. Many who have not followed Coleridge in the theological doctrine have agreed with him in reference to the metaphysical distinction, according to which the understanding is the logical faculty in man, the reason is the intuitive faculty, which stands face to face with spiritual and essential truth; and the immediate object of which is, as Mr. Morell says, 'the good, the beautiful, and the true.' The intuitive faculty in man has thus assigned to it an entirely separate sphere, and that the very highest. It dwells in a region apart, elevated above that of the logical understanding, and is quite independent of it. Being thus independent of the understanding, it is independent, so far as the morally good and right is concerned, of revelation also (which must be presented to it through the understanding), except in so far as it may, by its own light and authority, approve and warrant that which revelation brings before it. For reason, understood as above defined, must, whether in matters of taste, criticism, or morals, be the supreme judge, and be a law unto itself. Thus the scintillations of genius and the light of piety are but different manifestations of the same faculty. How well this accords with Coleridge's supplementary doctrine, that reason is the light in man of the divine Logos, and how naturally it is developed into Maurice's doctrine of the identification of the Word or Son of God, with all men, will be readily seen. How nearly related it is to the modern Pantheism is no less obvious. Coleridge, in a passage of his *Table Talk*, with which many passages in his writings fully accord, speaks of 'that higher state, to which Aristotle could

never raise himself, but which was natural to Plato, and has been to others' [himself, for instance], 'in which the understanding is distinctly contemplated, and, as it were, looked down upon from the throne of actual ideas, or living, inborn, essential truths.' He speaks of the spirit's ascending into 'the empyreon of ideas.' He identifies the reason with the divine Logos, making him, in this sense, to be the 'light which lighteth every man that cometh into the world.' He denies, as many have learned from him to deny, the possibility of a revelation *ab extra*. He speaks of the Trinity as an 'idea,' and analyzes this 'idea' in such a way as to resolve the Tri-unity into what is really no better than a refined, Platonized Sabellianism—only not Sabellianism, because not allowed to be conceived under any conditions of time and space. Such are some of the results of Coleridge's peculiar philosophy as applied to solve, or as used to measure and define, the mysteries of being, human and divine" (see Curry, in *Methodist Quarterly*, Jan. 1854, art. ii; and Rigg, in *Meth. Quarterly*, April, 1856, art. i; July, 1856, art. i). His views of *Inspiration*, as given in the *Confessions of an Inquiring Spirit*, are almost as low as those of the Rationalists. His theory of the *atonement* seems to exclude almost entirely the idea of substitution, in order to avoid what he calls the "commercial" theory.

The only uniform edition of Coleridge's works is that of Professor Shedd (N. Y. Harpers, 1858, 7 vols. 12mo). Prefixed to it will be found Marsh's admirable Preliminary Essay to the *Aids to Reflection*, and also an able and genial Introductory Essay by Professor Shedd. The work needs nothing but an index to be complete. Of Gillman's *Life of Coleridge* (Lond. 1838), two volumes were promised, but only one has appeared. In 1866 appeared Dr. J. H. Green's *Spiritual Philosophy, founded on the Teaching of S. T. Coleridge*, edited by J. Simon (Lond. 2 vols. 8vo). Critical essays on Coleridge abound in the leading reviews: among those that examine his philosophical theology and its results are papers in the *Christian Spectator*, vi, 617; *Princeton Review*, xx, 144; *Bibliotheca Sacra*, iv, 117; *Theological Journal* (Lord's), i, 681; *Am. Biblical Repository*, July, 1849, art. i; *British Quarterly*, Jan. 1854, art. iv.

Coles, Elisha, a native of Northamptonshire, was made steward of Magdalen College, Oxford, during the Commonwealth, when the famous Independent, Dr. Goodwin, was head of that college. After the Restoration he obtained a clerkship in the East India House, which he is supposed to have held until his death in 1688. His name is preserved by his well-known treatise entitled *A practical Treatise on God's Sovereignty*, originally published in 1673, 4to, and many times reprinted. It is thoroughly Calvinistic.

Coles, George, a minister of the Methodist Episcopal Church, and for many years a journalist. He was born in England, June 2, 1792; converted at twelve; became a local preacher in 1814; emigrated to America in 1818, and immediately entered the itinerant ministry in the New York Conference. He was an "effective preacher" for thirty-three years, and on the 1st of May, 1858, he died in New York. He was an invalid more than half of his life, yet eminently cheerful and useful. Though his advantages of education while young were limited, he was nevertheless a very well-read man, and for twelve years was eminently successful as assistant editor of the *Christian Advocate and Journal*, and three years sole editor of the *Sunday-school Advocate* and Sunday-school books. Among his published works are *The Antidote* (18mo), *Lectures to Children* (18mo), *Scripture Concordance* (18mo), *My youthful Days* (18mo), *My first seven Years in America* (18mo), and *Heroines of Methodism* (12mo). Mr. Coles was a sincere and simple-hearted Christian gentleman, loving all, by all beloved. As a preacher, although not powerful, he was clear, instructive, persuasive, and eminently consolatory. "His journal, which was carefully kept for nearly fifty years, shows how he longed to live and labor for God." His death was peaceful and beautiful.—*Minutes of Conferences*, 1858, p. 148.

Colet, Dr. John, was born in London in 1466; was educated at Oxford, and travelled on the Continent for seven years, where he made the acquaintance of many eminent scholars, especially of Erasmus, Budæus, and Linacer, and where he also learned Greek. He obtained Church preferment when very young. In 1497 he commenced lecturing at Oxford on St. Paul's Epistles, and drew crowds of students. In 1505 he was made dean of St. Paul's, in which capacity his endeavors to restore discipline brought on him, though happily without effect, a charge of heresy. He introduced divinity lectures at St. Paul's, delivered by himself and others. "These lectures raised in the nation a spirit of inquiry after the Holy Scriptures, which had then long been laid aside for the school divinity, and so might be said to prepare a way for the reformation which soon after ensued. We cannot but think that Colet was in some measure instrumental towards it, though he did not live to see it effected, for he expressed a great contempt for religious houses, exposed the abuses that prevailed in them, and the mischiefs attending the imposing celibacy on the clergy. This way of thinking, together with his free and public manner of communicating his thoughts, which were then regarded as impious and heretical, rendered him very obnoxious to the clergy, and exposed him to a persecution from the bishop of London. Latimer tells us in his sermons, not only was Colet brought into trouble, but he would certainly have gone to the stake had not God turned the king's heart." In 1512 he founded and endowed the noble institution of St. Paul's School for 153 scholars. He died in 1519. He wrote a Latin Grammar for St. Paul's School, which was long in use. Among his religious writings were, *Daily Devotions, or the Christian's morning and evening Sacrifice* (Lond. 1693, 12mo); *Monition to a godly Life* (Lond. 1534); *Epistolæ ad Erasmum*, etc. See Knight's *Life of Dean Colet* (Lond. 1724, 8vo); Jones, *Christ. Biog.*; Seebohm, *Oxford Reformers* (Lond. 1867).

Col-ho'zeh (Heb. *Kol-chozeh'*, כָּל־חֹזֶה, *every seer*; Sept. Χολεζέ, Χαλαζά), a descendant of Judah, being the son of Hazaiah, and father of one Baruch (Neh. xi, 5), B.C. ante 536. He had also a son named Shallun, who repaired part of the walls of Jerusalem after the Captivity (Neh. iii, 15).

Coligni, Gaspard de, admiral of France, was born February 16, 1517, at his ancestral castle, Châtillon-sur-Loing. His father, Gaspard de Coligni, marshal of France, died early (1522), and bequeathed to his widow the task of educating three sons. In this she was assisted by two masters, one of whom instructed the boys in languages and philosophy, and the other in bodily exercises. Gaspard early distinguished himself for a firmness of character and purity of private life very rare in those days. His only friend was the young duke Francis of Guise, afterwards among his bitterest enemies. He entered upon the career of arms, and early won high celebrity in the wars against Italy and Spain. In 1547, at thirty, Coligni was made commander of the French infantry. The very severe discipline introduced by him changed the wild bands of lawless soldiery into an organized army. In 1547, the year in which his mother died, he was married to Charlotte de Laval. But the troubles of his times called him soon again and again to the front of battle; the happy issue of the campaign of 1552-55 is to be ascribed to him. He became governor of Champagne, later of Picardy and Isle de France. In 1552 he was made admiral of France. When King Henry II violated the truce, and the war with Spain broke out anew, Coligni was commissioned to defend St. Quentin

against the Spaniards. In spite of a heroic defence, on the 27th of August St. Quentin fell. Coligni was taken prisoner and brought to the Netherlands, where he remained two years. Here he became a Protestant. At the peace of Chateau-Cambresis in 1559, he regained his liberty for a ransom of 50,000 florins. Through the sudden death of Henry II (1559), and the ascension of his throne by Francis II, the Guises became temporarily all powerful, and Coligni lost many of his honors. He left the court with a light heart. He had been suspected of "heresy," but had not yet publicly confessed himself a Protestant. Aware that this step might be fatal to his family, it was only after his wife had gladly confessed to the "Church of Christ" that he partook of the Lord's Supper in presence of the whole village. The news was received with rejoicing among all Protestants. While Coligni lived a peaceful. secluded life with his family, the public discontent at the usurpations of the Guises had reached a climax. The conspiracy of Amboise in 1560 amply shows the state of popular opinion in France. Coligni did not participate in, though he seems to have known of the plot. But at the Convention of the Notables he made brave but ineffectual attempts to gain more freedom of worship for the Protestants.

The death of Francis II, in 1560, however, changed the whole aspect of affairs. Coligni and his brother Andelot were reinstated in their honors, and now more than ever Protestantism found a powerful protector in him. He took part in the terrible religious wars which lasted for thirty years. At the head of the Roman Catholic party stood the Guises, while Condé and Coligni led the Protestants. But the latter suffered severe reverses, and only after the assassination of Francis of Guise, 1563, by Jean Poltrot, fortune began to be once more favorable to them. Coligni was not implicated in this murder, as has sometimes been asserted. After the peace of Amboise, concluded March 19, in which freedom of conscience and of worship was granted the Protestant nobility, the admiral again retired to his estates in Châtillon. Four years later the war broke out anew, and was on both sides waged with the old spirit and bitterness. For a time the prospects of the Reformed party looked very dark. In 1569 Condé fell, and only a few weeks later Coligni's brother Andelot. The admiral's siege of Poitiers was a failure; and, while he withdrew his troops, the Parliament in Paris had condemned him to death, hung him in effigy, broke his escutcheon, and offered a price of 50,000 florins for his head. Coligni's life, indeed, was endangered by several attempts to assassinate him. But no reverses could break Coligni's spirit or daunt his energy In 1570, at Arnay le Duc, the Protestants gained a complete victory; and shortly after all further movements were ended by a truce, which resulted in the peace of St. Germains.

Coligni's wife had died three years before, and in 1571 the admiral, although already at an advanced age, married Jaqueline, countess of Montlul and Entremont, a young, beautiful, intelligent, and pious lady of Savoy. Meanwhile the current of opinion at court seemed to be gradually settling in favor of the Protestants. The union of the two parties was to be completed by the marriage of Henry of Navarre (later Henry IV) to Margaret of Valois. Charles IX needed a man who would be equally respected by all parties, and Coligni was summoned to court. He went full of confidence in the king's good-will; and, indeed, it does not appear that Charles and his mother, Catharine de Medicis, had at that time any hostile intentions towards him. The admiral wept tears of joy at his reception in Blois (Sept. 13, 1571). The king embraced him, and both Charles and his mother showed him every honor. Gradually Coligni gained a decided influence over the king, and made good use of it in favor of the Huguenots. Catharine became alarmed, and her jealousy of Coligni changed into hatred, although it appears that as yet Charles was not ill disposed towards the admiral. On the 18th of August, 1572, the marriage of Henry and Margaret took place. On the same day Coligni wrote to his wife that he hoped to see her soon, as he was weary of court life. These were the last lines she ever received from his hand. Four days later, as he was walking in the street, a shot was fired at him from a house in the present Rue de Rivoli; a finger of his right hand was destroyed, and his left arm wounded. The assassination of the admiral was ascribed to the Guises, and filled all Paris with alarm and horror. The king visited Coligni, professed the greatest sympathy, and swore to the Protestants he would be revenged for the bloody deed. But Catharine de Medicis had resolved on Coligni's death. On the evening of the 23d, everything was prepared for the terrible massacre that was to take place on the following night. On the 23d, after midnight, a guard of only five men and a few servants remained with the admiral. In the morning, between one and two (Sunday, August 24), a murderous band approached the house. It had been resolved to kill the admiral first, and then give the signal for the general massacre. The young Duke of Guise had undertaken to destroy his great enemy. The doors were burst open and the guards killed. At the first noise Coligni requested to be lifted from his bed, and said to his minister, "Say a prayer, sir; I put my soul into the Saviour's hand." A servant burst into the room, and on being questioned, replied, "God calls us." "I have long been ready to die," Coligni replied; "but you others save yourselves." The murderers entered the room, and found the admiral standing upright. One called to him, "Are you not the admiral?" "Yes," Coligni answered with dignity; "and you, young man, should respect my gray hairs, and not take my life." With an oath the soldier thrust his sword into Coligni's breast. His body, in which life was still not entirely extinct, was thrown out of the window. Guise, who had been waiting below, wiped the blood from the face of the corpse to recognise it, and kicked the body with his foot. An Italian, Petrucci, cut off the head and brought it to the Louvre. The body was mutilated, dragged through the streets of Paris, and at last hung upon the gallows by the feet. When Charles IX came to see it a few days later, he is said to have repeated the words of Vitellius, "The body of an enemy always smells well." In Parliament, on the 26th of August, he stated that the massacre of St. Bartholomew had been necessary to prevent the execution of a plot in which the king was to be assassinated, and accused Coligni of ingratitude and treason. The servile Parliament accepted these statements, declared Coligni a traitor, and decreed the forfeiture of all his rights and honors, which resolution was, however, afterwards completely revoked.—Herzog, *Real-Encyklop.* xix, 331 sq.; Hoefer, *Nouv. Biog. Générale*, xi, 137; Haag, *La France Protestante*, vol. iii.

Co'lius (Κώλιος v. r. Κώϊος, Vulg. *Colvis*), a Levite "also called Calitas" (1 Esdr. ix, 23), for which the Heb. text (Ezra x, 23) has "KELAIAH (q. v.), the same as Kelita."

Collar, the rendering of one Gr. and two Heb. words in the Auth. Vers. 1. פֶּה (*peh*, Job xxx, 18; where, however, some merely read כְּמוֹ, *as*), properly signifies a *mouth*, in which sense it often occurs, and is hence applied to any aperture or orifice. See MOUTH. It is frequently applied elsewhere (as in the passage cited) to the opening of a garment that closes around the neck, such as the tunic (Exod. xxxix, 23; Psa. cxxxiii, 2). See EPHOD. 2. נְטִיפוֹת (*netiphoth'*, *drops*, Judg. viii, 26), "collars," mentioned among the spoils of the Midianites, were a peculiar kind of *pen-*

dant, or ear-drop, probably of pearls, and hence different from the ordinary ear-ring (q. v.). The same term occurs in the list of female attire in Isa. iii, 19, where it is translated "chains" (q. v.). 3. Ἱμας (Ecclus. xxxiii, 26), a *thong*, i. e. strap for harnessing a beast of burden to the yoke (q. v.).

Collation (Lat. *collatio*). When a bishop gives a benefice, which either he had as patron, or which came to him by lapse, he is said to "collate" to that benefice the clergyman on whom he bestows it. Where the living is not in the gift of the bishop, he is said to "institute" the clergyman to it. The word collation is also used among ecclesiastical writers to denote the spare meal on days of abstinence, consisting of bread or other fruits, but without meat.—Hook; Eden.

Collect (Lat. *Collecta*, from *colligere*, to collect), a short form of prayer in the liturgies of the Roman Catholic and the Anglican churches. In a wider sense, the word *collecta* was used by ancient writers of the Latin Church, like the Greek σύναξις, to designate a meeting of Christians for public worship. But soon it came to be restricted to several portions of the liturgy. The origin of this signification of the word is doubtful. According to some ritualists, the name indicates the comprehensive brevity of such prayers, the matter of the epistle and gospel, e. g. being gathered up, or *collected*, into the collect for the day Others derive the name from an ancient practice of the chief minister collecting into a single brief and public prayer at the end of some part of the service the previous (private) devotions of the people; accordingly, one of the service-books of the ancient Catholic Church was called *Collectarium*, as containing such prayers. Liturgical writers trace some of the collects tc the Leonian Sacramentary used in the Roman Church about 483 A.D.; others to the Sacramentary of Bishop Gelasius of Rome (494); and the majority to the Sacramentary of Gregory I (590).

The collects in the Roman Missal begin with *Oremus* (Let us pray), and conclude with the invocation, "*Per Dominum nostrum Jesum Christum, filium tuum, qui tecum vivit et regnat in unitate Spiritus Sancti Deus per omnia sæcula sæculorum. Amen.*" They occur before the Epistle, before the Preface and after the Communion, and consist sometimes of one, sometimes of several petitions; but if consisting of more than two, the introductory *Oremus* and the concluding "*Per Dominum,*" etc., are used only twice, all the intermediate petitions being joined to the last. In solemn masses, the collects before the epistle and after the communion are sung. Similar collects as in the Missal occur in the Breviary.

On the collects retained in the Anglican Prayer-book, Dr. Comber remarks: "Our reformers observed, first, that some of those collects were corrupted by superstitious alterations and additions, made by some later hand. Secondly, that the modern Roman Missals had left some of the primitive collects quite out, and put in their stead collects containing some of their false opinions, or relating to their innovations in practice. When the mass had struck out an old and put in a new collect, agreeable to their new and false doctrines or practices, there the Reformers restored the old collect, being pure and orthodox. At the restoration of king Charles II, even those collects made or allowed at the Reformation were strictly reviewed, and what was deficient was supplied, and all that was but incongruously expressed was rectified, so that now they are complete and unexceptionable, and may be ranked into three several classes. First, the ancient primitive collects, containing nothing but true doctrine, void of all modern corruptions, and having a strain of the primitive devotion, being short but regular, and very expressive. The second order of collects are also ancient as to the main; but where there were any passages that had been corrupted, they were struck out, and the old form restored, or that passage rectified; and where there was any defect it was supplied. The third order are such as had been corrupted in the Roman Missals and Breviaries, and contained something of false doctrine, or at least of superstition, in them; and new collects were made instead of these at the Reformation, under king Edward VI; and some few which were added anno 1662."

The following tables of the Collects for Sundays and other holidays used in the English Liturgy were partly formed by bishop Cosins, and were published by Comber:

I. *Collects retained from ancient Liturgies at the Reformation.*

Collects for	Whence taken.
4th Sunday in Advent.	In some old offices for the first Sunday in Advent.
St. John's Day.	St. Greg. Sacr. and Gothic Liturgy.
The Epiphany.	St. Greg. Sacr.
1st, 2d, and 3d Sunday after Epiphany.	The same, and St. Ambros. Liturgy.
5th Sunday after Epiphany.	St. Greg. Sacr.
Septuagesima.	The same.
Sexagesima.	The same.
2d, 3d, 4th, and 5th Sunday in Lent.	The same.
6th Sunday in Lent.	The same; but in St. Ambros. Liturgy for Good Friday.
Good Friday, the three Collects.	They are in all offices with little variation; but are left out of the Breviaries of Pius V. and Clement VIII.
Easter Day.	St. Greg. Sacr. and a Collect almost the same in the Gallic. Liturgy.
3d Sunday after Easter.	St. Greg. Sacr., St. Ambros. Liturgy.
5th Sunday after Easter.	St. Greg. Sacr.
Ascension Day.	The same.
Whit-Sunday.	The same.
1st Sunday after Trinity.	The same. This in some old offices is called the second after Pentecost; in others, the first after the Octaves of Pentecost.
The 3d, 4th, 5th, 6th, 7th, 8th, 9th, 10th, 12th, 13th, 14th, 15th, 16th, 17th, 20th, 21st, 22d, 23d, 24th, and 25th after Trinity.	Are all in St. Greg. Sacr.
The Purification.	The same.
St. Michael's Day.	The same.

II. *Collects taken from ancient Models, but considerably altered and improved by our Reformers and the Reviewers of the Liturgy.*

Collects for	Time of Improvement.	How it stood before.
St. Stephen's Day.	Beginning added 1662.	Grant us, O Lord, to learn to love our enemies, etc.
4th Sunday after Epiphany.	End improved 1662.	Grant to us the health of body and soul, that all those things which we suffer for sin, etc.
4th Sunday after Easter.	Improved 1662.	Who makest the minds of all faithful people to be of one will, etc.
Sunday after Ascension.	A little varied 1549.	This had been of old the Collect for Ascension Day, on which our venerable Bede repeated it as he was dying.
2d Sunday after Trinity.	The order inverted 1662.	Lord, make us to have a perpetual fear and love of thy holy name; for thou never failest, etc.
8th Sunday after Trinity.	Beginning improved 1662.	Whose providence is never deceived, etc.
11th Sunday after Trinity.	Improved 1662.	That we, running to thy promises, may be made partakers of thy heavenly treasure, etc.
18th Sunday after Trinity.	Improved 1662.	To avoid the infections of the devil, etc.
19th Sunday after Trinity.	Improved 1662.	That the workings of thy mercy may be in all things, etc.

Collects for	Time of Improvement.	How it stood before.
St. Paul's Day.	Improved 1549 and 1662.	In the Breviaries (Missals) a new prayer was added, mentioning St. Paul's intercession; in the year 1549 the old prayer alone out of Greg. Sacr. was restored, which had our walking after his example only, which was a little varied in the year 1662.
The Annunciation.	Improved 1549.	The Breviaries had put in a new prayer about the blessed Virgin's intercession, which was cast out in 1549, and the form being in St. Greg. Sacr. restored.
St. Philip and St James.	Improved 1662.	As thou hast taught St. Philip and the other apostles, etc.
St. Bartholomew.	Improved 1662.	To preach that which he taught, etc., was altered, because there is no writing of his extant.
Trinity Sunday.		This Collect is no older than the Sacramentary ascribed to Alcuinus. The old offices have another Collect for it, and call it the Octave of Pentecost.

III. *Collects composed anew, and substituted in the Place of those which, containing either false or superstitious Doctrines, were on this Account rejected.*

Collects for	Composed in
1st Sunday in Advent.	First Book of Edward VI, 1549.
2d Sunday in Advent.	The same time.
3d Sunday in Advent.	1662.
Christmas Day.	1549.
Circumcision.	The same time.
6th Sunday after Epiphany.	1662. Before this time they repeated the Collect for the fifth Sunday.
Quinquagesima.	1549.
Ash Wednesday.	The same time.
1st Sunday in Lent.	The same time.
Easter Even.	1662. No Collect for it ever before then.
Easter Sunday.	The first sentence (1 Cor. v, 7) was added 1662.
1st Sunday after Easter.	1549. Then it was used on Easter Tuesday, and in 1662 was fixed for this Sunday.
2d Sunday after Easter.	1549.
St. Andrew's Day.	1552. Second Book of Edward VI.
St. Thomas's Day, St. Matthias, St. Mark, St. Barnabas, St. John Baptist, St. Peter, St. James, St. Matthew, St. Luke, St. Simon and St. Jude, All Saints.	All composed anew in 1549.

See Wetzer u. Welte, *Kirchen-Lex.* ii, 665; Eadie, *Eccl. Dict.* 157; Hook, *Church Dictionary*, s. v.; Bingham, *Orig. Eccl.* bk. xv, ch. i; Palmer, *Orig. Liturg.* i, 319 sq.; Comber, *Companion to the Temple* (London, 1841, 7 vols.); Despensé, *Traité des Collectes;* Lebrun, *Explication des Cérémonies*, i, 192. See Liturgy.

Collection, (1.) מַשְׂאֵת, *maseth'*, something taken up, e. g. *tribute* (2 Chron. xxiv, 6, 9; elsewhere "gift," "mess," etc.); (2.) for συνάγω, to *contribute* (Baruch i, 6); (3.) λογία, a pecuniary *collection* (1 Cor. xvi, 1; "gathering," ver. 2). See Assessment.

In the apostolic age the Christians of Palestine were more straitened than other churches, and this might be from their being assailed with every sort of oppression by the Jews. The activity of Paul in taking up collections on their behalf is evident from what is said in Acts xxiv, 17; Rom. xv, 25, 26; 2 Cor. viii and ix, and Gal. ii, 10. For this purpose the apostle, in 1 Cor. xvi, 2, says, "Upon the first day of the week let every one of you lay by him in store as God hath prospered him." The reason why this day was appointed for this purpose seems to be that, by the early Christians, the first day of the week was observed as the Sabbath of the Lord; and consequently, as on that day they commemorated that which formed the great bond of union between them and other Christians, it was the most suitable occasion for their displaying their love in the way prescribed, and also the time when they would be most liberal (1 Cor. xvi, 1-3). See Alms.

Collector (ἄρχων φορολογίας, *chief of* the *tribute-levy*), a tax-gatherer (1 Macc. i, 29). See Publican.

College occurs (2 Kings xxii, 14; 2 Chron. xxxiv, 22) as the translation of מִשְׁנֶה (*mishneh'*, *second* rank), the residence of the prophetess Huldah (q. v.). The same term is used in Zeph. i, 10 (translated "second"), where the different quarters of Jerusalem are spoken of, and is found more fully in Neh. xi, 9 (where, instead of "the *second* over the city," the original has עַל־הָעִיר מִשְׁנֶה, "upon the city second," i. e. over the second part of the city). From all these notices we can only gather that there was anciently a quarter or district that went by this appellation, but there is no definite intimation of its position. It may have been only another name for Acra (q. v.), or the Lower City, which was built subsequently to the more fashionable portion of the city on Mt. Zion. The word occurs frequently elsewhere in its ordinary signification of persons or things that occupy a second place in order, dignity, honor, etc. See Jerusalem.

COLLEGE (Lat. *collegium*, a collection or assemblage). (1.) "In its Roman signification, a college signified any association of persons for a specific purpose. In many respects it was synonymous with *corpus*, a body or collection of members, a corporation—with *universitas*, a whole as contrasted with its parts—and with *societas*, a company or partnership, as opposed to all the members of which it was composed. A Roman college had a common chest, and it could sue and be sued in the name of its manager (actor or syndicus), just like an incorporation with us. It required, also, to be incorporated by some sort of public authority, springing either from the Senate or the emperor. A college could not consist of fewer than three persons." (2.) The term is applied to any company of persons associated upon some common principle; so we speak of the college of the apostles; the college of cardinals; a college or synod of bishops; and as "three" are required for a college, it has come to be usage that three bishops unite in the act of ordination of bishops. (3.) The word "college" is used also, in England, to designate "an endowed institution connected with a university, having for its object the promotion of learning. In this relation a college is a sub-corporation, i. e. a member of the body known as the University. The constitution of a college in this sense depends wholly on the will of the founder, and on the regulations which may be imposed by the visitors whom he has appointed. In Scotland and in America, the distinction between the college as the member and the university as the body has been lost sight of, and we consequently hear of the one and the other indiscriminately granting degrees, a function which in the English and in the original European view of the matter belonged

exclusively to the university. Where there is but one college in a university, as is the case in the universities of Scotland and most of those in America, the two bodies are of course identical, though the functions which they perform are different. In Germany there are no colleges in the English sense; and though the universities in that country perform precisely the same functions as in Scotland, the verbal confusion between the college and the university is avoided by the latter performing the functions of both in its own name, as two separate parts of its proper duties. In France the title 'college' has a meaning totally different from that which we attach to it: it is a school, corresponding, however, more to the gymnasium of Germany than to the grammar-school of this country. All the colleges are placed under the University of France, to which the centralizing tendencies of that country have given a meaning which also differs widely from that which the term university bears in England." See UNIVERSITY.

Collegia PONTIFICIA (*papal colleges*), institutions for training Romish missionaries for service among "heretical" and pagan nations. The first was the German college at Rome, founded by Loyola in 1552. Greek, English, Hungarian, Maronite, and Thraco-Illyrian colleges were established by Gregory XIII. Scottish and Irish colleges followed; and the institution of the Congregation *de propaganda fide* was succeeded by the erection of the college which bears the same title. More recently, an "American college" (1854) and a South American college have been established. See PROPAGANDA.

Collegial or Collegiate Church: (1.) In the Roman Church, a church served by canons regular or secular. They originated in a desire to have mass conducted in towns which had no cathedral (q. v.), with greater pomp than could be had with one priest. Originally the canons dwelt in common in one college, but this was afterwards abandoned. See CANONS. (2.) In England there are several *collegiate* churches, which are served by a dean and a body of canons. They differ from cathedrals in that the see of the bishop is at the latter. The service is or should be the same in both. They are under the jurisdiction of the bishop of the diocese in which they are situated, and he exercises visitorial powers over them. (3.) Several churches connected in one corporation are called "collegiate" churches: e. g. a combination of several Reformed Protestant Dutch churches in New York is so styled.

Collegial or Collegiate System, a mode of exhibiting the relation of Church and State employed by Puffendorf and Pfaff in Protestant Germany. The churches were regarded as being, after Constantine's time, legal corporations (*collegia licita*), with rights to form their creeds, conduct their worship, choose their presiding officer, admit and expel members; to make and administer by-laws, correct such abuses as might creep in among them, call in the aid of the civil power if necessary, or in certain cases to leave the exercise of these rights to others. It was assumed that the rights originally belonging to the congregations, which had been in course of time usurped by the hierarchy, were restored to the congregations by the Reformation, and were left by the Reformed congregations to the civil authorities. According to this view, the civil authority would have a double power with regard to the Church, the *jus circa sacra*, the right of superintendence and of patronage, which inheres in the secular authority, and the *jus in sacris*, the sum of the collegial rights in internal affairs of the Church, transferred to it (the secular government) as the representative of the congregations of the country. For some time this view was eagerly made use of by most of the Protestant state governments, but in modern times it has more or less given way in every country to a sounder conception of the relation between Church and State.—Wetzer u. Welte, *Kirchen-Lex.* ii, 667. See CHURCH AND STATE.

Collegiants, a party of the Remonstrants of Holland. It derived its name from the members calling their assemblies *colleges*. They rejected all creeds, all regular ministers, and all tests of communion and forms of ecclesiastical government. They are sometimes called *Rhinsbergers*, because they met twice a year at Rhinsberg, a village near Leyden. The Collegiants were confined to Holland; but some of their practices are followed by other religious bodies in other countries, as by the Plymouth Brethren (q. v.) in England.—Mosheim, *Church History*, cent. xvii, pt. ii, ch. vii.

Collegiate Church. See COLLEGIAL or COLLEGIATE CHURCH.

Collier, Jeremy, an English non-juror, was born Sept. 23, 1650, at Stow-with-Quy, Cambridgeshire. He passed M.A. at Caius College, Cambridge, in 1676, and obtained the living of Ampton, Sussex, which he resigned for the lectureship of Gray's Inn, 1685. At the Revolution of 1688 he not only refused the oaths, but was active in behalf of the dethroned monarch. In 1696 he was outlawed. At last he turned his talents to better ends, and made war on the licentiousness of the theatre. His first work on this subject was, *A Short View of the Immorality and Profaneness of the Stage* (Lond. 1738, 3d ed. 8vo). The wits in vain opposed him, and after a ten years' struggle, in which he wrote other books and pamphlets on the subject, he accomplished his object. The rest of his life was spent in various literary labors. He was consecrated a nonjuring bishop by Dr. Hicks in 1713, and died April 26, 1726. Collier was a man of eminent abilities, but of small reasoning faculty. Besides the books above named, he wrote *Ecclesiastical History of Great Britain* (new edition, with Life of Collier, Lond. 1840, 9 vols. 8vo); *Essays on Moral Subjects* (Lond. 3 vols. 8vo); *Historical, Geographical, and Poetical Dictionary*, from Moreri, with additions (Lond. 1701-27, 4 vols. fol.), besides numerous controversial tracts.—Macaulay, *Hist. of England*, iii, 363; *Life of Collier* (prefixed to his *Ec. History of England*); Hook, *Eccles. Biography*, iv, 137; *Biographia Britannica*, iv, 12.

Collier, Joseph Avery, a minister of the Reformed Protestant Dutch Church, was born at Plymouth, Mass., Oct. 26, 1828, graduated at Rutgers College, New Brunswick, N. J., July, 1849, and at the theological seminary of the Reformed Dutch Church in that city, July, 1852. Died at Kingston, N. Y., August, 1864. He was a clear, methodical, persuasive, and eloquent preacher. His literary attainments were unusually large, and entirely consecrated to his ministry. As a preacher to children and the young men he is entitled to the first rank. His publications were the following: *The right Way, or the Gospel applied to the Intercourse of Individuals and Nations* (a prize essay on Peace, Am. Tract Society, N. Y. 1854, of which over ten thousand copies have been circulated):—*The Christian Home, or Religion in the Family* (prize essay, Presbyterian Board, Phila. 1859):—*The Young Man of the Bible* (Am. Tract Soc. N. Y. 1861):—*Little Crowns, and how to Coin them* (N. Y. 1864; republished in England):—*Pleasant Paths for little Feet* (Am. Tract Soc. N. Y. 1864):—*The Dawn of Heaven, or the Principles of the heavenly Life applied to the earthly*, a posthumous work, to which is prefixed a brief and just biographical sketch by his brother, Rev. Ezra W. Collier (N. Y. 1865).

Collier, William, a Baptist minister, was born in Scituate, Mass., Oct. 11, 1771. He graduated at Brown University in 1797, studied theology under president Maxcy, and was licensed to preach in 1798. In 1799 he was ordained at Boston as minister at large,

but soon went as pastor to Newport, spent one year there, and four as pastor of the First Baptist Church, New York. In 1804 he became pastor of the Baptist church in Charlestown, Mass., where he remained sixteen years, a faithful and successful minister. In 1820, his health failing, he resigned his charge, and removed to Boston, where he remained during the rest of his life, doing service as minister at large. He was a pioneer of the temperance reform, and from 1826 to 1828 edited the *National Philanthropist*, the first temperance paper. He died March 19, 1843. Among his literary labors were a *Hymn-book*, a series of *Sermons from living Ministers* (begun in 1827), editions of Saurin and of Andrew Fuller, and several occasional Sermons.—Sprague, *Annals*, vi, 376.

Collins, Anthony, an English Deist, was born at Heston, near Hounslow, in 1676, and was educated at Eton and King's College, Cambridge. Being a man of property, he spent his life chiefly in literary pursuits. He died in 1729. His infidel principles brought him into collision with Bentley, Chandler, and many others. His chief works are: *Discourse on the Grounds and Reasons of the Christian Religion* (Lond. 1737, 8vo): —*Priestcraft in Perfection* (London, 1710, 8vo):—*Discourse on Free-thinking* (1713):—*Essay on the Thirty-nine Articles*, in reply to Bennet (Lond. 1724, 8vo), besides various pamphlets. In 1715 he published his *Philosophical Inquiry concerning Liberty and Necessity*, which was reprinted in 1717 in 8vo, with corrections, and was translated into French by Des Maizeaux (1720). Dr. Samuel Clarke replied to the necessarian doctrine of Collins chiefly by insisting on its inexpediency, considered as destructive of moral responsibility. Bentley's *Remarks upon a late Discourse of Free-thinking* (given in Randolph's *Enchiridion Theologicum*, vol v) is a sharp and sarcastic, but fully adequate reply to the skeptical arguments of Collins. See Leland, *Deistical Writers*, ch. vi; Farrar, *Critical History of Free Thought*.

Collins, John, a Methodist Episcopal minister, was born in New Jersey in 1769. In 1803 he removed to Ohio, and entered the itinerant ministry in 1807. He was one of the pioneers of Methodism in the West. In 1804, while yet a local preacher, he preached the first Methodist sermon in Cincinnati to a dozen persons, in an upper room. With a brief interval, he labored as an itinerant until 1836, when he became superannuated. He died Aug. 21, 1845. He was an able and faithful preacher, often impressively eloquent, and eminently successful as an evangelist. Revivals of religion followed his footsteps everywhere. An instructive sketch of his life, from the pen of Justice M'Lean, was published in 1850 (Cincinnati, 18mo).—*Minutes of Conferences*, iii, 650; *Meth. Quart. Review*, 1850, p. 324.

Collins, John A., a distinguished Methodist Episcopal minister, was born near Seaford, Del., 1801. His parents removed to Ohio in 1805, and to Georgetown, D. C., in 1812, and his academical education was obtained at the latter place. Giving early promise of talent, he was placed as a law student in the office of William Wirt; but the plan of his life was changed by his conversion at a camp-meeting in Loudoun Co., Va., in 1820. He joined the Methodist Episcopal Church, and in 1826 was licensed as a local preacher. In 1830 he entered the itinerant ministry in the Baltimore Conference, and his great talent as a preacher soon gained him a commanding reputation. He filled all the prominent appointments in his Conference as pastor, and served several terms as presiding elder. In 1836 he was elected assistant editor of the *Christian Advocate* at New York. This office he soon resigned, partly on account of the effect of the climate upon the health of his family, but mainly because he believed he could better serve the Church in the more regular duties of the ministry. Few men in any period of the history of the Methodist Episcopal Church have more successfully preached her doctrines, or more faithfully defended her discipline. He was elected to the General Conference as soon as he was eligible, and to every subsequent one down to the last, when he led the delegation. He had pre-eminent pulpit power. His sermons were marked with great clearness of thought, apt and scriptural illustrations, and were delivered with elegance of speech, and often with an eloquence, earnestness, and power that were overwhelming. As a debater on the floor of the General or Annual Conference he had few equals, certainly no superior. He died of pneumonia, after a short illness, May 7, 1857. —*Minutes of Conferences*, 1858, p. 16.

Collins, Judson Dwight, superintendent of the Methodist Episcopal missions in China, was born in Wayne County, N. Y., Feb. 12, 1822. He removed with his parents to Michigan in 1831, was converted in 1838, graduated in Michigan University 1845, entered the itinerant ministry in the Michigan Conference, and was appointed teacher in the Wesleyan Seminary at Albion in the same year. He was sent as missionary to China and superintendent in 1847, returned with impaired health in 1851, and died May 13, 1852, in Washtenaw County, Michigan. His mind was clear and vigorous, more solid than brilliant, and more logical than eloquent. "Years before the Church established the China mission, and while prosecuting his collegiate studies, he pursued a course of reading on China, preparatory to a whole life of missionary labor among its benighted millions, and his mind had no rest until it was actually surrounded by their darkness and misery. No temporary impulse led him thither, no transient fervent feelings urged him to a life of toil in that distant land; but a permanent conviction of duty possessed his mind, one great idea of supreme service to Christ controlled his whole existence, and carried all his thoughts, all his affections, all his impulses, to that extensive territory of heathenism, and his martyr-like attachments to his work were only loosened by death." —*Minutes of Conferences*, 1852, p. 113; Sprague, *Annals*, vii, 831.

Collins, Wellington H., a Methodist Episcopal minister, was born May, 1816, in Wolcott, Wayne County, N.Y.; removed with his parents to Michigan in 1830, was converted in 1835, began preaching in 1837 under the presiding elder, and entered the Michigan Conference in 1838. The Conference then included all of Michigan and North-western Ohio. After twenty years' service as a stationed minister and seven years as presiding elder, he died at Detroit, Aug. 11, 1858. He was delegate to the General Conference at Boston 1852, and also to that at Indianapolis in 1856. Mr. Collins was a man of great force of character. He was a masterly preacher, and was remarkably able in debate; but perhaps his highest excellence was in his safe judgment as a counsellor, by which he was always influential among his brethren.—*Minutes of Conferences*, 1858, p. 334; *Ladies' Repository*, xix, 449.

Cölln, Daniel Georg Conrad von, was born Dec. 21, 1788, at Oerlinghausen, in the principality of Lippe-Detmold, where his father was minister. His family were of Moravian origin. He studied at Detmold, Marburg, Tübingen (under Flatt and Schnurrer), and finally in Göttingen. In 1816 he became professor *extraordinarius* of theology at Marburg, and in 1817, at the Reformation Jubilee, he became doctor of theology. In 1818 he received a double call, one from Heidelberg to the philosophical, the other from Breslau to the theological faculty. He accepted the latter. His academic discourses, embracing exegetic and historical theology, attracted the more gifted among the students. Besides his occasional academical writings (*De Joelis prophetæ ætate* [Marb. 1811], *Spicilegium observationum exegetico-criticarum ad Zephaniæ vaticinia* [Vratisl. 1818], *Memoria professorum theol. Marburg. Philippo Magnanimo regnante* [Vratisl. 1827], *Confessi-*

orum Melanchthonis et Zwinglii Augustanarum capita graviora inter se conferuntur [Vratisl. 1830]), and many valuable articles in journals, two books particularly have made his name universally known. First, his revision of the first volume, and the first part of the second volume, of the third edition of Münscher's *Christliche Dogmengeschichte* (Cassel, 1832 and 1834). This edition formed an epoch in the History of Dogmas. But his principal book is the *Biblische Theologie* (2 vols. Leips. 1836, edit. by Schulz), which for a long time, especially in its Old-Testament part, was considered as the most excellent work on this science. He died on the 17th of February, 1833. In theology he was a moderate Rationalist. See a sketch of him by Schulz in the above-mentioned *Bibl. Theologie*, vol. i.—Herzog, *Real-Encyklop.* xix, 330.

Collops of Fat (פִּימָה, *pimah'*, *fatness*), spoken of the thick flakes of fat flesh upon the haunches of a stall-fed ox, put as the symbol of irreligious prosperity (Job xv, 27). See Fat.

Collyridians, a sect of heretics which arose towards the close of the fourth century, so named from a small cake of a cylindrical form (κολλυρίδες, *collyridæ*) which they offered to the Virgin Mary with libations and sacrifices. They were chiefly Arabian women, who rendered divine honors to the Virgin Mary as a goddess. It is conjectured by Neander that the cake-offering was a transfer of the oblations of the Lord's Supper to the worship of the Virgin, the whole taking the shape of a pagan ceremony; the truth probably being that the corruption was introduced from the pagan worship of Ceres, and that the customary bread-offerings at the heathen feast of the harvest, in honor of Ceres, had been changed for such offerings in honor of Mary.—See Epiphanius, *Hær.* 78; Mosheim, *Church History*, i, 311; Neander, *Church History* (Torrey's transl.), ii, 339.

Colman, an Irish missionary of the 7th century. Colman was the third ecclesiastic who by royal authority had been called from Ireland to preside over the see of Lindisfarne, in North Britain. During his and his predecessors' superintendency, the churches in that country which had been devastated by Penda, the last Pagan king, were restored, and were enjoying great temporal and spiritual prosperity. But about A.D. 662, the Anglo-Saxon clergy, who had deserted these churches in the hour of danger, wished to return and to share them at least with the Irish and Ionian missionaries. But here a difficulty arose. The English Catholic Church, as recently reconstructed by Augustine, and that of the Scoto-Irish, were found to be so dissimilar in doctrine and usage that they could not conduct worship in the same edifices. The differences were numerous; among them were the question of the Three Chapters (q. v.), the tonsure, and the time of keeping Easter. An appeal to the pope was useless, for long before he had put forth his decision; but the Irish Church and those of Iona had not complied with it. Oswy, the king, required the whole to be presented to him for adjustment. The discussion was in Irish and Anglo-Saxon, by Colman and Wilfred, the venerable Ceada, bishop of the East Angles, acting as interpreter. When the arguments had ended, the king and a majority of the assembly decided for Wilfred and the Anglo-Catholics (see Bede, lib. iii, c. 25). This decision, however, was far from effecting peace. The dominant party soon became intolerant, and required the clergy of Colman to be reordained; that their churches, previous to the performance of Catholic worship, "should be sprinkled with exorcised water (Usher, vol. vi, p. 274); and also that they should observe many new rites and usages to which they had been entire strangers. To all of these, like the Welsh Christians before them, Colman and the most of his clergy refused to submit, and quietly relinquished in North Britain the churches which they had built or had restored, and in which they had successfully preached for nearly seventy years. Colman now returned to Ireland, taking with him all his own countrymen and thirty-six ecclesiastics or students who adhered to his teaching. For the latter he established on the east of the island an institution long known as "Mayo of the English," to which Bede says many flocked from England, that they might "gain knowledge and lead a holy life." But, notwithstanding his success in his new enterprise, he could not recover himself from his former defeat; he went abroad, traveled on the Continent, visited the East, and died about A.D. 676. See Bede, *Hist. Eccl.*, l. c., and also iv, 4; Moore, *History of Ireland* (Am. edit., Philad.).

Colman, Benjamin, D.D., an eminent Congregational minister, was born in Boston, Oct. 19, 1673. He graduated at Harvard 1692, and sailed for London 1695, but on the voyage was taken by a French vessel and carried to France. After remaining in England some three years, he was called to take charge of Brattle Street Church, Boston. He accepted, and was ordained Aug. 4, 1699, in London. He died Aug. 29, 1747. He was made D.D. by the University of Glasgow, 1731. Dr. Colman published a *Poem on Elijah's Translation, occasioned by the Death of Rev. Samuel Willard* (1707); *The Incomprehensibleness of God, in four Sermons* (1715); *Five Sermons from Luke* xi, 21, 22 (1717); *Observations on Inoculation* (1722); *A Treatise on Family Worship* (1730); *A Dissertation on the Image of God wherein Man was created* (1736); and a large number of occasional sermons.—Sprague, *Annals*, i, 223.

Cologne, a celebrated city on the Rhine, the seat of an early bishopric. The legend that a disciple of the apostle Peter, by the name of Maternus, was the founder and first bishop of the church of Cologne, is now generally abandoned even by Roman Catholic writers. Maternus, the first (historical) bishop of Cologne, is mentioned as early as 313 (Mansi, *Collectio Concil.* t. ii, fol. 486). The successor of Maternus, Euphrates, attended in 347 the Synod of Sardica, and was one of the delegates of this synod to the Emperor Constantius. The acts of a Synod of Cologne of 346, which state that Euphrates was deposed for being an Arian, are now generally regarded as spurious. In 623–663 we find Cunibert mentioned as archbishop of Cologne (Rettberg, *Kirchengesch. Deutschlands.* ii, 602); yet it does not appear to have been at the time a regular archbishopric, for bishops of Cologne are mentioned after that date, and Bonifacius (q. v.) in 748 subjected it to the metropolitan of Mayence, from which it was probably detached under Charlemagne, between 794 and 799, in order to be raised to the dignity of an archbishopric. A national synod was held at Cologne in 874, to regulate the administration of the goods of the Church, and to consecrate the cathedral. The importance this see had obtained in the 10th century is proved by the fact that the Emperor Otto I gave it to his brother Bruno I, the first archbishop who was at the same time a prince of the German Empire. Popes and emperors vied in increasing the wealth and power of the archbishop of Cologne, and synods held at that place declared him to have the right of precedence over all other clergy, the papal legates *a latere* alone excepted. About the middle of the 12th century, the archbishops of Cologne were elevated to the rank of electors. Prominent among the archbishops of this period were Anno II, who abducted the young emperor Henry IV, and Rainald, count of Dossel, an able general of the Emperor Frederick I, who patronized the anti-popes, and brought from Milan to Cologne the pretended bodies of the "three holy kings," which up to this day are venerated as the most precious relics of Cologne. The political troubles of the 12th and 13th centuries diminished the power of the archbishopric, but it rose again under Conrad von Hochstaden

(1238-1261). But, while outwardly prospering, the see was inwardly weakened by the relaxation of the clergy, which became so great that complaint was made of it to Pope Alexander IV, by whose direction Conrad held a synod at Cologne in 1260, for the purpose of reforming abuses (Hartzheim, *Concil. Germ.* iii, p. 588 sq.). In 1266 (according to others, 1271 or 1272) another council was held against the violators of the rules of discipline. After the Reformation of the 16th century, two archbishops of Cologne, Herman V, count of Wied, and Gebhard II, turned Protestants, and were on that account deposed. After that, the see was held for 178 years without interruption (until 1761) by Bavarian princes. Joseph Clement († 1723), who was elected in 1688, was not even ordained a priest until 1706. Clement Augustus (1723-1761) was at the same time bishop of Munster, Paderborn, Hildesheim, and Osnabrück. Maximilian Frederick (1761-1784) founded the Academy of Bonn. Maximilian Francis, archduke of Austria (1784-1801), changed the Academy of Bonn into a university, and supported his brother, Emperor Joseph II, in his ecclesiastical reforms (see Ems, Congress of). His successor, Anthony Victor, archduke of Austria, was the last elector, as in 1803 the dominions of the archbishop were secularized, and divided among other princes. The electorate of Cologne at that time had about 2545 English sq. miles and 230,000 inhabitants. But the diocese of Cologne was much more extensive than the electorate. Even the city of Cologne, being a free city of the empire, was subject only to the spiritual, not to the temporal rule of the archbishops who resided at Bonn. At the time of the Reformation the diocese had about 800 parishes, divided into 22 deaneries; in the 18th century the number of parishes was about 1300 (a map of the diocese is given in Spruner's *Histor. Atlas*, No. 11). After the reorganization of Germany by the Vienna Congress, Cologne, now belonging to Prussia, was reconstituted an archbishopric by a bull of July 16, 1821, with the suffragan bishoprics of Treves, Munster, and Paderborn. The diocese of Cologne had, in 1867, 44 deaneries, about 600 parishes, and a population of about 1,000,000. The first archbishop, Ferdinand Joseph, count Spiegel (1824-1835), was a man of moderate principles, and a patron of the Hermesians (q. v.). His successor, Clement Augustus Droste von Vischering (1835-1845), had a violent controversy with the Prussian government on the subject of marriages between Protestants and Roman Catholics, was arrested in 1837, and set free in 1840 only on condition that he resigned the administration of the diocese into the hands of a coadjutor. Joannes von Geissel, who succeeded him in 1845, was created a cardinal in 1850, and died in 1864. He was succeeded by Paul Melchers, who was the incumbent in 1867. See Germany and Prussia.

Of the councils of Cologne, besides those already mentioned, the most important were, (1) in 1280, called by the Archbishop Sifridus (Sifroi), in which eighteen canons of discipline were drawn up; (2) in 1536, by Herman, on discipline, the duties of bishops, offices of the Church, etc.; (3) in 1549, by Adolphus, where several statutes were made for the reformation of the Church. The restoration of learning was recommended as one of the means of accomplishing this end.—Wetzer u. Welte, *Kirchen-Lex.* ii, 673; Rettberg, *Kirchen-Gesch. Deutschlands* (Gött. 1846); Friedrich, *Kirchen-Gesch. Deutschlands* (Bamberg, 1867); Binterim & Mooren, *Die alte und neue Erzdiöc. Cöln* (4 vols. Mayence, 1828); Mering u. Reischert, *Die Bischöfe u. Erzbisch. von Cöln* (Cologne, 1843); Ersch u. Gruber, s. v. (vol. xviii, 175 sq.; here a complete list of the bishops and archbishops of Cologne is given); Landon, *Manual of Councils*, s. v.; Smith, *Tables of Ch. History*.

Colombia, United States of, a republic in South America (until 1861 called New Granada). The country was discovered in 1498 by Christopher Columbus. In 1732 the viceroyalty of New Granada was established of what are now the United States of Colombia and Ecuador. In 1810 New Granada separated herself from the Spanish monarchy, and maintained a constant war until 1824, when the Spanish army was conquered by the Colombian. New Granada formed with Venezuela (since 1817) and with Ecuador (since 1821) the republic of Colombia. But Venezuela separated herself in Nov. 1829, and Ecuador in May, 1830, and the central part constituted itself as the republic of New Granada on Nov. 21, 1831. Several times some of the states forming the republic declared themselves independent: thus the state of Panama was independent from 1863 to 1865. Since then the united republic has been constituted of the nine states of Antioquia, Bolivar, Boyacá, Cauca, Cundinamarca, Magdalena, Panama, Santander, Tolima, together, according to the census of 1867, with a population of 2,794,-473 inhabitants. The population is rapidly increasing; in 1810, when the revolution commenced, there were 800,000 inhabitants; in 1826, 1,300,000; in 1835, 1,685,038; in 1885, 3,500,000. According to a decree of 1851, slavery ceased on January 1, 1852. The whole native population belongs to the Roman Catholic Church, whose ministers receive a salary from the state. The hierarchy consists of one archbishop at (Santa Fé de) Bogota, and seven bishops at Antioquia, Cartagena, Santa Martha, New Pampelona, Panama, Pasto (established in 1859), and Popayan. Church affairs have for many years been the subject of violent controversies between the Liberal party, who are in favor of absolute freedom of worship, of separating the state from the Church, of expelling the Jesuits, and similar measures, and the Conservative party, to whom belong all the fanatical partisans of the Church of Rome. Generally the government has been in the hands of the Liberal party, which several times has made attempts to enforce a full separation of the Church from Rome. Protestant foreigners received the right of public worship in 1822, and later the same right was given to the natives. In all the large towns the government enforces the legal toleration of all religions, but in the country the ignorance and fanaticism of the populace make it often difficult to obtain the full benefit of the law. In 1856 the Old School Presbyterian Church of the United States occupied Bogota as a missionary station, and in 1866 a second missionary was sent to the same place. A boys' school was opened January 1, 1867. The American Bible Society, in 1866, opened a depository at Bogota. At the English services the average attendance on the Sabbath, during the year 1866, was over thirty; but worship was still held in private houses, no suitable hall or edifice having yet been obtained by the missionaries. A large number of foreign Protestants, chiefly from the United States and England, have settled at Panama and Aspinwall (Colon), and they have a church and school, but hardly any progress has been made toward establishing a native Spanish congregation.—See the *Annual Reports of the Board of Foreign Missions of the Presbyterian Church; New American Cyclopædia* and *Lippincott's Gazetteer*, s. v. New Granada; Herzog, *Real-Encyklop.* ii, 792.

Colonna (De Columna), the name of an ancient princely family in Italy, which was famous for many centuries, and especially during the Middle Ages, for the number of cardinals and bishops which it gave to the Roman Church, and for the prominent influence which it exercised upon the election of the popes and the government of the papal states. In the quarrels between the popes and the emperors, the Colonnas mostly sided with the emperors. Boniface VIII became so incensed at the hostile attitude of the family, that the descendants of the princes John III and Otto XVII were declared by him to be "irregular" until the fourth generation. According to some ecclesias-

tical writers, Pope Alexander III (according to others Gregory IX) declared all the members of the family, for all time to come, incapable of holding any ecclesiastical office. The authenticity of this decree is doubtful; if it was ever issued, it soon fell into disuse, for there is no other family which counts so large a number of cardinals among its members as the Colonnas. Only one of the family ascended the papal chair under the name of Martin V (q. v.); in general, public opinion in Rome was so much opposed to the election of a Colonna as pope, that there was a proverb: *Nec frater, nec Gallus, nec Columna erunt papa* (Neither a brother [of the deceased pope], nor a Frenchman, nor a Colonna, must be elected pope). A great many of the cardinals of this family were known for their fighting propensities; and as late as 1527 the Cardinal Pompey Colonna expelled Pope Clement VII from Rome, who on that account deposed him from his ecclesiastical dignity, and pronounced the ban against him. He was, however, restored to all his dignities in 1529. But very few of the Colonnas published any theological writings; one of these few was

Colonna, GIOVANNI, born at the beginning of the 13th century. He entered the Dominican order; was in 1236 provincial of his order in Tuscany; became in 1255 archbishop of Messina, and in 1262 archbishop of Nicosia, in Cyprus. The latter see he resigned in 1268, on account of political disturbances in Cyprus. He died between 1280 and 1290. He wrote *Liber de viris illustribus ethnicis et Christianis* (published in 1720, with notes by B. Zoanelli). A number of other works (as *Mare historiarum, Epistolæ ad diversos, De gloria Paradisi*, etc.) have never been printed. See Wetzer u. Welte, *Kirchen-Lex.* ii, 679 sq.

Colony (*κολώνια*, for the Lat. *colonia*), a distinction applied to the city of Philippi, in Macedonia (Acts xvi, 12). After the battle of Actium, Augustus assigned to his veterans those parts of Italy which had espoused the cause of Antony, and transported many of the expelled inhabitants to Macedonia, by which means the towns of Philippi, Dyrrachium, etc., acquired the right of Roman colonies (Dio Cass. p. 455). Accordingly, we find Philippi described as a "colonia" both in inscriptions and upon the coins of Augustus (Orelli, *Inscr.* 512, 3658, 3746, 4064; Rasche, vol. viii, pt. ii, p. 1120). See PHILIPPI. Such towns possessed the *jus coloniarium* (Plin. *Nat. Hist.* v, 1), i. e. so-called *jus Italicum* (*Digest. Leg.* viii, 8), consisting, if complete, in a free municipal constitution, such as was customary in Italy, in exemption from personal and land taxes, and in the commerce of the soil, or the right of selling the land. Originally and properly a colony was a body of Roman citizens sent out as volunteers (Livy, x, 21) to possess a commonwealth, with the approbation of their own state (Servius, *ad Æneid.* i, 12). The old Roman colonies were thus in the nature of garrisons planted in conquered towns, having a portion of the conquered territory (usually a third part) assigned to them, while the native inhabitants retained the rest, and lived together with the new settlers (Dionys. *Ant. Rom.* ii, 53). Such colonists, of course, remained Roman citizens in the fullest sense. The original natives, however, and their descendants, did not become Roman citizens by having a colony planted among them, unless it was conferred, either at the time or subsequently, by a special act of the Roman people, senate, or emperor. Their exact relation in this respect it is somewhat difficult to determine in the absence of such a specific act, as the *jus Italicum*, readily and often conferred upon provincial cities, and which now would be more likely to obtain than colonial ones, conferred only the above rights upon the community, without making the individual inhabitants Roman citizens in full. (See Smith's *Dict. of Class. Antiq.* s. v. Colonia.) See CITIZENSHIP.

In one passage of the Apocrypha (Wisd. xii, 7) the term "colony" stands for *ἀποικία*, a *settlement*, referring to Palestine as the seat of the chosen people of God.

Color. Names of colors expressly mentioned as such in the Old Test. are: (*a.*) לָבָן, *laban'*, *white*; צַח, *tsach*, *bright*; חִוָּר, *chivvar'*, *pale*; שֵׂיב, *seyb*, *gray*; צָחֹר, *tsachor'*, *cream-colored*; (*b.*) צָהֹב, *tsahob'*, *yellow*; יָרָק, *yarak'*, *green*; (*c.*) אָדֹם, *adom'*, *red*; שָׂרֹק, *sarok'*, *fox-colored*; תּוֹלַעַת שָׁנִי, *tola'ath-shani'*, *crimson*: שָׁשַׁר, *shasher'*, *ochre-red*; (*d.*) אַרְגָּמוֹן, *argamon'*, *purple*, תְּכֵלֶת, *teke'leth*, *violet*; (*e.*) שָׁחֹר, *shachor'*, *black*; חוּם, *chum*, *brown*; (*f.*) נָקֹד, *nakod'*, *speckled*; תָּלוּא, *talu'*, *spotted*; בָּרֹד, *barod'*, *pie-bald*; עָקֹד, *akod'*, *striped*. In the N. T. the colors mentioned are: λευκός, *white*; μέλας, *black*; πυῤῥός, *red*; χλωρός, *green*; πορφύρα, πορφύρεος, *purple*; κόκκινος, *scarlet*. The following statements cover the whole subject in general.

The terms relative to color, occurring in the Bible, may be arranged in two classes, the first including those applied to the description of natural objects, the second those artificial mixtures which were employed in dyeing or painting. In an advanced state of art, such a distinction can hardly be said to exist; all the hues of nature have been successfully imitated by the artist; but among the Jews, who fell even below their contemporaries in the cultivation of the fine arts, and to whom painting was unknown until a late period, the knowledge of artificial colors was very restricted. Dyeing was the object to which the colors known to them were applied: so exclusively, indeed, were the ideas of the Jews limited to this application of color, that the name of the dye was transferred without any addition to the material to which it was applied. The Jews were not, however, by any means insensible to the influence of color: they attached definite ideas to the various tints, according to the use made of them in robes and vestments; and the subject exercises an important influence on the interpretation of certain portions of Scripture. See DYE.

I. The *natural* colors noticed in the Bible are white, black, red, yellow, and green. It will be observed that only three of the prismatic colors are represented in this list; blue, indigo, violet, and orange are omitted. Of the three, *yellow* is very seldom noticed; it was apparently regarded as a shade of green, for the same term *greenish* (יְרַקְרַק) is applied to gold (Psa. lxviii, 13), and to the leprous spot (Lev. xiii, 49), and very probably the *golden* (צָהֹב) or *yellow* hue of the leprous hair (Lev. xiii, 30-32) differed little from the *greenish* spot on the garments (Lev. xiii, 49). *Green* is frequently noticed, but an examination of the passages in which it occurs will show that the reference is seldom to color. The Hebrew terms are *raanan'* (רַעֲנָן) and *yarak* (יָרָק): the first of these applies to what is *vigorous* and *flourishing*; hence it is metaphorically employed as an image of prosperity (Job xv, 32; Psa. xxxvii, 35; lii, 8; xcii, 14; Jer. xi, 16; xvii, 8; Dan. iv, 4; Hos. xiv, 8); it is invariably employed wherever the expression "*green tree*" is used in connection with idolatrous sacrifices, as though with the view of conveying the idea of the *outspreading* branches, which served as a canopy to the worshippers (Deut. xii, 2; 2 Kings xvi, 4); elsewhere it is used of that which is *fresh*, as oil (Psa. xcii, 10), and newly-plucked boughs (Cant. i, 16). The other term, *yarak*, has the radical signification of *putting forth leaves*, *sprouting* (Gesenius, *Thes. Heb.* p. 632): it is used indiscriminately for all productions of the earth fit for food (Gen. i, 30; ix, 3; Exod. x, 15; Num. xxii, 4; Isa. xv, 6; comp. χλωρός, Rev. viii, 7; ix, 4), and again for all kinds of garden herbs (Deut. xi, 10; 1 Kings xxi, 2; 2 Kings xix, 26; Prov. xv, 17; Isa. xxxvii, 27; con-

trast the restricted application of our *greens*); when applied to grass, it means specifically the *young, fresh grass* (דֶּשֶׁא, *de'shè*, Psa. xxxvii, 2) which springs up in the desert (Job xxxix, 8). Elsewhere it describes the sickly yellowish hue of mildewed corn (Deut. xxviii, 22; 1 Kings viii, 37; 2 Chron. vi, 28; Amos iv, 9; Hag. ii, 17); and, lastly, it is used for the entire absence of color produced by fear (Jer. xxx, 6; comp. χλωρός, Hom. *Il.* x, 376); hence χλωρός (Rev. vi, 8) describes the ghastly, livid hue of death. In other passages "green" is erroneously used in the A.V. for *white* (Gen. xxx, 37; Esth. i, 6), *young* (Lev. ii, 14; xxiii, 14), *moist* (Judg. xvi, 7, 8), *sappy* (Job viii, 16), and *unripe* (Cant. ii, 13). Thus it may be said that *green* is never used in the Bible to convey the impression of proper color. See GREEN.

The only fundamental color of which the Hebrews appear to have had a clear conception was *red;* and even this is not very often noticed. They had, therefore, no scientific knowledge of colors, and we cannot but think that the attempt to explain such passages as Rev. iv, 3, by the rules of philosophical truth must fail (see Hengstenberg, *Comm.* in loc.). Instead of assuming that the emerald represents *green*, the jasper *yellow*, and the sardine *red*, the idea intended to be conveyed by these images may be simply that of *pure, brilliant, transparent* light. The emerald, for instance, was chiefly prized by the ancients for its *glittering, scintillating* qualities (αἰγλήεις, Orpheus, *De lap.* p. 608), whence, perhaps, it derived its name (σμάραγδος, from μαρμαίρειν). The jasper is characterized by John himself (Rev. xxi, 11) as being crystal-clear (κρυσταλλίζον), and not as having a certain hue. The sardine may be compared with the amber of Ezek. i, 4, 27, or the burnished brass of Dan. x, 6, or, again, the fine brass, "as if burning in a furnace," of Rev. i, 15, each conveying the impression of the color of fire in a state of pure incandescence. Similarly the beryl, or, rather, the *chrysolite* (the Hebrew *tarshish*) may be selected by Daniel (x, 6) on account of its transparency. An exception may be made, perhaps, in regard to the sapphire, in as far as its hue answers to the deep blue of the firmament (Exod. xxiv, 10; compare Ezek. i, 26; x, 1), but even in this case the pellucidity (לִבְנָה, *libnah'*, omitted in A. V., Exod. xxiv, 10) or polish of the stone (comp. Lam. iv, 7) forms an important, if not the main, element in the comparison. The highest development of color in the mind of the Hebrew evidently was *light*, and hence the predominance given to *white* as its representative (comp. the connection between λευκός and *lux*). This feeling appears both in the more numerous allusions to it than to any other color—in the variety of terms by which they discriminated the shades from a *pale, dull* tint (כֵּהֶה, *keheh'*, *blackish*, Lev. xiii, 21 sq.) up to the most brilliant splendor (זֹהַר, *zo'har*, Ezek. viii, 2; Dan. xii, 3)—and in the comparisons by which they sought to heighten their ideas of it, an instance of which occurs in the three accounts of the Transfiguration, where the countenance and robes are described as like "the sun" and "the light" (Matt. xvii, 2), "shining, exceeding white as snow" (Mark ix, 3), "glistening" (Luke ix, 29). Snow is used eleven times in a similar way, the sun five times, wool four times, milk once. In some instances the point of the comparison is not so obvious, e. g. in Job xxxviii, 14, "they stand as a garment" in reference to the *white* color of the Hebrew dress, and in Psa. lxviii, 13, where the glancing hues of the dove's plumage suggested an image of the brilliant effect of the *white* holiday costume. Next to white, *black*, or rather *dark*, holds the most prominent place, not only as its opposite, but also as representing the complexion of the Orientals. There were various shades of it, including the *brown* of the Nile water (whence its name Sihor)—the *reddish* tint of early dawn, to which the complexion of the bride is likened (Cant. vi, 10), as well as the *lurid* hue produced by a flight of locusts (Joel ii, 2)—and the darkness of blackness itself (Lam. iv, 8). As before, we have various heightening images, such as the tents of Kedar, a flock of goats, the raven (Cant. i, 5; iv, 1; v, 11), and sackcloth (Rev. vi, 12). *Red* was also a color of which the Hebrews had a vivid conception; this may be attributed partly to the prevalence of that color in the outward aspect of the countries and peoples with which they were familiar, as attested by the name Edom, and by the words *adamah* (earth) and *adam* (man), so termed either as being formed out of the red earth, or as being red in comparison with the fair color of the Assyrians and the black of the Æthiopians. Red was regarded as an element of personal beauty: comp. 1 Sam. xvi, 12; Cant. ii, 1, where the lily is the *red* one for which Syria was famed (Plin. xxi, 11); Cant. iv, 3; vi, 7, where the complexion is compared to the red fruit of the pomegranate; and Lam. iv, 7, where the hue of the skin is redder than coral (A. V. "rubies") contrasting with the white of the *garments* before noticed. The three colors, white, black, and red, were sometimes intermixed in animals, and gave rise to the terms צָחֹר, *tsahor'*, *dappled* (A.V. "white"), probably white and red (Judg. v, 10); עָקֹד, *akod'*, *ringstreaked*, either with white bands on the legs, or white-footed; נָקֹד, *nakod'*, *speckled*, and טָלֻא, *tala'*, *spotted*, white and black; and lastly בָּרֹד, *barod,' piebald* (A. V. "grizzled"), the spots being larger than in the two former (Gen. xxx, 32, 35; xxxi, 10); the latter term is used of a horse (Zech. vi, 3, 6) with a symbolical meaning: Hengstenberg (*Christol.* in loc.) considers the color itself to be unmeaning, and that the prophet has added the term strong (A. V. "bay") by way of explanation; Hitzig (*Comm.* in loc.) explains it, in a peculiar manner, of the complexion of the Egyptians. It remains for us now to notice the various terms applied to these three colors. (See each of the above words in its place.)

1. WHITE. The most common term is לָבָן, *laban'*, which is applied to such objects as milk (Gen. xlix, 12), manna (Exod. xvi, 31), snow (Isa. i, 18), horses (Zech. i, 8), raiment (Eccl. i, 8); and a cognate word expresses the color of the moon (Isa. xxiv, 23). צַח, *tsach*, *dazzling* white, is applied to the complexion (Cant. v, 10); חִוָּר, *chivvar'*, a term of a later age, to snow (Dan. vii, 9 only), and to the paleness of shame (Isa. xxix, 22, חָוַר); שֵׂיב, *sib*, to the hair alone. Another class of terms arises from the textures of a naturally white color, as שֵׁשׁ, *shesh*, and בּוּץ, *buts*. These words appear to have been originally of foreign origin, but were connected by the Hebrews with roots in their own language descriptive of a white color (Gesenius, *Thesaur.* p. 190, 1384). The terms were without doubt primarily applied to the material; but the idea of color is also prominent, particularly in the description of the curtains of the tabernacle (Exod. xxvi, 1), and the priests' vestments (Exod. xxviii, 6). *Shesh* is also applied to white marble (Esth. i, 6; Cant. v, 15); and a cognate word, שׁוּשַׁן, *shoshan'*, to the lily (Cant. ii, 16). In addition to these we meet with חוּר, *chur* (βύσσος, Esth. i, 6; viii, 15), and כַּרְפַּס, *karpas'* (κάρπασος; A. V. "green," Esth. i, 6), also descriptive of white textures.

White was symbolical of innocence; hence the raiment of angels (Mark xvi, 5; John xx, 12), and of glorified saints (Rev. xix, 8, 14), is so described. It was also symbolical of joy (Eccl. ix, 8); and, lastly, of victory (Zech. vi, 3; Rev. vi, 2). In the Revelations (vi, 2) the term λευκός is applied exclusively to what belongs to Jesus Christ (Wordsworth's *Apoc.* p. 105). See WHITE.

2. BLACK. The shades of this color are expressed in the terms שָׁחֹר, *shachor'*, applied to the hair (Lev. xiii, 31; Cant. v, 11); the complexion (Cant. i, v), particularly when affected with disease (Job xxx, 30); horses (Zech. vi, 2, 6): חוּם, *chum*, lit. *scorched* (φαιός, A. V. "brown," Gen. xxx, 32), applied to sheep; the word expresses the color produced by influence of the sun's rays: קָדַר, *kadar'*, lit. *to be dirty*, applied to a complexion blackened by sorrow or disease (Job xxx, 30); mourner's robes (Jer. viii, 21; xiv, 2; Mal. iii, 14; Zech. vi, 2, 6; see Plutarch, *Pericl.* 38; Mishna, *Middoth*, v, 3; comp. *vestes fuscæ*, Apulei, *Metam.* ii, p. 40, Bip.; see generally Götze, *De vest um nigrar. usu*, Helmst. 1726); a clouded sky (1 Kings xviii, 45); night (Mic. iii, 6; Jer. iv, 28; Joel ii, 10; iii, 15); a turbid brook (whence possibly KEDRON), particularly when rendered so by melted snow (Job vi, 16). Black, as being the opposite to white, is symbolical of evil (Zech. vi, 2, 6, Rev. vi, 5). See BLACK.

3. RED. אָדֹם, *adom'*, is applied to blood (2 Kings iii, 22); a garment sprinkled with blood (Isa. lxiii, 2); a heifer (Num. xix, 2); pottage made of lentiles (Gen. xxv, 30); a horse (Zech. i, 8; vi, 2); wine (Prov. xxiii, 31); the complexion (Gen. xxv, 25; Cant. v, 10; Lam. iv, 7). אֲדַמְדָּם, *adamdam'*, is a slight degree of red, *reddish*, and is applied to a leprous spot (Lev. xiii, 19; xiv, 37). שָׂרֹק, *sarok'*, lit. *fox-colored*, bay, is applied to a horse (A. V. "speckled;" Zech. i, 8), and to a species of vine bearing a purple grape (Isa. v, 2; xvi, 8): the translation "bay" in Zech. vi, 3, A. V. is incorrect. The corresponding term in Greek is πυῤῥός, lit. *red as fire*. This color was symbolical of bloodshed (Zech. vi, 2; Rev. vi, 4; xii, 3). See RED.

II. *Artificial Colors.*—The art of extracting dyes, and of applying them to various textures, appears to have been known at a very early period. We read of scarlet thread at the time of Zarah's birth (Gen. xxxviii, 28); of blue and purple at the time of the Exodus (Exod. xxvi, 1). There is, however, no evidence to show that the Jews themselves were at that period acquainted with the art; the profession of the dyer is not noticed in the Bible, though it is referred to in the Talmud. They were probably indebted both to the Egyptians and the Phœnicians; to the latter for the dyes, and to the former for the mode of applying them. The purple dyes which they chiefly used were extracted by the Phœnicians (Ezek. xxvii, 16; Plin. ix, 60), and in certain districts of Asia Minor (Hom. *Il.* iv, 141), especially Thyatira (Acts xvi, 14). It does not appear that those particular colors were used in Egypt, the Egyptian colors being produced from various metallic and earthy substances (Wilkinson, *Anc. Egypt.* iii, 301). On the other hand, there was a remarkable similarity in the mode of dyeing in Egypt and Palestine, inasmuch as the color was applied to the raw material previous to the processes of spinning and weaving (Exod. xxxv, 25; xxxix, 3; Wilkinson, iii, 125). The dyes consisted of purples, light and dark (the latter being the "blue" of the A. V.), and crimson (A. V. "scarlet"): vermilion was introduced at a late period.

1. PURPLE (אַרְגָּמָן, *argaman'*; Chaldaic form, אַרְגְּוָנָא, *argevana'*, Dan. v, 7, 16; πορφύρα; *purpura*). This color was obtained from the secretion of a species of shell-fish (Plin. ix, 60), the *Murex trunculus* of Linnæus, which was found in various parts of the Mediterranean Sea (hence called πορφύρα θαλασσία, 1 Macc. iv, 23), particularly on the coasts of Phœnicia (Strab. xvi, 757). Africa (Strab. xvii, 835) Laconia (Hor. *Od.* ii, 18, 7), and Asia Minor. See ELISHAH. The derivation of the Hebrew name is uncertain; it has been connected with the Sanscrit *râgaman*, "tinged with red;" and again with *arghamâna*, "costly" (Hitzig, *Comment. in Dan.* v, 7). Gesenius, however (*Thesaur.* p. 1263), considers it highly improbable that a color so peculiar to the shores of the Mediterranean should be described by a word of any other than Shemitic origin, and connects it with the root רָגַם, *ragam'*, *to heap up* or *overlay* with color. The coloring matter was contained in a small vessel in the throat of the fish; and as the quantity amounted to only a single drop in each animal, the value of the dye was proportionately high; sometimes, however, the whole fish was crushed (Plin. ix, 60). It is difficult to state with precision the tint described under the Hebrew name. The Greek equivalent was, we know, applied with great latitude, not only to all colors extracted from the shell-fish, but even to other brilliant colors; thus, the *purple upper garment* (ἱματίον πορφυροῦν) of John xix, 2 = the *crimson cloak* (χλαμὺς κοκκίνη) of Matt. xxvii, 28 (comp. Plin. ix, 62). The same may be said of the Latin *purpureus*. The Hebrew term seems to be applied in a similarly broad sense in Cant. vii, 5, where it either = *black* (comp. v, 11), or, still better, *shining* with oil. Generally speaking, however, the tint must be considered as having been defined by the distinction between the purple *proper* and the other purple dye (A. V. "blue"), which was produced from another species of shell-fish. The latter was undoubtedly a dark violet tint, while the former had a light reddish tinge. Robes of a purple color were worn by kings (Judg. viii, 26), and by the highest officers, civil and religious; thus Mordecai (Esth. viii, 15), Daniel (A. V. "scarlet," Dan. v, 7, 16, 29), and Andronicus, the deputy of Antiochus (2 Macc. iv, 38), were invested with purple in token of the offices they held (comp. Xenoph. *Anab.* i, 5, 8); so also Jonathan, as high-priest (1 Macc. x, 20, 64; xi, 58). They were also worn by the wealthy and luxurious (Jer. x, 9; Ezek. xxvii, 7; Luke xvi, 19; Rev. xvii, 4; xviii, 16). A similar value was attached to purple robes both by the Greeks (Hom. *Od.* xix, 225; Herod. ix, 22; Strab. xiv, 648) and by the Romans (Virg. *Georg.* ii, 495; Hor. *Ep.* 12, 21; Suet. *Cæs.* 43; *Nero*, 32). Of the use of this and the other dyes in the textures of the tabernacle, we shall presently speak. See PURPLE.

2. BLUE (תְּכֵלֶת, *teke'leth*; Sept. ὑάκινθος, ὑακίνθινος, ὁλοπόρφυρος, Num. iv, 7; Vulg. *hyacinthus*, *hyacinthinus*). This dye was procured from a species of shell-fish found on the coast of Phœnicia, and called by the Hebrews *Chilzon* (*Targ.* Pseudo-Jon. in Deut. xxxiii, 19), and by modern naturalists *Helix ianthina*. The Hebrew name is derived, according to Gesenius (*Thesaur.* p. 1502), from a root signifying to *unshell*; but according to Hitzig (*Comment.* in Ezek. xxiii, 6), from כָּלַל, *kalal'*, in the sense of *dulled*, *blunted*, as opposed to the brilliant hue of the proper purple. The tint is best explained by the statements of Josephus (*Ant.* iii, 7, 7) and Philo that it was emblematic of the sky, in which case it represents not the light blue of our northern climate, but the deep dark hue of the eastern sky (*Opp.* i, 536). The term adopted by the Sept. is applied by classical writers to a color approaching to black (Hom. *Od.* vi, 231; xxiii, 158; Theoc. *Id.* 10, 28); the flower, whence the name was borrowed, being, as is well known, not the modern *hyacinth*, but of a dusky red color (*ferrugineus*, Virg. *Georg.* iv, 183; *cœlestis luminis hyacinthus*, Colum. ix, 4, 4). The A. V. has rightly described the tint in Esth. i, 6 (margin) as *violet*; the ordinary term *blue* is incorrect; the Lutheran translation is still more incorrect in giving it *gelbe Seide* (yellow silk), and occasionally simply *Seide* (Ezek. xxiii, 6). This color was used in the same way as purple. Princes and nobles (Ezek. xxiii, 6; Ecclus. xl, 4), and the idols of Babylon (Jer. x, 9), were clothed in robes of this tint; the riband and the fringe of the Hebrew dress was ordered to be of this color (Num. xv, 38); it was used in the tapestries of the Persians (Esth. i, 6). The effect of the color is well described in Ezek. xxiii, 12, where

such robes are termed לְבֻשֵׁי מִכְלוֹל, *robes of perfection*, i.e. gorgeous robes. We may remark, in conclusion, that the Sept. treats the term תַּחַשׁ, *tach'ash* (A. V. "badger") as indicative of color, and has translated it ὑακίνθινος, *hyacinthine* (Exod. xxv, 5). See BLUE.

3. SCARLET (CRIMSON, Isa. i, 18; Jer. iv, 30). The terms by which this color is expressed in Hebrew vary: sometimes שָׁנִי, *shani'*, simply is used, as in Gen. xxxviii, 28–30; sometimes תּוֹלַעַת שָׁנִי, *tola'ath shani*, as in Exod. xxv, 4; and sometimes תּוֹלַעַת, *tola'ath*, simply, as in Isa. i, 18. The word כַּרְמִיל, *carmil'* (A. V. "crimson;" 2 Chron. ii, 7, 14; iii, 14) was introduced at a late period, probably from Armenia, to express the same color. The first of these terms (derived from שָׁנָה, *shanah'*, *to shine*) expresses the *brilliancy* of the color; the second, תּוֹלַעַת, *tola'ath*, the *worm*, or grub, whence the dye was procured, and which gave name to the color occasionally without any addition, just as *vermilion* is derived from *vermiculus*. The Sept. generally renders it κόκκινον, occasionally with the addition of such terms as κεκλωσμένον (Exod. xxvi, 1), or διανενησμένον (Exod. xxviii, 8); the Vulgate has it generally *coccinum*, occasionally *coccus bis tinctus* (Exod. xxviii, 8), apparently following the erroneous interpretation of Aquila and Symmachus, who render it δίβαφος, *double-dyed* (Exod. xxv, 4), as though from שָׁנָה, *to repeat*. The process of double-dying was, however, peculiar to the Tyrian purples (Plin. ix, 39). The dye was produced from an insect, somewhat resembling the cochineal, which is found in considerable quantities in Armenia and other Eastern countries. The Arabian name of the insect is *kermez* (whence *crimson*); the Linnæan name is *Coccus ilicis*. It frequents the boughs of a species of *ilex*: on these it lays its eggs in groups, which become covered with a kind of down, so that they present the appearance of vegetable galls or excrescences from the tree itself, and are described as such by Pliny, xvi, 12. The dye is procured from the female grub alone, which, when alive, is about the size of a kernel of a cherry, and of a dark amaranth color, but when dead shrivels up to the size of a grain of wheat, and is covered with a bluish mould (Parrot's *Journey to Ararat*, p. 114). The general character of the color is expressed by the Hebrew term חָמוּץ, *chamuts'* (Isa. lxiii, 1), lit. *sharp*, and hence dazzling (compare the expression χρῶμα ὀξύ), and in the Greek λαμπρά (Luke xxiii, 11), compared with κοκκίνη (Matt. xxvii, 28). The tint produced was *crimson* rather than scarlet. The only natural object to which it is applied in Scripture is the lips, which are compared to a scarlet thread (Cant. iv, 3). Josephus considered it as symbolical of fire (*Ant.* iii, 7, 7; comp. Philo, i, 536). Scarlet threads were selected as distinguishing marks from their brilliancy (Gen. xxxviii, 28; Josh. ii, 18, 21), and hence the color is expressive of what is *excessive* or *glaring* (Isa. i, 18). Scarlet robes were worn by the luxurious (2 Sam. i, 24; Prov. xxxi, 21; Jer. iv, 30; Lam. iv, 5; Rev. xvii, 4; xviii, 12, 16); it was also the appropriate hue of a warrior's dress from its similarity to blood (Nah. ii, 3; comp. Isa. ix, 5), and was especially worn by officers in the Roman army (Plin. xxii, 3; Matt. xxvii, 28). See SCARLET.

The three colors above described, purple, blue, and scarlet, together with white, were employed in the textures used for the curtains of the tabernacle, and for the sacred vestments of the priests. The four were used in combination in the outer curtains, the vail, the entrance curtain (Exod. xxvi, 1, 31, 36), and the gate of the court (Exod. xxvii, 16), as also in the high-priest's ephod, girdle, and breastplate (Exod. xxviii, 5, 6, 8, 15). The first three, to the exclusion of white, were used in the pomegranates about the hem of the high-priest's robe (Exod. xxviii, 33). The loops of the curtains (Exod. xxvi, 4), the lace of the high-priest's breastplate, the robe of the ephod, and the lace on his mitre, were exclusively of blue (Exod. xxviii, 28, 31, 37). Cloths for wrapping the sacred utensils were either blue (Num. iv, 6), scarlet (8), or purple (13). Scarlet thread was specified in connection with the rites of cleansing the leper (Lev. xiv, 4, 6, 51), and of burning the red heifer (Num. xix, 6), apparently for the purpose of binding the hyssop to the cedar wood. The hangings for the court (Exod. xxvii, 9; xxxviii, 9), the coats, mitres, bonnets, and breeches of the priests, were white (Exod. xxxix, 27, 28). The application of these colors to the service of the tabernacle has led writers both in ancient and modern times to attach some symbolical meaning to them (see Philo and Josephus, *ut sup.*). The subject has been followed up with a great variety of interpretations, more or less probable (see Krause, *De colore sacro*, Vit. 1707; Creuzer, *Symbolik*, i, 125 sq.; Bahr, *Symbolik*, i, 335 sq.; Friederich, *Symbol. d. Mos. Stiftshütte*, Lpz. 1841; *Stud. u. Krit.* 1844, ii, 315 sq.). Without entering into a disquisition on these, we will remark that it is unnecessary to assume that the colors were originally selected with such a view; their beauty and costliness is a sufficient explanation of the selection. See CRIMSON.

4. VERMILION (שָׁשַׁר, *shashar'*; Sept. μίλτος; Vulg. *sinopis*). This was a pigment used in fresco-paintings, either for drawing figures of idols on the walls of temples (Ezek. xxiii, 14), for coloring the idols themselves (Wisd. xiii, 14), or for decorating the walls and beams of houses (Jer. xxii, 14). The Greek term μίλτος is applied both to *minium*, red lead, and *rubrica*, red ochre; the Latin *sinopis* describes the best kind of ochre, which came from Sinope. Vermilion was a favorite color among the Assyrians (Ezek. xxiii, 14), as is still attested by the sculptures of Nimroud and Khorsabad (Layard, ii, 303). See VERMILION.

III. *Hebrew Symbolical Significance of Colors.*— Throughout antiquity color occupied an important place in the symbology both of sentiment and of worship. Of the analogies on which these symbolical meanings were founded, some lie on the surface, while others are more recondite. Thus *white* was everywhere the symbol of *purity* and the emblem of *innocence*; hence it was the dress of the high-priest on the day of atonement, his holy dress (Lev. xvi, 4, 32); the angels, as holy (Zech. xiv, 5; Job xv, 15), appear in white clothing (Mark xvi, 5; John xx, 12); and the bride, the Lamb's wife, was arrayed in white, which is explained as emblematical of the δικαιώματα τῶν ἁγίων (Rev. xix, 8). White was also the sign of *festivity* (Eccl. ix, 8; comp. the *albatus* of Horace, *Sat.* ii, 2, 6) and of *triumph* (Zech. vi, 3; Rev. vi, 2; see Wetstein, *N. T.* in loc.). As the light-color (comp. Matt. xvii, 2, etc.) white was also the symbol of *glory* and *majesty* (Dan. vii, 9; comp. Psa. civ, 2; Ezek. ix, 3 sq.; Dan. xii, 6 sq.; Matt. xxviii, 3; John xx, 12; Acts x, 30). As the opposite of white, *black* was the emblem of *mourning*, *affliction*, *calamity* (Jer. xiv, 2; Lam. iv, 8; v, 10; comp. the *atratus* and *toga pulla* of Cicero, *in Vatin.* 13); it was also the sign of *humiliation* (Mal. iii, 14) and the omen of *evil* (Zech. vi, 2; Rev. vi, 5). *Red* indicated, poetically, *bloodshed* and *war* (Nah. ii, 4 [A. V. 3]; Zech. vi, 2; Rev. vi, 4). *Green* was the emblem of *freshness*, *vigor*, and *prosperity* (Psa. xcii, 15; lii, 10; xxxvii, 35). *Blue*, or *hyacinth*, or *cærulean*, was the symbol of *revelation*; it was pre-eminently the celestial color, even among heathen nations (comp. e. g. Jer. ix, 10, of the idols of Babylon, and what Eusebius says, *Præp. Evang.* iii, 11, of the δημιουργός Κνήφ, and the Crishna of the Hindoo mythology); and among the Hebrews it was the Jehovah color, the symbol of the revealed God (comp. Exod. xxiv, 10; Ezek. i, 26). Hence it was the color pre-

dominant in the Mosaic ceremonial; and it was the color prescribed for the ribbon of the fringe in the border of the garment of every Israelite, that as they looked on it they might remember all the commandments of Jehovah (Num. xv, 38, 39). With *purple*, as the dress of kings, were associated ideas of *royalty* and *majesty* (Judg. viii, 26; Esth. viii, 15; Cant. iii, 10; vii, 5; Dan. v, 7, 16, 29; comp. *Odyss.* xix, 225, the *pallium purpureum* of the Jupiter Capitolinus at Rome, the *purpurea vestis* of Phœbus [Ovid, *Metam.* ii, 1, 23], the χλαμύδες πορφύραι of the Dioscuri [Pausan. iv, 27], the πορφυρογέννητος of the Byzantines, etc.). *Crimson* and *scarlet*, from their resemblance to blood (probably), became symbolical of life; hence it was a crimson thread which Rahab was to bind on her window as a sign that she was to be saved alive when Jericho was destroyed (Josh. ii, 18; vi, 25), and it was crimson which the priest was to use as a means of restoring those who had contracted defilement by touching a dead body (Num. xix, 6-22). From its intensity and fixedness this color is also used to symbolize what is indelible or deeply engrained (Isa. i, 18). The colors chiefly used in the Mosaic ritual were white, hyacinth (blue), purple, and crimson. It is a superficial view which concludes that these were used merely from their brilliancy (Braun, *De Vest. Sa. Heb.*; Bähr, *Sym. d. Mos. Cult.*). See further below.

COLORS, Christian Symbolism of. Colors are made use of in religious symbolism among the Jews, and in several branches of the Christian Church. Specific directions were given in the O. T. for the colors to be used in building of the tabernacle and the making of the dress for the Jewish priests. Colors are also introduced in giving moral or spiritual lessons, and in describing scenes in revelation, as in Isa. i, 18, in the description of the Transfiguration, and often in the imagery of the Apocalypse. See article above.

Very early in the history of Christianity the symbolism of colors was introduced in the ritualism and the art of the Church. In the Greek Church this symbolism has been worked out to such a degree of minuteness that little or no discrimination in the use of colors is allowed to the painter. In the Romish Church somewhat more latitude is allowed to the artist. Five colors are recognised as having a theological meaning or expression: White, Red, Green, Violet, and Black.

I. *White* is the most often referred to in the Scriptures. As the union of all the rays of light, it is the symbol of *truth* and *spotless purity*. It is applied to: (1.) *God the Father*, the source and essence of immutable truth. In Daniel (vii, 9) the Ancient of Days has garments white as snow, with his hair like pure wool. The manna in the wilderness, being white, has been considered as the emblem of the Word of God. (2.) *Christ*, at the Transfiguration, appeared in garments "white as the light" (Matt. xvii, 2; Mark ix, 3). As the Great Judge, he will be seated on a great white throne (Rev. xx, 11). In works of art, when Christ appears as the Lord of truth among the doctors of the law, he is represented in white garments. (3.) The *angels* are never represented in the Scriptures as clothed otherwise than in white—as at the sepulchre of Christ (Matt. xxviii, 3), at the Ascension (Acts i, 10). (4.) The *saints* in glory shall walk in white (Rev. iii, 4), shall be arrayed in white (iv, 4; vii, 9; xv, 6, and xix, 8, where the fine linen, clean and white, is the righteousness of the saints), and they shall receive a white stone (ii, 17). (5.) The *priests*, at the consecration of the Temple, were "arrayed in white linen" (2 Chron. v, 12). In the fourth century the priests of the Christian Church wore white garments while performing their offices. In the Romish Church white is yet retained for the alb, the cope, the amice, etc., and in the entire priestly garments on the festivals of the Nativity, Epiphany, Easter, etc. In the Church of England the white surplice of the Romish Church is retained. It is the same as the *alb*, except that the sleeves are broad and full. (6.) The *catechumens* formerly were dressed in white for one week from their baptism, and white is yet usually the dress worn by girls in their confirmation.

II. *Red* is a symbol of fire and of glowing love. It was used in the dress of the Jewish priesthood. It is usually adopted largely in painting Christ performing his miracles or other labors of love, or as he is giving to his disciples the mission to carry into the world the fire of his word (Luke xii, 49). On the famous standard or labarum of Constantine, the monogram of Christ rested on a purple cloth. Bede says that at his time the holy sepulchre was painted white and red. Some *angels* have been painted with red wings (perhaps from the word seraph—plenitude of love). The priestly vestments in the Romish Church are red on Whitsuntide and on days of the martyrs. The Ambrosian rite prescribes red during the consecration of the host, and the Ambrosian and Lyonnese rites during the festival of the Circumcision. The red dress of the cardinals is professedly intended to keep before them constantly the love and passion of the Saviour. The pope wears red on Good Friday. The Greek priests wear red ornaments during funeral services.

The red spoken of above is always scarlet. Crimson red is appointed for certain days in certain rites of the Romish Church.

III. *Green*, from its analogy to the vegetable world, indicates life and hope, especially in the future life and in the coming of our Lord. The perpetual youth of angels is often indicated by painting them in garments of green. The saints, and especially John the Evangelist, were often represented in green by painters and sculptors (who often colored their works). The tree of life in Paradise is painted green. An old tradition has it that a twig of the tree of life was transplanted, and produced the tree from which the cross of Christ was made! John the Baptist and the Virgin Mary are often represented in mantles of green. Branches of cypress, laurel, and other evergreens are often placed in the coffins or over the graves of the dead, as emblems of the hope in a future life. The Romish Church directs the priests to wear green from the Epiphany to Sexagesima Sunday, and from the third after Easter to Advent. The Ambrosian rite orders the cloth that covers the host to be green.

IV. *Violet* is considered the color of penitence and sorrow. The Romish Church orders it to be worn during all times of penance. In painting, this color is often applied to John the Baptist, who preached repentance; to the Virgin Mary, as the mother of grief; and to the angels, who are sent to call men to repentance.

V. *Blue* is forbidden by the Romish Church, but it is sometimes used as the color peculiarly appropriate to the Virgin Mary.

VI. *Black* is the universal representative of sorrow, destruction, and death, and is considered only appropriate on mourning occasions. It was also appointed in one of the later reforms of the Benedictine order of monks as the dress of that order. The students of the universities of Oxford and Cambridge thus were given the black gown, which they wear yet. This gown was adopted by the Reformed Church of England as the dress of ministers, who were all students of the universities, and thus it passed over to the Protestant Episcopal Church of America, and, further, gave the color of clerical dress to all Protestant churches.—Kreuser, *Bilderbuch* (Paderborn, 1863); Martigny, *Dictionnaire des Antiquités Chrétiennes* (Paris, 1865); Palmer, *Antiquities of the English Ritual; Pariser Messbuch* (1766); Jamieson, *Sacred and Legendary Art*, i, 35 sq.

Colos'sæ (Κολοσσαί, Col. i, 2; but the preponderance of MS. authority is in favor of Κολασσαί, Co-

lassæ, a form used by the Byzantine writers, and which perhaps represents the provincial mode of pronouncing the name. On coins and inscriptions [see Eckhel, *Doct. Num.* I, iii, 147], and in classical writers [see Valcken. *ad Herod.* vii, 30], we find Κολοσσαί), a city of Phrygia Pacatiana, in the upper part of the basin of the Mæander, on one of its affluents named the Lycus. Hierapolis and Laodicea were in its immediate neighborhood (Col. ii, 1; iv, 13, 15, 16; see Rev. i, 11; iii, 14). Colossæ fell as these other two cities rose in importance. At a later date they were all overthrown by an earthquake. Herodotus (vii, 30) and Xenophon (*Anab.* i, 2, 6) speak of it as a city of considerable consequence (comp. Pliny, v, 29). Strabo (xii, 576) describes it as only a πόλισμα, not a πόλις; yet elsewhere (p. 578) he implies that it had some mercantile importance; and Pliny, in Paul's time, describes it (v, 41) as one of the "celeberrima oppida" of its district. Colossæ was situated close to the great road which led from Ephesus to the Euphrates. Hence our impulse would be to conclude that Paul passed this way, and founded or confirmed the Colossian Church on his third missionary journey (Acts xviii, 23; xix, 1). He might also have easily visited Colossæ during the prolonged stay at Ephesus, which immediately followed. The most competent commentators, however, agree in thinking that Col. ii, 1, proves that Paul had never been there when the epistle was written (but see the *Stud. u. Krit.* 1829, iii, 612 sq.). See PAUL. Theodoret's argument that he must have visited Colossæ on the journey just referred to, because he is said to have gone through the whole region of Phrygia, may be proved fallacious from geographical considerations; Colossæ, though ethnologically in Phrygia (Herod. *l. c.*; Xen. *l. c.*), was at this period politically in the province of Asia (see Rev. l. c.). That the apostle hoped to visit the place on being delivered from his Roman imprisonment is clear from Philemon 22 (compare Phil. ii, 24). Philemon and his slave Onesimus were dwellers in Colossæ. So also were Archippus and Epaphras. From Col. i, 7; iv, 12, it has been naturally concluded that the latter Christian was the founder of the Colossian Church (see Alford's *Prolegomena* to *Gr. Test.* iii, 35). See EPAPHRAS. The worship of angels mentioned by the apostle (Col. ii, 18) curiously reappears in Christian times in connection with one of the topographical features of the place. A church in honor of the archangel Michael was erected at the entrance of a chasm in consequence of a legend connected with an inundation (Hartley's *Researches in Greece*, p. 52); and there is good reason for identifying this chasm with one which is mentioned by Herodotus. This kind of superstition is mentioned by Theodoret as subsisting in his time; also by the Byzantine writer Nicetas Choniates, who was a native of this place, and who says that Colossæ and Chonæ were the same (*Chron.* p. 115). The probability is that under the later emperors, Colossæ, being in a ruinous state, made way for a more modern town, *Chonæ* (Χῶναι, so Theophylact. *ad Col.* ii, 1), situated near it. The neighborhood (visited by Pococke) was explored by Mr. Arundel (*Seven Churches*, p. 158; *Asia Minor*, ii, 160); but Mr. Hamilton was the first to determine the actual site of the ancient city, which appears to be at some little distance from the modern village of Chonas (*Researches in Asia Minor*, i, 508). The huge range of Mount Cadmus rises immediately behind the village, close to which there is in the mountain an immense perpendicular chasm, affording an outlet for a wide mountain torrent. The ruins of an old castle stand on the summit of the rock forming the left side of this chasm. There are some traces of ruins and fragments of stone in the neighborhood, but barely more than sufficient to attest the existence of an ancient site (Pococke, *East*, iii, 114; Schubert, *Reise*, i, 282; see generally Hofmann, *Introd. in lection. ep. ad Colos.* Lips. 1749; Cellarii *Notit.* ii, 152 sq.; Mannert, *Geogr.* VI, i, 127 sq.; Smith, *Dict. of Class. Geogr.* s. v.). See COLOSSIANS (EPISTLE TO THE).

Colossians, EPISTLE TO THE, the seventh of the Pauline epistles in the New Test. (see Davidson's *Introd. to the N. T.* ii, 394 sq.). See EPISTLE.

I. *Authorship.*—That this epistle is the genuine production of the apostle Paul is proved by the most satisfactory evidence, and has never, indeed, been seriously called in question. The external testimonies (Just. M. *Trypho*, p. 311 b; Theophil. *ad Autol.* ii, p. 100, ed. Col. 1686; Irenæus, *Haer.* iii, 14, 1; Clem. Alex. *Strom.* i, p. 325; iv, p. 588, al., ed. Potter; Tertull. *de Præscr.* ch. 7; *de Resurr.* ch. 23; Origen, *contra Cels.* v, 8) are explicit, and the internal arguments, founded on the style, balance of sentences, positions of adverbs, uses of the relative pronoun, participial anacolutha, unusually strong and well defined. It is not right to suppress the fact that Mayerhoff (*Der Brief an die Kol.* Berl. 1838) and Baur (*Der Apostel Paulus*, p. 417) have deliberately rejected this epistle as claiming to be a production of the apostle Paul. The first of these critics, however, has been briefly, but, as it would seem, *completely* answered by Meyer (*Komment.* p. 7); and to the second, in his subjective and anti-historical attempt to make individual writings of the N. T. mere theosophistic productions of a later Gnosticism, the intelligent and critical reader will naturally yield but little credence (see Räbiger, *De Christologia Paulina*, etc. Vratisl. 1852; Klöpper, *De origine Epp. ad Ephesios et Collossenses*, Gryph. 1853). It is, indeed, remarkable that the strongly-marked peculiarity of style, the nerve and force of the arguments, and the originality that appears in every paragraph, should not have made both these writers pause in their ill-considered attack on this epistle (see Tregelles, in Horne's *Introd.* new edit. vol. iii).

II. It is less certain, however, *when* and *where* it was composed. The common opinion is that Paul wrote it at Rome during his imprisonment in that city (Acts xxviii, 16, 30). Erasmus, followed by others, supposes that Ephesus was the place at which it was composed; but this suggestion is obviously untenable from its incompatibility with the allusions contained in the epistle itself to the state of trouble and imprisonment in which the apostle was whilst composing it (i, 24; iv, 10, 18). In Germany, the opinions of theologians have been divided of late years between the common hypothesis and one proposed by Schulz in the *Theologische Studien und Kritiken* for 1829 (p. 612 sq.), viz., that this epistle, with those to the Ephesians and Philemon, was written during the apostle's (two years') imprisonment at Cæsarea previous to his being sent to Rome. This opinion has been adopted and defended by Schott, Böttger, and Wiggers, whilst it has been opposed by Neander, Steiger, Harless, Rückert, Credner, and others. In a more recent number of the same periodical, however, the whole question has been subjected to a new investigation by Dr. Wiggers, who comes to the conclusion that, of the facts above appealed to, none can be regarded as *decisive* for either hypothesis (*Stud. u. Krit.* 1841, p. 436). The above opinion that this epistle and those to the Ephesians and to Philemon were written during the apostle's imprisonment at Cæsarea (Acts xxi, 27–xxvi, 32), has been recently advocated by several writers of ability, and stated with such cogency and clearness by Meyer (*Einleit. z. Ephes.* p. 15, sq.), as to deserve some consideration. It will be found, however, to rest on ingeniously-urged plausibilities; whereas, to go no further into the present epistle, the notices of the apostle's imprisonment in chap. iv, 3, 4, 11, certainly seem historically inconsistent with the nature of the imprisonment at Cæsarea. The permission of Felix (Acts xxiv, 23) can scarcely be strained into any degree of liberty to teach or preach the Gospel, while the facts recorded of Paul's imprisonment at Rome (Acts xxviii, 23, 31)

are such as to harmonize admirably with the freedom in this respect which our present epistle represents to have been accorded both to the apostle and his companions (see chap. iv, 11, and comp. De Wette, *Einleit. z. Coloss.* p. 12, 13; Wieseler, *Chronol.* p. 420). Finally, the foundation for this opinion is taken away by the fact that the imprisonment of Paul at Cæsarea was not so long as commonly supposed. See PAUL. It is most likely, therefore, that it was written during Paul's first imprisonment at Rome, probably in the spring of A.D. 57, and apparently soon after the Epistle to the Ephesians, with which it contains numerous and striking coincidences. In support of this date the following facts may be adduced: Timothy was with Paul at the time (chap. i, 1; comp. Phil. ii, 19); Epaphroditus (Epaphras) had lately come from Asia Minor (i, 4, 7, 9; comp. Phil. ii, 25; iv, 18), and was now with Paul (iv, 2); Paul was in prison, and had been preaching in his confinement (iv, 3, 18; see Acts xxviii, 30, 31); various friends were at this time with him (iv, 7-14; these had therefore had time to gather about him, and it was not a season of danger); Tychicus (on his second journey) and Onesimus carried the letter (iv, 7, 8; and subscription; comp. Eph. vi, 21; Philem. 12). From this last circumstance, it would appear that the epistle could not have been written very early in his imprisonment, as the letter to Philemon (doubtless written not long after) speaks confidently of a speedy release (see Conybeare and Howson's *Life and Epistles of St. Paul*, ii, 384).

"The striking similarity between many portions of this epistle and of that to the Ephesians has given rise to much speculation, both as to the reason of this studied similarity, and as to the priority of order in respect to composition. These points cannot here be discussed at length, but must be somewhat briefly dismissed with the simple expression of an opinion that the similarity may reasonably be accounted for, (1) by the proximity in time at which the two epistles were written; (2) by the high probability that in two cities of Asia, within a moderate distance from one another, there would be many doctrinal prejudices, and many social relations, that would call forth and need precisely the same language of warning and exhortation. The priority in composition must remain a matter for a reasonable difference of opinion." See EPHESIANS and PHILEMON (*Epistles to*).

III. *Design.*—The Epistle to the Colossians was written, apparently, in consequence of information received by Paul through Epaphras concerning the internal state of their church (i, 6 8). Whether the apostle had ever himself before this time visited Colossæ is matter of uncertainty and dispute. From chap. ii, 1, where he says, "I would that ye knew what great conflict I have for you and for them at Laodicea, and for as many as have not seen my face in the flesh," etc., it has by some been very confidently concluded that he had not. It has been urged, however, that when, in ver. 5, the apostle says, "though I am absent in the flesh, yet am I with you in the spirit," etc., his language is strongly indicative of his having formerly been amongst the Colossians, for the ἄπειμι is used properly only of such absence as arises from the person's *having gone away from* the place of which his absence is predicated. In support of the same view have been adduced Paul's having twice visited and gone through Phrygia (Acts xvi, 6; xviii, 23), in which Colossæ was a chief city; his familiar acquaintance with so many of the Colossian Christians, Epaphras, Archippus, Philemon (who was one of his own converts, Phil. 13, 19), and Apphia, probably the wife of Philemon; his apparent acquaintance with Onesimus, the slave of Philemon, so that he recognised him again at Rome; the cordiality of friendship and interest subsisting between the apostle and the Colossians as a body (Col. i, 24, 25; ii, 1; iv, 7, etc.); the apostle's familiar acquaintance with their state and relations (i, 6; ii, 6, 7, etc.); and their knowledge of so many of his companions, and especially of Timothy, whose name the apostle associates with his own at the commencement of the epistle, a circumstance which is worthy of consideration from this, that Timothy was the companion of Paul during his first tour through Phrygia, when probably the Gospel was first preached at Colossæ. Of these considerations it must be allowed that the cumulative force is very strong in favor of the opinion that the Christians at Colossæ had been privileged to enjoy the personal ministrations of Paul. At the same time, if the Colossians and Laodiceans are not to be included among those of whom Paul says they had not seen his face, it seems unaccountable that in writing to the Colossians he should have referred to this class at all. If, moreover, he had visited the Colossians, was it not strange that he should have no deeper feeling towards them than he had for the multitudes of Christians scattered over the world whose faces he had never seen? In fine, as it is quite *possible* that Paul may have been twice in Phrygia without being once in Colossæ, is it not easy also to account for his interest in the church at Colossæ, his knowledge of their affairs, and his acquaintance with individuals among them, by supposing that members of that church had frequently visited him in different places, though he had never visited Colossæ? See LAODICEANS (*Epistle to*).

A great part of this epistle is directed against certain false teachers who had crept into the church at Colossæ (see Rheinwald, *De pseudo doctoribus Colossensibus*, Bonnæ, 1834). To what class these teachers belonged has not been fully determined. Heinrichs (*Nov. Test. Koppian.* VII, ii, 156) contends that they were disciples of John the Baptist. Michaelis and Storr, with more show of reason, conclude that they were Essenes. Hug (*Introd.* ii, 449) traces their system to the Magian philosophy, of which the outlines are furnished by Iamblichus. But the best opinion seems to be that of Neander (*Planting and Training*, i, 374 sq.), by whom they are represented as a party of speculatists who endeavored to combine the doctrines of Oriental theosophy and asceticism with Christianity, and promised thereby to their disciples a deeper insight into the spiritual world, and a fuller approximation to heavenly purity and intelligence than simple Christianity could yield. (See below.) Against this party the apostle argues by reminding the Colossians that in Jesus Christ, as set before them in the Gospel, they had all that they required; that he was the image of the invisible God; that he was before all things; that by him all things consist; that they were complete in him, and that he would present them to God holy, unblamable, and unreprovable, provided they continued steadfast in the faith. He then shows that the prescriptions of a mere carnal asceticism are not worthy of being submitted to by Christians, and concludes by directing their attention to the elevated principles which should regulate the conscience and conduct of such, and the duties of social and domestic life to which these would prompt. (See *Jour. Sac. Lit.* vol. iii.) See PHILOSOPHY.

What these dangerous tendencies therefore were that had appeared in the doctrine and practice of the Colossian Church we discover more particularly from three specifications: 1. A pretentious philosophy, which affected an esoteric knowledge, received through tradition, and which, abandoning Christ the Head, indulged in unhallowed speculations on the number and nature of the spiritual beings with which the invisible world is peopled (Col. ii, 8, 18). 2. The observance, if not the asserted obligation (for this does not appear), of Jewish ordinances (Col. ii, 16, 20-22). 3. The practice of ascetic regulations (Col. ii, 23). A question here at once arises, Were these various errors found united in the same party or individual? At first sight they seem mutually to exclude each other. The phar-

isaic Judaizers exhibited no proneness either to a speculative gnosis or to asceticism; the Gnostic ascetics, on the other hand, were usually opposed to a rigid ceremonialism. It is so improbable, however, that, in a small community like that of Colossæ, three distinct parties should have existed, that we are driven to the conclusion that the corrupt tendencies in question did really exist in combination in the same persons; and the difficulty will perhaps be alleviated if we bear in mind that in the apostolic age two classes of Judaizing teachers, equally opposed to the simplicity of the apostolic message, though in different ways, busied themselves in sowing tares among the wheat in the visible Church. The former consisted of the rigid formalists, chiefly Pharisees, who occupy so prominent a place in the history of the Acts and in several of Paul's epistles, and who contended for the continued obligation of the law of Moses upon Gentile converts; the latter were speculative adherents of the Alexandrian school, whose principle it was to subordinate the letter to the spirit, or rather to treat the former as a mere shell, which the initiated were at liberty to cast away as worthless, or intended only for the vulgar. With this false spiritualism was usually combined an element of Oriental theosophy, with its doctrine of the essential evil of matter, and the ascetic practices by which it was supposed that the soul is to be emancipated from the material thraldom under which it at present labors. To angelology, or the framing of angelic genealogies, the Jews in general of that age were notoriously addicted; in the pastoral epistles (see 1 Tim. i, 4) we again meet this idle form of speculation. That persons imbued with these various notions should, on becoming Christians, attempt an amalgamation of them with their new faith is but natural; and the ill-assorted union seems to have given birth to the Gnosticism of a subsequent age, with its monstrous tenets, the product of an unbridled imagination. Teachers then, or perhaps a single teacher (Col. ii, 16), of this cast of Judaism had effected an entrance into the Colossian Church, and seems to have there experienced a favorable reception. In a Gentile community like this, pharisaic Judaism could not so easily have gained a footing; but the mixture of mystical speculation and ascetic discipline, which distinguished the section of the Alexandrian school alluded to, was just adapted to attract the unstable, especially in Phrygia, from time immemorial the land of mystic rites, such as those connected with the worship of Cybele, and of magical superstition. From this congenial soil, in a subsequent age, Montanism sprang; and, as Neander remarks (*Apostelgeschichte*, i, 442), it is remarkable that in the 4th century the Council of Laodicea was compelled to prohibit a species of angel-worship, which appears to have maintained its ground in these regions (Can. 35). We must not, however, suppose that these tendencies had worked themselves out into a distinct system, or had brought forth the bitter practical fruits which were their natural consequence, and which, at a later period, distinguished the heresiarchs alluded to in the pastoral epistles, and the followers of Cerinthus. The corrupt teaching was as yet in its bud. The apostle therefore recommends no harsh measures, such as excommunication: he treats the case as one rather of ignorance and inexperience; as that of erring but sincere Christians, not of active opponents; and seeks by gentle persuasion to win them back to their allegiance to Christ. See GNOSTICISM.

IV. *Contents.*—Like the majority of Paul's epistles, that to the Colossians consists of two main divisions, one of which contains the doctrinal, the other the practical matter.

After his usual salutation (chap. i, 1-2), the apostle returns thanks to God for the faith of the Colossians, the spirit of love they had shown, and the progress which the Gospel had made among them as preached by Epaphras (i, 3-8). This leads him to pray without ceasing that they may be fruitful in good works, and especially thankful to the Father, who gave them an inheritance with his saints, and translated them into the kingdom of his Son—*his Son, the image of the invisible God*, the first-born before every creature, the *Creator* of all things earthly and heavenly, the Head of the Church, He in whom all things subsist, and by whom all things have been reconciled to the eternal Father (i, 9-20). This reconciliation, the apostle reminds them, was exemplified in their own cases; they were once alienated, but now so reconciled as to be presented holy and blameless before God, if only they continued firm in the faith, and were not moved from the hope of which the Gospel was the source and origin (i, 21-24). Of this Gospel the apostle declares himself the minister; the mystery of salvation was that for which he toiled and for which he suffered (i, 24-29). Nor were his sufferings only for the Church at large, but also for them and others whom he had not personally visited, even that they might come to the *full knowledge of Christ*, and might not fall victims to plausible sophistries; they were to walk in Christ and to be built on him (ii, 1-7). Here the apostle brings in the particular theme of the epistle. Especially were the Colossians to be careful that no philosophy was to lead them from Him in whom dwelt all the fulness of the Godhead, who was *the Head of all spiritual powers*, and who had quickened them, forgiven them, and in his death had triumphed over all the hosts of darkness (ii, 8, 15). Surely with such spiritual privileges they were not to be judged in the matter of mere ceremonial observances or beguiled into creature-worship. *Christ was the head of the body;* if they were truly united to him, what need was there of bodily austerities? (ii, 16-23.)

In the latter half of the epistle the apostle enforces the practical duties flowing from these truths. The Colossians were, then, to mind things above—spiritual things, not carnal ordinances, for their life was hidden *with Christ* (iii, 1-4): they were to mortify their members and the evil principles in which they once walked; the old man was to be put off, and the new man put on, in which all are one *in Christ* (iii, 5-12). Furthermore, they were to give heed to special duties; they were to be forgiving and loving, as was Christ. In the consciousness of his abiding word were they to sing; in his name were they to be thankful (iii, 13-17). Wives and husbands, children and parents, were all to perform their duties; servants were to be faithful, masters to be just (iii, 18-iv, 1).

In the last chapter the apostle gives further special precepts, strikingly similar to those given to his Ephesian converts. They were to pray for the apostle, and for his success in preaching the Gospel; they were to walk circumspectly, and to be ready to give a seasonable answer to all who questioned them (iv, 2-7). Tychicus, the bearer of the letter, and Onesimus would tell them all the state of the apostle (iv, 7-9): Aristarchus and others sent them friendly greetings (iv, 10-14). With an injunction to interchange this letter with that sent to the neighboring church of Laodicea (iv, 16), a special message to Archippus (iv, 17), and an autograph salutation, this short but striking epistle comes to its close. See EPISTLE.

V. *Commentaries.*—The following are expressly on this Epistle (including, in some instances, one or more of the other Pauline letters), the most important being designated by an asterisk (*) prefixed: Jerome, *Comment.* (in *Opp.* [*Suppos.*] ii); Chrysostom, *Hom.* (in *Opp.* ii, 368); Zuingle, *Annotationes* (in *Opp.* iv, 512); Melancthon, *Enarrationes* (Wittenb. 1559, 4to); Zanchius, *Comment.* (in *Opp.* vi); Musculus, *Commentarius* (Basil. 1565, 1578, 1595, fol.); Aretius, *Commentarii* (Morg. 1580, 8vo); Olevianus, *Notæ* (Gen. 1580, 8vo); Grynæus, *Explicatio* (Basil. 1585, 8vo); Rollock, *Commentarius* (Edinb. 1600, 8vo; Genev. 1602); also *Lectures* (Lond. 1603, 4to); Cartwright, *Commentary* (Lond.

1612, 4to); *Byfield, *Exposition* (Lond. 1615, fol.; also 1627, 1649); Elton, *Exposition* (Lond. 1615. 4to; 1620, 1631, fol.); Quiros, *Commentarius* (in *Disput.*, Lugd. B. 1623); Crellius, *Commentarius* (in *Opp.* i, 523); Cocceius, *In Ep. ad Col.* (in *Opp.* xii, 218); Alting, *Analysis* (in *Opp.* iv); *Davenant, *Expositio* (Cantab. 1627, fol.; also 1630, 1639, fol.; Genev. 1655, 4to; in English, London, 1831, 2 vols. 8vo); Calixtus, *Expositio* (Brunsw. 1654, 4to); Daillé, *Sermons* (in French, Gen. 1662, 2d ed. 3 vols. 8vo; in English, Lond. 1672, fol.); and *Exposition* (Lond. 1841, 8vo); Fergusson, *Commentarius* (Lond. 1658, 8vo); Martin, *Analysis* (in *Opp.* iv, 389); *D'Outrein, *Sendbrief*, etc. (Amst. 1695, 4to; in German, Frankfort, 1696, 4to); Schmid, *Commentarius* (Hamb. 1696, 4to; also 1704); Suicer, *Commentarius* (Tiguri, 1699, 4to); Streso, *Meditationes* (Amst. 1708, 8vo); Gleich, *Predigten* (Dresden, 1717, 4to); Lutken, *Predigten* (Gardel. 1718, 1737, 4to); Hazevoet, *Verklaering* (Lugd. B. 1720, 4to); Van Til, *Commentarius* (Amst. 1726, 4to); Roell, *Exegesis* (Traj. 1731, 4to); Peirce, *Paraphrase* (London, 1733, 4to); Koning, *Openlegging* (L. B. 1739, 4to); Storr, *Interpretatio* (in his *Opusc. Acad.* ii, 120-241); Boysen, *Erklärung* (Quedlb. 1766-1781); Jones, *Version* (London, 1820, 12mo); Junker, *Commentar* (Mannheim, 1828, 8vo); Böhmer, *Auslegung* (8vo, Berl. 1829; Breslau, 1835); Flatt, *Erklär.* ed. by Kling (Tüb. 1829, 8vo); *Bähr, *Commentar* (Basel, 1833, 8vo); Watson, *Discourses* (Lond. 1834, 8vo; also 1838); Steiger, *Uebers. u. Erklär.* (Erlang. 1835, 8vo); Schleiermacher, *Predigten* (Berlin, 1835, 2 vols. 8vo); Lange, *Homilien* (Barmen, 1839); Decker, *Bearbeitung* (Hamb. 1848, 8vo); Hüther, *Commentar* (Hamb. 1841, 2 vols. 8vo); *De Wette, *Erklärung* (Lpz. 1843, 1847, 8vo); Wilson, *Lectures* (London, 1845, 8vo; also 1846); Baumgarten-Crusius, *Commentar* (Jena, 1847, 8vo); Meyer, *Handbuch* (Gött. 1848, 8vo, pt. ix); Kähler, *Auslegung* (Eisleb. 1853, 8vo); Bisping, *Erklärung* (Münst. 1855, 8vo); *Eadie, *Commentary* (Glasg. 1856, 8vo); Dalmer, *Auslegung* (Gotha, 1858, 8vo); *Ellicott, *Commentary* (London, 1858, 1861, 8vo; Andover, 1865, 8vo); Gisborne, *Exposition* (Lond. 1860, 12mo); Messmer, *Erklärung* (Brixen, 1863, 8vo); Passavant, *Auslegung* (Basel, 1865, 8vo); *Bleek, *Vorlesungen* (Berlin, 1865, 8vo). See COMMENTARY.

Colt (prop. עַיִר, *a'yir*, a young ass, Judg. x, 4; xiii, 14; Job xi, 12; Zech. ix, 9; πῶλος, Matt. xxi, 2, etc.), spoken of the young of the horse, ass, or camel. See FOAL.

Colton, CALVIN, D.D., was born in Longmeadow, Mass., and graduated at Yale College in 1812. He studied divinity at Andover, and was ordained a Presbyterian clergyman in 1815, when he settled at Batavia, N. Y., where he preached until 1826, at which time he lost his voice, and thenceforth devoted his time to writing for periodicals. He travelled in Europe for several years, returning to New York in 1835, when he took orders in the Protestant Episcopal Church. After this he turned his attention to political subjects, and from 1838 to 1842 wrote many pamphlets. He held for some years before his death the chair of Political Economy in Trinity College, Hartford. Among his theological writings are *The Genius and Mission of the Protestant Episcopal Church in the United States* (12mo); *The Religious State of the Country* (12mo). He died at Savannah, March 20, 1857.

Columba was the first of the numerous Irish missionaries of the sixth and seventh centuries. He was born about A.D. 520, in Donegal, Ireland, of the royal family. His real name was Colum, but, from his dove-like appearance in childhood, it was Latinized to Columba (dove). Among his own countrymen he was called *Colum na Cielle*, or *Columbkille*, Colum of the Church. His mother, Ethena, was of the royal house of Leinster. Before Columba went abroad on his mission he had travelled over Leinster, Connaught, Meath, and other parts, preaching and calling upon all immediately to repent and believe in Christ. The Venerable Bede (*Eccl. Hist.* lib. iii) says, "Before Columb came into North Britain he founded a noble monastery in Ireland, which, in the language of the Scots [Irish], was called Dairmach, that is, the 'Field of Oaks.'" Archbishop Usher, who studied the life of this saint carefully, says "that, directly or indirectly, Columba founded nearly one hundred monasteries in Ireland." The bishop may have meant simply Christian schools; for, like his prototype St. Patrick, wherever he had built a church he founded a school. With these early Irish Christians religion and learning were twin sisters. But Columba is better known in history as "The Apostle of the Picts, or the Western Isles." Passing over on a religious visit to the Irish colony in Albyn or North Britain, the chieftains of which were his own relatives, for the first time he was brought into contact with the Picts, who were then pagans. From that moment he resolved to devote his life to their evangelization. For this purpose, about A.D. 563, Columba formed a company of twelve, and embarked for Druids' Island, situated west of Mull, in the country afterwards called Scotland. Here he founded the monastery, or, more properly, the great theological school known on the Continent during the Dark Ages as "The Western Star of literature and religion." Its government was wholly within itself, presbyterian and republican; the abbot or head invariably to be a presbyter, and to be chosen only by the inmates. Having built his huts, and left some of his men to till the ground for their support, with a few attendants he set out to preach to the Picts and the Highlanders on the north side of the Grampian Range. At first he was sternly resisted by the chieftain and his Druidic priest. At last, however, the king not only embraced Christianity, but became active in spreading it among his people. Columba and his companions afterwards set sail for the Western and Orkney Islands, and founded several churches and schools upon them. Having thus established his mission beyond the Grampian Hills, he returned to Iona and Albyn. For several years his field of labor was very large, extending from the Western Islands to the Lowland Picts, to the Irish colony in Argyleshire, to the Anglo-Saxons in Northumberland, and occasionally to Ireland. Although never episcopally ordained, he thus became the greatest missionary bishop of his day. His last visit to Ireland was one of peace, to adjust a political difference between two princes. On reaching Iona, "the isle of his heart," as he usually called it, he was very feeble. Finding that he was drawing near the close of life, he was taken to a little eminence from which he could see the holy settlement, and from which he invoked God's blessing upon it. Having returned, he began his favorite employment of transcribing the Scriptures. That night, being led to the altar, he fell on his knees and began to pray; soon, however, he was discovered leaning against the railing in a dying state. The brotherhood, now gathering around him with their lighted torches, began to weep and to crave his last blessing. Recovering for a moment, and feebly opening his eyes and smiling on all around, he attempted to raise his hand to pronounce the blessing, but it immediately fell. He then sank down in death, and breathed his last, in the 78th year of his age.

Columba was no ordinary man. In person he is said to have been very comely—beautiful even to old age. He was never idle. When not engaged in study, prayer, or missionary duty, he employed himself in transcribing the Holy Scriptures. When travelling he was always seeking for opportunities to do good. If he met a child, he gave it his blessing; if an adult, he inquired in regard to his soul. On entering a house, he invoked God's blessing upon it; and often, when reaching the threshing-floor, he would request all to stop

work till they had thanked God, the giver of bread. His early biographers say that he was a powerful preacher, speaking the Irish and Latin with equal ease, and both with great fluency. His voice was tender, tremulous, musical, and sufficiently strong to be heard at a great distance. His soul was in his preaching, and was constantly manifesting itself through his words, tones, and gestures. He was a man of great prayer; the spirit of devotion seemed to have been the atmosphere in which he lived. If he entered a boat, mounted a horse, administered medicine, or parted with a friend, in all these he acknowledged God, and asked his protection. He was not a Romanist—Romanism proper had not reached Ireland in his day. He enjoined on all his disciples to receive nothing as religious truth that was not sustained by proof drawn from the Holy Scriptures (*Prolatis sacræ Scripturæ testimoniis*).—Adamnan, *Life of Columba;* Bede, *Eccl. Hist.* iii, 4; Moore, *Hist. of Ireland*, often; *Pict. Hist. of England*, i, 277; Montalembert, *Monks of the West*, vol. iii; Todd, *Ancient Irish Church;* Smith, *Religion of Ancient Britain*, p. 256; McLear, *Christian Missions in the Middle Ages*, Lond. 1863; *Princeton Rev.* Jan. 1867, p. 5.

Columbanus, a missionary of the sixth century, was born in Leinster, Ireland, about A.D. 543, and descended from a noble family of that province. In early life, from talents, position, and property, the world opened to him with unusual attractions, but he decided to enter the monastery of Banchor, in Ulster, then giving instruction to about one thousand students. Having formed a company of missionaries, Columbanus set out for France, and settled at the foot of the Vosges Mountains, among the wildest, poorest, and most uncivilized of all the Franks. Here he built huts. The daily routine of the fraternity was, in their cabins, reading, praying, and transcribing the Scriptures and other books; in the field, cultivating the ground for their sustenance and to give to the poor; and when abroad, visiting the people, and inviting them to hear the Gospel. Their establishment, although generally called a monastery, was far more like one of our modern missionary stations. After a few years another was commenced at Fontaines—"The Springs"—which soon became a place of general resort, and which greatly enlarged their sphere of usefulness. In these places they continued for about twenty years, exerting the most benign influence on all the surrounding country; and through the wives and daughters of the semi-barbarous chieftains, Christianizing its political institutions. "The common people had followed these missionaries gladly; but the keen rebukes of Columbanus had long chafed the most of the ruling classes. At a royal festival a glass of wine was presented to him, which he dashed on the floor because it had 'been polluted by the touch of an adulterer'" (Godwin's *Ancient Gaul*, p. 338). At another time four illegitimate children of Theuderik, or Thierry, the king, were placed before him to receive his blessing, which he refused, and pronounced them to be the offspring of sin. Upon this the famous Brunehilda vowed his destruction. When the soldiers came to disperse his establishment, he met them with intrepidity. But the monastery was broken up. The brotherhood now rallied around him, and were willing to die with him; but he advised them to go to Germany.

Columbanus went to Italy, where new troubles awaited him. Holding with the Irish Church in regard to the Three Chapters (q. v.) and the time of keeping Easter (q. v.), he learned that the Roman Church had condemned these views under severe penalties. He found, however, a protector in Theodolinda, the pious queen of the Lombards, who agreed with him about the Three Chapters. He had everywhere avowed his principles, and even addressed a letter to pope Boniface, in which he charged him and the General Council with departing from the faith of the apostles. He reminded him that in Rome and Italy there had been many disputes and dissensions, while in Ireland "there never had been a heretic or schismatic but that from the beginning they had held without wavering (*inconcussa*) the true catholic faith." Soon afterwards he retired to Bobbio, in the Apennines, where he founded his last monastery, and died prematurely about A.D. 615.

Columbanus was one of those men who cannot pass easily through this world. The subjects of his rebukes were generally shining marks—kings, queens, dukes, popes, and others in high places. By nature he was a poet; and the fragments of Irish poetry left by him are said by competent judges to have been imitated in Macpherson's *Ossian.* He has been almost overlooked in English literature, while the authors of the *Literary History of France* are even extravagant in his praise. He left a treatise on Penitence, from which it is evident that communion in both kinds was allowed in the Irish Church in his day. Of the works written by Columbanus are still extant: *De octo vitiis principalibus, Pœnitentiale, Instructiones de officiis Christiani*, and some letters and poems. They have been published by Fleming (Louvain, 1607), and in Gallandius, *Bibl. veterum Patr.* tom. xii. Columbanus's monastic rule has been published in Holsten-Brockie, *Codex Regul.* i, 166 sq. Biographies of Columbanus were written by his companion Jonas and by the monk Walafrid Strabo, both of which are given by Mabillon, *Acta SS. Ord. S. Ben.* i, sec. 2.—See Wetzer u. Welte, *Kirchen-Lex.* ii, 700; Herzog, *Real-Encyklop.* ii, 789; Hefele, *Gesch. der Einführ. des Christ. in Süddeutsch.* p. 262–280; Knottenbelt, *Disp. de Columbano* (Leyd. 1859); *Histoire Litt. de la France*, iii, 279–505; Usher, vi, 281; *Lives of Illust. Men of Ireland*, i, 125 (Dublin, 1838); Moore's *Hist. of Ireland*, p. 136 (Philadelphia); Neander, *Light in Dark Places*, p. 187.

Column (Lat. *columna*), a pillar to support a roof or other part of a building. It is more usually applied to ancient architecture, the columns of Gothic buildings being usually termed *pillars.* Still, this distinction of terms is not universally observed. A column generally has a base, shaft, and capital. The proportions vary with the style of architecture, and the size and purpose of the building. It was frequently merely an architectural ornament, and was used in all cultivated ages. Those employed by the ancient Egyptians, Greeks, and Persians may be taken as the best and most classical examples of antiquity. See PILLAR.

1. Egyptian columns may be classed in eight *orders*, as in the accompanying wood-cut, where, being drawn to the same scale, their respective dimensions are shown. For, though columns of the same order vary very much in different buildings, an average proportion may be assigned to them, which, indeed, is all that can be done in those of Greece, though they varied less than in Egyptian architecture. In point of antiquity, the first was certainly the square pillar; then the polygonal and round fluted column of the second order; and soon afterwards the third and fourth came into use. But the fourth and fifth, though used long before, were not common till the 18th dynasty, and the fourth assumed a larger size than any other, as at Karnak and Luxor. The sixth, though mostly in Ptolemaic and Roman temples, dates at least as early as the 18th dynasty; as does the eighth, which is, in fact, the square pillar, with a figure attached, and the evident original of the Caryatide of Greece; but the seventh is limited to the age of the Ptolemies, and has an endless variety in the form and ornaments of its capital. It was, however, quite Egyptian, and in no way indebted to Greek taste for its introduction. Of the same kind were the columns described by Athenæus (v, 103), with circular capitals, set round with rose-like ornaments, or with flowers and interlaced leaves, some of which were made of the long tapering

Ancient Egyptian Columns.

form used in their houses, to which he also alludes. There was also a pilaster surmounted by a cow's head (Wilkinson's *Anc. Egyptians*, ii, 285, 286, abridgm.).

2. Among the Greeks, also, the grandeur of the temples, which were very simple in form, was greatly owing to the beautiful combinations of columns which adorned the interior as well as the outside. These columns either surrounded the building entirely, or were arranged in porticoes on one or more of its fronts, and according to their number and distribution temples have been classified both by ancient and modern writers on architecture. Columns were originally used simply to support the roof of the edifice; and, amidst all the elaborations of a later age, this object was always kept in view. Hence we find the column supporting a horizontal mass technically called the entablature. Both the column and the entablature are again divided into three distinct parts. The former consists of the base, the shaft, and the capital; the latter of the architrave, the frieze, and the cornice. The architrave is the chief beam (ἐπιστύλιον, *epistylium*), resting on the summit of the row of columns; the frieze (ζωφόρος, *zophorus*) rises above the architrave, and is frequenly adorned by figures in detail; and above the frieze projects the cornice (κορωνίς, *coronis*), forming a handsome finish (Smith's *History of Greece*, p. 144; see Müller, *Ancient Art* [Lond. 1842], § 277).

Ancient Grecian Columns. 1. Doric; 2. Ionic; 3. Corinthian.

3. The Persian style of columns (see ASSYRIA; JACHIN) greatly resembled the Ionic, having a circular and ornamental base, a fluted shaft, and a capital, consisting either of two half-formed animals (the horse-head or demi-bulls were the favorites) crosswise of the architrave, or of a complex pyramidal ornament surmounted by volutes (Fergusson's *Nineveh and Persepolis*, p. 159 sq.). Combefis, FRANÇOIS, a learned Dominican monk, was born in November, 1605, at Marmande, in the Department of Lot-et-Garonne, in France. He was educated by the Jesuits at Bordeaux, and in 1624 entered the Dominican order. After completing his theological studies, he was appointed professor of philosophy and theology in several houses of his order (in 1640 at Paris). But soon he withdrew from his professorship in order to devote all his time to literary labors, and, in particular, to the study and publication of the ancient writers of the Church. After publishing, in 1644, the works of Amphilochius, bishop of Iconium, of Methodius and Andreas of Crete (2 vols. fol., Greek and Latin, with notes), and in 1645 the Scholia of St. Maximus on Dionysius, he attracted great attention by the publication of the *Novum Auctarium Græco-Latinæ Bibliothecæ Patrum* (Paris, 1648), which consists of an exegetical and a historical part. The former contains homilies and sermons of St. Asterius, bishop of Amasea, of St. Proclus, of St. Anastasius of Alexandria, and of several other Church fathers and writers. The second part contains a history of the Monothelites, which was not well received in Rome, and the writings of several Greek writers, ecclesiastical and secular. In 1655 he published the Chronography of the Byzantine writer Theophanes, which had been begun by the Dominican monk Goar, but left unfinished at his death. In order to encourage these literary labors, the French bishops, at a meeting in Paris in 1655, assigned to Combefis an annual salary of 500 livres, which in the next year was increased to 800, and later to 1000 livres. In 1656 he published several works of Chrysostom; in 1660 the acts of martyrs of the Greek Church (*Illustrium Christi Martyrum Lecti Triumphi*, Greek and Latin). In 1662 appeared one of his greatest works, the *Bibliotheca Patrum Concionatoria* (8 vols. Paris). Among the most important of his later works are the following: *Auctarium novissimum Bibliothecæ Græcorum Patrum* (Paris, 1672, 2 vols.), containing *Liber Flavii Josephi de imperio rationis in laudem Maccabæorum*, two books of Hippolytus, one essay of Methodius, two works against the Manicheans by Alexander of Lycopolis (formerly himself a Manichean). and by Didymus of Alexandria; some essays of the Hesychast Palamas and his opponent Manuel Kalakas, who, on account of his Romanizing tendencies, had been expelled from the Greek Church and

had entered the Dominican order; the *Ecclesiastes Græcus* (Par. 1674), containing a Latin translation of select works of Basil the Great and Basil bishop of Seleucia; and new editions of the works of Maximus Confessor (Paris, 1675, 2 vols. fol.: this work was left incomplete in consequence of the death of Combefis) and of Basil the Great. The edition of Gregory of Nazianzus, and of the works of those Byzantine writers who wrote after Theophanes, were prepared by Combefis, but not finished. The latter was published by Du Fresne (Paris, 1685); the former was made use of by the Maurine Louvard for his edition of Gregory. Combefis died March 23, 1679. See Wetzer u. Welte, *Kirchen-Lex.* ii, 701 sq.; Quetif and Echard, *Script. Ord. Prædic.* ii, 678 sq.

Comber, Thomas, a learned English divine, was born at Westerham, Kent, March 19, 1644. It is said that he could read Greek at ten years old. Admitted B.A. at Cambridge in 1662, he was made Prebendary of York in 1677, dean of Durham in 1691, and died in 1699. His chief works are: *Companion to the Temple* (new edit., Oxford, 1841, 7 vols. 8vo, one of the most complete works extant on the Book of Common Prayer):—*Short Discourses on the Common Prayer* (1684, 8vo):—*Roman Forgeries in the Councils of the first four Centuries* (London, 1689, 4to). His *Memoirs*, by his great grandson, T. Comber, were published in London in 1799 (8vo).—Hook, *Eccles. Biography*, iv, 156; Kippis, *Biographia Britannica*, iv, 45.

Comber, Thomas, grandson of the preceding, passed M.A. at Cambridge in 1770, and LL.D. in 1777. He was rector of Hickby-Misherton, Yorkshire, afterwards of Morbone, and died rector of Buckworth in 1778. He wrote *The Heathen Rejection of Christianity in the first Ages considered* (Lond. 1747, 8vo):—*Examination of Middleton's Discourse against Miracles* (8vo):—*Treatise of Laws, from the Greek of Sylburgius* (1776, 8vo).

Comenius (properly *Komensky*), John Amos, was born at Comna, in Moravia, March 28, 1592. Having studied at Herborn and Heidelberg, he entered the ministry of the Bohemian Brethren's Church, and took charge (1616) of the parish of Prerau, as also of the rectorship of its theological seminary. In 1618 he removed to Fulneck, where he filled the same offices. Driven from his native country in the Bohemian anti-Reformation, he settled at Lissa, in Poland, where he superintended the high school of the Brethren. In 1632 he became one of their bishops, and, as such, prepared the way for their renewal as a church, caring in particular for the continuance of their episcopal succession. His skill as an educator, especially his new method of teaching Latin, gave him great celebrity, and he traveled through a large part of Protestant Europe to improve the methods of education, being called to England for this purpose in 1641, and to Sweden in 1642. He became closely connected with the mystic Antoinette Bourignon (q. v.), and in 1657 published *Lux in Tenebris* (4to), in which he reported the "visions" of Kotter, Poniatovia, and Drabicius. In after years, however, he regretted this connection, and acknowledged that "he had been entangled in an inextricable labyrinth." He settled finally at Amsterdam, where he died Oct. 15, 1671. His principal works are: *Theatrum divinum* (Prague, 1616):—*Labyrinth der Welt* (Prague, 1631; Berlin, 1787):—*Janua linguarum reserata* (Lissa, 1631), translated into many languages, and, among others, into Persian and Arabic, an elementary encyclopedia divided into 100 chapters and 1000 paragraphs:—*Opera didactica omnia* (Amst. 1657, fol.):—*Ratio disciplinæ ordinisque eccl. in Unitate Fratrum Bohemorum* (Lissa, 1632; Amsterd. 1660: Halle, 1702; in German by Köppen; in English by Seifferth, *Ch. Const. of the Boh. Brethren* (Lond. 1867).

Comer, John, one of the early Baptist ministers in America, was born in Boston, Aug. 1, 1704. He was apprenticed to a glover, but at seventeen, by the influence of Increase Mather, he was released by his master, and soon entered Harvard College, whence he removed, after a few years, to Yale. In 1721 he joined the Congregationalist Church at Cambridge, but in 1725 became a Baptist, connecting himself with Mr. Callender's church in Boston. In the same year he began preaching, and in 1726 he was ordained co-pastor at Newport. In 1729 a dispute about the "laying on of hands" in admitting baptized members into the Church led to his dismissal from his charge. In 1732 he became pastor at Old Rehoboth, about ten miles from Providence, where he died of consumption, May 23, 1734. He left a *Diary* in MS., which is of great interest for the early history of the Baptist Church in America.—Sprague, *Annals*, vi, 42.

Comforter. See Paraclete.

Coming (*παρουσία, being present*) of Christ, a phrase employed, (1.) literally, in reference to our Lord's first appearance in the flesh (1 John v, 20; 2 John vii), or to his future appearance at the last day to fulfil his promises to raise the dead and judge the world in righteousness (Acts i, 11; iii, 20, 21; 1 Thess. iv, 15; 2 Tim. iv, 1; Heb. ix, 28).

(2.) Metaphorically, Christ is said to come when his Gospel is introduced or preached in any place by his ministers (John xv, 22; Ephes. ii, 17); when his church or kingdom is visibly or powerfully established in the world (Matt. xvi, 28); when he bestows upon believers the influence of his spirit, and the peculiar tokens of his love (John xiv, 18, 23, 28); when he executes his judgment on wicked communities who reject or corrupt his Gospel (2 Thess. ii, 8); and when his providence calls us away from the world by death, as preparatory to the judgment of the last day (Matt. xxiv, 42). The basis of this metaphorical usage in regard to the coming of Christ is the same as in relation to the coming of God; that as he governs the world, every specific act of his providence and authority indicates his presence in a more striking manner to human conception, on the principle that no agent can act where he is not. See Eschatology.

Commandery or **Commandry**, a kind of benefice belonging to a military order. There are also "commanderies" in the orders of Bernard and Anthony, and for the knights of Malta, accorded for distinguished services.

Commandment. See Decalogue.

COMMANDMENTS, THE FIVE, or Commandments of the Church, certain rules of the Roman Catholic Church which, within the last three centuries, have been considered to be as obligatory on the laity as the *commandments of the decalogue.* These five commandments are generally stated as follows: 1. To keep holy the obligatory feast-days; 2. Devoutly to hear mass on Sundays and feast-days; 3. To observe the days of fast and abstinence; 4. To confess to the priest at least once a year (at Easter) (*Conc. Lat.* IV, Can. 21); 5. To partake of the sacrament at least once a year, towards Easter. As these different rules have no common origin in the regulations of the Church, and are not even taken from the *Catechismus Romanus*, it is not to be wondered at that they have undergone several modifications. Among other variations, it has been a general practice to join the fourth and fifth commandments together, and to replace the fifth by "Not to marry at certain prohibited times." Others have made various alterations. Bellarmine includes the paying of tithes among the commandments of the Church, whilst some of the French catechisms, unable to include all the rules under the five heads, have added a sixth, yet without reaching their object. In the United States the "commandments" are enjoined in the following form:

1. The Catholic Church commands her children, on Sundays and holydays of obligation, to be present at the holy sacrifice of mass, to rest from servile works on those days, and to keep them holy.

2. She commands them to abstain from flesh on all days of fasting and abstinence, and on fast-days to eat but one meal.
3. She commands them to confess their sins to their pastor at least once a year.
4. She commands them to receive the blessed sacrament at least once a year, and that at Easter, or during the paschal time.
5. To contribute to the support of their pastor.
6. Not to marry within the fourth degree of kindred, nor privately without witnesses; nor to *solemnize* marriage at certain prohibited times.

We have said that these commandments are as obligatory for the Romanist layman *as the commandments of God*. The Council of Trent has dogmatically settled the point (Sess. VI, *De Justif.* Can. xx). The Protestant opposition to this great wrong was commenced by such writings as Luther's *De captivitate Babylonica* and Zwingle's *Von Erkiesen und Fryheit der Spysen*. The Evangelical Confessions express the same opposition, as, for instance, the *Augustana*, in the articles XV, XVII, XXVI, the *Helvetica* in 23, 24, and 27, *Tetrapol.* cap. 7, 8, 9, 10. The clearly-expressed protestation contained in these passages does in no way seek to overthrow the dutiful obedience commanded towards pastors and rulers (Heb. xiii, 17), or towards decency and order (1 Cor. xiv, 40), and the power of government held by the Church in the persons of its constituted organs. All this is entirely different from the commandments established by the Romish hierarchy in opposition to the Word of God, as expressed in Col. ii, 16, 18, 20-23; Matt. xv, 17; 1 Tim. iv, 1-4; 1 Cor. viii, 8; vii, 6; iii, 21; Mark ii, 23; Gal. iv, 9-11. The old plea constantly presented by the Romish apologists, that the doctrine of the commandments of the Church has its foundation in the power of the keys and in the commandments of God himself, is of no weight.—Herzog, *Real-Encyklop.* iv, 644; Wetzer u. Welte, *Kirch.-Lex.* iv, 344.

Commendam. When a vacant living is *commended* in the Church of England to the charge of a clergyman until it can be supplied with a pastor, the benefice is said to be supplied *in commendam*. Anciently the administration of vacant bishoprics belonged to the nearest bishop, thence called *commendatory*. This custom was at a very early period introduced into the Church. Athanasius says of himself, according to Nicephorus, that there had been given him, *in commendam*, another church beside that of Alexandria, of which he was the stated bishop. When a priest is made bishop, his parsonage becomes vacant, but he may still hold it *in commendam*. It has been the practice sometimes in England for the crown thus to annex to a bishopric of small value either the living which had been held by the newly made bishop, and of which, in virtue of such elevation of its incumbent, the patronage became at the disposal of the crown, or some other in its stead.—Eden, *Churchman's Dict.;* Farrar, *Eccl. Dict.;* Wetzer u. Welte, *Kirch.-Lex.* ii, 705.

Commendone, Giovanni Francesco, a cardinal and papal legate in Germany, was born at Venice March 17, 1523. After studying law, he went (1550) to Rome, where he attracted the attention of Pope Julius III, and was employed as early as 1551 for a political mission. In 1552 he went as papal envoy to the Netherlands, and from there to England, where he had an important secret interview with Mary, the daughter of Henry VIII, who, on the death of her brother Edward, was to ascend the English throne. Mary gave him an autograph letter to the pope, and promised that the Roman Catholic religion should be re-established as the state Church. Commendone, having now gained the entire confidence of the pope, was at once employed for other important missions to Portugal, Spain, and France. Paul IV made him papal secretary and bishop of Zante. Pius IV sent him to Germany to invite the Protestant princes to send delegates to the Council of Trent. He addressed the Protestant convention at Naumburg (1561), and presented the papal bull of invitation and letters to the several princes, but met with no success, the letters being returned unopened and the invitation declined. Subsequent efforts to prevail upon the elector of Brandenburg and the kings of Denmark and Sweden to send deputies to the council remained likewise without effect. More successful was a mission to Poland in 1563. Whilst staying at the Polish court he was appointed a cardinal. In 1566 and 1568 he was sent to the Emperor Maximilian, who was suspected of leaning toward Protestantism, in order to detain him from making concessions to the Protestants. Soon after he was again sent to Poland in order to secure the election of a French prince, who was known as a fanatical partisan of the Church of Rome, as king of Poland. He returned to Rome in 1573, and died in 1584. His life was written by A. Maria Gratiani, his secretary, and subsequently bishop of Amelia. See Wetzer u. Welte, *Kirchen-Lex.* i, 707 sq.; Prisac, *Die päpstlichen Legaten Commendone und Cappaccini in Berlin* (Neuss, 1846).

Commentary (ὑπομνηματισμός, Lat. *commentarii*, 2 Macc. ii, 13), Biblical (see Carpenter's *Guide to the Study of the Bible*, pt. i, ch. iii, sec. 1-4; Davidson, in Horne's *Introd.* new ed. ii, 377-385; M. Stuart in the *Am. Bib. Repos.* iii, 180 sq.). See Interpretation.

I. *Definition.*—By *commentary*, in its theological application, is usually meant an exhibition of the meaning which the sacred writers intended to convey; or a development of the truths which the Holy Spirit willed to communicate to men for their saving enlightenment. This is usually effected by notes more or less extended—by a series of remarks, critical, philological, grammatical, or popular, whose purport is to bring out into view the exact sentiments which the inspired authors meant to express. It is true that this can only be imperfectly done, owing to the various causes by which every language is affected; but the *substance* of revelation may be adequately embodied in a great variety of garb.

(1.) The *characteristics* of commentary are: (*a*.) An elucidation of the meaning belonging to the words, phrases, and idioms of the original. The signification of a term is generic or specific. A variety of significations also belongs to the same term, according to the position it occupies. Now a commentary points out the particular meaning belonging to a term in a particular place, together with the reason of its bearing such a sense. So with phrases. It should likewise explain the construction of sentences, the peculiarities of the diction employed, the difficulties belonging to certain combinations of words, and the mode in which they affect the general meaning.

(*b*.) Another characteristic of commentary is an exhibition of the writer's scope, or the end he has in view in a particular place. Every particle and word, every phrase and sentence, forms a link in the chain of reasoning drawn out by an inspired author—a step in the progress of his holy revelations. A commentary should thus exhibit the design of a writer in a certain connection—the arguments he employs to establish his positions, their coherence with one another, their general harmony, and the degree of importance assigned to them.

(*c*.) In addition to this, the train of thought or reasoning pursued throughout an entire book or epistle, the various topics discussed, the great end of the whole, with the subordinate particulars it embraces, the digressions made by the writer—these, and other particulars of a like nature, should be pointed out by the true commentator. The connection of one argument with another, the consistency and *ultimate* bearing of all the statements advanced—in short, their various relations, as far as these are developed or intimated by the author, should be clearly apprehended and intelligently stated.

(*d.*) Another characteristic of commentary is, that it presents a comparison of the sentiments contained in one book, or one entire connected portion of Scripture, with those of another, and with the general tenor of revelation. A beautiful harmony pervades the Bible. Diversities, indeed, it exhibits, just as we should expect it *à priori* to do; it presents difficulties and mysteries which we cannot fathom, but with this variety there is a uniformity worthy of the wisdom of God. A commentator should therefore be able to account for diversities of sentiment, in reference to the same topic, that appear in the pages of books written at different periods, and addressed to individuals or communities whose circumstances, intellectual and physical, were dissimilar. Without it religious truth will be seen in disjointed fragments; no connected system, compact and harmonious in its parts, will meet the eye.

(2.) From what has been stated in regard to the constituents of commentary, it will also be seen that it differs from *translation*. The latter endeavors to find in another language equivalent terms expressive of the ideas which the words of the Hebrew and Greek languages were framed to convey. It is easy to see, however, that in many cases this cannot be done, and that in others it can be effected very imperfectly. There are and must be a thousand varieties of conception expressed in the original languages of Scripture, of which no other can afford an adequate representation. The inhabitants of the countries where the sacred books were written lived amid circumstances in many respects diverse from those of other people. These circumstances naturally gave a coloring to their language. They affected it in such a way as to create terms for which there are no equivalents in the languages of tribes who are conversant with different objects, and live amid different relations. In such a case no expedient is left but circumlocution. By the help of several phrases we must try to approximate at least the sentiment or shade of thought which the inspired writers designed to express. *Commentary* is thus more diffuse than *translation*. Its object is not to find words in one language corresponding to those of the original languages of the Scriptures, or nearly resembling them in significance, but to set forth the meaning of the writers in notes and remarks of considerable length. *Paraphrase* occupies a middle place between translation and commentary, partaking of greater diffuseness than the former, but of less extent than the latter. It aims at finding equivalent terms to those which the sacred writers employ, accompanied with others that appear necessary to fill up the sense, or to spread it out before the mind of the reader in such a form as the authors themselves might be supposed to have employed in reference to the people to whom the paraphrast belongs. *Scholia* differ from commentary only in brevity. They are short notes on passages of Scripture. Sometimes difficult places alone are selected as their object; at other times they embrace continuously an entire book.

II. There are two kinds of commentary which we shall notice, viz. the *critical* and the *popular*. 1. The former contains grammatical and philological remarks, unfolds the general and special significations of words, points out idioms and peculiarities of the original languages, and always brings into view the Hebrew or Greek phraseology employed by the sacred writers. It dilates on the peculiarities and difficulties of construction which may present themselves, referring to various readings, and occasionally bringing into comparison the sentiments and diction of profane writers, where they resemble those of the Bible. In a word, it takes a wide range, while it states the processes which lead to results, and shrinks not from employing the technical language common to scholars. Extended dissertations are sometimes given, in which the language is made the direct subject of examination, and the aid of lexicons and grammars called in to support or confirm a certain interpretation. 2. *Popular* commentary states in perspicuous and untechnical phraseology the sentiments of the holy writers, usually without detailing the steps by which that meaning has been discovered. It leaves philological observations to those whose taste leads them to such studies. All scientific investigations are avoided. Its great object is to present, in an attractive form, the thoughts of the sacred authors, so that they may vividly impress the mind and interest the heart. It avoids every thing that a reader unacquainted with Hebrew and Greek would not understand, and occupies itself solely with the theology of the inspired authors—that holy sense which enlightens and saves mankind. This, however, is rather what popular commentary should do, than what it has hitherto done.

The limits of *critical* and *popular* commentary are not so wide as to prevent a partial union of both. Their ultimate object is the same, viz. to present the exact meaning which the Holy Spirit intended to express. Both may state the import of words and phrases; both may investigate the course of thought pursued by prophets and apostles. They may develop processes of argumentation, the scope of the writers' remarks, the bearing of each particular on a certain purpose, and the connection between different portions of Scripture. Yet there is much difficulty in combining their respective qualities. In *popularizing* the critical, and in elevating the popular to the standard of intelligent interpretation, there is room for the exercise of great talent. The former is apt to degenerate into philological sterility, the latter into trite reflection. But by vivifying the one, and solidifying the other, a good degree of affinity would be effected. Critical and antiquarian knowledge should only be regarded as a means of arriving at the truth taught. Geographical, chronological, and historical remarks should solely subserve the educement or confirmation of Jehovah's will.

III. The prominent *defects* of existing commentaries.—1. *Prolixity*. This defect chiefly applies to the older works; hence their great size. It is not uncommon to meet with a large folio volume of commentary on a book of Scripture of moderate extent. Thus Byfield, on the Epistle to the Colossians, fills a folio volume; and Venema, on Jeremiah, two quartos. Peter Martyr's "most learned and fruitful commentaries upon the Epistle to the Romans" occupy a folio, and his "commentaries upon the book of Judges" another tome of the same extent. But Venema on the Psalms, and Caryl on Job, are still more extravagant, the former extending to no less than six volumes quarto, the latter to two goodly folios. It is almost superfluous to remark that such writers wander away, without confining themselves to exposition. We do not deny that even their extraneous matter may be good and edifying to those who have the patience to wade through its labyrinths, but still it is not *commentary*. It is very easy to write, *currente calamo*, any thing however remotely connected with a passage, or to note down the thoughts as they rise; but to *think out* the meaning of a place, to exercise independent mental effort upon it, to apply severe and rigid examination to each sentence and paragraph of the original, is quite a different process. To exhibit in a lucid and self-satisfying manner the results of deep thought and indomitable industry, is far from the intention of those prolix interpreters who, in their apparent anxiety to compose a *full* commentary, present the reader with a chaos of annotations, and bury the holy sense of the inspired writers beneath the rubbish of their prosaic musings.

2. Some commentators are fond of detailing various opinions without sifting them. They procure a number of former expositions, and write down out of each what is said upon a text. They tell what one and

another learned annotator affirms, but do not search or scrutinize his affirmations. No doubt an array of names looks imposing; and the reader may stare with surprise at the extent of research displayed; but nothing is easier than to fill up pages with such patchwork, and to be as entirely ignorant of the nature of commentary as before. The intelligent reader will be inclined to say, What matters it to me what this rabbi has said, or that doctor has stated? I am anxious to know the true sense of the Scriptures, and not the varying opinions of men concerning them. It is a work of supererogation to collect a multitude of annotations from various sources, most of which the industrious collector knows to be improbable or erroneous. It is folly to adduce and combat interpretations from which the common sense and simple piety of the unsophisticated reader turn away with instinctive aversion. If plausible views be stated, they should be thoroughly analyzed. But in all cases the right meaning ought to be a prominent thing with the commentator, and prominently should it be manifested, surrounded, if possible, with those hues which Heaven itself has given it, and qualified by such circumstances as the Bible may furnish.

3. Another defect consists in dwelling on *the easy* and evading *the difficult passages*. This feature belongs especially to those English commentaries which are most current among us. By a series of appended remarks, plain statements are expanded; but wherever there is a real perplexity, it is glozed over with marvellous superficiality. It may be that much is said *about* it, but yet there is no penetration beneath the surface; and when the reader asks himself what is the true import, he finds himself in the same state of ignorance as when he first took up the Commentary in question. Pious reflections and multitudinous inferences enter largely into our popular books of exposition. They spiritualize, but they do not expound. They sermonize upon a book, but they do not catch its spirit or comprehend its meaning. When a writer undertakes to educe and exhibit the true sense of the Bible, he should not give forth his own meditations, however just and proper in themselves. Put in the room of *exposition*, they are wholly out of place. The simple portions of the Bible are precisely those which require little to be said on them, while to the more difficult superlative attention should be paid. But the reverse order of procedure is followed by our popular commentators. They piously descant on what is well known, leaving the reader in darkness where he most needs assistance.

4. A very common fault with modern commentators is the attempt to go over too much ground of text, and thus do the whole work superficially. Many are ambitious of writing a commentary on the whole Bible, often with very inadequate preparations, or leisure, or research, and thus do but little else than rehearse the conclusions of others, with scarcely any original investigation themselves. The commentator should come to his work only after a long and matured study of the Scriptures as a whole, and then, with great deliberation, and patient study and balancing of various views and conflicting opinions, proceed step by step with one book at a time; not hastily run over the entire volume, and produce the crude and first-caught materials that he has gathered suddenly and by one-sided investigations. Hence those annotations are almost always the best where a writer has confined himself to a single book or epistle, and has perhaps made it his life-long study, looking at it from every possible point of view, and verifying his conclusions by repeated comparisons and researches. Commentaries "written to order" have almost invariably been worthless. See *American Biblical Repository*, January, 1833, art. iv.

IV. We shall briefly *review* the principal works of this class on the Bible at large, with criticisms especially on the older commentaries and those best known in modern times.

1. Such as are most accessible by having been written in *English* or *Latin*, or translated into one of those languages. (See a select list of this kind, with criticisms, in the Supplem. to Jenks's *Comprehensive Commentary*.)

(1.) J. Calvin ("*Commentarii*," etc. in his *Opp.*, translated, Edinb. 1845-56, 52 vols. 8vo).—In all the higher qualifications of a commentator Calvin is pre-eminent. His knowledge of the original languages was not so great as that of many later expositors, but in developing the meaning of the sacred writers he has few equals. It has been well remarked that he chiefly attended to the *logic* of commentary. He possessed singular acuteness, united to a deep acquaintance with the human heart, a comprehension of mind by which he was able to survey revelation in all its features, and an enlightened understanding competent to perceive sound exegetical principles, and resolute in adhering to them. He can never be consulted without advantage, although all his opinions should not be followed, especially those that result from his doctrinal prepossessions.

(2.) T. Beza ("*Test. Vet. c. schol.* Tremellii et Junii, Apocr. c. *notis* Junii, et N. T. c. *notis* Bezæ," fol. Genev. 1575-79, Lond. 1593, and often; "*Bible with Annotations*," fol. Gen. 1561 2, and often).—Beza's talents are seen to great advantage in expounding the argumentative parts of the Bible. He possessed many of the best exegetical qualities which characterized his great master. In tracing the connection of one part with another, and the successive steps of an argument, he displays much ability. His acuteness and learning were considerable. He was better acquainted with *the theology* than *the criticism* of the New Testament.

(3.) H. Hammond ("*Paraphrase and Annotations*" on the N. T., Lond. 1653, best ed. 1702; on the Psalms, in his *Works*, 4 vols. fol. 1674-84).—This learned annotator was well qualified for interpretation, and many good specimens of criticism are found in his notes. Yet he has not entered deeply into the spirit of the original, or developed with uniform success the meaning of the inspired writers. Many of the most difficult portions he has superficially examined or wholly mistaken.

(4.) M. Poole ("*Annotations*" on the whole Bible, Lond. 2 vols. fol. 1700 and before, best ed. Lond. 1840, 3 vols. 8vo).—Poole's annotations on the Holy Bible contain several valuable, judicious remarks. But their defects are numerous. The pious author had only a partial acquaintance with the original. He was remarkable neither for profundity nor acuteness. Yet he had piety and good sense, amazing industry, and an extensive knowledge of the older commentators.

Poli "*Synopsis Criticorum*" (fol. 4 vols. in 5, Lond. 1669-76, and several eds. since; best ed. by Leusden, Ultr. 1684).—In this large work, the annotations of a great number of the older commentators are collected and condensed, many of them from the still more extensive collection known as the *Critici Sacri* (q. v.), edited by Bp. Pearson and others (2d edit. with two supplemental vols. Frcft. a. M. 1696 1701, 9 vols. fol.). But they are seldom sifted and criticised, so that the reader is left to choose among them for himself.

(5.) H. Grotius ("*Annotationes*" on all the Bible and Apocr. in his *Opp.*, also ed. Moody, Lond. 1727, 2 vols. 4to).—This very learned writer investigates the literal sense of the Scriptures with great diligence and success. He had considerable exegetical tact, and a large acquaintance with the heathen classics, from which he was accustomed to adduce parallels. His taste was good, and his mode of unfolding the meaning of a passage simple, direct, and brief. His judgment was sound, free from prejudice, and liberal beyond the age in which he lived. As a commentator

he was distinguished for his uniformly good sense. It has been said without reason that he found Christ nowhere in the Old Testament. It is true that he opposed the Cocceian method, but in this he was often correct. His chief defect is in *spiritual discernment.* Hence he rests in the literal meaning in many cases, where there is a higher or ulterior reference.

(6.) J. Le Clerc ("V. T. c. *Paraphrasi, Commentario,*" etc. 4 vols. fol. Amst. 1710 sq.).—Excellent notes are interspersed throughout the commentaries of this author (his work by a similar title on the N. T. was based upon that of Hammond, 2 vols. in 1, fol. Amst. 1699). His judgment was good, and his mode of interpretation perspicuous. From his richly-stored mind he could easily draw illustrations of the Bible both pertinent and just. Yet he was very defective in theological discrimination. Hence, in the *prophetic* and *doctrinal* books he is unsatisfactory. It has been thought, not without truth, that he had a rationalistic tendency. It is certain that he exalted his own judgment too highly, and pronounced dogmatically where he ought to have manifested a modest diffidence.

(7.) A. Calmet ("*Commentaire Littéral*" on the entire Bible and Apocr. Par. 1724, 8 vols. in 9, fol.; transl. into Latin, with the *dissertations* by J. D. Manse, 19 vols. 4to, Wirceb. 1789).—Calmet is perhaps the most distinguished commentator on the Bible belonging to the Roman Catholic Church. In the higher qualities of commentary his voluminous work is very deficient. It contains a good collection of historical materials, and presents the meaning of the original where it is already plain; but his historical apparatus needs to be purified of its irrelevant, erroneous statements, while on the difficult portions no new light is thrown.

(8.) Patrick, Lowth, Arnald, and Whitby ("*Critical Commentary,*" etc. on the O. and N. T. and Apocr. 6 vols. 4to, Lond. 1822; 4 vols. 8vo, Phila. and N. Y. 1845).—Bishop Patrick had many of the elements belonging to a good commentator. His learning was great when we consider the time at which he lived, his method brief and perspicuous. Lowth is inferior to Patrick. Whitby presents a remarkable compound of excellences and imperfections. In philosophy he was a master. In critical elucidations of the text he was at home. Nor was he wanting in acuteness or philosophical ability. His judgment was singularly clear, and his manner of annotating straightforward. Yet he had not much comprehensiveness of intellect, nor a deep insight into the spiritual nature of revelation.

(9.) M. Henry ("*Exposition* of the O. and N. Test." Lond. 1704 sq., 5 vols. fol., and various eds. since, latest Lond. 1849, 6 vols. 4to, condensed with Scott's *Notes* and Doddridge's *Practical Observations,* besides additions from other sources, in Jenks's *Comprehensive Commentary,* Brattleboro, Vt. 1836 sq., 5 vols. 8vo).—The name of this good man is venerable, and will be held in everlasting remembrance. His commentary does not contain much *exposition.* It is full of *sermonizing.* It is surprising, however, to see how far his good sense and simple piety led him into the doctrine of the Bible, apart from many of the higher qualities belonging to a successful commentator. His prolixity is great. *Practical preaching* is the burden of his voluminous notes.

(10.) J. Gill ("*Exposition* of the O. and N. Test." Lond. 1763, 9 vols. fol., and several times since).—The prominent characteristic of Gill's commentary is *heaviness.* It lacks condensation and brevity. The meaning of the inspired authors is often undeveloped, and more frequently distorted. Gill's chief merit was his Rabbinical learning.

(11.) P. Doddridge ("*Family Expositor* of the N. T.," Lond. 1739, 6 vols. 4to, and often since; Amherst, Mass. 1837, 1 vol. 8vo).—The taste of this pious commentator was good, and his style remarkably pure. He had not much acumen or comprehension of mind; but he had an excellent judgment, and a calm candor of inquiry. His paraphrase leaves much unexplained, while it dilutes the strength *of the original.* The practical observations are excellent. The notes are few, and ordinarily correct.

(12.) T. Scott ("Holy Bible with *Notes,*" etc. Lond. 1796, and often since; Lond. 1841, 6 vols. 4to; Bost. 1827, 6 vols. 8vo).—The prevailing characteristic of Scott's commentary is judiciousness in the opinions advanced. The greater portion of it, however, is not *proper exposition.* The pious author preaches about and paraphrases the original. His simplicity of purpose generally preserved him from mistakes; but as a commentator he was neither acute nor learned. He wanted a competent acquaintance with the original, power of analysis, a mind unprepossessed by a doctrinal system, and penetration of spirit.

(13.) A. Clarke ("Holy Bible, with *Commentary,*" etc. 8 vols. 4to, Lond. 1810–23, and often since; best ed. Lond. 1844, 6 vols. 8vo, N. Y. 1843).—In many of the higher qualities by which an interpreter should be distinguished, this man of much reading was wanting. His commentary, however, which was the chief literary labor of his life, is replete with profound and varied, though not always accurate, and often inapposite, learning. He is always thoroughly earnest and practically spiritual. Some of his notions are indeed extravagant, but they are never the errors of the heart. Many of the dissertations scattered through the work possess a permanent value for their diligent research. Its historical notes are the best. Its quotations from ancient and Oriental authors are abundant and usually apt. Its remarks in vindication of the truth and consistency of Scripture are also often worthy of consultation.

(14.) E. F. C. Rosenmüller.—The "Scholia" of this laborious writer extend over the greater part of the Old Testament (11 pts. in 23 vols. 8vo, Lpz. 1795 sq.; "in *Compendium* redacta," by Lechner, 5 vols. 8vo).—The last editions especially are unquestionably of high value. They bring together a mass of annotation such as is sufficient to satisfy the desires of most Biblical students. Yet the learned author undertook too much to perform it in a masterly style. Hence his materials are not properly sifted, the chaff from the wheat. He has not drunk deeply into the spirit of the inspired authors. He seems, indeed, not to have had a soul attuned to the spirituality of their utterances, or impregnated with the celestial fire that touched their hallowed lips. His father, J. G. Rosenmüller, the author of the "Scholia" on the New Testament (5 vols. 8vo, Nurnbg. 1785, and since), is a good *word-explainer* for students beginning to read the original. He has not produced a masterly specimen of commentary on any one book or epistle.

(15.) H. Olshausen ("*Biblisches Commentar*" on the N. T. continued by Ebrard and others, 7 vols. 8vo, Königsb. 1837–56; tr. in Clarke's *Library,* Edinb. 1847 sq.; ed. by Kendrick, N. Y. 1856 sq., 6 vols. 8vo, have hitherto appeared).—One of the best examples of commentary on the New Testament with which we are acquainted has been given by this writer. The arrangement, however, being semi-historical, has some inconveniences, especially as the text is not given. The exposition is almost wholly free from the influence of German neology. Verbal criticism is but sparingly introduced, although even here the hand of a master is apparent. He is intent, however, on higher things. He investigates the thought, traces the connection, puts himself in the same position as the writers, and views with philosophic ability the holy revelations of Christ in their comprehensive tendencies. The critical and the popular are admirably mingled. The continuation of the work by other hands is scarcely equal in value.

(16.) A. Tholuck.—The commentaries of this eminent writer on various books of the New Testament, especially those on the Epistles to the Romans and

Hebrews, exhibit the highest exegetical excellences. While he critically investigates phrases and idioms, he ascends into the pure region of the ideas, unfolding the sense with much skill and discernment. His commentary on John is of a more popular cast. His interpretation of the *Bergpredigt*, or Sermon on the Mount, is very valuable. That on the Psalms is less thorough. (For the editions, see each of these books in their place.)

(17.) E. W. Hengstenberg.—This writer is too fanciful in his exegesis, too arbitrary in his philology, and too extreme in his theology to be fully trustworthy as a commentator; yet his expositions of the Psalms, Ecclesiastes, Revelation, etc., may be consulted with advantage, if used with comparison of other authors.

(18.) E. Henderson.—This commentator's translation and notes on the Minor Prophets, as well as Isaiah, Jeremiah, and Ezekiel, are admirable specimens of sound learning, good judgment, and evangelical piety. Their only fault in the exposition is an excessive leaning to literalism.

(19.) A. Barnes.—This series of *Notes* on the New Test. (N.Y. 12 vols. 12mo; Lond. 1850-52), and portions of the Old (Job, Isaiah, Daniel), have had a popularity which shows their adaptation to an extensive want. They are simple, lucid, and practical, and written with the author's happy flow of style, and are marked by genuine spirituality; but they are not characterized by critical or extensive learning.

(20.) J. A. Alexander.—The notes of this eminent scholar on Isaiah are a thorough and well-digested production. His commentaries on the Psalms and historical books of the N. T., however, are too popular to add anything to his reputation.

(21.) C. T. Kuinöl.—The commentaries of this writer, especially on the Gospels and Acts (in Latin, best ed. London, 1835, 3 vols. 8vo), although strongly tinctured with rationalism, are among the best, critically and philologically considered, extant. Learning, acuteness, and candor are everywhere apparent.

(22.) G. Bush.—This author's annotations on several of the first books of the O. T., although intended for popular use, are generally characterized by good sense, genuine learning, and pious sentiment; and are the more valuable as being nearly the only good commentary on these portions of Scripture available to the common reader.

(23.) M. Stuart.—His commentaries on Romans, Hebrews, Daniel, Revelation, Proverbs, and Ecclesiastes, albeit rather diffuse and grammatical, are yet of great value for their eminent candor, careful investigation, and general apprehension of the genius and scope of the writers. To the young student especially they are indispensable.

(24.) S. T. Bloomfield.—This author's critical *Digest* (8 vols. 8vo, Lond. 1826-8), as well as his Commentary (Lond. 1830 sq. 2 vols. 8vo; Phila. 1836) and its Supplement (London, 1840, 1 vol. 8vo), all on the N. T., give very much sound and judicious exposition, and have the advantage of placing before the reader the views of earlier interpreters. Without any great attempt at originality, there is generally a careful sifting of opinions and balancing of arguments that make his comments, on the whole, the best synopsis of simple exegesis yet produced.

(25.) H. Alford ("*Gr. Test.*" with critical apparatus and notes, Lond. 1853 61, 5 vols. 8vo; vol. i, N. Y. 1859).—This scholarly edition of the Greek Test. contains a critically-revised text, a copious exhibit of various readings, valuable prolegomena, and a series of analytical, philological, and expository notes. There is not much strictly new in any of these departments, but a convenient assemblage of materials not usually accessible. The whole is wrought out with great care and learning, and presented in the most condensed form. A very serious drawback upon its value, however, is the latitudinarianism evident in the author's theological, or, perhaps, rather hermeneutical principles, which leads him in very many difficult passages rather to array the sacred authors against one another than to reconcile their apparent discrepancies. Under arrogance of superior "honesty," he too often declines the prime task of an expositor by pronouncing difficulties insoluble. The critical apparatus is pervaded by the same subjective proclivity, insomuch that the writer has himself once or twice completely remodelled it.

(26.) F. J. V. D. Maurer ("*Commentarius* in V. T." Lps. 1835-47, 4 vols. 8vo).—This is a series of brief annotations on the Old Test., considerably full on the poetic portions, and characterized by great acumen, with much accuracy of scholarship, but little or no combination of the spiritual insight into Holy Writ. It is chiefly valuable to students for expounding the literal meaning.

(27.) J. C. Wolf ("*Curæ* in N. T." 5 vols. 4to, Basil. 1741).—This author, although somewhat old, deserves especial notice for his valuable mass of sound annotations.

Besides the above, the following English commentaries on portions of Scripture are entitled to particular mention, including several German works presented in an English dress by the publishers Clark, of Edinburgh (valuable additions to our literature these last, but sadly in need, as a general thing, of judicious editing), and some reprinted in this country: Trench on the Miracles and Parables; Stier on the words of Christ; Kitto's *Pictorial Bible* and *Daily Bible Illustrations*; Conybeare and Howson's *Life and Epistles of St. Paul*; Watson on Matt. and some other parts of the N. T.; Bengel on the N. T.; Baumgarten on the Acts; Eadie on several of the Pauline epistles; Horsley on Hosea; Elliott on Revelation; Lowth on Isaiah; Wemyss and Fry on Job; Ellicott on the pastoral epistles; Good on the Psalms and Canticles; Steiger on 1st Peter; Umbreit on Job; Billroth on Corinthians; Tittmann on John; Lightfoot's *Horæ Hebraicæ*; Keil on Joshua and Kings; Auberlein on Daniel; Kalisch on Gen. and Exod.; Stanley on Corinthians; Jowett on several of Paul's epistles; Ginsburg on Cant. and Eccles.; Phillips and De Burgh on the Psalms; Maclean on Hebrews; Preston on Ecclesiastes, and many others which space does not permit us here to enumerate. There are commentaries on the entire Bible by Girdlestone, Wellbeloved, Wesley, Coke, Benson, Cobbin, Sutcliffe, and others; on the New Test. by Baxter, Burkitt, Gillies, Trollope, and others; on the Gospels by Quesnel, Campbell, Norton, Ryle, and others; on the Epistles by Macknight, Pyle, and others. There are also serviceable annotations on various parts of Scripture by several of the early Church fathers, especially Origen, Jerome, and Chrysostom (see CATENA), by the mediæval theologians and reformers, especially Luther, and an almost innumerable series of later commentators more or less extensive, sufficiently complete lists of which are given under the appropriate heads in this Cyclopædia. There also exist an immense number of academical dissertations of an exegetical character, chiefly by Germans, for certain collections of a few of which, well known on the Continent, see Walch, *Bibl. Theolog.* iv, 920 sq. See also the several books and divisions of Scripture in their proper place in this work. For *Hebrew* commentaries on the whole Jewish Scriptures, see RABBINIC BIBLES.

2. The modern *Germans*, prolific as they are in theological works, have seldom ventured to undertake an exposition of the whole Bible. Each writer usually confines himself to the task of commenting on a few books. In this their wisdom is manifested. Yet they do not usually excel in good specimens of commentary, at least in the more sacred elements. They are *word-explainers*. In pointing out various readings, in

grammatical, historical, and geographical annotations, as also in subtle speculations respecting the genius of the times in which the writers of the Bible lived, they are at home. In the *lower criticism* we willingly sit at their feet and learn. But with regard to the *higher*, in all that pertains to the *logic* of commentary, in development of the sense in its holy relations, the great majority of them are lamentably wanting. Refined notions usurp the place of practical piety in their minds; and the minutiæ of verbal criticism furnish them nutriment apart from the rich repast of theological sentiment and sanctifying truth. But there are some noble exceptions, several of which are designated above.

One of the most complete and recent series of German commentaries (although somewhat meagre in detail) is that published by Hirzel (Leipzig, 1841-57), consisting of a *Kurzgefasstes exegetisches Handbuch*, on the Old Test., by Hitzig, Hirzel, Thenius, Knobel, Bertheau, and J. Olshausen (in 16 vols. 8vo); on the New Test. by De Wette, with additions by Brückner, Messner, and Lücke (in 11 vols. 8vo); on the Apocrypha by Fritzsche and Grimm (in 5 vols. 8vo). A most copious and (in the German sense) valuable series is also the *Kritisch exegetischer Kommentar zum Neuen Testament*, by Dr. H. A. W. Meyer and others (Gött. in 16 pts. lately completed, with new eds. of the earlier portions). Another is the *Exeg. Handb. zu den Briefen des Apostels Paulus*, by A. Bisping (Münster, 1858); and still more deserving of notice, *Die Heilige Schrift, m. Einleit. u. erkl. Anmerkungen*, by Otto von Gerlach (2d ed. Berl. 1858); to which may be added *Die poetischen Bücher des alten Bundes erklärt*, by H. Ewald (Gött. 1836-54, 4 vols. 8vo), together with his *Drei Erste Evangelien* (ibid. 1851, 8vo), *Sendschreiben des Paulus* (ib. 1857, 8vo), *Das B. Ijob* (ib. 1854, 8vo); *Die Propheten des alten Bundes erklärt* (Stuttg. 1842, 2 vols. 8vo), and *Comment. in Apocalypsin* (Lips. 1828, 8vo); likewise F. W. C. Umbreit's *Commentar üb. d. Propheten* (Hamb. 1842-6, 4 vols. 8vo), *Römer* (Gotha, 1856, 8vo), *Psalter* (ib. 1848, 8vo), *Sprüche Salomos* (ib. 1826, 8vo), *Kohelet* (ib. 1820, 8vo), and *Hiob*. (ib. 1832, 8vo); also the *Handb. d. Einleit. d. Apocryphen*, by G. Volkmar (Tüb. 1860 sq.). A new series of critical and exegetical commentaries of great value, in German, on the books of the O. T., is also in progress by Delitzsch and Keil (Lpz. 1861 sq.), which will doubtless include the substance of those already published by these writers on several of the books (Genesis, Psalms, Canticles, Habakkuk, Joshua, Kings, Chron. separately); it is in course of publication, in an English dress, by the Messrs. Clark of Edinburgh.

J. P. Lange, assisted by several evangelical scholars, is also issuing a series of admirable homiletical commentaries on the books of the O. and N. T., of which improved translations are in course of publication in this country, edited by Dr. Schaff (N. Y. 1864 sq.). Wetstein's *Novum Testamentum Græcum* (Amst. 1751, 2 vols. fol.), and Grinfield's Hellenistic *Editio* and *Scholia* on the New Test. (Lond. 1843, 1848, 4 vols. 8vo) afford much valuable philological elucidation of the text. Bunsen's *Bibelwerk*, now in progress of publication (Lpz. 1858 sq. 8vo), although eccentric in many respects, has also its valuable exegetical features, especially the new translation of the text.

In addition to these, Germany has produced many other specimens of commentary that occupy a high place in the estimation of competent judges, but still remain untranslated. Among these are Lücke on John's writings, especially in the *third* edition; Gesenius on Isaiah; De Wette on the Psalms; Fritzsche on Matt., Mark, and Rom.; Bähr on Colossians; Philippi on Romans; Bleek on Hebrews; Hupfeld on the Psalms; Gramberg on Chronicles; Rückert on Romans and Corinthians; Flatt on the Epistles; Lengerke on Daniel; Stier on Acts, Hebrews, James, and Jude; Hävernick on Ezekiel and Daniel; Harless on Ephesians; Winer (in Latin) on Galatians; Schultens (Lat.) on Job and Proverbs; and Tuch on Genesis; with numerous others, which possess much merit, accompanied, it is true, with some serious faults. Dr. Nast, of Cincinnati, is publishing in this country a commentary on the New Test. in German on an excellent plan, of which an edition in English is also issued.

3. To these may be added the *American* commentaries of Turner on Genesis, Romans, John, Ephesians, Galatians, and Hebrews; Hackett on Acts; Moore on Haggai, Zechariah, and Malachi; the notes of Owen, Whedon, Ripley, Jacobus, Hodge, and others, on the Gospels, Epistles, etc.; and numerous other less important works that might be specified, but which are given more fully under the respective books of Scripture. We may also refer to the notes accompanying the revision of the Engl. Bible now in progress by the Am. Bible Union, as furnishing much exegetical elucidation. (See a convenient list of works most accessible and useful to American students, with prices attached, and judicious practical hints on the general subject of aids to Biblical knowledge, in the *Methodist Quar. Rev.* April, 1856, p. 288-297.) Notwithstanding the above somewhat copious statement, it must, however, be admitted that a convenient and satisfactory manual of exposition on the entire Bible, adapted to the wants of the public in this country, is still a desideratum.

4. The following is a chronological conspectus of professed Commentaries on the whole canonical Scriptures (exclusive of merely improved versions or editions), as complete as we have been able to make it. For those covering the Old or the New Testament alone, see under those titles. The most important of those here enumerated are designated by an asterisk (*) prefixed: Origen, *Commentaria* (ed. Huetius, Rothmagi, 1668, 2 vols. fol.); Augustine, *Exegetica* (in *Opp.* iii-vi), also his *Sermones* (*ib.* vii), and his *Quæstiones* (Lugd. 1561, 8vo); Paterius, *Expositio* (from Gregory, in the latter's *Opp.* IV, ii); Hugo de S. Caro, *Postillæ* (6 vols. fol., Ven. et Basil. 1487, Basil. 1498, 1504, Par. 1508, Colon. 1621; 8 vols. fol., Lugd. 1645, 1669); *Walafridus Strabo, *Glossa*, etc. (a sort of Catena, including extracts from Rabanus Maurus, and the *Postillæ* of De Lyra, 6 vols. fol., Nuremb. 1494; also more complete, Duaci, 1617, and Antw. 1634); Nezen, *Operationes Biblicæ* [from Luther's expositions] (Jen. 1510-11, 2 vols. 4to); Dionysius Carthusianus, *Commentarius* (Colon. 1532 sq., 12 vols. fol.); *Pellican, *Commentarii* [except Jonah, Zech. and Rev.] (Tiguri, 1532 sq., 7 vols. fol.; with Meyer's notes on the Apocalypse, Tigur. 1542, 10 vols. fol.); Bp. Clario, *Annotationes* [those on the O. T. are chiefly from Seb. Munster] (Venice, 1542, 1557, 1564, fol.; also in the *Critici Sacri*); Gastius, *Commentarii* [from Augustine] (Basil. 1542, 2 vols. 4to); Vatablus, *Scholia* [from his lectures] (in Stephens's Latin Bible, Paris, 1545, 1551; also separately, Salamanca, 1584, 2 vols. fol.; and in the *Critici Sacri*, and since); Brucciolі, *Commento* (Venice, 1546, 7 pts. fol.); Castalio, *Biblia Sacra*, etc. (Basil. 1551, fol.; later with various additions, especially Francfort, 1697, fol.; also in the *Critici Sacri*); Marloratus, *Commentarii* [on many portions of Scripture] (various places and forms, 1562-85, etc.); Strigelius, *Scholia* (on the books of the O. T. separately, Lips. etc. 1566 sq., 18 vols. 8vo) and *Hypomnemata* (on the N. T., Lips. 1565, 8vo, and later); L. Osiander, *Annotationes* (Tüb. 1573-84, 8 vols., 1587, 1 vol. 4to, 1589-92, 1597, Franc. 1609, 3 vols. fol.; also in German, Stuttg. 1600, and often); Tremellius and Beza, *Scholia et Notæ* [chiefly notes by Tremellius and Junius] (Gen. 1575 9, Lond. 1593, fol., and later); Brentz, *Commentarii* [sermons] (in his *Opp.* i-vii, Tüb. 1576-90); *Calvin, *Commentarii* [except Judges, Ruth, 2 Sam., Kings, Chron., Esther, Neh., Ezra, Prov., Eccles., Cant., and Rev.] (at various times in different languages; together in Latin, in his *Opera*, Geneva, 1578, 12 vols.,

1617, 7 vols., Amst. 1671, 9 vols. fol.; in English [except 1 Sam. and Job], Edinb. 1845-56, 52 vols. 8vo); *Lucas Brugensis, *Notationes* (Antw. 1580, 4to; also in the *Critici Sacri*); also his and Molanus's and others' notes in the *Biblia Lovanensis* (Antw. 1580, 1582 sq.; 1590, fol.; also in the *Critici Sacri*); Chytræus, *Commentarii* [on most of the books of Scripture] (in *Opp. Exeg.* Vitemb. 1590-2, Lips. 1598-9, 2 vols. fol.); *Sa, *Notationes* (4to, Antw. 1598, 1610, Lugd. 1609, 1647, Colon. 1610, 1620; fol. Lugd. 1641; also in Mariana's *Scholia*, Antw. 1624, fol., and in De la Haye's *Biblia*, Par. 1643, fol.); Piscator, *Commentarii* (Herb. 1601 sq., 24 vols. 8vo; 1643-5, 4 vols. fol., N. T. also separate); Diodati, *Annotationes* (Genev. 1607, fol.; in English, Lond. 1608, enlarged 1651, fol.); Cramer, *Auslegung* (Argent. 1619, 3 vols. 4to; without the text, 1727, 4to; F. ad M. 1780, 2 vols. 4to); *Mariana, *Scholia* (Madrid, 1619, Paris, 1620, Antw. 1624, fol.); *Estius, *Annotationes* (Antw. 1621, fol.; Colon. 1622, 4to; enlarged by Nemius, Duaci, 1628, Antw. 1653, Par. 1663, 1683, Mogunt. 1668, fol., and in De la Haye; also with the author's excellent notes on the Epistles, Antw. 1699, fol.); Pareus, *Commentaria* [on most of the books of the Bible] (at different times, also collected Francfort, 1628, 1641, 1648, Gen. 1642, fol.; and in *Opp. Exeg.* Franc. 1647, 3 vols. fol.); Haræus, *Expositiones* [Patristic and mystical] (Antw. 1630, fol.); *Menochius, *Expositio* (fol. Colon. 1630, 3 vols.; Antw. 1679, Lugd. 1683, 1695, 1 vol.; with important additions by Tournemine, Par. 1719, 2 vols., Ven. 1722, 1 vol.; also in De la Haye, etc.); *Tirinus, *Commentarius* [chiefly compiled, especially from A Lapide] (fol. Antw. 1632, 3 vols.; 1645, 1656, 1668, 1688, 1719, Lugd. 1664, 1678, 1690, 1697, 1702, Venice, 1688, 1704, 1709, 1724, Aug. Vind. 1704, 2 vols.; also in De la Haye's *Biblia* and Poole's *Synopsis*); Strabo Fuldensis [ed. Leander], *Glossa* [with Lyra's *Postilla*] (Antw. 1634, 6 vols. fol.); Haak, *Dutch Annotations of Syn. of Dort* (Lond. 1637, 1657, 2 vols. fol.); Gordon, *Commentaria* (Par. 1636, 3 vols. fol.); Card. Cajetan, *Commentarii* (Lugd. 1639, 5 vols. fol.); the Nuremberg (otherwise Vinarian or Ernestian, *Erklärung* [by various authors, edited by Gerhard, Major, and other Jena professors] (Nürnb. 1640-2, and often afterwards, fol.); Quistorp, *Annotationes* (Rost. 1643, 2 vols. 4to); *De la Haye, *Biblia Magna* [a collection of the comments of Gagnæus, Este, Sa, Menoch, and Tirinus] (Par. 1643, 5 vols. fol.)· also his *Biblia Maxima* [an enlarged but less correct edition of the preceding, with some omissions, and the addition of De Lyra's and some original comments] (Par. 1660, 19 vols. fol.); Bp. Hall, *Contemplations* (in *Works*, i, ii, Lond. 1647; also often since separately); Friedlib, *Observationes* (Stral. 1649-50, 2 vols. fol.; enlarged, F. ad M. 1650); the Westminster Assembly's (q. v.) *Annotations* [by various divines] (Lond. 1650-7, 2 vols.; 3d ed. 1657, 3 vols. fol.); Escobar and Mendoza, *Commentarii* (Lugd. 1652-67, 9 vols. fol.); Mayer, *Commentary* [chiefly compiled] (Lond. 1653, 6 vols. fol., and 1 vol. in 4to, etc.); Trapp, *Commentary* [quaint] (Lond. 1654, 5 vols. fol.; 1867 sq., 8vo); *Grotius, *Annotationes* (O. T., Par. 1654, 3 vols. fol.; Venice, 1663, fol.; N. T., Par. 1644, 1646, 1649, fol., etc.; together, Lond. 1660, fol.; also in *Opera*, i, ii; and the *Critici Sacri*, vii, abridged by Moody, Lond. 1727, 2 vols. 4to); the *Critici Sacri* (q. v.), ed. by Bp. Pearson and others [an immense collection of exegetical treatises by various eminent scholars] (Lond. 1660, 9 vols. fol.; with the 2 additional vols. called *Supplementum*, F. ad M. 1696-1701, 9 vols. fol.; and with 4 more vols. called *Thesaurus Theologico-philologicus* et *Thesaurus Novus*, Amst. 1698-1732, 13 vols. fol.; condensed by Poole in his *Synopsis*); Pruckner, *Commentarium* (F. ad. M. 1663, 2 vols. fol.); F. de Carrières, *Commentaria* (Lugd. 1663, fol.); Brenius, *Adnotationes* [Socinian] (ed. Cuper, Amst. 1664, fol.); A Lapide, *Commentaria* [except Job and the Psalms] (Antw. 1664, 1671, 1681, 1694, 1705, Venice, 1708, 1730, 10 vols. fol.); Heinlin, Rebstock, Zeller, Jäger, Pfaff, and Hochstetter, *Summarien* [by order of the duke of Würtemberg] (Stuttgart, 1667, Lpz. 1709, Rudest. 1721, 4to, Lpz. 1721, fol. in 6 vols.); S. and H. Marestus, *Bibel* (Amst. 1669, fol.); *Poole, *Synopsis* [in large part a condensation of the *Critici Sacri*, De la Haye's *Biblia*, and similar works] (Lond. 1690-1676, 4 vols. in 5, fol.; Franc. 1679, 5 vols. fol.; Ultraj. 1685, 5 vols. fol.; Franc. 1694, 5 vols. 4to; 1712, 5 vols. fol.); a different work is his original *Annotations* [completed by others] (London, 1683-5, also 1700, 2 vols. fol.; Edinb. 1803, 4 vols. 4to; Lond. 1840, 3 vols. 8vo); De Sacy, *Sainte Bible*, etc. [chiefly Patristic] (Par. 1672, 30 vols. 8vo; Leyd. 1696, 32 vols. 12mo; Bruxelles, 1723, 3 vols. 4to; Lyons, 1702, 3 vols. fol., and other eds.); Calovius, *Biblia illustrata* [in opposition to Grotius] (F. ad M. 1672-6, Dresd. 1719, 4 vols. fol.); Cocceius, *Commentarii* [on many portions of Scripture] (at various times, separately; also in *Opera*, i-v, Amst. 1675, fol. and later); Olearius, *Erklär.* (Lips. 1618-81, 5 vols. fol.); *Patrick, Lowth, Arnold, Whitby, and Lowman, *Commentary* [originally in separate portions by each author on the successive books, Lond. 1679 sq.] (Lond. 1738 sq., 7 vols. fol.; ed. Pitman, Lond. 1821, 6 vols. 4to; Phila. 1844, Lond. 1853, 4 vols. 8vo); *Schmid, *Commentarii* [on most of the books of Scripture] (at various places, separately, 1680-1704, 18 vols. 4to); Allix, *Reflections* (Lond. 1688, 2 vols. in 1, 8vo; 1809, 8vo; Oxf. 1822, 8vo; also in Bishop Watson's *Theol. Tracts*; also in French, Lond. 1687-9, 8vo; Amst. 1689, 2 vols. 8vo); S. Clarke, *Annotations*, etc. (Lond. 1690, 1760, Glasg. 1765, fol.); Ness, *Hist. and Mystery* (Lond. 1690-96, 4 vols. fol.); L. de Carrières, *Commentaire* (Paris, 1701-16, 24 vols. 12mo); Haase, *Anmerk.* etc. (Lpz. 1704, 1710, 1733, 8vo; 1707, fol.; also in Dutch, Amst. 1725, 4to); Du Hamel, *Annotationes*, etc. (Par. 1706, 2 vols. fol.); Martin, *Bible expliquée* (Amst. 1707, 2 vols. fol.); *Henry, *Exposition*, etc. [completed from Acts by others] (London, 1707-15, 5 vols. fol.; 4th ed. complete, London, 1737, 5 vols. fol., and often since; new ed. Lond. 1849, 6 vols. 4to; condensed in Jenks's *Comprehensive Commentary*); *Calmet, *Commentaire* (Par. 1707-16, 23 vols., 1713, 26 vols. 4to; 1724, 8 vols. in 9, fol.; the *Dissertations*, etc., separately, Par. 1715, 5 vols. 8vo, 1720, 3 vols. 4to; the last in Latin by Manse, Lucca, 1729, 2 vols. fol., and the whole by the same, Wirceb. 1789-93, 19 vols. 4to; also in German by Mosheim, Brem. 1738-47, 6 vols. 8vo; abridged in French, Par. 1721, 8vo; many of its notes were inserted in the Abbé Vence's *Bible*, Paris, 1767-73, 17 vols. 4to, and later); Wells, *Paraphrase*, etc. (in parts, Oxf. 1708-27, 7 vols. 4to and 8vo): Raphelius, *Annotationes* [illustrations from Xenophon, etc.] (first separately on the O. and N. T., Hamb. 1709-15, 2 vols. 8vo; together, Lunenb. 1731, 8vo; enlarged, L. Bat. 1747, 2 vols. 8vo); Horche, *Erklärung* [mystical—Cant. and Rev. omitted] (Marb. 1712, 4to); Mdme. Guyon, *Explications* [mystical] (Col. et Amst. 1713-5, 20 vols. 12mo); Osterwald, *Observations*, etc. [tr. from his French *Bible*, Amst. 1714, fol.] (by Chamberlayne, Lond. 1722, 8vo; 5th edition enlarged, Lond. 1779, 2 vols. 8vo); Anon. *Bibel*, etc. (Stuttg. 1716, fol.); Parker, *Commentary* [in large part compiled] (Oxf. 1717-25, 4to); Anon. *Bibel*, etc. (Lemgo, 1720, fol.); the Berleburg (q. v.) *Bibel* [pietistical], by various anonymous editors (Berleburg, 1726-9, 7 vols. fol.); Pitschman, *Anmerk.* (Zitt. 1728, 4to); *Gill, *Exposition* [largely from Rabbinical sources] (originally in separate works, Lond. 1728-67, 9 vols. fol.; together, Lond. 1810, 9 vols. 4to; 1854, 6 vols. 8vo); Pfaff and Klemm, *Anmerk.* (Tüb. 1729, fol.); *Lang, *Erklär.* [in part by Adler] (in separate works, Hal. 1729-37, 7 vols. fol.); also substantially condensed in his *Biblia parenthetica* [in German—an elliptical or paraphrastic elucidation] (Lpz. 1743, 2 vols. fol.); Zeltner, *Erklärung* (Alt. 1730, 8vo; 1740, 4to); Wall, *Notes* (London, 1730-39, 3 vols. 8vo); Willisch, *Selbst-Erklär.* [completed by Haymann] (Freib. 1739,

fol.); Schmidt, *Erklär.* (Erf. 1740, 4to); Starck, *Auslegungen* (O. Test., Lpz. and Hal. 1741-7, 4 vols., N. T., Lpz. 1733-7, 3 vols. [and at other times in parts], 4to); *Chais [completed by Maclaine], *Commentaire*, etc. [from the best English interpreters] (Hague, 1743-90, 7 vols. 4to; the former part also in German, Lips. 1749-62, 4 vols. 4to); Luca ed. [by order of the pope], *Commentarii*, etc. [from various authors] (Ven. 1745, 4to); also [by the same authority] ed. Cartier, *Commentarii* [a more extensive work, with a Germ. version, for the use of the monastery of Ettenheim] (Constantine, 1751, fol.); Edwards, *Notes* (in *Works*, ii, 676); Koke, *Anmerk.* (Hild. 1750, 4to); Slezina, *Commentarius* (Prague, 1757-60, 1770, 4 vols. 4to); Goadby, *Illustration* [Arian] (London, 1759-70, 3 vols. fol., and later); Rider, *Family Bible* (Lond. 1763, 3 vols. fol.); Wesley, *Notes* [those on the N. T. are short, but valuable] (London, 1764, 4 vols. 4to; also in *Works*); Allen, *Exposition* [Antinomian] (London, 1765, 2 vols. fol., and later); Liebich ed., *Anmerk.* (Hirschberg, 1765, 3 vols. 8vo); *Dodd, *Commentary*, etc. [in part extracts from MSS.] (in numbers, Lond. 1765; complete, 1770, 3 vols. fol.); Hawies, *Expositor* (London, 1765-66 [also published in America], 2 vols. fol.); J. S. Braun, *Erklärung* (Erf. 1768, 3 vols. fol.); Michaelis, *Anmerk.* (Gött. and Gotha, 1769-83, and 1790 2, 17 vols. 4to; also in Dutch, Utrecht, 1780-86, 8vo; and *Erinnerungen* on the same by Schulz, Halle, 1790-4, 6 vols. 4to); Körner, *Anmerk.* (Lpz. 1770-3, 3 vols. 4to); Moldenhauer, *Erläut.* (Quedlinb. 1774-87, 10 vols. 4to and 2 vols. fol.); Weitenauer [Rom. Cath.], *Anmerk.* (Augsb. 1777-82, 14 vols. 8vo); Hezel, *Anmerk.* (Lemgo, 1780-91, 10 vols. 8vo; condensed by Schenk, Lemgo, 1787, 8vo; with the author's partial enlargement, Halle, 1786-90, 9 vols. 8vo; and this again annotated by Roos, Tübing. 1788, fol.); Bp. Wilson, *Notes*, etc. (Lond. 1785, 3 vols. 4to); H. Braun, *Anmerk.* (Nürnb. 1786, 8vo; ed. by Feder, 1803, 3 vols.; by Allioli, 1830-2, 6 vols.); also his [patristic] *Bemerk.* (Augsb. 1788-1805, 13 vols. 8vo; with a *Lexikon*, 1806, 2 vols. fol.); Yonge, *Commentary* (Lond. 1787, 4to); *Scott, *Notes*, etc. (in parts, Lond. 1788 sq., 4 vols. 4to; 5th ed. Lond. 1822, 6 vols. 4to; new ed. Lond. 1841, 6 vols. 4to; often reprinted in England and America; also condensed in Jenks's *Comprehensive Commentary*); *Rosenmüller and Son, *Scholia* [on all the books except Sam.-Ezra] (O. T. by the son, Lips. 1788-1817, etc., 22 vols. 8vo; also abridged, by Lechler, Lips. 1828-36, 6 vols. 8vo; the N. T. by the father, Norimb. 1777, 6th ed. enlarged by the son, 1815-31, 5 vols. 8vo); Brentano, *Erklär.* (Frkft. 1797-9, 13 vols. 8vo); Horst, Rullmann, Scherer, and others, *Commentar* (Altenb. 1799-1809, 7 vols. 8vo); Alber, *Interpretatio* (Pesth, 1801-4, 16 vols. 8vo); Bulkley, *Notes* [chiefly illustrations from the ancients] (ed. by Toulmin, Lond. 1802, 3 vols. 8vo); Priestley, *Notes* (Northumb. 1803, 4 vols. 8vo); Coke, *Commentary* [mostly a reprint of Dodd] (Lond. 1806, 6 vols. 4to); Webster, [Rev. T.], *Notes* [chiefly from the Genevan Bible and Beza] (London, 1810, 4to); *A. Clarke, *Commentary* (Lond. 1810-26, 8 vols. 4to; N. Y. 1811-25, 6 vols. 4to; new ed. Lond. and N. Y. 1832, 6 vols. 8vo; Lond. 1844, 6 vols. 4to and 8vo); Hewlett, *Notes* (London, 1811, 3 vols. 4to); Fawcott, *Devotional Bible* (London, 1811, 2 vols. 4to); Benson, *Commentary* [largely after Poole] (Lond. 1811-18, 5 vols. 4to; 6th ed. 1848, 6 vols. 8vo; N. Y. 1839, 5 vols. 8vo); Hawker, *Commentary* (Lond. 1816-22, 10 vols. 12mo, and later); Mrs. Cornwallis, *Observations* (London, 1817, 4 vols. 8vo); D'Oyly and Mant, *Notes* [chiefly compiled] (Oxf. 1817, 3 vols. 4to, and often since; N. Y. 1818-20, 2 vols. 4to; London, 1856, 1861, 3 vols. 8vo); Von Meyer, *Anmerkungen* (F. ad M. 1819, 1822, 3 vols. 8vo); Anon. *Erläut.* (Quedlinb. 1819-21, 5 vols. 8vo); the Richters' *Hausbibel* (Barm. 1820, 8vo); Mrs. Stevens, *Comments* (Knaresb. 1823-31, 20 vols. 8vo); Boothroyd, *Version*, etc. (Huddersf. 1824, 3 vols. 4to; Lond. 1853, 8vo); Williams, *Cottage Bible* (Lond. 1825-27, 3 vols. 8vo); Greenfield, *Comprehensive Bible* (Lond. 1827, 4to); Plumptre, *Sermons* (London, 1827, 2 vols. 8vo); Stokes, *Commentary* [chiefly from Scott] (London, 1835-36, 6 vols. 8vo and 12mo); Abbé Glaire, *Notes*, etc. [from various authors] (Par. 1835-38, 3 vols. 4to); Jenks, *Comprehensive Commentary* [chiefly an assemblage of Henry, Scott, and Doddridge] (Brattleb. 1835-38, 5 vols. 8vo); Girdlestone, *Lectures* (Lond. 1835-42, 8 vols. 8vo); Davidson, *Pocket Commentary* (Edinb. 1836, 3 vols. 24mo); Wellbeloved, *Notes*, etc. [Unitarian] (London, 1838, 2 vols. 8vo); *Kitto, *Pict rial Bible*, etc. [valuable for illustrations of Oriental customs] (Lond. 1838-39, 4 vols. 4to; 1855, 4 vols. 8vo; also without the text, as *Illustrated Commentary*, Lond. 1840, 5 vols. 8vo); Cobbin, *Condensed Commentary* (2d ed. Lond. 1839, 8vo); also *Portable Commentary* (Lond. 1846, 12mo); Abbé Migne, *Commentarius* [chiefly compiled] (Paris, 1839-43, 27 vols. 8vo); *Simeon, *Discourses* [mostly practical] (Lond. 1840, 21 vols. 8vo); Sutcliffe, *Commentary* (5th ed. Lond. 1850, 2 vols. 8vo; 1854, 1 vol. 8vo); Bunsen, *Bibelwerk* [intended as a popular elucidation—learned and ingenious, but extravagant] (Lpz. 1858 sq., 9 vols. [18 half vols.] 8vo [pt. i, translation; ii, exposition; iii, history, with suppl. Atlas]); Lange, *Bibelwerk* [mostly theological and homiletical] (Bielefeld, 1864 sq., 8vo [a large part of the N. T. has been issued, and several books of the O. T., in successive volumes, a considerable number of which have been translated in Clark's *Foreign Theol. Lib.*, Edinb., and some of them in N. Y., greatly enlarged and improved under the editorship of Dr. Schaff]); Wordsworth, *Notes* (Lond. 1865 sq., 8vo); Jamieson, etc., *Commentary* (Lond. 1868 sq., 8vo).

Commerce, a word that does not occur in the Auth. Vers., which uses the term "trade" or "traffic;" but the idea is designated by two Heb. words: 1. רְכֻלָּה, *rekullah'* (Gesenius, *Thes. Heb.* p. 1289); Sept. in Ezek. xxvi, 12, τὰ ὑπάρχοντα, Vulg. *negotiationes*; in xxvii, 5, 16, 18, ἐμπορία, *negotiatio*; from רָכַל, *rakal'*, to *travel* (on foot); 2. סְחֹרָה, *sechorah'* (Gesen. *ib.* p. 946), Sept. ἐμπορία, Vulg. *negotiatio*, Ezek. xxvii, 15; from סָחַר, *sachar'*, to *travel* (migrate). See TRADE.

1. Commerce, in its usual acceptation, means the exchange of one thing for another—the exchange of what we have to spare for what we want, in whatever country it is produced. The origin of commerce must have been nearly coeval with the world. As pasturage and agriculture were the only employments of the first inhabitants, so cattle, flocks, and the fruits of the earth were the only objects of the first commerce, or that species of it called barter. It would appear that some progress had been made in manufactures in the ages before the flood. The building of a city or village by Cain, however insignificant the houses may have been, supposes the existence of some mechanical knowledge. The musical instruments, such as harps and organs, the works in brass and in iron exhibited by the succeeding generations, confirm the belief that the arts were considerably advanced. The construction of Noah's ark, a ship of three decks, covered over with pitch, and much larger than any modern effort of architecture, proves that many separate trades were at that period carried on. There must have been parties who supplied Noah and his three sons with the great quantity and variety of materials which they required, and this they would do in exchange for other commodities, and perhaps money. That enormous pile of building, the tower of Babel, was constructed of bricks, the process of making which appears to have been well understood. Some learned astronomers are of opinion that the celestial observations of the Chinese reach back to 2249 years before the Christian æra; and the celestial observations made at Babylon, contained in a calendar of above nineteen centuries, transmitted to Greece by Alexander, reach back to within

fifteen years of those ascribed to the Chinese. The Indians appear to have had observations quite as early as the Babylonians. See ANTEDILUVIANS.

Such of the descendants of Noah as lived near the water may be presumed to have made use of vessels built in imitation of the ark—if, as some think, that was the first floating vessel ever seen in the world—but on a smaller scale, for the purpose of crossing rivers. In the course of time the descendants of his son Japheth settled in "the isles of the Gentiles," by which are understood the islands at the east end of the Mediterranean Sea, and those between Asia Minor and Greece, whence their colonies spread into Greece, Italy, and other Western lands. See ETHNOLOGY.

In short, from the time that men began to live in cities, trade, in some shape, must have been carried on to supply the town-dwellers with necessaries (see Heeren, *Afr. Nat.* i, 469); but it is also clear that international trade must have existed and affected to some extent even the pastoral nomade races, for we find that Abraham was rich, not only in cattle, but in silver, gold, and gold and silver plate and ornaments (Gen. xiii, 2; xxiv, 22, 53); and further, that gold and silver in a manufactured state, and silver, not improbably in coin, were in use both among the settled inhabitants of Palestine, and the pastoral tribes of Syria at that date (Gen. xx, 16; xxiii, 16; xxxviii, 18; Job xlii, 11), to whom those metals must in all probability have been imported from other countries (Hussey, *Anc. Weights*, c. xii, 3, p. 193; Kitto, *Phys. Hist. of Pal.* p. 109, 110; see Herod. i, 215). See CITY.

2. Among trading nations mentioned in Scripture, Egypt holds in very early times a prominent position (see Hubbard, *Commerce of Ancient Egypt*, in the *Biblical Repository*, April, 1836), though her external trade was carried on, not by her own citizens, but by foreigners, chiefly of the nomade races (Heeren, *Afr. Nat.* i, 468; ii, 371, 372). It was an Ishmaelite caravan, laden with spices, which carried Joseph into Egypt, and the account shows that slaves formed sometimes a part of the merchandise imported (Gen. xxxvii, 25; xxxix, 1; Job vi, 19). From Egypt it is likely that at all times, but especially in times of general scarcity, corn would be exported, which was paid for by the non-exporting nations in silver, which was always weighed (Gen. xli, 57; xlii, 3, 25, 35; xliii, 11, 12, 21). These caravans also brought the precious stones as well as the spices of India into Egypt (Exod. xxv, 3, 7; Wilkinson, *Anc. Eg.* ii, 235, 237). Intercourse with Tyre does not appear to have taken place till a later period, and thus, though it cannot be determined whether the purple in which the Egyptian woollen and linen cloths were dyed was brought by land from Phœnicia, it is evident that colored cloths had long been made and dyed in Egypt, and the use, at least, of them adopted by the Hebrews for the tabernacle as early as the time of Moses (Exod. xxv, 4, 5; comp. Heeren, *Asiat. Nat.* i, 352; see Herod. i, 1). The pasture-ground of Shechem appears from the story of Joseph to have lain in the way of these caravan journeys (Gen. xxxvii, 14, 25), probably a thoroughfare from Damascus. See CARAVAN.

At the same period it is clear that trade was carried on between Babylon and the Syrian cities (see Hubbard, *Commerce of Anc. Bab.* in the *Biblical Repos.* July, 1837), and also that gold and silver ornaments were common among the Syrian and Arabian races; a trade which was obviously carried on by land-carriage (Num. xxxi, 50; Josh. vii, 21; Judg. v, 30; viii, 24; Job vi, 19). See BABYLON.

Sidon, which afterwards became so celebrated for the wonderful mercantile exertions of its inhabitants, was founded about 2200 years before the Christian æra. The neighboring mountains, being covered with excellent cedar-trees, furnished the best and most durable timber for ship-building. The inhabitants of Sidon accordingly built numerous ships, and exported the produce of the adjoining country, and the various articles of their own manufacture, such as fine linen, embroidery, tapestry, metals, glass, both colored and figured, cut, or carved, and even mirrors. They were unrivalled by the inhabitants of the Mediterranean coasts in works of taste, elegance, and luxury. Their great and universally acknowledged pre-eminence in the arts procured for the Phœnicians, whose principal seaport was Sidon, the honor of being esteemed, among the Greeks and other nations, as the inventors of commerce, ship-building, navigation, the application of astronomy to nautical purposes, and particularly as the discoverers of several stars nearer to the north pole than any that were known to other nations; of naval war, writing, arithmetic, book-keeping, measures and weights—to which, it is probable, they might have added money. See SIDON.

The earliest accounts of bargain and sale reach no higher than the time of Abraham, and his transaction with Ephron. He is said to have weighed unto him "400 shekels of silver, current money with the merchant" (Gen. xxiii, 16). The word merchant implies that the standard of money was fixed by usage among merchants, who comprised a numerous and respectable class of the community. Manufactures were by this time so far advanced that not only those more immediately connected with agriculture, such as flour ground from corn, wine, oil, butter, and also the most necessary articles of clothing and furniture, but even those of luxury and magnificence, were much in use, as appears by the ear-rings, bracelets of gold and of silver, and other precious things presented by Abraham's steward to Rebecca (Gen. xxiv, 22, 53.) See BARGAIN.

In the book of Job, whose author, in the opinion of the most learned commentators, resided in Arabia, and was nearly contemporary with Abraham, much light is thrown upon the commerce, manufactures, and science of the age and country in which he lived. There is mention of gold, iron, brass, lead, crystal, jewels, the art of weaving, merchants, gold brought from Ophir, which implies commerce with a remote country, and topazes from Ethiopia; ship-building, so far improved that some ships were distinguished for the velocity of their motion; writing in a book, and engraving letters or writing on plates of lead and on stone with iron pens, and also seal-engraving; fishing with hooks, and nets, and spears; musical instruments, the harp and organ; astronomy, and names given to particular stars. These notices tend to prove that, although the patriarchal system of making pasturage the chief object of attention was still maintained by many of the greatest inhabitants where the author of the book of Job resided, the sciences were actively cultivated, the useful and ornamental arts in an advanced state, and commerce prosecuted with diligence and success; and this at a period when, if the chronology of Job is correctly settled, the arts and sciences were scarcely so far advanced in Egypt, from whence, and from the other countries bordering upon the eastern part of the Mediterranean Sea, they afterwards gradually found their way into Greece. See JOB.

The inhabitants of Arabia appear to have availed themselves at a very early period of their advantageous situation between the two fertile and opulent countries of India and Egypt, and to have obtained the exclusive monopoly of a very profitable carrying trade between those countries. They were a class of people who gave their whole attention to merchandise as a regular and established profession, and travelled with caravans between Arabia and Egypt, carrying upon the backs of camels the spiceries of India, the balm of Canaan, and the myrrh produced in their own country, or of a superior quality from the opposite coast of Abyssinia—all of which were in great demand among the Egyptians for embalming the dead, in their

religious ceremonies, and for ministering to the pleasures of that superstitious and luxurious people. The merchants of one of these caravans bought Joseph from his brothers for twenty pieces of silver, and carried him into Egypt. The southern Arabs were eminent traders, and enjoyed a large proportion, and in general the entire monopoly, of the trade between India and the western world from the earliest ages, until the system of that important commerce was totally overturned when the inhabitants of Europe discovered a direct route to India by the Cape of Good Hope. See ARABIA.

At the period when Joseph's brethren visited Egypt, inns were established for the accommodation of travellers in that country and in the northern parts of Arabia. The more civilized southern parts of the peninsula would no doubt be furnished with caravanserais still more commodious. See CARAVANSERAI.

During the residence of the Israelites in Egypt manufactures of almost every description were carried to great perfection. Flax, fine linen, garments of cotton, rings and jewels of gold and silver, works in all kinds of materials, chariots for pleasure, and chariots for war, are all mentioned by Moses. They had extensive manufactories of brick. Literature was in a flourishing state; and, in order to give an enlarged idea of the accomplishments of Moses, it is said he was "learned in all the wisdom of the Egyptians" (Acts xii, 22). See EGYPT.

The expulsion of the Canaanites from a great part of their territories by the Israelites under Joshua led to the gradual establishment of colonies in Cyprus, Rhodes, and several islands in the Ægean Sea; they penetrated into the Euxine or Black Sea, and, spreading along the shores of Sicily, Sardinia, Gaul, Spain, and Africa, established numerous trading places, which gradually rose into more or less importance. At this period mention is first made of Tyre as a strong or fortified city, whilst Sidon is dignified with the title of Great. See CANAANITE.

The rising prosperity of Tyre soon eclipsed the ancient and long-flourishing commercial city of Sidon. About 600 years before Christ her commercial splendor appears to have been at its height, and is graphically described by Ezekiel (xxvii). The imports into Tyre were fine linen from Egypt; blue and purple from the isles of Elishah; silver, iron, tin, and lead from Tarshish—the south part of Spain; slaves and brazen vessels from Javan or Greece, Tubal, and Meshech; horses, slaves bred to horsemanship, and mules from Togarmah; emeralds, purple, embroidery, fine linen, corals, and agates from Syria; corn, balm, honey, oil, and gum from the Israelites; wine and wool from Damascus; polished ironware, precious oils, and cinnamon from Dan, Javan, and Uzal; magnificent carpets from Dedan; sheep and goats from the pastoral tribes of Arabia; costly spices, some the produce of India, precious stones, and gold from the merchants of Sheba or Sabæa, and Ramah or Regma, countries in the south part of Arabia; blue cloths, embroidered works, rich apparel in corded cedar-chests, supposed to be original India packages, and other goods from Sheba, Ashur, and Chilmad, and from Haran, Canneh, and Eden, trading ports on the south coast of Arabia. The vast wealth that thus flowed into Tyre from all quarters brought with it its too general concomitants—extravagance, dissipation, and relaxation of morals. See TYRE.

The subjection of Tyre, "the renowned city which was strong in the sea, whose merchants were princes, whose traffickers were the honorable of the earth," by Cyrus, and its subsequent overthrow by Alexander, after a determined and most formidable resistance, terminated alike the grandeur of that city and the history of ancient commerce, as far as they are alluded to in Scripture. (See Anderson's *History of Commerce*, Lond. 1764, and latest 1801; Vincent's *Commerce and Navigation of the Indian Ocean*, Lond. 1807; Heeren's *Researches;* Barnes on the *Ancient Commerce of Western Asia*, in the *Biblical Repository*, Oct. 1840, Jan. 1841; Gilbert, *Lects. on Anc. Commerce*, Lond. 1847.) See ALEXANDER.

3. Until the time of Solomon the Hebrew nation may be said to have had no foreign trade (see Tychsen, *De Comm. et Nav. Hebræorum*, in the *Com. Soc. Gott.* 1808, p. 150-79). Foreign trade was indeed contemplated by the Law, and strict rules for morality in commercial dealings were laid down by it (Deut. xxviii, 12; xxv, 13-16; Lev. xix, 35, 36), and the tribes near the sea and the Phœnician territory appear to have engaged to some extent in maritime affairs (Gen. xlix, 13; Deut. xxxiii, 18; Judg. v, 17); but the spirit of the Law was more in favor of agriculture and against foreign trade (Deut. xvii, 16, 17; Lev. xxv; see Josephus, *Apion*, i, 12). See ALLIANCE.

During the reign of David, king of Israel, that powerful monarch disposed of a part of the wealth obtained by his conquests in purchasing cedar-timber from Hiram, king of Tyre, with whom he kept up a friendly correspondence while he lived. He also hired Tyrian masons and carpenters for carrying on his works. See DAVID. Solomon, however, organized an extensive trade with foreign countries, but chiefly, at least so far as the more distant nations were concerned, of an import character. He imported linen yarn, horses, and chariots from Egypt. Of the horses, some appear to have been resold to Syrian and Canaanitish princes. For all these he paid gold, which was imported by sea from India and Arabia by his fleets in conjunction with the Phœnicians (1 Kings x, 22-29; see Gesenius, *Thes. Heb.* p. 1202; comp. Heeren, *As. Nat.* i, 334). It was by Phœnicians also that the cedar and other timber for his great architectural works was brought by sea to Joppa, whilst Solomon found the provisions necessary for the workmen in Mount Lebanon (1 Kings v, 6, 9; 2 Chron. ii, 16). The united fleets used to sail into the Indian Ocean every three years from Elath and Eziongeber, ports on the Ælanitic gulf of the Red Sea, which David had probably gained from Edom; and they brought back gold, silver, ivory, sandal-wood, ebony, precious stones, apes, and peacocks. Some of these may have come from India and Ceylon, and some from the coasts of the Persian Gulf and the east coast of Africa (2 Sam. viii, 14; 1 Kings ix, 26; x, 11, 22; 2 Chron. viii, 17; see Herod. iii, 114; comp. Livingstone, *Travels*, p. 687, 662). See OPHIR.

But the trade which Solomon took so much pains to encourage was not a maritime trade only. He built, or more probably fortified, Baalbek and Palmyra; the latter at least expressly as a caravan station for the land-commerce with eastern and south-eastern Asia (1 Kings ix, 18). See SOLOMON.

After his death the maritime trade declined, and an attempt made by Jehoshaphat to revive it proved unsuccessful (1 Kings xxii, 48, 49). See TARSHISH. We know, however, that Phœnicia was supplied from Judæa with wheat, honey, oil, and balm (1 Kings v, 11; Ezek. xxvii, 17; Acts xii, 20; see Josephus, *War*, ii, 21, 2; *Life*, 13), whilst Tyrian dealers brought fish and other merchandise to Jerusalem at the time of the return from captivity (Neh. xiii, 16), as well as timber for the rebuilding of the Temple, which then, as in Solomon's time, was brought by sea to Joppa (Ezra iii, 7). Oil was exported to Egypt (Hos. xii, 1), and fine linen and ornamental girdles of domestic manufacture were sold to the merchants (Prov. xxxi, 24). The successive invasions to which Palestine was subjected, involving both large abstraction of treasure by invaders, and heavy imposts on the inhabitants to purchase immunity or to satisfy demands for tribute, must have impoverished the country from time to time (under Rehoboam, 1 Kings xiv, 26; Asa xv, 18; Joash, 2 Kings, xii, 18; Amaziah, xiv, 13; Ahaz, xvi, 8; Hezekiah, xviii, 15-16; Jehoahaz and Jehoiakim, xxiii,

33, 35: Jehoiachin, xxiv, 13); but it is also clear, as the denunciations of the prophets bear witness, that much wealth must somewhere have existed in the country, and much foreign merchandise have been imported; so much so that, in the language of Ezekiel, Jerusalem appears as the rival of Tyre, and through its port, Joppa, to have carried on trade with foreign countries (Isa. ii, 6, 16; iii, 11, 23; Hos. xii, 7; Ezek. xxvi, 2; Jonah, i, 3; comp. Heeren, *As. Nat.* i, p. 328). See PHŒNICIA.

Under the Maccabees Joppa was fortified (1 Macc. xiv, 34), and later still Cæsarea was built and made a port by Herod (Joseph. *Ant.* xv, 9, 6; Acts xxvii, 2). Joppa became afterwards a haunt for pirates, and was taken by Cestius; afterwards by Vespasian, and destroyed by him (Strab. xvi, p. 759; Josephus, *War*, ii, 18, 10; iii, 9, 1). See PALESTINE.

4. The internal trade of the Jews, as well as the external, was much promoted, as was the case also in Egypt, by the festivals, which brought large numbers of persons to Jerusalem, and caused great outlay in victims for sacrifices and in incense (1 Kings viii, 63; comp. Heeren, *Afr. Nat.* ii, 363). See FESTIVAL.

The places of public market were, then as now, chiefly the open spaces near the gates, to which goods were brought for sale by those who came from the outside (Neh. xiii, 15, 16; Zeph. i, 10). See GATE.

The traders in later times were allowed to intrude into the Temple, in the outer courts of which victims were publicly sold for the sacrifices (Zech. xiv, 21; Matt. xxi, 12; John ii, 14). See TEMPLE.

In the matter of buying and selling great stress is laid by the Law on fairness in dealing. Just weights and balances are stringently ordered (Lev. xix, 35, 36; Deut. xxv, 13-16). Kidnapping slaves is forbidden under the severest penalty (Exod. xxi, 16; Deut. xxiv, 7). Trade in swine was forbidden by the Jewish doctors (see Surenhusius, *Mischna, de damn.* c. 7, vol. iv, 60; Lightfoot, *Hor. Heb. on Matth.* viii, 33; Saalschütz, *Arch. Hebr.* c. 15, 16). See MERCHANT.

Commination, an office in the Liturgy of the Church of England, which contains God's *threatenings* against impenitent sinners. It is directed to be used on the first day of Lent, and at other times, as the ordinary shall appoint. It is called Commination from the opening Exhortation to Repentance, in which the curses of God against sin are recited. The office for "A Commination, or denouncing of God's anger and judgments against sinners," was left out of the American Prayer-book, but the three concluding prayers of that office were introduced into the service for Ash-Wednesday, immediately after the Collect for that day. See Procter on *Common Prayer*, 429; Hook, *Church Dictionary*, s. v.; Eden, *Churchman's Dictionary*, s. v.

Commissary. 1. In the Church of England, an officer who fills the bishop's place in exercising ecclesiastical jurisdiction, in places so far distant from the chief city that the chancellor cannot call the people to the bishop's principal consistory court without great trouble to them.—Eden, *Churchman's Dictionary*, s. v.

2. In the Church of Rome, archbishops, bishops, or other dignitaries are deputed as *Papal Commissaries* for the exercise of functions properly belonging to the pope; and in the same manner bishops may depute *episcopal commissaries*. If they are deputed for one particular act they are temporary commissaries (*commissarii temporarii*). If several individuals are conjointly deputed for such a function they are called a *commission*. If persons are clothed by the pope, or by a bishop, with power to exercise regularly functions belonging to them, they are called *perpetual commissaries* (*commissarii perpetui*). See Wetzer und Welte, *Kirchen-Lex.* ii, 714.

Commission, 1. דָּת, *dath* (a *mandate*, Ezra viii, 36; elsewhere "decree," etc.); 2. ἐπιτροπή (*full charge*, Acts xxvi, 12).

COMMISSION, ECCLESIASTICAL. See COMMISSARY.

Commissioner, a gloss rendering (1 Macc. ii, 25) for ἀνήρ, *man*, i. e. officer.

Commodiānus, a Christian historian, supposed to have been born in Africa in the second half of the 3d century, and to have been converted from heathenism. He wrote, in a sort of acrostic verse, *LXXX instructiones adv. gentium deos*, which ridicules heathenism and exhorts the Christians to lead a pure life. It also contains Chiliastic notions, and gives out the idea that Nero was the Antichrist. It is one of the oldest monuments of Christian history. It was published by Rigalt (1650); by Priorius, together with the works of Cyprian (Paris, 1666); by Schurzfleisch (Wittenb. 1704, 4to); and by Davisius (Cambridge, 1711). See Clarke, *Succession of Sac. Lit.* i, 171; Wetzer u. Welte, *Kirch.-Lex.* ii, 715.

Commodus, LUCIUS ÆLIUS AURELIUS, a Roman emperor, was born A.D. 161, and succeeded his father, Mark Aurelius, as emperor in 180. From early youth he was noted for weakness of character, licentiousness, and cruelty. His father was the first emperor who issued a decree of persecution against the Christians. On the accession to the throne of Commodus the persecution ceased, owing, it was said, to the influence of his concubine, Marcia. According to Irenæus, Christians were found during the reign of Commodus even in the palace, and in the service of the emperor. But, though Commodus did not decree to persecute the Christians, there were laws according to which Christians who were informed against were to be tried. Thus the learned senator Apollonius, who was informed against by one of his slaves, was condemned to death. Partial persecutions during the reign of Commodus are mentioned by Tertullian, and Irenæus likewise speaks of martyrs of this time. But, as Commodus was supposed to be favorably disposed toward the Christians, the governors of the provinces felt no inclination to carry out the laws against the Christians. —Wetzer u. Welte, *Kirch.-Lex.* ii, 717.

Common (κοινός). The Greek term properly signifies *what belongs to all* (as in Wisd. vii, 3, κοινὸς ἀήρ), but the Hellenists applied it (like the Hebrew חֹל) to what was profane, i. e. *not holy*, and therefore of common or promiscuous use (Acts x, 14). They also applied the term to what was *impure*, whether naturally or legally (as in Mark vii, 2, compared with 1 Macc. i, 47, 62). Finally, it was used of meats forbidden, or such as had been partaken of by idolaters, and which, as they rendered the partakers thereof impure, were themselves called κοινά (common), and ἀκάθαρτα (unclean) (see Kuinöl on Acts x, 14). See CLEAN.

Common-house. A room in a monastery where a fire is constantly kept for the monks to warm themselves.

Common Life. See BRETHREN OF THE COMMON LIFE.

Common Lot, BROTHERS OF THE. See BRETHREN OF THE COMMON LIFE.

Common Prayer, the service-book of the Church of England and of the Protestant Episcopal Church. It is so called because it contains the prayers which the members of those churches use *in common*, as distinguished from their devotions as private individuals. In the view of those churches, the devotions of separate families or persons may be conducted in any mode which best suits the circumstances of each; but joint worship, *common* prayer, must be in forms on which all are previously agreed, because these alone can equally express common wants (see Canons 4, 38, and 98, Church of England, on the obligation to use the Book of Common Prayer· Eden, *Churchman's Diction-*

ary, s. v.). As to the question of the value of such forms, see FORMS OF PRAYER. On liturgies proper (i. e. *communion service*), see LITURGY. We give here a brief sketch of the history of English and American Prayer-books.

I. *The English Prayer-book.*—The "Common Prayer" contains, in one volume, the articles of faith, and all the rites, ceremonies, and prescribed forms of the Church of England; and it is thus not only a Prayer-book, but a Ritual and Confession of Faith. Before the Reformation, the Missals, Breviaries, etc., of the Church of Rome were in use in England. In 1537 the Convocation put forth, in English, "*The godly and pious Institution of a Christian Man*," containing the Lord's Prayer, the Creed, the Commandments, and the Ave Maria. In 1547, the first of Edward VI, a committee was appointed to draw up a liturgy in English, free from Popish errors. Cranmer, Ridley, and other eminent reformers were of this committee, and their book was confirmed in Parliament in 1548. This is known as the *first Prayer-book of Edward VI.* Great part of it was taken from the old services used in England before the Reformation; but the labors of Melancthon and Bucer helped to give the book its Protestant form. "About the end of the year 1550 exceptions were taken against some parts of this book, and archbishop Cranmer proposed a new review. The principal alterations occasioned by this second review were the addition of the *Sentences*, *Exhortation*, *Confession*, and *Absolution*, at the beginning of the morning and evening services, which in the first Common Prayer-book began with the Lord's Prayer; the addition of the *Commandments* at the beginning of the communion office; the removing of some rites and ceremonies retained in the former book, such as the use of oil in confirmation, the unction of the sick, prayers for the departed souls, the invocation of the Holy Ghost at the consecration of the eucharist, and the prayer of oblation that used to follow it; the omitting the rubric that ordered water to be mixed with the wine, with several other less material variations. The habits, likewise, which were prescribed in the former book were in this laid aside; and, lastly, a rubric was added at the end of the communion office to explain the reason of kneeling at the sacrament" (Hook). The liturgy, thus revised and altered, was again confirmed by Parliament A.D. 1551. This is cited as the *second Prayer-book of Edward VI.* See Cardwell, *Two Books of Common Prayer set forth under Edward VI compared* (Lond. 1838, 8vo); Ketley, *The two Liturgies*, A.D. 1549 and 1552 (edited for the Parker Society, 8vo, 1844). See CRANMER.

Queen Mary, on her accession, repealed the acts of Edward, and restored the Romanist prayer-book. "On the accession of Elizabeth, however, this repeal was reversed, and the second book of Edward VI, with several alterations, was re-established. This liturgy continued in use during the long reign of Elizabeth, and received further additions and improvements. An accurate edition of it, and of the Latin translation of it made by Alexander Ales, was published for the Parker Society by the Rev. W. K. Clay, B.D. It is entitled *Liturgies and occasional Forms of Prayer set forth in the Reign of Queen Elizabeth* (Cambridge University Press, 1847, 8vo). Early in the reign of James I it was again revised. At this revision a collect in the daily morning and evening service, and a particular intercession in the litany, were appointed for the royal family; the forms of thanksgiving upon several occasions were then added; the questions and answers concerning the sacraments were subjoined to the catechism; and the administration of baptism was by the rubric expressly confined to the lawful minister. These and some other additions and improvements were made by the authority of James I, though they were not ratified by Parliament. In 1661, the year after the restoration of Charles II, the commissioners, both Episcopal and Presbyterian, who had met at the Savoy to revise the liturgy, having come to no agreement [see SAVOY CONFERENCE], the Convocation agreed to the following alterations and additions, viz. several lessons in the calendar were changed for others more proper for the days; the prayers upon particular occasions were disjoined from the litany; several of the collects were altered; the epistles and gospels were taken out of the last translation of the Bible, published in 1611, instead of being read from the old version. Further, the prayer for the Parliament, that for all conditions of men, the general thanksgiving, the office of baptism for those of riper years, the forms of prayer to be used at sea, for the anniversary of the martyrdom of Charles I, and for the restoration of the royal family, were added; and throughout the whole liturgy ambiguities were removed, and various improvements made. The whole book, being finished, passed both houses of Convocation; it was subscribed by the bishops and clergy, and was ratified by act of Parliament, and received the royal assent May 19, 1662. This was the last revisal of the *Book of Common Prayer* in which any alteration was made by public authority. (Wheatly's *Illust. of the Common Prayer*, appendix to introduction; Nicholl's *Pref. to his Comment. on the Book of Common Prayer*; Tomline's *Christ. Theol.* ii, 20-29; Dr. Cardwell's *History of Conferences and other Proceedings connected with the Revision of the Book of Common Prayer, from the year* 1558 *to the year* 1690, Oxford, 1840, 8vo). Hamon l'Estrange's *Alliance of Divine Offices* (Lond. 1659, fol.; reprinted at Oxford in 1844 in 8vo), exhibits all the liturgies of the Church of England since the Reformation, as also the service-book introduced into the Church of Scotland in 1637: it is illustrated with ample annotations. The *Liturgicæ Britannicæ*, published by the Rev. William Keeling, B.D., at London in 1842, exhibits the several editions of the *Book of Common Prayer* of the Church of England from its first compilation to its last revision in 1662, together with the liturgy set forth for the use of the Episcopal Church in Scotland. The Rev. W. K. Clay's *Book of Common Prayer Illustrated* (Lond. 1841, 8vo) most commodiously shows its various modifications, the date of its several parts, and the authority on which they rest. An appendix, containing various important ecclesiastical documents, concludes the volume. To those who can procure more expensive publications, the complete collection of the authentic editions of the *Book of Common Prayer*, published at London in 1848, in six large folio volumes, will doubtless be preferred. The collection, which is uniformly printed in black letter, like the original editions, comprises the liturgies of king Edward VI, 1549 and 1552; the first Prayer-book of queen Elizabeth, 1550; king James the First's Prayer-book, as settled at the Hampton Court Conference in 1604; the Scotch book of king Charles I; and Charles the Second's book, as settled at the Savoy Conference in 1662. By the Act of Uniformity, 13 and 14 Car. II, c. 4, sec. 28, it was enacted that true and perfect copies of that act, and of the *Book of Common Prayer*, 1662, should be delivered into the respective courts, and into the Tower of London, to be preserved among the records thereof in all time to come. These copies are usually termed 'the Sealed Books,' from their being exemplified under the great seal of England. From the copy in the Tower of London the folio fac-simile edition of 1848 was chiefly printed. In 1849-50 Mr. A. J. Stephens published an edition of the *Book of Common Prayer* in three octavo volumes, with notes legal and historical. The text of this edition is taken from the 'Sealed Book' of the Court of Chancery, collated with the copies preserved in the courts of Queen's Bench and Exchequer, and also with the copies in the Tower of London; in the library of St. Paul's Cathedral, London; of Christ Church, Oxford; at Ely; and with the manuscript *Book of Common Prayer* originally annexed to the

Irish statute 17 and 18 Car. II, c. 6, now preserved in the Rolls Office at Dublin. In 1849-55 Mr. Stephens also published (3 vols. 8vo) the text of the *Book of Common Prayer* for the use of the Church of Ireland, from the same manuscript, with an introduction and notes" (Eadie, *Eccles. Encyclopædia*, s. v.).

Several attempts have been made to revise the book since 1662 without success. The first was in the reign of William III, furthered by Tillotson and Stillingfleet, who in 1668 had united with Bates, Manton, and Baxter in preparing a bill for the "comprehension of Dissenters." Failing then and in 1681, the scheme was resumed after the Revolution, and in 1689 a commission was formed to revise the Prayer-book. A number of alterations were suggested, in order, if possible, to gratify the Dissenters (see the *Revised Liturgy* of 1689, a blue-book, 1855). Nothing came of the proposition. A full account of this and other proposed revisions is given by Procter, *Hist. of the Book of Common Prayer* (Camb. 1856, 2d edit.). There is now a *Liturgical Revision Society* in England, which in its *Declaration of Principles and Objects* proposes the following changes: "1. The Rubric: the word priest to be changed; 2. The Ordination Service: words abused to the purposes of sacerdotal assumption to be altered. 3. The Visitation of the Sick: the absolution to be omitted or qualified. 4. The Baptismal Offices: words asserting the spiritual regeneration of each recipient to be altered. 5. The Catechism to be revised. 6. The Burial Service: general language to be employed in expressing hope for the departed. 7. The Athanasian Creed: the damnatory clauses to be omitted. 8. The Apocryphal Lessons to be replaced by Scripture. A careful examination of the changes here specified will illustrate the chief aim of this society, which is to bring the *Book of Common Prayer* into closer conformity with the written word of God and the principles of the Reformation, by excluding all those expressions which have been assumed to countenance Romanizing doctrine or practice. It is believed this object will be greatly advanced by the combination of numbers, and the abandonment of desultory for systematic action. All, therefore, who are friendly to the cause of Protestantism in our Church—all who would gladly see the *letter* of our formularies, which have been altered for the worse more than once since the Reformation, brought again into harmony with the *spirit* of that glorious epoch—are invited to co-operate in this work, and to aid the society with their contributions, their influence, and, above all, their prayers." Four hundred and sixty English clergymen signed a petition in 1860, presented by Lord Ebury, asking for a commission to revise the *Book of Common Prayer*. On the other hand, the clerical declaration against the proposed revision received between six and seven thousand signatures. See also Fisher, *Liturgical Purity our Rightful Inheritance* (Lond. 1857, 12mo).

The *Nonjurors* (q. v.), whose quasi-separation from the Church of England lasted from 1688 to 1779, generally used the authorized Prayer-book, except in the prayer for the king. "Dr. Hicks, whose example was probably followed by Jeremy Collier, used the communion office in the first book of king Edward VI, which he regarded as more conformable to the ancient practice; but most others continued to use the *English Prayer-book* until the year 1718 (Lathbury's *History of the Nonjurors*). The following are the principal liturgies of the Nonjurors: (1.) *A Communion Office, taken partly from the Primitive Liturgies, and partly from the first English Reformed Common Prayer-book: together with Offices for Confirmation and the Visitation of the Sick* (London, 1718, 8vo. Reprinted in the fifth volume of Hall's *Fragmenta Liturgica*, in 1848, 12mo). From the publication of these offices the Nonjurors were divided into two parties—those who adopted the new, and those who retained the old offices. The obsolete, not to say superstitious ceremonies, revived in this new communion office, were four, viz. mixing water with the wine, prayer for the dead, prayer for the descent of the Holy Spirit on the elements, and the prayer of oblation. These were called the *usages*, and those who practised them were called *usagers*. Three other ceremonies, apart from these usages, are frequently reckoned among them, viz. trine immersion at baptism; chrism, or consecrated oil in confirmation; and unction at the visitation of the sick (*ibid.* vol. i, p. xxxviii). (2.) *A Compleat Collection of Devotions, taken from the Apostolical Constitutions, the Ancient Liturgies, and the Common Prayer-book of the Church of England. Part I comprehending the Publick Offices of the Church. . . . . . Part II a Method of Private Prayer* (London, 1784, 8vo). Part I is reprinted in Hall's *Fragmenta Liturgica* (Eadie, s. v.).

II. *Common Prayer-books of Dissenters from the Church of England.*—(1.) "The earliest of these is *A Booke of the Forme of Common Prayers, Administration of the Sacraments, etc., agreeable to God's Worde and the use of the Reformed Churches.* This liturgy was printed by Waldegrave at London, without date, and at Middleburg, in Holland, in 1586, 1587, and 1602. The text of Waldegrave's edition is reprinted in Hall's *Fragmenta Liturgica*, vol. i; and that of the Middleburg edition, 1586, in his *Reliquiæ Liturgicæ*, vol. i. (2.) At the conference held in the Savoy in 1661 between the royal commissioners for reviewing the liturgy and the Nonconformists, the office of drawing up certain additional forms was assigned to Baxter, who presented a new form of prayer of his own composition, entitled, *The Reformation of the Liturgy as it was presented to the Right Reverend the Bishops, by the Divines appointed by his Majesties Commission to treat with them about the alteration of it.* This form of prayers is now more generally known as the Savoy Liturgy. It has been repeatedly reprinted, and will be found in the fourth volume of Hall's *Reliquiæ Liturgicæ.* A new edition of *The Book of Common Prayer, as amended by the Westminster Divines in* 1661, edited by the Rev. Dr. C. W. Shields, was published in Philadelphia (1865). The Savoy Liturgy comprises forms of prayer for 'the ordinary public worship of the Lord's day; the order of celebrating the sacrament of the body and blood of Christ, and the celebration of the sacrament of baptism; a short discourse of catechizing, and the approbation of those who are to be admitted to the Lord's Supper; the celebration of matrimony; directions for the visitation of the sick, and their communion,' with prayers; 'the order for the burial of the dead, prayer and thanksgiving for particular members of the Church;' a discourse 'of pastoral discipline,' with forms of 'public confession, absolution, and exclusion from the holy communion of the Church.' (3.) William Whiston (q. v.) was deprived of his professorship as an Arian, and being for a time suspended from communion with the Church by an act of convocation, he formed a religious society at his house in London for public worship. There he employed *The Liturgy of the Church of England reduced nearer to the primitive standard, humbly propos'd to publick consideration.* This liturgy was first published at London in 1713. Whiston believed the pseudo-Apostolical Constitutions to be the genuine work of the apostles, and has made use of them in the composition of some of his prayers. (4.) *The Book of Common Prayer, Reformed according to the Plan of the late Dr. Samuel Clarke*; or, as it is designated in the prefatory advertisement, *The Liturgy of the Church of England, with the Amendments of Dr. Clarke, and such further Alterations as were judged necessary to render it Unexceptionable with respect to the Object of Religious Worship*, was first published in 1774 by the Rev. Theophilus Lindsay, M.A., who Socinianized the Arian alterations proposed by Dr. Samuel Clarke, rector of St. James's, Westminster. This Prayer-book has subsequently passed through numerous editions. It contains al-

most all the offices in the *Book of Common Prayer*, except the order of baptism for persons of riper years and the commination. The great object of the whole is to address the entire worship to God the Father, to the utter exclusion of God the Son and God the Holy Spirit. This liturgy is the basis of *A Liturgy collected principally from the Book of Common Prayer, for the Use of the First Episcopal Chapel in Boston* [Massachusetts], *together with the Psalter or Psalms of David* (Boston, 1785, 8vo). This was reprinted in 1811, and again in 1838, with further alterations. (5.) *The Book of Common Prayer, compiled for the Use of the English Church at Dunkirk, together with a Collection of Psalms*, was printed at Dunkirk in 1791. The anonymous compiler states that he followed throughout the plan proposed by Dr. Clarke. This book deviates less from the liturgy of the Church of England than the Socinian liturgy above noticed" (Eadie, s. v.). (6.) *The Sunday Service of the Methodists* was originally prepared by John Wesley. On comparing a copy of the edition of *The Sunday Service of the Methodists, with other Occasional Services* (reprinted in 1826), with the *Book of Common Prayer*, we find that the first lessons for Sundays are retained; but for the second lessons in the morning, a chapter out of the four Gospels or the Acts of the Apostles is to be read, and in the evening a chapter out of the epistles in regular rotation. Many verbal expressions, which have been excepted against, are here corrected. Select psalms are appointed to be read, while others are abridged. The only creed read is that of the apostles. The offices for the baptism of infants, or of persons of riper years, the celebration of matrimony, the communion of the sick, and the burial of the dead, are shortened. The offices for the ordination of priests and deacons, and for the consecration of bishops, are altered into forms for the ordination of deacons, elders, and superintendents; and the Thirty-nine Articles are reduced to twenty-five. The Nicene and Athanasian Creeds, and the apocryphal books of the Old Testament, are omitted. Some obsolete words are replaced by others which are more easily understood. An edition of this book was prepared, with the necessary modifications, for the use of the American Methodist Church, by Mr. Wesley, in 1784; a second edition, slightly modified, in 1786. This Prayer-book was used for some time in the American Methodist Church; but it gradually dropped out of use, without any prohibition, however, on the part of the General Conference. A modified form of it appears in *The Sunday Service of the Methodist Episcopal Church South*, edited by T. O. Summers, D.D. (Nashville, 1867). (7.) *The Liturgy of the New Church, signified by the New Jerusalem in the Revelation, prepared by Order of the General Conference*, was published in 1828, and superseded all the liturgies which had previously been used by the Swedenborgians, or followers of Emanuel Swedenborg.

III. *Scottish Common Prayer-books.*—"1. *Ancient Liturgy of the Kirk of Scotland.*—At the commencement of the Reformation in Scotland the Protestant nobles and barons, assembled at Edinburgh in December, 1557, agreed that they would rest satisfied for the present with the reading of the prayers and lessons in English, according to the order of the *Book of Common Prayer*, that is, the liturgy of king Edward VI, in every parish on Sundays and other festival days. This regulation, however, continued in force only a short time; for in 1562 the *Book of Common Order*, commonly termed 'Knox's Liturgy,' was partially introduced; and by an act of the General Assembly, passed December 26, 1564, its use was authoritatively ordained in all the churches in Scotland. This liturgy was taken from the order or liturgy used by the English church at Geneva. It contains forms for morning and evening prayer, the celebration of baptism, the Lord's Supper, and marriage; and for the election of superintendents or presbyters who were invested with episcopal functions; the order of ecclesiastical discipline, of excommunication, and of public repentance; a treatise on fasting; and forms of prayer for domestic and private use. A new edition of *The Liturgy of the Church of Scotland; or, John Knox's Book of Common Order*, was published by the Rev. Dr. Cumming, at London, in 1840, in 18mo. *The New Booke of Common Prayer, according to the Forme of the Kirke of Scotland, our Brethren in Faith and Covenant*, printed in 1644, is a very brief abstract of Calvin's Genevan Prayer-book, or rather of Knox's *Book of Common Order*. It is reprinted in the first volume of Hall's *Fragmenta Liturgica*. See DIRECTORY.

"2. *Liturgy of the Episcopal Church in Scotland.*—The liturgy of the Episcopal Church in Scotland is at present nearly the same as that of the Church of England. Charles I, in 1637, made an unsuccessful attempt to introduce into Scotland a *Book of Common Prayer*, copied, with some alterations, from that of England, which produced the Solemn League and Covenant. That liturgy was prepared by archbishop Spottiswoode, of St. Andrew's, and Lindsay of Glasgow, assisted by Wedderburn, dean of the Chapel Royal at Edinburgh, and by bishops Guthrie, Maxwell, and Whitford. On its being sent to London, Charles I referred it to the examination of archbishop Laud, and of Wren, bishop of Ely. It was published at Edinburgh in folio, and entitled *The Booke of Common Prayer and Administration of the Sacraments and other parts of Divine Service, for the Use of the Church of Scotland.* This liturgy is reprinted in the second volume of Hall's *Reliquiæ Liturgicæ;* a copious bibliographical and historical account of it will be found in vol. i, p. xiii-xxxv. From 1645 until after the restoration in 1660, the *Westminster Directory* was adopted, but by no means strictly adhered to, in various instances (as in that of praying for the civil government); and when episcopacy was restored together with monarchy, it was not thought advisable to renew the attempt to introduce a public liturgy; so that, except at ordinations, when the English forms were used, as far as local circumstances would admit, no regular form of prayer was in general use, while episcopacy continued to be the form of ministry in the Established Church. Many, indeed, of the episcopal clergy compiled forms to be used by themselves in their particular congregations, with some petitions and collects taken out of the English book, and all of them uniformly concluded their prayers with the Lord's Prayer, and their singing with the doxology. *Prayers for the Morning and Evening Service of the Cathedral Church of Aberdeen*, composed by the Rev. Henry Scougal, professor of theology in the King's College, continued in use until the Revolution, when the Presbyterians would no longer tolerate a written prayer. At length, in 1712, the English *Book of Common Prayer* was universally adopted by the Scottish Episcopal Church with little variation, except in the celebration of the Eucharist. In that service the order for the administration of the Lord's Supper is substantially that in the liturgy authorized by Charles I, but with alterations made to make it more conformable to the first and comparatively imperfectly reformed liturgy of king Edward VI. By the twenty-first canon of *The Code of Canons of the Episcopal Church in Scotland*, as revised, amended, and enacted, by an ecclesiastical synod, holden for that purpose at Edinburgh, from August 20 till September 6, 1838 (Edinburgh, 1838, 8vo), after ratifying and confirming the permission formerly granted by the bishops 'to all those who profess to be of the episcopal persuasion in Scotland . . . . to retain the use of the English office in all congregations where the said office had previously been in use,' it is enacted, 'That in the use of either the Scotch or English office no amalgamation, alteration, or interpolation whatever shall take place, nor shall any substitution of the one for the other be admitted, unless it shall be approved by the bishop.

From respect, however, for the authority which originally sanctioned the Scotch liturgy, and for other sufficient reasons, it is hereby enacted, that the Scotch communion office continue to be held of primary authority in this Church, and that it shall be used in all consecrations of bishops, but also at the opening of all general synods'—p. 29, 30. Although the Scotch communion office is thus established, it is worthy of notice that this canon does not prescribe what specific edition is to be used, almost every single bishop, in the lapse of years, having made additions, and even some changes, according to their own judgment or preference. In point of doctrine, the difference between the English and Scotch offices is clear and unequivocal—the English offices being exclusively commemorative, and the Scottish most distinctly sacrificial. Besides which, the following usages are practised, not one of which is adopted in the English offices, viz.: 1. The mixing of water with the wine in the Eucharist; 2. Commemorating the faithful departed at the altar; 3. Consecrating the elements by an express invocation; 4. Using the oblatory prayer before distribution" (Eadie, s. v.). See COMMUNION SERVICE.

IV. *The American Prayer-book.*—After the American Revolution the "Protestant Episcopal Church" was established as an organization separate from the Church of England in 1784. In 1786 a committee was appointed to adapt the English liturgy to use in this country, and they prepared a book which, however, never went into general use (*The Proposed Book*, 1786; reprinted in Hall, *Reliquiæ Liturgicæ*, Lond. 1847).

"At the General Convention in October, 1789, the whole subject of the liturgy was thrown open by appointing committees on the different portions of the Prayer-book, whose several reports, with the action of the two houses thereupon, were consolidated in the Book of Common Prayer, etc., as it is now in use, the whole book being ratified and set forth by a vote of the Convention on the 16th of October, 1789, its use being prescribed from and after the 1st day of October, 1790. The American liturgy retains all that is excellent in the English service, omits several of its really objectionable features, brings some of the offices (the communion, for example) nearer to the primitive pattern, modifies others to suit our peculiar institutions, and, on the whole, is a noble monument to the wisdom, prudence, piety, and churchmanship of the fathers of the American Church. By the 45th canon of 1832, it is required that every minister shall, before all sermons and lectures, and all other occasions of public worship, use the Book of Common Prayer, as the same is or may be established by the authority of the General Convention of this Church. And in performing said service, no other prayers shall be used than those prescribed by the said book" (Hook, *Church Dictionary*, Am. ed. s. v.).

There seems to be a widely-diffused conviction, both in England and America, quite apart from doctrinal considerations, that the forms of morning service, which are composed of what were formerly several distinct services, are too long for use. Bennett, in his *Paraphrase with Annotations on the Book of Common Prayer* (Lond. 1709, 8vo), observes that the using of the morning prayer, the litany, and communion service at one and the same time, in one continued order, is contrary to the first intention and practice of the Church. On this subject the *Church of England Quarterly* (London, 1855, p. 20) remarks, "That our services are too long is generally, although not universally conceded. There is, no one will deny, much repetition in them as they are at present conducted; and the recitation of the Lord's Prayer six times on a sacrament morning may be taken as an instance. We recognise our liturgy as deservedly endeared to our people; and neither would we recommend, nor would they suffer, any alterations in it which would tend to lower its tone. A few verbal changes, the omission of a few rubrics, a new arrangement of the morning lessons, and we might go on without detriment for another three centuries. Much, too, must at all times be left to the discretion of the clergy." On this and other questions as to needed changes, see the *Memorial Papers*, containing the *Circular and Questions of an Episcopal Commission* ordered by the General Convention of the P. E. Church in 1853, edited by Bp. A. Potter (Phila. 1857, 12mo); Powys, *Reconstruction of the Liturgy* (Lond. 1854).

"A writer in the London *Daily News* (1867) relates the discovery, in the library of the House of Lords, of the copy of the Act of Uniformity, 14 Charles II, 1662, with the roll affixed containing the words of the Book of Common Prayer, which had been detached and lost from the copy deposited with the House of Commons. Technically and practically, therefore, the writer remarks, the two rolls form one engrossed act, and 'nothing can be so distinct a proof that the prayers, psalms, rubrics, etc., are the law of the land'" (*Nation*, Sept. 19, 1867).

The most important works on the Common Prayer, besides those cited in the course of this article, are Wheatly, *Rational Illustration of the Common Prayer* (London, 1720, fol.; new ed. 1842, 8vo; also in Bohn's Standard Library, 12mo); Comber, *Companion to the Temple* (new ed. Oxf. 1841, 7 vols. 8vo); Sparrow, *Rationale upon the Book of Common Prayer* (new ed. Oxf. 1839, sm. 8vo); Bailey, *The Liturgy compared with the Bible* (Lond. 1833, 2 vols. 8vo); Palmer, *Origines Liturgicæ* (Oxf. 1832, 2 vols. 8vo); Berens, *Lectures on Catechism and Offices* (Oxf. 1828); Procter, *History of the Book of Common Prayer* (Lond. 1856, 2d ed. 8vo); Cardwell, *The two Liturgies of Edward VI compared* (Oxf. 1838, 8vo); Maskell, *Monumenta Ritualia Ecclesiæ Anglicanæ* (Lond. 1846, 3 vols. 8vo); Freeman, *Principles of Divine Service* (Lond. 1855, 8vo); *Christian Remembrancer*, Oct. 1855, art. vii; Lathbury, *History of the Book of Common Prayer from the Reformation* (1858, 2d ed. 8vo); Cardwell, *History of Conferences for revision of the Common Prayer* from 1558 to 1690 (Oxf. 1849, 3d ed. 8vo); Humphrey, *Historical and Explanatory Treatise on the Common Prayer* (Lond. 2d ed. 1856, 8vo); Stoddart, *The History of the Prayer-book, and of its Formation from previous Liturgies, with a Draft showing how our present Liturgy might, with some alterations, be advantageously revised and rearranged in more varied services* (Lond. 1864, crown 8vo); *The Annotated Book of Common Prayer, being an Historical, Ritual, and Theological Commentary on the Devotional System of the Church of England*, edited by John Henry Blunt (Lond. 1866, imp. 8vo). On the American book, see Brownell, *Family Prayer-book* (N. Y. 1855, royal 8vo); Butler, *Common Prayer interpreted by its History* (Boston, 1845, 12mo); *Am. Church Review*, Jan. 1858, art. i. See FORMS OF PRAYER; LITANY; LITURGY.

Commune, or **Communicate**, a term made use of to denote the act of receiving the Lord's Supper. See LORD'S SUPPER.

Communicants, (1.) a sect of Anabaptists (q. v.); (2.) a term used to designate church-members who partake of the Lord's Supper (q. v.).

Communicatio Idiomătum, a doctrine of the Lutheran Church as to the person of Christ. In the ancient Church the question arose if a real personal unity of the divine and the human elements in the person of Christ could be effected without destroying the distinction of natures. The ancient Church maintained the *reality* of the personal unity of the two elements by condemning the Nestorian, Monophysite, and Monotheletic doctrines. The Lutheran theology undertook to show *the possibility* of this union. Luther laid the foundation of the doctrine by the assertion that Christ, according to his humanity, fills all things, and is ubiquitous. He did not use, however, the expression *communicatio idiomatum*, which was first employed

in the *Formula Concordiæ* (q. v.). Three classes of Scriptural passages were adduced by the old Lutheran writers in behalf of this doctrine: 1, those in which qualities belonging to one nature only are attributed to the whole person; 2, those which predicate of one nature an activity which belongs to the work of redemption, consequently to the whole person; 3, those which transfer divine attributes to Christ's human nature. The *Formula Concordiæ*, however, expressly rejects a restriction of the divine nature, in consequence of its union with the human. Zwingle, with whom, on the whole, the theologians of the Reformed Church agreed, rejected the doctrine of a real *communicatio idiomatum* (peculiar qualities of the two natures), and explained the passages adduced by the Lutherans as figures of speech (ἀλλοίωσις). The Supranaturalistic school of the later German theology does not expressly reject the doctrine, but explains it away. The Rationalistic, Æsthetic, and Speculative schools of Germany either reject it entirely, or partly put upon it an ethical or speculative construction. The revived Lutheran orthodoxy of the 19th century partly restricts itself to a mere revival of the old doctrine, and partly attempts to complete it by asserting a self-restriction of the divine nature in Christ, in consequence of his union with the human. According to this doctrine, which was in particular developed by Sartorius (*Dorpater Beiträge zu den theologischen Wissenschaften*, Hamburg, 1832) and Thomasius (*Beiträge zur kirchlichen Christologie*, Erlangen, 1845), the Logos, from the moment of his incarnation, renounced his *divine self-consciousness* in order to develop himself in a merely human form. See, besides the works already mentioned, Dorner, *History of the Person of Christ*, Edinb. translation, vol. ii; Hase, *Evangelische Dogmatik*, p. 221 sq.; Gieseler, *Church History*, edited by Smith, vol. iv, § 37; Hagenbach, *History of Doctrines* (Smith's), § 266, 267; Pearson *On the Creed*, art. ii; and the article CHRISTOLOGY, p. 281.

Communicative Life. Ecclesiastical writers, in describing the habits of monks, distinguish between *vita communicativa* and *vita renunciativa*. The usual plan was for candidates to take a solemn vow of poverty, and consequently to renounce the world by disposing of their estates to charitable uses, before they entered into a community, where they were to have all things in common. Others kept their estates in their own hands, and yet enjoyed no more of them than if they had passed over to others; for they distributed their whole yearly revenue to the poor, and to such uses as the daily necessities of men required. The latter was called the *communicative* life.—Farrar, *Eccl. Dictionary*, s. v.; Bingham, *Orig. Eccl.* vii, 3, 9.

Communio Laica, in the language of the Church of Rome, means properly the rank of the laity, but is more commonly used to signify the *status* of a clergyman transferred from the privileged class of the clergy to the lay community. Only the clergy of the lower grades (see CLERGY) could voluntarily go back to the rank of the laity; those who had received one of the higher orders (upwards from the diaconate) could be transferred back to the laity only by legal dispensation granted by the pope, or by degradation. Clergymen of the lower grades can, according to the canon law, contract a valid marriage, but thereby lose their benefices and the privileges of the clergy. The Council of Trent allowed that in exceptional cases the lower orders be conferred upon married men (in case they had not been married oftener than once), and, on condition of their wearing the tonsure and the clerical habit, granted to them the *privilegia canonis et fori* (see CLERGY). Papal dispensation for members of the higher clergy to re-enter the rank of the laity (in particular, for the purpose of marrying) has only been given in rare instances. The transfer of a clergyman to the rank of the laity, as a punishment, took place, according to the ancient canonical law, in connection with deposition, but, according to the later law, only in consequence of degradation (q. v.). See Wetzer u. Welte, *Kirchen-Lex.* ii, 718; Bingham, *Orig. Eccl.* xvii, 2; Farrar, *Eccl. Dict.* s. v.

Communio Peregrina. In the early Church the term *communio* denoted not only a participation of the Eucharist, but also a right of partaking of the bounty of the Church. When travellers or strangers came to any church without bringing *letters testimonial*, by which they might be ascertained to be members of some Christian church, they were liable to the suspicion that they were under the censure of the Church to which they had belonged. Until they could thus clear themselves from imputation, they were not admitted to the Lord's table, but were allowed to derive their means of temporal maintenance from the Church fund. In this way delinquent clergymen were sometimes treated in their own churches, and this was called *communio peregrina*. They were not permitted to officiate or to be present at the celebration of the Lord's Supper until they had given satisfaction to the Church. —Farrar, *Eccl. Dict.* s. v.; Bingham, *Orig. Eccl.* xvii, 3, 1.

Communion (*κοινωνία, a sharing*), in ordinary terms, an association or agreement when several persons join and partake together of one thing; hence its application to the celebration of the Lord's Supper as an act of fellowship among Christians (1 Cor. x, 16); and it is to this act of participation or fellowship that the word "communion," in the religious sense, is now chiefly applied in the English language. In 2 Cor. vi, 14, it takes the derived sense of *concord*. The "communion of the Holy Ghost" (2 Cor. xiii, 14) signifies that spiritual intercourse with the divine Spirit which the child of God maintains by faith and prayer. The Greek term has also a secondary meaning of *bestowal* in charity, in other passages, where it is rendered "contribution," "distribution," or "communication" [which see]. The word is elsewhere translated simply "fellowship" (q. v.). For a large number of treatises on this subject, see Volbeding, *Index Dissertationum*, p. 147 sq.

(1.) *Communion* (*κοινωνία*) therefore "properly means the *sharing* something *in common* with another. Hence, in the Christian sense, it signifies the sharing *divine converse* or intercourse (1 John i, 3); and as this takes place, sacramentally, in the Lord's Supper, the word, in a third stage, signifies a *joint participation* in a spiritual sense of the body and blood of Christ, i. e. of his Spirit (John vi, 63) in that sacrament (1 Cor. x, 16). Some explain the *κοινωνία* in the Lord's Supper to be a *communication* of the 'body and blood of Christ,' as though these were given by the Church to the receiver, but the above account of the order in which the senses of the word have grown out of one another shows that such an interpretation is untenable. The Church has not, nor pretends to give, anything as from herself in that ordinance, but Christians come together to hold 'communion' with each other, and with their (once-sacrificed) Lord, of the benefits of whose death, sacramentally exhibited, they are in a special, though only spiritual, manner then *partakers*. 'Communion' (*κοινωνία*) is that which is sought and spiritually partaken of by the *receiver*, not that which is actually conveyed by any person as the *giver*. Of the several names by which the Supper of the Lord has been at different times distinguished, that of the 'Holy Communion' is the one which the Church of England has adopted for her members. The Rubrics, Articles, and Canons almost invariably employ this designation." See EUCHARIST; LORD'S SUPPER.

(2.) In a historical sense, *communion* denotes participation in the mysteries of the Christian religion, and, of course, Church fellowship, with all its rights and privileges. Hence the term "excommunication."

In this sense the word is used also with reference to the admission of persons to the Lord's Supper. This is said to be *open* when all are admitted who apply; to be *strict* when confined to the members of a single society, or at least to members of the same denomination; and it is *mixed* when persons are admitted from societies of different denominations, on the profession of their faith and evidence of their piety, as is the case in Protestant churches generally. The principal difficulty on this point arises between the strict Baptists and Pædo-baptists.

CLOSE COMMUNION, *Question of*.—Among the Baptists there is a controversy on the subject, in which the two parties (called *Free* and *Strict* Communionists) may be represented respectively by Robert Hall and by J. G. Fuller. The following statement, embracing the substance of the controversy, represents the opposite sides of the subject.

(*a*) "The opinion of Mr. Hall that baptism is not a prerequisite to the participation of the Eucharist runs through all his reasonings in favor of unrestricted communion, and is the real foundation on which they rest. His positions are the following: 1. The baptism of John was a separate institution from that appointed by Christ after his resurrection; from which it follows that the Lord's Supper was anterior to Christian baptism, and that the original communicants consisted entirely of such as had not received that ordinance. 2. That there is no such connection, either in the nature of things or by the divine institution, between baptism and the Eucharist as renders it, under all circumstances, indispensable that the former should precede the latter. 3. That admitting this to be the prescribed order, and to be sanctioned by the uniform practice of the apostles, the case of pious Pædo-baptists is a new case, calling for some peculiar treatment, in which we ought to regard rather the *spirit* than the *letter* of apostolic precedent. 4. That a schism in the Church, the mystical body of Christ, is deprecated in the New Testament as the greatest evil. 5. That a reception to Church fellowship of all such as God has received, notwithstanding a diversity of opinion and practice in matters not essential to salvation, is expressly enjoined in the New Testament (Rom. xiv, 1–5; xv, 1, 5–7). 6. That to withhold the Lord's Supper from those with whom we unite in other acts of Christian worship is a palpable inconsistency. And, lastly, that it is as impolitic as it is illiberal, being calculated to awaken a powerful prejudice, and place beyond the reach of conviction our Pædo-baptist brethren, and to engender among the Baptists themselves a narrow and sectarian feeling, wholly opposed to the enlarged spirit of the present age (*Complete Works of Robert Hall*, ii, 207–230; also i, 283–504).

(*b*) "The positions urged on the opposite side by Mr. J. G. Fuller are these: 1. That all the arguments which are used to destroy the identity of baptism as practiced by John and the apostles before the death of Christ, with that practiced afterwards, amount only to proof of a *circumstantial*, not an *essential* difference, and cannot, therefore, warrant the inferences of Mr. Hall in any one point. 2. That the commission of our Lord (Matt. xxviii, 19, 20) furnishes the same evidence that baptism is an indispensable prerequisite to external Church fellowship as that faith is an indispensable prerequisite to baptism. 3. That the uniform examples of the apostles is an inspired explanation of the commission under which they acted, and a pattern intended for the instruction of the Church in all succeeding ages. 4. That strict conformity to the commission of Christ, thus explained, is not *schism*, but the only possible mode of restoring and perpetuating *Christian union*. 5. That the mutual forbearance enjoined on Christians in the New Testament related to matters of real indifference, not involving the surrender of any positive institution of Christ, and is therefore inapplicable to the present case. 6. That to unite with Pædo-Baptist brethren in all such acts of worship and benevolent effort as do not imply an abandonment of the commission is not an inconsistency, but the dictate of Christian charity. And, lastly, that to whatever imputations a strict adherence to the commission of Christ may subject the Baptist churches, it is better to suffer them than to sin; and that a deviation in deference to modern error, however conscientiously maintained, is neither charity nor Christian wisdom, since "whatever is right is wise." Christians may cordially unite in the evangelization of the world, but they *do* not, nor *can* they, without a change of sentiments, unite in the constitution of their churches (*Conversations on Strict and Mixed Communion*, by J. G. Fuller)."

It is said that most of the English Baptists favor free communion; those of the United States are mostly close communionists, except the Free-will Baptists, who are, as a body, open communionists. See Curtis, *Communion, a Review of the Arguments of Hall and Noel* (Phila. 1850, 12mo), for a full argument for close communion; also *Christian Review*, xvi, 210, and an able article by Dr. Hovey, *Bibliotheca Sacra*, Jan. 1862, art. v. See also the same Journal, July, 1864, art. i, and July, 1867, art. iii. See BAPTISTS.

II. A similar controversy has been going on in the Lutheran Church, in which the High-Church party refuses the admission of members of the Reformed and all non-Lutheran churches to communion. See LUTHERANS.

III. The Reformed Presbyterians (Covenanters) in Scotland and the United States, and the United Presbyterians in the United States, are also believers in the doctrine of close communion; but in all these churches there is a party which strongly contends against this doctrine, and in favor of open communion. At the United Presbyterian General Assembly of 1867 the subject of close communion was the chief topic of discussion. The Rev. W. C. McCune, the author of a book against close communion, was censured by a large majority. See W. C. McCune, *Close Communion, or Church Fellowship, by Rev. J. T. Pressly, D.D., of the United Presbyterian Theological Seminary at Alleghany, Penn.* (Cincinnati, William Scott, 1866, p. 147); also W. Annan (O. S. Presbyterian), *The Doctrine of Close Communion tested by Scripture and Reason* (Pittsburg, 1867). Mr. Annan endeavors to establish that the views entertained and defended by the leading men at present in that Church are not those which were held by the fathers of the Associate Reformed Church. In discussing the subject, Mr. Annan presents the views of Drs. Mason, Smith, and Annan, father of the author, and others, down to 1867, in support of his positions.

COMMUNION IN BOTH KINDS. "The communion was universally administered in both kinds (bread and wine), to both clergy and laity, until about the twelfth century, when the cup began to be gradually withdrawn from the laity in the Western Church, on account (as was affirmed) of the disorders to which the use of it had given rise. Communion in one kind is intimately connected with the doctrine of transubstantiation. Romanists profess to believe that Christ, whole and entire—soul, body, and divinity—is contained in either species, and in the smallest particle of each. Hence they infer that, whether the communicant receives the bread or the wine, he enjoys the full benefit of the sacrament. Thus, to support this absurd and monstrous dogma, a Christian ordinance is divided; transubstantiation justifies communion in one kind, and communion in one kind proves the truth of transubstantiation. This is the principal reason assigned in the Catechism of the Council of Trent. After alleging many frivolous reasons, such as that there is danger of spilling the wine in a crowded assembly, and thus inflicting an indignity on the blood of Christ; that many cannot bear the smell or taste of wine; that it may become vapid; that it is extremely scarce in some places, and would involve

great expense to procure it—it says, 'A circumstance which principally influenced the Church in establishing this practice was, that means were to be devised to crush the heresy which denied that Christ, whole and entire, is contained under either species, and asserted that the body is contained under the species of bread without the blood, and the blood under the species of wine without the body. This object was attained by communion under the species of bread alone, which places, as it were sensibly before our eyes, the truth of the Catholic faith.' Protestants believe that without the cup there can be no sacrament at all, and therefore the Eucharist is not celebrated in the Romish Church." For the history of this question, see LORD'S SUPPER.—Bingham, *Orig. Eccl.* xv, 5; Farrar, *Eccles. Dict.* s. v.

COMMUNION OF SAINTS, one of the points of a Christian's faith according to the Apostles' Creed.

1. According to the *Roman Catholic* definition, it is the "union between the Church triumphant (in heaven), the Church militant (on earth), and the Church suffering (in purgatory). These three form the one body, of which Christ is the invisible head, and of which the pope, Christ's vicar, is the visible head. Its members are united by a mutual communication of intercessions and prayers" (Bergier). This definition, it will be seen, prepares the way for the Roman superstitions of the invocation of saints and prayers for the dead. The saints in heaven are to be venerated and invoked by the Church militant, and the members of the latter are to be supported by the intercessions of the former. The Church militant is to support by her prayers the Church suffering; and the members of the Church militant may also offer prayers for each other. See Wetzer und Welte, *Kirchen-Lexikon*, iv, 929 sq.

2. The *Protestant* definitions vary somewhat. (*a*) The *Westminster Confession* says: "All saints that are united to Jesus Christ, their head, by his Spirit and by faith, have fellowship with him in his graces, sufferings, death, resurrection, and glory. And being united to one another in love, they have communion in each others' gifts and graces, and are obliged to the performance of such duties, public and private, as do conduce to their mutual good, both in the inward and outward man. Saints by profession are bound to maintain a holy fellowship and communion in the worship of God, and in performing such other spiritual services as tend to their mutual edification, as also in relieving each other in outward things, according to their several abilities and necessities; which communion, as God offereth opportunity, is to be extended unto all those who in every place call upon the name of the Lord Jesus. This communion which the saints have with Christ doth not make them in anywise partakers of the substance of his Godhead, or to be equal with Christ in any respect; either of which to affirm is impious and blasphemous." (*b*) Pearson and Leighton agree, substantially, in stating that "Christians have communion or fellowship with the Father, from whom cometh every good and perfect gift (1 John i, 3; 2 Pet. i, 4), with his son Jesus Christ, through whom forgiveness and mercy are conveyed to us (1 John i, 8; John xvii, 20, 23), and with the Holy Ghost, whose sanctifying graces are conferred on those whose hearts are duly prepared for their reception (Phil. ii, 1; 2 Cor. xiii, 14); that Christians have also communion with the holy angels, who are ministering spirits sent forth to minister for them who shall be heirs of salvation (Heb. i, 14; Luke xv, 10; Matt. xviii, 10); that, besides the external fellowship which they have in the word and sacraments of the Church, they have an intimate union and conjunction with all the saints on earth, as the living members of Christ (John i, 7; Col. ii, 19); and that Christians have communion not only with the saints on earth, but are of one city and one family with all those who have ever died in the true faith and fear of God, and now enjoy the presence of the Father, and who, in their state of glory, still sympathize with the faithful below, assisting, comforting, and praying for them (Heb. xii, 22, 23). The belief of this communion of saints should excite and encourage us to holiness of life. If 'we walk in the light, as God is in the light, we have fellowship one with another;' but 'if we say that we have fellowship with him, and walk in darkness, we lie, and do not the truth' (1 John i, 6, 7). It should induce us to wish well to all mankind, and to render them every good in our power. To those who have obtained the like precious faith with ourselves, we are still more nearly related, as being in a peculiar sense children of the same Father, disciples of the same Master, animated by the same spirit, and members of the same body" (Secker, *On Catechism*, lect. xiv; Pearson, *On the Creed* (ed. 1710, p. 759); Leighton, *On the Creed* (*Works*, ii, 412). (*c*) Another view is given by Wilson, who remarks that, while the Romish view is unscriptural, that of Pearson and others is vague. His work aims to show that the bond of union among Christians (denoted by the *communion of saints*) is not to be sought (1) in identity of doctrinal beliefs, or (2) in identity of religious feeling or experience, as feeling, or (3) in identity of forms of Church government in worship, but in *moral* unity, founded in the action of the grace of God not merely in the hearts, but in the activities of Christians. See Wilson, *Bampton Lectures* (Oxford, 1851, 8vo).

COMMUNION OF THE SICK. See LORD'S SUPPER.

COMMUNION SERVICE, the office for the administration of the Eucharist, or sacrament of the Lord's Supper. See LITURGY.

COMMUNION-TABLE, a table on which the sacramental bread and wine are placed for the communion in Protestant churches. At the Reformation, *stone altars* were rejected, as likely to support the notion of a material sacrifice, against which the Reformers protested. See ALTAR; LORD'S SUPPER.

Communism, a theory of "community of property," often attempted to be realized in practice.

I. *Communistic Ideas in the religious and philosophical Systems of ancient Paganism.*—The most ancient form of communism known to us is found in the monasteries of Buddhism, in attempts to reach an ideal of sanctity by renouncing marriage and property. In the history of Greece, a form of society based upon community of goods is ascribed to the order of Pythagoreans. But by far the most important representative of communistic ideas in pagan antiquity is Plato, whose work on the ideal state still ranks among the best that has ever been written in favor of communism. Plato regards the possession of private property as the source of every evil for the state—of avarice, of egotism, of a low character. He therefore allows only the lowest of the three classes, into which, according to him, the state is divided, and which he excludes from a participation in the government of the state, to possess private property. The two ruling classes, the archontes and the warriors, are subjected by Plato to compulsory communism in the widest sense of the word. As both classes were to live exclusively for the state, and any private possession appeared to Plato as productive of egotism, he not only demanded for these two classes community of property, but, under certain restrictions, to be regulated by law, community of women. After the establishment of Christianity, the Neo-Platonic philosopher Plotinus was a prominent representative of communistic ideas, and applied to the Roman Emperor Gallienus for permission to establish a state according to the Platonic ideal, upon the ruins of a destroyed city of Calabria.

II. *Communism among the Jews.*—Among the Jews, the sects of the Therapeutæ and the Essenes, whose fundamental principle was the dualism of the Eastern

religions, formed, like the Buddhists, communistic societies, the former on Lake Moeris in Egypt, the latter in the deserts near the Dead Sea. See ESSENES, THERAPEUTÆ.

III. *Monastic Communism and Socialism in the ancient Christian Church.*—The infant Christian Church at Jerusalem has been held up as at once an example of communism and an argument for it (Acts ii, 42, 44, 46). But the passage in Acts does not imply either an absolute, total, or compulsory community of goods. There is no trace in the New Testament of Jewish Essenism or of modern communism. Christianity carefully guards the individuality of each member, and considers love as the only law by which Christians are bound. It is true, however, on the other hand, that a communistic tendency existed in the Church, which developed itself in the 4th century in the establishment of the communities of anachorets and monks. See MONACHISM. The reformation of the monastic orders, began principally through the efforts of Bernard de Clairvaux in the 12th century, gave a new socialistic and communistic impulse to the laity, and led to the formation of religious bodies, united by vows of life-long poverty and asceticism. Such were the *Humiliates* (q. v.), who made vows of voluntary poverty, chastity, and fasting, but were not distinguished from the people in dress, though living together as a religious community; the *Beghards* (q. v.), a society of unmarried men, who lived in community under a master, and devoted themselves to manual labor and devotions; and a similar female association, formed as early as the 11th century, under the name of *Beguines* (q. v). These lay associations differed from the clerical communities by considering poverty and continence as essential rules, and bore more of a socialistic than a communistic character. In the 13th century, the *Mendicant orders* (q. v.) united the socialistic organization to the clerical character, and cast the lay brotherhoods in the shade. Another sort of communistic union was that of the *Fratres et sorores liberi spiritus* (see BRETHREN OF THE FREE SPIRIT) (13th century), who held that the original state anterior to the Fall should be restored, and that the distinctions created by the law, of Church, state, society, should be abolished. In their secret assemblies (*paradises*) the principles of the community of goods and of women was advocated by naked preachers before naked audiences of both sexes. This sect extended under different names through France, Italy, and Germany. A similar sect, under the name of *Adamites* (q. v.), advocating the community of women, arose during the Hussite wars, but was put down by the Hussite general Ziska.

IV. *Communistic and Socialistic Associations of the Times of the Reformation.*—A socialistic impulse, tending to a universal division of property, lay at the foundation of the peasant war of Germany in the early days of the Reformation. The twelve articles of the peasants, however, demanded only the abolition of feudal privileges, not a total subversion of society. The *Heavenly Prophets*, instituted by Nicholas Storch in 1521, went further; they advocated the community of goods, the substitution of polygamy for monogamy, and the abolition of all civil and ecclesiastical authority. Münzer (q. v.) went still further; his doctrine of the absolute community of all possessions was pure communism. These doctrines were admitted to the fullest extent by the Anabaptists (q. v.) of Munster. Some isolated followers of Anabaptism in the Netherlands disseminated these doctrines afterwards in France and the north of Germany. Following in the same road we find the *Libertines* of Geneva, whom Calvin strenuously opposed, and the *Familists* of Holland and England, about 1545. The communistic element is also apparent in a pure form in the organization of the Herrnhuters (Moravians), and in some communities of Auvergne, which are unions of families under one head, by whom work is divided according to different individual capacities.

V. *Modern Communism and Socialism.*—By the side of the above religious communistic doctrines arose the modern communism, taking its source in the new antagonism to the institutions of the Middle Ages, which recognised two classes of people—the rulers, nobles and clerks, and the ruled, civilians and peasants. All the privileges belonged to the former, all the burdens to the latter. For the old divisions of society—nobles and peasants—were substituted gradually two new classes, a *moneyed* aristocracy and a *proletariat*. The recognition of the principle of equality tended to overthrow all conventional authority and privileges.

In Great Britain the germs of communism are to be found in Roger Bacon's *New Atlantis;* in More's *De optimo reipublicæ statu* (1516); and in Harrington's *Oceana* (1656); but no practical form of socialism appeared till the 18th century, when the *Buchanites* (q. v.) of Scotland formed a religious communistic association, which lasted fully for half a century. In the 19th century, Robert Owen (q. v.) attempted to better the condition of the cotton-weavers of New Lanark. He published his system (*A new View of Society*, 1818), in which, starting from the principle that all men are born equal, he maintains that they become good or bad through the influence of outward circumstances. But his political radicalism obliged him to leave England, and he came to the United States, where he founded the colony of New Harmony. The experiment was successful so long as money lasted, but this failing, it was abandoned in 1826. See OWEN. In the mean time, the *Owenites* had founded another colony at Orbiston, near Edinburgh, Scotland, under the guidance of Abram Combe, but it was dissolved after his death in 1827. Owen, having returned to England, became the founder and director of the *National Labor Equitable Exchange*, and the *Community Friendly Society* of Manchester. These Owenite working associations brought forth the *Chartists*, who aimed at the suppression of the powers of the clergy, the land-owners, the large capitalists, and all privileged classes.

In France, the *Declaration of the Rights of Man*, in 1789, laid down the principle of equality as the foundation of the state organization. The Constitution of 1791 acknowledged the right of property, but recognised also the corresponding right of employment for those destitute of property. The Constitution of 1793 aimed to establish greater material equality, and Marat often expressed the idea that real equality could only be established on the basis of equality of rights and equality of tastes. Under Napoleon and the Restoration these ideas were for a time forgotten, until the Revolution of July, 1830, showed again their existence and power among the *proletariat*. The Socialists before the Revolution, whose way had been prepared by other Utopists, such as Fénelon (*Republique de Salente*, *Voyage dans l'île des plaisirs*, etc.), are but few in number, if considered as distinct from the advocates of equality. Among their works the most remarkable are *La Basiliade*, a novel by Morelli (Paris, 1753); *Le Code de la Nature* (1755), presenting the idea of systematizing labor. The materialist and atheistic works of Holbach, Helvetius, Diderot, Voltaire, Rousseau, Reynal, full of Utopian theories, greatly damaged the authority of existing institutions. Communism did not practically take its modern form until after the end of the Reign of Terror; but after the Constitution of 1795 had made the franchise of voting to depend on property, the remaining terrorists joined the disfranchised classes in their opposition to all right of individual property. They aimed at bringing back society to the state of nature, claiming that in a true state of society there should be neither rich nor poor; that a common education would make all equal in their attainments. The heads of the party were Babeuf and his followers. After the fall of Babeuf, and under the military rule of

Napoleon, arose the socialistic doctrines of St. Simon and Fourier. The former explained his views in *Le Catéchisme des Industriels* and *Le nouveau Christianisme*, in the former of which he proposed to establish an industrial system on the basis of perfect equality; while in the latter he attempts to demonstrate that this equality is a result of the divine commandment to love one another as brethren. In order practically to arrive at the object of St. Simon, Bazard proposed that after the death of a person, the community at large, instead of his family, should inherit his estate. Fourier expounded his system in *La Théorie des quatre Mouvements*, and *Le Traité de l'Association Domestique Agricole* (1822, 2d edit. 1841). He aims at the practical perfection of mankind, and considers happiness as the aim of all living creatures. Wealth is to be increased and disseminated, and this is to be accomplished by dividing the common property and by regulating labor, uniting persons to work in groups, industrial series, and phalanges, according to their capacity for labor; the result of the joint labor to be divided among the producers in proportion to their capital, labor, and talent. Fourier succeeded in gaining the public ear after the fall of St. Simonism, and was greatly helped by Victor Considérant. He published a newspaper, *Le Phalanstère*, in 1832, and in 1836 another, *La Phalange, Journal de la Science Sociale*, to disseminate his ideas.

St. Simonism and Fourierism gave rise to an immense number of publications in France. Among the most eminent writers are found, among the Socialists, Lamennais, who, in his *Essais sur l'Indifférence* (1827), attempts to bring the socialistic idea into unison with religious dogmas, while in his pamphlet *D'avenir* he calls the people back to union with the Church of Rome on the ground that it upholds the doctrine of equality before God, from which social equality will follow. For this he was put under the ban by the pope. Stung by this treatment, he published the *Paroles d'un Croyant; Politique à l'Usage du Peuple; Pays et Gouvernement*, which are among the most radical works extant. Of a more abstract and speculative character are the works of Pierre Leroux, *Essais sur l'Égalité* (1837), and *De l'Humanité* (1840), wherein he considers the principle of equality as a dogma, and recognises no distinctions of country, family, or property. The latter point is the foundation of Proudhon's doctrine; he attempts to prove that the right of property is unnatural in his work *Qu'est-ce que la Propriété?* (1840), to which question he returns the significant answer, *La Propriété c'est le Vol.* This work was followed by *De la Création de l'Ordre dans l'Humanité* (1843), and the *Philosophy of Misery* (1846). As the advocate of socialism among the newspapers, Louis Blanc stands first. His principal object is the organization of labor, to be accomplished by using state competition to destroy private competition; the state acting as capitalist, and rewarding each worker according to his deserts. Buonarotti's († 1837) *History of the Conspiracy of Babeuf* (*La Conspiration de Babeuf* (Paris, 1828), gave fresh circulation to Babeuf's theories, which found organs in *Le Moniteur Républicain*, 1837–38, and *L'homme libre*, after August, 1839. A practical application of these principles was prevented by the insurrection of the *Société des Saisons*, May 12th, 1839, led by Blanqui and Barbès. The failure of that enterprise damped the communistic spirit, and for a while there were only a few solitary attempts made, such as Quenisset's (1841). Still, secret societies continued to be organized, such as the *Société des Travailleurs Egalitaires*, composed of the remaining followers of Barbès, who pushed the communistic principles to extremes, and considered materialism as the immutable law of nature. Opposed to them were the *Réformistes*, comprising the greater part of the workingmen, who aimed at community of labor; a newspaper advocating their principles, *L'Atelier*, appeared in 1840. The *Icarian Communists*, headed by Cabet, strove to realize an ideal system of communism, depicted by the latter in his *Voyage en Icarie* (1840). The state, in this system, has no property, money, or distinct function; there are no distinctions of classes or ranks, and yet the state is immensely rich, as every thing belongs to it; the integrity of the family is preserved, and marriage held sacred, but the women are employed in the general workshops; all affairs are to be settled by the *Comité*, from whose decisions there is no appeal. These ideas were further disseminated in Cabet's newspaper, *Le Populaire*. An extreme sect of these communists was established in 1848 by Dézamy, who, bringing everything back to the individual, arrived at the fundamental maxim, *We must do as we can;* consequently, one may take all he requires for the time being. In this system no God is necessary, and man satisfies himself with what he finds in nature.

VI. *Communism and Socialism since the Revolution of February*, 1848.—This revolution gave at first a new impulse to socialism. The words *Liberté, Egalité, Fraternité*, posted on all the walls and appended to all the decrees of the republic, seemed to contain all that Socialists could wish for. The government itself was composed in part of Socialists. The result was the organization of the national work-shops, which only served to prove again the impracticability of these theories. But communism began to lift its head by the side of socialism, and made great progress with the lower classes. Both united in the insurrection of June, 1848. The putting down of the movement by General Cavaignac dispersed the leaders, some of whom took refuge in England; but their doctrines, nevertheless, continued to gain adherents among the lower classes of France. In 1850 a secret socialistic society was discovered, whose ramifications, from its centre at Beziers, extended almost through the whole of southern France, and which had completed a plan of general insurrection. This also led to the discovery, in Paris, of the secret society *La Némésis*, whose members, at their initiation, swore to defend the inalienable rights of man to liberty, equality, and fraternity.

The Socialism and Communism of Switzerland and Germany present no particularly new features, being mostly based on French theories. After the failure of the Revolution of 1849, the leaders fled from Germany to England, from whence they continued to direct the operations of the *Communist Association of Labor*, divided in circuits and communities, and strongly organized in Germany. But the alliance of the governments in 1850, the lack of energy among the confederates, and the publication of the aims of the society in June, 1851, by a tailor's apprentice, Peter Nothjung, at Leipsig, materially injured the organization. In Belgium French communistic ideas also obtained to some extent, and were upheld in several newspapers. In 1845 Considérant went to Brussels to advocate the Fourierite theories, but found no opportunity of carrying them into practice. These ideas, however, took a firmer hold among the lower classes of Italy; Pius IX, in a letter to the Italian bishops and archbishops, December 9th, 1849, recommended them to use all efforts to prevent the propagation of socialism. That the existence of these communistic societies depends on the personality of their founders, and not on their own excellence, has been demonstrated. After the death of the leading spirits, the organizations invariably degenerate, if they do not entirely disperse. In the United States a number of attempts have been made to establish communistic colonies, partly upon a merely humanitarian, and partly upon a religious basis. Among the former belong the communistic colony established by Cabet at Nauvoo, several colonies established by the German communist Weitling and his adherents, and several phalanges established by the admirers and followers of Fourier. They have all perished. Among the second class of communistic asso-

ciations belong the Shakers (q. v.) and the German Seventh-day Baptists (q. v.), who enjoin universal celibacy, the colonies Economy and Zoar, established by Separatists from Wurtemberg, and the Oneida Community (q. v.), which teaches a community of women as well as of property.—Pierer, *Universal-Lexikon*, s. v.; Herzog, *Real-Encyklopädie*, iii, 21; Romang, *Bedeutung des Communismus aus dem Gesichtspunct des Christenthums* (Bern, 1847); Reybaud, *Études sur les Réformateurs ou Socialistes Modernes* (2 tom. Paris, 1843); Sudre, *Hist. du Communisme* (4th edit. Paris, 1850); L. Stein, *Der Socialismus u. C. d. heutigen Frankreichs* (Lpz. 1842; 2d ed. 1848); *Gesch. d. socialen Bewegung in Frankreich v. 1789 b. a. unsere Tage* (Lpz. 1850, 3 vols.); Karl Grün, *Die sociale Bewegung in Frankreich u. Belgien* (1845); Th. Mundt, *Die Gesch. d. Gesellschaft in ihren neueren Entwickelungen u. Problemen* (1844); Williams, *The Harmony Society at Economy, Pennsylvania* (New Haven, 1867). See SOCIALISM.

Community of Goods. (1.) From the fact "that the early Christians '*had all things common*' (Acts ii, 44), some have supposed that to renounce all property, and to share one's goods with fellow-Christians, is the perpetual duty of Christians. But it is to be observed that no precept is given in Scripture to this effect; we have only the fact recorded that the early disciples were indifferent to property, unselfish, and 'willing to communicate.' And, if history is to be our help in this matter, it seems never to have been a part of Church discipline that goods should be common. It is usually supposed that the renunciation of private property, and the system of community of goods, was, for a time at least, adopted by the *whole* of the infant Church of Jerusalem. That the system, if ever so adopted, was soon discontinued, is perfectly evident. Those '*who were rich in this world*' were exhorted to be '*ready to give, and glad to distribute*,' which implies both that there were rich men in the churches, and that they were not required to sell all that they had, and cease to possess property, which would have left them, for the future, nothing to give. And the same may be learned from all that we read about the collections made in Greece for the poor Christians of Judæa, and from many other circumstances in the sacred history.

(2.) "But it has been contended that even in the infancy of the Church of Jerusalem, the community of goods was in reality confined to *those engaged in the ministry*, including the female catechists, or deaconesses, who were called 'widows.' Just at first, this description may have included *all* the believers; that is, those who were the first to embrace the Gospel may *all* have been employed in some department of the ministry. That Ananias and Sapphira thus offered themselves for the ministry is (doubtless) both a correct supposition, and one which will make the whole of the transaction recorded in Acts v intelligible" (Eden, *Churchman's Dictionary*, s. v.). This view is taken by Hinds, *Early Christianity* (pt. ii, ch. ii), who refers to Eusebius (lib. iii, c. 137) for confirmation of the suggestion.

(3.) Mosheim treats the subject largely in his treatise *De Vera Natura Communionis bonorum in eccl. Hierosol.* (Diss. ad Eccl. Hist. pertin. vol. i), and seeks to show that the passages in Acts ii, 44; iv, 32, imply a communion merely of the *use*, not the *possession* of property, and that only for a temporary purpose. But the more likely view is that the infant Church of Jerusalem "went so far in the ardor of their first love as to abolish the external distinction of rich and poor," perhaps as "a prophetic anticipation of the state of things in the perfected kingdom of God." The offering was entirely *voluntary*, and not the fruit of any command. On the contrary, the N. T. abounds in precepts for the right use of property, implying its separate and proper possession. See Hinds (l. c.); Schaff, *Apost. Ch. Hist.* § 114; Killen, *Ancient Church*, p. 52; Neander, *Planting and Training* (Bohn's ed.), i, 258; ii, 64.

Commutation OF PENANCE in the Roman Catholic Church. See PENANCE.

Compass (usually סָבַב, κυκλόω, to *surround*) is used as a noun by the A. V., especially in the phrase "fetch a compass" (סָבַב, Num. xxxiv, 5; Josh. xv, 3; 2 Sam. v, 23; 2 Kings iii, 9; περιέρχομαι, Acts xxviii, 13), i. e. *go around*.

Compel, in Matt. v, 41; xxvii, 32; Mark xv, 21, is the rendering of the A. V. for the technical term ἀγγαρεύω, to *impress* into public service [see ANGAREUO]; in Luke xiv, 23 (ἀναγκάζω, often to "constrain"), it has a milder sense, i. e. *urge*, rather than the full meaning of *coercion* (as elsewhere).

Compiegne, SYNODS OF (*Conventus Compendienses; Concilium Compendiense*). The synods held in Compiegne began first in the middle of the 8th and ended in the 14th century. The Diet held by Pepin the Little, A.D. 757, at Compiegne, is counted among the synods, because the privileges of the archbishop Chrodegang were ratified and signed before the assembled bishops (Mansi, *Conciliorum nova et ampl. Collectio*, vii, 653 sq., Florent. 1766). Whether the few church laws which were issued under Charlemagne in the year 775 as capitularies, which related partly to church government, partly to ecclesiastical revenues, and partly to monastic discipline, were established at a synod in Compiegne is very doubtful, because in the record of the capitulary there is only mention made of a *synodalis conventus* (see Harduinus, *Acta Conciliorum*, iii, 2056, Paris, 1714). A synod held there in 823, at which the bishops spoke of the usurpations practised by laymen in church matters, may indeed be regarded as a diet (Mansi, l. c. xiv, 410, Venet. 1769). The synod held in Compiegne in 833 was of real importance in the development of the Church. In the year 829, a Council at Paris, in a letter to the kings Louis and Lothaire, referring to an explanation which it was said the Emperor Constantine had given, set up the opinion that the bishops were the judges of kings, but that the bishops themselves could not be judged by men. This thesis first found a practical application at the above-mentioned synod in Compiegne, as the sons of Louis desired their father to be sentenced to a public penance by the bishops, and thus declared unfit to reign (Harduinus, l. c. iv, 1378, Par. 1714; Mansi, l. c. xiv, 647). The synod of 1095 declared a nobleman, Hugo de Juiaco, under the ban; that of 1236 established several regulations which aimed at securing ecclesiastical liberties; and that of 1270 declared against the unlawful possession of ecclesiastical benefices, which was regarded as sacrilege (see Harduinus, l. c. vii, 654, Par. 1714; Mansi, l. c. xxiv, 13, Venet. 1782). More important was the synod in 1301, as it made several decisions concerning ecclesiastical jurisdiction (Harduinus, l. c., p. 1247; Mansi, l. c. xxv, 87, Venet. 1782). The last synod in Compiegne issued only some decrees for the maintenance of Church discipline (see Harduinus, l. c. p. 1263; Mansi, l. c. p. 117).—Herzog, *Real-Encyklopädie, Supplementbd.* i, 345.

Competentes, a class of catechumens in the early Church. See CATECHUMENS.

Completorium, Completinum, or Compline (from Lat. *complere*, to *fill up*), the last service in the evening; the bed-time service. According to the canonical hours, fixed hours for public prayer were introduced into the Church with the institutions of the monastic life. In the Western Church the practice of praying seven times a day was adopted in the 5th or 6th century, and the *completorium* was the last or finishing canonical hour. See Procter, *Hist. of the Common Prayer*, p. 11; Freeman, *Principles of Divine Service*, p. 83. Comp. CANONICAL HOURS; BREVIARY.

Complutensian POLYGLOT. See POLYGLOTS.

Compostella, MILITARY ORDER OF ST. JAMES OF. "St. James the Elder was adopted as the patron saint of Spain after the victory of Clavijo, and his relics were preserved at Compostella. The marvels supposed to be performed by these relics drew vast numbers of pilgrims, for whose support hospitals were established by the canons of St. Eloi. The vicinity of the Moors having rendered the roads unsafe, thirteen noblemen united for the protection of the pilgrims, and with the canons resolved to found an order of the same kind as that of the Hospitallers or Templars. The pope granted his assent in a bull, dated 5th July, 1175, accompanied with the statutes of the order. Whatever conquests were made from the infidel were declared the property of the order, and a council of thirteen knights was vested with authority to elect and depose a grand master. The knights made vows of poverty, obedience, and celibacy, and professed their belief in the immaculate conception. To protect Christians and convert infidels they vowed to be the only object in their wars with the Saracens. In most of the great battles between Christian and Moor the red cross of the order was conspicuous. The conquests of the order itself, combined with the grateful munificence of the nation, speedily increased its wealth and power beyond those of any of the other orders of knighthood. In addition to the three large commanderies of Leon, Castile, and Montalvan, it possessed nearly 200 minor commanderies, comprising, it is said, more than 200 priories, with many fiefs, cloisters, hospitals, castles, boroughs, two towns, and 178 villages, exclusive of its possessions in Portugal. This enormous wealth and power of the order excited the jealousy of the crown, in which, in 1522, the grand mastership was permanently vested by the pope. Having thus become merely honorary and dependent on the crown, the order rapidly decreased in importance."

Cross of the Order Compostella.

Compostella, SANTIAGO DE, a town in Spain, and one of the three most famous places of pilgrimage in the Church of Rome, the two others being Rome and Jerusalem. The place was formerly called *ad Sanctum Jacobum Apostolum* or *Giacomo Postolo*, whence by abbreviation Compostella was formed. According to a Spanish tradition, the apostle James the Elder came to the Pyrenæan peninsula, and is buried at Compostella. The legend of the apostle having preached in Spain is first mentioned in the ninth century, and has generally been repudiated by the Roman Catholic writers, although it was defended by the Bollandists (*Acta Sanct.* tom. vi, *Julii, Appendix;* and tom. i, *Aprilis, Diatribe*), and by the Protestant J. A. Fabricius (*Salutaris Lux Evangelii*, c. 16, § 2). The claim of Compostella to the body of the apostle has found more advocates among the Roman Catholic writers, although the church of St. Saturnine at Toulouse prefers the same claim. The rival claims have been compromised by assuming that each church had one half, as a division of famous relics, it is alleged, frequently occurred in the Middle Ages. Compostella was made a bishopric in the beginning of the 9th century, and in 1120 an archbishopric.—Wetzer u. Welte, *Kirchen-Lex.* ii, 736.

Comprehension, in English history, "the scheme first proposed by Sir Orlando Bridgman in 1668 for relaxing the terms of conformity to the Established Church of England, and admitting Protestant dissenters into its communion. In 1674, Tillotson and Stillingfleet renewed the attempt, and the terms were settled to the satisfaction of the nonconformists; but, the bishops unanimously refusing their consent, the project fell to the ground. Immediately after the Revolution, the scheme was renewed at the instance of William III, but after two attempts the design of union was abandoned, and the Act of Toleration passed in its stead." See Macaulay, *History of England*, iii, 68, 380; art. ENGLAND, CHURCH OF; Eden, *Churchman's Dictionary*, s. v.

Compton, HENRY, bishop of London, son of the second Earl of Northampton, was born at Compton in 1632, and was educated at Queen's College, Oxford, which he left in 1652. After some years spent in travel on the Continent, he returned to England on the restoration of Charles II. For a short time he was a cornet in the army; then went to Cambridge, passed M.A., took orders, and was made canon of Christ Church, Oxford, in 1666. After various preferments, he was made bishop of Oxford in 1674, and was translated to the see of London in 1675 or 1676. He became tutor to the princesses Mary and Anne, and imbued them with his own earnestly Protestant sentiments. On the accession of James II he was dismissed from the council and from his deanery of the Royal Chapel on account of his vigorous opposition to popery. In 1686 he was tried before the lords commissioners (the notorious Jeffries presiding) on a charge of disobedience to the king's mandate (for the suspension of Dr. Sharp), and was suspended from his episcopal functions. He was restored in 1688, and on the accession of William he recovered all the offices from which he had been expelled. Bishop Compton sought to conciliate Dissenters, and to find means of reuniting them to the Church of England. His so-called "ultra-Protestantism" made him unpopular with High-churchmen. He died July 7, 1713. He published *A Treatise of the Holy Communion* (London, 1677); a number of episcopal letters and charges, etc.

Comstock, GROVER S., a Baptist missionary, was born at Ulysses, N. Y., March 24, 1809. He graduated at Hamilton College in 1827, studied law afterwards, and was admitted to the bar in 1830. Under the ministry of the Rev. C. G. Finney he was converted, and then studied theology at the Madison University. Deciding to devote his life to missions, he entered the service of the Baptist Foreign Missionary Board, and sailed from Boston for Burmah on July 2, 1834. He remained some time at Amherst and Maulmain studying the language, and then chose Arracan for his field of labor. In 1837 he organized a native church at Kyouk Phyou; and he remained, in spite of a deadly climate, to which his wife and two children fell victims in 1843, unremitting in labor until the illness which ended in his death, April 25, 1844.—*American Missionary Memorial*, p. 155.

Comte, AUGUSTE, founder of the so-called Positivism, was born at Montpellier Jan. 12, 1798, and died at Paris Sept. 5, 1857. He was the propounder of an elaborate system of philosophy, to which he gave the name of Positive, to denote its scientific and practical character, and to distinguish it from all schemes of metaphysical speculation.

He sprung from a family eminently Roman Catholic in religion and Royalist in politics, and these influences affected the development of his theories, notwithstanding the fever of innovation which always possessed him. He was educated in Paris at the Polytechnic school, in which he became a subordinate instructor in 1832. His first dreams of philosophic reform are ascribed by him to his fourteenth year, perhaps in rivalry of the precocity attributed to Bacon. In 1816 he contemplated emigration to the United States, and the transplanting of his nascent philosophical career to America. In August, 1817, he became acquainted with the notorious St. Simon — half seer,

half charlatan—and was so strongly impressed with his visionary raptures as to be considered his most hopeful disciple, and the successor upon whom that strange sage desired his mantle to fall, though recognising Comte's fatal want of religious susceptibility. This connection was always acknowledged by Comte, though mentioned in later years with increasing bitterness and disgust. He disclaimed all obligations to St. Simon, and fumed and fretted whenever the traces of St. Simonism were recognised in his own philosophy. In April, 1826, he opened a course of gratuitous prelections on the new scheme, which had been reduced to a somewhat determinate form by several essays previously published. The course was interrupted by brain fever, terminating in insanity. In consequence of this attack, which he designates *une crise cérébrale*, he was for some time confined in a lunatic asylum.

In 1829 he commenced the immense structure of his Positive Philosophy. It was completed in six heavy volumes, containing nearly 5000 pages. The first volume appeared in 1830, its 750 pages having been composed in the space of three months. M. Comte rarely revised, and never recopied his manuscript. As it came from his brain it passed to the press, and from the press to the public. The Revolution of July delayed the prosecution of his labors for five years, but with the return of more tranquil times he resumed them, and achieved the sixth and last volume in 1842. This is the work on which M. Comte's reputation as a philosopher almost exclusively rests. It is the only one of his works accepted by the majority of his disciples, or regarded by those who follow his guidance without attaching themselves to his banner. It contains the body and substance of Positivism, and was justly rebaptized *Système de Philosophie Positive.* In his later philosophical development Comte endeavored to infuse the vital breath of a moral and religious spirit into the cadaverous Pyrrhonism of his earlier views. But this attempt, which was flagrantly unsuccessful, offended alike his sect and his distant admirers, who hailed and honored his labors rather for their systematic infidelity than for their recognised truth.

On the completion of his scheme of philosophy Comte proceeded to apply its principles to the rectification of society. It was nine years, however, before the first volume of his *Système de Politique Positive* appeared. They were years of annoyance, anguish, misfortune, and strange adventure. He had supported himself and his family by the scanty fruits of his vocation as a public and a private teacher of mathematics. To this vocation we are indebted for his *Treatise of Analytical Geometry*, published in 1843. He relieved the dull routine of duty by lectures to the Parisian community on topics connected with science, or with the promulgation of his philosophy. One of these courses is perpetuated in his *Philosophical Treatise on Popular Astronomy* (1845). His heretical opinions, and, still more, his arrogant and irritable disposition, provoked opposition, and excited ill-will among his colleagues. His position in the Polytechnic School was rendered precarious, and he was finally deprived of it. At a later period his public lectures were for a short time closed by the interference of the government. This is the long personal persecution of which he complains with habitual acrimony in his later works. He was married, but had been separated from his wife. While his heart was wrung and parched by many sorrows, a new fascination consoled him, and opened unsuspected fountains in a dry and thirsty soil. In 1845 Comte became violently attached to an accomplished lady, Madame Clotilde de Vaux, who was separated from her husband, as he was from his wife. Their association was purely Platonic, and terminated in a year by the death of the siren on April 5, 1846. The *Positive Politics* is animated throughout by her inspiration, and is dedicated to her, with a commemoration of her virtues, in language which would sound extravagant in Dante or Petrarch. Brief as the intimacy had been, it revolutionized Comte's whole nature and the entire spirit of his speculations.

This strange transmutation of doctrine exhibited itself in the *Discourse on the general Character of Positivism*, which belonged to the midsummer of 1848, and was employed as an introduction to the *System of Positive Politics.* The rigidity and sterility of the cold and heartless rationalism of the *Positive Philosophy* was evidently unsuited to act upon society and to regenerate it; and the application of the Positive doctrine to practical ends almost necessitated the admission of the moral element, which had been previously disregarded. Men are not controlled by their reason; they are stimulated by their imagination, and impelled by their affections. To discipline the heart, an authority, and not arguments, is required. But no practical morals are possible, as an obligatory rule of action, which do not result from the decrees of a supreme will. Thus the first step towards a systematic plan of political authority, or of sociological interpretation, must be the recognition of a Divine Legislator and the acceptation of an incontestable creed. M. Comte was thus driven, by the extension of his theories to their practical applications, to introduce ethics into the circle of the sciences, to institute a divinity, to recognise or to invent a religion. His perception of the need was quickened, if his susceptibilities were not awakened, by the resuscitation of his natural affections, and the glow of sentiment was kindled by his preposterous passion. The long interval which separated the completion of the *Philosophie Positive* from the commencement of the *Politique Positive* may have been, in reality, due less to the personal persecution of which he complains, and to the revolutionary anarchy of 1848, than to the time and thought requisite to systematize his new views, and to produce some appearance of harmony between the philosophic doctrine and its efflorescence in a theocratic dream. The whole plan was, however, arranged in his own mind when he entered upon the composition of his sociological treatise. Nothing is more admirable than the rapidity and completeness, the methodical regularity, and the preordained precision with which each successive year brought forward at the appointed time a new volume of the *Politique Positive*, till the whole was accomplished. Each volume appeared in its season, like the blossoms of the returning summer. The first was published in July, 1851; the second in May, 1852; the third in August, 1853; and the fourth in August, 1854. The second volume of the *Positive Politics* was preceded in the same month by the publication of the *Calendar of Positivism*—that singular and elaborate rebaptism of the months of the year and the days of the week which substitutes the notabilities of human progress for the Sundays and saints' days of the Catholic Church, and the months of imperial Rome. In the October of the same year was published the *Catechism of Positivism*, designed to diffuse a knowledge of the new philosophy and the new creed among the masses of the people. At the close of the *Politique Positive* M. Comte marks out the ulterior projects which he designed to achieve before advancing years should demand repose. Seven years were to be devoted to the enlargement and rectification of his theory; and then, on the attainment of his grand climacteric, he would sing his *Dimittas.* *A System of Positive Logic, or the Philosophy of Mathematics*, was promised for 1856; *A System of Positive Morals, or Treatise on Universal Education*, for 1859; and *A System of Positive Industry, or Treatise on the Action of Humanity on its terrestrial Abode*, for 1861. The first volume of the first of these works was published, according to announcement, in 1856, but before the second was ready Comte died, in 1857. Various

pamphlets had been issued by M. Comte at different periods of his career, in order to give immediate consistency to his views on special points, or to popularize his doctrine. These it is needless to specify. More interesting in themselves, as more important for an appreciation of the man, are the annual circulars issued to those who participated in the subscription for his support.

The System of Positivism, in accordance with what has already been observed, requires to be considered under two distinct, though connected aspects—the scientific theory as originally expounded in M. Comte's earlier work, and the practical application of that theory as presented in his latest complete treatise.

(1.) *The Positive Philosophy.*—This is the development and co-ordination of all the materialistic tendencies of science in the age of the Encyclopædia and the Revolution. It is not itself materialistic, because it proceeds beyond materialism in the same direction, and is attenuated into a pure sensuous phenomenalism. It contemplates merely "the shows of things," and it coordinates them according to their concomitances and sequences, recognising no actual bond of connection between them, nor any power on which they depend. The function of philosophy is simply to introduce order and coherence into observed phenomena. Positivism is, accordingly, a habit or intellectual temperament rather than a philosophy, a method rather than a doctrine. Hence the most characteristic peculiarity of this work, as of the whole intellectual evolution of its author, is his arrangement of the sciences, with the principles on which that arrangement proceeds. The treatise becomes, in consequence, an orderly exposition of the sciences and of their reciprocal dependencies, embracing the statement of the results and processes of science, with an indication of deficiencies, excrescences, and aberrations in their present constitution. It is more profound in its execution than in its conception—in its details than in its general spirit. The solitary principle on which the whole elaboration of Positivism reposes is the doctrine of the Three States. To this may be referred Comte's classification of the sciences—his rule for their evolution, composition, and rank—his exposition of their significance and disciplinary value—his history of society, and his theory of humanity. This cardinal position is, that the whole human family, as well as each individual mind, passes through three successive and incompatible conditions: 1. The Theological State, which ascribes all phenomena to divine agency; 2. The Metaphysical State, which questions the divine action, and attributes all changes to influences, entities, occult causes, laws of nature, etc.; and, 3. The Positive State, which accepts the phenomena without reference to their origination, and arranges them under general laws, which merely state "the invariable relations of succession and resemblance." This principle of the Three States has been assailed by both admirers and opponents; but it is rather imperfect and misapplied than false. The succession of these states is explained by the confusion and multiplicity of apparently disconnected facts, which perplex the untutored mind, and suggest the arbitrary will of superior existences. As order reveals itself in the midst of disorder, an arbitrary government of the universe is repudiated, and law maintained by the operation of natural forces is more or less extensively accepted as the solution of the enigmas of creation. Thus metaphysics is the crucible in which theology and faith are gradually evaporated. As the regularity of phenomena is more generally apprehended, the jurisdiction of metaphysics is by degrees restricted, and is finally denied. No knowledge is admitted which does not promise to become science, no science which is not phenomenal only, no phenomena which suggest any other principle than uniform harmony and consecution of facts. In the process of speculative disentanglement by which the Positive habit is attained, those subjects are naturally the first to assume a scientific form which are characterized by the greatest simplicity in themselves, and are, according to the Baconian expression, "least immersed in matter." Hence the relations of number and space are the earliest to exhibit an orderly coherence; and mathematics is not merely the disciplinary introduction to the sciences, but the eldest by birth. Increasing complexity and specialty characterize the sciences as they successively detach themselves from the general mass of unsystematized knowledge. The principle on which the classification of the sciences proceeds is thus from greater to less simplicity, from the more general to the more special, from the more abstract to the more concrete. By the application of this rule M. Comte organizes the whole hierarchy of the sciences. Six only are recognised in the *Politique Positive:* I. Mathematics; II. Astronomy; III. Natural Philosophy, or Physics; IV. Chemistry; V. Biology; VI. Sociology; to which was afterwards added, VII. Morals. Having thus arranged the several sciences, M. Comte proceeds to the exhibition of their functions, their constitution, their conquests, and their condition. He thus furnishes an abstract of all scientific knowledge. This immense elaboration culminates in his creation of the new science of sociology. That science is roughly sketched rather than definitely constituted in the *Philosophie Positive.* It is divided into two parts, Statics and Dynamics. Social Statics treats of the formal conditions of the existence of societies; social Dynamics of society in its vital state of incessant transformation. Having ascertained all that had been accomplished, and all that legitimately sought accomplishment, Comte considered that a solid foundation had been laid for a scientific theory of political action adequate to the regeneration of society.

(2.) *Positive Politics.*—It has been shown how M. Comte was reduced to the necessity of discovering or imagining a God, and of reconstructing a theology, a ceremonial, and a religious organization. The new divinity—*le Nouveau Être Suprême*—is humanity. The units of the living race are separately united by death to this great spirit, and become atomic constituents of the immortal essence. It is a complete deification of man, a complete resolution of divinity into humanity. It is a strange counterpart to Pantheism which is produced in this scheme of thorough-going Panhumanism. The new divinity was to be adored, to be approached with prayer, to be honored with an appropriate ceremonial, worshipped with due rites, and served by a numerous army of priests. Of this priesthood M. Comte was to be the living head. Science and religion were at length reconciled by their union and identification; the priest was the scientific instructor; the priesthood consisted of the consecrated devotees of science; the high-priest was the supreme director of the intellectual, moral, industrial, and social development of society. In the midst of these wild imaginations, it is startling to find a sedate and sober estimation of the whole order of society and of each of its separate parts. The sanctity of the family, the consecration of marriage and its indissolubility, the domestic culture of infancy, the relation and subordination of the sexes, the general inviolability of property, the duties of capital and industry, the distribution and retribution of service—are all maintained in a manner utterly antagonistic to the current doctrines of communism and agrarianism. The most original and instructive part of this treatise is to be found in the consideration of the reciprocal influences of external nature upon man, and of man upon external nature. By this inquiry, brief as it is, the first permanent foundation is laid for a scientific exposition of the transformation of societies.

From the rapidity with which Comte's works were composed, from the absence of all revision, from gen-

eral inattention to the arts of composition and disposition, his treatises are swelled and deformed by continual repetitions and by want of perspicuous arrangement. They are vast and rambling essays rather than systematic expositions of philosophic doctrine. The blemishes which he was careless of avoiding have now ceased to be important. The impulse communicated by Comte remains, but few will ever again dream of reading the ten thick volumes in which his whole vast project was originally set forth. The direct effect of his career has been very slight, its indirect effect very great. He has linked his name with no enlargement of science or philosophy except in sociology—with no practical reform in society. His principles have found of late numerous followers in England, and a small number of them adopt "the religion of humanity" as well as the Positive philosophy. One of the chief of these is Mr. Thomas Congreve, who has taken steps (1867) to found a church, with a building and regular services. Mr. Congreve has announced that a church will shortly be built, and regular services instituted, for promoting the new creed which is to regenerate humanity.

Literature.—All Comte's important works have been enumerated in this notice. For his biography reference may be made to the autobiographical statements scattered through his prefaces, circulars, etc.; to Robinet, *Notice sur l'Œuvre et sur la Vie d'Auguste Comte* (Paris, 1860), and to Littré, *Auguste Comte et la Philosophie Positive* (Paris, 1863). For a fuller account of his philosophy than has been given here, recourse may be had to the last-named work; to Littré, *Conservation, Révolution, et Positivisme* (Paris, 1852); Lewes, *Comte's Philosophy of the Sciences* (Lond. 1853); Harriet Martineau, *The Positive Philosophy of Auguste Comte* (Lond. 1853, 2 vols. 8vo); Lewes, *History of Philosophy* (3d ed. 1867, Lond. 2 vols. 8vo); Célestin de Blignières, *Exposition Abrégée de la Philosophie et de la Religion Positives* (Paris, 1857); Herbert Spencer, *The Classification of the Sciences, etc.* (New York, 1864); J. S. Mill, *Comte's Philosophy* (Lond. 1866); also to Sir David Brewster's notice of the first two volumes of the Positive Philosophy in the *Edinburgh Review*, July, 1838, and to the Essays on Comte and his Philosophy in the *Methodist Quarterly Review*, New York, January, 1852; April, 1852; July, 1853; October, 1853; and July, 1854; and in the *North British Review*, May, 1854. See also POSITIVISM.

Conani'ah (Heb. in the text *Kaonanya'hu*, כָּוֹנַנְיָהוּ, i. e. *Konanya'hu*, כּוֹנַנְיָהוּ, but as read in the Masoretic margin, *Kananya'hu*, כָּנַנְיָהוּ; *settled by Jehovah;* Sept. Χωνενίας v. r. Χωχενίας, Vulg. *Chonenias*), the name of two chief Levites.

1. A person appointed (with his brother Shimei) as "ruler" (נָגִיד) by Hezekiah, to superintend the disposal of the sacred utensils of the Temple (2 Chron. xxxi, 12, 13, where the Auth. Vers. Anglicizes the name "Cononiah"). B.C. 726.

2. A person who, with several of his kindred, made large offerings for the Paschal sacrifices as renewed by Josiah (2 Chron. xxxv, 9). B.C. 628.

Conception OF CHRIST. (1.) This was supernatural, by the agency of the Holy Spirit (Luke i, 35; Matt. i, 20). (2.) It was without the communication of original depravity (Heb. vii, 26; iv, 15, etc.). For some of the literature of the subject, see Volbeding, *Index Dissert.* p. 9; Meyer, *Kommentar*, i, 54 sq. See CHRIST, PERSON OF.

Conception OF THE VIRGIN MARY. 1. The *Immaculate Conception of the Virgin Mary*, a doctrine of the Church of Rome. See IMMACULATE CONCEPTION. 2. *Monastic Institutions of the Conception of Mary.* (1.) *Order of Knights of the Immaculate Conception of the Blessed Virgin.* In 1617 three Italian noblemen of the family De Pétrignan announced their intention to establish a military order under the above name, whose object was to be to fight against all infidels and heretics. The plan was not executed, but in 1618 an order under the same name was established in Vienna. According to some writers the first impulse came from one of the brothers De Pétrignan; but the bull by which pope Urban VIII, in 1623, confirmed the order, mentions only Ferdinand, duke of Mantua, Charles, duke of Nevers, and Adolphus, count of Athlan, as founders. The order did not exist long.—Helyot, *Dict. des Ordres Relig.* i, 1077 sq. (2.) *Nuns of the Immaculate Conception of Mary*, also called Conceptionists. An order under this name was in 1484 founded by Beatrix de Sylva at Toledo, in Spain. It was sanctioned in 1489 by pope Innocent VIII. Cardinal Ximenes united this order with that of the Clarisses, the rule of which they adopted with some modifications. Pope Julius II, in 1511, gave to the Conceptionists a special rule, but they continued to be a part of the order of the Clarisses. (3.) *Congregation of the Immaculate Conception of the Blessed Virgin* was the name of congregations of lay-women which were established in connection with the convents of the congregation of Notre Dame, founded by Peter Fourier (q. v.).

Concha (Gr. κόγχη, a *shell*), the plain round or polygonal semi-dome that covers the apsis (q. v.) of a church. See CHURCH EDIFICES.

Concilia. See COUNCILS.

Conciliabule, a term applied by Roman writers to synods and councils held by "heretics and schismatics."

Concision (κατατομή, a *cutting down*, i. e. entire mutilation of the parts), a contemptuous term used by Paul in Phil. iii, 2, to denote the zealots for circumcision. In classical writers the Greek word denotes a *groove* or channel, etc. (see Liddell and Scott, s. v.), but the apostle parodies the term previously employed, for the purpose of indicating more pointedly the real character of the sectaries in question; instead of saying "beware of the *circumcision*" (περιτομήν), namely, the party who pressed the necessity of still observing that ordinance, he says "beware of the *concision*" (κατατομήν); as much as to say they no longer deserve the old and venerable name; what *they* stickle for is a mere concision, a flesh-cutting. He then goes on to state the reason, "for *we* are the circumcision"—the reality has now passed over into us, who believe in Christ and are renewed in the spirit of our minds. (See Sommel, *Obss. Philol.* on this passage, Lond. 1793.) Similarly in Gal. v, 12, he says even more pointedly, "I would they [the same class of Judaizing teachers] were even *cut off*" (ἀποκόψονται, *would for themselves cut off* wholly the organ circumcised, and not be content with a mere scarification of it), i. e. make themselves outright eunuchs (comp. the allusions to their impurity, ver. 13, 19. 21). So Chrysostom and Jerome explain (περικοπτέσθωσιν, *abscindantur*). See CIRCUMCISION.

Conclave (Lat. *con*, *with*, and *clavis*, *a key*, because from their strict seclusion its inmates as it were *unam habent clavem communem*) is applied (1.) to the apartments in which the cardinals of the Roman Catholic Church meet to elect a new pope; and (2.) to the assembly itself convened for this object. The place of assembling was frequently changed until 1455, from which date to 1823 the conclave was held in the Vatican palace; since 1823 the Quirinal palace has been used for this purpose. When necessary, however, another place, even if without the city of Rome, may be designated. Little chambers, technically called cells, are prepared for the separate accommodation of each cardinal and his attendants, which are assigned by lot, and those falling to the occupancy of cardinals created by the late pope are draped with some purple material as a badge of mourning, while green is used

for the others. The coat of arms of each cardinal is affixed to his cell. When a pope dies, ten days are allowed for the obsequies, for the arrival of absent cardinals, and for the preparations above mentioned for the conclave, together with the selection of persons styled conclavists, who are to enter the conclave as servants of the cardinals (two to each, or, if the cardinal be very old, sickly, or of princely birth, three), masters of ceremonies, confessors, clerks, physicians, carpenters, masons, barbers, and other servants. The prescribed time having elapsed, the cardinals and conclavists attend the mass of the Holy Ghost, formerly in St. Peter's, lately in St. Sylvester's church. The papal ordinances governing the conclaves are read, to the strict observance of which all who are to enter the conclave are sworn. Then the cardinals, with their conclavists, proceed solemnly to the apartments prepared, and repair severally to their cells, where they receive visits until evening from persons not of their number. At the third signal from the bell, about three hours after sunset, all not belonging to the conclave are excluded, and all the entrances except one are walled up, the windows also, except so much as may be necessary for air and light. The excepted entrance is closed by double locks and strictly guarded, admission being allowed to none except the absent cardinals. No egress is allowed except by permission of the conclave itself in case of grave illness. The theory is that all communication between those within and persons without in regard to the pending election must be prevented; but these precautions have not always secured their end. In spite of the law, there is frequent correspondence between the cardinals within and their political friends without. The decree of Gregory X prescribed that, if a choice was not made by the cardinals within three days, for the next five days only one dish at noon and evening should be allowed to each, and after that time only bread, wine, and water; but this rigid regimen was modified somewhat by Clement VI (1351). The execution of these regulations is intrusted externally to the civil authorities of the place where the conclave is held, and internally to the officers appointed by the conclave.

Prior to the latter half of the 11th century, the choice of the bishop of Rome was the joint prerogative of the clergy and people, exercised, we may suppose, at first directly, though subsequently the popular participation in the election appears to have been through some representative body; while the supreme secular power asserted its authority by requiring that the election should receive its sanction, the origin, doubtless, of the right exercised by certain Catholic governments (France, Spain, and Austria), and claimed by Italy (Naples) and Portugal, of each excluding from the papal throne some particular cardinal, a right, however, to be exercised before an election, and limited to one veto at each conclave. By a decree of Pope Nicholas II (*In nomine Domini*), 1059, the election of pontiff was given to the cardinal bishops, the other cardinals, and the clergy, the people merely approving it. By a further decree of Alexander III (1179), the choice was vested exclusively in the college of cardinals, with the proviso that the concurrence of two thirds of the cardinals present should constitute a legal election, the assent of clergy and people being no longer required. The Council of Lyons (1274), under the auspices of Gregory X, promulgated a constitution minutely prescribing the forms to be observed in regard to such elections, which were to be made in *conclavi clauso*, so as to shut out secular influence. These three instruments furnish the organic laws and regulations, both of franchise and ceremonials, which, without fundamental change, are still in force in papal elections.

It is laid down as a settled principle that no pope can appoint his successor, and that every cardinal, however recently made such, provided he has taken deacon's orders, may participate in a conclave, though under papal censure, suspension, interdict, or excommunication.

According to the bulls of Gregory XV (*Æterni Patris Filius* and *Decet Romanum Pontificem*), confirmed by that of Urban VIII (*ad Romani Pontificis providentiam*), the choice must be made in one of three ways, viz., by inspiration, compromise, or ballot. Election by inspiration is when all the electors spontaneously (*per quasi inspirationem*), without any previous concert, proclaim the same person for the office. Examples of such elections are given by early ecclesiastical writers, as that of Fabianus (Euseb. *Hist. Eccles.* vi, 29), but in modern times none such has occurred. Election by compromise is when, in default of agreement themselves, the cardinals delegate to a select number of their body, with or without conditions, authority to choose a pope, as was the case in the election of Clement V. The ordinary way, however, is by ballot. In this method, after the usual morning mass, each cardinal (when the conclave is assembled in the balloting-room or chapel), invoking Christ as witness to the purity of his intentions in the vote, deposits in the chalice on the altar a square paper, folded at opposite corners so as to conceal the voter's name and motto (which, once selected, must be adhered to), while the name of the person voted for is written on the open central space. These ballots are then examined in turn by three cardinals, appointed *scrutatores*, and the numbers taken, which must agree with that of the cardinals present, all being required to vote, and are filed to await the result. If any one has received just two thirds, the folded ends are opened to see that he has not voted for himself, which is not allowable. If no one has attained the required majority, the conclave proceeds in the afternoon session, after the hymn Veni Creator Spiritus, to try the process called *acceding* (*accessus*), in which each cardinal may give a supplementary vote, in the words *accedo domino cardinali*, to any one who received votes in the first process from others than the accedent; those declining to change the morning's choice write *nemini*. If the supplementary votes for any, added to the morning's votes for the same, do not make up the two thirds majority, the papers are burned, and the same process of balloting is repeated the next day. When the requisite majority is given, the papers are examined to see that no cardinal has voted twice for the same person, and that the mottoes of the evening and morning vote tally; then the recipient of the highest vote equalling or exceeding two thirds is declared duly elected. On his acceptance the work of the conclave strictly ends, for the newly elected is deemed to be legally pope, with all his prerogatives and powers; he is invested with the pontifical robes, receives the homage of the cardinals, adopts his official name, and is proclaimed from a reopened balcony window to the people by the cardinal dean, in the words *Annuntio vobis gaudium magnum. Papam habemus Eminentissimum ac Reverendissimum* ——, *qui sibi imposuit nomen* ——, and the shouts of the people are recorded as their assent, still, in theory, necessary to an election. The other ceremonies belonging to the inauguration follow in due order.—Ferraris, *Bibliotheca Canonica*, etc., art. Papa; Herzog, *Real-Encyklopädie*, art. Papstwahl; Ranke, *History of the Papacy* (see Index); *North British Review*, Dec. 1866, art. Conclaves; Petruccello della Gattina, *Histoire Diplomatique des Conclaves* (Paris, 1865, 2 vols. 8vo); Cartwright, *Papal Conclave* (Lond. 1867). See CARDINALS; POPE.

Concomitant. (1.) A term used by Roman theologians to denote the grace of God *accompanying* an action, as distinguished from *prevenient* grace, which (against the Pelagians) is necessary to excite to good desires and actions (Bergier). (2.) *Concomitance*, in the Roman doctrine of the Lord's Supper (q. v.), means

the "accompanying of the body of Christ by the blood, and of the blood by the body," in the Eucharist. Aquinas introduced the term (*concomitantia*). The withholding of the cup from the laity is justified by this Romanist doctrine of concomitance on the ground that as Christ is present entirely in each of the elements, he is received fully in either by the communicant. Of course this theory goes along with transubstantiation. — Burnet, *On the Articles*, art. xxxi; Smith's Hagenbach, *History of Doctrines*, § 195. See LORD'S SUPPER.

Concord, Formula of (FORMULA CONCORDIÆ), the seventh and last symbolical book of the Lutheran Church, first publicly adopted in 1580. It was framed in consequence of the long disputes between the stricter Lutherans and the milder Philippists and the Crypto-Calvinists in Germany. The principal theologians and evangelists considered it their duty to unite the Church as much as possible by clearly defining its fundamental doctrines in accordance with the principles of the Augsburg Confession of 1530. In 1574, duke Julius of Brunswick and the elector Augustus of Saxony commissioned professor Jacob Andreä (q. v.), of Tübingen, to frame a suitable formula. His work underwent divers alterations in the hands of Chemnitz and Chytræus, and was finally received as the confession of Swabia and Saxony. Subsequently, by the influence of prince George Ernest of Henneberg, a second formula of concord was framed by Osiander and Bidenbach, theologians of Würtemberg, and revised and completed by a body of theologians in the convent of Maulbronn in January, 1576 (known as the formula of Maulbronn). Andreä considered this latter as too short, the former as too diffuse, and undertook to base a third on these two. For this purpose the elector, in May, 1576, called a meeting of theologians at Torgau. Among the eighteen who answered to the call were Andreä, Chemnitz, Chytræus, Selneccer, Cornerus, Musculus, Crell, and Mörlin. Between them, and based on the two preceding formulas and the Augsburg Confession, they framed the *Book of Torgau* (published by Semler, Halle, 1760), which was submitted to the elector and his council on the 7th of June, and by him sent to the other evangelical princes and states, to be approved or altered according to their suggestions. After many additions had been made to it, the elector required Chemnitz, Andreä, and Selneccer to remodel it. This was done in March, 1577, in the convent of Bergen, near Magdeburg. In order to embody the different additions made to the primitive production (*Solida declaratio*), they made a small supplement (*Epitome*). At a second session in April they adopted a new redaction; and in a third, in May, where they were assisted by Musculus, Cornerus, and Chytræus, they perfected the final version, which was then handed to the elector. The latter named it *Formula Concordiæ*, and with the elector of Brandenburg called on the theologians of their states to sign it. It was then joined with the other received symbols in a *Corpus doctrinæ*, and this *Book of Concord* was officially recognised at Dresden, June 25th, 1580, as the fundamental symbol of the Lutheran Church.

It is divided into two parts: 1. The *Epitome*, or summary, consisting of eleven articles, each headed by the enunciation of some controverted point of doctrine (*status controversiæ*), which is then followed by the orthodox doctrine (*pars affirmativa*), and finally by the condemnation of the opposite view (*pars negativa*). 2. The *Solida declaratio*, or fundamental exposition, which treats of the same articles in connection with each other. The eleven articles, taken in the order of the Augsburg Confession, are on, 1. Original Sin (human nature by original sin has become *utterly depraved* [*in universum corrupta*]); 2. Free-will; 3. Justification by Faith; 4. Good Works; 5. The Law and the Gospel; 6. The third Use of the Law; 7. The Lord's Supper (the body and blood of Christ is really and substantially [*vere et substantialiter*] present: there is a sacramental union between bread and wine and the body and blood of Christ, and consequently an oral [*ore*] reception of the body and blood of Christ, in a supranatural and heavenly manner, so that also the unworthy and the unbelievers receive the real body and blood of Christ, though to their condemnation); 8. The Person of Christ; 9. The Descent of Christ into Hell; 10. The Customs of the Church; 11 Predestination and Election (the foreknowledge of God [*præscientia*] relates to all men, the prædestination only to the good). To these is joined an appendix concerning heresies and sectaries (i. e. all who had not accepted the Augsburg Confession). The appended testimony of the witnesses of the Holy Scriptures, and of the pure doctrines of the original Church, on the person and work of Christ (*Communicatio idiomatum*), by Andreä and Chemnitz, in eight articles, is not considered as part of the creed.

As to Anthropology, the Formula Concordiæ carries out the doctrines of the Augsburg Confession with regard to original sin to their logical results, and after distinctly rejecting the view of Flacius, which made original sin to be the substance of the human soul's agency, and not the soul's essence, the Formula Concordiæ, affirms that "Christians ought not only to acknowledge and define actual faults and transgressions of the commands of God to be sins, but they ought also to regard that hereditary disease (*morbus*), by which the whole nature of man is corrupted, as a specially dreadful sin, and, indeed, as the first principle and source of all other sins, from which all other transgressions spring as from their root." The first position in the statement of the doctrine of original sin, according to the Formula Concordiæ, is that "this hereditary evil is guilt (*culpa*) or crime (*reatus*); whence it results that all men, on account of the disobedience of Adam and Eve, are odious in the sight of God, and are by nature the children of wrath, as the apostle testifies" (Hase, *Libri Symbolici*, p. 639, 640; Shedd, ii, 155).

The Formula "is the only Lutheran symbol in which the distinction between the active and passive righteousness of Christ appears." Its statement is as follows: "That righteousness which is imputed to faith, or to the believer, of mere grace, is the *obedience*, suffering, and resurrection of Christ, by which he satisfied the law for us and expiated our sins. For since Christ was not only man, but truly God and man in one undivided person, he was no more subject to the law than he was to suffering and death [i. e. if his Person merely be taken into account, without any reference to his vicarious relations], because he was the divine and eternal Lord of the law. Hence not only that obedience to God his Father which he exhibited in his passion and death, but also *that obedience which he exhibited in voluntarily subjecting himself to the law, and fulfilling it for our sakes*, is imputed to us for righteousness, so that God, on account of the total obedience which Christ accomplished (*præstitit*) for our sake before his heavenly Father, both in acting and in suffering, in life and in death, may remit our sins to us, *regard us as holy and righteous, and give us eternal felicity*" (Hase, *Libri Symbolici*, p. 68; Shedd, *Hist. of Doctrines*, ii, 342). As to the work of regeneration, it teaches that "before man is illuminated, converted, regenerated, and drawn by the Holy Spirit, he can no more operate, co-operate, or even make a beginning towards his conversion or regeneration, with his own natural powers, than can a stone, a tree, or a piece of clay" (Hase, *Libri Symbolici*, p. 622; Shedd, ii, 368). For a full discussion of the Christology of the Formula, see Dorner, *History of the Doctrine of the Person of Christ*, div. ii, vol. ii, 209 sq.

The *Formula* was originally framed in German; the Latin translation by Osiander was adopted by Sel-

neccer in his first Latin edition of the Book of Concord; but the latter afterwards made another translation of it, which, after being revised in the convent of Quedlinburg in 1583, was inserted in the new edition of the Book of Concord in 1584. The signatures of the princes who endorsed it were placed after the preface, which was prepared at Jüterbock in 1579; those of 8000 ministers (put in A.D. 1582) follow immediately after the text. The Formula was for a long time rejected by Denmark and Sweden; in the former country its publication was, until 1580, forbidden under penalty of death. It was received in Hungary (1593-1596), Holstein (1647), Pomerania (1685), and Livonia. It was rejected in Hesse, Anhalt, a part of Mecklenburg, and the free cities of Frankfort on the Main. Spires, Worms, Strasburg, Nuremberg, Magdeburg, Bremen, Dantzic, etc.; the electors of the Palatinate (in 1583), and Brandenburg (1614), and the Duke Julius of Brunswick, who had previously accepted it, retracted afterwards. Thus, of the three Protestant electors of the German empire, Palatinate, Brandenburg, and Saxony, only one (Saxony) remained a champion of the Formula of Concord, and he subsequently joined the Church of Rome. The Formula of Concord, united with the Augsburg Confession of 1590, the Apology, the Articles of Smalcald, and the two catechisms of Luther, forms the "Concordienbuch," or the Book of Concord, of which there are many editions in German and Latin. "But the Lutheran Church is still divided upon this symbol. The so-called High Lutherans insist that the Formula Concordiæ is the scientific completion of the preceding Lutheran symbolism, while the moderate party are content to stand by the Augsburg Confession, the Apology, and the Smalcald Articles" (Shedd, *Hist. of Doctrines*, ii, 458). See CONFESSIONS OF FAITH; SYMBOLICAL BOOKS; LUTHERANS.

See Hospinian, *Concordia discors* (Zurich, 1607; Gen. 1678); Leonhard Hutter, *Concordia concors* (Wittenb. 1614, 1621; Lpz. 1690); J. Musæus, *Prælectiones in epitomen Formulæ conc.* (Jena, 1701); Balthasar, *Hist. d. Torgischen Buches* (Greifsw. 1741-56, 8 vols.); J. N. Anton, *Gesch. d. form. Conc.* (Lpz. 1779, 2 vols.); Francke, *Lib. Symbol.* pt. iii; Mosheim, *Ch. Hist.* 153-165; Herzog, *Real-Encyklopädie*, iii, 87 sq.; Franck, *Theologie der Concordienformel* (Erlang. 1865, 4 vols.).

Concordance (Lat. *concordantiæ*), a book containing the words in the Holy Scriptures, in alphabetical order, with their context more or less fully given, and a designation by chapter and verse of the places in which they are to be found. (See Glauchius, *De usu Concordantiarum Biblicarum*, Lips. 1668.) While the Scriptures remained in manuscript, or were not divided into sections and paragraphs, indexes of their words and phrases could neither be formed nor used. As soon as any regular divisions began to be made, the importance of concordances, or alphabetical indexes, was felt, and learned men devoted their labors to form them. The first concordances were prepared for the Latin Vulgate. (See below.) See Orme's *Bibliotheca Biblica*, p. 112; Watts's *Bibliotheca Britannica*; Winer's *Handbuch*; Walch, *Biblioth. Theol.* iv, 307; Röhr's *Kritische Prediger-Bibliothek*, 1841; *Meth. Quar. Review*, 1847, p. 451; *Princeton Review*, 1828, p. 471. The following are the most important works of this description.

I. *Hebrew*.—1. The first Hebrew concordance was by Rabbi Isaac (or Mordecai) Nathan (q. v.), in 1445. It cost seven years' hard labor by himself and some assistants. It was first printed at Venice in 1524, fol., by Dan. Bomberg, then by Franzoni (ib. 1564, fol.), again by Pesaro (Basle, 1581, fol.), and afterwards at Rome in 1622. It is entirely Hebrew, and entitled *Meir Nathib* (מֵאִיר נָתִיב), "The Light of the Way." It was translated into Latin by A. Reuchlin (Basil. 1556, fol., 1569, 4to), but both the Hebrew and the Latin editions are full of errors.

2. These errors were for the most part corrected and other deficiencies supplied by Mario di Calasio (q. v.), a Franciscan friar, who published *Concordantiæ Sacr. Bibl. Hebr. et Latin.* (Romæ, 1621, 4 vols. fol.), republished in London under the direction of W. Romaine (1747-9, 4 vols. fol.), under the patronage of all the monarchs in Europe, not excepting the pope himself.

3. *Concordantiæ Bibl. Ebraicæ, nova et artificiosa methodo dispositæ* (Basil. 1632, fol.), by John Buxtorf, the father, but published by his son. It takes for its basis the work of Rabbi Nathan, though it is much better arranged, more correctly printed, the roots more distinctly ascertained, and the meanings more accurately given; but as the references are made by Hebrew letters, and relate to the rabbinical divisions of the Old Testament, it is of little service, unless the student is familiar with the Masoretic system. This work was abridged under the title of *Fons Leonis*, etc. (Berolini, 1677, 8vo). A new edition of Buxtorf's Heb. Concordance, by Bär, has lately been published (Stettini, 1861 sq., 4to).

4. Before the republication of Calasio there appeared Chr. Nolde's (q. v.) *Concor. particularum Ebræo-Chaldaicarum* (Hafn. 1679, 4to: an edition seems to have been begun in 1675, fol., but this never saw the light). This concordance contains the particles, or indeclinable words, omitted in former (as well as later) concordances. The best edition of Nolde is that by Tympe (Jena, 1734, 4to). It contains, as an appendix, a Lexicon of the Hebrew Particles, by John Henry Michaelis and Christ. Kœrber.

5. But the best, or at least to the English reader most important work up to the present century on this subject is *The Hebrew Concordance, adapted to the English Bible, disposed after the manner of Buxtorf*, by John Taylor, D.D. (London, 1754, 2 vols. fol.). It was the fruit of many years' labor, and still has its value.

6. An edition of Buxtorf's *Hebrew Concordance*, which has received so much care and attention on the part of the editor as nearly to deserve the name of a new work—*Hebräische und Chaldäische Concordanz zu den heiligen Schriften des alten Testaments*, by Dr. Julius Fürst (Leipzig, 1840, fol.), offers one of the most useful aids to the study of the Bible that has ever appeared. In addition to those of a more mechanical kind, such as a good type and clear arrangement, there are, 1. A corrected text, founded on Hahn's *Vanderhooght*; 2. The Rabbinical significations; 3. Explanations in Latin, giving the etymology of the Rabbinical; illustrations from the three Greek versions, the Aramaic Paraphrase, the Vulgate, etc.; the Greek words employed by the Seventy as renderings of the Hebrew; together with philological and archæological notices, so as to make the Concordance contain a brief Hebrew lexicon.

7. *The Englishman's Hebrew and Chaldee Concordance*, edited by G. V. Wigram (Lond. 1843, 2 vols. 8vo), is an original and exceedingly useful work, and remarkably accurate. It gives the Hebrew words in their order, but quotes the passages in which they occur from the common English Bible. It contains the first complete list of the Heb. proper names ever made. It deserves to be more extensively known and used. Its high price is a serious check to its circulation.

8. Aaron Pick, *The Bible Student's Concordance* (Lond. 1845, 8vo), a work of little account to scholars.

9. W. Wilson, *The Bible Student's Hebrew Guide* (Lond. 1850, 4to), equally brief and insufficient.

Other and earlier Heb. Concordances are: Rabbi Anschel, מִרְכֶּבֶת הַמִּשְׁנֶה (a vocabulary, with references to passages, Cracow, 1584, 4to, and later); Crinesius, *Concordantiæ Ebraicæ* (Vitemb. 1627, 4to); Layman, *Concordantiæ Ebræo-sacræ*, etc. (1681, fol.); Trostius, *Concordantiæ Chaldaicæ* (Vitemb. 1617, 4to).

II. *Greek Concordances*.—(*a*) *To the Septuagint*.—1. Conrad Kircher, *Concordantiæ Veteris Testamenti Græ-*

ex Ebræis vocibus respondentes (Francof. 1607, 2 vols. 4to). This work follows the order of the Hebrew words, placing the corresponding Greek word after it; in consequence of which, it is more useful in consulting the Hebrew than the Greek Scriptures.

2. The best Greek Concordance to the Septuagint is that which bears the title A. Trommii *Concordantiæ Græcæ Vers. vulgo dic. LXX Interpre.* (Amst. et Traj. ad Rh. 1718, 2 vols. fol.). See TROMME. It follows the order of the Greek words, of which it first gives a Latin translation, and then the Hebrew word or words for which the Greek term is used in the Seventy. Then the different places in which the words occur follow in the order of the several books and chapters. When the word occurs in any of the Greek translators, Aquila, Symmachus, or Theodotion, the places where it is found are referred to at the end of the quotations from the Sept. The words of the Apocrypha are placed at the end of each enumeration. There are two indices at the end of the work: one Hebrew and Chaldaic, by examining which the Greek term used in the Septuagint for any Hebrew or Chaldee word is seen at once, with the Latin version and the place where it is found in the concordance, so that Tromme serves in a measure for a Hebrew concordance; the other index contains a lexicon to the Hexapla of Origen, and comprehends the Greek words in the fragments of the old Greek translators published by Montfaucon.

(*b*) *To the New Testament.*—1. The first Greek concordance to the New Testament, now exceedingly rare, is entitled Xysti Betuleii *Concordantiæ Græcæ Novi Testamenti* (Basil. 1546, fol.). The author's real name was Birck.

2. A concordance to the Greek New Testament, projected and partly executed by Robert Stephens, and completed and published by his son Henry (Genev. 1594, and with a supplement, 1600, fol.), is too inaccurate to merit more than a passing notice.

3. Of much value is Erasmi Schmidii *Novi Testamenti J. C. Græci; hoc est, originalis linguæ ταμεῖον* (Vitemb. 1638, fol.; revised ed. Gotha, 1717, fol.; also Glasg. 1819, 2 vols. 8vo; recently by the Messrs. Bagster of London, in a thin, flat pocket volume, and in another form, 32mo, being one of their "Polymicrian series").

4. J. Williams, *Concordance to the Greek Testament* (Lond. 1767, 4to), a work especially useful to the mere English reader.

5. A new and very superior edition of Schmid's ταμεῖον has been put forth by C. H. Bruder, *Concordantiæ* (Leipz. 1842, 4to). Among the advantages of this edition, let it suffice to specify, 1. Fulness, accuracy, and correspondence with Griesbach's edition; 2. Regard has been paid to the editions of Lachmann and Scholz; all the readings of the Elzevirs, Mill, Bengel, Knapp, Tittmann, Scholz, and also of Erasmus, Robert Stephens's third edition, and of Schmid himself, are either given or pointed out. The student is presented also with a selection of readings from the most ancient MSS., from the interpreters of Scripture who lived in the earlier ages of the Church, and the works of the ecclesiastical fathers: no various reading possessing critical value is omitted.

6. One of the most valuable aids for the general study of the New Testament which modern times have produced is *The Englishman's Greek Concordance of the New Testament*, being an attempt at a Verbal Connection between the Greek and the English Texts (Lond. 1839, 8vo). The work, which is carefully compiled, takes Schmid as its basis. The plan is the same as that of the "Englishman's Hebrew Concordance" above, and it is by the same editor. It has been republished in this country (N. Y. 1848, 8vo).

III. *Latin Concordances.*—1. Antony of Padua (born A.D. 1195, died 1231) is said to have produced the first work of the kind, entitled *Concordantiæ Morales*, which was formed from the Vulgate translation.

2. Hugo de Santo Caro, better known as Cardinal Hugo, a Dominican monk, who died about 1262, followed Antony in 1244, by compiling for the Vulgate a concordance of the Scriptures. Having given himself sedulously to the study of Holy Writ, with a view of writing a commentary thereon, he was, in order to facilitate his labor, led to project and undertake to form a concordance, calling to his aid his brother monks to the number of no fewer than five hundred. Their labors have been a rich storehouse for subsequent compilers. The concordance thus made was improved by Conrad of Halberstadt, who flourished about 1290, and by John of Segovia in the ensuing century.

3. R. Stephens, *Concordantiæ Bibliorum utriusque Testamenti* (1555, fol.).

4. After the revision of the Vulgate by Sixtus V, a concordance to it appeared, entitled *Concordantiæ Sacr. Bibl. Vulgat.* edit. F. Lucæ Brugensis (Antw. 1617; Paris, 1683). Most of the Latin concordances are reprints of this, e. g. by Luca and Phalesti (Vien. 1825, fol.).

5. A new Latin Concordance to the Vulgate, edited by Ducrisson, appeared in Paris in 1838 (4to).

IV. *German Concordances.*—The first German concordance was that of *Conrad Agricola* (Nurnb. 1609, fol.), repeatedly reprinted and revised.

2. The most useful is that of F. Lankisch, *Concordant. Bibl. Germanico-Hebraico-Græcæ* (Lips. 1677, fol., often reprinted; best edition that of Reineccius, Lips. 1718). There are several modern German concordances, the most noteworthy of which is

3. J. G. Hanff, *Biblische Real-und Verbal-Concordanz* (2 vols. in 4 pts. 8vo, Stuttg. 1828–34).

4. We may also mention a valuable concordance for the German Bible—*Biblische Hand-Concordanz für Relegionslehrer und alle Freunde der Heiligen Schrift* (pub. by H. Schott, Leipzig, 1827, 8vo). The work is more comprehensive than similar writings in the English language. It is divided into three parts: (1.) A full and complete register of all the words found in the Bible; (2.) An index of the most important things, subjects, and ideas found in the Bible, with references to the places where they lie in the sacred volume; as, for instance, under the head "Lord's Supper, a meal commemorative of the death of Jesus, it brings us into intimate fellowship with Christ; the worthy participation of the same; spiritual enjoyment of the flesh and blood of Christ," etc. (3.) The leading doctrines of Christianity systematically arranged, drawn up according to Luther's *Catechism*, and accompanied by scriptural proofs.

Other concordances in German are those of G. Büchner (Jena, 1750, 1757, 1776; Halle, 1837; Lpz. 1806), Wichmann (Lpz. 1782), F. J. Bernhard (Lpz. 1850–2), J. M. Otto (Sulzb. 1842), K. A. Toller (Stuttg. 1838), S. Lueg (Passau, 1841).

IV. The first complete *French* concordance was that of Mark Wilks, *Concordance des Saintes Ecritures* (Paris, 1840, 8vo).

V. *English Concordances.*—1. The first concordance to the English version of the New Testament was published without date, but certainly before 1540, by "Mr. Thomas Gybson," being chiefly, as appears probable from the prefatory epistle to the reader, the work of the famous printer John Day. It is entitled *The Concordance of the New Testament, most necessary to be had in the hands of all soche as desire the communication of any place contained in the New Testament.*

2. The first English concordance to the *entire* Bible was that of John Marbeck—*A Concordance, that is to saie, a Worke wherein by the order of the letters of the A, B, C, ye maie redely find any worde conteigned in the whole Bible, so often as it is there expressed or mentioned*, Lond. 1550, fol. Till the year 1555, when Robert Stephens published his concordance, it was not customary to mark the verses in books of this sort. At

first it was thought sufficient to specify the chapter with the letters *a*, *b*, *c*, *d*, as marks to point out the beginning, middle, and end of each chapter. But in 1545 Robert Stephens divided the Bible into verses, thus preparing the way for a more exact reference in concordances, etc.; but Marbeck does not appear to have made use of this improvement, as his work refers merely to the chapters. See MARBECK.

3. The following work, which appeared in the same year as the last, is a translation from the German—*A Briefe and a Compendious Table, in maner of a Concordance, openyng the waye to the principall Histories of the whole Bible, and the most comon articles grounded and comprehended in the Newe Testament and Olde, in maner as amply as doeth the great Concordance of the Bible. Gathered and set forth by Henry Bullinger, Leo Jude, Conrade Pellicane, and by the other ministers of the Church of Ligurie. Translated from the Hygh Almayne into Englysh by Walter Lynne. To which is added, a Translation of the Third Boke of Machabees* (8vo, 1550). Lynne, the translator, was an English printer, who flourished about the middle of the 16th century, a scholar, author, and translator of several books. See BULLINGER. An improved edition of the tabular *Concordance*, adapted to the translation of 1611, was published by John Downame (London, 1646, 8vo).

4. All earlier English concordances were superseded by the more correct and valuable work of Alexander Cruden (q. v.), entitled *A Complete Concordance to the Holy Scriptures of the Old and New Testament, etc., to which is added a Concordance to the books called Apocrypha* (1737, 4to). Three editions were published by the author during his life, and many have appeared since his death. The London edition of 1810 is the best standard edition. Several useful editions of Cruden have been put forth by the Messrs. Bagster, who have also issued *An Alphabetical Index of the Holy Scriptures, comprising the Names, Characters, and Subjects, both of the Old and New Testament*, in two sizes, which the Biblical student will find very serviceable.

Cruden's Concordance has been for a century the basis of every other work of the kind, such as Brown's, Butterworth's, Coles's, Eadie's, etc. With all its excellences, however, it has more serious defects than is generally apprehended. The Rev. Thomas Scott was so well aware of this that he contemplated a revision of the work. Its chief fault is its great want of completeness, but a moiety of the words being really given at all, and only a part of the occurrences of these, the proper names being especially defective. These and other defects are in a good measure remedied in the edition issued by the "Society for Promoting Christian Knowledge" (Lond. 1859, 8vo), but this still is far from perfect. A really *complete* and accurate English concordance is yet a desideratum. The want is about to be met by Strong's *Exhaustive Concordance to the Auth. Engl. Version of the Holy Scriptures*, which is now passing through the press.

Concordat. 1. A treaty, but usually restricted to a convention between the pope of Rome and any secular Roman Catholic government for the settling of ecclesiastical relations. Treaties which the pope, as a secular sovereign, concludes with other princes, are not called concordats. Conventions between the pope and a Protestant government for the settlement of the ecclesiastical relations of the Roman Catholic subjects of the latter are properly only called *conventions*, though it is common to apply the term concordat to any convention. The name concordat was for the first time applied to the convention made in 1418 between Pope Martin V and the representatives of the German nation, which was called *Nonnulla capitula concordata et ab utraque parte suscepta*. The name is now, however, generally applied to earlier conventions also. One of the most important of the earlier concordats is that of *Worms*, called also the Calixtine Concordat, made in 1122 between Calixtus II and Henry V, in order to put an end to the long contest on the subject of investiture, and which has since been considered a fundamental ordinance in Germany. Most of the concordats have been extorted from the popes by the different civil powers. This was done as early as the fifteenth century; for when the Council of Constance urged a reformation of the papal court, Martin V saw himself obliged, in 1418, to conclude the concordats of *Constance* with the German, the French, and the English nations. Chap. 1 restricts the number of cardinals, and makes provisions as to their character and mode of appointment. Chap. 2 restricts the papal reservations. Chap. 3 treats of papal annates and taxes, which for France were reduced for the space of five years to one half of their former amount; while in the English concordat these were abolished altogether. Chap. 4 defines what trials are to be lodged at Rome. Chap. 5 reduces the number of commendams. Chap. 6 enjoins a strict proceeding against simony before the *forum conscientiæ*. Chap. 7 provides that excommunicated persons need not be shunned before the publication of the ban. Chap. 8 reduces the number of papal dispensations. Chap. 9 treats of the revenue of the papal curia. Chap. 10 reduces for Germany the papal indulgences, and repeals those that had been issued since the death of Gregory XI: in the French concordat nothing is said about this point. Chap. 11 provides that the German and French concordats are to be valid only for five years, and that with regard to the French the royal sanction is reserved. The English concordat is definite. The German and English concordats obtained at once legal authority; the French in 1424.

At a meeting of the German electors at Frankfort, in October, 1446, the reformatory demands of the German nations, which for several years had been the subject of negotiations, were finally agreed upon. They chiefly concerned the recognition of the supreme authority of general councils, the convocation of a new general council, and the redress of the grievances of the German nation. Pope Eugene IV, through his ambassadors, declared his readiness to concede these demands, and on his death-bed, Feb., 1447, signed five bulls by which they were severally granted. The Frankfort demands, and the bulls of Eugene IV, by which they are ratified, are together called the *Frankfort Concordats*, or the *Concordat of Princes*. The chief basis of these concordats was the series of reformatory decrees which had been adopted by the Council of Basle. Nicholas V, on March 28, 1447, ratified the concessions made by his predecessor to the German nation.

On Feb. 17, 1448, the Emperor Frederick III concluded (without the co-operation of the electors) with the cardinal legate Carvajal a concordat at Vienna, which made to the pope far-reaching concessions; in particular, the right of ratifying the election of all the bishops (which right, by the Concordat of Princes, had been restricted to the bishoprics immediately subject to the pope), of cancelling uncanonical elections, and of appointing bishops for the dioceses thus become vacant. This convention was formerly called the *Aschaffenburg Concordat* or *Recess*, but the more correct name is the *Vienna Concordat*. The Frankfort Concordats and the Vienna Concordat together are called the *Concordats of the German Nation*. They formed a fundamental law of the German Empire, and part of them continued, even after the destruction of the German Empire, to be a part of the ecclesiastical law of the several German countries.

In *France*, the reformatory decrees of the Council of Basle had been, in 1438, adopted as a law of the kingdom at the Diet of Bourges. But this law—the *Pragmatic Sanction of Bourges*—was never recognised by any of the popes of the 15th century; and in 1516, Pope Leo X prevailed upon king Francis I to conclude a new concordat, which the Lateran Council, then in

session, approved and embodied with its decree, while the king made it a law of the country, notwithstanding the protest of the Parliament and the University of Paris. It established the annates, referred the *causæ majores* for adjudication to Rome, and gives to the king the right of nominating the bishops.

In 1451 a concordat was concluded with the duke of *Savoy*, by which the latter received the right of nominating for the most important benefices. In 1486 king John II of *Portugal* concluded a concordat with Pope Innocent VIII, by which he abandoned the *Placet Regium*, which the kings had exercised since the beginning of the century, though, since 1427, the popes had protested against it. The concordat was disapproved by the Cortes. In 1523 Pope Adrian II gave to the kings of *Spain* the same right as regards the nominating for ecclesiastical benefices which had been conceded to France. No concordat was concluded during the 16th century after the year 1523, and none at all during the 17th century.

II. *The Concordats of the Eighteenth Century.*—The concordats of this period (1717–1774) were occasioned by the revival of the anti-papal tendencies of the Church of Rome, which had prevailed in the 15th century, and still more by the development of the theory of the absolute state. They all belong to the Latin nations of Europe.

1. *Savoy.*—The arrangement of 1451 had been the subject of long controversies, which were partly settled by an agreement in 1727, and fully by a concordat on Jan. 6, 1741, which made provisions on the admission and authority of papal bulls in the country, on the limits of ecclesiastical jurisdiction, on the exemption of church property, on the right of asylum, etc.

2. For *Milan*, which, since 1706, belonged to Austria, a concordat was concluded Dec. 10, 1757, concerning exclusively the exemption of church property.

3. In *Naples* the so-called *Monarchia Sicula*, or the right claimed by kings to act as papal legates, had long been a hereditary subject of controversy between the secular governments and the popes. It was finally regulated, together with other differences, by a treaty concluded June 2, 1741, which recognised, though in somewhat modified form, the exemption of church property and of the clergy from taxation. the right of asylum, ecclesiastical jurisdiction in marriage affairs, and the right of the Church to superintend the importation of foreign books.

4. *Spain.*—The conflicts between Spain and the pope concerning the extent of the royal right of collation were settled by a preliminary agreement in 1737, and by a concordat concluded Jan. 11, 1753. An appendix to the concordat concerning the rights of the papal nuncio in Madrid was agreed upon.

5. *Portugal.*—In 1740 Benedict XIV granted to the kings of Portugal, by a concordat, the right of nominating for the episcopal sees and all benefices.

III. *The Concordats of the Nineteenth Century.*—The present century has witnessed the conclusion of a very large number of concordats. Most of them were called forth by a desire of the secular government to rearrange ecclesiastical affairs, which had been thrown into utter disorder by the French Revolution and the territorial changes in Europe following it.

1. *France.*—Bonaparte, when first consul, concluded a concordat with Pius VII, July 15, 1801, which went into operation in April, 1802. It re-established the Roman Catholic Church, which is declared to be the religion of the majority of Frenchmen, and has become the basis of the present ecclesiastical constitution of that country. It guaranteed to the Roman Catholic Church freedom and publicity of worship, which was, however, placed under the general laws of police; promised a new circumscription of dioceses, and provided for the resignation of all the bishops at that time in office; it gave to the first consul the right of nominating the bishops, and prescribed the oath of fidelity toward the secular government which the bishops and other priests have to take. The bishops received the right to appoint the parish priests, but the latter must be agreeable to the secular government. Of the churches not yet sold, as many as were necessary for divine worship were to be restored to the bishops. The Church renounced all claims to the property that had been sold during the Revolution, and the state promised to pay the bishops and priests a sufficient salary. The former rights and prerogatives of the French crown were recognised as having been transferred to the first consul, but in case a person not a member of the Church of Rome should be invested with the latter office, new provisions were reserved. The concordat was published as a law of France in 1802, together with some introductory "organic articles." Against the latter, however, the popes always protested. The concordat and the new circumscription of dioceses were also valid for Belgium, and those parts of Germany (the left bank of the Rhine), Switzerland, and Savoy which, by the treaties of peace at Luneville and Amiens, had been united with France.

In 1803 a special concordat was concluded between Pius VII and Napoleon for the Italian republic. It substantially agrees with the French concordat, though some provisions are more favorable to the pope. This concordat remained valid for the kingdom of Italy, which was established in 1805.

In 1813 Napoleon negotiated with the pope a second concordat (the Concordat of Fontainebleau), which was published against the consent of the pope, who had regarded it only as a preliminary agreement, and at once took back his consent. As the reign of Napoleon ceased soon after, the concordat never became effective.

Louis XVIII concluded at Rome with Pius VII (July 11, 1817) a new concordat, by which that of 1516, so injurious to the liberties of the Gallican Church, was again revived; the concordat of 1801 and the *articles organiques* of 1802 were abolished; the nation was subjected to an enormous tax by the demand of endowments for forty-two new metropolitan and episcopal sees, with their chapters and seminaries; and free scope was afforded to the intolerance of the Roman court by the indefinite language of art. 10, which speaks of measures against the prevailing obstacles to religion and the laws of the Church. This revival of old abuses, this provision for the luxury of numerous clerical dignitaries at the expense of the nation, could please only the ultra-royalist nobility, who saw in it the means of providing their sons with benefices. The nation received the concordat with almost universal disapprobation; voices of the greatest weight were raised against it; the Chambers rejected it, and it was never carried through. After the Revolution of 1830 the government fell back on the concordat of 1801, and the organic articles became a new subject of controversy between Church and State.

2. *Germany, Prussia, and Austria.*—The relations of the German Roman Catholics to the pope were greatly disturbed by tho dissolution of the German empire. For some time everything was in confusion; at the time of the Congress of Vienna only five German bishops were still alive. When the political reorganization was begun, the pope at first demanded the restoration of the entire former state of things. But when it was found out that this demand would never be granted, negotiations with particular states concerning the conclusion of concordats began. (1.) *Bavaria* was the first state which succeeded (July 5, 1817) in arriving at an agreement. By the Bavarian concordat two archbishoprics were established; seminaries were instituted and provided with land; the nominations were left with the king, with the reservation of the papal right of confirmation; the limits of the civil and ecclesiastical jurisdiction were precisely settled, and the erection of new monasteries was prom-

ized. This concordat was published in May, 1818, together with the new political constitution, by which all apprehensions for the Protestant Church in Bavaria were allayed.

(2.) The government of *Prussia*, in 1821, agreed with the pope upon a bull of circumscription (*De Salute Animarum*), which was published by the Prussian government as a law of the state. It divides the state into two archbishoprics and six bishoprics, and contains provisions as to the re-establishment of chapters, the election of bishops by chapters, the dotation of bishops and chapters, and the taxes to be paid by the episcopal chancellories to Rome.

3. *The Ecclesiastical Province of the Upper Rhine.*—In 1818 the state governments of *Würtemberg*, *Baden*, and a number of other minor German states sent delegates to a conference at Frankfort to conduct joint negotiations with the pope concerning the reconstruction of episcopal sees. In 1821, a bull of circumscription, beginning *Provida sollersque*, and providing for the establishment of an archbishopric in Baden, and bishoprics in Hesse-Darmstadt, Hesse-Cassel, Nassau, and Würtemberg, and for the dotation of the bishops, was issued and ratified by the governments in 1822. Some further points were agreed upon between these governments and the pope in 1827, and others continued to be the subject of animated controversy, and were in most states not yet settled in 1867.

A concordat with the king of Würtemberg, consisting of thirteen articles, was concluded in 1857. The government promises in it to execute the dotation of the bishopric as soon as circumstances will permit. The bishop received the right to confer all benefices which have no patron, of appointing his vicar general, the extraordinary members of the chapter, and the rural deans, yet he must appoint persons to whom the government has no objections. To the bishops belong all the regulations concerning divine service, the holding of synods, and the introduction of monastic orders, the latter, however, only in concert with the government. The episcopal court has jurisdiction over all ecclesiastical affairs, in particular also over all marriage affairs. The bishop has the right of inflicting ecclesiastical censures on clergymen and laymen. If clergymen transgress civil laws, the secular court will act in concert with the bishop. The intercourse of the bishop, the clergy, and the people with the papal see is free, and ecclesiastical decrees do not require the *placet regium*. The religious instruction of the youth, both in public and private institutions, is under the control of the bishop. He selects the catechism. He has the right of establishing seminaries and of superintending them. Provisionally, special regulations are made for the continuance of the three seminaries at Ehingen, Rottweil, and Tübingen. The theological faculty of the university of Tübingen is also under the control of the bishop, who authorizes the professors to lecture, and may refuse this authorization; who takes their confession of faith, and examines the manuscript of their lectures. The property of the Church is inviolate, but subject to public taxes. It is administered by the Church. The vacant benefices and the intercalar fund are administered by a joint committee of Church and State. The concordat was published by the government in its official paper in 1858, but did not receive the consent of the Legislature, without which many of its provisions cannot become valid.

4. In 1821 *Hanover* obtained a bull of circumscription similar to the one issued for Prussia, by which two bishoprics were established. For the kingdom of Saxony two bishops *in partibus* were appointed as vicars apostolic. The other minor states had their Roman Catholic subjects placed under the subjection of Prussian or Hanoverian bishops, or of those of the province of the Upper Rhine, and thereby ratified the agreements concluded between those states and Rome.

5. *Austria.*—The government of Austria began to negotiate with the pope about a new concordat soon after the beginning of the revolutionary movements in 1848. The concordat was concluded in 1855, and was most favorable to the claims of the papacy. The following are the most important points of the Austrian concordat. The Roman Catholic Church in all parts of the empire enjoys the protection of the government. The *Placet Regium* is abolished, and the intercourse of the bishops with the pope is free. The instruction of the Roman Catholic youth must be in accordance with the Roman Catholic religion. The bishops have the power to detain the faithful from reading pernicious books. Cases of the canon law, especially marriage affairs, belong to the ecclesiastical courts, while the civil relations of marriage remain under the jurisdiction of the secular judge. The bishops have the right of exercising the discipline of the Church, and of proceeding against members of the Church with ecclesiastical punishments. The power of the state is promised to the maintenance of the immunity of the Church. The episcopal seminaries are under the jurisdiction of the bishops. The emperor has the right of nominating the bishops, after taking counsel with the other bishops of the ecclesiastical province. The first dignity at every metropolitan and suffragan church is conferred by the pope. The monastic orders are under the jurisdiction of their superiors. The bishops have the right of introducing new orders, after coming previously to an understanding with the government. Church property may be acquired in the legal way, and is secured to the Church. In Feb. 1856, *twenty* "*Separat-Artikel*" (separate articles) to the concordat were published. They provide that the bishops may found one university independent of the state; that only Roman Catholic professors shall be appointed at the University of Pesth; that Church and State will work together for the suppression of books against religion and morals; that the state shall lay no obstacle in the way of erecting such confraternities and associations as the Church has approved; and that the bishops shall not be hindered from regulating in religious institutions everything that concerns religion and the purity of the Christian life. The immense majority of the Austrian people were indignant at this concordat, and in July, 1867, the Austrian Parliament, by an almost unanimous vote, called on the government to abolish it.

6. *The Netherlands and Belgium.*—Between the government of the Netherlands and the pope a concordat was concluded in 1827, which extended to the northern provinces the provisions of the French concordat of 1801, with the exception that the bishops were not to be nominated by the Protestant king, but to be chosen by the chapter from a list of candidates from which the government had the right to strike out any names not agreeable to it. The concordat was officially published by the government, but the bull of circumscription by which the provinces were divided into bishoprics was not recognised, and the concordat was never carried out. Later the papal government itself disregarded the concordat, and made a new division of dioceses without concert with the government.

In Belgium, which at the time of the publication of the French concordat of 1801 was a part of France, that concordat continued in force, while the country was annexed to Holland (1815-1830). In the new Belgian kingdom the Church was separated from the state, and thus the concordat naturally lost its authority.

7. *Switzerland.*—The idea of establishing one national bishopric could not be carried out, as some of the cantons were unable to agree with the papal see. Gradually, by agreement with some of the cantonal governments, the ecclesiastical relations of the Roman Catholics were regulated, and six bishoprics established.

8. *Italy.*—For *Sardinia* a new bull of circumscrip-

tion was issued July 17, 1817. *Naples* concluded a convention with the pope July 18, 1818, which in the same year was promulgated as a law of the country. The convention consists of thirty-five articles, and yields all the chief demands of the Roman court. The Roman Catholic Church is declared to be the exclusive religion of the state; the right of nominating the bishops is given to the king; the right to nominate the members of the chapters is divided among the pope and the bishops of the diocese. The Church recognises the sale of Church property which had taken place during the French rule, and the property not yet sold is restored to her; she also receives the right of acquiring new landed property. The jurisdiction of bishops is enlarged; the influence of the Church upon public instruction is guaranteed; the abolition or fusion of ecclesiastical benefices without the consent of the pope is declared invalid; the property of the Church is declared inviolate.

The concordat with *Tuscany* of June 19, 1851, consists of fifteen articles. It provides that the ecclesiastical authorities, in the exercise of their offices, shall find the protection of the state. The intercourse of the bishops with their diocesans and the papal see shall be free. They shall also have the censorship over religious publications, and the right of preventing the faithful from reading pernicious books. If priests offend against civil laws they shall be amenable to the civil courts, but the punishment shall not be inflicted without the consent of the bishops; and if it be the penalty of death, or any penalty involving infamy, the papal see shall take cognizance of the case. The property of the Church shall be administered by the bishops and the parish priests, and, in case of vacancies, by a joint committee of priests and laymen. By this concordat the ecclesiastical legislation of Leopold II, which was nearly the same as that of Joseph II in Austria, was abolished. The concordat was soon followed by some organic interpretations, by which the state, with the consent of the papal see, guarded some of its former rights. The provisional government of Tuscany in 1859 declared this concordat abolished. By the absorption of Naples and Tuscany into the kingdom of Italy their special concordats ceased.

9. *Russian Concordat.*—For the Roman Catholic Church of Russia a concordat was concluded by the emperor Nicholas Aug. 15, 1847. It guarantees to the Roman Catholics of Russia the free exercise of their religion, and permits the establishment of a new bishopric at Cherson for Bessarabia, Tauris, and the Caucasus. The government charged itself with maintaining the bishop, his chapter, and seminary. It also contained provisions on the elections of bishops not yet officially published.

10. A concordat with *Spain*, consisting of forty-five articles, was concluded March 16, 1851. According to it, the Roman Catholic religion is, to the exclusion of every other religious worship, the only religion of the Spanish people. Public instruction in all institutions is to be imparted in accordance with the Roman Catholic doctrine, and placed in this respect under the control of the bishops. The government is bound to assist the bishops in maintaining the purity of doctrine and of morals, and in suppressing pernicious books. The female orders which occupy themselves with education, and the Sisters of Charity, are to be maintained. The confiscated Church property which was not yet sold at the time of the conclusion of the concordat was to be restored to the Church, and to be administered by the clergy. The pope, on the other hand, promised to leave the former buyers of Church property in the undisturbed possession thereof. A new concordat, slightly modifying the preceding, was concluded Nov. 25, 1859.

11. *Portugal.*—A concordat with Portugal was concluded in 1857, and ratified by the Portuguese Legislature in 1859—almost unanimously by the Chamber of Peers, but only by a majority of fifteen (66 votes against 51) in the Chamber of Deputies. This concordat concerns only the present and former Portuguese possessions in India. It places again nearly the whole of British India under the jurisdiction of bishops appointed by the Portuguese government.—Pierer, *Universal-Lexikon*, s. v.; Herzog, *Real-Encykl.* iii, 60-87; Wetzer u. Welte, *Kirch.-Lex.* ii, 741-760; the Manuals of Church Law (*Kirchenrecht*) by Richter and Walter; Münch, *Vollständige Sammlung aller ältern u. neuern Concordate* (Leipz. 1830, 2 vols.); *Revue des deux Mondes*, May 1, 1865; Sept. 15, 1866.

Concubinage, the sexual connection of two persons of different sexes who are not united by the bond of matrimony. Externally, marriage and concubinage were equal according to Roman law, as even for marriage nothing was required but the agreement of the contracting parties. But they were different with regard to the legal effect of the union. In a regular marriage the wife obtained the rank of the husband (*dignitas mariti*), and her children were legitimate and in the power of the father. None of these results took place in case of concubinage. The Church distinguished between temporary and life-long concubinage. The former was always forbidden; the latter, though not approved, was long tolerated. The Council of Toledo (A.D. 400), by its Canon 17, excommunicates a married man keeping a concubine, but permits unmarried men to do so; and allows either a wife or a concubine. In the Latin Church, it was not until the Council of Trent, which made the validity of a marriage dependent upon a declaration of consent before the parish priest and two witnesses, that life-long concubinage was declared to be criminal, and subjected to punishment. The punishment for ministerial *concubinarii* was withholding of income, suspension, imprisonment, and, ultimately, excommunication. The evangelical churches have never recognised concubinage.—Herzog, *Real-Encyklop.* iii, 105; Lea, *Sacerdotal Celibacy*, chap. xii. See CONCUBINE.

Concubine (פִּילֶגֶשׁ, *pile'gesh*, deriv. uncertain, but apparently connected with the Gr. πάλλαξ [fully in the plur. נָשִׁים פִּלַגְשִׁים, 2 Sam. xv, 16; xx, 3]; Chald. לְחֵנָה, *lechenah'*, Dan. v, 2, 3, 23), denotes in the Bible not a paramour (Gr. παλλακή), but only a female conjugally united to a man in a relation inferior to that of the regular wife (אִשָּׁה). See WIFE. The positions of these two among the early Jews cannot be referred to the standard of our own age and country; that of concubine being less degraded, as that of wife was, especially owing to the sanction of polygamy, less honorable than among ourselves. The natural desire of offspring was, in the Jew, consecrated into a religious hope, which tended to redeem concubinage from the debasement into which the grosser motives for its adoption might have brought it. The whole question must be viewed from the point which touches the interest of propagation, in virtue of which even a slave concubine who had many children would become a most important person in a family, especially where a wife was barren. Such was the true source of the concubinage of Nahor, Abraham, and Jacob, which indeed, in the two latter cases, lost the nature which it has in our eyes, through the process, analogous to adoption, by which the offspring was regarded as that of the wife herself. From all this it follows that, save in so far as the latter was generally a slave, the difference between wife and concubine was less marked, owing to the absence of moral stigma, than among us. We must therefore beware of regarding as essential to the relation of concubinage what really pertained to that of bondage.

The concubine's condition was a definite one, and quite independent of the fact of there being another woman having the rights of wife towards the same

man. The state of concubinage is assumed and provided for by the law of Moses. A concubine would generally be either (1) a Hebrew girl bought of her father, i. e. a slave, which alone the rabbins regard as a lawful connection (Maimonides, *Halach-Melakim*, iv), at least for a private person; (2), a gentile captive taken in war; (3), a foreign slave bought, or (4), a Canaanitish woman, bond or free. The rights of (1) and (2) were protected by law (Exod. xxi, 7; Deut. xxi, 10), but (3) was unrecognised, and (4) prohibited. Free Hebrew women also might become concubines. So Gideon's concubine seems to have been of a family of rank and influence in Shechem, and such was probably the state of the Levite's concubine (Judg. xx). The ravages of war among the male sex, or the impoverishment of families, might often induce this condition. The case (1) was not a hard lot. The passage in Exod. xxi is somewhat obscure, and seems to mean, in brief, as follows: A man who bought a Hebrew girl as concubine for himself might not treat her as a mere Hebrew slave, to be sent "out" (i. e. in the seventh year, v, 2), but might, if she displeased him, dismiss her to her father on redemption, i. e. repayment probably of a part of what he paid for her. If he had taken her for a concubine for his son, and the son then married another woman, the concubine's position and rights were secured, or, if she were refused these, she became free without redemption. Further, from the provision in the case of such a concubine given by a man to his son, that she should be dealt with "after the manner of daughters," we see that the servile merged in the connubial relation, and that her children must have been free. Yet some degree of contempt attached to the "handmaid's son" (בֶּן־אָמָה), used reproachfully to the son of a concubine merely in Judg. ix, 18; see also Psa. cxvi, 16. The provisions relating to (2) are merciful and considerate to a rare degree, but overlaid by the rabbis with distorting comments.

Concubinage therefore, in a scriptural sense, means the state of cohabiting lawfully with a wife of second rank, who enjoyed no other conjugal right but that of cohabitation (q. v.), and whom the husband could repudiate, and send away with a small present (Gen. xxi, 14). In like manner, he could, by means of presents, exclude his children by her from the heritage (Gen. xxv, 6). Such concubines had Nahor (Gen. xxii, 24). Abraham (xxv, 6), Jacob (xxxv, 22), Eliphaz (xxxvi, 12), Gideon (Judg. viii, 3), Saul (2 Sam. iii, 7), David (1 Sam. v, 13; xv, 16; xvi, 21), Solomon (1 Kings xi, 3), Caleb (1 Chron. ii, 46), Manasseh (*ib.* vii, 14), Rehoboam (2 Chron. xi, 21), Abijah (2 Chron. xiii, 21), and Belshazzar (Dan. v, 2). Their issue was reputed legitimate (though the children of the first wife were preferred in the distribution of the inheritance), but in all other respects these concubines were inferior to the primary wife, for they had no authority in the family, nor any share in household government. If they had been servants in the family before they came to be concubines they continued to be so afterwards, and in the same subjection to the mistress as before. If a woman were made captive in war she was allowed a month in which she was at liberty to mourn the loss of her parents and friends; and neither father nor son was permitted to take her as a concubine until the expiration of that time (Deut. xx, 10, 14). To judge from the conjugal histories of Abraham and Jacob (Gen. xvi and xxx), the immediate cause of concubinage in patriarchal times was the barrenness of the lawful wife, who in that case introduced her maid-servant of her own accord to her husband for the sake of having children. Accordingly, we do not read that Isaac, son of Abraham, had any concubine, Rebecca, his wife, not being barren. In process of time, however, concubinage appears to have degenerated into a regular custom among the Jews, and the institutions of Moses were directed to prevent excess and abuse in that respect by wholesome laws and regulations (Exod. xxi, 7-9; Deut. xxi, 10-14). The unfaithfulness of a concubine was regarded as criminal (Judg. xix, 2; 2 Sam. iii, 7, 8), but it was not punished as was that of a wife (Lev. xix, 20). See ADULTERY. Such a case, however, as that mentioned (Judg. xix), where not only is the possessor of the concubine called her "husband" (ver. 3), but her father is called his father-in-law and he his son-in-law (4, 5), shows how nearly the concubine approached to the wife. Hired women, such as "uxores mercenariæ conductæ ad tempus ex pacto," whom Ammianus Marcellinus attributes to the Saracens (xiv, 4), were unknown among the Hebrews. To guard adult male offspring from debauchery before marriage, their parents, it appears, used to give them one of their female slaves as a concubine. She was then considered as one of the children of the house, and she retained her rights as a concubine even after the marriage of the son (Exod. xxi, 9, 19). When a son had intercourse with the concubine of his father, a sort of family punishment, we are informed, was inflicted on him (Gen. xxxv, 22; 1 Chron. v, 1). Where polygamy was tolerated—as it was among the Hebrews—the permission of concubinage would not seem so much at war with the interests and preservation of society as we know it to be. Christianity restores the sacred institution of marriage to its original character, and concubinage is ranked with fornication and adultery (Matt. xix, 5; 1 Cor. vii, 2). See POLYGAMY.

In the Talmud (tit. *Cetuboth*), the Rabbins differ as to what constitutes concubinage, some regarding as its distinguishing feature the absence of the betrothing ceremonies (*sponsalia*) and of the dowry (*libellus dotis*), or portion of property allotted to a woman by special engagement, and to which she was entitled on the marriage day, after the decease of the husband, or in case of repudiation; others, again, the absence of the latter alone. In the books of Samuel and Kings the concubines mentioned belong to the king, and their condition and number cease to be a guide to the general practice. A new king stepped into the rights of his predecessor, and by Solomon's time the custom had approximated to that of a Persian harem (2 Sam. xii, 8; xvi, 21; 1 Kings ii, 22). To seize on royal concubines for his use was thus a usurper's first act. Such was probably the intent of Abner's act (2 Sam. iii, 7), and similarly the request on behalf of Adonijah was construed (1 Kings ii, 21-24). For fuller information, Selden's treatises *De Uxore Hebraâ* and *De Jure Natur. et Gent.* v, 7, 8, and especially that *De Successionibus*, cap. iii, may, with some caution (since he leans somewhat easily to rabbinical tradition), be consulted; also the treatises *Sotah*, *Kidushim*, and *Chetuboth* in the Gemara Hierosol., and that entitled *Sanhedrin* in the Gemara Babyl. The essential portions of all these are collected in Ugolini, vol. xxx, *De Uxore Hebraâ*. See also Otho, *Lex. Rabbin.* p. 151; Selden, *De Successionibus*, iii; Michaelis, *Laws of Moses*, i, 455-466.

The Roman law calls concubinage an allowed custom (*licita consuetudo*). When this expression occurs in the constitutions of the Christian emperors, it signifies what we now sometimes call a *marriage of conscience*. The concubinage tolerated among the Romans, in the time of the Republic and of the heathen emperors, was that between persons not capable of contracting legal marriage. Inheritances might descend to children that sprung from such a tolerated cohabitance. Concubinage between such persons they looked on as a kind of marriage, and even allowed it several privileges; but then it was confined to a single person, and was of perpetual obligation, as much as marriage itself (Gaii, *Institut.* lib. i, § 109 sq.; Justin. *Institut.* lib. i, tit. x). Hottoman observes that the Romans had allowed concubinage long before Julius Cæsar enacted the law by which every one was at

liberty to marry as many wives as he pleased. The emperor Valentinian, Socrates tells us, allowed every man two. Concubinage is also used to signify a marriage with a woman of inferior condition, to whom the husband does not convey his rank. Dajos (Paratilla) observes that the ancient laws allowed a man to espouse, under the title of concubine, certain persons who were esteemed unequal to him on account of the want of some qualities requisite to sustain the full honor of marriage; and he adds that, though such concubinage was beneath marriage both as to dignity and civil rights, yet was concubine a reputable title, and very different from that of "mistress" among us. The connection was considered so lawful that the concubine might be accused of adultery in the same manner as a wife (see Smith's *Dict. of Class. Antiq.* s. v. Concubina).

This kind of concubinage is still in use in some countries, particularly in Germany, under the title of *halb-ehe* (half-marriage), left-hand or morganatic marriage, in allusion to the manner of its being contracted, namely, by the man giving the woman his left hand instead of the right. This is a real marriage, though without the usual solemnity, and the parties are both bound to each other forever, though the female cannot bear the husband's name and title. See MARRIAGE; CONCUBINAGE.

Concupiscence (Lat. *concupiscentia*), evil desire (ἐπιθυμία, Rom. vii, 8; ἐπιθυμία κακή, Col. iii, 5); generally used in the sense of indwelling sin. The term is especially used in Roman Catholic theology. For its import there, and the controversy concerning it, see SIN.

Conder, JOSIAH, born in London 17th September, 1789, was the son of a bookseller, and very early displayed a taste for literature. In 1814, being at the time a bookseller, he purchased the *Eclectic Review*, of which he continued to be editor until 1837. Under his management the *Eclectic Review* received the assistance of many eminent men among the Nonconformists, such as Robert Hall, John Foster, Dr. Chalmers, Dr. Vaughan, and others. In 1818 he published a treatise *On Protestant Nonconformity* (Lond. 2 vols. 8vo); in 1824 *The Star in the East*, a poem; and in in 1834 a new translation of the *Epistle to the Hebrews, with Notes*. In 1836 he edited *The Congregational Hymn-book*, issued under the sanction of the Congregational Union. Besides these, he issued *An Analytical View of all Religions* (1838, 8vo); *Exposition of the Apocalypse* (8vo); *Literary History of N. T.* (1845, 8vo). His works are chiefly compilations, but are carefully executed, and well adapted to popular use. He died Dec. 27, 1855.

Condescension, a term both earlier and more correct for the modern theory of the ACCOMMODATION (q. v.) of Scripture; we have therefore reserved for this place some remarks supplementary to the article under that head. The general idea expressed by the term Accommodation is that some object is presented, not in its absolute reality as it is in itself, but under some modification, or under some relative aspect, so as the better to secure some end at which the writer or speaker aims. Of this leading conception there are several forms known among Biblical scholars under the titles of *formal* and *material* accommodation. The following is a somewhat fuller analysis.

1. *Real.*—This takes place when a person is set forth as being or as acting under some modified character, accommodated to the capacity for conceiving him, or the inclination to receive him, of those to whom the representation is addressed. Thus God is frequently in Scripture described anthropomorphically or anthropopathically, i. e. not as he is in himself, but relatively to human modes of thought and apprehension. See ANTHROPOMORPHISM. So also the apostle describes himself as becoming all things to all men, that by all means he might save some; i. e. he accommodated himself to men's habits, usages, and modes of thought, and even prejudices, in order that he might disarm their opposition, and secure a favorable reception for the gospel of salvation which he preached. This species of accommodation is what the Christian fathers usually have in view under the terms συγκατάβασις, or *condescensio*, and οἰκονομία, or *dispensatio*. They apply these terms also to the incarnation and state of humiliation of Christ, which they regarded as an accommodation to the necessities of man's case for his redemption. (See Suicer, *Thesaurus Eccl.* s. v. συγκατάβασις and οἰκονομία; Chapman's *Miscellaneous Tracts relating to Antiquity*, London, 1742.) To this head may be referred many of the symbolical actions of the prophets.

2. *Verbal.*—This takes place when a passage or expression used by one writer is cited by another, and applied with some modification of the meaning to something different from that to which it was originally applied. Such accommodations are common in all languages. Writers and speakers lay hold of the utterances of others for the sake of giving to their own ideas a more graceful and a more forcible clothing than they feel themselves able to give them, or for the purpose of procuring for them acceptance, by uttering them in words which some great writer has already made familiar and precious to the general mind. Sometimes this is done almost unconsciously. "Wherever," says Michaelis, "a book is the object of our daily reading and study, it cannot be otherwise than that passages of it should frequently flow into our pen in writing; sometimes accompanied with a conscious recollection of the place where we have read them, at other times without our possessing any such consciousness. Thus the lawyer speaks with the *corpus juris* and the laws, the scholar with the Latin authors, and the preacher with the Bible" (*Einleit.* i, 223). Our own literature is full of exemplifications of this, as is too well known to need illustrative proof. In the writings of Paul we find him making use in this way of passages from the classics (Acts xvii, 19; 1 Cor. xv, 34; Tit. i, 12), all of which are of course applied by him to Christian subjects only by accommodation. We need not be surprised, then, to find the later Biblical writers quoting in this way from the earlier, especially the N.-T. writers, from the great classic of their nation, the ἱερὰ γράμματα of the former dispensation. As instances may be adduced, Rom. x, 18 from Psa. xix, 4, and Rom. xii, 20 from Prov. xxv, 21, 22. See also Matt. ii, 15, 18, with Calvin's notes thereon. "They have done this," says Michaelis, "in many places where it is not perceived by the generality of readers of the N. T., because such are too little acquainted with the Septuagint."

3. *Rhetorical.*—This takes place when truth is presented, not in a direct and literal form, but through the medium of symbol, figure, or apologue. Thus, in the prophetical writings of Scripture, we have language used which cannot be interpreted literally, but which, taken symbolically, conveys a just statement of important truth, e. g. Isa. iv, 5; xxvii, 1; xxxiv, 4; Joel ii, 28–31; Zech. iv, 2, 10, etc. Many instances occur in Scripture where truth is presented in the form of parable, and where the truth taught is to be obtained only by extracting from the story the spiritual, or moral, or practical lesson it is designed to enforce. In all the sacred books there are instances constantly occurring of words and statements which are designed to convey, under the vehicle of figure, a truth analogous to, but not really what they literally express. (See Knobel, *Prophetismus der Hebräer*, § 30–33; Smith, *Summary View and Explanation of the Writings of the Prophets*, Prel. Obss. p. 1–22; Glassius, *Phil. Sac.* l. v, p. 669 sq., ed. 1711; Lowth, *De Sac. Poesi Heb.*, pl. loc.; Davidson, *Sacred Hermeneutics*, ch. ix.)

4. *Logical.*—In arguing with an opponent it is sometimes advantageous to take him on his own ground, or to argue from principles which he admits, for the purpose of shutting him up to a conclusion which he cannot refuse, if he would retain the premises. It does not follow from this that his ground is admitted to be the right one, or that assent is given to his principles; the argument is simply one *ad hominem*, and may or may not be also *ad veritatem*. When it is not, that is, when its purpose is merely to shut the mouth of an opponent by a logical inference from his own principles, there is a case of logical accommodation.

5. *Doctrinal.*—This takes place when opinions are advanced or statements made merely to gratify the prejudices or gain the favor of those to whom they are addressed, without regard to their inherent soundness or truthfulness. If, for instance, the N.-T. writers were found introducing some passage of the O. T. as a prediction which had found its fulfilment in some fact in the history of Jesus Christ or his Church, merely for the purpose of overcoming Jewish prejudices, and leading those who venerated the O. T. to receive more readily the message of Christianity; or if they were found not only clothing their ideas in language borrowed from the Mosaic ceremonial, but asserting a correspondence of meaning between that ceremonial and the fact or doctrines they announced when no such really existed, thereby warping truth for the sake of subduing prejudice, they would furnish specimens of this species of accommodation.

In both respects, a charge to this effect has been brought against them. It has been alleged that when they say of any event they record that in it was fulfilled such and such a statement of the O. T., or that the event occurred that such and such a statement might be fufilled, they did so merely in accommodation to Jewish feeling and prejudices. A fitter place will be found elsewhere for considering the import of the formulæ ἵνα πληρωθῇ, τότε ἐπληρώθη, and the like. See QUOTATION. At present it will suffice to observe that it may be admitted that these formulæ are occasionally used where there can have been no intention on the part of the writer to intimate that in the event to which they relate there was the fulfilment of a prediction; as, for instance, where some gnome or moral maxim contained in the O. T. is said to be fulfilled by something recorded in the N. T., or some general statement is justified by a particular instance (comp. Matt. xii, 35; John xv, 25; Rom. i, 17; Jam. ii, 23; 2 Pet. ii, 22, etc.). It may be admitted, also, that there are cases where a passage in the O. T. is said to be fulfilled in some event recorded in the N., when all that is intended is that a *similarity* or *parallelism* exists between the two, as is the case, according to the opinion of most, at least, in Matt. ii, 17, 18. But, whilst these admissions throw the *onus probandi* on those who, in any special instance, maintain that there is in it an actual fulfilment of an ancient prediction, it would be preposterous from them to foreclose the question, and maintain that in *no* case is the N.-T. passage to be understood as affirming the fulfilment in fact of an ancient prediction recorded in the Old. Because *some* accommodations of the kind specified are admitted, it would be folly to conclude that nothing but accommodation characterizes such quotations. If this position were laid down, it would not be easy to defend the N.-T. writers, nay, our Lord himself, from the charge of insincerity and duplicity.

Still more emphatically does this last observation apply with respect to the notion that our Lord and his apostles accommodated their teaching to the current notions and prejudices of the Jews of their own times. It might seem almost incredible that any one should venture to impute to them so unworthy and so improbable a course, were it not that we find the imputation broadly made, and the making of it defended by some very eminent men of the anti-supernaturalist school, especially in Germany. By them it has been asserted that our Lord and his disciples publicly taught many things which privately they repudiated, and an attempt has been made to save them from the charge of downright dishonesty which this would involve by an appeal to the usage of many ancient teachers who had an exoteric doctrine for the multitude, and an esoteric for their disciples. (Semler, *Programm. Acad. Sel.* Hal. 1779; Corrodi, *Beyträge zur beförderung des vernünftigen Denkens in d. Religion*, 15th part, p. 1-25; P. Van Hemert, *Ueber Accom. in N. T.* Leipz. 1797, etc.). The prompt and thorough repudiation of such views even by such men as Wegscheider (*Instt. Theologicæ*, p. 105, 6th ed.) and Bretschneider (*Handb. der Dogmat.* i, 260, 265, 2d ed.) renders it unnecessary to enlarge on the formal refutation of them. These writers, however, contend that, though our Lord and his apostles did not make use of a *positive* accommodation of their doctrine to the prejudices or ignorance of the Jews, they did not refrain from a *negative* accommodation, by which they intend the use of *reserve* in the communication of truth or refutation of error, and the allowing of men to retain opinions not authorized by truth without express or formal correction of them. They adduce as instances, John xvi, 12; vi, 15; Luke xxiv, 21; Acts i, 6; 1 Cor. iii, 1, 2; viii, 9, etc. By these passages, however, nothing more is proved than that in teaching men truth our Lord and his apostles did not tell them *everything at once*, but led them on from truth to truth as they were able to receive it or bear it. In this there is no accommodation of the *material* of doctrine; it is simply an accommodation of *method* to the capacity of the learner. In the same way Paul's assertion, which they have also cited, that he became all things to all men, that he might by all means save some (1 Cor. ix, 22), is to be regarded as relating merely to the mode and order of his presenting Christian truth to man, not to his modifying in any respect the substance of what he taught. When he spoke to Jews, he opened and alleged out of their own Scriptures that Jesus was the Christ (Acts xvii, 2, 3). When he spoke to the Athenians on Mars' Hill, he started from the ground of natural religion, and addressed the reason and common sense of his audience; but in either case it was the same Jesus that he preached, and the same Gospel that he published. Had he done otherwise, he would have been found a false witness for God.

This accommodation theory is often spoken of as identical with the historical principle of interpreting Scripture. It is so, however, only as the historical principle of interpretation means the treating of the statements of our Lord and his apostles as merely expressing the private opinions of the individual, or as historically traceable to the prevailing opinions of their day. This is not to be confounded with that true and sound principle of historical interpretation which allows due weight to historical evidence in determining the meaning of words, and to the circumstances in which statements were made as determining their primary application and significancy. (Storr, *Opusc. Acad.* vol. i; *Abhandlung u. d. Zweck des Todes Jesu*, § 10; *Lehrb. d. Chr. Dogmatik*, § 13 [Eng. tr. by Schmucker, p. 67, Lond. 1836]; Planck, *Introd. to Sac. Interpretation*, tr. with notes by Turner [N. Y. 1834], p. 188, 276; Unselt, *De accommodatione orthodoxa* [Lips. 1766]; Smith, *First Lines of Christian Theology*, p. 518; Alexander, *Connection and Harmony of the Old and New Testaments*, p. 45-48; 148-157, 416, 2d edit.). See HERMENEUTICS.

Condict, IRA, D.D., a clergyman of the Reformed Dutch Church at New Brunswick, N. J., from 1798 to 1811, and vice-president of Queen's (now Rutgers) College, and professor of moral philosophy. He was an eminent, useful, and honored minister and collegiate officer. He died suddenly in 1811. See Sprague,

Annals of the Amer. Pulpit, IX, ii, 79; Corwin, *Manual of the Ref. Ch. in America*, 3d ed. p. 219.

Condignity and Congruity (*meritum de condigno* and *de congruo*), "terms used by the schoolmen to express their peculiar opinions relative to human merit and deserving. The Scotists maintain that it is possible for man in his natural state so to live as to *deserve* the grace of God, by which he may be enabled to obtain salvation; this natural *fitness* (*congruitas*) for grace being such as to oblige the Deity to grant it. Such is the *merit of congruity*. The Thomists, on the other hand, contend that man, by the divine assistance, is capable of so living as to *merit* eternal life, to be *worthy* (*condignus*) of it in the sight of God. In this hypothesis, the question of previous preparation for the grace which enables him to be *worthy* is not introduced. This is the *merit of condignity*." The 13th article of the Church of England is directed against these opinions, and maintains that the grace of Christ and the inspiration of his Spirit can alone produce the fitness required in Christians; and that so far are any works not springing of faith in Christ from being pleasing to God, that they have the nature of sin.

Conditional. Strict Calvinists maintain that the decrees of God with regard to the salvation or damnation of individual men are *absolute;* Arminians, that they are *conditional.* The Pelagian doctrine is that God's will to grant grace to men is always conditioned on their so using their *natural* power as to merit that grace. To say that God decrees to save all men if they will, i. e. if they, without grace, are willing to obey God, is Pelagian; to say that God wills to save all men if they will use the prevenient grace given to them, which they are left at liberty to resist, is Arminian. See Arminianism; Grace.

Condillac, Etienne Bonnot de Mably, one of the chief French philosophers of the 18th century, brother of the abbé Mably, was born at Grenoble in 1715. At the age of thirty he published his first important work, *Essai sur l'origine des connaissances humaines* (Amsterdam, 1746, 2 vols.; Eng. transl. by Th. Nugent, 1756), by which he largely contributed to the spreading of the views of Locke in France, and to their farther development. This book is a natural history of human cognition, the foundation of which is found by Condillac in the sensuous impressions and their transformations. To refute the metaphysical systems which do not proceed from experience, he wrote his *Traité des Systêmes* (Amsterdam, 1749, 2 vols.). His views on the origin of human cognition were more fully developed in his *Traité des Sensations* (Amsterdam, 1754, 2 vols.). As he was charged with having plagiarized from Diderot and Buffon, he wrote for his defense *Traité des Animaux* (Amsterdam, 1775). By all these writings Condillac became one of the chief representatives of Sensualism, although he steered clear of the Materialism of his age. His knowledge had procured for him at an early age the position of tutor of the infante of Parma, a nephew of Louis XV. He wrote for him a *Cours d'étude* (Parma, 1775, 13 vols.), which contains a grammar, an *Art d'écrire*, an *Art de raisonner*, an *Art de penser*, and a universal history. In 1768 he was made a member of the French Academy. During the latter part of his life he lived very retired, and died August 3, 1780. His complete works have appeared in several editions (*Œuvres Complètes*, Paris, 1798, 23 vols.; 1803, 32 vols.; 1824, 16 vols.).—(Brockhaus) *Conversat. Lex.* s. v.; Wetzer u. Welte, *Kirchen-Lex.* ii, 764.

Conduit (תְּעָלָה, *teâlah'* [from עָלָה, *alah*, to *ascend*, Gesenius, *Thes. Heb.* p. 1022], a *channel*, "watercourse," Job xxxviii, 25, stream, Ezek. xxxi, 4, or "trench," 1 Kings xviii, 32-38), spoken of the *aqueduct* made by Hezekiah for conveying the waters from the upper pool in the valley of Gihon into the western part of Jerusalem (2 Kings xviii, 17; xx, 20; Isa. vii, 3; xxxvi, 2); apparently the same with that which now supplies the mosque enclosure with water from the pools at Bethlehem. It seems at first to have been an open trench, but was closed by Hezekiah with masonry on the approach of the Assyrians (Sirach xlviii, 12). See Jerusalem.

1. Although no notice is given either by Scripture or by Josephus of any connection between the pools of Solomon beyond Bethlehem and a supply of water for Jerusalem, it seems unlikely that so large a work as the pools should be constructed merely for irrigating his gardens (Eccl. ii, 6); and tradition, both oral and as represented by Talmudical writers, ascribes to Solomon the formation of the original aqueduct by which water was brought to Jerusalem (Maundrell, *Early Trav.* p. 458; Hasselquist, *Trav.* 146; Lightfoot, *Descr. Templ.* c. xxiii, vol. i, 612; Robinson, i, 390). Pontius Pilate applied the sacred treasure of the Corban to the work of bringing water by an aqueduct from a distance, Josephus says of 300 or 400 stadia (*War*, ii, 9, 4), but elsewhere 200 stadia, a distance which would fairly correspond with the length of the existing aqueduct with all its turns and windings (*Ant.* xviii, 3, 2; Williams, *Holy City*, ii, 501). His application of the money in this manner gave rise to a serious disturbance. Whether his work was a new one, or a reparation of Solomon's original aqueduct cannot be determined, but it seems more than probable that the ancient work would have been destroyed in some of the various sieges since Solomon's time. The aqueduct, though much injured, and not serviceable for water beyond Bethlehem, still exists; the water is conveyed from the fountains which supply the pools about two miles S. of Bethlehem. The watercourse then passes from the pools in a N.E. direction, and, winding round the hill of Bethlehem on the S. side, is carried sometimes above and sometimes below the surface of the ground, partly in earthen pipes and partly in a channel about one foot square of rough stones laid in cement, till it approaches Jerusalem. There it crosses the valley of Hinnom at the S.W. side of the city on a bridge of nine arches at a point above the pool called *Birket es-Sultân*, then returns S.E. and E. along the side of the valley and under the wall, and, continuing its course along the east side, is finally conducted to the Haram. It was repaired by Sultan Mohammed Ibn-Kalaûn of Egypt about A.D. 1300 (Williams, *Holy City*, ii, 498; Raumer, *Pal.* p. 280; Robinson, i, 514; ii, 166; new ed. iii, 247). See Pool.

2. Among the works of Hezekiah he is said to have stopped the "upper watercourse of Gihon," and brought it down straight to the W. side of the city of David (2 Chron. xxxii, 30). The direction of this watercourse of course depends on the site of Gihon. Dr. Robinson identifies this with the large pool called *Birket es-Mamil'la* at the head of the valley of Hinnom, on the S.W. side of Jerusalem, and considers the lately-discovered subterranean conduit within the city to be a branch from Hezekiah's watercourse (*Researches*, new ed. iii, 243-4; i, 327; Gesenius, *Thes. Heb.* p. 626, 1395). Mr. Williams, on the other hand, places Gihon on the N. side, not far from the tombs of the kings, and supposes the watercourse to have brought water in a S. direction to the temple, whence it flowed ultimately into the Pool of Siloam, or Lower Pool. One argument which recommends this view is found in the account of the interview between the emissaries of Sennacherib and the officers of Hezekiah, which took place "by the conduit of the upper pool, in the highway of the fuller's field" (2 Kings xviii, 17), whose site seems to be indicated by the "fuller's monument" mentioned by Josephus as at the N.E. side of the city, and by the once well-known site called the Camp of the Assyrians (Josephus, *War*, v, 4, 2; 7, 3; 12, 2). (See Maundrell, p. 456 sq., Bohn's ed.; Richardson,

Travels, ii, 379; Bertheau, *D. Büch. d. Könige*, p. 409; Schultz, *Jerusalem*, p. 40.) See GIHON.

Cone, SPENCER HOUGHTON, D.D., an eminent Baptist minister, was born in Princeton, N. J., April 30, 1785. His early education was carefully conducted, and at twelve years of age he entered Princeton College. Two years after, through his father's failure in business, he was compelled to leave college, and devoted himself to teaching, first in Princeton, then in Burlington, and finally (under Dr. Abercrombie) in Philadelphia. Here he began to study law; but his fine powers of elocution led him in 1805 to become an actor. He "trod the boards" with distinction for eight years, and then was suddenly converted, and was baptized by immersion Feb. 4, 1814. Obtaining a government clerkship in Washington, he removed thither, and began to preach within a year after his baptism. In 1815-16 he was chaplain to Congress, and immediately became pastor of a Baptist church at Alexandria, D. C. In 1823 he accepted a call from the Oliver Street Baptist Church, New York, where he remained until 1841, when he became pastor of the First Baptist Church, which built a new edifice in Broome Street. In this charge he remained until his death, Aug. 28, 1855. Dr. Cone's career as a preacher was very brilliant. He spoke with great ease, with a rich, sonorous voice, and very appropriate and expressive gestures. In doctrine he was a Calvinist, and a strenuous advocate of Baptist views, but yet courteous and charitable to all Christians. His preaching and pastoral labor exhausted but a small part of his activities. He took a deep interest in missions, was a member of the Baptist Board, and was president of the Convention from 1832 to 1841. He did his utmost to avert the disruption of the Convention in 1845 through the slavery disputes. He was also an officer of the Baptist Home Missionary Society from its beginning in 1832 to 1855. For many years he was active in the service of the American Bible Society, but on the formation of the Baptist (American and Foreign) Bible Society in 1836, which he aided greatly in organizing, he was made its president. On the refusal of this society to embark in the enterprise of "Bible Revision," so called, he seceded from it in order to form the American Bible Union, one of the chief objects of which was to substitute "immerse" for "baptize" in the versions of Scripture.—Sprague, *Annals*, vi, 656.

Coney (שָׁפָן, *shaphan'*; Sept. χοιρογρύλλιος), an animal joined in Lev. xi, 5, and Deut. xiv, 7, with the hare, and described as chewing the cud; in Psa. civ, 18, it is spoken of as an inhabitant of the mountains and rocks, and in Prov. xxx, 26, it is represented as a feeble, but gregarious and cunning animal. These descriptions some think agree best with the different species of the *jerboa*, the *Mus jaculus* of Linnæus. It is on the authority of Rabbinical writers that the word has by our translators been rendered "coney," or *rabbit*, which cannot be sustained, as the rabbit is not an Asiatic animal, and does not seek a rocky habitation, which is the leading characteristic by which the *shaphan* is distinguished. "The animal is, in truth, as Bruce justly indicated, the same as the *Ashkoko* of Abyssinia, or *Daman* of Syria, the *Wabber* of the Arabs, and in scientific zoology is one of the small genus Hyrax, distinguished by the specific name of Syrian (*Syriacus*). This animal has been described by travellers as a ruminant, but this is an error. The number, shape, and structure of the teeth are totally different (as is true also of the hare); nor is the jawbone articulated so as to admit freely of a similar action; finally, the internal structure, as well as the whole osteology, represents that of a rhinoceros in miniature, and has no appearance of the complicated fourfold stomachs of ruminants; therefore the hyrax is neither a rodent like hares and rabbits, nor a ruminant, but is anomalous, and most nearly allied to the great pachyderms of systematic zoology. It may be that the peculiar structure of their anterior teeth is convenient for stripping off the seeds of grasses and tritica, and that these, in part retained in the mouth, cause a practice of working the jaws, which, to common observers, may appear to be chewing the cud. In hares and rats a similar appearance is produced by a particular friction of the incisors or nippers, which, growing with great rapidity, would soon extend beyond a serviceable length if they were not kept to their proper size by constant gnawing, and by working the cutting edges against each other. This action, observed in the motion of the lips of most rodents when in a state of rest, caused the belief of rumination in the hare, though, like the hyrax, all rodentia are equally unprovided with the several stomachs, and want the muscular apparatus necessary to force the food back into the mouth for remastication at pleasure, which constitute the leading peculiarities of the anatomical structure of the ruminantia. But they may possess, in common with pachydermata, like the horse and hog, the peculiar articulation and form of jaws which give them the power of grinding their food, and laminated teeth fitted for the purpose. Externally the hyrax is somewhat of the size, form, and brownish color of a rabbit, and it has short, round ears, sufficiently like for inexact observers to mistake the

Hyrax Syriacus: 1, From a specimen in the British Museum; 2, Ordinary appearance in its native haunts.

one for the other. The hyrax is of clumsier structure than the rabbit, without tail, having long bristly hairs scattered through the general fur; the feet are naked below, and all the nails are flat and rounded, save those on each inner toe of the hind feet, which are long and awl-shaped; therefore the species cannot dig, and is by nature intended to reside, not, like rabbits, in burrows, but in the clefts of rocks. This character is correctly applied to the shaphan by David." The total length of the animal as it sits is about one foot. It presents at first sight the idea of a rat rather than any other creature. The color is gray, mixed with reddish-brown, and the belly white. They do not appear to have any cry, nor do they stand upright in walking, but seem to steal along as if in fear, advancing a few steps at a time, and then pausing. "Their timid, gregarious habits, and the tenderness of their paws, make them truly 'the wise and feeble folk' of Solomon, for the genus lives in colonies in the crevices of stony places in Syria, Palestine, Arabia, Eastern Egypt, Abyssinia, and even at the Cape of Good Hope, where one or two additional species exist. In every locality they are quiet, gentle creatures, loving to bask in the sun, never stirring far from their

retreats, moving with caution, and shrinking from the shadow of a passing bird, for they are often the prey of eagles and hawks; their habits are strictly diurnal, and they feed on vegetables and seeds." The flesh of the shaphan was forbidden the Hebrews, and it appears that the Mohammedans and Christians of the East at the present day abstain from the flesh of the daman. (See further particulars in the *Penny Cyclopedia*, s. v. Hyrax; also Bochart, *Hieroz.* ii, 421 sq.; Rosenmüller, *Alterth.* IV, ii, 218 sq.; Shaw, *Trav.* p. 301; Sonnini, i, 98; Bruce, vii, 241; Hasselquist, p. 277 sq.; Wilson, *Bible Lands*, ii. 28; Laborde, *Voyages*, p. 47; Robinson, *Researches*, new edit. iii, 387; Thomson, *Land and Book*, i, 460; Oedmann, *Samml.* iv, 48; Lucas, *Allerneuste R.* p. 300; Oken, *Naturgesch.* VII, ii, 889; Ehrenberg, *Symbol. phys.* i, fig. 2; Ludolf, *Lex. Amhar.* p. 58; *Hist. Æthiop.* lib. i, c. 10, § 75; Peyron, *Lex.* p. 314; Gesenius, *Thes. Amhar.* p. 122; Kitto, *Phys. History of Palest.* p. ccclxxvi; Laborde, *Syria*, p. 114.) See ZOOLOGY.

Confalon, a fraternity of seculars in the Church of Rome called penitents, established originally by some Roman citizens. Henry III commenced a similar fraternity in Paris in 1583, and, dressed in the habit of a penitent, assisted at a procession wherein the cardinal of Guise carried the cross, and his brother, the duke of Mayence, was master of the ceremonies.—Hook, *Church Dictionary*, s. v.

Confection (רֹקַח, *ro'kach*, Exod. xxx, 35), CONFECTIONARY (רַקָּחָה, *rakkachah'*, 1 Sam. viii, 13), both derived from the root רָקַח (*rakach'*), to *spice*, denote respectively *perfume* and a *female perfumer*, as the passages cited and the kindred terms derived from the same root (and translated "apothecary," "perfume," "ointment") indicate. See APOTHECARY.

Conference, the *bringing together* of individual opinions upon any subject of debate: hence applied, peculiarly, to religious discussions of any kind (Gal. ii, 6).

CONFERENCE, FREE-WILL BAPTIST. The ecclesiastical bodies among Free-Will Baptists, higher than the congregation, are the Quarterly Meeting, the Yearly Meeting, and the General *Conference*. The latter meets every three years. See BAPTISTS, FREE-WILL.

CONFERENCE, HAMPTON-COURT. A conference held at Hampton Court in the year 1604, between nine bishops and as many other dignitaries of the Church on the one side, and four Puritan divines on the other. It was held in the presence of James I, and lasted for three days. Some of the demands of the Puritans were acceded to, but others were rejected. One lasting advantage, however, resulted from this conference, namely, our present authorized version of the Bible. Some alterations also were made in the Liturgy; all the thanksgivings now in use were inserted except the "general" one, which was subsequently introduced; and there was annexed to the Catechism the portion explaining the sacraments.—Eden, *Churchman's Dictionary*, s. v.; Neal, *History of the Puritans*, ii, 30; Mosheim, *Ch. Hist.* iii, 408.

CONFERENCE, METHODIST. There are three synods or judicatories styled *Conferences* in the Methodist Episcopal Church.

I. The *Quarterly Conference* of each circuit or station consists of the "travelling and local preachers, exhorters, stewards, and class-leaders of the circuit or station. The presiding elder, and, in his absence, the preacher in charge, is president. The regular business of the Quarterly Conference is to hear complaints, and to receive and try appeals; to superintend the interests of Sunday-schools, to license local preachers, to appoint stewards," etc. (*Discipline*, pt. ii, ch. i, § 3).

II. The *Annual Conference* is composed of all the ministers in a certain territory included in the "Conference." There are now (1867) fifty-nine Conferences of the Methodist Episcopal Church, including Mission Conferences, besides those of the Methodist Episcopal Church South. The functions of the Annual Conference are purely administrative. At each session the preachers are "appointed" to their several stations for the ensuing year by the bishop (*Discipline*, pt. ii, ch. i, § 2).

III. The *General Conference* is "composed of one member for every twenty-seven members of each Annual Conference, appointed either by seniority or choice, at the discretion of such Annual Conference." It meets once in four years, and is presided over by the bishops. It has full power to "make rules and regulations for the Church," subject to certain limitations known as "constitutional restrictions" (*Discipline*, pt. ii, ch. i, § 1). See METHODISM.

In the Wesleyan Church, in England, all the ministers meet in one Conference. "The first Conference of the Wesleyan Methodists was held in London in the year 1744. It was attended only by six persons, five of whom were clergymen. By them the characters of the preachers were examined, differences of theological opinions repressed, the stations of the preachers determined, and their hearts warmed and cheered by mutual consultation and prayer. As Mr. Wesley declined into the vale of years, the perpetuity of that system of doctrine and discipline, which had been so signally owned of God in the conversion and salvation of men, became a matter of anxious concern both to himself and his people. The appointment of the preachers to the various chapels, and to the consequent pastoral charge of the societies, presented the greatest difficulty. The preachers felt the importance of the case, and requested Mr. Wesley to consider what could be done in this emergency, so that, in the event of his death, the connection might not be dissolved. He took legal advice, and drew up the 'deed of declaration,' constituting one hundred preachers by name 'the Conference of the people called Methodists;' at the same time defining their powers, and making provision for the filling up of all vacancies occasioned by death, superannuation, or expulsion. This deed he caused to be enrolled in the High Court of Chancery in the year 1784. Thus the power of government which Mr. Wesley possessed during his life, by his appointment devolved upon the Conference after his decease, he having nominated its members, provided for its perpetuity, and defined its powers by the 'deed of declaration.' To prevent any abuse of this instrument on the part of the 'legal hundred,' Mr. Wesley left a letter, to be read by the Conference at its first assembling after his death, of which we subjoin an extract: 'I beseech you, by the mercies of God, that you never avail yourselves of the "deed of declaration" to assume any superiority over your brethren, but let all things go on, among those itinerants who choose to remain together, exactly in the same manner as when I was with you, so far as circumstances will permit. Have no respect of persons in stationing the preachers, in choosing children for Kingswood school, in disposing of the yearly contribution and the preachers' fund, or any other public money, but do all things with a single eye, as I have done from the beginning.' When this letter was read after Mr. Wesley's decease, the Conference unanimously resolved that all the preachers who are in full connection with them shall enjoy every privilege that the members of the Conference enjoy, agreeably to the above-written letter of our venerable deceased father in the Gospel. The Conference of the preachers of the Methodist societies is held annually in some one of the principal cities and towns in the kingdom. Representatives from the Irish Con-

ference, whose sittings precede the English Conference by a few weeks, regularly attend." See Jackson, *Centenary of Wesleyan Methodism*, 1839; Stevens, *History of Methodism*.

CONFERENCE, PASTORAL, a meeting of ministers for the discussion of questions relating to their pastoral duties. Many meetings of this name are regularly held in many countries, both within the Protestant and the Roman Catholic churches. Among the best known of the class in Europe belong the annual meetings of the ministers of the Protestant churches of France at Paris. See FRANCE.

CONFERENCE, ROMAN CATHOLIC, a meeting of priests for the discussion of religious and ecclesiastical topics. They are either convoked by the bishop of the diocese, or are held by priests of their own accord. Conferences are not mentioned before the 11th century. They seem to have had their origin in the large extent of the dioceses, which made the regular meetings of all the clergy of a diocese difficult. They consequently met in deaneries and archipresbyteries, under the presidence of the dean and archpriest. They were called *Calendæ* because they were held on the first day of the month, or Chapters, Consistories, Synods, Sessions. They were common until the middle of the 13th century, when they fell into disuse. In the 16th century cardinal Charles Borromeo gave special regulations on these conferences, and ordered them to be held regularly. The same order was given by a number of French provincial synods. In 1720 they were declared by the congregation of the Council of Trent to be a proper substitute for diocesan synods. They have, however, never been in general use.—Wetzer u. Welte, *Kirchen-Lex.* ii, 766.

CONFERENCE, SAVOY, a series of meetings held by royal commission at the residence of the bishop of London, in the Savoy, in the year 1661, between the bishops and the Nonconformist ministers, in order so to review, alter, and reform the Liturgy as to meet the feelings of those who had serious scruples against its use, and thereby promote the peace of the Church. The individuals chosen comprehended the archbishop of York, with twelve bishops, on the one side, and eleven Nonconformist ministers on the other. Had the episcopal ministers entered into a fair and open discussion on the points at issue, reconciliation, to a certain extent, might have taken place; but as they were from the beginning averse from conceding a single iota to the Dissenters, the negotiation turned out a complete failure. At a convocation of the bishops, held almost immediately after, instead of removing anything that was at all likely to stumble tender consciences, they rendered the Liturgy still more objectionable by adding the story of Bel and the Dragon to the lessons taken from the Apocrypha. See Procter, *On Common Prayer*, ch. v; Neal, *History of the Puritans*, pt. iv, ch. 6.

Confessio Augustana. See AUGSBURG, CONFESSION OF.

Confessio Belgica. See BELGIC CONFESSION.

Confession. In the Church of Rome and in the Eastern churches the confession of sins is considered to be one of the seven sacraments. See AURICULAR CONFESSION. The law prescribing how often the member of the Church should go to confession was not uniform in all parts of the Church, some synods enjoining one, others two, others three confessions a year. Since the Council of Trent, the Church inflicts ecclesiastical censures only upon those who omit going to confession once a year. For nuns the Council of Trent prescribes a confession once a month. Priests are exhorted to go often to confession; some synods, like that of Ghent, enjoined upon them a weekly confession.

In the Middle Ages it was customary to pay a tax to the priests (*nummus confessionarius*) for hearing confession; but the demand for the abolition of this custom was so urgent that after the 16th century the payment of the tax was generally optional, and in this form it still exists in some Roman Catholic countries. Offerings of this kind remained also in use in many Lutheran churches until the present century, while the Reformed churches entirely abolished them.

The priest to whom a confession is made has the duty of observing with regard to it an absolute silence. No exception *whatever* is allowed to this rule. If a person makes communication to a priest of a crime which is still to be committed, the priest must try to change the mind of such a person, and induce him to do all that is possible to prevent its being committed by others, but he is not allowed to notify the secular government of it. In several countries (as Prussia) the civil law demanded in the latter case a notification, but the Church of Rome has always refused compliance with such a law. Luther, and the Church regulations in the Lutheran countries, also enjoined the strictest observance of the secret of confession.

Confession, AURICULAR. See AURICULAR.

CONFESSION OF FAITH, a collection of the articles of belief of any Church. See CREED.

I. *Their Use in the Church.*—(1.) The Protestant Confessions were the result of efforts, at the dawn of reviving toleration, to separate the Christian doctrines from the mass of corruption which ignorance, negligence, or artifice had conduced to accumulate around them, under an implicit obedience to the authority and domination of the Church of Rome.

(2.) Many persons altogether object to Creeds and Confessions of Faith on the ground that they infringe Christian liberty, supersede the Scriptures, exclude topics which ought not to be excluded, and admit such as ought not to be admitted; are often too particular and long; are liable to be abused; tempt men to hypocrisy; preclude improvement; and have been employed as means of persecution. It is said further "that confessional formularies, if they do not supersede the Word of God, are placed on a parity with it, and, to a wide extent, are of greater practical authority. Two consequences follow: the first is, that spiritual life is either altogether extinguished, or, where it exists, is so dwarfed and imprisoned that it has neither scope nor power of manifestation; and the second, that fellow-Christians who occupy a domain on the outside of the confessional pale are condemned as schismatics, and at the same time feared as if they were foes."

(3.) On the other hand, the arguments in favor of them are such as the following. All arts and sciences have been reduced to system, and why should not the truths of religion, which are of greater importance? A compendious view of the principal points of the Christian religion must be useful to inform the mind, as well as to hold forth to the world which are the sentiments of particular churches. They tend to discover the common friends of the same faith to each other, and to unite them together. The Scriptures countenance them. We have the moral law, the Lord's prayer, "the form of doctrine," mentioned by St. Paul (Rom. vi, 17), and "the form of sound words" (2 Tim. i, 13). Their becoming the occasion of hypocrisy is not the fault of the Confessions, but of those who subscribe them. If all Creeds and Confessions were expressed in the words of Scripture, this would set aside all exposition and interpretation, and would destroy all means of distinguishing the sentiments of one man from those of another (Farrar, s. v.). And to say that each individual is to interpret the Creeds by the Bible, and to hold and publish his own interpretation, without reference to that of the Church to which he may belong, "is not to exalt the Scriptures, but only to confound the uses of the Word

of God and the word of the Church. The one is at all times the ultimate appeal of every believer's conscience; the other is the interpretation of that appeal by the collective body of the Church. The Church does not first make a minister, and then tie him down to her articles; but the minister, professing to have been moved by the Holy Ghost, and demanding to exercise his office and to be intrusted with the cure of souls in the community to which he applies, is asked by the Church whether his individual interpretation of the Scripture accords with that of the collective mind of his brethren. If he cannot answer in the affirmative, it is evident that he must exercise his ministry elsewhere. A particular Church may be in the wrong, and an individual may be in the right; in which case there will arise controversy, and the Church, by the secession and opposition of individuals, may be led to modify and improve its theology. But this must be done by a collective act, and not by the insubordination of private clergymen filling the Church with various doctrines, and giving to its proclamation of the Gospel an uncertain sound. For, if it were otherwise, what heresy could be excluded?"

(4.) In the interpretation of Confessions there are some distinctions perpetually overlooked, some most important principles of interpretation but little attended to. For instance, sometimes the *private opinions* of the framers of formularies confessedly go beyond them; now these *private opinions* are sometimes appealed to as a proof that the formularies ought to be understood in that extended sense, whereas they prove the direct *contrary*. (See Archbishop Whately's *Kingdom of Christ*, sec. 24.) If, indeed, the writings of these framers contain indications of the *design* with which they were framed, this ought to be considered. For instance, articles, etc., framed manifestly on purpose to exclude certain Romish doctrines, as being so utterly unscriptural as to justify and enforce that separation from Rome which the Reformers deliberately resolved on, ought not to be interpreted so as to *be* consistent with these doctrines; not, however, because this would have been at variance with the *private opinions* of each Reformer separately, but because it would be at variance with their deliberate *public* declaration as a *body*. Again, there is a distinction to be observed between the interpretation (i) of anything put forth by an *individual* for the purpose of instructing others or explaining his own views, and (ii) of anything emanating from an *assembly*, the members of which could not be expected exactly to agree, not only in every shade of opinion, and the relative importance also of every point, but also in the degree of concession to be made to those before whom their declarations were to be put; e. g. an individual (unless a blunderer) will never make one part of his statement so far neutralize the other, that the whole effects no object which might not have been equally well obtained by omitting the whole, yet some public declarations drawn up by assemblies of sensible men may be expected to be such; the XVIIth 'Article' of the Church of England, for instance, is by many considered to contain nothing which might not have been attained by omitting it. In any such case, it may have been that a strong majority think it will be requisite to say something on the point; many may think that so and so ought to be said; and many others may object to this, unless some qualification be added, such as nearly to neutralize it. These principles of interpretation are incalculably important, and should be constantly remembered" (Eden, s. v.). See CREEDS.

II. *Confessions of different Churches.*—1. That of the *Greek Church*, entitled "The Confessions of the True and Genuine Faith," which was presented to Mohammed II in 1453, but which gave place to the "Orthodox Confession of the Catholic and Apostolic Greek Church," composed by Mogila, metropolitan of Kiev, in Russia, and approved in 1643 by the patriarchs of Constantinople, Alexandria, Antioch, and Jerusalem. It contains the standard of the principles of the Russian-Greek Church. For the originals, see *Libri Symbolici ecclesiæ Orientalis*, ed. E. J. Kimmel (Jena, 1843, 8vo); Neale, *Hist. of the Eastern Church* (Lond. 1850, 2 vols.). See GREEK CHURCH.

2. The *Church of Rome*, though she has always received the Apostles', Nicene, and Athanasian creeds, had no fixed, public, and authoritative symbol till the Council of Trent. A summary of the doctrines contained in the canons of that council is given in the creed published by Pius IV (1564) in the form of a bull. It is introduced by the Nicene Creed, to which it adds twelve articles, comprising those doctrines which the Church of Rome finally adopted after her controversies with the Reformers. See CREED OF PIUS IV. Besides this creed, and the "Canons and Decrees of the Council of Trent," the Church of Rome acknowledges no symbolical books as authoritative. See TRENT, COUNCIL OF. The best editions are *Canon. et Decret. Concil. Trid.* (Lips. 1853, 8vo); Buckley, *Canons and Decrees of Trent* (Lond. 1851, 12mo); Donovan, *Catechism of the Council of Trent* (Balt. 8vo). See also Streitwolf, *Lib. Symb. Eccl. Cath.* (Gött. 1844), and the article TRENT.

3. The *Lutheran* books of faith and discipline are called *Libri Symbolici Ecclesiæ Evangelicæ*. They contain the three creeds—Apostles', Nicene, and Athanasian [see CREEDS], the Augsburg Confession [see AUGSBURG], the "Apology" for that Confession by Melancthon, the Articles of Smalcald (q. v.) drawn up by Luther, the Catechisms of Luther, and in many churches the Form of Concord, or Book of Berg. See CONCORD. The Saxon, Würtemburg, Suabian, Pomeranian, Mansfeldtian, and Copenhagen Confessions agree in general with the symbolical books of the Lutherans, but are authoritative only in the countries after which they are respectively called. There are many editions of the *Libri Symbolici*; the best and most convenient are those of Hase (3d edit. Leip. 1846, 12mo) and of Francke (*edit. stereot.* Leips. 1846, 12mo). See LUTHERAN CHURCH.

4. Of the *Calvinistic* Confessions the following are the principal: (1.) The four Helvetic Confessions—that of Basle, 1530; the Summary and Confession of the Helvetic churches, 1536; the *Expositio Simplex*, etc., 1566, ascribed to Bullinger; and the *Formula Consensus Helvetici*, 1675. See HELVETIC. (2.) The Tetrapolitan Confession, 1531, which derives its name from four cities, Strasburg, Constance, Memmingen, and Lindau, by the deputies of which it was signed: it is attributed to Bucer. (3.) The Palatine or Heidelberg Catechism, framed by Ursinus and Olevianus, first published in 1563. See HEIDELBERG. (4.) The Confession of the Gallic churches, accepted at the first synod of the Reformed, held at Paris, 1559. See GALLICAN CONFESSION. (5.) The Confession of the Reformed churches in Belgium, drawn up in 1559, and approved in 1561. See BELGIC. (6.) The Confession of Faith of Scotland, allowed by the Estates in 1560, and subscribed by king James in 1561. (7.) The Westminster Confession. See WESTMINSTER. (8.) The Canons of the Synod of Dort. See DORT. See *Corpus Librorum Symbolicorum*, ed. J. C. G. Augusti (Elberfeld, 1827, 8vo); *Collectio Confessionum in eccles. reformatis*, edit. H. A. Niemeyer (Lipsiæ, 1840, 8vo, the most complete and convenient manual); Böckel, *Die Bekenntnisschriften der evangelisch-reformirten Kirche* (Leipz. 1847). The last-named work contains, besides all the Reformed Confessions of Faith (of Germany, Switzerland, France, Great Britain, Bohemia, Hungary, Poland, and the Netherlands), brief introductions and notes to each of them.

5. The *Anglican* Confession, or "Thirty-nine Articles of the Church of England," agreed on in the Convocation held in London, 1552. They were drawn up in Latin, but in 1571 they were revised, and subscribed

both in Latin and English. See ARTICLES, XXXIX; ENGLAND, CHURCH OF. They were adopted by the Protestant Episcopal Church in 1801, with some alterations, and the rejection of the Athanasian Creed. A selection from these forms the "Articles of the Methodist Episcopal Church." See ARTICLES, XXV; METHODIST EPISCOPAL.

The subject of "Confessions of Faith" is treated in Systematic Theology under the head of *Symbolism*, or *Symbolics*. The best special collections and text-books, besides those already named, are: Marheineke, *Institutiones symbolicæ doct. Cath., Prot., Socin., ecclesiæ Græcæ Minorumque Societ. Christian.* (Berlin, 1830, 3d ed. 8vo); Guericke, *Allgemeine chr. Symbolik* (Leips. 1846, 8vo); Winer, *Comparative Darstellung des Lehrbegriffs der verschiedenen christlichen Kirchenpartheien* (Lips. 1837, 4to); Möhler, I. A. (Romanist), *Symbolism, or Exposition of the Doctrinal Differences betw. Cath. and Prot.* (New York, 1844, 8vo); *Corpus et Syntagma Confessionum fidei* (Genev. 1654, 4to); Hall, *Harmony of Protestant Confessions* (London, 1844, 8vo); *Sylloge Confessionum, edit. auct.* (Oxon. 1827, 8vo). Very convenient manuals are Hahn, *Das Bekenntniss der evangelischen Kirche, in seinem Verhältniss zu d. römischen u. griechischen* (Lips. 1853, 12mo); Hofmann, *Symbolik* (1856, 8vo); Heurtley, *Harmonia Symbolica* (Oxford, 1858, 8vo).—Winer, *Theol. Lit.* xi; Hend. Buck, s. v.; Pelt, *Theol. Encyclopædie*, § 67; Hagenbach, *Theol. Encyclop.* § 76; Hill, *Divinity*, Am. ed., p. 751.

The general *harmony* of the Protestant Confessions has been shown in various publications. Bossuet's *Histoire des Variations des Eglises Protestantes* (1688) was written to show that the Protestant churches were wide asunder in points of faith; and Basnage's *Histoire de la Religion des Eglises Réformées* (Rott. 1725, 2 vols. 4to) affords a thorough refutation of Bossuet. The Assembly of Frankfort, 1577, entertained the question of a new Confession, which should be adopted by all, or nearly all, the Protestant bodies. A number of divines (among whom Beza, Salvart, and Daleau are named) accordingly drew up a *Harmonia Confessionum Fidei Orthodoxarum et Reformatarum Ecclesiarum*, etc. (Geneva, 1581, 4to). It embodies, under heads of doctrine, the following eleven Confessions: Augsburg, the Tetrapolitana, Basle, Helvetian, Saxony, Würtemberg, France, England, Helvetica posterior, Belgium, and Bohemia (see Niemeyer, *Præf. ad Coll. Confess.* v-ix). An English translation was immediately made, and published under the title, *An Harmony of the Confessions of Faith of Christian and Reformed Churches*, etc. (Camb. 1586, 12mo; London, 1643, 4to). A new edition of this very valuable work was published in 1842 by the Rev. P. Hall, with important prolegomena and additions (Lond. 1842; again 1844, 8vo). This edition gives also in an appendix, in English, the XXXIX Articles; the Westminster Confession of 1647; Usher's Articles adopted by the Convocation of the Episcopal Church in Ireland, 1615; and the Articles of the Synod of Dort.

Among minor works of this class we name Stuart, *The Scriptural Unity of Protestant Churches, exhibited in their published Confessions* (Dublin, 1835, 12mo); contains the XXXIX Articles, the Irish Articles, the Confession of the Church of Scotland, and a Declaration of Faith of the Congregational dissenters. Also Cumming, *Unity of Protestantism, being Articles of Religion from the Creeds of the Reformed Churches* (Lond. 1837, 8vo), which contains extracts from nine Confessions, arranged under heads. See Hall, *Harmony of Protestant Confessions* (Lond. 1842, 8vo). For the three œcumenical Confessions, see CREED, APOSTLES'; CREED, ATHANASIAN; CREED, NICENE.

Confessional, the cell in which the Romish confessor sits to hear confessions. It is erected within the church, with a boarded back against the wall, or against a pillar or pier, and is divided into three niches. The centre, which is intended for the priest, is closed half-way up by a dwarf door, and has a seat within it. There is a small grated aperture in each of the partitions between the priest and the side-cells, which are for those who come to confess. The earliest laws which give a prescription concerning the place where confession (q. v.) is to be made, provide that such places shall be open so that they may be seen by all. Nuns, according to a decree of the Synod of Paris of 829, must confess before the altar in the presence of witnesses not standing off very far. The first traces of confessionals as they are now in use in the Church of Rome are found in the second half of the 16th century, when several synods (Cosenza, 1579; Malfi, 1591) enjoined that every church should have as many confessionals and confessors (priests hearing confessions) as were necessary, which, however, should be so conspicuous that both the priest and the confessing person could be seen without difficulty by every one in the Church. —Herzog, *Real-Encykl.* ii, 786. See SHRIVING-PEW.

Confessor. (1.) In early ecclesiastical history the word is frequently used for martyr (q. v.), but its proper application was to those who, after having been tormented, were permitted to live and die in peace. At length it indicated those who, after having lived a good life, died under the reputation of sanctity. According to Cyprian, he who presented himself to torture, or even to martyrdom, without being called to it, was not designated a *confessor*, but a *professor;* and if any through want of courage abandoned his country, and became a voluntary exile for the sake of the faith, he was called *ex terris*. Later the title Confessor was applied to persons of eminently pious life as "witnessing a good confession." Edward of England was made "Confessor" by a bull of Alexander III. (2.) In the Romish Church, a confessor is an ordained priest who has power to hear sinners in the so-called sacrament of penance, and to give them "absolution." He is generally designated *confessarius*, to distinguish him from *confessor*. The confessors of the kings of France, from the time of Henry IV, were constantly Jesuits; before them, the Dominicans and Cordeliers shared the office between them. The confessors of the house of Austria have also ordinarily been Dominicans and Cordeliers, but the later emperors have taken Jesuits.—Mosheim, *Church History*, i, 54. See AURICULAR.

Confirmation, a rite by which, in some Christian churches, baptized persons are fully admitted into the Church by the imposition of hands and prayer. The Churches which practise this ceremony profess to do it in imitation of apostolic example recorded in the New Testament. (1.) It appears from the Acts that the apostles laid hands only on baptized persons, as in the case of the converted Samaritans, Acts viii, 12-17, and the disciples at Ephesus, Acts xix, 5, 6. It is, however, evident that in those passages allusion is made to the miraculous gifts imparted by the apostles. It is said that "when Simon saw that through laying on of the apostles' hands the Holy Ghost was given, he offered them money, saying, Give me also this power, that on whomsoever I lay hands he may receive the Holy Ghost." Nothing is said of the laying on of hands in the baptism of the three thousand on the day of Pentecost (Acts ii, 38-42). Nor does the ceremony appear to have taken place at the baptism of Lydia and her household, Acts xvi, 15; or the Philippian jailer and his family, Acts xvi, 31-38. In Heb. vi, 2, mention is made of "the doctrine of the laying on of hands" immediately after that of "the doctrine of baptisms," but there is no intimation that the two transactions were connected. The journey of St. Paul through Syria and Cilicia to confirm the churches does not necessarily imply the rite of confirmation as practised by the Church of England. These churches had been probably planted by himself at an earlier period, and he now gives them such regulations as are neces-

sary for their welfare, ordaining elders, imparting miraculous gifts, so important to the instruction of converts, and to the furnishing convincing evidences of the truth and power of the Gospel. The unction, or chrism, referred to in 1 John ii, 27, and 2 Cor. i, 21, has been supposed by some to refer to the ceremony of confirmation; it seems rather to relate to a spiritual anointing, to the royal and priestly dignity of Christians, or to the communication of extraordinary and miraculous gifts. (2.) As the practice cannot be traced to New-Testament authority, so neither do the earliest records of ecclesiastical antiquity contain any clear and certain testimony concerning it. Passages supposed to refer to this rite have been pointed out in the writings of Dionysius, in the Apostolical Constitutions, in Clement, and in Eusebius; but they rather relate to the sacrament of baptism. *Confirmation in connection with baptism* may be traced to the time of Tertullian, who informs us that the ceremonies of unction and the imposition of hands followed immediately after baptism. Cyprian refers to the subject of confirmation, and applies to it the word *sacramentum;* but it is evident, from the use of the term at the time in which he wrote, and from the scope of the passages in which it occurs, that *sacramentum* was not used in its strictly theological meaning, but simply in the sense of *ceremony*. Numerous references to later writers might be made to show the connection of baptism and confirmation. The baptism of adults being regarded as a solemn compact or covenant, confirmation followed as the seal by which the contract was ratified; and hence confirmation was administered, not by the person officiating, but by the bishop. At the stated baptismal seasons, the bishop was chiefly occupied with the rite of confirmation; but he sometimes commenced the whole solemnity by the baptism of a few individuals with his own hands. When baptism was administered in the absence of the bishop, confirmation was solemnized at some convenient season afterwards, either by the bishop or by his representative. Hence it followed that confirmation was often deferred until several years after baptism, especially in those dioceses which were seldom visited, either on account of their great extent, or the negligence or ignorance of the bishop. Even after the *general* introduction of infant baptism, confirmation immediately succeeded. In the Oriental churches, baptism, confirmation, and the Lord's Supper are administered in immediate succession; a probable evidence that such was the ancient custom. (3.) The permanent separation of confirmation from baptism is generally traced to the 13th century. The bishop was, for the most part, the ordinary minister. Several canons deny to the other orders of the clergy the right of confirming; but presbyters appear to have conferred imposition of hands, (*a*) in the absence of the bishop; or, (*b*) in the presence of the bishop, only by his express orders; or, (*c*) on the conversion of a reputed heretic, if such a one, desirous of being received into the church, was at the point of death while the bishop was absent. Deacons were on an equality with presbyters in this respect, until they were absolutely forbidden to administer this rite by the Council of Toledo, A.D. 400.

In the Latin Church, after the separation of confirmation from baptism, a series of preliminary religious exercises was requisite for this rite, similar to those which had been previously required for baptism. Names given in baptism were sometimes changed in confirmation. Sponsors were also required; and a separate edifice in some instances provided, called *consignatorium*, *albatorium*, and *chrismarium*. After the disuse of baptisteries, both baptism and confirmation were administered in the church (Farrar; Bingham, *Orig. Eccles.* bk. xii, ch. i, ii; Neander, *Ch. Hist.* i, 316).

Confirmation is a *sacrament* in the Romish and Greek churches. In the Greek Church confirmation is administered at the same time with, or as soon as possible after, baptism, even in the case of infants, it being considered perilous to die without it; and in the Latin Church also it is often administered to young children—the Church of Rome not considering a person a "complete Christian" till he has partaken of this "sacrament." To reconcile this opinion with the salvation of children who die after baptism but before confirmation, or "committing actual sin," the Church of Rome has decided that they are confirmed by death, as they cannot sin afterwards. In England, five centuries ago, children were usually confirmed at the age of five years. The Council of Trent appointed from the age of seven to twelve; and a synod of Milan, in 1565, prohibited confirmation under seven years of age. The canon law fixes no time, but says "of perfect age," which may be interpreted strictly or laxly. The earlier German Reformers rejected it even as a ceremony; but it was restored through the influence of Spener in the 17th century, and is now in use, as a renewal of the baptismal covenant, in the Reformed and Lutheran Churches. In the Church of England, and in the Protestant Episcopal Church, it is a formal rite, administered by the bishop. These churches direct that the child shall be confirmed "so soon as he can say the Creed, the Lord's Prayer, and the Ten Commandments in the vulgar tongue, and is further instructed in the Church Catechism set forth for that purpose." Bishop Gibson, to elucidate the words "years of discretion," in the Act 13, 14, Car. II, refers to Lyndwood's Gloss upon Archbishop Walter's Constitutions, which makes the proper age to be above seven and under fourteen. The ritualists and canonists of the English Church generally incline to a tender age. Thus, in reply to Bucer, who "finds fault with our Church for administering confirmation too soon," and says that none ought to be confirmed "who have not had opportunity of giving sufficient testimonies of their faith and desire of living to God by their life and conversation," Wheatly argues that confirmation is administered "to assist them in manifesting their faith and practice, and is not to be deferred till these are already manifested." The rite, he says, is to guard them against sin, before they are exposed to temptation, "that so the Holy Spirit may take early possession of their youthful hearts, and prevent those sins to which, without his assistance, the very tenderness of their age would be apt to expose them." All that the Church demands, he adds, is "that they should understand the nature and advantages of the rite, and the obligations it lays upon them." The High and Low Church differ as to the essence of confirmation, the latter regarding it as being essentially a personal renewal of the promises made in the name of the subject by others at baptism, while the High-Churchmen look upon it as a kind of sacramental rite for conveying the strengthening power of the Holy Ghost. Some High-Churchmen have therefore maintained that the Roman doctrine of the sacramental character of confirmation (as well as of all the other sacraments of the Church of Rome) may, in some sense, be accepted by the Anglican Church. It is connected with this difference of views as to the sacramental character of confirmation that the High-Churchmen generally urge an earlier (about five or six years) and the Low-Churchmen a later age (from fourteen to sixteen), for the performance of the rite. Their difference of opinion became the subject of an animated conference when, a few years ago, bishop Baring, of Durham, refused to confirm any children less than fourteen years of age. See Coleman, *Ancient Christianity*, ch. xx; Bangs, *Original Church*, p. 319 (N. Y. 12mo); Burnet, *Hist. of Engl. Reformation*, i, 466, 583; Wilson, *Bampton Lecture*, p. 260; Whately, *Infant Baptism*, p. 36; Schaff, *Apostolic Church;* Palmer, *On the Church;* Procter, *On Common Prayer;* Elliott, *Delineation of Romanism*. confirmation in Volbeding's *Index Dissertationum*, p. 144, 145.

Conflagration, GENERAL. The opinion that the end of the world is to be effected by the agency of fire is very ancient, and was common among heathen philosophers (Ovid, *Metamorph.* i, 256). Other testimonies are quoted by Grotius (*De Veritate Rel. Chr.* lib. i, § 22). It is not easy to discover the origin of this opinion; it can scarcely be traced to tradition derived from revelation, since there is no distinct reference to such a catastrophe in the Old Testament. It is, moreover, remarkable, considering how universal and definite is the ordinary belief on the subject, that there is only one passage in the New Testament, viz., 2 Pet. iii, 7-10, which can be adduced as speaking distinctly of this event. This passage is, indeed, very explicit, but some learned and able expositors have referred it altogether to the destruction of Jerusalem and of the Jewish polity. Among these are Dr. Lightfoot (*Horæ Hebr.* in Joh. 21, 22) and Dr. John Owen (*Θεολογούμενα*, edit. Bremen, 1684, p. 147, quoted by Dr. Pye Smith, *Scripture and Geology*, sect. 6, p. 233, 1st ed.). If, however, with the majority of interpreters, we refer the prediction to the end of the world, to which it seems most naturally to apply, we could not have a more distinct statement of the fact that the present order of things is to be terminated by the world we inhabit and all the works of man it contains being "burnt up." There is no reason for assuming that the whole material universe is to be involved in this catastrophe; the mention of the heavens leads our thoughts no farther than the atmosphere and vapors surrounding this planet. Nor should we regard this conflagration as involving the absolute *destruction* or annihilation of the world; it is more consistent with the narrative itself, as well as with physical science, to consider it as introductory to a new and better state of things—"new heavens and a new earth, wherein dwelleth righteousness" (ver. 11). By what means the conflagration is to be effected we are not informed, and all attempts to explain how this is to be accomplished must be mere speculation. We have only at present to remark that such an event is not inconsistent with physical facts. We know that the temperature of the earth increases gradually and with considerable regularity as we descend below the surface (Phillips, *Geology*, ii, 232), and we have every reason to believe that the central mass is intensely hot. We know, moreover, that there are subterranean fires of great extent, if not forming part of this heated central mass. The means, therefore, of combustion are near at hand. But even if there were no such central heat, chemistry points out very easy means by which the conflagration may be effected through the agency of various elementary substances (Phillips, *Geology*, ii, 211). We find evidence also in the pyrogenous rocks which form so large a part of the crust of the earth, that the world has already been subjected, if not to conflagration, yet to a more intense and general action of heat than any which is now observed on the surface of the earth; and it is clearly not impossible that the action may be yet more intense and more general. The example of the conflagration of a star in the constellation of the Northern Crown in May, 1866, by the sudden evolution of hydrogen gas, shows one way in which such a catastrophe might be produced (*Bibliotheca Sacra*, July, 1867, p. 473). In speculating on this subject, however, the caution of Calvin should not be disregarded, that the apostle is not speaking to gratify the speculations of the curious, but to add impressiveness to his pious exhortations (*Comm. in 2 Pet.* iii, 10).

Conformity strictly means, (1) the being reduced to the *same shape* with anything else; hence it has acquired the figurative sense of (2) agreement with any existing set of principles, or any institution; and has, in a more limited and technical sense, been used for (3) *compliance with the discipline of the Church of England.* "Conformists" are therefore generally contrasted with "Nonconformists," a name which now includes generally all those who, either in doctrine or government, or both, dissent from the Church of England. A declaration is required of all persons who are to be licensed or instituted to an ecclesiastical charge in the Church of England in the following words: "I, A. B., do declare that I will conform to the Liturgy of the Church of England as it is now by law established." This declaration is to be made and subscribed before the bishop or his commissary, and the making and subscription thereof is to be testified under the episcopal seal of the bishop, and under the hand of the bishop or his commissary.—Eden, *Churchman's Theol. Dict.*; Hook, *Church Dict.*

Conformists. See CONFORMITY.

Confucius (Latinized by the Jesuit missionaries from Cong-fu-tse or Koong-foo-tse), a Chinese reformer and moralist, was born about 551 B.C. at the village of Tseu-se, in the small kingdom of Lu (now a part of the province of Shantung), and died B.C. 479. He is said to have been a descendant of the emperor Hoang-ti, who reigned B.C. 2600. When he was three years old his father died, but his mother trained him with great care, and was rewarded by the rapid progress and filial tenderness of her son. At seventeen he was called to public life as inspector of the grain-markets. He was married at nineteen, but, according to some accounts, subsequently divorced his wife (after she had borne him a son) in order to devote himself to the study of the ancient writings, and prepare for the work of restoring the usages and doctrines of the old sages. He was soon after promoted to the office of inspector general of agriculture. At twenty-four, having lost his mother, he resigned his public employments that he might pay the respect to her memory prescribed by the ancient traditions. During the three years passed in mourning he was a diligent student. China at that period was divided into a number of feudal kingdoms but slightly under the control of the central authority, whose constant quarrels filled the land with disorder, while the social and moral condition of the people had fallen so low that the ancestral religious rites were no longer observed. To restore the proper observance of these, rather than to introduce any new religious system, was the task to which Confucius determined to devote himself. About the age of thirty he began his public teachings, making journeys through the various states of China, instructing all ranks of the people, and gaining fame and disciples, though meeting often with opposition, and even persecution, in his efforts to reform the manners and better the condition of his countrymen. When fifty-five years old he re-entered public life as prime minister of his native kingdom, Lu, with opportunity and authority to test the efficacy of his proposed means of amelioration. In three years, it is said, he brought about a complete change in its social and moral condition. His success, however, excited the jealousy of neighboring princes, and through their intrigues he was obliged to flee to the north of China. After several unsuccessful efforts to obtain office and opportunities to teach the people, he retired to the kingdom of China, where he lived in great poverty. His doctrines, however, had taken root, but his rigid principles and practice made him many enemies. When full of years, in company with some chosen disciples, he retired from the world, that he might complete and arrange the works which, under the name of the *King* (or Books), constitute the sacred books of the Chinese, and, standing at the head of their literature, have for more than 2000 years been the recognised authority in moral and political conduct for nearly one third of the human race. Soon after the completion of these works

he died, leaving a single descendant, his grandson, Tse-Tse, whose offspring, numbering A.D. 1671 about 11,000 males, mostly of the seventy-fourth generation, form a distinct caste in Chinese society, the only instance of a hereditary nobility among them. The veneration of the Chinese for Confucius amounts to worship, to which the second and third months are devoted. In every district and every department there is a temple erected in his honor (Culbertson, p. 41).

The Rev. Dr. Wentworth, Methodist Episcopal missionary at Fuh-Chau, gives an account of the worship as witnessed by himself in a temple in that city, from which we make the following extracts: "The temple is one of the finest buildings in the city. It is one storied, in the form of a hollow square, with a spacious court in the centre, apartments on each side, and the main temple at the end. It has a fine portico, and the roof within is sustained by columns of solid granite of enormous size. There are no idols, but ancestral tablets supply their places in the gilded shrines. In the centre is that of Confucius, on the sides are those of twelve of his most celebrated disciples, six on each side. The worship of the philosopher is monopolized by the literati; and the mandarins, who are literary graduates of the highest distinction, are the only priests who officiate upon the occasion. The sacrifice takes place twice a year, in the second and eighth months. It is performed before daylight in the morning, and the common people are rigidly excluded. We were an hour too early, but better that than five minutes too late. The mandarins had not yet made their appearance. A burst of music indicated the coming of the magnates. Their first business was to get the 'whang kee-angs,' 'foreign babies,' out of the sacred precincts, and a mandarin of high rank came to request us to go outside. We asked him to let us stand next one of the great doors on the portico outside. To this he consented. The platform was cleared and the ceremonies began. The darkness was dispelled by rows of gaudy lanterns and a forest of blazing torches. The court was filled with mandarins and their servants. Privileged spectators from the literary classes, with their attendants, crowded all the available space below. In front of the great central door of the temple, on the portico, was a band of musicians, with flutes and 'soft recorders,' and another of boys fantastically dressed. Within were musicians chanting vocally, accompanied by the instruments without, the praises of the sage. The loud voice of a crier within the temple, and the loud response of a herald below, indicated that all was ready. Clouds of incense filled the temple, while two or three mandarins, in full official dress and caps, preceded by attendants, ascended the steps and entered the lofty doors on either side, prostrating themselves with the head to the pavement before the shrines successively, and offering the various articles placed in their hands by the attendants for that purpose to Confucius and his favorite followers. This was repeated three times in succession, the officers retiring and re-entering with the same stately ceremony on each occasion. The offerings were animal and vegetable. On a broad table in front of the shrine and altar of Confucius lay shrouded the carcase of a whole ox, denuded of his skin, and on either side of him a pig and a goat. On the altar were vases of flowers and plates of cooked provisions. At one point in the ceremony an official kneeled before the shrine of Confucius at a respectful distance, and in a loud voice chanted a prayer or a hymn of praise. The ordinary chants were very simple, consisting of four notes perpetually repeated, thus:

The last offering was material for clothing; a sort of coarse silk, in large patches, first offered bodily in the temple, and then taken down into the court and burned, that it might become spirit-silk in the other world. The Buddhists usually offer ready-made clothing, stamped on paper. The mandarins send Confucius the raw material. About the first gray streakings of the dawn of a cloudy morning the ceremonies ended, the torches were suddenly extinguished, and the officers and their retinues slowly retired" (*Christian Advocate and Journal*, 1859).

"It was the great object of Confucius to regulate the manners of the people. He thought outward decorum the true emblem of excellence of heart; he therefore digested all the various ceremonies into one general code of rites, which was called Le-ke, or Ly-king, etc. In this work every ritual in all the relations of human life is strictly regulated, so that a true Chinese is a perfect automaton, put in motion by the regulations of the Ly-king. Some of the rites are most excellent: the duties towards parents, the respect due to superiors, the decorum in the behavior of common life, etc., speak highly in favor of Confucius; but his substituting ceremony for simplicity and true politeness is unpardonable. The Ly-king contains many excellent maxims and inculcates morality, but it has come to us in a mutilated state, with many interpolations" (Gutzlaff, *Sketch of Chinese History*).

In the writings of Confucius the duties of husbands towards their wives were slightly dwelt upon; the duties and implicit submission of children to their parents were most rigidly inculcated. Upon this wide principle of filial obedience the whole of his system, moral and political, is founded. A family is the prototype of the nation; and, instead of the notions of independence and equality among men, he enforces the principles of dependence and subordination—as of children to parents, the younger to the elder. By an easy fiction, the emperor stands as the father of all his subjects, and is thus entitled to their passive obedience; and, as Dr. Morrison observes, it is probably (he might say certainly) this feature of his doctrines which has made Confucius such a favorite with all the governments of China, whether of native or Tartar origin, for so many centuries. At the same time, it should be observed that this fundamental doctrine has rendered the Chinese people slavish, deceitful, and pusillanimous, and has fostered the growth of a national character that cannot be redeemed by gentleness of deportment and orderliness of conduct.

Confucius was a teacher of morals, but not the founder of a religion. His doctrines constitute rather a system of philosophy in the department of morals and politics than any particular religious faith (Davis). Arnauld and other writers have broadly asserted that he did not recognise the existence of a God (Bayle, *Dict.* in art. *Maldonat*). In his physics Confucius maintains that "out of nothing there cannot be produced anything; that material bodies must have existed from all eternity; that the cause or principle of things must have had a co-existence with the things themselves; that therefore this cause is also eternal, infinite, indestructible."

The system of Confucius is essentially ethical and political, and cannot be called a religion or a philosophy. He disclaims originality in doctrine. His object was to re-establish the ancient *cultus* of China, and to mould the manners of her people by minute regulations, embodying the usages of the past, and digested into one general code of rites (*Li-ki*), in which the proper ritual for all the relations of life is prescribed. To the influence of this code may be referred the automatic character of Chinese life. While many of his doctrines are deserving of high praise, and may justly claim to rank, in a moral point of view, above the ethics of Greece and Rome, they fall short of the elevation and ameliorating power of the Mosaic and Christian codes, which the encyclopædist writers of

the eighteenth century asserted were equalled, if not surpassed by them. To show the falsity of such statement, we need only contrast the results achieved by the development of the two systems, starting from what has been claimed to be cognate doctrinal bases. Founding his system upon the duty enjoined in the fifth commandment of the Decalogue, Confucius inculcates in such wise dependence and subordination, first of children to parents, then of citizens to the emperor, the representative father of the state, as to give to the imperial power that despotic cast which, while it has made him so great a favorite with all governments in China, native or Tartar, has nevertheless undoubtedly tended to check progress and make the people deceitful and pusillanimous, though the long-continued existence of their nationality vindicates the promise made by God of long life to those who honor their parents, for this injunction, it would seem, the Chinese obey beyond all nations of the earth. His celebrated maxim of negative reciprocity, "What you would not wish done to yourself, that do not to others" (*Anal.* xv, 23), fitly contrasts the immobile, selfish spirit of Confucianism, limited in its aims to China only, with the active reciprocity of Christ's golden rule, whose progressive spirit embraces all the world.

Whether Confucius recognised the existence of a personal God has been questioned, though the religious ceremonies observed by him, and certain expressions of his (*Anal.* iii, 13, and xiv, 13)—"He who offends against Heaven has none to whom he can pray," "But there is Heaven that knows me"—are urged as proofs that he did (see preface to the Amer. ed. of the recent translation by Dr. Legge). He maintained that *ex nihilo nihil fit*, and consequently that matter is eternal; that the cause or principle of things had a coexistence with the things themselves, and therefore also is eternal, infinite, indestructible, omnipotent, and omnipresent, having the blue firmament (Tien) as the central point; therefore offerings, particularly at the equinoxes, should be made to Tien. Neither Confucius nor his true followers have ever represented the Great First Cause by any image. "The images and idols of China belong to other faiths." The doctrine of the soul's immortality is implied in the worship paid to ancestors, and the absence of the word death from his philosophy. When a person dies, the Chinese say "he has returned to his family." The spirits of the good were, according to him, permitted to visit their ancient habitations on earth, or such ancestral halls or places as were appointed by their descendants, to receive homage and confer benefactions. Hence the duty of performing sacred rites in such places, under the penalty, in the case of those who, while living, neglect such duty, of their spiritual part being deprived after death of the supreme bliss flowing from the homage of descendants. The aim of the living should be the attainment of perfect virtue by the observance of the five fundamental laws of the relation between ruler and subject, parents and children, husband and wife, friends and brothers, and the practice of the five cardinal virtues—humanity, justice, order, rectitude, and sincerity, or good faith."

Of the five canonical books composing the King, three (I-King, Shi-King, and Shu-King) were compiled, and one (Chun-Tsien) was composed by Confucius, while one (Li-Ki) was compiled from his teachings by his disciples, and brought to its present form some centuries after him. The first (I-King, Book of Changes), assigned by tradition to the mythical emperor Fuhi (B.C. 2800) as its author, is "simply a number of figures made up of straight lines, entire and broken, variously put together in parallel arrangement," and which "are regarded as typifying the elements and processes of nature, and the great truths of the moral and intellectual world," and "expressing the earliest cosmical philosophy of the Chinese. To the brief early interpretation of these emblematic figures Confucius added a fuller one of his own." The second (Shi-King, Book of Songs) is a selection of 311 pieces of lyric poetry, relating to moral sentiments, public and private affairs, as harvesting, marriage, etc., with praise of the good and censure of the wicked. The third and most important (Shu-King, Book of Annals) is a historical work, recording not only events, but the maxims, conversations, decrees, and institutions of the sovereigns of ancient China, drawn confessedly from authentic sources, and coming down to about 200 years before Confucius. The fourth (Chun-Tsien, Spring and Autumn), composed by Confucius as a supplement to the third, records from memorials of his native kingdom Lu the events from Pingwang to B.C. 560. This is the only work coming directly from the hand of Confucius. The fifth (Li-Ki, Book of Rites) is a "compilation, brought into its present form some centuries after Confucius, and made up from material of very different age and character." It is a text-book especially of ceremonial and etiquette, in which the personal teachings of Confucius occupy an important place. His doctrines are also set forth in the Hiao-King (Filial Piety) by an anonymous writer, which contains apothegms of Confucius, collected during his conversations with his disciple Tsang-Tsan, and in the four Chinese classics termed Seé-shu, viz. (1) Tahis (Great Learning, or doctrine for adults), consisting of seven verses of text from Confucius, with ten chapters of commentary by Tsang; (2) Chung-Yang (the Doctrine of the Mean), by Tsé-tse, the grandson of Confucius; (3) Lung-yu (conversations—replies), conversations of Confucius, written by two disciples after his death; (4) the Meng-tse-shu, the work of his great disciple Meng-tsé (Mencius), who lived about B.C. 370, and ranks among the Chinese next to Confucius as moralist and philosopher. Dr. Legge is now publishing all the Chinese classics, giving original texts, versions, and literary apparatus. Four volumes have appeared (Hong Kong); see also his *Life and Teachings of Confucius* (Lond. 1867, Phila. 1867, 12mo); Huc, *Trav. in the Chinese Empire* (N.Y., Harpers, 2 vols. 12mo); *New-Englander*, Feb. 7, 1859, p. 116-121; *Edinb. Rev.* April, 1855, p. 223-5 (Amer. ed.); *Quart. Rev.* xi, 332; Culbertson, *China, its Religions and Superstitions* (N.Y. 1857, 1 vol. 12mo); *Bibl. Sacra*, May, 1846, art. iii; *The Chinese Classics*, pt. i, *Confucius*, Worcester, Mass. Examiner*, Sept. 1858; Hardwick, *Christ and other Masters*, bk. iii, ch. i; Loomis, *Confucius and the Chinese Classics*, 1867; *Brit. Quart. Rev.* Jan. 1867. See CHINA.

Confusion OF TONGUES. See TONGUES (CONFUSION OF).

Congé d'élire, a French term, signifying *leave to choose*. It is used in England to denote the king's writ or license to the dean and chapter of the diocese to choose a bishop in the time of vacancy of the see. Prior to the reign of Edward I the kings of England used to invest bishops with the ring and staff, in virtue of their donative right. Henry I so far ceded this right as to give a *congé d'élire* to deans and chapters for the election of bishops. Henry VIII added "letters missive," nominating the person whom he required them to elect, under pain of præmunire; and Edward VI (1 Edw. VI, c. i, 2) abolished elections by writ of *congé d'élire*, but they were revived by queen Elizabeth. The *congé d'élire* is now a mere form, as the nominee of the crown is invariably chosen by the dean and chapter.

Congo, a country of Western Africa, extending from latitude 6° to 8° 20′ S. It was discovered in 1484 by the Portuguese, who soon afterwards made settlements

and erected forts along its coast. A few years after, Dominican monks were sent there as missionaries, and in 1491 the prince of Congo was baptized under the name of Emanuel. His son, Alphonsus I, who reigned fifty years, sent ambassadors to Rome, of whom several were ordained priests. The next king, Peter I, obtained for Congo a special bishop. The following kings remained, with the people, nominal adherents of the Church of Rome. The efforts of Roman Catholic missionaries to introduce reforms have been fruitless. In 1878 Congo became a dependency of Belgium and afterwards expanded into the Congo Free State. As this was the result of Mr. Stanley's explorations, he was made governor in 1890. Congo is nominally still an Episcopal see, but at present united with the Portuguese diocese of Angola (q. v.). Some Roman Catholic writers (as P. Karl v. Heil. Aloys, *Jahrbuch d. Kirche*, Ratisbon, 1812) claim for the diocese of Congo a Roman Catholic population of 80,000, and for that of Angola of 300,000.—Wetzer u. Welte, *Kirchen-Lex.* ii, 784.

Congregatio de auxiliis divinæ gratiæ is the name given to a commission formed by pope Clement VIII in 1598, to examine Molina's (q. v.) book entitled *Concordia liberi arbitrii cum gratia.* This work had been the cause of great disputes between the Jesuits and the Dominicans, and it was hoped that the investigations of the commission would settle these difficulties. The *congregatio de auxiliis*, after three months, decided that the Jesuits were in the wrong in most of the controverted points. Instead of submitting to this decision, that powerful order managed to inveigle the civil authorities, and even kings and emperors, into the quarrel. After colloquies between the most celebrated theologians of the two parties had led to no result, in 1602 the pope ordered the controversy to be discussed in his own presence. These transactions lasted until 1606. The Dominicans still tried to show that the doctrines of Molina were Semipelagian errors, and the Jesuits charged their opponents with Calvinistic views. Pope Clement VIII, who personally sympathized with the views of the Dominicans, resolved to read the book himself, but before he could do so he died (1605). During the conclave following his death, every cardinal had to take an oath that if elected pope he would bring the controversy, as soon as possible, to a close. The new pope, Paul V, consequently dissolved in 1607 the congregation, and in an encyclica, addressed to the generals of the Jesuits and Dominicans, and which the latter had to communicate to all the provincials of the two orders, allowed both parties to retain, teach, and defend their opinions, and forbade them to charge the other party with heresy. This decision was confirmed by a constitution of Oct. 2, 1733. Soon after the dissolution of the congregation, the general of the Jesuits prescribed that in the schools of the order a somewhat modified form of Molina's views should be taught. As some of the Jansenist theologians maintained that Paul V had really condemned the views of Molina in a special constitution which the Jesuits had subsequently induced him not to publish, pope Innocent X in 1654 declared that such a constitution did not exist. Nevertheless, the accounts of the Dominican and Jesuit writers of the history of this congregation have never been harmonized.—Wetzer u. Welte, *Kirchen-Lex.* ii, 786.

Congregation (usually עֵדָה, *edah'*, or perhaps more technically קָהָל, *kahal'*, both often rendered "assembly;" Gr. ἐκκλησία or συναγωγή), a term that describes the Hebrew people in its collective capacity under its peculiar aspect as a holy community, held together by religious rather than political bonds. Sometimes it is used in a broad sense as inclusive of foreign settlers (Exod. xii, 19), but more properly as exclusively appropriate to the Hebrew element of the population (Num. xv, 15); in each case it expresses the idea of the Roman *civitas* or the Greek πολιτεία. See ALIEN. Every circumcised Hebrew (אֶזְרָח; *αὐτόχθων*; *indigena;* A. V. "home-born," "born in the land," the term specially descriptive of the Israelite in opposition to the non-Israelite, Exod. xii, 19; Lev. xvi, 29; Num. ix, 14) was a member of the congregation, and took part in its proceedings probably from the time that he bore arms. It is important, however, to observe that he acquired no political rights in his individual capacity, but only as a member of a *house;* for the basis of the Hebrew polity was the house, whence was formed in an ascending scale the *family* or collection of houses, the *tribe* or collection of families, and the *congregation* or collection of tribes. See GOVERNMENT. Strangers (גֵּרִים) settled in the land, if circumcised, were, with certain exceptions (Deut. xxiii, 1 sq.), admitted to the privilege of citizenship, and are spoken of as members of the congregation in its more extended application (Exod. xii, 19; Num. ix, 14; xv, 15); it appears doubtful, however, whether they were represented in the congregation in its corporate capacity as a deliberative body, as they were not, strictly speaking, members of any house; their position probably resembled that of the πρόξενοι at Athens. The congregation occupied an important position under the Theocracy, as the *comitia* or national Convention, invested with legislative and judicial powers. In this capacity it acted through a system of patriarchal representation, each house, family, and tribe being represented by its head or father. These delegates were named זִקְנֵי הָעֵדָה (Sept. πρεσβύτεροι; Vulg. *seniores;* A. V. "elders"), נְשִׂיאִים (ἄρχοντες; *principes;* "princes"), and sometimes קְרִיאִים (*ἐπίκλητοι*; *qui vocabantur*, Num. xvi, 2; A. V. "renowned," "famous"). See ELDER. The number of these representatives being inconveniently large for ordinary business, a farther selection was made by Moses of 70, who formed a species of standing committee (Num. xi, 16). Occasionally, indeed, the whole body of the people was assembled, the mode of summoning being by the sound of the two silver trumpets, and the place of meeting the door of the tabernacle, hence usually called the tabernacle *of the congregation* (מוֹעֵד, lit. *place of meeting*) (Num. x, 3); the occasions of such general assemblies were solemn religious services (Exod. xii, 47; Num. xxv, 6; Joel ii, 15), or to receive new commandments (Exod. xix, 7, 8 [comp. Acts vii, 38]; Lev. viii, 4). The elders were summoned by the call of *one* trumpet (Num. x, 4), at the command of the supreme governor or the high-priest; they represented the whole congregation on various occasions of public interest (Exod. iii, 16; xii, 21; xvii, 5; xxiv, 1); they acted as a court of judicature in capital offences (Num. xv, 32; xxxv, 12), and were charged with the execution of the sentence (Lev. xxiv, 14; Num. xv, 35); they joined in certain of the sacrifices (Lev. iv, 14, 15); and they exercised the usual rights of sovereignty, such as declaring war, making peace, and concluding treaties (Josh. ix, 15). The people were strictly bound by the acts of their representatives, even in cases where they disapproved of them (Josh. ix, 18). After the occupation of the land of Canaan, the congregation was assembled only on matters of the highest importance. The delegates were summoned by messengers (2 Chron. xxx, 6) to such places as might be appointed, most frequently to Mizpeh (Judg. x, 17; xi, 11; xx, 1; 1 Sam. vii, 5; x, 17; 1 Macc. iii, 46); they came attended each with his band of retainers, so that the number assembled was very considerable (Judg. xx, 2 sq.). On one occasion we hear of the congregation being assembled for judicial purposes (Judg. xx); on other occasions for religious festivals (2 Chron. xxx, 5; xxxiv, 29) [see CONVOCATION]; on others for the election of kings, as Saul (1 Sam. x, 17), David (2 Sam. v, 1), Jeroboam

(1 Kings xii, 20), Joash (2 Kings xi, 19), Josiah (2 Kings xxi, 24), Jehoahaz (2 Kings xxiii, 30), and Uzziah (2 Chron. xxvi, 1). In the later periods of Jewish history the congregation was represented by the Sanhedrim; and the term synagogue (*συναγώγη*), which in the Sept. is applied exclusively to the congregation itself (for the place of meeting אֹהֶל מוֹעֵד is invariably rendered *ἡ σκηνὴ τοῦ μαρτυρίου*, *tabernaculum testimonii*, the word מוֹעֵד being considered = עֵדוּת), was transferred to the places of worship established by the Jews, wherever a certain number of families were collected. See ASSEMBLY.

MOUNT OF THE CONGREGATION (הַר מוֹעֵד, *mountain of* the *assembly*, Isa. xiv, 13 [14]; Sept. *ὄρος ὑψηλόν*, Vulg. *mons testamenti*), usually supposed to refer to Mount Moriah as the site of the Temple (comp. Isa. xxxiii, 20). The tenableness of this interpretation was disputed by Michaelis (*Biblioth. Orient.* v, 191), who contends that the name designates some place of religious ceremony among the Babylonians, and has hence been compared with the sacred hill of the gods (q. d. mount of their meeting), such as the *Alborj* named in the Zend-Avesta as situated in the north of the earth (comp. Rhode, *Heil. Sage*, p. 230 sq.). We may also compare with this the Mount *Olympus* of the Greek mythology, and the *Meru* of the Indian. Indeed all pagan systems seem to point to the north of the respective regions as the locality of the highest mountains, naturally assumed as the abode of the gods; possibly having a vague reference to the great Caucasian range (see Gesenius, *Jesa.* ii, 316 sq.; Rosenmüller, *Alterth.* I, i, 154 sq.; Henderson, *Comment.* in loc.). See MOUNT.

CONGREGATION, (1.) an assembly, or *gathering together* of persons, more particularly for divine service. This word is used, in the Rubrics of the Church of England, in the same sense as "people" is used, to mean that portion of the Church of the nation who are assembled in any one sacred edifice for the purposes of worship (Eden).

(2.) *Monastic Congregations.*—(*a*) In a wider sense, all ecclesiastical associations of laymen in the Roman Catholic Church, for contemplative, ascetic, or practical purposes, are called congregations. (*b*) In a more special sense, *ecclesiastical congregations* are associations which, like monastic orders, lead a common life, and are bound by vows. They differ from the monastic orders by not demanding from their members the vow of poverty, by binding them to less stringent or to no rules of retirement from the world, and frequently by prescribing only the *simple* vow of chastity (see VOW). The number of congregations of this class is very large; among them are the Oratorians, the Priests of the Mission, the Doctrinarians, the Piarists, the Brothers of the Christian Schools, the Mechitarists, Redemptorists, all of which are treated of in special articles. (*c*) The name is also applied to several branches of reformed Benedictines. In these "congregations" each monastery has its own abbot or prior, but all were subordinate to the head of the chief abbey. The most noted of these congregations were those of Clugny, Vallambrosa, Camaldoli, the Cistercians, Carthusians, and Maurines (see these articles).

(3.) *In Œcumenical Synods.*—At the Œcumenical Synod of Constance, it was resolved to take the vote, not by heads, but by nations, of which there were at first four (German, French, Italian, English), and subsequently five (Spanish). Each nation was to cast one vote. In order to establish the vote of a nation, its members held separate sessions, which were called "congregations." In these congregations, every member, without distinction of rank, had an equal vote. When the vote of each congregation had been established, all the congregations met as a *general congregation*, and the resolutions, for which a majority of the nation voted, were declared the Resolutions of the Œcumenical Council. See Wetzer u. Welte, *Kirchen-Lex.* ii, 794.

(4.) *Congregation of Cardinals.*—A committee of cardinals, prelates, and others, met for the dispatch of some particular business, and deriving its name from the particular business it has to dispatch. The following account will be found to include the names of the chief of these congregations, and the particular business of each:

1. *The Consistorial Congregation*, instituted in 1586 by Sixtus V. They prepare the most difficult beneficiary matters, afterwards debated in the Consistory in the presence of the pope. Such matters are the approbation of new religious orders; the erection of new episcopal sees; the separation, union, or suppression of benefices of the higher grade; the examination of newly-appointed or elected bishops; the appointment of coadjutors. The number of cardinals is not fixed.

2. *The Congregation of the Holy Office, or Inquisition*, instituted in 1542 by Paul III, at the desire of cardinal Caraffa, who afterwards became Paul IV. The privileges were enlarged by the addition of statutes by Sixtus V, by which this tribunal became so formidable that the Italians were accustomed to say, "Pope Sixtus would not pardon Christ himself." It takes cognizance of heresies and all novel opinions, as well as of apostasy, magic, witchcraft, abuse of the sacraments, and the circulation of pernicious books. The pope himself is prefect of this congregation. It consists of 12 cardinals, a number of theologians and canonists as "consultors," of several "qualificators" who give their opinion in special cases, of a defender of the accused, and several other persons. See INQUISITION.

3. *The Congregation de Propagandâ Fide*, instituted by Gregory XV in 1622, consists of 24 cardinals, one of the secretaries of state, an apostolical prothonotary, a referendary, an assistant or lateral judge, and the secretary of the Holy Office. See PROPAGANDA.

4. *The Congregation of the Council*, for explaining the Council of Trent. When the council closed its sessions, Pius IV deputed certain cardinals, who had assisted in it, to put an end to all doubts which might arise concerning its decrees. This congregation meets once a week. "Its decisions from 1739 to 1848 fill 103 vols. 4to." The prefect is chosen by the pope, and has a salary.

5. *The Congregation of the Index*, instituted in 1570 by Pius V. This committee is deputed to examine all books. It is composed of several cardinals, and has a secretary of the order of Dominic. The pope generally presides himself.

6. *The Congregation of Ecclesiastical Immunity.* This was established by Urban VIII in order to obviate the disputes which arose in the judgment of such suits as were carried on against churchmen for various matters, whether criminal or civil.

7. *The Congregation of Bishops and Regulars.* Sixtus V, in the beginning of his pontificate, united two congregations under this name. It has power to regulate all disputes arising between bishops and regular or monastic orders.

8. *The Congregation for the Election, Examination, and Residence of Bishops.* This was instituted by Clement VIII, to examine into the qualifications of all such churchmen as are nominated to bishoprics. The examiners are chosen by the pope. It has the power of enjoining or dispensing with the residence of bishops, and obliging all abbots to reside in their several communities.

9. *The Congregation of Religious Discipline.* This has the right to inquire into the state of Italian monasteries, and to suppress those whose temporalities are so far diminished that the remainder is not sufficient for the maintenance of six monks.

10. *The Congregation of Apostolical Visitation.* Its

business is to visit, in the name of the pope, the six bishoprics, suffragans to the metropolis of Rome.

11. *The Congregation of Indulgences and Sacred Relics*, instituted in 1689 by Clement IX. Its business is to superintend the relics of ancient martyrs, which are frequently said to be found in catacombs and other subterranean places in Rome, and to distinguish their bones, shrines, and tombs from those of the heathen. After the congregation has pronounced sentence on the validity of any relics, they are consigned to the cardinal-vicar and the pope's sacristan, who distribute them to applicants. This congregation also investigates the causes and motives of those who sue for indulgences. The registrar sends the minutes and conclusions of petitions to the secretary of briefs, who dispatches them under the fisherman's seal.

12. *The Congregation of Sacred Rites.* Sixtus V founded this congregation to regulate all matters relating to ceremonies and rites in worship, and especially to take the chief part in the canonization of saints. It has authority to explain the rubrics of the Mass-Book and the Breviary when any difficulties are started in relation thereto.

13. *The Congregation of the Reverend Fabric of St. Peter.* This was founded to superintend the building of St. Peter's, and is now employed in repairing and beautifying it. This congregation has the peculiar privilege of altering the last wills of those who bequeath money to pious uses, and to apply it to the support of the fabric of St. Peter's.

14. *The Congregation of the Sacred Consulta.* This has supreme civil and criminal jurisdiction over the subjects of the papal states. It was instituted by that famous founder of congregations, Sixuts V.

15. *The Congregation of Good Government.* This watches over the conduct of the magistrates throughout the states, and works in concert with the *Consulta.*

16. *The Congregation of Prisons.* This consists of the governor of the city, and other ecclesiastics bearing civic and judiciary offices. They dispose of cases relating to the numerous occupants of secret prisons, galleys, etc., etc., having under their jurisdiction all that are in legal bonds; the sufferers in the Inquisition and in the monasteries excepted, whom it is not within their province to visit, pity, or release.—Farrar, *Eccl. Dict.* s. v.; Herzog, *Real-Encyklop.* ii, 577; Broughton, *Bibliotheca Historico-Sacra* (London, 1787, vol. i); Meier, *Die heutige römische Curie* in Jacobson, *Zeitschrift f. d. Recht*, 1847, ii; Wetzer u. Welte, *Kirchen-Lex.* ii, 844.

Congregation, Lords of the, a title given, in Scottish Church History, to the chief nobles and gentlemen who signed the Covenant of December 3, 1557. From the frequent recurrence of the word congregation in the document, the adherents were called "the Congregation," and the chief signers (such as the earls of Argyle, Glencairn, and Morton, the Lord of Lorn, Erskine of Dun, etc.) were styled "Lords of the Congregation."—Hetherington, *History of the Church of Scotland*, chap. ii.

Congregational Lectures, a series of lectures delivered in London by Congregational ministers of Great Britain from year to year. The following courses have been published: 1833, Christian Ethics, by Rev. Ralph Wardlaw, D.D.; 1834, The Causes of the Corruption of Christianity, by Rev. Robert Vaughan, D.D.; 1835, The Christian Atonement, by Rev. Joseph Gilbert; 1836, Divine Inspiration, by Rev. Ebenezer Henderson, D.D.; 1837, Holy Scripture Verified, by Rev. George Redford, D.D., LL.D.; 1839, Revelation and Geology, by Rev. John Pye Smith, D.D., LL.D., etc.; 1840, The Connection and Doctrinal Harmony of the Old and New Testaments, by Rev. William Lindsay Alexander, D.D.; 1841, The Theology of the early Christian Church, by Rev. James Bennett, D.D.; 1843, The Existence and Agency of Evil Spirits, by Rev. Walter Scott; 1844, The Sacraments (Part I, Baptism), by Rev. Robert Halley, D.D.; 1845, The Doctrine of Original Sin, by Rev. George Payne, LL.D.; 1847, The Revealed Doctrine of Rewards and Punishments, by Rev. Richard Winter Hamilton, D.D., LL.D.; 1848, The Ecclesiastical Polity of the New Testament unfolded, by Rev. Samuel Davidson, LL.D.; 1849, The Work of the Holy Spirit, by Rev. William Hendry Stowell, D.D.; 1850, The Sacraments (Part II, the Lord's Supper), by Rev. Robert Halley, D.D.; 1853, Psychology and Theology, by Rev. Richard Alliott, LL.D.; 1855, Ages of Christendom before the Reformation, by Rev. John Stoughton; 1858, Christian Faith, by Rev. John H. Godwin; 1860, The Divine Covenants, their Nature and Design, by Rev. John Kelly. The course has since been temporarily suspended.

Congregationalists, a denomination of Christians (generally Calvinistic in theology) holding to a system of church government which embraces these two fundamental principles, viz., (1) that every local congregation of believers, united for worship, sacraments, and discipline, is a complete church, and not to be subject in government to any ecclesiastical authority outside of itself; and (2) that all such local churches are in communion one with another, and bound to fulfil all the duties involved in such fellowship. The system is distinguished from Presbyterianism by the first, and from Independency by the second. It involves the equal right of all brethren to vote in all ecclesiastical affairs; and the parity of all ministers, the ministers being set apart by the churches, and not possessed of any power of government as ministers, but only of official power in the churches by which they may be chosen pastors. In England they are often, but not quite accurately, styled Independents. Several denominations in the United States are congregational in practice, but bear other names than that of the denomination known distinctly as "The Congregational Churches of the United States."

I. History.—Congregationalists claim that their system is only a substantial return to the order and practice of the apostolic churches, which had been corrupted by the tendencies that culminated in the papacy; and that traces of dissent from the episcopal power are found in every age (see Punchard's *History of Congregationalism*). The origin of modern Congregationalism is seen in the early stages of the reformation in England. From the beginning of the protest against Romanism, some of the main distinctive views afterwards developed into Congregationalism, especially the identity of "bishop" and "presbyter," and the independent right of each congregation to choose its pastor and exercise discipline, found decided adherents. While Henry VIII, after throwing off the Romish supremacy, clung in the main to the Romish theology, and in part to the Romish polity and practices, the progress of thought continued in the opposite direction. When the reforms carried on by Edward VI were peremptorily stopped by Mary, dissenting congregations, in substance Congregational, came immediately, though privately, into existence in various places, as in London in 1555. Their existence is learned almost entirely from the persecutions to which their members were subjected, and but few particulars in their history are preserved. Among the Congregational martyrs were Barrowe, Greenwood, and Penry, executed in 1593. Of the Congregational church formed in London in 1592, of which Francis Johnson was pastor, and John Greenwood teacher, fifty-six members were seized and imprisoned. Many of them eventually found their way to Amsterdam, where they reorganized under the same pastor. Robert Brown's publication, in 1582, of "A Book which showeth the Life and Manners of all true Christians," etc., presents the earliest full development of the Independent side of Congregationalism. While at first only Puritans, many became Separatists,

in despair of securing complete reformation in the Church of England. About 1602 a church was organized at Gainesborough, in Lincolnshire, Rev. John Smyth pastor. In 1606 another was formed at Scrooby, Nottinghamshire, Richard Clyfton pastor, which met at the house of William Brewster. Of that church John Robinson was a member, and afterwards associate pastor. In 1606 Mr. Smyth and his friends removed to Amsterdam. In 1607 Mr. Clyfton and many of his church, after great persecution, also escaped to Amsterdam, and in 1608 most of the remaining members of the Scrooby church followed. After about a year the church removed to Leyden. Owing to the disadvantages of residing in a country of different language and customs from their own, they resolved to emigrate to America, and a portion of the Leyden church, with elder William Brewster, after many trials landed at Plymouth, Massachusetts, Dec. 21, 1620 (N. S.), while Robinson, with a part of the church, remained at Leyden. In 1616 a Congregational church was established at Southwark, London, under the care of Henry Jacob, who had been confirmed in Congregational views by conference with John Robinson at Leyden. This church, organized after Mr. Jacob had conferred with leading Puritans, probably gathered together some of the scattered members of Mr. Johnson's church. Though sometimes called "the first Independent church in England," there had been the secret congregations in the reign of Mary, and the churches of Gainesborough and Scrooby, and, it is said, one at Duckenfield, Cheshire Co. About 1624 Rev. John Lathrop became pastor of the Southwark church; he was, in 1632, imprisoned, with forty-one other of its members. In 1634 Mr. Lathrop, obtaining release, removed to America, with about thirty of his flock, and in that year organized the church in Scituate, Mass., where he continued until 1639, when the majority removed to West Barnstable, where that church is still existing.

1. *American Congregationalists.*—The Plymouth settlement was distinct in origin and government from that of Massachusetts Bay, the Pilgrim settlers being distinctively known as "the Pilgrims." The persecutions under Laud led many Puritans to the resolution to emigrate. Endicott and his company began the colony at Salem in 1628, and in 1630 John Winthrop, their governor, with other emigrants, occupied Boston and the surrounding towns. Settlements were made at Hartford and Saybrook, in Connecticut, in 1635, and in 1638 Davenport and his associates founded the New Haven colony, while in 1633 a distinct company re-enforced the colonies on the Piscataqua River. The Plymouth church had come out fully organized; in the other settlements churches were immediately formed. None but the Plymouth people had come over as Separatists; the others declared that they did not separate from the Church of England, but only desired to remove its corruptions. But, gathered in a new land, away from all ecclesiastical establishments, and searching the Scriptures for their ecclesiastical order, they all fell into the Congregational order. Their ministers had almost all been regularly ordained in the Church of England, and were highly educated men, as (e. g.) Cotton and Wilson, of Boston; Mather, of Dorchester; Hooker and Stone, of Hartford; Davenport and Hooke, of New Haven.

Congregationalism proper received substantially its form in the early history of New England. If traced to the writings of any one person, it would be to those of John Robinson, of Leyden; those of John Cotton and Thomas Hooker, in America, being next in importance. Robert Brown was never acknowledged as a leader, he being a strict Independent, and finally returning to the communion of the Church of England; but his writings undoubtedly aroused many minds to examine and reject the claims of episcopacy. The system cannot, however, be traced to any one man, but rather to the united sentiments of the early emigrants, who agreed in carrying into practice the opinion that every church is, according to the Scriptures, confined to the limits of a single congregation, and must be democratic in government; while all churches are in fellowship with one another. Hence the term "the Congregational Church" is never used to denote the denomination, but "the Congregational churches."

Church and State.—From the earliest settlement of New England there was a definite but peculiar relation between the churches and the state. It was neither that in which the State rules the Church, nor that in which the Church rules the State, but rather a peculiar blending of the two. Townships were incorporated with a view to the ability to maintain a settled ministry, and to the convenience of the people in attending public worship. Provision was made by law for the support of pastors, and for all necessary expenses. The choice of a pastor belonged to the church. A peculiar feature of the connection was established in 1631, in Massachusetts Bay, and later (in substance) in the Connecticut colonies, and, by the authority of Massachusetts, in Maine and New Hampshire, that "no man shall be admitted to the freedom of the body politic but such as are members of some of the churches within the limits of the same." This was in no respect a principle of Congregationalism, but grew out of the objects of the emigration from England. As the population increased the rule was modified, and by-and-by abandoned. Ministers, although their influence was great, had no voice as ministers in public affairs. The laws taxing all persons for the support of the ministry were first ameliorated by allowing persons to contribute to whatever church they might prefer; and the whole system of compulsory taxation was abolished in Connecticut in 1816, and in Massachusetts in 1833.

General Synods.—The history of the denomination is rather the history of distinct churches than of an organized body. Yet the fellowship of the churches has always been maintained, and all "matters of common concernment" have been decided by the common consent of the whole body, and sometimes embodied in the pronounced opinions of general bodies convened for the special occasion. Denying the authority of any standing judicatory, Congregationalists recognise the necessity and desirableness of occasional synods for deliberation and advice on great public interests. Only four such general synods have been held. The first met in 1637, at Cambridge, Mass., to deliberate on the doctrinal speculations of John Wheelwright, Anne Hutchinson, and others. It consisted of "all the teaching elders through the country" and of "messengers from the churches;" Rev. Peter Bulkley, of Concord, Mass., and Rev. Thomas Hooker, of Hartford, Conn., were moderators. The second synod met at Cambridge in 1646, and dissolved in 1648. It declared its approval of the Westminster Assembly's Confession of Faith, and set forth an elaborate statement of Church polity, known as the "Cambridge Platform," which has always—though latterly with modifications—been regarded as an important standard. The third synod, or "Convention," met at Albany, N. Y., in 1852, composed, like the preceding, of pastor and delegate from each church. Its main business resulted in the formal dissolution of the "Plan of Union between Presbyterians and Congregationalists" agreed upon by the Presbyterian Church and the General Association of Connecticut in 1801. The fourth synod, styled "National Council," met in Boston, Mass., in 1865, composed of a minister and delegate from every group of ten churches; William A. Buckingham, governor of Connecticut, was its moderator. It was called to deliberate upon the exigencies of religious duty growing out of the circumstances of the country in its emerging from the war of 1861-5.

Among its important acts were a Declaration of Faith and a revised Platform of Church Polity. Partial synods of importance have been held—of Massachusetts in 1662, which recommended the disastrous, and now long since abandoned "Half-way Covenant," by which baptized persons might "own the covenant" of the Church, but without coming into full communion;—of Massachusetts in 1679-80, called the "Reforming Synod:" that synod readopted, with some alterations, the Confession agreed upon by the Congregational Synod which met at the Savoy, in London, in 1658, which was itself that of the Westminster Confession, with slight alterations, the variations of the three documents being carefully shown in the *Congregational Quarterly*, Boston, 1866;—and the Synod of Connecticut, which met at Saybrook in 1708, and framed the "Saybrook Platform" of Discipline, which established the "consociation" system in that state. All of these synods disclaimed authority over the churches to impose either a platform of polity or a creed; they declared only what were the sentiments and usages of the churches in their understanding of the Scriptures.

Other Organizations.—In each state and territory where Congregationalists exist in sufficient numbers, there have been formed General Associations or Conferences, which are without any ecclesiastical authority, and not allowed to hear causes or give advice in any ecclesiastical affairs. All are now composed of both ministers and lay delegates, except the General Associations of Massachusetts and Connecticut, which are purely bodies of ministers; but that of Massachusetts voted unanimously in 1866 to unite with the Conference of the same state, and admit laymen. The General Conference of Maine, where the "Conference" (including laymen) system originated, was organized in 1826; New Hampshire, 1809; Vermont, 1796; Massachusetts, Association in 1803, Conference in 1860; Rhode Island, 1809; Connecticut, 1709; New York, 1834; Ohio, 1852; Indiana, 1858; Illinois, 1843; Michigan, 1852; Wisconsin, 1840; Minnesota, 1855; Iowa, 1840; Missouri, 1865; Nebraska, 1857; Kansas, 1855; Oregon, 1853; California, 1857; Canada, 1853; Nova Scotia and New Brunswick, 1847. These bodies all hold annual meetings. In addition, a "Convention" of the Congregational ministers of Massachusetts has met annually since near the beginning of the 18th century, of which Unitarians are a component part, which holds funds, mainly contributed before the division, for the relief of widows and orphans of ministers of either denomination. A "Triennial Convention of the Northwest" was formed in 1858, mainly to supervise the affairs of the Chicago Theological Seminary. Local Conferences of churches covering groups of (usually) from ten to thirty churches have been voluntarily formed, and embrace nearly all the churches: they generally meet semi-annually for religious conference, and are denied every power of jurisdiction. Nearly all the ministers are grouped in local associations of convenient size for purposes of mutual improvement, but with no ecclesiastical authority; but the churches look to them to examine and recommend candidates for the ministry. These associations began in the 17th century. "Ecclesiastical Councils" are occasional bodies, which will be noticed under "government."

"*Plan of Union*" with Presbyterians.—Congregationalists and Presbyterians, holding the same doctrinal views, have always had more or less intimate relations. When Western New York and the territories beyond were becoming rapidly settled, a formal "Plan of Union" was adopted by the Presbyterian General Assembly and the General Association of Connecticut in 1801. To prevent division into small and weak churches, it was arranged that Congregationalists and Presbyterians in any locality could unite in one church, its character to be settled by the majority; and, if Congregational, the church could, while retaining power of internal government, hold a qualified relation to Presbyteries. The result was that large numbers of Congregationalists and of Congregational churches were finally absorbed in the Presbyterian Church. The Plan grew into disfavor, and was abrogated by the Congregational Convention of 1852. Many churches which still hold that abnormal relation are now dropped from the Congregational statistics.

Unitarianism.—Owing to various causes—particularly the "Half-way Covenant," the connection of Church and State, and opposition to the great revivals of the middle of the 18th century—there grew up in some of the churches a dislike to the doctrines of the denomination, which developed itself into Unitarianism. The first church to become such, however, was the Episcopal church of King's Chapel, Boston. Sharp controversy ensued, which resulted in an entire separation. The division was going on from about 1810 to 1825 by the steady withdrawal of fellowship from the churches and ministers which had become Unitarian. The change of doctrine was chiefly confined to Massachusetts, and, in a great degree, to Boston and vicinity. In 1825 there were found to be 95 Unitarian churches (a part of which were new churches organized as such), and 310 Congregational; while in the other states the defection was hardly known. Many churches were deprived of their property by adverse majorities in parishes, and were forced to begin anew. The trials of the churches awakened a vigorous life in the denomination, which added 146 new churches in Massachusetts in the following 25 years, and increased the number of communicants from 37,987 in 1830 to 64,830 in 1850. The terms "Unitarian Congregational" and "Trinitarian Congregational" have been sometimes used in Massachusetts; but the latter title has never been allowed by the denomination, while the Unitarian National Conference has refused to insert the term "Congregational" in its official name.

Benevolent and Missionary Operations.—In the earliest history of American Congregationalism efforts were directed to the conversion of the Indians, of which the work of John Eliot is the most noted. Later, when the country became settled westward, missionary societies, of which those of Connecticut were perhaps most important, sent ministers to the new settlements of New York, Ohio, etc. In 1825 an American Home Missionary Society was suggested by Congregationalists, and was organized to embrace the several state societies and the Presbyterians. In Home Missions, the efforts of the denomination have been made through this channel, which has now really become Congregational by the withdrawal of the Presbyterians since 1860. Foreign Missions have been carried on through the American Board of Commissioners for Foreign Missions, which was formed by the General Association of Massachusetts in 1810, but through which the New School Presbyterian Church also does its mission work. An impetus was given to assisting Congregational churches in building meeting-houses by the Albany Convention, under whose recommendation a large amount was immediately raised. That work is successfully carried on by the American Congregational Union, which was organized at New York in 1853. The American Congregational Association has collected a fine and rapidly-increasing Congregational Library in Boston, and a large fund to be devoted to the erection of a Congregational House. Large amounts of money have been collected through co-operative societies for ministerial education, Sabbath-schools, tract and other religious publications, seamen, temperance, education at the West, etc. The denomination, from its polity, has no Church Boards. Its benevolent operations have been carried on through such channels as the churches preferred. The National Council, in 1865, recommended the American Board, the American Home Missionary Society, the American Missionary Association, the

American Education Society, the Society for promoting Collegiate and Theological Education at the West, the American Bible Society, the American and Foreign Christian Union, the Congregational Board of Publication, the American Congregational Association, the Massachusetts Sabbath-school Society, and the objects of the American Tract Societies. While co-operation is still adhered to, there is an evident drift in the denomination towards separate methods of work, due undoubtedly to an increasing conviction of the scripturalness, importance, and efficacy of the denominational polity.

Progress.—The denomination, while always predominant in New England, was retarded in its growth beyond the Hudson River partly by the "Plan of Union," and partly by the advice of theological instructors to their pupils going westward to become Presbyterians. The result has been that the Congregational churches have given a large number of ministers to the Presbyterian Church, and furnished the material of many of its churches. Not a few of the early New York churches became Presbyterian, and Congregational associations were disbanded lest they should interfere with harmony. But the gradual increase of ministers who, removing to the West, refused to give up their ecclesiastical fellowship, and a growing conviction that the Congregational polity demanded its own preservation, has changed the current. The oldest church in Ohio was founded in 1796; in 1866 the number was 166. Commencing in Illinois about 1830, the churches numbered in 1866, 221. Commencing in Michigan about 1827, the number in 1866 was 150. The oldest in Minnesota dates from 1851; in 1866 there were 58. In Iowa, from the first in 1839, the number increased to 166 in 1866. In Missouri, from 2 in 1864, they increased to 41 in 1867. In Kansas, from 1 in 1854, to 33 in 1866. In California, from 10 in 1859 to 32 in 1866. In the Southern States the denomination had no foothold prior to the war of 1861–5; but beginnings have since been made in Delaware, Maryland, the District of Columbia, North and South Carolina, Louisiana, and Tennessee; and Congregationalists have planted the first church, other than Mormon, in Utah.

2. *In the British Islands.*—The removal of Robinson and others to Leyden, and the large emigration of Puritans to America, left many others in England whose views coincided with theirs. The Southwark church, organized in 1616, continued. In the latter part of Mr. Lathrop's pastorate, the Baptists, hitherto mingled with the Pædo-Baptists, by the cheerful consent of those remaining, withdrew and organized the first Baptist church in England. Mr. Jacie succeeded Mr. Lathrop, and, with his congregation, suffered much persecution. Another church appears to have been organized in Southwark in 1621, which soon emigrated to Ireland to avoid the severities under which they suffered; but it returned to England, and chose Rev. John Canne as pastor, who, with others, was soon driven to Holland. In 1640, sixty-six of that congregation were imprisoned at once, who, on trial, boldly declared that they could acknowledge no other head of the Church than Jesus Christ. From these roots grew the denomination which came to exercise potent influence in England. Its adherents increased, and might soon have had comparative quiet but for the opposition of the Presbyterians. In the Westminster Assembly were a few Congregationalists, who steadily upheld their views, such as Thomas Goodwin, Philip Nye, Jeremiah Burroughs, William Bridge, and Sidrach Simpson; but they were overpowered by a vast majority of Presbyterians. The five named issued, during the session, "An Apologetical Narration," in which they asked for toleration, and set forth their distinctive views of polity. "We do here publicly profess," said they, "we believe the truth to lie and consist in a *middle way* betwixt that which is falsely charged on us, *Brownism*, and that which is the contention of these times, the *authoritative Presbyterial government*, in all the subordinations and proceedings of it." During the Commonwealth they stood on an improved footing, Cromwell being an Independent, with many of the men who overthrew the tyranny of Charles I. Eminent Congregationalist ministers were appointed chaplains, or placed in leading positions in the universities, among whom were John Owen, Thomas Goodwin, Gale, Howe, Charnock, Bridge, Nye, Caryl, and Greenhill. While steadily increasing in the subsequent reigns, Congregationalists resolutely opposed all union of Church and State. The most important early public proceeding was the meeting of elders and messengers at the Savoy, in London, in 1659. They then issued "A Declaration of the Faith and Order owned and practiced in the Congregational churches in England." The declaration of faith, known as the "Savoy Confession," was a modification of the Westminster Confession, changing doctrinal statements only slightly, but excluding everything Presbyterian in polity, and changing the Westminster theory of the relation of the Church and State so as to deny the authority of magistrates to interfere with ecclesiastical liberty. This Confession is the one which, slightly amended, was adopted by the American Synod of 1680, and reaffirmed by the American National Council in 1865. The "Toleration Act" of 1669 gave shelter to the Congregationalists, but at that time they, as well as the Baptists, were few compared with the Presbyterians—the three leading denominations of Dissenters. The Congregationalists had increased considerably at the date of the accession of George I, in whose time that defection from orthodox doctrine appeared which so greatly involved the Presbyterians; from that the Independents were free, to which the labors of Watts and Doddridge were greatly conducive. In 1727, on the adoption of a rule by the Congregational ministers of the metropolis for making up their list, there were found to be fifty ministers in that city. In 1734 a writer says that all the Independent ministers were Calvinists. In 1831 was formed the CONGREGATIONAL UNION OF ENGLAND AND WALES, "on a full recognition of their own distinctive principles, viz. the Scriptural right of every separate church to maintain perfect independence in the government and administration of its own particular affairs." This Union meets annually. "Protesting against subscription to any human formularies as a term of communion," the Union declares the "Principles of Religion" as held by their churches. The English and Welsh churches are associated in local unions or associations. The Congregationalists forming the CONGREGATIONAL UNION OF SCOTLAND trace their immediate origin to the enterprises of Robert and James Haldane (q. v.) in 1798 and subsequent years. Originally having no idea of forming churches, when God blessed their labors their converts instinctively drew towards each other. Places of worship were built in several of the largest towns, in which churches were formed. The Union was organized in 1812. The oldest Congregational churches in Ireland date respectively from 1760, 1787, 1798, and 1796. The churches are united in a Union. In the British colonies there are churches forming the following Unions, viz. Victoria, New South Wales, Queensland, South Australia, Tasmania, and Natal, besides those of Canada, and Nova Scotia, and New Brunswick, which are regularly reported with the statistics of the United States churches.

3. *Continental Europe.*—*L'Union des Églises Evangéliques de France*, which was formed in August, 1849, shortly after the secession from the *Eglise Reformée* of the late Frederick Monod and those who acted with him, though not denominated Congregational, holds to the essential principle of that polity in this constitutional declaration: "Each church which en-

ters the union preserves the liberty of determining for itself its own constitution, according to its conviction and necessities. . . . Every church must be constituted on the principle of individual confession of faith, with a guarantee of discipline being exercised by the church itself." It is a union of self-sustaining churches, and hence is small; but a large number of churches dependent on aid are in sympathy, and are represented at the biennial meetings. In SWITZERLAND the free churches of Vaud are united on a basis which, though Presbyterian in form, secures the independence of each. There are also independent churches in Neufchâtel and Berne. These all, with the Free Church of Geneva, the independent churches of the north of France, compose the alliance of Free or Independent Evangelical churches founded in 1860, admitting all churches free of state control which accept the simple Evangelical Confession of Faith adopted by the Alliance, practise a scriptural discipline, recognise the ministry as a divine institution, and engage in the propagation of the Gospel. In ITALY evangelical communities are being formed, since the establishment of the kingdom, upon independent principles, but no definite statements can be given at present regarding actual organization into churches.

4. *Other Parts of the World.*—Missionary churches exist in all parts of the missionary world, established by missionaries of mainly the London Missionary Society, the American Board of Commissioners of Foreign Missions, and the American Missionary Association.

II. DOCTRINES.—1. *In America.*—The Congregational churches are "orthodox" in the general sense of Christendom, holding that the Scriptures are the only rule of faith and practice, and that no creeds may be imposed on any; yet it is the duty of the churches to set forth declarations of the understanding of the Scriptures in Confessions of Faith. Alleged erroneous opinions are to be tested, however, not by the Confessions of Faith, but by the Scriptures. They are, in their views of human nature, Augustinian in distinction from Pelagian, and, as regards the method of the divine government, Calvinistic in distinction from Arminian. While no power can impose a creed on the churches, and each Church adopts its own formulas, yet the principles of fellowship, in which a council of churches is called for the recognition of a new Church, secures a general agreement in doctrine. For a more general standard, the Westminster Confession was adopted by the synod of 1648; that of the Savoy (a slight modification) by the synod of 1680. The General Association of Massachusetts, comprising 600 ministers, declares the Westminster Catechism to be its standard of doctrine. The National Council of 1865 declared, *nem. con.*, "our adherence to the faith and order of the apostolic and primitive churches held by our fathers, and substantially as embodied in the confessions and platforms which our synods of 1648 and 1680 set forth or reaffirmed." The study of theology has been pursued with great earnestness by Congregationalists, and, as a consequence, many shades of opinion are held, while as a body they stand within the lines indicated. Very many theological writers of great power have published systems or criticisms upon points in divinity, from which has arisen a view of Calvinism often styled the "New England theology," which has many adherents, and which doubtless affects the views of those who do not adopt it as a whole. Its origin is ascribed to the works of the first Jonathan Edwards, who, from his sympathy with the "great revival," directed his powerful energies to such explanations of truth as should remove obstacles supposed to be found in the then understanding of Calvinism. The views which he promulgated were subjected to the scrutiny of his son, Dr. Jonathan Edwards; and those of both were developed or modified by a school of writers, among whom may be named Hopkins, West, Smalley, Bellamy, Emmons, and Dwight, and, later, Taylor, of New Haven, and Park, of Andover. While not all of these agree in all points, and while the later views are considered by many ministers and churches to be materially different from those of the elder Edwards, yet the Calvinism thus explained is wide-spread. The great problem of this "New England theology" has been to harmonize the sovereignty of God and the freedom of man, and from that centre peculiarities in explaining other doctrines have proceeded. The result of these efforts has been a view of Calvinism of which the following may be called distinctive features. The doctrine of *original sin* is held as involving the hereditary corruption of men's nature, but not as involving the guilt of men before actual transgression. The doctrine of *depravity* is held as indicating a *moral* inability, or such an unwillingness and aversion as render it certain that man will not comply with God's demands without the regenerating grace of God, but not as involving a *natural* inability. Of the *Will*, the doctrine is held that it always chooses the greatest apparent good, but with a power of contrary choice. The doctrine of the regenerating *grace of God* is held as involving the *certainty* of its accomplishing its object, but not as *irresistible*. The doctrine of *Decrees* and *Predestination* is held in the sublapsarian sense, and not in the supralapsarian sense. Of the *Atonement*, the "governmental" theory is held. In regard to the Trinity, the Incarnation, the mode of the Divine existence, etc., the "New England theology" has no peculiarities differing from the general view of the Christian Church. This system is by no means held by all Congregationalists. Very many pastors and churches class themselves among the older Calvinistic schools, and all are held in general conformity with the early Confessions. The Congregationalists are Pædo-Baptists; as to mode, while "sprinkling" or "affusion" is the general custom, adults are held entitled to choose the mode they conscientiously prefer. The doctrine of the Lord's Supper is variously held, although rarely debated; but only persons professing a change of heart are admitted to the communion, and members of all evangelical churches are freely welcomed. The *Declaration of Faith* set forth by the National Council in 1865, adopted on Burial Hill, at Plymouth, Mass., declares (1) the doctrinal standards of the denomination, and (2) the principles of its recognition of fellowship with all the evangelical bodies. It is as follows:

"Standing by the rock where the Pilgrims set foot upon these shores, upon the spot where they worshipped God, and among the graves of the early generations, we, elders and messengers of the Congregational churches of the United States in National Council assembled, like them acknowledging no rule of faith but the Word of God, do now declare our adherence to the faith and order of the apostolic and primitive churches held by our fathers, and substantially as embodied in the confessions and platforms which our synods of 1648 and 1680 set forth or reaffirmed. We declare that the experience of the nearly two and a half centuries which have elapsed since the memorable day when our sires founded here a Christian commonwealth, with all the development of new forms of error since their times, has only deepened our confidence in the faith and polity of those fathers. We bless God for the inheritance of these doctrines. We invoke the help of the Divine Redeemer, that, through the presence of the promised Comforter, he will enable us to transmit them in purity to our children.

"In the times that are before us as a nation, times at once of duty and of danger, we rest all our hope in the Gospel of the Son of God. It was the grand peculiarity of our Puritan fathers that they held this Gospel, not merely as the ground of their personal salvation, but as declaring the worth of man by the incarnation and sacrifice of the Son of God; and therefore applied

its principles to elevate society, to regulate education, to civilize humanity, to purify law, to reform the Church and the State, and to assert and defend liberty; in short, to mould and redeem, by its all-transforming energy, everything that belongs to man in his individual and social relations.

"It was the faith of our fathers that gave us this free land in which we dwell. It is by this faith only that we can transmit to our children a free and happy, because a Christian commonwealth.

"We hold it to be a distinctive excellence of our Congregational system that it exalts that which is more above that which is less important, and by the simplicity of its organization facilitates, in communities where the population is limited, the union of all true believers in one Christian Church; and that the division of such communities into several weak and jealous societies, holding the same common faith, is a sin against the unity of the body of Christ, and at once the shame and scandal of Christendom.

"We rejoice that, through the influence of our free system of apostolic order, we can hold fellowship with all who acknowledge Christ, and act efficiently in the work of restoring unity to the divided Church, and of bringing back harmony and peace among all 'who love our Lord Jesus Christ in sincerity.'

"Thus recognising the unity of the Church of Christ in all the world, and knowing that we are but one branch of Christ's people, while adhering to our peculiar faith and order, we extend to all believers the hand of Christian fellowship upon the basis of those great fundamental truths in which all Christians should agree. With them we confess our faith in God, the Father, the Son, and the Holy Ghost, the only living and true God; in Jesus Christ, the incarnate Word, who is exalted to be our Redeemer and king; and in the Holy Comforter, who is present in the Church to regenerate and sanctify the soul.

"With the whole Church, we confess the common sinfulness and ruin of our race, and acknowledge that it is only through the work accomplished by the life and expiatory death of Christ that believers in him are justified before God, receive the remission of sins, and through the presence and grace of the Holy Comforter are delivered from the power of sin, and perfected in holiness.

"We believe also in the organized and visible Church, in the ministry of the Word, in the sacraments of Baptism and the Lord's Supper, in the resurrection of the body, and in the final judgment, the issues of which are eternal life and everlasting punishment.

"We receive these truths on the testimony of God, given through prophets and apostles, and in the life, the miracles, the death, the resurrection of his Son, our Divine Redeemer—a testimony preserved for the Church in the Scriptures of the Old and the New Testaments, which were composed by holy men as they were moved by the Holy Ghost.

"Affirming now our belief that those who thus hold 'one faith, one Lord, one baptism,' together constitute the one catholic Church, the several households of which, though called by different names, are the one body of Christ, and that these members of his body are sacredly bound to keep 'the unity of the spirit in the bonds of peace,' we declare that we will co-operate with all who hold these truths. With them we will carry the Gospel into every part of this land, and with them we will go into all the world, and 'preach the Gospel to every creature.' May he to whom 'all power is given in heaven and earth' fulfil the promise which is all our hope: 'Lo, I am with you alway, even to the end of the world.' Amen."

2. *In Europe.*—The doctrines of the English Congregationalists were set forth in 1659 in the Savoy Confession. As now stated, they are presented in the declaration of the Congregational Union, in articles of a Calvinistic type, but not presenting "a scholastic or critical confession of faith." While able writers have vigorously maintained the great doctrines of the evangelical churches, speculations upon doctrine do not seem to have been carried on as extensively as in the American churches, and the peculiarities of the "New England theology" have not been prominently discussed.

III. GOVERNMENT.—1. *In America.*—The whole administration of Congregationalism grows out of the two cardinal principles of (1) the completeness of the local church for its own government, and (2) the necessary fellowship of the churches. In all matters concerning the *individual church* alone, no other body is necessary to complete or sanction its action, and none has power to revise or overrule it. But in all matters concerning the *churches in fellowship* as a whole, those churches properly convened express their opinions and determine their course; and although their decision is of force only in such churches as adopt it, yet the moral weight of such decisions generally secure acquiescence. The two principles mentioned limit each other.

(1.) *Of the local Church.*—The church is composed only of persons supposed to be regenerated, united by a covenant which recognises duty to God and to each other, meeting for worship, sacraments, and discipline. The government is strictly democratic, so far as giving the right of voting to all adult males, and with no power of veto in the pastor. By vote of the brotherhood members are admitted or dismissed, alleged offenders tried, and censures passed, and all officers elected. The permanent officers are pastor (or bishop) and deacons, with clerk and such committees as the Church finds desirable. The pastor is necessarily an ordained minister or elder, and, from his position, "bishop." He is chosen by the Church, and may be dismissed by the Church; but the usual alliance of the Church with an incorporated civil society gives the pastor a legal relation to that society (by which he has also been chosen in concurrence with the Church) which the Church cannot touch. This alliance is a variation from pure Congregationalism, which some churches do not practice; but inasmuch as members of the Church usually compose the far larger part of the civil corporation, harm seldom ensues.

(2.) *Of the Fellowship of the Churches.*—All churches stand in a sisterly relation to each other, and are bound to fulfil its duties. This communion is manifested in mutual recognition; in admitting members of one church to the communion of another; in temporary interchange of ministers; in the dismissal and reception of members; in giving and receiving advice; in giving and receiving help; in consultation and co-operation in the edification of a particular church, or matters of general welfare; and in giving and receiving admonition. These principles limit the independence of the local church, and are embodied in the decisions of councils, which are the churches of a greater or less locality, represented each by pastor and delegate, and convened for special occasions. The limiting effect may be seen thus: believers in a given locality may organize a Church, but it is not *recognised* as in fellowship until a council of churches has examined the need of it, its material, and its doctrine, and approved of its recognition. A Church may settle a pastor, but he is not in fellowship with other churches until those churches in council have considered and approved his doctrinal and religious fitness. A Church may excommunicate a member, and no power outside can replace him in that Church; but inasmuch as the effect of that excommunication is to cut him off from the communion of all churches, the other churches have a right (and under certain circumstances it is their duty) to examine the case, and if the Church appears to have erred, recommend his restoration; in default of which they determine that his fellowship with

them ought to continue, and they advise any Church to which he may apply to receive him. A Church may become erroneous in doctrine, or scandalous by its conduct, and no power can reverse its actions; but inasmuch as the scandalous conduct injures all the churches, they have a right to remonstrate and admonish, and, if that fails, withdraw fellowship from the offending Church. The general principle, therefore, is, that while no external power can interfere with any act of a Church whose result is confined to itself, yet if that act, in its effect and influence, goes beyond and affects the body of churches, those churches have full right to consider such external effect and influence. The practical result of the working of these principles has been to secure both the rights of local churches, and the harmony, stability in doctrine, and united action of the denomination.

(3.) *Of the Ministry.*—"The ministry," says the National Council of 1865, "includes all men called to that work, and orderly set apart by ordination. When ordination of a pastor is to be performed, the church in which he is to bear office invite a council to examine as to faith, grace, and ability, that, if he be approved, they may extend the hand of fellowship. If the ordination be in view of any other sphere of labor, the request for a council ought to come from the church of which he is a member. A pastor dismissed does not cease to be a minister, but he cannot exercise any official act over a church until orderly replaced in office, except when particularly invited by a church." Congregationalists acknowledge but one grade of ministers; regarding the apostolic office as extraordinary, and to have ended with the death of those mentioned in the Scriptures. In the early history of American Congregationalism no ministry was recognised except that of a pastorate. But when it became necessary to preach the Gospel where there were no churches, as in missionary work, "evangelists" were ordained, but with no distinction in permanent character or authority from other ministers. A further modification of the original view has taken place. Until "now, all the Congregational churches," says Dr. Leonard Bacon, "acknowledge the difference between a minister of the Gospel and a pastor of a church. The former has no official power in any church or over any Christian. He is only a man set apart to preach the Gospel where God in his providence may call him." In the ordination of a pastor a distinction is now generally recognised between (1) the act of setting him apart as a minister of the Gospel, and (2) the act of his installation as pastor of the particular church. Ordinations without pastoral charge are now frequent, but never except in view of some particular sphere of labor.

Synods and Councils.—There are no standing bodies to hear appeals, give evidence, or declare the opinions of the denomination. But bodies to hear, determine, and advise are held to be involved in the fellowship of the churches, and are always called when the occasion is seen to demand them. They are more or less extensive, according to the number of churches affected by any matter to be considered. In all cases they are meetings of the churches, represented, however, by pastor and delegate. Only four *general* synods, as stated above, have been held in the United States. Matters affecting only a limited territory cause the convening of a limited council, as in Connecticut in 1709; while matters of merely local interest are the occasion of local councils, or those made up of a few contiguous churches, such as for the ordination of a pastor or the hearing of a case of alleged grievance. All are convened on the motion of a Church or churches, but no Church is obliged to participate. The proposal of the National Council of 1865 was first made in a local association; was recommended by the "Convention of the North-west;" was submitted to all the state bodies, and approved by all save one, which afterwards, however, was represented; and was called, in behalf of the various churches represented in the state bodies, by a joint committee composed from each body assenting. Local councils are frequent, being called to advise upon the recognition of new churches, the ordination or dismissal of pastors, the complaint of alleged grievance, and for advice to any Church desiring it. In calling a council, a Church must always be a party; the only apparent exception being that wherein, on complaint of injury to a member, the Church *ought* to be a party by assenting to his request for a council, but *unreasonably* refuses. In the latter case the member may call one himself, with a statement of the grounds and of the unreasonable refusal of the Church, in which case the council is known as *ex parte*, but is entitled to all the respect of a mutual one. If the Church and member (or, in similar circumstances, the Church and pastor, if there be differences between them) unite in the call, it is a *mutual* council. A council is composed of those churches invited, a list of which is given to every Church called, and cannot add to or diminish the number. It can act only on the matters presented in the document calling it, which is known as the "letters-missive." When it has examined the case, it puts its opinion in a "result," which is communicated to all parties, and then dissolves. Refusal to adopt the result does not prejudice the standing of a Church; if the refusal is a grave offence, and such as should affect fellowship with that Church, as in cases of doctrinal error, then new proceedings would be necessary for admonishing the offending Church. But the adoption of the results of council by one party in difference is held to justify that party, and in legal matters, such as relate to the contract of a pastor and parish, will be sustained by courts. The legal decisions on ecclesiastical matters have been numerous in Massachusetts. But the courts merely declare what the usages of Congregationalism are in reference to any contract in dispute, and they refuse to go behind the declaration of *facts* made by a council properly convened and properly conducted. The system of occasional councils is varied from only in Connecticut, where most of the churches are united in local consociations, in which system all matters which could elsewhere be referred to a special council, originated for the purpose, are referred to a fixed and recorded list of churches united in the consociation, which have bound themselves to constitute a mutual council whenever needed. Any Church may withdraw from a consociation without affecting its standing.

Customs and Usages.—Persons desiring approbation to preach apply, for convenience and fitness, to local associations of ministers, who receive his credentials of Church membership and of theological study, examine him as to his religious experience, his doctrinal views, his knowledge of scriptural learning, and his general fitness. Their approval, given in a certificate, merely commends him to the churches as a candidate for the ministry. In ordinations or installations of pastors, a council of churches makes similar examinations. Ordinations are accompanied by a sermon, an ordaining prayer (in connection with the "laying on of hands" by ordained ministers), charge to the pastor, the hand of fellowship, and an address to the Church. In the celebration of the Lord's Supper there is no prescribed liturgy. Persons applying for membership in the Church on profession of faith are examined by the Church or a committee, publicly propounded for a reasonable time prior to the vote on reception, are voted for or against by the whole brotherhood, and are received in public on adoption of the Church covenant, and (generally) assent to the doctrinal confession of the Church. Persons are dismissed from one Church to another, on their application, by vote of the Church dismissing, which takes effect on the reception of the person by the Church to which he is dismissed, which also votes on his reception.

Public worship is conducted in the form any Church prefers, although there is a very general similarity; but a few churches use a more or less extended liturgy, which is entirely within the control of every Church. In cases of the discipline of alleged offenders, the rules given in the 18th chapter of Matthew are required to be followed. If the first and second steps have been properly taken, the alleged offender is summoned by the Church to appear at a time reasonably distant, and is entitled to a copy of all charges, and an unprejudiced and fair hearing: all the brotherhood vote upon the case. Church censures are of two kinds, admonition (which is often accompanied by suspension from Church privileges) and excommunication. If a member claims to have been unjustly suspended or excommunicated, his remedy is in asking the Church for a mutual council to consider and advise in the matter, and, in case of unreasonable refusal, to call a council himself, with the effect already described under *Councils*.

2. *In Great Britain.*—The general principles of Congregationalism are held in England precisely as in the United States. In the doctrine of the ministry, Church completeness, fellowship, and discipline, there is no particular variation; but in administration the Congregationalists of the British Islands make far less use of synods and councils. The above explanations, therefore, are in great degree inapplicable to that country, so far as they relate to such bodies. At this time (1867) the subject is attracting attention and causing discussion. There are, however, associations or unions of churches similar to those in the United States, as well as associations of ministers. The English Congregationalists have also organized benevolent religious societies, either alone or with others, on the voluntary principle, for missions, religious publications, church building, education, etc. Among the Congregational societies are the Home Missionary Society, the Colonial Missionary Society, the Irish Evangelical Society, the Congregational Board of Education, etc. Foreign missions are carried on by means of the London Missionary Society, established in 1795, which is undenominational. The British and Foreign Bible Society, the Religious Tract Society, and others, receive the cooperation of the Congregationalists.

IV. Statistics.—The statistics of the American churches are given annually in the *Congregational Year-book* (Boston, Mass.), as well as those of the British Islands and Colonies. As published in 1890 (collected in 1889), they are as follows, to which, for the American churches, the figures collected in 1857 (the first completely to be relied upon) are prefixed for comparison:

American.

	1858 (for 1857).	1890 (for 1889).
Churches	2,479	3,765
Members	232,549	491,985
Numbers in Sabbath-schools	128,772	597,351
Ministers	2,414	4,640

Of the above, the churches in the United States, in 1889, were 4569; members, 475,608; numbers in Sabbath-schools, 580,672; ministers, 3300. These figures do not include over 200 churches, independent, or still connected with presbyteries on the "Plan of Union." Charitable contributions in 1888–9, excluding all cost of churches or repairs, or support of the ministry, or of endowment of schools, colleges, or theological seminaries, amounting to $2,205,563.

Great Britain and Colonies.

	County Associations, or Unions.	Churches.	Ministers.
England	36	3413	2010
Wales	15	1006	700
Scotland	8	101	103
Ireland	1	29	28
Colonies	8	435	217
Channel Islands	—	—	5
Foreign lands	—	207	204
Total	68	5191	3267

Other Parts of the World.—The number of Congregational churches established by missionaries is very considerable, but has never been reported. The number of ministers is included in the English and American reports.

Summary.—Including the churches on the European Continent, and also the missionary churches, and likewise the requisite number for Canada, Nova Scotia, and New Brunswick, which are included in both the English and American reports, there are found in recognised and formal fellowship: Total churches, 9398; ministers, 6141; communicants (estimating the whole from the proportion of members to churches in the United States), about 1,000,000.

Institutions of Learning.—*United States.*—A large number of academies are controlled by Congregationalists, but no record has ever been made. Of colleges, though none are conducted on any exclusive principle, or require any denominational test, the Congregationalists control Bowdoin, Dartmouth, Vermont University, Middlebury, Williams, Amherst, Yale, and partially a number in the Western States, which they have helped liberally to endow. Theological schools in 1887, with the number of professors, lecturers, etc., and students, were as follows (one in San Francisco, California, was also chartered in 1866, and has 3 professors and 14 students):

	Professors.	Lecturers, etc.	Students.
Bangor, Me	5	—	35
Andover, Mass	10	2	61
Yale, Conn	9	5	95
Hartford, Conn	8	5	42
Oberlin, Ohio	6	5	50
Chicago, Ill	6	6	112

Colleges in the British Islands and Colonies.

British Islands	15	Victoria	1
British North America	1	Sydney	1

Theological Colleges in the British Islands and Colonies.

	Schools.	Students.
England	11	346
Wales	2	81
Scotland	1	16
Colonies	3	29
Private Seminaries in England	4	(?)

Periodicals.—*United States.*—No periodical can properly be called an *organ* of the denomination, inasmuch as none are controlled by either the churches or any body representing the churches. But the following are published in their interests: Quarterlies—*Bibliotheca Sacra*, Oberlin, O.; *New-Englander*, New Haven, Conn.; *Congregational Quart.*, Boston, Mass.; *Congregational Review*, Boston, Mass. Religious (weekly) newspapers: *Congregationalist and Boston Recorder*, Boston, Mass.; *Christian Mirror*, Portland, Maine; *Vermont Chronicle*, Windsor, Vt.; *Religious Herald*, Hartford, Conn.; *Advance*, Chicago, Ill.; *Pacific*, San Francisco, Cal. The Welsh Congregational churches in the United States have their own publications. Many other periodicals—missionary, tract, Sabbath-school, etc.—are mainly or wholly conducted by Congregationalists, but without distinctive denominational character.

England.—*Year-book*, etc. (annual). Quarterlies—*Journal of Sacred Literature*; *British Quarterly Review*. Eighteen monthlies. Newspapers — *Nonconformist*, *English Independent*, *Christian World*, and *The Independent*.

Scotland.—*Congregational Magazine* (monthly).

Ireland.—*Congregational Magazine* (monthly).

Wales.—*Dyddiadur Annibynwyr* (annual); *Beirniad* (quarterly), and five other periodicals.

Canada.—*Independent*, Toronto (monthly); *Montreal Witness* (weekly).

V. Literature.—The American Congregational churches have required from the beginning ministers of liberal education and extensive learning. From this culture large contributions have resulted to general as well as denominational and religious literature. Of the very many authors in each department of the

latter, the following may be mentioned as the most prominent:

In *Church Polity*, in the 17th century, John Cotton, John Norton, Thomas Hooker, Richard Mather, John Davenport, Increase Mather (Pres. Harvard College). In the 18th century, Cotton Mather, Samuel Mather, John Wise, Ezra Stiles (Pres. Yale College). In the present century, John Mitchell, Thomas C. Upham, Nathanael Emmons, Leonard Bacon, Preston Cummings, George Punchard, Henry M. Dexter. The work on "Congregationalism" by the last named, which is the latest American work, is also the fullest and most exhaustive, and is generally received by the churches as a safe and comprehensive guide.

In *Denominational History*, in the 17th century, Gov. John Winthrop, Nathaniel Morton, William Hubbard. In the 18th century, Cotton Mather, Thomas Prince, Jeremy Belknap. In the present century, Leonard Bacon, Bela B. Edwards, George Punchard. The *History of Congregationalism* by the latter, though not yet completed, is a work of thorough research and peculiar value.

In *Theology*, in the 17th century, Cotton, Norton, the Mathers, Thomas Shepard. In the 18th century, Samuel Willard (*Body of Divinity*), Jonathan Edwards, Jonathan Edwards the younger, Joseph Bellamy, Samuel Hopkins, Stephen West. In the present century, John Smalley, Nathaniel Emmons, Asa Burton, Jesse Appleton (Pres. Bowdoin College), Leonard Woods, Enoch Pond, Timothy Dwight (Pres. Yale College), Edward D. Griffin (Pres. Williams College), Nathaniel W. Taylor, Bennett Tyler, Lyman Beecher, Edward Beecher, Charles G. Finney (Pres. Oberlin College), Asa Mahan (Pres. Oberlin College), Mark Hopkins (Pres. Williams College), Edwards A. Park, Horace Bushnell, George P. Fisher.

In *Biblical Literature*, Moses Stuart. The missionaries of the American Board have made very extensive contributions in the languages of the world, as well as to general science; among these, Myron Winslow is specially prominent.

In *various relative Studies and in Religious Works*, Edw. Hitchcock (Pres. Amherst College), Jas. Marsh, Joseph P. Thompson, Richard S. Storrs, Jr., Austin Phelps, Henry Ward Beecher, Augustus C. Thompson, Nathan W. Fiske, Nehemiah Adams, Ray Palmer (hymns and other religious poems), Lowell Mason (in sacred music), Hubbard Winslow, Joseph Haven, Rufus Anderson (sec. A. B. C. F. M.), Noah Porter, Jr., John Lord, Samuel C. Bartlett, Leonard Bacon, Thomas C. Upham, Leonard Woods, Jr., James B. Walker.

In England, after John Robinson, whose writings in Leyden began strictly Congregational literature, are found the names of Milton, Goodwin, Nye, John Owen, Charnock, Watts, Doddridge, and, later, Wardlaw, Davidson, Newman Hall, Robert Vaughan, John Angell James. Hanbury's *Memorials* is a work of great historical value.

VI. AUTHORITIES.—As Congregationalists admit no *obligatory* standards of human devising, there are properly no *authorities* for government or doctrine; but their principles are stated in Declarations, in which they are agreed, and which carry great moral force. The principal on doctrine are the Westminster Confession, as revised by the Savoy Synod in 1659, and again by the Boston Synod of 1680; the "Principles of Religion" of the Congregational Union of England and Wales; and the "Declaration of Faith" set forth by the American National Council in 1865. Of ecclesiastical polity, the principal are the Savoy "Order of the Churches" in 1659; the "Cambridge Platform" in 1648; the "Saybrook Platform" in 1708; the "Principles of Church Order and Discipline" of the "Congregational Union of England;" and the "Platform of Church Polity" of the National Council in 1865. The works of many writers are also considered of great value, as showing what Congregational principles and usages are. The volumes of the *Congregational Quarterly* (Boston) also contain careful discussions on the several points of polity as well as history, and furnish full statistics. The English *Year-book* furnishes such statistics as are collected in Great Britain.

Congregationists, or Apostolical Congregation, a designation of the Ultramontane party in France, which, under the reign of Napoleon I, resumed the direction of primary instruction, and established religious associations. After the restoration of the Bourbons, the power of the Congregationists increased rapidly, and they made extraordinary efforts to bring back the Church of France under the dominion of Rome. They usurped the control of public instruction, established colleges and seminaries, connected themselves with the Jesuits, and even gained the control of the police of Paris. Their leaders held the highest stations at court. The material means of the Congregation were to a large extent furnished by the laboring classes (in 1826 there were 500,000 persons contributing each one cent a week). The celebrated Lamennais belonged to this party. At last their usurpation of power gave rise to the formation of a counterparty, which gradually gained strength and influenec. In 1826 count Montlosier proved the existence of the Congregation to be illegal. A large number of bishops appealed to the king against the abuse of the Gallican liberties. The Congregation endeavored to excite the fanaticism of the people by sermons and tracts, but in 1827 the Higher Chamber resolved to interfere actively in putting down all Jesuitic associations, and in 1828 the control of the primary schools was given to the minister of Public Instruction. It was then decided that every teacher should declare in writing that he was not a member of any forbidden religious association, or be suspended. A large number of Congregationists left France in consequence, but their influence, which made itself felt even after their departure, was not entirely lost until the Revolution of 1830.—Pierer, *Universal-Lexikon*, iv, 358.

Congruity. See CONDIGNITY.

Coni'ah (Heb. in the prolonged form *Konya'hu*, כָּנְיָהוּ, a contracted form of *Jeconiah;* Sept. Ἰεχονίας), another mode of writing (Jer. xxii, 24, 28; xxxvii, 1) the name of king JEHOIACHIN (q. v.).

Conists. See CONONITES.

Conjuration, the form of words or ceremony by which dæmons are supposed to be expelled in the Church of Rome. See EXORCISM.

Connell, ZECHARIAH, a Methodist Episcopal minister, was born in Connellsville, Fayette County, Pa., September 11, 1794. In 1801 his father removed to the West, and settled in Adams County, Ohio. His early education was such as could be obtained in the West at that day, which he diligently improved. He was a faithful student and became a wise man. He entered the itinerant ministry in 1818, and filled various stations, as minister and presiding elder, with uniform fidelity and success, up to the year of his death. Methodism in Ohio is largely indebted to him, not only for its extent, but for its character. By his zeal as a preacher, and his skill as an administrator, he gained and kept the confidence of the Church during his long career of service. He was five times elected to the General Conference. He died December 13, 1863.—*Minutes of Conferences*, 1864, p. 148.

Conon, bishop of Rome. He was a native of Temesvar, in Mysia (now Hungary), educated in Sicily, and was elected bishop of Rome, Oct. 21, 686. He sent the Irish missionary Kilian to Germany to preach to the pagan Thuringians. He died Sept. 21, 687.

Cononi'ah (2 Chron. xxxi, 12, 13). See CONANIAH.

Cononites, followers of Conon, bishop of Tarsus, in Cilicia, in the 6th century, a disciple of Johannes

Philoponus (q. v.). Conon differed from Philoponus in the doctrine of the resurrection, maintaining that the dissolution of the body after death affected only the form, not the matter of the body, and that at the resurrection the soul was reunited with the same, though transformed body.—Wetzer u. Welte, *Kirchen-Lex.* ii, 798. See JOHANNES PHILOPONUS; TRITHEISM.

Conrad of Marburg. See KONRAD VON MARBURG.

Conrad, WILLIAM, a highly useful minister in the German Reformed Church, born Aug. 11, 1808. He pursued his classical and preparatory studies in the Reformed Academy and Theological Seminary, then located at York, Pa. He was licensed to preach by the Westmoreland Classis, Pa., in May, 1835, and labored the whole of his subsequent life as a pioneer in West Pennsylvania. His death occurred Feb. 16, 1865. He was an earnest student. As a writer he often appeared in the Church papers. He is also the author of a volume on Baptism, published 1847, and of several unpublished works on different subjects—one on the Heidelberg Catechism. For thirty years he gathered geological specimens, the entire collection of which he presented to Westmoreland College, one of whose founders and best friends he was.

Conring (*Conringius*), HERMANN, one of the most learned men of his time, was born at Norden. in East Friesland, Nov. 9th, 1606; became professor of Philosophy, Medicine, and Jurisprudence at Helmstadt, and in 1660 privy counsellor of the duke of Brunswick. He died Dec. 12, 1681. Public law is greatly indebted to him, and he may be said to have first brought it to a scientific form. He was also among the first to adopt Harvey's theory of the circulation of the blood. His complete works, embracing a number of treatises on ecclesiastical subjects, particularly on the rights of Protestantism as opposed to the Romish Church, were published by Gōbel (Brunsw. 1730, 7 vols. fol.).—Pierer, *Universal-Lexikon*, s. v.

Consalvi, ERCOLE, *Marquis of*, an Italian cardinal, and one of the ablest diplomatic agents of Rome in the present century, was born at Rome, June 8, 1757. Pius VI appointed him in 1792 to the office of *Uditore della sacra ruota*, and afterwards minister of war. In this capacity he showed himself a steady enemy of the French Revolution. When the French troops took Rome in 1798 he was made prisoner, but soon after released. After the death of Pius VI he was secretary of the conclave which elected cardinal Chiramonte (Pius VII) as pope, and soon after (1800) he was made by the new pope secretary of state and cardinal. In 1801 he went to Paris, where he signed the concordat with Napoleon, July 15; but having afterwards incurred the displeasure of the emperor, Consalvi resigned (1806) his office. He refused his assent to the divorce of Napoleon and Josephine, in the council held on the subject, and was exiled in 1809. The pope having returned to Rome in 1814, Consalvi was restored to his position as prime minister, and soon sent to the conferences held by the great powers at London as representative of the papal interests. He was also papal plenipotentiary at the Congress of Vienna, when he secured the restitution of all the papal territories with the exception of Avignon and Venaissin. Against the incorporation of these places with France he protested, as also against the occupation of Ferrara and Rimini by Austrian troops, and against the secularization of the ecclesiastical states of Germany. This protest, however, was of no avail, and he was also unsuccessful in his endeavor to rearrange the ecclesiastical affairs of Germany by one general concordat. He was more fortunate in his negotiations with particular states, and successfully concluded concordats (q. v.) with France, Russia, Poland, Prussia, Austria, Bavaria, Würtemberg, Sardinia, Spain, Geneva, and even with St. Domingo and Chili. At the death of Pius VII (1823) he retired to Porto d'Anzo, but was called again to Rome by Leo XII, who placed him at the head of the Propaganda, which office he had hardly accepted when he died, Jan. 24, 1824.—*Mémoires du Cardinal Consalvi* (with introduction and notes by Cretineau-Joly, Paris, 1864, 2 vols.); Wetzer u. Welte, *Kirchen-Lex.* ii, 811; Bartholdy, *Züge aus dem Leben des Card. Consalvi* (Stuttgart, 1824); *Revue Chrétienne*, 5 Feb. 1865.

Consanguinity, alliance by blood, as *affinity* (q. v.) is alliance by marriage. Certain degrees of consanguinity are among the impediments to marriage, both by the law of nature and by the revealed word of God. These degrees, as defined by the Church of England, are expressed in a table drawn up by archbishop Parker in 1563, and set forth by authority. This table is as follows:

A Table of Kindred and Affinity, wherein whosoever are related are forbidden in Scripture and our Laws to marry together.

A man may not marry his	*A woman may not marry with her*
1 Grandmother,	1 Grandfather,
2 Grandfather's Wife,	2 Grandmother's Husband,
3 Wife's Grandmother.	3 Husband's Grandfather.
4 Father's Sister,	4 Father's Brother,
5 Mother's Sister,	5 Mother's Brother,
6 Father's Brother's Wife.	6 Father's Sister's Husband.
7 Mother's Brother's Wife,	7 Mother's Sister's Husband,
8 Wife's Father's Sister,	8 Husband's Father's Brother,
9 Wife's Mother's Sister.	9 Husband's Mother's Brother.
10 Mother,	10 Father,
11 Step-mother,	11 Step-father,
12 Wife's Mother.	12 Husband's Father.
13 Daughter,	13 Son,
14 Wife's Daughter,	14 Husband's Son,
15 Son's Wife.	15 Daughter's Husband.
16 Sister,	16 Brother,
17 Wife's Sister,	17 Husband's Brother,
18 Brother's Wife.	18 Sister's Husband.
19 Son's Daughter,	19 Son's Son,
20 Daughter's Daughter,	20 Daughter's Son,
21 Son's Son's Wife.	21 Son's Daughter's Husband.
22 Daughter's Son's Wife,	22 Daughter's Daughter's Husband,
23 Wife's Son's Daughter,	23 Husband's Son's Son,
24 Wife's Daughter's Daughter.	24 Husband's Daughter's Son.
25 Brother's Daughter,	25 Brother's Son,
26 Sister's Daughter,	26 Sister's Son,
27 Brother's Son's Wife.	27 Brother's Daughter's Husband.
28 Sister's Son's Wife,	28 Sister's Daughter's Husband,
29 Wife's Brother's Daughter,	29 Husband's Brother's Son,
30 Wife's Sister's Daughter.	30 Husband's Sister's Son.

See AFFINITY.

Conscience. See ETHICS; MORAL PHILOSOPHY.

CONSCIENCE, CASES OF. See CASUISTRY.

Conscientiarii (conscience people), the name of a sect of atheistic freethinkers in the 17th century. The founder of the sect was a student of theology at the University of Jena, Matthias von Knutsen (also called Knuzan or Kuntzen), born at Oldensworth, in Schleswig, who, while studying at Jena (in 1674), circulated among the students two writings, in which he denied the existence of God, the authority of the Bible, and the difference between marriage and fornication, recognising only the individual reason and *conscience* (hence the name) as rules of religious belief. Knutsen claimed to have numerous adherents at all the universities and capitals of Europe, at Jena no less than 700, and thus brought the university into bad repute. The professors of Jena indignantly denied his assertion. The excitement produced by the discovery of the agitation of Knutsen soon died out, and the *Conscientiarii* were no longer heard of. See Wetzer u. Welte, *Kirch.-Lex.* ii, 815; Arnold, *Kirch. u. Ketzerhist.* vol. ii.

Consecration (properly some form of the verb

קָדַשׁ, *kadash'*, to *be holy*, often rendered "sanctify;" ἐγκαινίζω, to *dedicate;* τελειόω, to *complete*), the act of devoting or setting apart anything to the worship or service of God. See DEDICATION. The Mosaic law ordained that all the first-born, both of man and beast, should be sanctified or consecrated to God. See FIRST-BORN. The whole race of Abraham was in a peculiar manner consecrated to his worship, and the tribe of Levi and family of Aaron were more immediately consecrated to the service of God (Exod. xiii, 2; xii, 15; Num. iii, 12; 1 Pet. ii, 9). See SACERDOTAL ORDER. Besides these consecrations ordained by God, there were others which depended on the will of men, and were either to continue forever or for a time only. See VOW. Hannah, the mother of Samuel, offered her son to the Lord to serve all his lifetime in the tabernacle (1 Sam. i, 11; comp. Luke i, 15). David and Solomon devoted the Nethinim to the service of the Temple forever (Ezra viii, 20). The Hebrews sometimes devoted their fields and cattle to the Lord, and sometimes the spoils taken in war (Levit. xxvii, 28, 29). In like manner, vessels (Josh. vi, 19), profits (Mic. iv, 13), individuals (Num. vi, 9-13; 1 Sam. i, 11; Luke i, 15), and nations (Exod. xix, 6), were often dedicated. See ANATHEMA.

The New Testament also furnishes us with examples of consecration. Christians in general are esteemed as consecrated to the Lord, and are a holy race, a chosen people (1 Pet. ii, 9). Ministers are in a peculiar manner consecrated or set apart, and so are places of worship, the forms of dedication varying according to the views of different bodies of Christians. See ORDINATION. It does not appear that we have any particular accounts of the formal consecration of churches earlier than the fourth century, a fact which may be easily accounted for by considering the circumstances of the times before Constantine. See the articles following; also BELLS.

CONSECRATION-OFFERING. At the inauguration of the Israelitish priesthood, in connection with the oblation, certain parts of the victim (a ram), besides bread and cakes, were laid in the hand of the person to be consecrated, before he came to the altar (Exod. xxix, 22 sq.; Lev. viii, 25 sq.), as a manipulation expressive of the representative power thus conferred (Bähr, *Symbol.* ii, 426). This depositing in the hand is called by the technical term *filling their hand* (A. V. "consecrate." Exod. xxviii, 41; xxix, 9; Lev. xxi, 10; Num. iii, 3; comp. Exod. xxxii, 29; 1 Chron. xxix, 5), and thus the sacerdotal consecration-offering itself was styled a *filling* (מִלֻּאִים, sc. of the hand, Sept. τελείωσις, Lev. vii, 37; xxviii, 31), and the sacrificed ram was designated by the corresponding term (אֵיל מִלֻּאִים, Exod. xxix, 26). See OFFERING.

CONSECRATION, in the Christian Church, a ceremony of dedicating persons or things to the service of God. It is especially applied to the setting apart of bishops for their office, and to the dedication of Church edifices to the worship of God.

I. *Consecration of Bishops.*—The forms for the consecration of bishops in the Greek, Roman, Anglican, and Methodist Episcopal churches are given under BISHOP (i, 822, 823). In the preface to the form used in the Church of England, it is stated that no one shall be accounted or taken to be a bishop, or suffered to execute the same function, unless he be called, tried, and admitted thereunto according to that form, or *hath formerly had episcopal consecration.* The concluding portion of this sentence recognises the validity of consecrations given in foreign churches by any other form adopted by those churches. Thus a Greek or Roman bishop, conforming to the rules of the Church of England, requires no fresh consecration, but is at liberty to officiate in that Church (Hook, s. v.). The Greek and Roman churches, on the contrary, do not recognise the validity of Anglican consecrations.

According to a canon of the first Nicene Council, there must be four, or at least three bishops present at the consecration of a bishop. See COLLEGE, 2.

II. *Consecration of Churches.*—1. *Ancient Church.*—The practice of solemnly dedicating to God those edifices which had been built for his worship is very ancient. The precise manner in which it was done for the first three ages of Christianity is unknown; but Eusebius gives an account of the ceremony by which the church of Jerusalem, built by Constantine, was consecrated, A.D. 335. On such occasions it was usual for a whole synod of the neighboring or provincial bishops to assemble. "The solemnity ordinarily began with a panegyrical oration or sermon in commemoration of the founder, which was followed by prayers, among which there seems to have been one in particular for the church which was then to be dedicated. The act of consecrating churches was so peculiarly reserved to the office of bishops that presbyters were not allowed to perform it. Anciently churches were always dedicated to God, and not to saints, though they were sometimes distinguished by their names as a memorial of them. Consecration was performed, indifferently, on any day; but, whatever the day was, it was usually kept and observed among their annual festivals. To this pope Gregory, surnamed the Great, added a new custom in England, which was, that on the anniversary of the dedication of churches, and particularly of those which had been heathen temples, the people might build themselves booths round the church, and there feast themselves, in lieu of their ancient sacrifices while they were heathens. The *wakes*, which are still observed in some English counties, are the remains of these feasts of dedication."

2. *Church of Rome.*—"The consecration of a church is performed with much ceremony in the Church of Rome, by whose members this rite is usually termed a dedication. As a preliminary step, the relics which are to be deposited in the altar of the new church are put into a clean vessel, together with three grains of incense, to which a piece of parchment is added, containing the day of the month and year, and the name of the officiating bishop. Three crosses are painted on each of the church walls, and over each cross a candle is placed. On the morning appointed for the ceremony, the bishop, arrayed in his pontifical vestments, and attended by the clergy, goes to the door of the church, where they recite the seven penitential psalms; after which he makes a tour of the church walls, sprinkling them in the name of the Holy Trinity. This rite being performed, he knocks at the church door with his pastoral staff, repeating from Psalm xxiii [xxiv], "*Attollite portas, et introibit Rex Gloriæ.*" A deacon, shut up in the church, demands, "*Quis est iste Rex Gloriæ?*" To which the bishop answers, "*Dominus fortis et potens: Dominus potens in prælio?*" At the same time the bishop crosses the door, repeating the following verse:

'Ecce Crucis signum, fugiant phantasmata cuncta!'

On the admission of the bishop and clergy into the church, the *Veni Creator* is sung. Then one of the subdeacons takes ashes, and sprinkles them on the pavement in the form of a cross; next follow the litanies and other parts of divine service. After which the bishop, with his pastoral staff, describes, as with a pen, two alphabets in the ashes sprinkled by the deacon, and proceeds to consecrate the altar by sprinkling it with a mixture of water, wine, salt, and ashes, in the name of Jesus Christ. The consecration of the altar is followed by a solemn procession of the relics, which are deposited under it with great ceremony. During the whole of this imposing solemnity the church is finely adorned, and tapers are lighted upon the altar. Mass is afterwards performed by the bishop, or by

some other person" (Eadie, *Ecclesiastical Dictionary*, s. v.).

3. *Protestant Churches.*—The Church of England retains the usage of consecration both for Church edifices and cemeteries. What is called the consecration of a church at present is purely a *legal* (not a religious) act, duly setting aside a certain building from secular uses. There is no form of prayer for consecration of churches prepared by competent authority; it is left to every bishop to use any which he thinks fit, though the form which was prepared by the bishops in 1712 is that most generally used. But all existing unauthorized forms are illegal, and contrary to the Act of Uniformity (Eden, s. v.). The form of 1712 was adopted, with slight modifications, by the Protestant Episcopal Church in the United States: it is given in the Prayer-book. The form used in the Methodist Episcopal Church (for Dedication) is taken partly from a form of consecration prepared by bishop Andrewes, and partly from the above-mentioned form of 1712. It may be found in the *Discipline* (pt. iv, ch. viii). The new "Liturgy of the German Reformed Church" in America contains an excellent form for the consecration of a church, as does also the "Liturgy of the Evangelical Lutheran Church" (§ 13).

Consensus Genevensis, a confession of faith drawn up by Calvin in 1551. Its title is *De æterna Dei prædestinatione, qua in salutem alios ex hominibus elegit, alios suo exitio reliquit, it. de providentia, qua res humanas gubernat, consensus pastorum Genevensis ecclesiæ, a J. Calvino expositus* (Genev. 1552, 8vo, in Opp. vii, 688). It is given in Niemeyer, *Collectio Confessionum* (1840), p. 218 et sq. Its purpose was to unite the Swiss churches with regard to predestination, as the *Consensus Tigurinus* (q. v.) had served to do with regard to the sacraments. It presents the Calvinistic theory of predestination with great clearness and decision.—Smith's Hagenbach, *History of Doctrines*, § 222; Shedd, *History of Christian Doctrine*, bk. vii, ch. ii, § 2.

Consensus Tigurinus, a confession prepared by Calvin in 1549, and adopted by the Zurich theologians. "It grew out of a desire on the part of Calvin to effect a union among the Reformed upon the doctrine of the Eucharist." Its title is *Consensio mutua in re sacramentaria Ministror. Tigur. et J. Calvini*, and consists of 26 articles (*Calvini Opp.* viii, p. 648 sq. and in his *Tract. theolog.* [Genev. 1611; Amster. 1667, fol.]. It was separately printed in 1554 by Robert Stephen, and is given in Niemeyer, *Confessio Collectionum* [1840], p. 191 sq.).—Shedd, *History of Doctrines*, bk. viii, ch. ii, § 2; Hagenbach, *History of Doctrines*, § 222.

Consilia Evangelica, in the Roman Catholic Church, are such moral counsels as are not obligatory for *every* Christian, but are *advised* in order to perfection. The name is generally applied to the three monastic vows of virginity, voluntary poverty, and obedience (to the monastic superior), but some theologians of the Church of Rome count as many as twelve "evangelical counsels." It is needless to say that Protestants admit of no such distinctions.—Herzog, *Real-Encyklop.* iii, 119. See SUPEREROGATION.

Consistory (Lat. *consistorium*), a name designating a college of men who acted as advisers of the Roman emperors in important affairs of the state, as well as the place where these meetings were held. 1. In the *Roman Catholic Church* the name has frequently, but not generally, been used to designate colleges of members of the chapter, also the episcopal chapters themselves, viewed as a whole, in their relations to the bishop and to the diocese. *Papal consistories*, or *Consistories of cardinals* (*Consistoria cardinalium*), are meetings of the colleges of cardinals, called by the pope for deliberating on important affairs of the Church, and generally under his presidency. These consistories are partly regular (usually once a fortnight), in which only cardinals take part, under the presidency of the pope or of the dean of the college of cardinals. They are called *secret consistories* (*consistoria secreta*). When, on solemn occasions, bishops and the ministers of foreign powers are admitted, they are called *public consistories* (*consistoria publica*). The latter are always presided over by the pope. At both the cardinals have only a consultative vote. The subjects which are to be finally disposed of in a consistory are first selected by the pope with the aid of an extraordinary congregation, consisting of the oldest (as to the time of appointment) cardinal bishop, the oldest cardinal priest, and the oldest cardinal deacon, the cardinal vice-chancellor, the cardinal chamberlain, and the cardinal secretary of state; and after that referred for preparatory deliberation to the *Consistorial Congregation*. See CONGREGATION. The resolutions passed at secret consistories are promulgated in a public consistory, and mostly accompanied by a solemn "allocution" (q. v.) of the pope. While presiding the pope is mounted on a magnificent throne and habited in his pontificalia; on his right sit the cardinal bishops and priests, and on the left the cardinal deacons. The other prelates, prothonotaries, auditors of the rota, and officers, are seated on the steps of the throne; the courtiers on the ground; ambassadors on the right, and consistorial and fiscal advocates behind the cardinals.—Wetzer u. Welte, *Kirchen-Lex.* ii, 845 and 821.

2. In the *Lutheran state churches* consistories are boards of clerical and lay officers appointed by the sovereign of the country, as highest bishop for the administration and superintendence of ecclesiastical affairs, for exercising jurisdiction in marriage affairs, and for inflicting ecclesiastical penalties. The first consistory was established at Wittenberg in 1537, the second at Leipzic in 1543. The members are called "consistorial councillors," the chief "consistorial president." If there are more than one consistory in a country, a "supreme or national consistory" (*Ober-Consistorium, Landes-Consistorium*) is placed over the "provincial consistories." If the right to establish a consistory was conceded by the sovereign of a country to a nobleman or city, such a consistory was called a "mediate consistory" (*Medial-Consistorium*). Nearly all the consistories of this class have been abolished in modern times. As the power of consistories was defined by the princes, it differed in different countries. In the *Reformed* churches the name consistory is equal to the session of the Presbyterian churches. For full information, consult Böhmer *Jus Ecclesiasticum Protestantium*, and Richter, *Kirchenordnungen*.

3. The lower Church courts in the *German* and *Reformed Dutch* churches in America are also called *consistories*.—Herzog, *Real-Encyklop.* iii, 130; Wetzer u. Welte, *Kirchen-Lexikon*, ii, 822; *Constitution of the Reformed Dutch Church*, ch. ii, art. ii.

Consociation. See CONGREGATIONALISTS.

Consolamentum. See CATHARI.

Console (Lat. *consolida*), a bracket to support cornices, figures, busts, etc.

Constance, COUNCIL OF (*Concilium Constantiense*), a synod assembled by pope John XXIII, in accordance with the writ of the emperor Sigismund, and which sat from 1414 to 1418. One of its professed objects was to put an end to the schism which had lasted for thirty years, and which was caused by the several claimants of the papacy. At this time, besides John (Balthasar Cossa), two others claimed the title of pope, viz., Pedro of Luna, a native of Catalonia, who styled himself Benedict XIII, and Angelo Corrario, a Venetian, who assumed the name of Gregory XII. Another object of the council was to take cognizance of the so-called heresies of Huss and Wickliffe. The council was convoked to meet at Constance on the festival of All Saints, A.D. 1414, and so great was the influx of persons, that it was reckoned that not less

than thirty thousand horses were brought to Constance, which may give some idea of the enormous concourse of people. It is stated that, during the session, the emperor, the pope, twenty princes, one hundred and forty counts, more than twenty cardinals, seven patriarchs, twenty archbishops, ninety-one bishops, six hundred other clerical dignitaries, and about four thousand priests, were present at this celebrated assembly. The pretended heresies of Wickliffe and Huss were here condemned, and the latter, notwithstanding the assurances of safety given him by the emperor, was burnt, July 6, 1415 [see HUSS], and his friend and companion, Jerome of Prague, met with the same fate May 30, 1416 [see JEROME]. The three popes were formally deposed, and Martin V was legally chosen to the chair of St. Peter; but, instead of furthering the emperor's wishes for a reformation in the affairs of the Church, he thwarted his plans, and nothing was done till the Council of Basle (q. v.). At this council the question was very warmly agitated whether the authority of an œcumenical council is greater than that of a pope or not? Gerson proved that in certain cases the Church, or, which is the same thing, an œcumenical council, can assemble without the command or consent of the pope, even supposing him to have been canonically elected, and to live respectably. These peculiar cases he states to be, "1. If the pope, being accused, and brought into a position requiring the opinion of the Church, refuse to convoke a council for the purpose. 2. When important matters concerning the government of the Church are in agitation, requiring to be set at rest by an œcumenical council, which, nevertheless, the pope refuses to convoke." The sources of information as to this council are ample: among them are Van der Hardt, *Magnum œcumenicum Constantiense Concilium* (ed. Bohnstedt, Berlin, 1742, 6 vols. fol.); Chastenet, *Nouv. Hist. du Concile de Constance* (Paris, 1718, 4to); L'Enfant, *Hist. du Conc. de Constance* (Amst. 1727, fol.); the same translated (Lond. 1730, 2 vols. 4to). See Landon, *Manual of Councils*, 160 sq.; Hase, *Ch. Hist.* 277, 291, 348; Mosheim, *Ch. Hist.* ii, 426 sq.; Wessenberg, *Die grossen Kirchenversamml.* vol. ii; Wetzer u. Welte, *Kirchen-Lex.* ii, 849; Herzog, *Real-Encykl.* iii, 144.

Constant, BENJAMIN, a distinguished French politician of the liberal school, was born at Lausanne 1767; educated in England and Germany. He entered public life in 1799; was banished by Napoleon in 1801; took office under Napoleon on his return from Elba, 1814; became a popular representative under Charles X; and died Dec. 8, 1830. He wrote largely in politics; but it is our place only to mention his treatise *De la Religion considerée dans sa source, ses formes et ses développements* (Paris, 1824–31, 5 vols. 8vo), and a posthumous work, *Du Polytheisme romain considéré dans ses rapports avec la philosophie et la religion Chrétienne* (Paris, 1838, 2 vols. 8vo).

Constantine THE GREAT (CONSTANTINUS, CAIUS FLAVIUS VALERIUS AURELIUS), son of the emperor Constantius Chlorus and of his wife Helena, was born Feb. 27, 272 or 274 (see HELENA), at Naissus (now Nissa) in Illyricum, or, according to other traditions, in Britain. He first distinguished himself by his military talents under Diocletian, in that monarch's famous Egyptian expedition, 296; subsequently he served under Galerius in the Persian war. In 305 the two emperors, Diocletian and Maximian, abdicated, and were succeeded by Constantius Chlorus and Galerius. Galerius, who could not endure the brilliant and energetic genius of Constantine, took every means of exposing him to danger, and it is believed that this was the period when he acquired that mixture of reserve, cunning, and wisdom which was so conspicuous in his conduct in after years. At last Constantine fled to his father, who ruled in the West, and joined him at Boulogne just as he was setting out on an expedition

Ancient Effigies of Constantine and his wife Fausta.

against the Picts in North Britain. Constantius died at York, July 25, 306, having proclaimed his son Constantine his successor. The Roman soldiers, in the Prætorium at York, proclaimed Constantine emperor. He now wrote a conciliatory letter to Galerius, and requested to be acknowledged as Augustus. Galerius, however, would not allow him the title of *Augustus*, and gave him that of *Cæsar* only. Constantine took possession of the countries which had been subject to his father, viz., Gaul, Spain, and Britain; and, having overcome the Franks, he turned his arms against Maxentius, who had usurped the government of Italy and Africa. He conquered Maxentius in three battles, the last at the Milvian bridge, under the walls of Rome. Constantine was now declared by the senate Augustus and Pontifex Maximus (Oct. 28, 312). It was in this campaign that he is said to have seen a flaming cross in the heavens, beneath the sun, bearing this inscription, *In hoc signo vinces*, i. e. "By this sign thou shalt conquer;" and on the same authority it is stated that Christ himself appeared to him the following night and ordered him to take for his standard an imitation of the fiery cross which he had seen. He accordingly caused a standard to be made in this form, which was called the *labarum* (q. v.). This account rests chiefly on the testimony of Eusebius (*Vita Constantini*, i, 29, 30), said to be founded on a communication from Constantine himself. "Lactantius, the earliest witness (*De mortibus persecutorum*, c. 44, a work which may not have been written by Lactantius, but yet was composed about A.D. 314 or 315), speaks only of a dream, in which the emperor was directed to stamp on the shields of his soldiers 'the heavenly sign of God,' that is, the cross, with the name of Christ, and thus to go forth against his enemy" (Schaff, *History of the Christian Church*, vol. ii, § 2, where this point, and indeed the whole relation of Constantine to the Church, is admirably treated). In January, 313, he published the memorable edict of toleration in favor of the Christians, by which all the property that had been taken from the Christians during the persecutions was restored to them. "They were also made eligible to public offices. This edict has accordingly been regarded as marking the triumph of the cross and the downfall of paganism. Having defeated Licinius, who showed a mortal hatred to the Christians, Constantine became sole head of the Eastern and Western empire in 325, the year noted for the œcumenical council which he convened at Nice, in Bithynia, and which he attended in person, for the purpose of settling the Arian controversy. Towards the close of his life he favored the Arians, to which he was induced by Eusebius of Nicomedia, in consequence of which he banished many orthodox bishops. Though he professed Christianity, he was not baptized till he fell sick in 337, in which year he died in Nicomedia" (Buck, *Theol. Dict.* s. v.). The senate of Rome placed him among the gods, and

the Christians of the East reckoned him among the saints: his festival is still celebrated by the Greek, Coptic, and Russian churches on the 21st of May.

"Whatever may have been the true character of Constantine's conversion to the Christian faith, its consequences were of vast importance both to the empire and to the Church of Christ. It opened the way for the unobstructed propagation of the Gospel to a wider extent than at any former period of its history. All impediments to an open profession of Christianity were removed, and it became the established religion of the empire. Numerous, however, in various points of view, as were the advantages accruing to it from this change, it soon began to suffer from being brought into close contact with the fostering influence of secular power. The simplicity of the Gospel was corrupted; pompous rites and ceremonies were introduced; worldly honors and emoluments were conferred on the teachers of Christianity, and the kingdom of Christ in a great measure converted into a kingdom of this world. The character of Constantine has been the object of various and contradictory judgments, according to the religious and political spirit of the various writers. Eusebius, Nazarius, and other Christian contemporaries, grateful for the protection afforded by the emperor to the Christian religion, may be considered his panegyrists, while Zosimus and other heathen writers, animated by an opposite feeling, were his enemies. The brief summing-up of Eutropius is perhaps nearest the truth: 'In the first part of his reign he was equal to the best princes, in the latter to middling ones. He had many great qualities; he was fond of military glory, and was successful. He was also favorable to civil arts and liberal studies; fond of being loved and praised, and liberal to most of his friends. He made many laws; some good and equitable, others superfluous, and some harsh and severe'" (*Hend. Buck*). See Gibbon, *Decline and Fall*, i, 454 sq.; Manso, *Leben Konstantin's* (Breslau, 1817); Keim, *Uebertritt Konstantins zum Christenthum* (Zurich, 1862); Burckhardt, *Die Zeit Konstantin des Grossen;* Schaff, *Ch. Hist.* l. c.; Neander, *Ch. Hist.* (Torrey's ed.), ii, iii; Stanley, *Eastern Church*, Lect. vi. See DONATION.

Constantine, Pope (708-715), a native of Syria, succeeded Sisinnius in 708. He visited Constantinople and Nicomedia, where he was received with great honor by the emperor Justinian the younger. After his return to Rome he defended the worship of images against John, patriarch of Constantinople, and against Philippicus, who had usurped the empire. Felix, archbishop of Ravenna, who had at first refused to acknowledge Constantine, and had been exiled in consequence, made his submission to him, and was reinstated in his see. Constantine died April 8, 715, and was succeeded by Gregory II.—Wetzer und Welte, *Kirch.-Lex.* ii, 833.

Constantinople.—There are few cities which unite more points of interest than Constantinople. It is unsurpassed in many elements of beauty, and for twenty-five centuries has been a place of great political and commercial importance. During several hundred years it was the chief centre of learning, refinement, and military power. As the seat of the Greek Church, in it were held a large number of councils. The indications are that its future will be as important as its past history. Yet no city has suffered more from the desolations of earthquakes, pests, famine, fire, and sword.

I. *History.*—There are three defined epochs: 1, from the foundation of the city (B.C. 667) till it became the capital of the Roman empire (A.D. 303); 2, from this time till its conquest by the Turks (A.D. 1453); and, 3, under the Turkish dominion till the present time.

1. *Byzantium.*—The ancient Greeks attributed the foundation of Byzantium to a colony of Megarians, who, directed by an oracle of Apollo, built a city (B.C. 667) on the high land formerly occupied by the old seraglio. This city soon became the entrepôt for the grain trade from the Black Sea to Greece. Without any great military power or ambition of its own, Byzantium fell into the hands of the different cities that successively became dominant in Greece. It yielded without resistance to Darius (B.C. 512). The ten thousand rested here in their retreat (B.C. 400). During a siege by Philip of Macedon (B.C. 340), a light suddenly appeared one night, enabling the Athenian garrison to see and thwart an intended assault by the besiegers. In commemoration of this event, a crescent appears on some Byzantine coins, and to this is usually attributed the origin of the crescent, the emblem of the Turkish empire, adopted immediately after the conquest of Constantinople. With Greece this city fell under the dominion of Rome (B.C. 146). An ancient legend relates that the apostle St. Andrew, on his arrival at Galata, a suburb of Constantinople, pressed the form of a cross into the rock with his hand. After preaching here two years, he was driven away by the tyrant Zeuxippus, and he continued his labors on the opposite Asiatic shore. Byzantium had, in order to resist the frequent sieges of the Northern barbarians, been made the strongest fortified city in the Roman empire. For harboring Piscinus its walls were razed by Septimius Severus (A.D. 169). These were soon rebuilt, but the city was completely destroyed by Constantine (A.D. 324) for havin rebelled again.

2. *Under the Eastern Empire.*—Many reasons combined to induce Constantine to remove the capital of the Roman empire from Rome to Byzantium, especially his desire to free himself from the remnants of the power of the Roman senate; his desire to follow the Oriental custom of a great emperor and conqueror founding his own capital; the central commercial position of Byzantium in the then known world, and its favorable position for controlling the troublesome parts of the empire on the Danube and the Euphrates. On May 11, 330, the new capital was inaugurated by festivals and ceremonies, half Christian and half pagan, and lasting forty days. Among the many embellishments which Constantine added to the city were the hippodrome, surrounded by palaces, porticoes, and statues brought from all parts of the Roman empire; the cistern of a thousand columns, the church of St. Sophia, and many other churches and public buildings. Theodosius also greatly embellished and enlarged the capital. In 396 Constantinople became the capital of the Eastern or Greek division of the Roman empire. The glory of the city increased until the time of Heraclius (A.D. 641), although subjected to many scourges. Justinian (527-595) may be regarded as its second founder. After a civil commotion in A.D. 532, in which 30,000 men were slain, and which reduced the city to ashes, Justinian rebuilt St. Sophia with unparalleled magnificence. His gorgeous palace, the twenty-five other churches and many public edifices that he built, have all since perished. The size of the city may be estimated from the fact that 300,000 persons died from the pest in one year. In 675 the Arabs lost 30,000 men before the walls, and in 718 1161 ships of war. The greatest destruction of works of art in all history occurred in the ravaging of Constantinople by the Crusaders (1204), who spent eight days after they took the city in burning and plundering all public and private property. The restoration of the Byzantine empire (1261) had little effect in restoring the glory of the capital. The Genoese and Venetians, who had established themselves in the suburbs of Galata and Pera, had many contests near the city for commercial supremacy. In 1391 the Turks, who had already conquered most of European Turkey, forced the Byzantine emperor to permit a mosque to be erected in Constantinople, to permit the appointment of a kadi to look after the interests of the resident Mohammedan merchants, and to pay the sul-

tan a yearly tribute of 10,000 ducats. In 1453 the Turks took the city by assault, after a siege of forty days. In this siege the Turks had several cannon of three and four feet calibre.

3. *Under the Turks.*—For the space of three days after the taking of the city it was given up to pillage, and was the scene of frightful massacre and destruction of public and private property. After the three days had elapsed Mahomet caused the carnage to be stopped, and offered to such Greeks as chose to remain protection in their property and in the exercise of their religion. The sultan then entered upon the erection of a series of public edifices. He built the castle of seven towers, the two seraglios, and a number of magnificent mosques. He also transformed St. Sophia and other churches into mosques. The chief sultans after Mahomet have followed his example in building at least one magnificent mosque. Constantinople has suffered frequently from fires that have often devastated whole quarters. In 1726 the first printing-press was set up in the city. During an outbreak in the Greek quarter in 1821, during the Greek Revolution, the Greek patriarch was hung by the mob. In 1826 the power of the Janissaries, who had opposed most fanatically the introduction of modern civilization by the sultan, was completely broken by the shooting of 40,000 of them by the other troops of the army.

II. *Description of the City previous to its Occupation by the Turks* (1453).—The ancient Byzantium occupied the extreme point of the peninsula between the Sea of Marmora and the Golden Horn, upon which the great capital was afterwards built. As Constantinople, the city was enlarged to its present limits. On the water side was built a single wall without a ditch. On the land side was a double, later a triple wall, each part from 14 to 20 feet high, 20 feet thick, with a ditch 28 feet broad in front, defended also by 548 towers, and a castle at each corner of the great triangle which the city covered, and penetrated by 3 gates. The private houses were small and poor.

Of the many public places or edifices we can notice but a few. (*a*) The *Forum of Constantine* (now part of the seraglio palace), which Constantine surrounded with a circus, an imperial palace, churches, baths, and many private palaces. Here he placed the porphyry column surrounded with wreaths of gold, "the Palladium of Rome," which he brought from that city; on this pillar he placed a bronze statue of Apollo, brought from Heliopolis, in Phrygia, and which Constantine wished to have considered as his own statue, substituting the nails of the passion for the rays of the sun, in order to give the statue a resemblance to Christ. This statue is now lost. The column is partly destroyed, the remainder being called the "Burnt Column." (*b*) The *Forum of Theodosius*, laid out by Theodosius (A.D. 393), and containing a triumphal pillar like the Column of Trajan in Rome, and an equestrian statue of a man with winged feet, whom the popular tradition held to be Joshua commanding the sun to stand still; under the left foot of the horse was buried the *Palladium of Constantinople*, consisting of a doll or body wrapped in woollen garments, and which the Latins (in 1204) dug up and burnt, after having destroyed the statue. (*c*) The *Forum Bovis*, containing the brazen bull in which criminals were burnt to death. (*d*) The *Hippodrome or Circus*, near St. Sophia, in which races and other games were held, and which Constantine adorned with the best works of Grecian art, brought from all parts of the empire; over the gate through which the horses entered the circus stood the four horses of Lysippus, which originally were placed in Athens, were brought here from Chios, then taken to Venice (1206), to Paris by Napoleon (1797), and finally returned to Venice (1815); an obelisk, 61 feet high, brought from Egypt to Athens, and thence to Constantinople, is yet standing; the triple bronze snakes, that formed the interior of the Tripod of Delphos, 13 inches in diameter and 10 feet high, is yet standing, one serpent's head having been cut off by Mahomet with his sabre when he entered the city (1453), the other two having been removed during the last century. These, then, are all the remains of ancient art that have been preserved from the immense number brought to Constantinople. What few the Crusaders left (1204) the Turks have since destroyed. (*e*) The *Imperial Palace* stood on the site of the old seraglio. It contained many magnificent buildings and rooms; in the chapel of St. Theodor were the relics, consisting of the "original cross" and the "staff of Moses." (*f*) The *Hebdomon Palace*, where Leo Philosophos held his school, containing five golden towers, supporting a golden tree on which golden birds sung, and containing the "head of John the Baptist." (*g*) The *Palace and Baths of Lausos*, adorned with many works of art, and containing the imperial library of 120,000 volumes (burnt 475). (*h*) The many heathen temples were either turned into churches or secularized by Theodosius. (*i*) Of *churches*, by far the most important is that of *St. Sophia* (q. v.). (*j*) The *Choras Church* contained a "picture of the Virgin Mary painted by St. Luke," which the Turks cut to pieces when they took the city. (*k*) The *Church of the Holy Apostles*, built by Constantine, together with the Heroon (the burial-place of the emperors from the time of Constantine), with their rich ornaments and treasures, were plundered by the Crusaders in 1204, and destroyed in 1463. (*l*) The *Church of St. George*, the Greek patriarchal church, is an ancient edifice, with many mosaics and Byzantine paintings. Externally it is entirely destitute of ornament. It contains the "chair of St. Chrysostom," richly inlaid with pearl, and on which the patriarch sits during great festivals; also the "pillar to which Christ was bound when he was scourged." (*m*) The *Blachednen Church*, containing the "holy chest with the garments of the Virgin Mary," and a "miraculous image whose veil lifted itself every Friday evening, and settled down again on Saturday at vespers." On the yearly festival of this church a great procession took place, with the emperor at its head. (*n*) The *Church of the Virgin at the Golden Spring*, near a spring or cistern of that name containing golden or "fried fish." A tradition has it that "during the last assault by the Turks, a Greek monk in the monastery at this place disbelieved the report that the Turks had entered the walls, saying, 'I would sooner believe that these fish I am frying would leap out of the pan of hot oil and come to life again in the cistern.' Scarcely had he uttered these words when the fish sprang out into the cistern. Their descendants are red on one side and brown on the other, in commemoration of this event." (*o*) *Monasteries* abounded in the city soon after the origin of this institution. Some of them were large, and occupied sightly positions. (*p*) The *Jews* were allowed a synagogue by Constantine, but they were expelled from the city by Theodosius. (*q*) Large *aqueducts* supplied the city with an abundance of water; some of these are yet in use, others are out of repair. (*r*) Vast *cisterns*, or subterranean reservoirs, were dug out during the reigns of the first emperors. Most of these are now out of repair, and but few contain water. One of the most remarkable of these was the cistern of Philoxenus (now called the cistern of the thousand and one columns), containing three stories, supported each by 224 pillars. It is now used for silk-spinning. It contained 1,000,000 cubic feet of water. The cistern of St. Peter contained 6,000,000 cubic feet of water.

III. *The Modern or Turkish City.*—With Christian nations the city retains its Greek name, Constantinople. The Turks call it *Stamboul*, or *Istamboul;* also *Assitana*. The beauty of situation of the city is world-renowned. Each of the seven hills is crowned by a mosque, with its tall slender minarets. The rich profusion of foliage from the public and private gar-

dens blends with the brown of the unpainted wooden houses, and contrasts with the white of the mosques and other public buildings, presenting a picturesque effect to be seen in no other European city. The harbor is crowded with vessels and steamers from all parts of the world. Slight, slender caïques dart between the larger boats, and give an unusual animation to the already over-crowded harbor. The suburbs of Pera and Galata rise on the other side of the Golden Horn, covered with massive palaces and stone houses. Across the Bosphorus is Scutari, with its vast, dark, cypress-bound cemeteries; and in the distance the snow-capped Olympus raises its head above the horizon.

Constantinople is at present the capital of the Turkish empire, of which it forms a distinct province. It is the residence also of the Greek patriarch, who holds here the patriarchal synod, composed of twelve bishops. Here are also an Armenian patriarch and a Greek-Catholic bishop. The Protestant missions of Europe and America for the Orient have their head-quarters in Constantinople. The city, with its immediate suburbs, contains above a million inhabitants. Stamboul, or the old city, contains about half this number. More than half of the population are Turks; the remainder are Greeks, Armenians, Bulgarians, and some thousands each of nearly every nation of Europe, Western Asia, and Northern Africa.

Within, the city loses much of its charm. The streets are narrow, uncleanly, and full of dogs; they are not lighted, and every passer-by, after nightfall, is arrested if he has not a lighted lantern: the streets are not named, nor the houses numbered. (*a*) *The houses* are almost entirely of wood, are unpainted, of two or three stories, and have projecting latticed windows. (*b*) Of *public squares* there are but few of importance. The chief are the *Hippodrome* (see above, *d*) and the *Seraskai Place*, containing the offices of the war department and the lofty, fine tower from which is to be obtained the finest view of Constantinople and its environs. This place is about a mile in circumference. (*c*) The *Seraglio*, once so famous as the splendid palace of the sultans, had not been used as a royal palace since the erection of the new *Seraglio* on the Bosphorus. It was burned in 1865. Near the old seraglio is the office of the grand vizier, entered by the "Sublime Porte," where the sessions of the cabinet are held, and where the sultan meets the foreign ambassadors. There are many *kiosks*, or royal summer-houses on the Bosphorus and the Golden Horn. (*d*) Constantinople contains thirteen imperial *mosques*, above a hundred large mosques (or Djami, i. e. places of reunion), and more than a hundred besides of smaller mosques (or Medjid, i. e. places of prayer). The chief mosque is that of *Omar*. See St. Sophia. The second mosque of importance is that of *Achmet the First* (built in 1610). Here are celebrated with great pomp the festival of Bairam, that of Mevloud (the birth of the Prophet), and that of the departure of the caravans for Mecca. It is said to contain a piece of the black stone of Mecca. (*e*) *Churches and Synagogues*. —The Greeks have twenty-one churches in the old city. Of these, *St. George's* (see above, II, 2) is the chief or patriarchal church. The Armenians have a number of churches, among them the *Patriarchal* church (or, rather, two churches—one for men, the other for women), and the Church of the Nine Angel-choirs, containing a "miracle-working pillar," to which the sick of fevers are brought. The Romish and Protestant churches are in Pera. There are several synagogues in the old city. The British and American Bible Societies have their head-quarters in the old city. (*f*) There are many Mohammedan *monasteries* for the different orders of dervishes, and also several Greek monasteries. (*g*) *Burial-places* for the Turks are found near all the mosques. Burial-chapels (Turbés) for the sultans, the founders of mosques, and their families. are found within the inclosure of the mosques. (*h*) *The public instruction* was reorganized in 1847. Schools were divided into three grades. Attendance upon the primary schools is obligatory. In them are taught reading, writing, arithmetic, geography, religion, history of the Turkish empire, and the Turkish language. In the second grade, the history of the Mohammedan religion, mathematics, natural science, and other branches are taught. The technical schools are many in number, as the two schools in the mosques of Achmet and Selim for the persons designed for civil offices; the school founded by the sultaness in 1850 for the education of diplomatists and other high officers of state; the colleges for the education of the ulemas or priests; the schools of military and naval instruction; the college of medicine; the veterinary, and other schools. All of these are supported by the state when the endowments do not suffice. The University, comprising many of their highest schools, has a large building, but is only partly organized. The school systems of the Christians and Jews stand under the direction of their church authorities, and are much neglected. (*i*) Of *libraries* there are over a hundred smaller ones connected with the mosques, and forty large ones, some of which have fine rooms, and are accessible to non-Mohammedans.

IV. *The Environs of Constantinople.* — (*a*) *Eyoub*, above Stamboul, on the Golden Horn, is the most sacred spot in Turkey. Eyoub was the standard-bearer of the Prophet, and perished in the first attack on Constantinople by the Saracens (668). His body was miraculously discovered by Mahomet II (1453), who built here the mosque of Eyoub. There is also a stone, surrounded by a silver plate, containing an "impression of the foot of the Prophet," which he made in the rock at the building of the Caaba. Within this mosque is the *sword of Othman*, which the sultans gird on as their inaugural ceremony instead of being crowned. Around the mosque, which is richly built and decorated, are tombs of many great men of state, mingled with trees and shrubbery, and surrounded by hospitals and an extensive cypress-covered grave-yard. (*b*) *Galata*, on the opposite side of the Golden Horn, was formerly a Genoese city. It now contains many important European houses of business, and one part is filled with the scum of all European nations. (*c*) *Pera*, on the crown of the hill above Galata, contains the residences of European ambassadors and merchants, many fine and lofty residences, and many Christian churches. (*c*) At *Kassim-pasha*, where vessels of war are built, and at *Top-hana*, where cannon are made, the works rival those of any European power. (*e*) *Scutari*, on the Asiatic shore of the Bosphorus, is the landing-place of all the commerce to and from Asia, and hence has many and large khans. As the place from which Mohammedanism set out in its conquest of Europe, it is considered by the Turks to be sacred ground, and its burial-place is by far the largest around Constantinople. Near this burial-place are the famous mosque and barracks of Selim, and the hospital where Florence Nightingale performed her deeds of mercy during the Crimean war. (*f*) The *Bosphorus* is lined with palaces of the sultan, of pashas, merchants, and ambassadors, and with cities and villages. In one of them, Bebék, is a college founded by the missionary Dr. Hamlin, and endowed by American Christians with $100,000.—Hesychius, *De originibus Constantinopoleos*, 1596 (Leipzig, 1820); Viquesnel, *La Turquie* (Paris, 4 vols. 8vo); Th. Gautier, *Constantinople* (Paris, 1853); Dallaway, *Constantinople, Ancient and Modern;* Adolphe Joanne et Emile Isambert, *Itinéraire, descriptif, historique, et archéologique de l'Orient* (Paris, 1867); Hammer, *Histoire de l'empire Ottoman* (Paris, 8 vols. 8vo); Hammer, *Constantinople und der Bosporus.*

CONSTANTINOPLE, Councils of. I. *General Synods.*—The following are regarded as œcumenical by the Latin or by the Greek Church, or by both: 1.

The First Œcumenical Council of Constantinople (or the second in the list of œcumenical councils) was convoked at Constantinople in 381 by Theodosius the Great. There were present 150 orthodox bishops (mostly Eastern), and 36 followers of Macedonius, who left Constantinople when their doctrine was rejected by the majority. The council condemned, besides the Macedonians, the Arians, Eunomians, and Eudoxians, and confirmed the resolutions of the Council of Nice. It assigned to the bishop of Constantinople the second rank in the Church, next to the bishop of Rome, and in controversies between the two reserved the decision to the emperor. 2. *The Second Œcumenical Council of Constantinople* (the fifth in the list of œcumenical councils), held in 553 on account of the Three Chapters' controversy, by 165, mostly Oriental, bishops. This council excommunicated the defenders of the Three Chapters, Theodore of Mopsuestia, Ibas, and others, and the Roman bishop Vigilius, who refused to condemn the Three Chapters unconditionally. 3. *The Third Œcumenical Council of Constantinople* (the sixth in the list of œcumenical councils), held from 680 to 681 in the Trullan palace, and attended by 289 bishops, among whom were three Oriental patriarchs, and four legates of the Roman bishop Agathon. The opinions of the Monothelites were condemned, especially through the influence of the Roman legates, as heretical. 4. The General Council convoked in 691 by the emperor Justinian II, and also held in the Trullan palace. As it was regarded as supplementing the fifth and sixth œcumenical councils, which had given no Church laws, it was called *Quinisexta* (*Synodus*) or *Quinisextum* (*Concilium*). It gave 102 stringent canons on the morals of clergymen and ecclesiastical discipline. It is recognised as an œcumenical council by the Greeks only. 5. *The fifth Œcumenical Council*, held in 754, and attended by 383 bishops. It passed resolutions against the veneration of images, which were repealed by the second Œcumenical Council of Nice. It is not recognised by the Latin Church, but only by the Greek. 6. *The sixth Œcumenical Council* (by the Church of Rome regarded as the fourth Œcumenical Council of Constantinople, or the eighth in the list of œcumenical councils), held in 869. It deposed patriarch Photius, restored patriarch Ignatius, and gave laws on Church discipline. It is, of course, not recognised by the Greeks. 7. In 879 another General Synod was held at Constantinople, attended by 380 bishops, among whom were the legates of pope John VIII. Photius was recalled, the resolutions of the preceding council against him repealed, and the position of the patriarch of Constantinople to the pope defined. The Greeks number this council as the Eighth Œcumenical. 8. The ninth Œcumenical Council of the Greek Church was held in Constantinople, under the emperor Andronicus the younger, in 1341. It condemned the opinions of Barlaam as heretical.

II. *Particular Synods.*—The most important of the particular synods are: 1. and 2. In 336 and 339, two Arian synods, under the leadership of Eusebius of Nicomedia. The former deposed and excommunicated Marcellus of Ancyra; the latter deposed and expelled bishop Paulus, of Constantinople, and appointed Eusebius his successor. 3. A semi-Arian synod against Ætius, who was banished. 4. In 426, a synod held against the Messalians; in 448, 449, and 450, synods against the Eutychians. 5. In 495 and 496, Eutychian synods, condemning their opponents, and recognising the *Henoticon* of Zeno. 6. A synod in 516, condemned the resolutions of the Council of Chalcedon. 7. In 536, against Severus, Anthimus, and other chiefs of the Acephali. 8. In 541 (543?), against some views of Origen. 9. In 815, two synods on the question of veneration of images, the one, attended by 270 bishops, in favor, and the second against the images. 10. In 861, introducing patriarch Photius, and approving the veneration of images. 11. In 1170 (according to others in 1168), a synod, attended by many Eastern and Western bishops, on the reunion of the Eastern and Latin churches. Similar synods were held in 1277, 1280, 1285, all without effect. 12. In 1450, a council convoked by the emperor Constantine Palæologus deposed the patriarch Gregory, put in his place the patriarch Athanasius, and declined to accept the resolutions passed by the Council of Florence in favor of the union of the Greek and the Latin churches. 13. In 1638 and 1642, two synods held against the crypto-Calvinism of the patriarch Cyril Lucaris.—Pierer, *Univers.-Lex.* iv, 397; Wetzer u. Welte, *Kirchen-Lex.* ii, 838; *Christian Rememb.* April, 1854, art. i; Schaff, *Hist. of the Christian Church*, ii, iii; Landon, *Manual of Councils*; Hefele, *Concil.-Geschichte; Edinburgh Review*, July, 1867, p. 49.

Constantinople, Patriarchate of. Until the time of Constantine the bishop of Constantinople was subject to the bishop of Heraclea as metropolitan. When Constantinople became the residence of the emperor, the dignity of the bishop naturally rose. The second œcumenical council, in 381, gave to the bishop of Constantinople a precedence of honor next to the bishop of Rome, on the ground that Constantinople was New Rome. This canon implied no extension of jurisdiction except the exemption of the bishop of Constantinople from the metropolitan jurisdiction of the bishop of Heraclea; but gradually the bishop of Constantinople obtained a right of superintendence over the exarchs of the neighboring dioceses. Early in the 5th century an imperial edict placed Eastern Illyricum under the jurisdiction of the bishop of Constantinople, but the Roman bishop Boniface protested against this as an encroachment on the patriarchal rights of Rome in Illyricum, and the decree was not carried through. Theodosius II issued a decree that no bishop in Asia and Thracia should be ordained without the consent of the Council of Constantinople. The execution of this decree met with much opposition, but the metropolitan jurisdiction over Thracia and Asia was nevertheless gradually confirmed, and it was even extended over Pontus and the patriarchate of Antioch. In 451 the Council of Chalcedon formally sanctioned this right of jurisdiction. Canon 9 authorized bishops and clergymen to appeal from the decisions of the metropolitans to either the exarchs or to the see of Constantinople. Canon 28 gave to the bishop of Constantinople equal ecclesiastical prerogatives with the bishop of Rome, stating, however, that the see of Constantinople was the second; and provided that the bishop of Constantinople should have the right to ordain the metropolitans of the three dioceses of Asia, Pontus, and Thracia, and of the bishops of the pagan countries belonging to those three dioceses. The papal legates protested against the 28th canon, and their protest was ratified by the Roman bishop Leo. The opposition of the Roman bishops against this canon prevented it from being received into the Oriental legislation, although the patriarchs of Constantinople never relinquished any of the rights conceded to them by the Council. During the controversy on the images, Leo Isauricus separated the Illyrian churches from the patriarchate of Rome and united them with that of Constantinople. Entire separation from Rome was carried through by the patriarchs Photius and Michael Cærularius. The extensive diocese of the patriarch of Constantinople, containing, since the 8th century, the whole of Eastern Illyricum and the three dioceses of Asia, Thracia, and Pontus, embraced (since the 10th century) also Russia, for which, however, in the 16th century, a special patriarchate was established at Moscow. See Russia. In the 14th century a special Servian patriarchate was established, which, however, was again dissolved in 1765. See Servia. After the establishment of the independence of Greece, the Church of Greece made itself independent of the jurisdiction of the patriarch of Constantinople in 1833. See

GREECE. The Greek bishops of Austria are likewise not subject to the patriarch of Constantinople. See AUSTRIA. The jurisdiction of the latter embraces the mediate and immediate provinces of the Turkish empire, with the exception of the patriarchates of Antioch, Alexandria, and Jerusalem, and the archbishoprics of Cyprus and Ochrida in Rumelia. In 1867 the patriarchate of Constantinople had 135 sees, of which 90 are metropolitical and 4 archiepiscopal.

From the conquest of Constantinople by the Latins in 1204 until the reconquest of the city by the Greeks in 1261, there was a Latin patriarch in Constantinople, to whom the pope assigned the highest place in the Church next to himself. Since the destruction of the Byzantine empire the title of patriarch has been given by the popes to some dignitary of Rome. At Constantinople there resides a patriarchal vicar, under whose jurisdiction are about 10,000 Latin Catholics, in Constantinople, Thracia, Macedonia, and Northern Asia Minor.—Herzog, *Real-Encykl.* iii, 138; Wetzer u. Welte, *Kirchen-Lex.* ii, 838; Wiggers, *Kirchl. Statistik*, i, 176; *The Churchman's Calendar for* 1867, p. 39.

Constellation, *a cluster of stars*, stands in the Auth. Vers. only in Isa. xiii, 10 ("the stars of heaven and *constellations* thereof shall not give their light"), for the Heb. כְּסִיל, *kesil'* (in the plur.), i. e. the fat or *clear* (Sept. Ὠρίων, Vulg. *splendor*), as a designation apparently of the large starry bodies generally. The same (Heb.) word elsewhere designates some special assemblage of stars ("Orion," Job ix, 9; xxxviii, 31; Amos v, 8); and once the name of a town ("Chesil," Josh. xv, 30). (See Schnaar, *Ueb. d. Sternbilder*, etc. Rink. 1791.) See ASTRONOMY.

Constitution, in the Roman Church, a decree of the pope in matters of doctrine. In France, the name has been applied, by way of eminence, to the famous bull *Unigenitus* of the year 1713. See UNIGENITUS.

Constitutions, Apostolical. See CANONS; CLEMENTINES.

Constitutions and Canons, Books of, "the code of 141 rules which regulates the order and worship of the Church of England. The preface thus describes itself: 'Constitutions and canons ecclesiastical, treated upon by the bishop of London, president of the convocation for the province of Canterbury, and the rest of the bishops and clergy of the said province; and agreed upon with the king's majesty's licence, in their synod begun at London, *Anno Domini* 1603, and in the year of the reign of our sovereign lord James, by the grace of God king of England, France, and Ireland, the first, and of Scotland the thirty-seventh; and now published for the due observation of them by his majesty's authority, under the great seal of England.'" See CANONS.

Constitutions of Clarendon. See CLARENDON.

Consubstantial, a word of similar import with *co-essential*, denoting something of the same substance with another. The term ὁμοούσιος was first used by the fathers of the councils of Antioch and Nicæa to express the orthodox doctrine more precisely. At first the term had only a negative use, as against the Arian heresy; but after the adoption of the Nicene Creed it became a test-word of orthodoxy.—Tomline, *Theology*, ii, 110; Schaff, *History of the Christian Church*, § 127.

Consubstantiation, the doctrine that, in the Lord's Supper, the bread remains bread, and the wine remains wine; but that with and by means of the consecrated elements the true natural body and blood of Christ are communicated to the recipients. It differs from *Transubstantiation* (q. v.) in that it does not imply a change in the substance of the elements.—Browne on 39 Articles, art. xxviii, § 1; Hagenbach, *History of Doctrines*, ii, 309 (Smith's ed.). See IMPANATION; LORD'S SUPPER; LUTHER; LUTHERAN CHURCH; TRANSUBSTANTIATION.

Consul (ὕπατος, i. e. *highest* in office), a title applied (1 Macc. xv, 16) to Lucius (q. v.), the Roman officer, whose communication to Ptolemy is there cited. The Sept. elsewhere uses the same Greek term as a rendering of the Chald. אֲחַשְׁדַּרְפְּנִין, *satraps* ("princes," Dan. iii, 2, 3), and הַדָּבְרִין, *viziers* ("counsellors, Dan. vi, 7, etc.). It is often used by classical Greek writers for the Roman *consul*. See ROME.

Consumption, as a disease, is the rendering of the Heb. שַׁחֶפֶת, *shache'pheth* (occurs only Lev. xxvi, 10; Deut. xxviii, 22), from שָׁחַף, *shachaph'*, to *pine away;* and probably designates a wasting malady. See DISEASE.

Contarini, GASPARO, Cardinal, was born in 1483 of a noble Venetian family, and carefully educated. Entering the public service, he was embassador to Charles V, 1521, and met Luther at Worms. In 1535 he was made cardinal by pope Paul III. In 1538, Contarini, together with the cardinals Caraffa (subsequently Paul IV), Sadolet, and Polus, was appointed a member of a committee on the reformation of the Church. Their report, made to the pope in the same year, and entitled *Consilium de Emendanda Ecclesia*, was printed against their wish and contrary to the order of the pope, and published in a German translation, with pungent notes, by Luther. It was subsequently put on the Index. In 1541 Contarini was sent as papal legate to the Diet of Ratisbon, where he showed a conciliatory spirit toward the Protestants, and urgently admonished the bishops to labor for the reformation of the Church. On his return to Italy he was by some accused of having encouraged heresy, but was appointed by the pope cardinal legate of Bologna. His religious feelings were deep; he accepted the doctrine of justification by faith, and looked for a reform of the Roman Church, while he utterly distrusted the Lutheran reformation. He was, on the whole, one of the best men in the Roman Church at the time of the Reformation. He died in Bologna, 1542. Among his writings are, *De Immortalitate Animæ adversus Petrum Pomponatium:—De Libero Arbitrio et Prædestinatione:—De Septem Ecclesiæ Sacramentis:—Confutatio Articulorum Lutheri:—Scholia in Epistolas Divi Pauli:—De Officio Episcopi:—De Potestate Pontificis* (liberal). His works were collected and published together at Paris (1571, fol.) and Venice (1578, fol.). See Ranke, *History of Popes*, vol. i, passim; Wetzer u. Welte, *Kirchen-Lex.* ii, 860; McCrie, *Reformation in Italy* (Am. ed p. 171).

Contemplation. See MYSTICS.

Contentment (αὐτάρκεια, 1 Tim. vi, 6; "sufficiency," 2 Cor. ix, 8) is a disposition of mind in which our desires are confined to what we enjoy without murmuring at our lot, or wishing ardently for more. It stands opposed to envy (James iii, 16); to avarice (Heb. xiii, 5); to pride and ambition (Prov. xiii, 10); to anxiety of mind (Matt. vi, 25, 34); to murmurings and repinings (1 Cor. x, 10). Contentment does not imply unconcern about our welfare, or that we should not have a sense of anything uneasy or distressing; nor does it give any countenance to idleness, or prevent diligent endeavors to improve our circumstances. It implies, however, that our desires of worldly good be moderate; that we do not indulge unnecessary care, or use unlawful efforts to better ourselves; but that we acquiesce with, and make the best of our condition, whatever it be. Contentment arises not from a man's outward condition, but from his inward disposition, and is the genuine offspring of humility, attended with a fixed habitual sense of God's particular providence, the recollection of past mercies, and a just estimate of the true nature of all earthly things. Mo-

tives to contentment arise from the consideration of the rectitude of the divine government (Psa. xcvii, 1, 2), the benignity of the divine providence (Psa. cxlv), the greatness of the divine promises (2 Pet. i, 4), our own unworthiness (Gen. xxxii, 10), the punishments we deserve (Lam. iii, 39, 40), the reward which contentment itself brings with it (1 Tim. vi, 6), the speedy termination of all our troubles here, and the prospect of eternal felicity in a future state (Rom. v, 2). See Barrow, *Works*, iii, ser. 5, 6, 7, 8, 9; Burrows, *On Contentment*; Watson, *Art of Contentment*; Dwight, *Theology*, ser. cxxix; Fellowes, *Theology*, ii, 423, 500.

Continency. See CHASTITY; VIRGINITY.

Continentes. See ENCRATITES.

Contingency. See FOREKNOWLEDGE; PREDESTINATION.

Contract (συνάλλαγμα, 1 Macc. xiii, 42), a business agreement or formal compact. See BARGAIN. Various solemnities were used in the conclusion of contracts among the ancient Hebrews. Sometimes it was done by a simple joining of hands (Prov. xi, 21; Ezek. xvii, 18), and thus the Hindoos, to this day, ratify an engagement by one person laying his right hand upon that of the other. Sometimes, also, a covenant was ratified by erecting a heap of stones, to which an appropriate name was given (Gen. xxxi, 44–54); that made between Abraham and the king of Gerar was ratified by the oath of both parties, also by a present from Abraham to the latter of seven ewe lambs, and by giving a name to the well which had occasioned the transaction. Festivities appear to have accompanied the ceremonies attending such alliances, for Isaac and Abimelech made a feast on concluding their covenant (Gen. xxvi, 30; xxxi, 54). A similar practice also obtained among the heathen nations. The Scythians are said to have first poured wine into an earthen vessel, and then the contracting parties, cutting their arms with a knife, let some of the blood run into the wine, with which they stained their armor; after which they themselves, together with the other persons present, drank of the mixture, uttering the direst maledictions on the party who should violate the treaty. Another mode of ratifying covenants was by the superior contracting party presenting to the other some article of his own dress or arms. Thus "Jonathan stripped himself of the robe that was upon him, and gave it to David, and his garments, even to his sword, and to his bow, and to his girdle" (1 Sam. xviii, 4); and at the present day, the highest honor which a king of Persia can bestow upon a subject is to cause himself to be disapparelled, and to give his robe to the favored individual. In Numbers xviii, 19, mention is made of a covenant of salt (q. v.). See OATH.

Among the Hebrews, and, long before them, among the Canaanites, the purchase of anything of consequence was concluded, and the price paid, at the gate of the city, as the seat of judgment, before all who went out and came in (Gen. xxiii, 16, 20; Ruth, iv, 1, 2). From the latter book we also learn that on some occasions of purchase and exchange, the transfer was confirmed by the proprietor plucking off his shoe at the city gate, in the presence of the elders and other witnesses, and handing it over to the new owner.

The earliest notice of written instruments, sealed and delivered, for ratifying the disposal and transfer of property, occurs in Jeremiah xxxii, 10-15, which the prophet commanded Baruch to bury in an earthen vessel, in order to be preserved for production at a future period as evidence of the purchase. No mention is particularly made as to the manner in which deeds were anciently cancelled. Some expositors have imagined that in Colossians ii, 14, Paul refers to the cancelling of them by blotting or drawing a line across them, or by striking them through with a nail; but we have no authority whatever, from antiquity, to authorize such a conclusion.—Thomson, *Land and Book*, ii, 382-384. See COVENANT.

Contrition, in the Roman Catholic theology, is perfect or thorough repentance (*contritio cordis*), as distinguished from *attrition*, or imperfect repentance, which is not adequate to justification without penance (see ATTRITION for a fuller statement). The Council of Trent makes contrition part of the matter of the sacrament of penance. "The acts of the penitent, namely, contrition, confession, and satisfaction, are the matter, as it were, of this sacrament, which, inasmuch as they are required by divine appointment in order to the completeness of the sacrament, and the full and perfect remission of sins, are for this reason called the parts of penance. . . . . Contrition, which holds the first place in the above-mentioned acts of the penitent, is the sorrow and detestation which the mind feels for past sin, with a purpose of sinning no more. Now this emotion of contrition was always necessary in order to obtain the pardon of sins; and when a man has sinned after baptism, it prepares him for the remission of sin, if joined with confidence in the mercy of God, and an earnest desire of performing whatever is necessary to the proper reception of the sacrament. . . . . The council further teaches that although it may sometimes happen that this contrition is perfect in charity, and reconciles a man to God before the sacrament of penance is actually received, nevertheless the reconciliation is not to be ascribed to contrition without the desire of the sacrament, which was in fact included in it."—*Canons of Trent*, sess. xiv, chap. iv.

It will be observed from the preceding quotations that the Church of Rome teaches that we are to be truly grieved or sorry on account of our sins; that we are to hate them; and that we must purpose or resolve to forsake them. All this is excellent so far as it goes. But one essential element or mark of true repentance is entirely omitted, or so slightly referred to that this sorrow or hatred of sin, together with all good purposes of amendment, are counteracted, or may be substituted by additional *resolutions* to do better in future, by priestly absolution, by penances, and by the doctrine of attrition or imperfect contrition. The deficiency to which reference is made is *forsaking* sin. This practical act is overlooked, counteracted, or rendered unnecessary by the resolutions of amendment, absolution, penances, and whatever may pertain to them.—Elliott, *Delineation of Romanism*, bk. x, chap. ii, § 1.

Convenient, used in the A. V. only in its old Latin sense of *suitable* or becoming, as a rendering of יָשָׁר, *yashar'* (Jer. xl, 4, 5, "*right*," as often elsewhere), חֹק, *chok* (Prov. xxx, 8, an allotted "*portion*," as sometimes elsewhere), καθῆκον (Rom. i, 28, "*fit*," as in Acts xxii, 22), ἀνῆκον (Eph. v, 4; Philem. 8, "*fit*," as in Col. iii, 18); but εὔκαιρος (Mark vi, 21), εὐκαίρως (Mark xiv, 11), εὐκαιρέω (1 Cor. xvi, 12), or simply καιρός (Acts xxiv, 25), refer to *opportuneness* of time or season. Similarly in the Apocrypha (καθήκω, Ecclus. x, 23; 1 Macc. xii, 11; 2 Macc. iv, 19; xi, 36), ἐπιτήδειος, (1 Macc. iv, 46; xiv, 34), ἐπίκαιρος (2 Macc. iv, 32; xiv, 22), simply καιρός (Ecclus. xxxix, 17), or mere construction (2 Macc. x, 18).

Convent, (1.) the name given in monasteries and similar institutions to the assembly (and the whole) of the members entitled to a vote ("conventuals"). The heads of these institutions (abbots, priors, provosts, rectors, guardians) are bound, in some points of administration, either to hear the counsel or to obtain the consent of the convent. Monastic congregations [see CONGREGATIONS] sometimes hold "general convents" (or "general chapters"), consisting of the abbots of all the houses of the congregation. The constitution of

the mendicant orders and of the regular clerks provides for the holding of "provincial convents" (or provincial chapters), consisting of the heads of the monasteries of a province, and "general convents" (or general chapters), consisting of the chiefs of all the monastic provinces ("provincials"). But the latter, in modern times, have generally fallen into disuse, and written reports have taken their place. (2.) The word is also used to denote a society of monks or nuns in one establishment, or the building itself in which they dwell.—Wetzer u. Welte, *Kirchen-Lex.* ii, 869. See also MONASTERY.

Conventicle (*place of meeting*, Lat. *conventiculum*, diminutive of *conventus*). The word *conventiculum* was known to the primitive Church to designate a house of prayer, *conventicula ubi summus oratur Deus* (Arnob. iv; see also Lactant. v, 11; Orosius, vii, 12). In after times it denoted a cabal among the monks of a convent, to secure the election of some favorite candidate for abbot or superior. The term conventicle is said to have been first applied in England to the assemblies of Wickliffe's followers; but in the reign of Charles II it was given contemptuously to the meetings for religious worship of Protestant dissenters from the Church of England, which were not at the time sanctioned by law.

Conventicle Act, an act of the British Parliament, passed in 1664. It enacted that only five persons above sixteen years of age, besides the family, were to meet for any worship, domestic or social. The first offence on the part of him who officiated was three months' imprisonment, or five pounds' fine; the second, six months' imprisonment, or ten pounds; the third offence was transportation for life, or a fine of one hundred pounds. Those who permitted conventicles to be held in their barns, houses, or outhouses, were liable to the same forfeitures; and married women taken at such meetings were to be imprisoned for twelve months, unless their husbands paid forty shillings for their redemption. The power of enforcing the act was lodged in the hands of a single justice of the peace, who might proceed, without the verdict of a jury, on the bare oath of an informer. In consequence of this act, houses were broken open, goods and cattle distrained, persons arrested, and the jails in the different counties filled with those who had been guilty of no other misdemeanor but that of assembling together to worship God, or listen to the exposition of his holy word.—Buck, *Theol. Dictionary*, s. v.; Neal, *History of the Puritans*, part iv, ch. vii; Orme, *Life of Baxter*, i, 221, 254.

Conventuals, (1.) Monks or clerical knights who are members of a convent, and have the right of voting at the meetings (*conventus*). See CONVENT. (2.) Monks in general, in opposition to hermits. (3.) In several orders, especially the mendicant, Conventuals is a name for those congregations which follow a mitigated rule (see FRANCISCANS, CARMELITES), in opposition to the Observants (q. v.), who demand the observance of the rigorous primitive rule, and who sometimes even pass beyond it. The name is especially applied to the Franciscan conventuals (see FRANCISCANS). (4.) Sometimes, also, a community of candidates for the priesthood, who, in a monastic manner, lived in common under a provost, were designated by this name.

Conversation (דֶּרֶךְ, *de'rek*, *way*, Psa. xxxviii, 14; l, 23; Apocrypha and N. T. ἀναστροφή, but τρόπος in 2 Macc. xx, 12; Heb. xiii, 5) is never used in the Scriptures in the sense of *verbal communication*, but always in its now obsolete meaning of course of life or *deportment*, including all one's words and acts. In Phil. i, 27; iii, 20, a different term is found in the original (πολιτεύομαι, πολίτευμα), which literally signifies *residence*, or relations to a community as a citizen. See CITIZENSHIP.

Orientals are little in the habit of repairing to each other's houses for the purpose of social intercourse, but rather prefer to resort to some spot out of doors, where friends can meet together, and for this purpose the gate of the city is generally chosen. See GATE. Such was the custom of old, and, accordingly, we find that to each city among the Jews there was an open space near the gate, which was fitted up with seats for the accommodation of the people (Gen. xix, 1; Psa. lxix, 12). Those who were at leisure occupied a position on these seats, and either amused themselves with witnessing those who came in and went out, and with any trifling occurrences that might present themselves to their notice, or attended to the judicial trials, which were commonly investigated at public places of this kind (Gen. xxxiv, 20; Ruth iv, 11; Psa. xxvi, 4, 5; cxxvii, 5). Promenading, so agreeable in colder latitudes, is wearisome and unpleasant in the warm climates of the East, and this is probably one reason why the inhabitants of those climates preferred holding intercourse with one another while sitting near the gate of the city, or beneath the shade of the fig-tree and the vine (1 Sam. xxii, 6; Micah iv, 4).

This mode of passing the time is still customary in the East. "It is no uncommon thing," says Mr. Jowett, "to see an individual or a group of persons, even when very well dressed, sitting with their feet drawn under them, upon the bare earth, passing whole hours in idle conversation. Europeans would require a chair, but the natives here (Syria) prefer the ground; in the heat of summer and autumn, it is pleasant to them to while away their time in this manner under the shade of a tree. Richly-adorned females, as well as men, may often be seen thus amusing themselves."

The Orientals, when engaged in conversation, are, in general, very mild in their demeanor, and do not feel themselves at liberty directly to contradict the person with whom they are conversing, although they may at the same time be aware that he is telling them falsehoods. The ancient Hebrews, in particular, very rarely used any terms of reproach more severe than those of שָׂטָן, *satan'*, meaning "adversary," or "opposer;" רֵיקָה, *reykah'*, ῥακά, "contemptible;" and sometimes נָבָל, *nabal'*, "fool," an expression which means "a wicked man," or "an atheist," not, as with us, a person deficient in understanding (Job ii, 10; Psa. xiv, 1; Isa. xxxii, 6; Matt. v, 22; xvi, 23). See FOOL. When anything was said which was not acceptable, the dissatisfied person replied, "Let it suffice thee" (Deut. iii, 26), or "It is enough" (Luke xxii, 38). In addressing a superior, the Hebrews did not commonly use the pronouns of the first and second person, but instead of "I," they said "thy servant," and instead of "thou," they employed the words "my lord." Instances of this mode of expression repeatedly occur in Scripture (as in Gen. xxxii, 4; xliv, 16, 19; xlvi, 34; Dan. x, 17; Luke i, 38).

The form of assent or affirmation was, "Thou hast said," or "Thou hast rightly said;" and modern travellers inform us that this is the prevailing mode of a person's expressing his assent or affirmation to this day in some parts of the East, especially when they do not wish to assert anything in express terms (comp. Matt. xxvi, 64). See AFFIRMATIVE.

Conversion, a theological term used to denote the "turning" of a sinner to God. It occurs in Acts xv, 3 ("declaring the conversion [ἐπιστροφή] of the Gentiles"). The verb ἐπιστρέφω is used in the N. T. actively in the sense of turning or converting others (Luke i, 16, et al.); intransitively, in the sense of "turning back," "returning;" and tropically, to denote "turning to good," "to be converted" (Luke xxii, 32, "when thou art converted, strengthen the brethren"). In general, the word is used to designate the "turning of men from darkness unto light, and from the power of Satan unto God" (Acts xxvi, 18.) In a general sense, heathens or infidels are "convert-

ed" when they abandon paganism or unbelief, and embrace the Christian faith; and men in general are properly said to be "converted" when they are brought to a change of life through the influence of divine grace upon the soul.

Specifically, then, conversion may be said to be "that change in the thoughts, desires, dispositions, and life of a sinner which is brought about when the Holy Ghost enters the heart as the result of the exercise of a saving faith in the atonement, by which the sinner is justified. The process by which this great change is effected is this: The sinner is convinced of sin by the Holy Spirit; he exercises a penitent faith in Christ as his Saviour; God immediately justifies him, the Holy Spirit attests to the penitent the fact of his pardon, and instantly sheds abroad the love of God in the heart, when all things are indeed new" (Farrar, *Biblical Dictionary*, s. v.).

The word is also used, in a narrower sense, to denote the "voluntary act of the soul consciously embracing Christ in faith;" and in this sense it is to be distinguished from regeneration, which is "a second creation," wrought only by the Spirit of God. Kling, in Herzog, *Real-Encyklopädie* (s. v. Bekehrung), gives the following statement of the relations between God and man in the whole work of conversion: "It is not a purely personal act of man (Jer. xxxi, 18, *Turn thou me and I shall be turned*), but includes both the divine act and the human. Conviction, calling, and justification are of God. The Word of God declares God's will convincingly in the law, and offers salvation through faith in Christ in the Gospel. In Christ law and Gospel are united. None of these divine acts preclude man's activity (Phil. ii, 12, *Work out your own salvation*, etc.). . . . The truth lies midway between that extreme, on the one hand, which teaches that the will of man is entirely absorbed by the grace of God, and that false Synergism, on the other, which conceives man's will as capable of action, in the work of conversion, without the inworking of divine grace."

Wesley (*Letter to Bishop Lavington*, *Works*, v, 368) remarks: "Conversion is a term I very rarely use, because it rarely occurs in the N. T." Lavington had spoken of Wesley's idea of conversion as "to start up perfect men at once." "Indeed, sir," replies Wesley, "it is not. A man is usually converted before he is a perfect man. It is probable most of those Ephesians to whom St. Paul directed his epistles were converted, yet they were not come (few, if any) to a perfect man, to the measure of the stature of the fulness of Christ." See REPENTANCE; REGENERATION.

CONVERSION OF ST. PAUL, FEAST OF THE, observed in the Roman Church on the 25th of January. It is generally supposed that this festival had its beginning in the year 1200, when it was established by order of Innocent III. Baronius says it was observed in earlier times, but had grown into disuse after the 9th century. After the 13th century it became generally observed. See PAUL.

Conviction. The first stage of repentance, when a penitent is led to see the evil nature of sin, and has been *proved*, to himself, *guilty* of it. See REPENTANCE.

Convocation (מִקְרָא, *mikra'*, from קָרָא, *kara'*, to *call;* comp. Num. x, 2; Isa. i, 13), applied invariably to meetings of a *religious* character, in contradistinction to *congregation*, in which political and legal matters were occasionally settled. See GOVERNMENT. Hence it is connected with קֹדֶשׁ, *holy*, and is applied only to the Sabbath and the great annual festivals of the Jews (Exod. xii, 16; Lev. xxiii, 2 sq.; Num. xxviii, 18 sq.; xxix, 1 sq.). In this sense, with one exception (Isa. i, 13, "assembly"), the word is peculiar to the Pentateuch; but in Isa. iv, 5, it denotes the *place* of gathering ("assemblies"), and in Neh. viii, 8, it signifies the public "*reading*" of the law in the synagogue service. The Sept. treats it as an adjective (κλητός, ἐπίκλητος; *called*); but there can be no doubt that the A. V. is correct in its rendering (Smith, s. v.). See CONGREGATION. Like the Greek πανήγυρις or mass-meeting (Smith's *Dict. of Class. Antiq.* s. v. Panegyris), it signifies "a meeting or solemn assembly of a whole people for the purpose of worshipping at a common sanctuary." The phrase "holy convocation" is applied, I. To the FEASTS: 1. To the *Sabbaths*, all of which were "holy convocations" (Lev. xxiii, 2, 3). 2. To the *Passover*: (*a*.) its *first* day (Exod. xii. 16; Lev. xxiii, 7; Num. xxviii, 18); (*b*.) its *last* day (Exod. xii, 16; Lev. xxiii, 8; Num. xxviii, 25). 3. To the *Pentecost* (Lev. xxiii, 21). 4. To the *Feast of Trumpets* on the 1st of Tisri, the New Year's day of the civil year (Lev. xxviii, 24; Num. xxix, 1). 5. To the *Feast of Weeks* or *First-fruits* (Num. xxviii, 26). 6. To the *Feast of Tabernacles*: (*a*.) its *first* day (Lev. xxiii, 35; Num. xxix, 12); (*b*.) its *last* day (Lev. xxiii, 36). 7. As introductory to the enumeration of these feasts (Lev. xxiii, 4), and as closing it (ver. 7). II. To the one great FAST, the annual *Day of Atonement* (Lev. xxiii, 27; Num. xxix, 7). To the deep solemnities of "the Holy Convocation," whether of joy or of sorrow ("afflicting the soul," as in the last passage), one great feature was common, marked by the command, "Ye shall do no servile work therein" (see all the passages); or more fully in Exod. xii, 16, "No manner of work shall be done in them, save that which every man must eat, that only may be done of you." (Such as are curious about the Rabbinical opinions of what might be done, and what might not, on these occasions, may find them in Buxtorf's *Synagoga Judaica*, especially ch. xix; the joyous celebrations are described in ch. xxi, and the expiatory in ch. xxv, xxvi; see also Ugolini *Thesaur.* iv, 988-1052). With this may be compared Strabo's statement (bk. x), "This is a common practice both of Greeks and barbarians, to perform their sacred services with a festive cessation of labor." See SABBATH.

CONVOCATION, a convention of the English clergy to discuss ecclesiastical affairs in time of Parliament. This body grew out of the ecclesiastical councils held in the earlier times. From the time of Edward I, when the Commons were first assembled in Parliament, it became the practice to summon the Convocation at the same time. About the year 1400 it assumed its present form. There was at this time a Convocation for the province of York, and another for that of Canterbury. At the Reformation the king assumed the title of supreme head of the Church. Both convocations hesitated to acknowledge his claim, but the king, says Strype, made them buckle to at last; and the recognition of his supremacy was made at Canterbury in 1531, and the next year at York. In 1532 the Act of Submission passed: it required the clergy, in the first place, to consent that no ordinance or constitution should be enacted or enforced but with the king's permission; secondly, that the existing constitutions should be revised by his majesty's commissioners; and, thirdly, that all other constitutions, being agreeable to the laws of God and of the land, should be enforced. The bishops demurred, but the king and the commons were against them, and they were compelled to yield; and in 1534 their submission was confirmed by act of Parliament. Since this period the Convocation can only be assembled by the king's writ; when assembled, it cannot make new canons without a royal *license*, which is a separate act from the permission to assemble; having agreed upon canons with the royal license, they cannot be published or take effect until confirmed by the sovereign; nor, lastly, can they enact any canon which is against the law or customs of the land or the king's prerogative, even should the king himself consent. Prior to this period, the archbishop of each province could assemble his provincial synod at his pleasure; though,

at the same time, the sovereign could summon both provinces by a royal writ (Hook).

England is divided into the two provinces of Canterbury and York, and by the term Convocation is meant the synod or provincial council of those provinces. There are, therefore, two convocations, each independent of the other; but instances have frequently occurred in which they have acted together by mutual consent. Commissioners have sometimes been sent from York to sit in the Convocation of Canterbury, with full powers to act on behalf of the northern Convocation. Since the Reformation, for obvious reasons, the legislation of the Church of England was virtually in the hands of the southern Convocation. That of York seldom originated any important measure, or persisted long in resisting the decisions of Canterbury. It became at length the faint echo of its more favored sister's voice. The Convocation of Canterbury consists of all the bishops of the province, who constitute the upper house; and of the deans, archdeacons, proctors of chapters, and proctors for the parochial clergy, who compose the lower house. In 1867 the upper house of Canterbury consisted of 21 members, and that of York of 7 members; while the lower house of Canterbury had 146 (namely, 24 deans, 56 archdeacons, 24 proctors for cathedral chapters, and 24 proctors for the clergy), and that of York 57 members (6 deans, 15 archdeacons, 7 proctors of the chapters, and 29 proctors for the clergy). As president, the archbishop summons the Convocation to meet at the command of the king. Were he to attempt to assemble a synod by his own authority, he would be subject to a præmunire, and the proceedings of such synod would be void. Since the Act of Submission the power to summon the Convocation at the commencement of a new Parliament has usually been granted, though from the time of George I (1717) until recently no business was transacted. It is also the duty of the archbishop to prorogue and dissolve the Convocation, under the direction of the crown. Of late the convocations of Canterbury and York have been revived, and the revival of the Irish Convocation has been strenuously urged, especially by the High-Church party. The decisions of Convocation have no legal force in England. "As essentially interwoven with the State, the Church possesses no independent action; its articles, liturgy, organization as to benefices, etc., are all regulated by Parliament; while its discipline falls within the scope of the ecclesiastical courts, a class of tribunals apart from the ministering clergy. The Church, therefore, in its distinct capacity, is left little to do in the way of jurisdiction. It is further urged, as a reason for restricting the power of Convocation, that, being purely sacerdotal, it might be apt to run into excesses, and put forth claims adverse to the prevailing tone of sentiment on religious matters; that, in short, as things stand, it is safer for the public to be under the authority of Parliament than to be subject to the ordinances of a body of ecclesiastics" Chambers, *Encyclopædia*, s. v.). There is an able article against the revival of Convocations in the *Edinb. Rev.* Jan. 1857. For further information as to the history of Convocation, see Collier, *Eccles. Hist. of Great Britain;* Wilkins, *Concilia Magnæ Britanniæ* (London, 1737, 4 vols. fol.); Wake, *State of the Ch. of England*, etc. (Lond. 1703, fol., containing a large collection of documents on Convocation); Fellows, *Convocation: its Origin, Progress, and Authority, Legislative and Judicial, with a Scheme for amending its Power and Constitution* (Lond. 1852; proposes to establish one Convocation instead of the three [2 English, 1 Irish] then in existence); Lathbury, *Hist. of Convocation* (Lond. 1853, 8vo, 2d ed.); Landon, *Manual of Councils*, s. v. *London;* Cardwell, *Documentary Annals* (Oxf. 1844, 2 vols. 8vo); Marsden, *Churches and Sects*, p. 308 sq.; *Christ. Remembrancer*, Oct. 1854, p. 369; Overall, *Convocation Book* (Oxford, 1844, 8vo); Palmer, *On the Church*.

Convulsionists, a term applied to persons who were the subjects of fits, of which they were said to be cured by visiting the tomb of the abbé Paris, a celebrated zealot among the Jansenists. The name was afterwards given, in France, to those whose fanaticism or imposture caused them to work themselves up into the strongest agitations or convulsions, during which they received wonderful revelations, and abandoned themselves to the most extravagant antics that were ever exhibited. They threw themselves into the most violent contortions of body, rolled about on the ground, imitated birds and beasts; and, when they had completely exhausted themselves, went off in a swoon. Pinault, an advocate, who belonged to the Convulsionists, maintained that God had sent him a peculiar kind of fits to humble his pride. See JANSENISM.

Conybeare, John, D.D., a learned divine and distinguished preacher, was born at Pinhoe, Devonshire, in 1692, and was educated at Exeter College, Oxford, of which he became fellow in 1710. In 1724 he became rector of St. Clement's, Oxford, and in 1727 obtained great celebrity by his visitation sermon on subscription. He was appointed rector of his college in 1730, dean of Christ Church two years after, and finally bishop of Bristol in 1750. He died at Bath, July 18, 1755. He published several works, the most important of which are, *A Defense of Revealed Religion against the Exceptions of* [Tindal's] *Christianity as Old as the Creation* (Lond. 1732, 8vo):—*Sermons* (London, 1757, 2 vols. 8vo).—Darling, *Cycl. Bibl.* s. v.

Conybeare, William Daniel, dean of Llandaff, was born at his father's rectory, St. Botolph's, Bishopsgate, June 7, 1787. He entered Christ Church College, Oxford, in January, 1805, and took his degree of B.A. in 1808 and M.A. in 1811. Mr. Conybeare was one of the earliest promoters of the Geological Society, and the important services he has rendered to geological science may be seen in his numerous papers printed in the society's "Transactions." In 1839 he was Bampton lecturer, and was made dean of Llandaff in 1845. He died near Portsmouth, Aug. 12, 1857. Besides his numerous writings on geological topics, he published *The Christian Fathers during the Ante-Nicene Period* (Oxf. 1839, Bampton Lecture, 8vo); *Elementary Course of Theological Lectures* (Lond. 1836, sm. 8vo).

Conybeare, W. J., son of the preceding, was a frequent contributor to the *Edinburgh Review*, especially on ecclesiastical topics. Together with the Rev. J. S. Howson, he published the *Life and Epistles of St. Paul* (Lond. 1854, 2 vols. 8vo, reprinted in N. Y.; also abridged, 2 vols. 12mo), one of the best works of its class. He died in 1857.

Cook (male, טַבָּח, *tabbach'*, 1 Sam. ix, 23, 24; female, טַבָּחָה, *tabbachah'*, viii, 3, both properly a *slayer*), a person employed in families of rank to perform culinary service. Cooking (בִּשֵּׁל, *bashshel'*), however, among the Hebrews (at least in early times) was generally done by the matron of the family, even though she were a princess (Gen. xviii, 2-6; Judges vi, 19). Among the Egyptians the cook was a professional character. (See Wilkinson's *Ancient Egyptians*, i, 174, abridgm.) The process of cooking seems to have been very expeditiously performed (Gen. xxvii, 3, 4, 9, 10), and all the flesh of the slain animal, owing to the difficulty of preserving it in a warm climate, was commonly cooked at once, which is the custom of the East at the present day. (See Rosenmüller, *Morgenl.* ii, 117; Thomson, *Land and Book*, ii, 162.) See FOOD. The Assyrian monuments lately discovered by Layard and Botta contain similar delineations of eunuchs cooking over charcoal braziers, and engaged in other culinary operations, often attended by a servant with a fly-flap. See BAKE; CRACKNEL.

"As flesh-meat did not form an article of ordinary

Ancient Egyptian Kitchen.

Fig. 1. Killing and preparing the joints, which are placed at *a, b, c*. 2. Catching the blood for the purposes of cookery, which is removed in a bowl by fig. 3. 4 and 5. Employed in boiling meat in a large pot, *d*, and stirring the fire. 7. Preparing on a chopping-board, *p*, the meat for the caldron, which fig. 6 is taking to the fire. 8. Pounding some ingredients for the cook with a pestle, *r*, in a mortar, *q*. 9. Bringing a pile apparently of platters or bowls. *e*. Probably a piece of meat *f, h*. Apparently siphons for drawing liquids from various vessels, *l, m, n*. *g*. Perhaps bottles in a rack. *k*. Ropes passing through rings, *i, j*, and supporting different things, as a sort of safe. *s*. Probably plates. *t*. A coil. *u, v*. Tables.

diet among the Jews, the art of cooking was not carried to any perfection; and, owing to the difficulty of preserving it from putrefaction, few animals (other than sacrifices) were slaughtered except for purposes of hospitality or festivity. The proceedings on such occasions appear to have been as follow: On the arrival of a guest, the animal, either a kid, lamb, or calf, was killed (Gen. xviii, 7; Luke xv, 23), its throat being cut so that the blood might be poured out (Lev. vii, 26); it was then flayed, and was ready either for roasting (צָלָה) or boiling (בָּשַׁל); in the former case the animal was preserved entire (Exod. xii, 46), and roasted either over a fire (Exod. xii, 8) of wood (Isa. xliv, 16), or perhaps, as the mention of fire implies another method, in an oven, consisting simply of a hole dug in the earth, well heated, and covered up (Burckhardt, *Notes on Bedouins*, i, 240). The Paschal lamb was roasted by the first of these methods (Exod. xii, 8, 9; 2 Chron. xxxv, 13). Boiling, however, was the more usual method of cooking, both in the case of sacrifices, other than the Paschal lamb (Lev. viii, 31), and for domestic purposes (Exod. xvi, 23), so much so that בָּשַׁל, *bashal'*, *to cook*, generally included even *roasting* (Deut. xvi, 7). In this case the animal was cut up, the right shoulder being first taken off (hence the priest's joint, Lev. vii, 32), and the other joints in succession; the flesh was separated from the bones and minced, and the bones themselves were broken up (Micah iii, 3); the whole mass was then thrown into a caldron (Ezek. xxiv, 4, 5) filled with water (Exod. xii, 9), or, as we may infer from Exod. xxiii, 19, occasionally with milk, as is still usual among the Arabs (Burckhardt, *Notes*, i, 63), the prohibition 'not to seethe a kid in his mother's milk' having reference apparently to some heathen practice connected with the offering of the first-fruits (Exod. l. c.; xxxiv, 26), which rendered the kid so prepared unclean food (Deut. xiv, 21). No cooking was allowed the Jews on the Sabbath (Exod. xxxv, 3). See FIRE. The materials for making coals were grass and cow-dung. See FUEL. The caldron was boiled over a wood fire (Ezek. xxiv, 10); the scum which rose to the surface was from time to time removed, otherwise the meat would turn out loathsome (6); salt or spices were thrown in to season it (10); and when sufficiently boiled, the meat and the broth (מָרָק: Sept. ζωμός; Vulg. *jus*) were served up separately (Judg. vi, 19), the broth being used with unleavened bread, and butter (Gen. xviii, 8) as a sauce for dipping morsels of bread into (Burckhardt, *Notes*, i, 63). Sometimes the meat was so highly spiced that its flavor could hardly be distinguished: such dishes were called מַטְעַמִּים, *matammim'* (Gen. xxvii, 4; Prov. xxiii, 3). There is a striking similarity in the culinary operations of the Hebrews and Egyptians (Wilkinson's *Anc. Egypt.* ii, 374 sq.). Vegetables were usually boiled, and served up as pottage (Gen. xxv, 29; 2 Kings iv, 38). Fish was also cooked (Luke xxiv, 42), probably broiled. The cooking was in early times performed by the mistress of the household (Gen. xviii, 6); professional cooks were afterwards employed (1 Sam. viii, 13; ix, 23). The utensils required were: כִּירַיִם, *kira'yim* (Sept. χυτρόποδες; Vulg. *chytropodes*), a cooking range, having places for two or more pots, probably of earthenware (Lev. xi, 35); כִּיּוֹר, *kiyor'* (λέβης, *lebes*), a caldron (1 Sam. ii, 14); מַזְלֵג, *mazleg'* (κρεάγρα; *fuscinula*), a large fork or flesh-hook; סִיר, *sir* (λέβης; *olla*), a wide, open metal vessel, resembling a fish-kettle, adapted to be used as a wash-pot (Psa. lx, 8) or to eat from (Exod. xvi, 3); פָּרוּר, *parur'*; דּוּד, *dud*; קַלַּחַת, *kallach'ath*, pots probably of earthenware and high, but how differing from each other does not appear; and, lastly, צַלַּחַת, *tsallach'ath*, or צְלֹחִית, *tselochith'*, dishes (2 Kings ii, 20; xxi, 13; Prov. xix, 24; A. V. 'bosom')." The רֶצֶף, *re'tseph* (fem. רִצְפָה), was, according to Gesenius, a *hot stone*, used for baking on; or, as Winer thinks (in Simonis *Lex.* p. 926), for cooking milk or broth, by throwing it into the vessel; but

Fürst regards it as simply meaning live *embers*. See VICTUALS.

Royal Kitchen of the Ancient Assyrians.

Cook, Charles, D.D., one of the founders of French Methodism, was born in London, May 31, 1787. Skeptical in youth, he was converted at twenty-one, chiefly under the instruction of the Rev. Jacob Stanley. After spending a few years as tutor in a seminary, he entered the ministry of the Wesleyan Methodist Church in 1817. In 1818 he was sent to France, and commenced his ministry at Caen, in Normandy. He soon acquired a good French style, both in writing and speaking, and became eminently popular and useful as an evangelist. The Sunday-school Society and Bible Society were originated chiefly through the impulse given by him. In numerous evangelical journeys, especially in the south of France, he preached in the Reformed churches with great acceptance, and revivals of religion followed his labors. His administrative talent was very great. Merle d'Aubigné, in a letter to M. Gallienne, president of the French Conference, says that Cook "was to France, Switzerland, and Sardinia what Wesley was in his day to England." He died Feb. 21, 1858.—J. P. Cook, *Vie de Charles Cook* (Paris, 1862); Stevens, *History of Methodism*.

Cook, Russell S., an American Congregational clergyman, was born in New Marlborough, Mass., March 6, 1811. After being for a short time in a lawyer's office, he studied theology at the Theological Seminary at Auburn. In 1836 he was ordained pastor of the Congregational church in Lanesboro, Mass. In 1839 he was elected secretary of the American Tract Society, in which office he remained until 1856, when failing health obliged him to retire. He was a regular contributor to the *American Messenger*, the monthly organ of the society; and to his labor the development of the colportage system was greatly due. After a visit to Europe in 1856, he in 1857 became the secretary of the Sabbath Committee in New York, and in 1863 he added to his work on this committee several weeks of exhausting labor in organizing and energizing the Christian Commission in New York. He died at Pleasant Valley, near Poughkeepsie, N. Y., Sept. 4, 1864.—See *Annual American Cyclop. for* 1864, p. 354.

Cook, Valentine, a Methodist Episcopal minister. He was born in Pennsylvania (date wanting), of pious and cultivated parents; removed early to Western Virginia; was converted in youth; entered Cokesbury College while a boy, where he was one of the four boys placed on the charity foundation, and, after a partial course in 1787, entered the itinerant ministry in 1788. In 1794-7 he was presiding elder on Philadelphia and Pittsburg districts; and in 1798, missionary to Kentucky. In 1799 he took charge of Bethel Seminary, the second Methodist literary institution in America; afterwards was some time principal of Harrodsburg Academy, and finally removed to a farm near Russelville, Logan Co., Ky., where he resided until his death. In his youth he was very studious and serious, and became in subsequent life a good classical scholar. He had great reputation as an eloquent and effective minister. Many were converted by his preaching, and his influence was widely extended.—Stevenson, *Life of Cook* (Nashville, 1856, 12mo); *Methodist Quart. Rev.* April, 1859, p. 183; Geo. Peck, D.D., *Early Methodism* (N. Y. 1860, 12mo, p. 71, 72, 86); Sprague, *Annals*, vii, 151; Summers, *Biograph. Sketches*, p. 183.

Cooke, Parsons, D.D., an American Congregational minister, was born in Hadley, Mass., in 1800. He was educated at Williams College, where he graduated in 1821. In 1826 he was ordained as pastor of the Congregational church in Ware, Mass. After continuing in this pastorate for ten or eleven years, he became pastor of the First Congregational church in Lynn, Mass., with which he remained until his death, a period of twenty-eight years. While pastor at Lynn he established the "New England Puritan," which, after some time, was united with the "Recorder," under the name of the "Puritan Recorder," which name was later changed to that of the "Boston Recorder," of which Mr. Cooke became, and remained until his death, the senior editor. In 1829 he published a sermon on *The Exclusiveness of Unitarianism*, and afterwards several other controversial writings. He died at Lynn, Feb. 12, 1864.—See *Annual American Cyclop. for* 1864, p. 355.

Cookman, George Grimston, one of the most distinguished Methodist preachers, was born Oct. 21, 1800, at Kingston-upon-Hull, England. His father, a man of wealth and position, was a Wesleyan local preacher, and gave his children a thorough religious training and a careful academical education. In early youth Cookman gave promise of his powers in oratory by speeches at Sunday-school anniversaries, etc., which excited extraordinary interest. When about twenty-one years old he visited America on business for his father, and while at Schenectady, N. Y., he began his labors as a local preacher. In 1821 he returned to Hull, and entered into business with his father, exercising his talents meanwhile zealously in the Wesleyan local ministry. He continued in his father's firm during four years, but with a restless spirit; and finally, deciding to enter the ministry in America, he took passage for Philadelphia in 1825. After laboring a few months in that city as a local preacher, he was received into the Philadelphia Conference in 1826. He continued in the itinerant ranks, without intermission, the remainder of his life, laboring with indomitable energy, and constantly increasing ability and success, in various parts of Pennsylvania, New Jersey, Maryland, and the District of Columbia.

Mr. Cookman was slight, but sinewy in person, and capable of great endurance. His arms were long, which gave a striking peculiarity to his gestures. In the act of public speaking, every nerve and muscle of his lithe frame seemed instinct with the excitement of his subject. In 1838-39 he was chaplain to the American Congress, and the Hall of Representatives at Washington never echoed more eloquent tones than during his chaplaincy to Congress. Several of his distinguished hearers, both in Congress and the executive department of the government, were awakened to a personal interest in religion by his powerful appeals. Imagination was Mr. Cookman's dominant mental faculty. It can hardly be doubted that, had he devoted himself to the production of some work in this rare and difficult department of literature, he might have become a worthy disciple of the glorious old dreamer of Bedford Jail. On the 11th of March, 1841, he embarked in the ill-fated steamer President

for a visit to England, and was never heard of more. Few of his sermons and speeches have been published. A small volume of *Speeches* (N. Y. 1841, 18mo) contains those referred to above and some others. Some account of him is given by Dr. H. B. Ridgaway, in his *Life of the Rev. Alfred Cookman*, the son (N. Y. 1878).—*National Magazine*, Aug. 1855; *Methodist Quart. Review*, July, 1852; Sprague, *Annals*, vii, 711.

Cooper, Ezekiel, an early and celebrated Methodist preacher, born in Caroline County, Md., Feb. 22, 1763. He joined the Conference in 1785; labored from Boston to Baltimore as a travelling preacher for many years, and was editor and general agent of the Book Concern from 1799 to 1804. His abilities for this office were soon shown to be of the highest order. He gave to the "Book Concern" an impulse and organization which has rendered it the largest publishing establishment in the New World. After managing its interests with admirable success for six years, during which its capital stock had risen from almost nothing to forty-five thousand dollars, he resumed his itinerant labors, and continued them in Brooklyn, New York city, Wilmington, Del., Baltimore. etc., for eight years, when he located. He remained in the latter relation during eight years, when he re-entered the travelling ministry, but was soon afterwards placed on the supernumerary list in the Philadelphia Conference. He continued, however, for many years to perform extensive service, visiting the churches, and part of the time superintending a district. During the latter years of his life he resided in Philadelphia, where he died Feb. 21, 1847. He was distinguished for pulpit eloquence, logical ability, and especially for his multifarious knowledge, which obtained for him among his brethren the title of "the Walking Encyclopædia." He published a "Funeral Sermon" on Rev. John Dickens, and "the Substance of a Funeral Discourse on Rev. Francis Asbury," etc., Philad. 1819. The latter was a 32mo volume of 230 pages (Stevens, *Hist. of Meth. Epis. Church*, vol. iii; Sprague, *Annals*, vii, 108; *Minutes of Conferences*, iv, 104).

Cooper, Samuel, D.D., a Congregational minister, was born in Boston, March 28, 1725. He graduated at Harvard in 1743, and was chosen collegiate pastor with Dr. Colman in the Brattle-street Church, Dec. 31, 1744. He was ordained pastor May 21, 1746, and died Dec. 23, 1783. He was made D.D. by the University of Edinburgh in 1767. Dr. Cooper published a few occasional sermons, and wrote contributions for the Boston *Gazette and Independent Ledger*. He was elected president of Harvard in 1774, but did not accept.—Sprague, *Annals*, i, 440.

Cooper, Samuel C., a Methodist Episcopal minister, was born in Baltimore 1799, converted in Ohio 1818, acted efficiently as exhorter and local preacher for some years, and entered the itinerancy in 1827. He died at Greencastle, Ind., July, 1856. He filled the positions of pastor, presiding elder, and agent for the Asbury University with excellent success. He was twice delegate to the General Conference, and his attendance at the Conference of 1856 was his last service to the Church.—*Minutes of Conferences*, vi, 134.

Cooper, Thomas, a Methodist Episcopal minister, was born at Maidstone, Eng., in 1819; emigrated to America while young; was converted at Mount Vernon, Ohio, while a boy; studied with success at the Norwalk seminary under Dr. Thomson, and entered the itinerancy in 1842. As an agent of the Ohio Wesleyan University, a seamen's missionary, and in the regular pastoral work, he was very able and useful, until his sudden death by cholera, July, 1849.—Thomson, *Biographical Sketches*, p. 191.

Cooper, William, a Congregational minister, was a native of Boston, born in 1694, and graduated at Harvard 1712. He commenced preaching in 1715, and was ordained collegiate pastor of the Brattle-street Church, May 23, 1716. He was elected president of Harvard in 1737, but declined the honor. He died Dec. 12, 1743. Mr. Cooper published *A Tract defending Inoculation for the Small-pox* (1721); *The Doctrine of Predestination unto Life vindicated in four Sermons* (1740); and several occasional discourses.—Sprague, *Annals*, i, 288.

Co'ös [or rather Cos, as it is usually written] (Κῶς, contracted for Κόως, Anglicized "Coos" only in Acts xxi, 1), a small island (about 80 stadia in circumference, Strabo x, 488), one of the Sporades, in the Ægæan Sea, near the coast of Caria in Asia Minor, and almost between the promontories on which the cities Cnidus and Halicarnassus were situated (Plin. v, 36). Its more ancient names were *Cea*, *Staphylus*, *Nymphæa*, and *Meropis*, of which the last was the most common (Thucyd. viii, 41). Homer mentions it as a populous settlement (*Il.* ii, 184; xiv, 255), no doubt of Dorian origin. Its fertility is attested by its celebrity for wine (Plin. xv, 18; xvii, 30), its costly ointments (Athen. xv, 688), and its fabrics of a transparent texture (Horace, *Od.* iv, 13, 7; Tibull. ii, 4, 6). It was the birthplace of Hippocrates. "It is specified, in the edict which resulted from the communications of Simon Maccabæus with Rome, as one of the places which contained Jewish residents (1 Macc. xv, 23). Josephus, quoting Strabo, mentions that the Jews had a great amount of treasure stored there during the Mithridatic war (*Ant.* xiv, 7, 2). From the same source we learn that Julius Cæsar issued an edict in favor of the Jews of Cos (*ib.* 10, 15). Herod the Great conferred many favors on the island (Joseph. *War*, i, 21, 11); and an inscription in Böckh (No. 2502) associates it with Herod the Tetrarch. The apostle Paul, on the return from his third missionary journey, passed the night here, after sailing from Miletus. The next day he went on to Rhodes (Acts xxi, 1). The proximity of Cos to these two important places, and to Cnidus, and its position at the entrance to the Archipelago

Coins of Cos.

from the east, made it an island of considerable consequence. It was celebrated also for a temple of Æsculapius, to which a school of physicians was attached, and which was virtually, from its votive models, a museum of anatomy and pathology. The emperor Claudius bestowed upon Cos the privileges of a free state (Tac. *Ann.* xii, 61). The chief town (of the same name) was on the N.E., near a promontory called Scandarium, and perhaps it is to the town that reference is made in the Acts (l. c.)" (Smith). It is now called *Stanco* or *Stanchio* (a corruption of ἐς τὰν Κῶ), and presents to the view fine plantations of lemon-trees, intermixed with stately maples. Its population is about eight thousand, who mostly profess the Greek religion (Turner's *Tour in the Levant*, iii, 41). "There is a monograph on Cos by Küster (*De Co Insula*, Halle, 1833), and a very useful paper on the subject by Col. Leake (in the *Trans. of the Royal Soc. of Literature*, vol. i, second series). An account of the island will be found in Clarke's *Travels* (vol. ii, pt. i, p. 196-218,

and vol. ii, pt. ii, p. 821-838); but the best description is in Ross (*Reisen nach Kos, Halicarnassus, u. s. w.* Halle, 1852, with which his *Reisen auf den Griech. Inseln* should be compared, vol. ii [1843], p. 86-92; vol. iii [1845], p. 126-139)" (Smith). See also the *Penny Cyclopædia* and Smith's *Dict. of Class. Geogr.* s. v. Cos.

Cope (Lat. *capa*, Fr. *chape*), a sort of cloak, forming part of the sacerdotal vestments in the Roman Church. It was formerly worn by the clergy of the Church of England during divine service, but has fallen into disuse, except on such occasions as a coronation. It reaches from the neck nearly to the feet, and is open in front, except at the top, where it is fastened by a band or clasp. The canons of the Church of England describe it as a part of clerical dress. See Du Cange, s. v. *Capa*.

Copiātæ (*κοπιαταί*, from *κοπιάω, to toil*), undertakers, grave-diggers; in ancient times a subordinate class of servants of the Church and clergy, intrusted with the care of funerals and the burial of the dead. They are also called *vespillones, bispellones, νεκροθάπται*; also *ordo fossariorum, fossores*, grave-diggers; *lecticarii*, bearers of the bier; and *collegiati, decani*, collegiates and deans. The order is supposed to have been first instituted by Constantine, and in some codes they are designated *clerici*.—Bingham, *Orig. Eccl.* III, viii, 1.

Coping (also called *capping*), a course of stones, either flat or sloping, to throw off the water, especially used in the end walls of Gothic edifices.

COPING (טֶפַח, *te'phach*, a *hand-breadth*; Sept. *τὰ γεῖσα*) occurs in 1 Kings vii, 9, as an architectural term for the *corbils* (*mutuli*) or projecting stones in a wall on which the ends of the timbers are laid. See CORBEL.

Coponius (Græcized Κωπώνιος), the first Roman procurator of Judæa, established by Augustus after the banishment of Archelaus (Josephus, *War*, ii, 8, 1), A.D. 6. He was of the equestrian order (Josephus, *Ant.* xviii, 1, 1), and was succeeded by M. Ambivus (*ib.* 2, 2), A.D. 9. He was probably the same person as Caius Coponius, a prætor, who, having espoused the cause of Pompey, narrowly escaped execution by the triumvirs (Appian, *Bell. Civ.* iii, 40), but was afterwards held in great respect (Vell. Pat. ii, 83), and seems to have held an office in the imperial mint.—Smith's *Dict. of Class. Biog.* s. v.

Copleston, EDWARD, D.D., bishop of Llandaff and dean of St. Paul's, was born at Offwell, in Devonshire, of which parish his father was at once the patron and incumbent, Feb. 2, 1776. In 1791 he was elected to a scholarship at Corpus Christi, Oxford; in 1793 he obtained the chancellor's prize for a Latin poem; and in 1795 he was elected a fellow of Oriel College. In 1797 he was appointed college-tutor, though he had not then taken his degree of M.A. In 1802 he was elected professor of poetry to the University. He published in 1813 the substance of the lectures which he had delivered, under the title of *Prælectiones Academicæ*, a work which gained him a high reputation for elegant Latin composition. In 1814 he was elected provost of Oriel College, and soon afterwards the degree of D.D. was conferred upon him by diploma. His ablest work is *An Inquiry into the Doctrine of Necessity and Predestination, with Notes and an Appendix on the 17th Article of the Church of England* (London, 1821, 8vo). Between the years 1811 and 1822 he contributed many articles to the *Quarterly Review*. In 1826 he was appointed dean of Chester, and in 1827 he succeeded Dr. Sumner in the bishopric of Llandaff and deanery of St. Paul's. He died Oct. 14, 1849. Dr. Whately published, after Copleston's death, his *Remains, with Reminiscences of his Life* (8vo). See also W. J. Copleston, *Memoirs of E. Copleston, with Selections from his Diary and Correspondence*, etc. (London, 1851, 8vo).—*English Cyclopædia*, s. v.; *North British Review*, Feb. 1852; *English Review*, xvi, 243.

Copper (נְחשֶׁת, *necho'sheth* [whence also properly as an adjective, נָחוּשׁ, *nachush'*, *brazen*, fem. נְחוּשָׁה, *nechushah'*]; Greek *χαλκός*) occurs in the common translation of the Bible only in Ezra viii, 27 ("two vessels of *copper*, precious as gold," i. e. probably of a purer kind or more finely wrought than ordinary), being elsewhere incorrectly rendered "brass," and occasionally even "steel" (2 Sam. xxii, 35; Jer. xv, 12), i. e. hardened so as to take a temper like iron). "The expression 'bow of steel' (Job xx, 24; Psa. xviii, 34) should therefore be rendered 'bow of copper,' since the term for steel is פְּלָדָה, or בַּרְזֶל מִצָּפוֹן (*northern* iron). The ancients could hardly have applied copper to these purposes without possessing some judicious system of alloys, or perhaps some forgotten secret for rendering the metal harder and more elastic than we can make it. It has been maintained that the cutting-tools of the Egyptians, with which they worked the granite and porphyry of their monuments, were made of bronze, in which copper was a chief ingredient. The arguments on this point are found in Wilkinson (*Anc. Eg.* iii, 249, etc.), but they are not conclusive. There seems to be no reason why the art of making iron and excellent steel, which has for ages been practised in India, may not have been equally known to the Egyptians. The quickness with which iron decomposes will fully account for the non-discovery of any remains of steel or iron implements. For analyses of the bronze tools and articles found in Egypt and Assyria, see Napier (*Ancient Workers in Metal*, p. 88). This metal is usually found as pyrites (sulphuret of copper and iron), malachite (carb. of copper), or in the state of oxide, and occasionally in a native state, principally in the New World. It was almost exclusively used by the ancients for common purposes, for which its elastic and ductile nature rendered it practically available (see Smith's *Dict. of Class. Antiq.* s. v. Aes). It is a question whether in the earliest times iron was known. In India, however, its manufacture has been practised from a very ancient date by a process exceedingly simple, and possibly a similar one was employed by the ancient Egyptians (Napier, *ut sup.* p. 137). There is no certain mention of iron in the Scriptures; and, from the allusion to it as known to Tubal-Cain (Gen. iv, 22), some have ventured to doubt whether in that place בַּרְזֶל means iron (Wilkinson, *Anc. Eg.* iii, 242). The vessels of 'fine copper,' mentioned in Ezra viii, 27 (comp. 1 Esdr. viii, 57, 'vases of *Corinthian* brass'), were perhaps similar to those of 'bright brass' in 1 Kings vii, 45; Dan. x, 6. They may have been of *orichalcum*, like the Persian or Indian vases found among the treasures of Darius (Aristot. *De Mirab. Auscult.*). There were two kinds of this metal, one *natural* (Serv. *ad Æn.* xii, 87), which Pliny (*H. Nat.* xxxiv, 2, 2) says had long been extinct in his time, but which Chardin alludes to as found in Sumatra under the name *calmbac*; the other *artificial* (identified by some with *electrum*, *ἤλεκτρον*, whence the mistaken spelling *aurichalcum*), which Bochart (*Hieroz.* vi, ch. 16, p. 871 sq.) considers to be the Hebrew חַשְׁמַל, *chashmal'*, a word compounded (he says) of נְחשׁ (copper), and Chald. מְלָלָא (? gold, Ezek. i, 4, 27; viii, 2). On this substance, see Pausan. v, 12; Plin. xxxiii, 4, § 23. Gesenius considers the *χαλκολίβανον* of Rev. i, 15, to be *χαλκὸς λιπαρός*=חַשְׁמַל; he differs from Bochart, and argues that it means merely smooth or polished brass." See AMBER. "Many of the ancient copper alloys had to stand working by the hammer; and their working was such, either for toughness or hardness, that we cannot at the present day make anything like it" (Napier, *ut sup.* p. 54). The Mexicans and Peruvians, when first visited by the

Spaniards, were in possession of tempered implements of copper, and had the means of smelting, refining, and forging this metal. They were also able to harden it by alloying. "The metal used for this latter purpose was *tin;* and the various Peruvian articles subjected to analysis are found to contain from three to six per cent. of that metal" (Silliman's *Journal*, ii, 51). See METAL.

Tubal-Cain is recorded as the first artificer in brass and iron (Gen. iv, 22). In the time of Solomon, Hiram of Tyre was celebrated as a worker in brass (1 Kings vii, 14; comp. 2 Chron. ii, 14). To judge from Hesiod (*Op. et Dies*, 134) and Lucret. (v, 1285), the art of working in copper was even prior to that in iron, probably from its being found in larger masses, and from its requiring less labor in the process of manufacture. Palestine abounded in copper (Deut. viii, 9), the mines being apparently worked by the Israelites (Isa. li, 1); and David left behind him an immense quantity of it to be employed in building the Temple (1 Chron. xxii, 3–14). Of copper were made all sorts of vessels in the tabernacle and temple (Lev. vi, 28; Num. xvi, 39; 2 Chron. iv, 16; Ezra viii, 27), weapons, and more especially helmets, armor, shields, spears (1 Sam. xvii, 5, 6, 38; 2 Sam. xxi, 16), and bows (2 Sam. xxii, 35), also chains (Judg. xvi, 21), and even mirrors (Exod. xxxviii, 8; Job xxxvii, 18). The larger vessels were moulded in foundries, such as lavers, the great one being called "the copper sea" (2 Kings xxv, 13; 1 Chron. xviii, 8); also the pillars for architectural ornaments (1 Kings vii). It would, however, appear (1 Kings vii, 14) that the art of copper-founding was, even in the time of Solomon, but little known among the Jews, and was peculiar to foreigners, particularly the Phœnicians, who seem to have imported the material and even wrought articles from a distant quarter (Ezek. xxvii, 13), probably from the Moschi, etc., who worked the copper mines in the neighborhood of Mount Caucasus. Michaelis (*Mos. Recht*, iv, 217, 314) observes that Moses seems to have given to copper vessels the preference over earthen (Lev. vi, 28), and on that ground endeavors to remove the common prejudice against their use for culinary purposes. From copper, also, money was coined (Ezek. xvi, 36; Matt. x, 9). See BRASS.

COPPERSMITH (χαλκεύς, q. d. *brazier*, from χαλκός, *copper*), a worker in metals of any kind, a *smith* (Hesych. s. v.); a sense in which the word is used in other Greek writings (Hom. *Od.* ix, 391). Alexander, an opponent of Paul, is designated as being of this trade (2 Tim. iv, 14). See MECHANIC.

Coptic Church. See COPTS.

Coptic Language, a mixture of ancient Egyptian with Greek and Arabic words, spoken in Egypt after the introduction of Christianity. It is not now a spoken language, having been everywhere supplanted by the Arabic. It has not been spoken in Lower Egypt since the tenth century, but lingered for some centuries longer in Upper Egypt. It is, however, still used by the Copts in their religious services, but the lessons, after being read in Coptic, are explained in Arabic. The Coptic literature consists in great part of lives of saints and homilies, with a few Gnostic works (Chambers, s. v.). It is especially interesting as giving us a clew to the meaning of the *hieroglyphics* (q. v.) after they have been phonetically deciphered. It is divided into three dialects, the Memphitic, or Lower Egyptian, which is the most polished, and is sometimes exclusively called Coptic; the Sahidic, or Upper Egyptian; and the Bashmuric, which was spoken in the Delta, and of which only a few remains exist (*Penny Cyclopædia*, s. v.). See EGYPT. A full list of works on the subject is given by Jolowicz, *Bibliotheca Ægyptiaca*, p. 101 sq., 229; also the Supplem. p. 29 sq. See COPTS.

article, namely, *pi*, *p*, *f*, for the masc.; *t*, *th*, *ti*, for the fem.; *ni*, *nen*, for the common plur. The simple article is, sing. *u*, plur. *hau*. The plur. of nouns is expressed partly by the termination, as *-i*, *-u*, *-y*, *-x*; partly by an internal change. The cases are supplied by the enclitic additions: nom. *-enje*, gen. *-ente*, dat. and accus. *-e*. The adjectives are indeclinable, but are compared by means of *huo*=more, *emasho*=very. The numerals are: 1, *uai*; 2, *snau*; 3, *shomb*; 4, *ftŏu*; 5, *tiu*; 6, *sou*; 7, *shashf*; 8, *shmēn*; 9, *psib*; 10, *meb*, etc. The ordinals are formed from these by the addition of *-mak*. The personal pronouns are *anok*=I, *enthok* (masc.) and *entho* (fem.)=thou, *enthof*=he, *enthos*=she, *anon*=we, *enthōten*=ye, *enthŏu*=they. Abbreviated forms of these are used, some as possessives, etc., others as suffixes to nouns, verbs, and particles. But instead of them the words *ro* (i. e. "mouth"), *tot* (i. e. "hand"), etc., are commonly employed, with their various inflections. The tenses are formed partly by additional syllables, and partly by means of auxiliaries. There are grammars of the language by Kircher (Rome, 1636), Blumberg (Leipzig, 1716), Tuli (Rome, 1778), Scholz (Oxford, 1778), Valperga (Parma, 1783), Tattam (Lond. 1830, 2d ed. 1863), Rosellini (Rome, 1837), Peyron (Turin, 1841), Schwartze (Berl. 1850), Uhlemann (Lpz. 1853); and dictionaries by La Croze (Oxford, 1775), Tattam (ib. 1835), Peyron (Turin, 1835), and Parthey (Berl. 1840). See Nève, *Monuments de la langue Copte* (in the *Revue Catholique*, Louvain, 1853). For a reading-book the learner may use the so-called *Pistis Sophia*, published by Petermann (Latin version by Schwartze, Berlin, 1851).—Pierer, *Universal-Lexikon*, ix, 712.

Coptic Liturgy. See LITURGY.

Coptic Version. See EGYPTIAN VERSIONS.

Copts, a denomination of Monophysite Christians in Egypt. Some writers derive the name from *Coptos*, once a great city in Upper Egypt (Wilkins; Pococke), but it is generally taken as an abbreviation of the word Αἴγυπτος. The native Christians of Egypt chose this name when the Monophysite doctrines became prevalent among them, and they, on this account, fell out with the court of Constantinople. The Monophysites chose their own patriarch, while the imperial court sustained an orthodox patriarch at Alexandria. The Monophysites called themselves *Egyptian* or *Coptic* Christians, and gave to their opponents the nickname *Melchites*, i. e. Imperial Christians (from Melek, king; see Neander, *Ch. Hist.* vol. iii).

I. *History.*—The Copts are not an unmixed race. Their ancestors in the earlier times of Christianity intermarried with Greeks, Nubians, and Abyssinians. After the condemnation of Monophysitism by the Council of Chalcedon (A.D. 451), the Copts were oppressed so grievously that, from hatred of the Greeks, they facilitated the conquest of Egypt by the Mohammedans. We know from the Arabic historian Macrizi (see below) that at that time there were in Egypt only about 300,000 Jacobites, but several millions of Copts. Persecution and intermarriages with the Moslems greatly reduced their numbers in the course of time, and laid waste many of their churches and convents. It was not until the reign of Mehemet Ali, in the beginning of the 19th century, that they ceased to be a despised race. Some of them have since been raised to the rank of beys. The sad condition of the Coptic Church induced the Church Missionary Society of England in 1825 to send two German missionaries to Cairo for the purpose of awakening among them a new spiritual life. They established several schools and a small theological seminary for the training of priests, where, among others, also the present abuna of the Abyssinian Church was educated. The patriarch for some time seemed to favor the missionaries, and to aid their efforts for the education of the clergy and the circulation of the Bible, numerous copies of which have been repeatedly supplied by the Bible Society (500 in 1859, at the request of Dr. Tattam). The mission was subsequently transferred to the care of the United Presbyterian Church of the United States, and has since then greatly increased in extent and importance. Several native congregations have been constituted, and have been organized into the Missionary Presbytery of Egypt, in connection with the General Assembly of the Church in the United States. At the General Assembly for 1867 the following statistics of the Presbytery of Egypt were reported: ministers, 9; congregations, 3; families, 46; communicants, 126. Besides a number of valuable mission-schools, there is a theological school for training theological students in Osioot. For several years the mission has received a contribution of £1000 annually from the maharajah Dhuleep Singh, besides occasional liberal donations, the maharajah having met his wife in one of the mission-schools at Cairo. The maharajah also presented the missionaries at Cairo with a printing-press, which, up to 1867, has issued a selection of the book of Psalms and 3000 copies of Brown's *Short Catechism*. The Coptic patriarch instituted a fierce persecution against all the Copts associating with the missionaries, causing their children to be beaten and withdrawn from the schools, and burning all the Bibles and other religious books he could lay hands on. The Mussulman authorities at first countenanced these proceedings, but finally stopped them, in consequence of the representations of the American consul general.

II. *Doctrines.*—It has already been remarked that the Copts are Monophysites (q. v.). They hold seven sacraments. They postpone the baptism of male children forty days, and that of girls eighty days, and administer it only in church. In case of emergency, they substitute baptism for anointing. They agree with the Greek Church in using trine immersion, and also in the doctrine and administration of the Lord's Supper. Confession among them is rare, and is generally followed by unction. Unction in general is used among them very extensively in the case of sickness, and is administered not only to the sick, but also to the by-standers and to the dead. They invoke the saints, pray for the dead, and venerate images and relics, but they reject all sculptured representations except the cross. Their fasts are long, frequent, and rigorous. They observe four Lents—one before Easter, which commences nine days earlier than in the Latin Church; a second after the week of Pentecost, which lasts thirteen days; a third after the feast of Assumption, lasting fifteen days; and a fourth before Christmas, which lasts forty-three days for the clergy and twenty-three for the people.

III. *Worship.*—They have three liturgies, called after St. Basil, Gregory of Nazianzus, and Cyril of Alexandria (see LITURGY), which are translated into Coptic from the original Greek. They continue to use the Coptic language, though but few persons, even among the priests, understand it. The liturgical books have been translated into Arabic. The reading of homilies from the fathers is generally substituted for preaching. Instead of seats, the congregations are provided with crutches, on which they rest themselves during the service. One part of the worship is celebrated with the clangor of cymbals, in imitation of David's rejoicing before the Lord. The conduct of the priests at divine service is described by all travellers as careless, if not indecorous. In private, it is said, they abide more strictly than other Orientals by the prescribed daily services, which, in reference probably to David's resolution (Psa. cxix, 164), are seven in number. The full form enjoins the recital of one seventh part of the book of Psalms at each service; but there is a shorter form for the lower classes, containing in each of the seven daily prayers the "Pater" seven, and the "Kyrie Eleison" forty-one times—a string of

so many beads being used for the purpose. This service may be gone through while a person is walking, or riding, or pursuing any ordinary employment.

IV. *Present Condition and Ecclesiastical Statistics.*—In some parts of Upper Egypt there are still villages exclusively inhabited by Copts, and in every village of moderate size is a moallim (a title given to all Copts except those of the poor class or peasants), who keeps the register of the taxes. Most of the Copts in Cairo are employed as secretaries and accountants or tradesmen. They are the chief employés in the government offices; and as merchants, goldsmiths, silversmiths, jewellers, architects, builders, and carpenters, they are generally considered more skilful than the Moslems. In the villages they are employed in agriculture, like the rest of the peasantry. Petty causes among them are judged of by their clergy and the patriarch, but appeal may be made to the cadi. They bear a hatred to other Christian denominations, and are not permitted by their Church to intermarry with them. The clergy, on the whole, are poor and ignorant. At the head of the clergy stands the patriarch of Alexandria, who resides, however, in Cairo. His jurisdiction extends also over Nubia and Abyssinia, for which latter country he has the right of consecrating the *abuna* (q. v.). He himself is always chosen from among the monks of the convents of St. Macarius, in the desert of Scete. It is customary for the patriarch elect to decline the dignity, and only to yield to apparent force. Besides the patriarch, there are four metropolitans (Cairo, Lower Egypt, Codus, Mounoufia) and eleven bishops. They are appointed by the patriarch, and generally chosen among laymen who are widowers. Their income consists of tithes, which they collect for themselves and for the patriarch. The priests are generally simple mechanics, and, although they are at liberty to marry, they live mostly in celibacy. The number of churches and convents is said to amount to about 150. A few years ago Tattam and Curzon discovered in some of these convents a number of the most valuable manuscripts. The population is estimated from 150,000 to 250,000, of whom about 10,000 reside in Cairo. The number of Copts who have acknowledged the authority of the pope (United Copts since 1732) is about 10,000. In 1855 the pope appointed one of their priests vicar apostolic and bishop *in partibus*.—Makrizii *Historia Coptorum Christianorum in Ægypto, Arab. et in linguam Lat. translata*, ab H. J. Wetzer (Solisbaci, 1828); Schaff, *History of the Christian Church*, § 145; Stanley, *Eastern Church*, Lect. i; *Churchman's Calendar for* 1867, p. 168; *Evangelical Repository*, July, 1867.

Cor (כֹּר, *kor*, properly a *round* vessel; Gr. κόρος), a measure both for liquids and solids, containing ten ephahs or baths (Ezek. xlv, 14), and equal to the *homer* (q. v.). In 1 Kings iv, 22; v, 11; 2 Chron. ii, 10; xxvii, 5; Luke xvi, 7, it is rendered indefinitely "measure" (q. v.); but in 1 Esdr. viii, 20, it is correctly Anglicized. See METROLOGY.

Corăcin (κορακῖνος, a Latinized form for κορακινός, from κόραξ, *a raven*), a kind of fish (so called probably from its *black* color), found, according to Josephus (*War*, iii, 10, 8), in the spring of Capernaum (q. v.) and in the Nile (Theophylact, *Hist.* vii, 17; Oribasius, *Medic. Collect.* ii, 58); accustomed to leap like the salmon (Pliny, xxxii, 5, 10), and called likewise the *saperda* (Athenæus, vii, 16) and other names (Stevens, *Thes. Gr.* s. v.; Reland, *Palæst.* p. 274).

Coral is usually understood to be denoted by the word רָאמוֹת (*ramoth'*, literally *heights*, i. e. *high-priced* or valuable things, or from its *upright* growth; Sept. μετέωρα, but in Ezek. Ῥάμωθ), in Job xxviii, 18; Ezek. xxvii, 16; and this interpretation is not unsuitable (comp. Niebuhr, *Beschr.* p. 41), although the etymology is not well made out (Parcau, *De immortalitatis notitiis Iob* [Daventr. 1808], p. 321 sq.), and the dialects afford little support. According to the Rabbins, it means *red corals.* The ancient translators were evidently much perplexed to determine whether the word פְּנִינִים (*peninim'*, literally *branches;* rendered "rubies," Job xxviii, 18; Prov. iii, 15; viii, 11; xx, 15; xxxi, 10; Lam. iv, 7) meant corals or pearls. This will always be doubtful; but the text in Lam. iv, 7, by describing the article as *red*, suggests a preference of the former. It is scarcely credible, indeed, that such a product should have circulated under two different names (if *ramoth* also means coral); but surely there is no difficulty in conceiving that one word may have denoted *coral* generally, while another may have distinguished that *red coral* which was the most esteemed, and the most in use for ornament (see Gesenius, *Thes. Heb.* p. 1113, 1249).

Branch of Coral.

Coral is a hard, cretaceous marine production, arising from the deposit of calcareous matter by a minute polypous animal, in order to form the cell or polypidom into whose hollows the tenant can wholly or partially retire. The corals thus produced are of various shapes, most usually branched like a tree. The masses are often enormous in the tropical seas, where they top the reefs and cap the submarine mountains, frequently rising to or near the surface, so as to form what are called coral islands and coral reefs (see Kitto, *Pict. Bible*, on Job xxviii, 18). These abound in the Red Sea (Wellsted, *Trav.* ii, 181; Rüppel, *Abyssin.* i, 140), from which, most probably, was derived the coral with which the Hebrews were acquainted; but coral is also found in the Mediterranean. The coral brought by the merchants of Syria to Tyre must have come from the Indian seas, by the Euphrates and Damascus (comp. Plin. xxxii, 2). Coral was in higher esteem formerly as a precious substance than now, probably because the means of obtaining it in a fine state were not so efficacious as those now practised. It is of different colors—white, black, red. The red was anciently, as at present, the most valued, and was worked into various ornaments (Plin. xxxii, 11; comp. Hartmann, *Hebr.* i, 275 sq.). For the scientific classification of corals, see the *Penny Cyclopædia*, s. v. Polyparia. The red variety is the stony skeleton of a compound zoophyte, allied to the sea-anemones of our coasts. It forms a much-branching shrub, the beautiful scarlet stone constituting the solid axis, which is covered during life by a fleshy bark, out of which protrude here and there upon the surface

1. Stem of Coral. 2. Part enlarged to show the Zoophyte.

minute polypes with eight tentacles. It is found attached to the rocks at considerable depths, as from 20 to 120 fathoms. The demand for it has given rise to a fishery of some importance, about 180 boats being employed in it on the coast of Algeria, of which 156 fish in the neighborhood of Bona and Calla, obtaining 36,000 kilogrammes (about 720 cwt.) of coral; and this, selling at the rate of 60 francs per kilogramme, produces a return of $450,000. The mode by which it is obtained is the same which has always prevailed, and is rude and wasteful. A great cross of wood loaded with stones, and carrying at the end of each arm a sort of net formed of cords partly untwisted, is lowered from a boat, and dragged over the bottom. The branches of the corals are entangled in this apparatus, and, as the boat moves on, are torn off; at intervals it is pulled up, and the produce secured. Of course a great deal must be broken off which is not secured, but yet it is a profitable employment. A boat manned by nine or ten hands has been known to bring in 80 or 100 kilogrammes in a day, yielding $100 or $125; but such success is rare. The fishery is prosecuted from the 1st of April to the end of September, during which there may be on the average about 100 days in which the fishermen can work (Milne Edwards, *Hist. des Coralli̇nes*). See GEM.

Cor'ban (κορβᾶν, for קָרְבָּן, *korban'*, an *offering*), a Hebrew word (occurring frequently in the original of the O. T., but only in Lev. and Numb., except in Ezek. xx, 28; xl, 43) employed in the Hellenistic Greek, just as the corresponding Greek word δῶρον was employed in the Rabbinical Hebrew (Buxtorf, *Lex. Rab.* col. 579) to designate an *oblation* of any kind to God, whether bloody or bloodless, but particularly in fulfilment of a vow (Jahn, *Bibl. Arch.* v, § 392, 394). It occurs only once in the New Testament (Mark vii, 11), where it is explained (as also by Josephus, *Ant.* iv, 4, 4; *contra Ap.* i, 22) by the word "gift." Money, lands, and houses, which had been made the subject of this vow, became the property of the tabernacle or the Temple, except that the land might be redeemed before the year of Jubilee (Lev. xxvii, 1-24). Among other false doctrines taught by the Pharisees, who were the keepers of the sacred treasury (κορβανᾶς, from *corban*, Matt. xxvii, 6), was this, that as soon as a person had pronounced to his father or mother this form of consecration or offering, "Be it (*or*, It is) *corban* [i. e. devoted] whatever of mine shall profit thee" (קָרְבָּן שֶׁאֲנִי נֶהֱנֶה לָךְ), he thereby consecrated all he had spoken of to God, and must not thenceforth do anything for his indigent parents if they solicited support from him. Therefore our Lord reproaches them with having destroyed by their tradition not only that commandment of the Law which enjoins children to honor their father and mother, but also another divine precept, which, under the severest penalty, forbade that kind of dishonor which consists in contumelious words (Mark vii, 9; x, 13). They, however, proceeded even further than this unnatural gloss; for though the son did not give, or even mean to give, his property to the Temple, yet, if he afterwards should repent of his rashness, and wish to supply his parents with anything, what he had formerly said precluded the possibility of doing so, for, according to the Pharisaic doctrine, the sacred treasury had a claim upon him in preference to his parents, although he was perfectly at liberty to keep it to himself (see Lightfoot, *Hor. Heb.*, and Grotius, *Annot.*, on Matt. xv, 5). The law laid down rules for vows, 1. affirmative; 2. negative. By the former, persons, animals, and property might be devoted to God, but, with certain limitations, they were redeemable by money payments. By the latter, persons interdicted themselves, or were interdicted by their parents, from the use of certain things lawful in themselves, as wine, either for a limited or an unlimited period (Lev. xxvii; Num. xxx; Judg. xiii, 7; Jer. xxxv; comp. Josephus, *Ant.* iv, 4, 4; *War*, ii, 15, 1; see Acts xviii, 18; xxi, 23, 24). See VOW. Upon these rules the traditionists enlarged, and laid down that a man might interdict himself by vow, not only from using for himself, but from giving to another, or receiving from him some particular object, whether of food or any other kind whatsoever. The thing thus interdicted was considered as *corban*, and the form of interdiction was virtually to this effect: "I forbid myself to touch or be concerned in any way with the thing forbidden, as if it were devoted by law," i. e. "let it be *corban*." (The exact formula, קוֹנָם שֶׁאֲנִי נֶהֱנֶה לָךְ, "[that] has been given [to God], which [in respect to] me is beneficial to thee," of which the Evangelist's δῶρον, ὃ ἐὰν ἐξ ἐμοῦ ὠφεληθῇς seems a strict rendering, is cited by Schöttgen, *Hor. Hebr.* i, 138, from the Mishna, *Nedarim*, fol. 24, 1.) So far did they carry the principle that they even held as binding the incomplete exclamations of anger, and called them יָדוֹת, *handles*. A person might thus exempt himself from assisting or receiving assistance from some particular person or persons, as parents in distress; and, in short, from any inconvenient obligation under plea of *corban*, though by a legal fiction he was allowed to suspend the restriction in certain cases (Surenhusius, *Mischna, de Votis*, i, 4; ii, 2). It was with practices of this sort that our Lord found fault (Matt. xv, 5; Mark vii, 11), as annulling the spirit of the law. See OFFERING.

Theophrastus, quoted by Josephus (*Ap.* i, 22), notices the system, miscalling it a Phœnician custom, but in naming the word *corban* identifies it with Judaism. Josephus (*War*, ii, 9, 4) calls the treasury in which offerings for the Temple or its services were deposited, κορβανᾶς, *corbanas;* and Matthew (xxvii, 6) uses the same word to signify the treasury, saying that the chief priests did not think it lawful to put the money of Judas into it (εἰς τὸν κορβανᾶν) (Bingham, *Orig. Eccl.* v, 4, 2). Origen's account of the *corban*-system is that children sometimes refused assistance to parents on the ground that they had already contributed to the poor fund, from which they alleged their parents might be relieved. In the early Church, oblations were presented monthly, and they were always voluntarily placed in the treasury. Baronius thinks this treasury was called *corban*, because Cyprian uses the word when he speaks of the offerings of the people, rebuking a rich matron for coming to celebrate the Eucharist without any regard to the *corban*. See ALMS.

Cor'bè (Χορβέ, Vulg. *Choraba*), one of the captive Jews whose "sons" (to the number of 705) are stated to have returned from Babylon (1 Esdr. v, 12); apparently the ZACCAI (q. v.) of the Hebrew lists (Ezra ii, 9; Neh. vii, 14).

Corbel (Fr. *corbeille*, a basket), in Gothic architecture a projecting stone or timber to bear the superincumbent weight, usually of some architectural member of the structure, as the ribs or groins of an arch.

Great variety is used in ornamenting the corbel, it representing sometimes an animal, a human being, a plant, or a group of mouldings. See COPING.

Corbel-table, a row of corbels supporting a cornice, parapet, or other projecting part of a wall.

Corbey Manuscript (*Codex Corbeiensis*, so called from the abbey of Corbie or Corbey, in Picardy [see below], which once contained it), the name of a very ancient MS., or, rather, of two partially confused codices of the Gospels in the Old Latin version.

1. A MS. from which Martianay edited Matthew (in his *Vulgata Antiqua Latina*, etc., Par. 1695), and which is repeated by Blanchini (in his *Evangelarium Quadruplex*). Sabatier gives its various readings, but seems to confound it with the following.

2. A MS. defective in the first eleven chapters of Matthew. Its readings are cited in the three other Gospels by Blanchini, and throughout by Sabatier.

These texts (which are designated respectively as ff[1] and ff[2] of the Gospels) are mixed; they occasionally preserve good readings, but there is much officious revision (see Scrivener, *Introd. to N. T.* p. 257). See MANUSCRIPTS, BIBLICAL.

Corbie (*Corbeja Antiqua*, also called *Aurea* and *Gallica*), a Benedictine monastery in Picardy, France, built in 657 by St. Bathildis, wife of king Clovis II and mother of Clotaire III. The first monks in Corbie were Anglo-Saxons from Luxeuil, the monastery of St. Columban. Corbie remained one of the most prominent monasteries of the Benedictine order. An offshoot of Corbie was the German monastery at Corvey (q. v.).—Wetzer u. Welte, *Kirch.-Lex.* ii, 872.

Corbie-steps, the steps up the gable of a house; often used with very picturesque effect, but more common in domestic than in ecclesiastical architecture.

Corbinian, SAINT, born at Chartres in 680, was for fourteen years a hermit, and then went to Rome, where the pope, Gregory II, consecrated him bishop. He returned to his solitude, and afterwards travelled along the Danube and the Isar to preach. Duke Theodo II of Bavaria appointed him first bishop of Freising. He died in 730, and is commemorated as a saint on Sept. 8.—Pierer, *Universal-Lexikon*, s. v.; Butler, *Lives of Saints*, Sept. 8.

Corbit, ISRAEL S., a minister of the Methodist Episcopal Church, was born in Philadelphia, Feb. 16, 1817, and entered the itinerancy in the New Jersey Conference in 1844. He died at Bordentown, N. J., April 11, 1856. Mr. Corbit's ministry, in the most important stations of his Conference, was eminently successful. "A sublimity caught from long converse with the Bible and the Christian poets ran through all his thoughts. He was accomplished, eloquent, and laborious, and gave full proof of his ministry."—*Minutes of Conferences*, vi, 29.

Cord, the rendering in the Auth. Ver. of the following Heb. words: (1.) usually חֶבֶל, *che'bel* (but not חֵבֶל), a *rope* [see CHEBEL]; (2.) יֶתֶר, *ye'ther*, a *straw* ("withe," Judg. xvi, 7, 8, 9; tent-rope, "excellency," Job iv, 21; bow-"string," Psa. xi, 2; halter-"cord," Job xxx, 11); (3.) מֵיתָר, *meythar'*, a *line* (e. g. tent-rope, Exod. xxxv, 18; xxxix, 40; Num. iii, 26, 37; iv, 26, 32; Isa. liv, 2; Jer. x, 20; bow-"string," Psa. xxi, 12); (4.) עֲבֹת, *aboth'*, a *braid* (e. g. "wreathed" work, Exod. xxviii, 14, etc.; "band," Job xxxix, 10; Ezek. iii, 25; iv, 8; Hos. xi, 4; "rope," Judg. xv, 13, 14; Psa. ii, 3; cxviii, 27; cxxix, 4); (5.) חוּט, *chut* (Eccl. iv, 12, a "*thread*," Gen. xiv, 23; Josh. ii, 18; Judg. xvi, 12; Cant. iv, 3; "line," 1 Kings vii, 15; "fillet," Jer. lii, 21). The first of these terms is the most comprehensive, being from the root חָבַל, to *twist*, hence Engl. *cable*. This word occurs often in its proper sense, as well as in the special meanings of *measuring-line* (hence also *region*), *snare* (Psa. cxl, 5), and *bridle*. In Mic. ii, 5, it signifies "portion" (as it is frequently rendered elsewhere); and the phrase "cast a cord" denotes a change of inheritance, as in ver. 4. The same word has the secondary sense of a *band* of men (1 Sam. x, 5, 10), and *destruction* (Mic. ii, 10). See ROPE. "In the N. T. the term σχοινία is applied to the whip which our Saviour made (John ii, 15), and to the 'ropes' of a ship (Acts xxvii, 32). Alford understands it in the former passage of the rushes on which the cattle were littered; but the ordinary rendering *cords* seems more consistent with the use of the term elsewhere. (See below.)

"The materials of which cord was made varied according to the strength required; the strongest rope was probably made of strips of camel hide, still used by the Bedouins for drawing water (Burckhardt's *Notes*, i, 46); the Egyptians twisted these strips together into thongs for sandals and other purposes (Wilkinson, *Anc. Egypt.* iii, 145). The finer sorts were made of flax (Isa. xix, 9). The fibre of the date-palm was also used (Wilkinson, iii, 210); and probably reeds and rushes of various kinds, as implied in the origin of the word σχοινίον (Plin. xix, 9), which is generally used by the Sept. for חֶבֶל, and more particularly in the word אַגְמוֹן, *rush* (Job xli, 2), which primarily means a reed; in the Talmud (*Erubin*, fol. 58), bulrushes, osier, and flax are enumerated as the materials of which rope was made; in the Mishna (*Sotah*, i, § 6) the חבל מצרי, or Egyptian rope, is explained as *a rope of vines or osiers*. See MECHANIC.

"Of the various purposes to which cord, including under that term rope, and twisted thongs, was applied, the following are especially worthy of notice: (1.) For fastening a tent, in which sense מֵיתָר, *meythar'*, is more particularly used (e. g. Exod. xxxv, 18; xxxix, 40; Isa. liv, 2). As the tent supplied a favorite image of the human body, the cords which held it in its place represented the principle of life (Job iv, 21): 'Are not their tent cords (A. V. 'excellency') torn away?' (Eccl. xii, 6). (2.) For leading or binding animals, as a halter or rein (Psa. cxviii, 27; Hos. xi, 4), whence to 'loosen the cord' (Job xxx, 11) = to free from authority. (3.) For yoking them either to a cart (Isa. v, 18) or a plough (Job xxxix, 10). (4.) For binding prisoners, more particularly עֲבֹת, *aboth'* (Judg. xv, 13; Psa. ii, 3; cxxix, 4; Ezek. iii, 25), whence the metaphorical expression '*bands of love*' (Hos. xi, 4). (5.) For bow-strings (Psa. xi, 2), made of catgut; such are spoken of in Judg. xvi, 7 (יְתָרִים לַחִים, A. V. 'green withs;' but more properly νευραὶ ὑγραί, fresh or moist bow-strings). (6.) For the ropes or 'tacklings' of a vessel (Isa. xxxiii, 23). (7.) For measuring ground, the full expression being חֶבֶל מִדָּה (2 Sam. viii, 2; Psa. lxxviii, 55; Amos vii, 17; Zech. ii, 1); hence to 'cast a cord' = to assign a property (Mic. ii, 5), and cord or *line* became an expression for an inheritance (Josh. xvii, 14; xix, 9; Psa. xvi, 6; Ezek. xlvii, 13), and even for any defined district (e. g. the *line*, or tract, *of Argob*, Deut. iii, 4). See CHEBEL. (8.) For fishing and snaring. See FISHING; FOWLING; HUNTING. (9.) For attaching articles of dress: as the *wreathen chains* (עֲבֹת), which were rather twisted cords, worn by the high-priests (Exod. xxviii, 14, 22, 24; xxxix, 15, 17). (10.) For fastening awnings (Esth. i, 6). (11.) For attaching to a plummet. The line and plummet are emblematic of a regular rule (2 Kings xxi, 13; Isa. xxviii, 17); hence to destroy by line and plummet (Isa. xxxiv, 11; Lam. ii, 8; Amos vii, 7) has been understood as a regular systematic destruction (*ad normam et libellam*, Gesenius, *Thesaur.* p. 125); it may, however, be referred to the carpenter's level, which can only be used on a flat surface (comp. Thenius, *Comm.* in 2 Kings xxi, 13). (12.) For draw-

ing water out of a well, or raising heavy weights (Josh. ii, 15; Jer. xxxviii, 6, 13). (13.) To place a rope on the head (1 Kings xx, 31) in place of the ordinary head-dress was a sign of abject submission" (14.) The "small cords" (σχοινίον, a *rush-rope*) used by our Saviour in expelling the traders from the Temple (John ii, 15) were probably the same used for leading the animals for sacrifice and binding them to the altar (עֲבֹת, Psa. cxviii, 27). (15.) The same word is employed in Acts xxvii, 32, "ropes," i. e. *cordage*, with which the yawl-boats were secured to the ship (q. v.). See RUSH.

Among the figurative uses of the word the following are the most striking: (1.) To gird one's self with a cord was considered a token of sorrow and humiliation (1 Kings xx, 31-33; Job xxxvi, 8). (2.) To stretch a line or cord about a city signifies to ruin it, to destroy it entirely, and to level it with the ground (Lam. ii, 8). (3.) The cords (מֵיתָר) extended in setting up tents furnish several metaphors in the prophetical books (Isa. xxxiii, 20; Jer. x, 20). (4.) Hence to "loose one's cord" was a metaphor for dissolving one's comfort and hopes (יֶתֶר, *ye'ther*, elsewhere "withe"). (5.) "The cords of sin" (Prov. v, 22), metaphorically speaking, are the consequences of crimes and bad habits. (6.) The "silver cord" (i. e. composed of silvery threads, Eccl. xii, 6) is generally supposed to refer to the spinal marrow, to which, as to its form and color, it may not be inaptly compared. (7.) A "three-fold cord" (i. e. one of treble strands) is put as the symbol of union (Eccles. iv, 12, חוּט, *chut*, elsewhere "thread"). (8.) The "cords of a man," in Hos. xi, 4, are immediately explained as meaning "the bands of love," although some interpreters join this clause to the preceding sentence, and render it "amid the *desolations* of men," referring to the plagues of Egypt (Horsley, in loc.). See LINE. For *cords of Sheol*, see SNARES OF DEATH.

Cordeliers, a name given to the Franciscans (q. v.) in France. The name is said to have originated in the war of St. Louis against the Infidels, in which the friars having repulsed the barbarians, and the king having inquired their name, it was answered they were people *cordeliés*, that is, tied with ropes. See FRANCISCANS.

Cordonniers et Tailleurs, FRÈRES (brothers *Shoemakers and Tailors*), the title of a religious society founded in France by Henry Michael Buch, a shoemaker, in 1645. They chose as their patron Crispin and Crispinian, two sainted shoemakers. They lived in community, and under fixed statutes and officers, by which they were directed both in their temporal and spirtual concerns. The produce of their labor was put into a common stock to furnish necessaries for their support; any surplus was distributed among the poor. The society became extinct in the French Revolution.

Cordova, an ancient city of Spain (called by the Romans Corduba), seat of a Roman Catholic bishop, and noted for its cathedral church, which is the most beautiful of all Spain. 1. A celebrated *Synod of Cordova* was held on occasion of the persecution of Spanish Christians from 850 to 859, during the caliphate of Abderrahman II († 852) and of Mohammed. The synod was called at the wish of Abderrahman, in order to enjoin moderation upon monks and others who craved martyrdom by provoking the Mohammedans. In accordance with this wish, the council, of which the metropolitan Hostegis of Malaga seems to have been the leading spirit, forbade self-sought martyrdom. This action met at once with a determined opposition on the part of the rigorists, who called the synod *impium conciliabulum*. The acts of the council are lost, as it soon came to be generally disowned by the Spanish Church. 2. *The School of Cordova* was one of the most celebrated literary institutions of the Arabs in Spain. It was founded about 980 by caliph Hakem II, and had the largest Arabic library in Spain, which, according to one, undoubtedly exaggerated, account, numbered as many as 600,000 volumes. The school of Cordova became in particular celebrated for the impulse which it gave to the study of the Aristotelian philosophy. One of the most celebrated professors of Cordova was Averrhoes (q. v.). The conquest of Cordova by the Christians put an end to this school, as also to the flourishing Talmudic school of the same city.—Herzog, *Real-Encyklopädie*, s. v.

Co'rè (Κορέ), a mode of Græcizing (Ecclus. xlv, 18; Jude 11) the name of the rebellious KORAH (q. v.) of the Mosaic history (Num. xvi).

Corea, a dependency of China. It is an extensive peninsula, bounded east by the Sea of Japan, south by the Strait of Corea, west by the Yellow Sea and the Gulf of Leaotong, and north by Mantchuria. It is governed by a king, who, though tributary to China, exercises virtually an absolute power. The prevailing religion is Buddhism. Confucius also has many followers. The area is about 87,550 English square miles; the population, according to a census of 1793, was 7,342,361, and in 1885 was estimated at 8,500,000. The Roman Catholic missionaries in China and Japan speak of conversions of natives of Corea to their Church in the latter part of the 16th century. In the 17th century one of the kings of Corea was a patron of the celebrated Jesuit Adam Schall. There seems always since to have been some small number of Roman Catholics in Corea, and in 1800 the total number of Christians was reported to amount to 10,000; but the progress of the Church was prevented by constant persecution. Early in the present century the mission of Corea was placed under the Paris "Congregation of Foreign Missions." The missionaries greatly extol the zeal of the native converts, and report a number of accessions to their Church. Thus, in 1853, the number of catechumens who were admitted to baptism was stated to be 460. A new persecution broke out in February, 1866. Two Roman Catholic bishops and seven priests, all natives of France, were put to death by order of the king for preaching a forbidden religion. Three others succeeded in concealing themselves, and one of them arrived at Chefoo, China, having been sent by the other two to communicate the sad intelligence. The escaped missionary asserted that there were 50,000 converts in Corea, and that great consternation was produced among them by the fierceness of the persecution. The missionary proceeded to Pekin to invoke the aid of the French ambassador. In October, 1866, the French undertook an expedition against Corea, demanding the punishment of the three principal ministers who instigated the execution of the missionaries, and the conclusion of a treaty guaranteeing the Christians against future persecutions. The expedition was not successful, and in December returned to Shanghai. Mr. Williamson, the agent of the Scottish National Bible Society, wrote in 1866 from Chefoo, China, that he had visited two Roman Catholic natives of Corea who had come to that port. According to their statement, there are in Corea eleven European priests, who visit from house to house. They have no temples, but worship in private houses. They showed a catechism containing a full statement of their faith, in which Mr. Williamson was delighted to find much truth forcibly expressed. They appeared to be ignorant of any distinction between Protestantism and Roman Catholicism, and when Mr. Williamson spoke to them of Jesus, at once saluted him as "holy father." They agreed to act as the guides of the Rev. J. R. Thomas, who offered to accompany them, on their return to Corea, as the agent of the Bible Society. The mission of the Presbyterian board was first begun in

1844. It now has 25 communicants, 6 native helpers, and 25 pupils in school. In 1885 the Methodist Episcopal Church entered Corea. It has 12 foreign workers, 2 native ordained preachers, 4 communicants, 150 adherents, and 63 pupils. The National Bible Society of Scotland published, in 1886-7, two of the Gospels in Corean.

Corĕæ (Κορέαι), a fortified place mentioned by Josephus (*Ant.* xiv, 3, 4) as lying on the northern border of Judæa, on the route of Pompey to Jerusalem (*War*, i, 6, 5), and also visited by Vespasian, who marched in one day thither from Neapolis, and the next reached Jericho (*War*, iv, 8, 1). Near this place (πρός) was situated the fortress Alexandrium (q. v.), where the princes of Alexander Jannæus's family were mostly buried, and whither Herod carried the remains of his sons Alexander and Aristobulus (who were maternally of that family), after they had been put to death at Sebaste (Joseph. *Ant.* xiii, 24; xiv, 6, 10, 27; xvi, 2, et ult.). The situation of Coreæ, which determines that of the castle, is not known; but Dr. Robinson (*Bib. Researches*, iii, 83) conjectures that he may have found it in the modern *Kuriyet*, which is about eight miles S. by E. from Nablous (Shechem), and half an hour N. by E. of Shiloh (Ritter, *Erdk.* xv, 455). It is small, with no very definite traces of antiquity (Wolcott, in the *Bibliotheca Sacra*, 1843, p. 72). The similarity of name to that of Beth-car (Χόῤῥαια, Josephus, *Ant.* vi, 22) seems to be accidental. See EBENEZER.

Coreăthè (Κωρεάθη), an episcopal village of Trachonitis (Reland, *Palæst.* p. 218) mentioned in the early Church notices (S. Paulo, *Geogr. Sac.* p. 51); probably the modern *Kiratah* (Ritter, *Erdk.* xv, 866), on the southern edge of the Lejah (Porter, ii, 216).

Coriander (גַּד, *gad*, from the root גָּדַד, to make an *incision*, referring to the furrows in the seed). The Syriac, Chaldee, and Arabic, with the Sept. and Vulg., render this word coriander (Gesenius, *Thesaur. Heb.* p. 264), as does our version in Exod. xvi, 13; Num. xi, 7, the only passages where it occurs, and in both which the appearance of manna is compared to that of its seeds as to form, and in the former passage as to color also. See MANNA. According to Dioscorides also (iii, 64) the ancient Carthaginian name for coriander was *goid* (γοίδ), evidently kindred with the Hebrew *gad*. Celsius states (*Hierob.* ii, 78 sq.) that the coriander is frequently mentioned in the Talmud (where it is called כַּסְבַּר, *kasbar'*, or כּוּסְבַּר, *kusebar'*). It was known to and used medicinally by Hippocrates: it is mentioned by Theophrastus, as well as Dioscorides, under the name of κόριον or κορίαννον; and the Arabs, in their works on *Materia Medica*, give *korion* as the Greek synonym of coriander, which they call *kuzecreh*, the Persians *kushneez*, and the natives of India (compare Pliny, xx, 82) *dhunya*. It is known throughout all these countries, in all of which it is cultivated, being universally employed as a grateful spice, and as one of the ingredients of currie-powder (see Büsching, *Wöchentl. Nachr.* 1775, p. 42; Rauwolff, *Reise*, p. 94; Gmelin, *Reise durch Russl.* iii, 282). It is also found in Egypt (Prosp. Alpin. *Res. Æg.* ii, 9, p. 156). It is now very common in the south of Europe, and also in England, being cultivated, especially in Essex, on account of its seeds, which are required by confectioners, druggists, and distillers in large quantities; in gardens it is reared on account of its leaves, which are used in soups and salads (see Pereira's *Materia Medica*). The coriander is the *Coriandrum sativum* of botanists, an umbelliferous plant, with a round tall stalk. The flowers are small and pale pink, the leaves are much divided (especially the upper ones) and smooth. The fruit, commonly called seeds, is globular, grayish-colored, about the size of peppercorn, having its surface marked with fine striæ. Both its taste and smell are agreeable, depending on the presence of a volatile oil, which is separated by distillation (see *Penny Cyclopædia*, s. v.). See BOTANY.

Coriander, with enlarged views of the flower, pericarp, and section of hemisphere of the last.

Cor'inth (Κόρινθος, occurs Acts xviii, 1; xix, 1; 1 Cor. i, 2; 2 Cor. i, 1, 23; 2 Tim. iv, 20; "Corinthus," subscr. to Ep. to Rom.), a Grecian city, placed on the isthmus which joins Peloponnesus (now called the Morea) to the continent of Greece. A lofty rock rises above it, on which was the citadel, or the Acrocorinthus (Livy xlv, 28). It had two harbors: Cenchreæ, on the eastern side, about seventy stadia distant; and Lechæum, on the modern Gulf of Lepanto, only twelve stadia from the city (Strabo, viii, 6). Its earliest name, as given by Homer, is *Ephyre* (Ἐφύρη, *Il.* vi, 152); and mysterious legends connect it with Lycia, by means of the hero Bellerophon, to whom a plot of ground was consecrated in front of the city, close to a cypress grove (Pausan. ii, 2). Owing to the great difficulty of weathering Malea, the southern promontory of Greece, merchandise passed through Corinth from sea to sea, the city becoming an *entrepôt* for the goods of Asia and Italy (Strabo, viii, 6). At the same time, it commanded the traffic by land from north to south. An attempt made to dig through the isthmus was frustrated by the rocky nature of the soil; at one period, however, they had an invention for drawing galleys across from sea to sea on trucks. With such advantages of position, Corinth was very early renowned for riches, and seems to have been made by nature for the capital of Greece. The numerous colonies which she sent forth, chiefly to the west and to Sicily, gave her points of attachment in many parts; and the good will, which, as a mercantile state, she carefully maintained, made her a valuable link between the various Greek tribes. The public and foreign policy of Corinth appears to have been generally remarkable for honor and justice (Herod. and Thucyd. *passim*); and the Isthmian games, which were celebrated there every other year, might have been converted into a national congress, if the Corinthians had been less peaceful and more ambitious. When the Achæan league was rallying the chief powers of Southern Greece, Corinth became its military centre; and, as the spirit of freedom was active in that confederacy, they were certain, sooner or later, to give the Romans a pretence for attacking them. The fatal blow fell on Corinth (B.C 146), when L. Mummius, by order of the Roman

Corinth restored, as viewed from the Acrocorinthus.

senate, barbarously destroyed that beautiful town (Cicero, *Verr.* i, 21), eminent even in Greece for painting, sculpture, and all working in metal and pottery; and, as the territory was given over to the Sicyonians (Strabo, l. c.), we must infer that the whole population was sold into slavery.

The Corinth of which we read in the New Testament was quite a new city, having been rebuilt and established as a Roman colony, and *peopled with freedmen from Rome* (Pausanias and Strabo, *u. s.*) by the dictator Cæsar a little before his assassination. Although the soil was too rocky to be fertile, and the territory very limited, Corinth again became a great and wealthy city in a short time, especially as the Roman proconsuls made it the seat of government (Acts xviii) for *Southern* Greece, which was now called the province of Achaia. In earlier times Corinth had been celebrated for the great wealth of its temple of Venus, which had a gainful traffic of a most dishonorable kind with the numerous merchants resident there —supplying them with harlots under the forms of religion (hence κορινθιάζεσθαι = *scortari*, see Schotti *Adagia Gr.* p. 568). The same phenomena, no doubt, reappeared in the later and Christian age. The little which is said in the New Test. seems to indicate a wealthy and luxurious community, prone to impurity of morals; nevertheless, all Greece was so contaminated that we may easily overcharge the accusation against Corinth. We find Gallio, brother of the philosopher Seneca, exercising the functions of proconsul here during the apostle Paul's first residence at Corinth, in the reign of Claudius. This residence continued for a year and six months, and the circumstances which occurred during the course of it are related at some length (Acts xviii, 1-18). The apostle had recently passed through Macedonia. He came to Corinth from Athens; shortly after his arrival Silas and Timotheus came from Macedonia and rejoined him; and about this time the two epistles to the Thessalonians were written (probably A.D. 49 and 50). It was at Corinth that the apostle first became acquainted with Aquila and Priscilla, and shortly after his departure Apollos came to this city from Ephesus (Acts xviii, 27). Corinth was a place of great mental activity, as well as of commercial and manufacturing enterprise. Its wealth was so celebrated as to be proverbial; so were the vice and profligacy of its inhabitants. The worship of Venus here was attended with shameful licentiousness. All these points are indirectly illustrated by passages in the two epistles to the Corinthians, which

Map.

were written (probably A.D. 54), the first during Paul's stay at Ephesus, the second from Macedonia, shortly before the second visit to Corinth, which is briefly stated (Acts xx, 3) to have lasted three months. See CORINTHIANS (EPISTLES TO). During this visit (probably A.D. 55) the epistle to the Romans was written. From the three epistles last mentioned, compared with Acts xxiv, 17, we gather that Paul was much occupied at this time with a collection for the poor Christians at Jerusalem. It has been well observed that the great number of Latin names of persons mentioned in the epistle to the Romans is in harmony with what we know of the colonial origin of a large part of the population of Corinth. According to Philo (*Opp.* ii, 587), it was extensively colonized by Jews. From Acts xviii we may conclude that there were many Jewish converts in the Corinthian church, though it would appear (1 Cor. xii, 2) that the Gentiles predominated. On the other hand, it is evident from the whole tenor of both epistles that the Judaizing element was very strong at Corinth. Party spirit also was extremely prevalent, the names of Paul, Peter, and Apollos being used as the watchwords of restless factions. Among the eminent Christians who lived at Corinth were Stephanas (1 Cor. i, 16; xvi, 15, 17), Crispus (Acts xviii, 8; 1 Cor. i, 14), Caius (Rom. xvi, 23; 1 Cor. i, 14), and Erastus (Rom. xvi, 23; 2 Tim. iv, 20). The epistle of Clement to the Corinthians is among the most interesting of the post-apostolic writings. The Corinthian church is remarkable in the epistles of Paul by the variety of its spiritual gifts, that seem for the time to have eclipsed or superseded the office of the elder or bishop, which in most churches became from the beginning so prominent. Very soon, however, this peculiarity was lost, and the bishops of Corinth take a place co-ordinate to those of other capital cities. One of them, Dionysius, appears to have exercised great influence over many and distant churches in the latter part of the second century (Eusebius, *Hist. Eccles.* iv, 23). In the year 268 of the Christian era the city was burned by the Goths, and in 525 it was destroyed by an earthquake. During the Middle Ages Corinth shared the fate of many of the cities of Greece in being wrested from the emperors of Constantinople and possessed by a succession of adventurers, and at length formed a part of the duchy of Athens, ruled first by the French, then by the Arragonese kings of Sicily, and finally by the Accaioli, a family of Florence, from whom it was taken by Mohammed II in 1460. During a war between the Venetians and the Turks, it was captured by the former in 1687, but was recovered by the Turks in 1715, and held by them until the period of the Greek revolution, when it became the seat of the new government, although taken and retaken more than once during the war. Corinth is still an episcopal see. The cathedral church of St. Nicholas, "a very mean place for such an ecclesiastical dignity," used in Turkish times to be in the Acrocorinthus. The city has now shrunk to a wretched village, on the old site, and bearing the old name, which, however, is often corrupted into *Gortho* (see Hassel, *Handbuch der neuest Erdbeschreib.* III, i, 673 sq.).

Pausanias, in describing the antiquities of Corinth as they existed in his day, distinguishes clearly between those which belonged to the old Greek city and those which were of Roman origin. Two relics of Roman work are still to be seen, one a heap of brick-work which may have been part of the baths erected by Hadrian, the other the remains of an amphitheatre

Coins of Corinth.

with subterranean arrangements for gladiators. Far more interesting are the ruins of the ancient Greek temple—the "old columns which have looked down on the rise, the prosperity, and the desolation of two [in fact, three] successive Corinths." At the time of Wheler's visit in 1676 twelve columns were standing; before 1795 they were reduced to five; and further injury has very recently been inflicted by an earthquake. It is believed that this temple is the oldest of which any remains are left in Greece. There are also distinct traces of the Posidonium, or sanctuary of Neptune, the scene of the Isthmian games, from which Paul borrows some of his most striking imagery in 1 Cor. and other epistles. See GAMES. The fountain of Peirene, "full of sweet and clear water," as it is described by Strabo, is still to be seen in the Acrocorinthus, as well as the fountains in the lower city, of which it was supposed by him and Pausanias to be the source. The walls on the Acrocorinthus were in part erected by the Venetians, who held Corinth for twenty-five years in the 17th century. This city and its neighborhood have been described by many travellers, but we must especially refer to Leake's *Morea*, iii, 229-304 (London, 1830), and his *Peloponnesiaca*, p. 392 (London, 1846); Curtius, *Peloponnesos*, ii, 514 (Gotha, 1851-1852); Clark, *Peloponnesus*, p. 42-61 (London, 1858). See also Pauly, *Real-Encykl.* ii, 643 sq.; Pott, *Prolegg. in 1 ad Cor.*; Conybeare and Howson, *St. Paul*, ch. xii. There are four German monographs on the subject—Wilckens, *Rerum Corinthiacarum specimen ad illustrationem utriusque Epistolæ Paulinæ* (Bremen, 1747; also in Oelrich's *Collect. Opusc.* i, 427 sq.); Walch, *Antiquitates Corinthiacæ* (Jena, 1761); Wagner, *Rerum Corinthiacarum specimen* (Darmst. 1824); Barth, *Corinthiorum Commercii et Mercaturæ Historiæ particula* (Berlin, 1844). For a full elucidation of the history and topography of the city, see Smith's *Dict. of Classical Geography*, s. v. Corinthus. See ACHAIA.

Corin'thian (Κορίνθιος), an inhabitant (Acts xviii, 8; 2 Cor. vi, 11) of the city of Corinth (q. v.).

CORINTHIAN ORDER, the latest developed and the most ornamental of the three orders of Greek architecture. The column (q. v.) is about ten diameters in height, and is fluted. The capital is over a diameter of the column in height, has two rows of richly-carved leaves of acanthus, olive, or other plant, from above which roll out volutes, surmounted by leaves, and crowned by a moulding, called the abacus. The base is richly moulded. The Corinthian order was largely introduced in the Renaissance architecture, both in ecclesiastical and civil buildings. See ARCHITECTURE.

Corinthians, FIRST EPISTLE TO THE. 1. The testimony of Christian antiquity is full and unanimous in ascribing this inspired production to the pen of the apostle Paul (Lardner's *Credibility*, *Works*, vol. ii, *plur. loc.*; see also Heydenreich, *Comment. in priorem D. Pauli ad Cor. epist. Proleg.* p. 20; Schott, *Isagoge in N. T.* p. 236, 239 sq.). The external evidences (Clem. Rom. *ad Cor.* ch. 47, 48; Polycarp, *ad Phil.* ch. 11; Ignat. *ad Eph.* ch. 2; Irenæus, *Hær.* iii, 11, 9; iv, 27, 8; Athenag. *de Resurr.* p. 61, ed. Col.; Clem. Alex. *Pædag.* i, 33; Tertull. *de Præscr.* ch. 33) are extremely distinct, and with this the internal evidence arising from allusions, undesigned coincidences, style, and tone of thought fully accords (see Davidson, *Introd.* ii, 253 sq.).

2. The epistle seems to have been occasioned partly by some intelligence received by the apostle concerning the Corinthian church from the domestics of Chloe, a pious female connected with that church (i, 11), and probably also from common report (ἀκούεται, v, i), and partly by an epistle which the Corinthians themselves had addressed to the apostle, asking advice and instruction on several points (vii, 1), and which probably was conveyed to him by Stephanas, Fortunatus, and Achaicus (xvi, 17). Apollos, also, who succeeded the apostle at Corinth, but who seems to have been with him at the time this epistle was written (xvi, 12), may have given him information of the state of things among the Christians in that city. From these sources the apostle had become acquainted with the painful fact that since he had left Corinth (Acts xviii, 18), the church in that place had sunk into a state of great corruption and error. One prime source of this evil state of things, and in itself an evil of no inferior magnitude, was the existence of schisms or party divisions in the church. "Every one of you," Paul tells them, "saith I am of Paul, and I of Apollos, and I of Cephas, and I of Christ" (i, 12). This has led to the conclusion that four great parties had arisen in the church, which boasted of Paul, Apollos, Peter, and Christ as their respective heads. By what peculiarities of sentiment these parties may be supposed to have been distinguished from each other it is not difficult, with the exception of the last, to conjecture. It appears that the schisms arose merely from quarrels among the Corinthians as to the comparative excellence of their respective teachers—those who had learned of Paul boasting that he excelled all others, and the converts of Apollos and Peter advancing a similar claim for them, while a fourth party haughtily repudiated all subordinate teaching, and pretended that they derived all their religious knowledge from the direct teaching of Christ. The language of the apostle in the first four chapters, where alone he speaks directly of these schisms, and where he resolves their criminality, not into their relation to false doctrine, but into their having their source in a disposition to glory in men, must be regarded as greatly favoring this view. (Comp. also 2 Cor. v, 16.)

The few facts supplied to us by the Acts of the Apostles, and the notices in the epistle, appear to be as follows: The Corinthian church was planted by the apostle himself (1 Cor. iii, 6) in his second missionary journey, after his departure from Athens (Acts xviii, 1 sq.). He abode in the city a year and a half (ch. xviii, 11), at first in the house of Aquila and Priscilla (ch. xviii, 3), and afterwards, apparently to mark emphatically the factious nature of the conduct of the Jews, in the house of the proselyte Justus. A short time after the apostle had left the city the eloquent Jew of Alexandria, Apollos, after having received, when at Ephesus, more exact instruction in the Gospel from Aquila and Priscilla, went to Corinth (Acts xix, 1), where he preached, as we may perhaps infer from Paul's comments on his own mode of preaching, in a *manner* marked by unusual eloquence and persuasiveness (comp. ch. ii, 1, 4). There is, however, no reason for concluding that the *substance* of the teaching was in any respect different from that of Paul (see ch. i, 18; xvi, 12). This circumstance of the visit of Apollos, owing to the sensuous and carnal spirit which marked the church of Corinth, appears to have formed the commencement of a gradual division into two parties, the followers of Paul, and the followers of Apollos (comp. ch. iv, 6). These divisions, however, were to be multiplied; for, as it would seem, shortly after the departure of Apollos, Judaizing teachers, supplied probably with letters of commendation (2 Cor. iii, 1) from the church of Jerusalem, appear to have come to Corinth, and to have preached the Gospel in a spirit of direct antagonism to Paul *personally*, in every way seeking to depress his claims to be considered an apostle (1 Cor. xi, 2), and to exalt those of the Twelve, and perhaps especially of Peter (ch. i, 12). To this third party, which appears to have been characterized by a spirit of excessive bitterness and faction, we may perhaps add a fourth, that, under the name of "the followers of Christ" (ch. i, 12), sought at first to separate themselves from the factious adherence to particular teachers, but were eventually driven by antagonism into positions equally sectarian and inimical to the

unity of the church. At this momentous period, before parties had become consolidated, and had distinctly withdrawn from communion with one another, the apostle writes; and in the outset of the epistle (ch. i-iv, 12) we have his noble and impassioned protest against this fourfold rending of the robe of Christ. This spirit of division appears, by the good providence of God, to have eventually yielded to his apostolic rebuke, as it is noticeable that Clement of Rome, in his epistle to this church (ch. 47), alludes to these evils as long past, and as but slight compared to those which existed in his own time. See DIVISIONS (IN THE CHURCH AT CORINTH).

Besides the schisms and the erroneous opinions which had invaded the church at Corinth, the apostle had learned that many immoral and disorderly practices were tolerated among them, and were in some cases defended by them. A connection of a grossly incestuous character had been formed by one of the members, and gloried in by his brethren (v, 1, 2); lawsuits before heathen judges were instituted by one Christian against another (vi, 1); licentious indulgence was not so firmly denounced and so carefully avoided as the purity of Christianity required (vi, 9-20); the public meetings of the brethren were brought into disrepute by the women appearing in them unveiled (xi, 3-10), and were disturbed by the confused and disorderly manner in which the persons possessing spiritual gifts chose to exercise them (xii-xiv); and, in fine, the *ἀγάπαι*, which were designed to be scenes of love and union, became occasions for greater contention through the selfishness of the wealthier members, who, instead of sharing in a common meal with the poorer, brought each his own repast, and partook of it by himself, often to excess, while his needy brother was left to fast (xi, 20-34). The judgment of the apostle had also been solicited by the Corinthians concerning the comparative advantages of the married and the celibate state (vii, 1-40), as well as, apparently, the duty of Christians in relation to the use for food of meat which had been offered to idols (viii, 1-13). For the correction of these errors, the remedying of these disorders, and the solution of these doubts, this epistle was written by the apostle.

3. The epistle consists of four parts. The first (i-iv) is designed to reclaim the Corinthians from schismatic contentions; the second (v-vi) is directed against the immoralities of the Corinthians; the third (vii-xiv) contains replies to the queries addressed to Paul by the Corinthians, and strictures upon the disorders which prevailed in their worship; and the fourth (xv-xvi) contains an elaborate defence of the Christian doctrine of the resurrection, followed in the close of the epistle by some general instructions, intimations, and greetings.

The apostle opens with his usual salutation and with an expression of thankfulness for their general state of Christian progress (ch. i, 1-9). He then at once passes on to the lamentable divisions there were among them, and incidentally justifies his own conduct and mode of preaching (ch. i, 10; iv, 16), concluding with a notice of the mission of Timothy, and of an intended authoritative visit on his own part (ch. iv, 17-21). The apostle next deals with the case of incest that had taken place among them, and had provoked no censure (ch. v, 1-8), noticing, as he passes, some previous remarks he had made upon not keeping company with fornicators (ch. v, 9-13). He then comments on their evil practice of litigation before heathen tribunals (ch. vi, 1-8), and again reverts to the plague-spot in Corinthian life, fornication and uncleanness (ch. vi, 9-20). The last subject naturally paves the way for his answers to their inquiries about marriage (ch. vii, 1-24), and about the celibacy of virgins and widows (ch. vii, 25-40). The apostle next makes a transition to the subject of the lawfulness of eating things sacrificed to idols, and Christian freedom generally (ch. viii), which leads, not unnaturally, to a digression on the manner in which he waved his apostolic privileges and performed his apostolic duties (ch. ix). He then reverts to and concludes the subject of the use of things offered to idols (ch. x-xi, 1), and passes onward to reprove his converts for their behavior in the assemblies of the church, both in respect to women prophesying and praying with uncovered heads (ch. xi, 2-16), and also their great irregularities in the celebration of the Lord's Supper (ch. xi, 17-34). Then follow full and minute instructions on the exercise of spiritual gifts (ch. xii-xiv), in which is included the noble panegyric of charity (ch. xiii), and further a defence of the doctrine of the resurrection of the dead, about which doubts and difficulties appear to have arisen in this unhappily divided church (ch. xv). The epistle closes with some directions concerning the contributions for the saints at Jerusalem (ch. xvi, 1-4), brief notices of his own intended movements (ch. xvi, 5-9), commendation to them of Timothy and others (ch. xvi, 10-18), greetings from the churches (ch. xvi, 19, 20), and an autograph salutation and benediction (ch. xvi, 21-24).

4. From an expression of the apostle in ch. v, 9, it has been inferred by many that the present was not the first epistle addressed by Paul to the Corinthians, but that it was preceded by one now lost. For this opinion, however, the words in question afford a very unsatisfactory basis. They are as follows: *ἔγραψα ὑμῖν ἐν τῇ ἐπιστολῇ, κ. τ. λ.* Now these words must be rendered either "I have written to you in *this* epistle," or "I wrote to you in *that* epistle;" and our choice between these two renderings will depend partly on grammatical and partly on historical grounds. As the aorist *ἔγραψα* may mean either "I wrote" or "I have written," nothing can be concluded from it in either way. It may be doubted, however, whether, had the apostle intended to refer to a former epistle, he would have used the article *τῇ* simply, without adding *προτέρᾳ*, "former;" while, on the other hand, there are cases which clearly show that, had the apostle intended to refer to the present epistle, it was in accordance with his practice to use the article in the sense of "*this*" (comp. *ἡ ἐπιστολή*, Coloss. iv, 16, *τὴν ἐπιστ.* 1 Thess. v, 27). In support of this conclusion it may be added, 1st, that the apostle had really in this epistle given the prohibition to which he refers, viz., in the verses immediately preceding that under notice; and that his design in the verses which follow is so to explain that prohibition as to preclude the risk of their supposing that he meant by it anything else than that *in the church* they should not mingle with immoral persons; 2d, that it is not a little strange that the apostle should, only in this cursory and incidental manner, refer to a circumstance so important in its bearing upon the case of the Corinthians as his having already addressed them on their sinful practices; and, 3d, that, had such an epistle ever existed, it may be supposed that some hint of its existence would have been found in the records of the primitive Church, which is not the case. Alford, indeed (*Comment.* in 2 Cor. i, 16), thinks that 1 Cor. iv, 18, contains an allusion likewise to the lost letter, but the information there spoken of may easily have been otherwise communicated. On these grounds we strongly incline to the opinion that the present is the first epistle which Paul addressed to the Corinthians (Bloomfield, *Recensio Synopt.* in loc.; Billroth's *Commentary*, Eng. tr., i, 4, note *a*). The same view is taken by Lange (*Apost. Zeitalt.* i, 205) and others.

5. There is a general agreement as to the date (at least the *place*) of this epistle. It was written from Ephesus (chap. xvi, 8), probably about the time of Passover (chap. v, 7, 8) of the apostle's third year there (Acts xix, 10; xx, 31), after his first severe treatment (chap. xv, 32; Acts xix, 9) had somewhat abated (chap. xvi, 9; Acts xix, 17), and when he had formed the purpose of a journey through Macedonia and

Greece (chap. xvi, 5; Acts xix, 21), and before the culminating act of mobbing (which cannot in any case be referred to in chap. xv, 32, since the apostle was still in Asia, chap. xvi, 19; and he mentions this incident in his next letter as a special piece of news, 2 Cor. i, 8), that only served to expedite his plan (Acts xx, 1; comp. xix, 29). See ACTS. This opinion is further verified by the following coincidences: [chap. i, 1, "Sosthenes" here was a *Christian*, and therefore different from the president of the synagogue at Corinth, Acts xviii, 17] chap. i, 11-16; ii, 1; iii, 1-6, Paul had left the Corinthian church in its infancy some time since, and Apollos had visited them meanwhile (Acts xviii, 18; xix, 1); chap. iv, 17, 19; xvi, 10, 11, Paul had just sent Timothy to them, and designed visiting them himself shortly (Acts xix, 21, 22; xx, 1, 2); chap. xv, 32, he had some time previously been violently opposed (ἐμάχησα) at Ephesus (Acts xix, 9); chap. xvi, 1, he had visited Galatia not very long before (Acts xviii, 23); chap. xvi, 5-7, he was about to set out for Macedonia, and thence to Corinth, where he designed to spend the coming winter (Acts xx, 1-3); chap. xvi, 8, he still expected to stay (ἐπιμενῶ) at Ephesus till Pentecost, which stay was prolonged till the uproar about Diana (Acts xix, 22, 23); chap. xvi, 3, 4, he afterwards designed to visit Jerusalem (Acts xix, 21) [chap. xvi, 12, Apollos was at this time in the vicinity of Paul, but was not about to revisit Corinth just yet, Acts xix, 1]; chap. xvi, 19, Paul was surrounded by the churches of Asia, in the capital of which Aquila and Priscilla were now settled (Acts xviii, 18, 19, 26). Finally, the *subscription* (so far as of any authority) agrees with all this (comp. chap. xvi, 17), except as to Timothy, who was then on his way to Corinth (chap. iv, 17; xvi, 10) [for from 2 Cor. viii, 17, 18, it does not necessarily follow that Timothy (even supposing him to be there alluded to) did not visit Corinth till afterwards]; and also except as to the date at Philippi (the best copies read Ephesus), an error of tradition apparently arising from the fact that Paul was doubtless expecting to pass through (διέρχομαι) that city (Acts xx, 6). See TIMOTHY. (Comp. Conybeare and Howson's *Life and Epistles of St. Paul*, ii, 33). The date assigned this epistle by the foregoing particulars is the spring of A.D. 54. The bearers were probably (according to the common subscription) Stephanas, Fortunatus, and Achaicus, who had been recently sent to the apostle, and who, in the conclusion of this epistle (chap. xvi, 17), are especially commended to the honorable regard of the church of Corinth. For *commentaries*, see below. Of treatises on special points we may name the following (in Latin): those of Faust on the alleged lost epistle (Argent. 1671); on the schisms of the Corinthian Church, Dorscheus (Hafn. 1722), Mosheim (Helmst. 1726), Schongard (Hafn. 1733), Vitringa (*Obs. sacr.* iii, 800 sq.); on "leading about a wife," Quistorp (Rost. 1692), Witte (Viteb. 1691); on other national allusions, Olearius (Lips. 1807), Schlæger (Helmst. 1739), Wolle (Lips. 1731). See PAUL.

CORINTHIANS, SECOND EPISTLE TO THE. 1. We have seen above that, when writing his first epistle to the Corinthians, Paul expected shortly to visit them, and had indeed formed a detailed plan of the journey. But we may safely infer from 2 Cor. i, 15, 16, 23, that Paul had not been at Corinth between the writing of the first and second epistles, so that we must place his second epistle very soon after the writing of the first epistle, probably on his arrival at Philippi. The place whence it was written was clearly not Ephesus (see chap. i, 8), but Macedonia (chap. vii, 5; viii, 1; ix, 2), whither the apostle went by way of Troas (chap. ii, 12), after waiting a short time in the latter place for the return of Titus (chap. ii, 13). The Vatican MS., the bulk of later MSS., and the old Syr. version, positively assume Philippi as the exact place whence it was written; that the bearers were Titus and his associates (Luke?) is apparently substantiated by chap. viii, 23; ix, 3, 5.

The following coincidences will serve to establish this date: chap. i, 1, Timothy (who had now rejoined Paul by way of Corinth, 1 Cor. xvi, 10, 11) was in Paul's company (Acts xx, 4); chap. i, 8, Paul had lately escaped death at Ephesus (Acts xix, 30); chap. i, 15, 16, he had originally intended to go through Corinth to Macedonia, and return through Corinth to Judæa, but, upon receipt of the information which called forth his first epistle, he had so far altered his plan (chap. i, 17; 1 Cor. iv, 18, 19) as to determine to forego the first of these visits to Corinth, and to make the second a longer one (1 Cor. xvi, 7), and he was ultimately compelled to pass through Macedonia to Corinth, and return through Macedonia to Jerusalem (Acts xx, 1-3); chap. ii, 12, 13, on his way to Macedonia, since writing the first epistle, he had touched at Troas (as usual, Acts xvi, 11; xx, 6), but did not stay, on account of Titus's absence, who afterwards met him in Macedonia, with intelligence of the good effects of his former letter (chap. vi, 5-15); chap. viii, 1; ix, 2, 4, he was now in Macedonia (Acts xx, 2); chap. viii, 6, 16-18, 22, 23, this letter was sent by Titus (compare *subscription*) (Acts xx, 4); chap. viii, 10; ix, 2, Paul was collecting funds for the church at Jerusalem (Acts xx, 16), and had heard of the Corinthians' readiness to contribute a year since, probably by Apollos, who had now returned to Ephesus (Acts xix, 1, compared with 1 Cor. xvi, 12). Finally, the *subscription* exactly tallies with these particulars; comp. chap. viii, 18, 22. (See Conybeare and Howson's *Life and Epistles of St. Paul*, ii, 97.)

2. From 2 Cor. ii, 1; xii, 14; xiii, 1, 2, many have inferred that before writing this epistle Paul had *twice* visited Corinth, and that one of these visits had been after the church there had fallen into an evil state; and the second of these visits has been most plausibly assigned to the apostle's three years' stay at Ephesus. So Chrysostom and his followers, Œcumenius and Theophylact, and in recent times, Müller (*De tribus Pauli itin.* Basil, 1831), Anger (*Rat. Temp.* p. 70, sq.), Wieseler (*Chronol.* p. 239), and the majority of modern critics. Olshausen adopts a still more complicated theory (*Comment.* iv, 124 sq., Am. ed.). We have seen above that this visit did not take place between the two epistles, and as it cannot be assigned to the subsequent residence in Greece (Acts xx, 2, 3), those who think it occurred are obliged to suppose one not mentioned in the Acts. (See this position maintained by Alford, *Comment. in N. T.*, ii, proleg. 49 sq.) This expedient of interpolating an event in a continuous history is always a doubtful one, and in this case seems excluded by the positive terms in which Paul's residence and labors are confined, during the whole time in question, to Ephesus (see Acts xix, 10, 22, compared with xx, 31). Nor is this hypothesis necessary; the passages that seem to imply an intended third visit, when carefully examined, merely speak of a third *intention* (τρίτον ἑτοίμως ἔχω ἐλθεῖν, chap. xii, 14, and τρίτον ἔρχομαι, chap. xiii, 1, do *not* state two actual prior visits, as contended by Alford, *Comment.* in loc.; see Horne's *Introd.*, new ed., iv, 529) to visit them, only one of which had heretofore been successful (Acts xviii, 1; comp. 2 Cor. i, 15); and, in like manner, the "second, coming to them in heaviness" and "humbling," instead of deprecating a second such scene, simply intimates the possibility of such a scene on his second coming. (See Davidson's *Introd. to N. T.* ii, 213 sq.) This question, however, does not affect the dates assigned each epistle above, except so far as the supposed middle visit may be taken as the occasion of one or both of them—a position which we have shown to be wholly gratuitous and untenable. See PAUL.

3. "On arriving at Troas, Paul expected to meet Titus with intelligence from Corinth of the state of things in that church. According to the common opin-

ion Titus had been sent by Paul to Corinth, partly to collect money in aid of the distressed Christians in Palestine, partly to observe the effect of the apostle's first epistle on the Corinthians. In this expectation of meeting Titus at Troas Paul was disappointed. He accordingly proceeded into Macedonia, where at length his desire was gratified, and the wished-for information obtained (2 Cor. ii, 13; vii, 15 sq.)."

"The epistle was occasioned by the information which the apostle had received also, as it would certainly seem probable, from *Timothy*, of the reception of the first epistle. It has indeed recently been doubted by Neander, De Wette, and others, whether Timothy, who had been definitely sent to Corinth (1 Cor. iv, 17) by way of Macedonia (Acts xix, 22), really reached his destination (comp. 1 Cor. xvi, 10); and it has been urged that the mission of Timothy would hardly have been left unnoticed in 2 Cor. xii, 17, 18 (see Rückert, *Comm.* p. 409). To this, however, it has been replied, apparently convincingly, that as Timothy is an associate in writing the epistle, any notice of his own mission in the third person would have seemed inappropriate. His visit was assumed as a fact, and as one that naturally made him an associate with the apostle in writing to the church he had so lately visited.

"It is more difficult to assign the precise reason for the mission of Titus. That he brought back tidings of the reception which Paul's first epistle had met with seems perfectly clear (chap. vii, 6 sq.), but whether he was specially sent to ascertain this, or whether to convey fresh directions, cannot be ascertained. There is a show of plausibility in the supposition of Bleek (*Stud. u. Krit.* 1830, p. 625), followed more recently by Neander (*Pflanz. u. Leit.* p. 437), that the apostle had made Titus the bearer of a letter couched in terms of decided severity, now lost, to which he is to be supposed to refer in chap. ii, 3 (compared with ver. 4, 9); vii, 8, 11 sq.; but, as has been justly urged (see Meyer, *Einleit.* p. 3), there is quite enough of severity in the first epistle (consider chap. iv, 18-21; v, 2 sq.; vi, 5-8; xi, 17) to call forth the apostle's affectionate anxiety. Moreover, the supposition of a lost letter is in itself improbable. If it be desirable to hazard a conjecture on this mission of Titus, it would seem most natural to suppose that the return of Timothy and the intelligence he conveyed might have been such as to make the apostle feel the necessity of at once dispatching to the contentious church one of his immediate followers, with instructions to support and strengthen the effect of the epistle, and to bring back the most recent tidings of the spirit that was prevailing at Corinth."

"The intelligence brought by Titus concerning the church at Corinth was on the whole favorable. The censures of the former epistle had produced in their minds a godly sorrow, had awakened in them a regard to the proper discipline of the church, and had led to the exclusion from their fellowship of the incestuous person. This had so wrought on the mind of the latter that he had repented of his evil courses, and showed such contrition that the apostle now pities him, and exhorts the church to restore him to their communion (2 Cor. ii, 6-11; vii, 8 sq.). A cordial response had also been given to the appeal that had been made on behalf of the saints in Palestine (ix, 2). But with all these pleasing symptoms there were some of a painful kind. The anti-Pauline influence in the church had increased, or at least had become more active; and those who were actuated by it had been seeking by all means to overturn the authority of the apostle, and discredit his claims as an ambassador of Christ.

4. "This intelligence led the apostle to compose his second epistle, in which the language of commendation and love is mingled with that of censure, and even of threatening. This epistle may be divided into three sections. In the first (i-iii) the apostle chiefly dwells on the effects produced by his first epistle and the matters therewith connected. In the second (iv-ix) he discourses on the substance and effects of the religion which he proclaimed, and turns from this to an appeal on behalf of the claims of the poor saints on their liberality. And in the third (x-xiii) he vindicates his own dignity and authority as an apostle against the parties by whom these were opposed. The divided state of feeling in the apostle's mind will account sufficiently for the difference of tone perceptible between the earlier and later parts of this epistle, without our having recourse to the arbitrary and capricious hypothesis of Semler (*Dissert. de duplice appendice Ep. ad Rom.* Hal. 1767) and Weber (*Prog. de numero epp. ad Cor. rectius constituendo,* Vitemb. 1798), whom Paulus follows, that this epistle has been extensively interpolated."

"A close analysis is scarcely practicable, as in no one of the apostle's epistles are the changes more rapid and frequent. Now he thanks God for their general state (chap. i, 3 sq.); now he glances at his purposed visit (chap. i, 15 sq.); now he alludes to the special directions in the first letter (chap. ii, 3 sq.); again he returns to his own plans (chap. ii, 12 sq.), pleads his own apostolic dignity (chap. iii, 1 sq.), dwells long upon the spirit and nature of his own labors (chap. iv, 1 sq.), his own hopes (chap. v, 1 sq.), and his own sufferings (chap. vi, 1 sq.), returning again to more specific declarations of his love towards his children in the faith (chap. vi, 11 sq.), and a yet further declaration of his views and feelings with regard to them (chap. vii). Then again, in the matter of the alms, he stirs up their liberality by alluding to the conduct of the churches of Macedonia (chap. viii, 1 sq.), their spiritual progress (ver. 7), the example of Christ (ver. 9), and passes on to speak more fully of the present mission of Titus and his associates (ver. 18, sq.), and to reiterate his exhortations to liberality (chap. ix, 1 sq.). In the third portion he passes into language of severity and reproof: he gravely warns those who presume to hold lightly his apostolical authority (chap. x, 1 sq.); he puts strongly forward his apostolical dignity (chap. xi, 5 sq.); he illustrates his forbearance (ver. 8 sq.); he makes honest boast of his labors (ver. 23 sq.); he declares the revelations vouchsafed to him (chap. xii, 1 sq.); he again returns to the nature of his dealings with his converts (ver. 12 sq.), and concludes with grave and reiterated warning (chap. xiii, 1 sq.), brief greetings, and a doxology (ver. 11-14).

5. "The *genuineness* and *authenticity* is supported by the most decided external testimony (Irenæus, *Haer.* iii, 7, 1; iv, 28, 3; Athenagoras, *de Resurr.* p. 61, ed. Col.; Clem. Alex. *Strom.* iii, 94; iv, 101; Tertull. *de Pudicit.* chap. 13), and by internal evidence of such a kind that what has been said on this point with respect to the first epistle is here even still more applicable. The only doubts that modern pseudo-criticism has been able to bring forward relate to the unity of the epistle, but these are not such as seem to deserve serious consideration (see Meyer, *Einleit.* p. 7)."

6. The following are the separate *Commentaries* on BOTH epistles, the most important being designated by an asterisk (*) prefixed: Jerome, *Commentarii* (in *Opp.* ii, 901); Chrysostom, *Homiliæ* (in *Opp.* x, 1, 485; transl. in the *Library of Fathers*, Oxf. 1839, 1848, vol. 4, 7, and 27); Cramer, *Ep. ad Cor.* (*Catenæ Gr. Patr.* v); Hugo a S. Victore, *Annotationes* (in *Opp.*); Aquinas, *Expositio* (in *Opp.* vi); Zuingle, *Annotationes* (in *Opp.* iv); *Calvin, tr. by Tymme, *Commentarie* (Lond. 1517, 4to); also tr. by Pringle, *Commentary* (Edinb. 1848, 2 vols. 8vo); Bullinger, *Commentarius* (Tigur. 1534-5, 2 vols. 8vo); Sarcer, *Meditationes* (Argent. 1544, 8vo); Meyer, *Annotationes* (Bernæ, 1546, 4to); Major, *Enarratio* (Vitemb. 1558, 1561, 8vo); also *Predigten* (Jen. 1568, 8vo); Musculus, *Commentarius* (Basil. 1559, 1562, 1582, 1600, 1611, fol.); Shangenberg, *Predigten* (Eisleb. 1561-4, 2 vols. fol.); Aretius, *Commentarius* (Lausan. 1579, 8vo; Morg. 1583, fol.); Sta-

pleton, *Antidota* (Ant. 1595 sq., 3 vols. 8vo); Rollock, *Commentarius*, cum *notis* I. Piscatoris (Herborn. 1600, Jen. 1602, 8vo); Runge, *Disputationes* (Vitemb. 1606, 4to); Steuart, *Commentaria* (Ingoldstadt, 1608, 4to); Weinrich, *Commentarius* (Lips. 1609, 1610, 4to); Coutzen, *Commentaria* (Colon. 1631, fol.); Perez, *In epp. ad Cor.* (Barcin. 1632, fol.); Sclater, *Explicatio* (Oxon. 1633, 4to); Wandalin's paraphrase (in Danish, Copenhagen, 1648, 4to); Salmeron, *Disputationes* (in *Opp.* xiv); Cocceius, *Commentarius* (in *Opp.* v); Breithaupt, *Predigten* (Hal. 1696, 4to); *Biermann, *Verklaringe* (Tr. a. Rh. 1705-8, 3 vols. 4to); Locke, *Notes* (Lond. 1733, 4to); Pfenniger, *Erklärung* (Zür. 1759, 8vo); *Baumgarten, *Auslegung* (Hal. 1761, 4to); *Mosheim (ed. Windheim), *Erklärung* (Flensb. 1763, 2 vols. 4to); Semler, *Paraphrasis* (Hal. 1770 and 1776, 2 vols. 8vo); Moldenhauer, *Erklärung* (Hamb. 1771, 8vo); Schulz, *Briefe a. d. Kor.* (Hal. 1784-5, 2 vols. in 1, 8vo); Zachariä, ed. Volborth, *Anmerk.* (Gött. 1786, 2 vols. 8vo), Storr, *Notitiæ* (Tübing. 1788, 4to); Göpfert, *Anmerk.* (Lpz. 1788, 8vo); Morus, *Erklär.* (Leipz. 1794, 8vo); Wirth, *Ueb. d. Br. a. d. Kor.* (Ulm, 1825, 8vo); Pott, *Annotationes* (Götting. 1826, 8vo); Flatt, *Vorlesungen* (Tüb. 1827, 8vo); Lothian, *Lectures* (Edinb. 1828, 8vo); *Billroth, *Commentar* (Lpz. 1833, 8vo; transl. by W. L. Alexander, Edinb. 1837-8, 2 vols. 12mo); *Rückert, *Commentar* (Lpz. 1836-7, 2 vols. 8vo); Jäger, *Erklär.* (Tüb. 1837, 8vo); G. B——, *Explanation* (Lond. 1842, 12mo); *Stanley, *Notes*, etc. (Lond. 1855, 1862, 1865, 2 vols. 8vo); Hodge, *Exposition* (N. Y. 1857-60, 2 vols. 12mo); Maier, *Commentar* (Freib. 1857-65, 2 vols. 8vo); Osiander, *Commentar* (Stuttg. 1847, 1858, 2 vols. 8vo); Robertson, *Lectures* (London, 1859, 1861, 1870, 8vo); *Neander, *Auslegung* (in his *Theol. Vorlesungen*, ed. Beyschlag, Berlin, 1859, 8vo); Kling, *Commentar* (Viteb. 1861, 8vo). See EPISTLES.

On the whole of the FIRST epistle alone: Sampson, *In ep. pr. ad Cor.* (London, 1546, 8vo); Martyr, *Commentarius* (Tigur. 1551, 1563, 4to; 1568, 1589, fol.); Haimo, *Tractatus* (in Duchery, *Spicileg.* i, 42); Hus, *Explicatio* (in *Monumenta*, ii, 83); Covillonius, *Conclusiones* (Romæ, 1554); Melanchthon, *Commentarius* (Vitemb. 1561, 8vo); Prædenius, *Commentarius* (in *Opp.* Basil. 1563, fol.); Andreas, *Exegesis* (Francfort, 1585, 8vo); Mathesius, *Predigten* (Lpz. 1590, fol.); Steuart, *Commentaria* (Ingolst. 1594, 4to); Morton, *Expositio* (Lond. 1596, 8vo); Myle, *Explicatio* (Jen. 1600, 8vo); Valdesius's Commentary (in Spanish, without date or place); Crell, *Commentarius* [on chs. i-x, xv] (Racov. 1635, 8vo); Burgess, *Commentary* (London, 1659, fol.); Lightfoot, *Hor. Hebr.* (Cantab. 1664. Amst. 1677, Lips. 1679, 4to); Schmid, *Paraphrasis* (Hamb. 1691, 1696, 1704, 4to); Häberlin, *Explicatio* (Tüb. 1699); *Koning's Comm. (in Dutch, Dort, 1702, 4to); *Akersloot, *Vytlinge* (Leyden, 1707, 4to); Van Til, *Verklaaringe* (Amsterd. 1731, 4to); *Mosheim, *Erklärung* (Alt. and Flensb. 1741, 4to); Nicolai, *Betrachtungen* (Lpz. 1747, 4to); Pearce, *Paraphrase* (in *Comment.* ii); Sahl, *Paraphrasis* (Copenh. 1779, 4to); Vitringa, *Exercitationes* (Franeq. 1784-9, 4to); Krause, *Annotatio* (Francof. 1792, 8vo, vol. i); Valckenaer, *Scholæ* (ed. Wassenburgh, Amst. 1817 sq.); Heydenreich, *Commentarius* (Marburg, 1825, 1828, 2 vols. 8vo); Tolley, *Paraphrase* (Lond. 1825, 8vo); Peile, *Annotationes* (London, 1848, 8vo); Burger, *Erklär.* (Erlang. 1859, 8vo).

On the SECOND epistle: Heshusius, *Explicatio* (Helmst. 1580, 8vo); *Koning's *Commentary* (in Dutch, Amst. 1704, 4to); Van Alphen, *Verklaaring* (Amst. 1708, enlarged Utrecht, 1725, 4to); Gabler, *Dissertatio* (Lemgo, 1804, 8vo); Leun, *Annotationes* (Lemgo, 1804, 8vo); Roynards, *Disputatio* (Tr. ad Rh. 1819, 8vo); *Emmerling, *Commentarius* (Lips. 1823, 8vo); Fritzsche, *Dissertationes* (Lips. 1824, 8vo); *Scharling, *Commentar* (Copenh. 1840, 8vo); Turnbull, *Translation* (Lond. 1849); Pridham (ibid. 1869, 12mo). See EPISTLE.

CORINTHIANS, APOCRYPHAL EPISTLES TO AND FROM. There are two such letters extant in the Armenian language: the first is called "*The Epistle of the Corinthians to Paul the Apostle*," and the second "*The Epistle of Paul the Apostle to the Corinthians.*" They were evidently based upon the early belief that the apostle had written to these converts more than twice. Their spuriousness has been shown by Carpzov (*Epistolæ duæ apocryphæ*, etc. Lips. 1776) and Ullman (*Heidelberger Jahrb.* 1823, vi). The original Armenian, with a translation, will be found in Aucher, *Arm. Grammar* (p. 143-161); it was also edited by Rink (Heidelb. 1824). These epistles are translated into Arabic, Latin, and English, in Whiston's *Authentic Records* (ii, 585-604). There are also "*Two Epistles of Clement to the Corinthians*" extant, the second of which, at least, is probably apocryphal. See CLEMENT OF ROME; CLEMENTINES. An English version of them exists in Wake's *Apostolical Fathers;* also a commentary on them by Lightfoot (Lond. 1869, 8vo). See EPISTLES (*Spurious*).

Corinthus (Κόρινθος), an Arabian, one of Herod's body-guard, greatly trusted by him till arrested on information by Fabatus of being bribed by Syllæus to kill his master, which he confessed on torture, and was sent by Saturninus to Rome for punishment (Josephus, *Ant.* xvii, 3, 2; *War*, i, 29, 3).

Cormac MACCULINAN, a bishop and king of Munster, in Ireland, was born A.D. 837. He was the author or collector of the *Psalter of Cashel*, a work that details the romances of the Milesian kings, a copy of which in the Irish language, according to Moore (*History of Ireland*), was seen in Limerick as late as 1712. He spent nearly his whole life in the duties of religion and pursuits of literature, founding numerous schools. But, being king, he was forced to fight. Before his first and only engagement he made his will, assembled his bishops, named his successor, gave them good advice, said he would die in battle, went into it, and died.

Cormorant. There are two Hebrew words thus translated in our version. (See Bochart, *Hieroz.* iii, 20 sq.)

1. שָׁלָךְ (*shalak'*, that which *casts* itself *down;* Sept. καταρράκτης, Vulg. *merculus*, Syr. and Chald. *fish-catcher;* occurring only in Lev. xi, 17; Deut. xiv, 17), in common with the usual Greek version καταράκτης, is considered to have reference to darting, rushing, or stooping like a falcon; and accordingly has been variously applied to the eagle, the jerfalcon, the gannet, the great gull, and the cormorant. The passages where it occurs only inform us that it was an unclean bird, and associate it with the "gull."

Its apparent Greek name, *cataractes*, though noticed by several authors, is not always referred to the same genus, some making it a minor gull, others a diver. Cuvier thinks Gesner right in considering it to denote a gull, and it certainly might be applied with propriety to the black-backed gull, or to the glaucous; but, although birds of such powerful wing and marine *habitat* are spread over a great part of the world, it does not appear that, if known at the extremity of the Mediterranean, they were sufficiently common to have been clearly indicated by either the Hebrew or Greek names, or to have merited being noticed in the Mosaic prohibition. Both the above are in general northern residents, being rarely seen even so low as the Bay of Biscay, and the species now called "Lestris cataractes" is exclusively Arctic. With regard to the cormorant, birds of that genus are no doubt found on the coasts of Palestine, where high cliffs extend to the sea-shore, such, for example, as the *Phalacrocorax pygmæus;* but all the species dive, and seldom, if ever, rush flying upon their prey, though that habit has been claimed for them by commentators, who have mixed up the natural history of "cormorants" with that of the "sula" or "gannet," which really darts from great elevations into the sea to catch its prey, rising to the surface sometimes nearly half a minute

after the plunge. But the gannet (solan goose) rarely comes further south than the British Channel, and does not appear to have been noticed in the Mediterranean. It is true that several other marine birds of the North frequent the Levant, but none of them can entirely claim Aristotle and Oppian's characters of "cataractes;" for, though the wide throat and rather large head of the dwarf cormorant may be adduced, that bird exceeds in stature the required size of a small hawk, and fishes, it may be repeated, swimming and diving, not by darting down on the wing, and is not sufficiently numerous or important to have required the attention of the sacred legislator.

Thus reduced to make a choice where the objections are less and the probabilities stronger, we conclude the *shalak* to have been a species of "tern," considered to be identical with the *Sterna Caspica*, so called because it is found about the Caspian Sea; but it is equally common to the Polar, Baltic, and Black Seas, and, if truly the same, is not only abundant for several months in the year on the coast of Palestine, but frequents the lakes and pools far inland, flying across the deserts to the Euphrates, and to the Persian and Red Seas, and proceeding up the Nile. It is the largest of the tern or sea-swallow genus, being about the weight of a pigeon, and near two feet in length, having a large black-naped head, powerful, pointed crimson bill, a white and grey body, with forked tail, and wings greatly exceeding the tips of the tail; the feet are very small, weak, and but slightly webbed, so that

Caspian Tern.

it swims perhaps only accidentally, but with sufficient power on land to spring up and to rise from level ground. It flies with immense velocity, darting along the surface of the sea to snap at mollusca or small fishes, or wheeling through the air in pursuit of insects; and in calm weather, after rising to a great height, it drops perpendicularly down to near the surface of the water, but never alights except on land; and it is at all times disposed to utter a kind of laughing scream. This tern nestles in high cliffs, sometimes at a very considerable distance from the sea. (See the *Penny Cyclopædia*, s. v. Tern.)

2. קָאַת (*kaath'*), rendered "cormorant" in our version in Isa. xxxiv, 11; Zeph. ii, 14, is elsewhere translated "Pelican," q. v.

Greater Cormorant (*Phalacrocorax Carbo*).—The bird in front is in full plumage, that behind in its Spring dress.

The cormorant belongs to the natural order of the *Pelicanidæ* of Linnæus, and the species have the characteristic habit of watching on high cliffs, and, on perceiving a fish in the water, of darting down like an arrow and seizing its prey. The "greater cormorant," however, more frequently shoots along in a line nearly close to the surface of the water, or, sitting on the wave, dives after the prey. It is trained to fish for man's use in China. It is common on the coasts of Syria and Palestine; Rauwolff saw numbers of them along the sea-washed crags of Acre, which he mistook for sea-eagles. The cormorant is a widely-diffused genus, and is found in almost every country in the world. (See the *Penny Cyclopædia*, s. v. Pelicanidæ.) The large kind weighs about seven pounds, and is nearly of the same size as the goose; it lives upon fish, and has a long, straight, and compressed bill, with the upper mandible hooked at the point, to confine the prey with the greater security; its head and neck are of a sooty blackness, more resembling in figure those of the goose than of the gull. Its distinguishing character, however, consists in its toes being united by membranes, and by the middle toe being notched like a saw, to assist it in holding its fishy prey. On the approach of winter these birds are seen dispersed along the seashore, and ascending the mouths of rivers; they are remarkably voracious, and have such a quick digestion that the appetite appears insatiable. They build their nests on the highest parts of the cliffs that overhang the sea; the female usually lays three or four eggs about the size of those of a goose, and of a pale green color. See Bird.

Corn. There are several words thus translated in the English version of the Scriptures, in which it is used in the proper sense of *grain* of any kind, and never in the American application of maize or "Indian corn" (*Zea mays* of Linn.), which it is generally thought was anciently unknown. In 1817, Parmentier (*Nouveau Dictionnaire d'Hist. Naturelle*, vol. xviii), founding on the silence of Varro, Columella, Pliny, and the other agricultural and botanical writers of classical antiquity, concluded that maize was unknown till the discovery of America; and in 1834 Meyer asserted that "nothing in botanical geography is more certain than the New-World derivation of maize" (quoted by Duchartre in Orbigny's *Dict. d'Hist. Natur.*). But since then, in the magnificent monograph (*Hist. Naturelle du Mais*, 1836), M. Bonafous, the director of the Royal Garden of Agriculture at Turin, has shown that it is figured in a Chinese botanical work as old as the middle of the sixteenth century—a time when the discoveries of Columbus could scarcely have penetrated to the Celestial Empire; and, what is more conclusive, in 1819 M. Rifaud discovered under the head of a mummy at Thebes not only grains, but leaves of Indian corn. Nor is it at all impossible that the ζειά of Homer and Theophrastus may include the plant in question. The wide diffusion of this corn through the Indian archipelago, and on the Indian continent itself, is in favor of the hypothesis which claims it as a native of the Old World; and if it was known to the Egyptians, nothing could be more natural than its early introduction into Palestine. See Cereals.

1. The word דָּגָן, *dagan'* (from its *increase*), which is rendered "grain," "corn," and sometimes "wheat" in the Auth. Vers., is the most general of the Hebrew terms representing "corn," and is more comprehensive than any word in our language, seeing that it probably includes not only all the proper cereals, but also various kinds of pulse and seeds of plants, which we never comprehend under the name of "corn," or even of "grain." It may therefore be taken to represent all the commodities which we describe by the different words corn, grain, seeds, pease, beans. Among other places in which this word occurs, see

Gen. xxvii, 28-37; Num. xviii. 27; Deut. xxviii, 51; Lam. ii, 12, etc. See GRAIN.

2. There is another word, בַּר, *bar* (i. e. *winnowed*), which denotes any kind of cleansed corn, that is, corn purified from the chaff and fit for use (Gen. xli, 35-49; Prov. xi, 26; Jer. iv, 11; Joel ii, 24). The same word is more rarely used to describe corn in a growing state (Psa. lxv, 13). It elsewhere signifies the open "fields" or country. See LAND.

3. The word שֶׁבֶר, *she'ber* (*broken*, i. e. grist), which is sometimes rendered corn, denotes in a general sense "provisions" or "victuals," and by consequence "corn," as the principal article in all provisions (Gen. xlii, 1, 2, 20; Exod. viii, 5; Neh. x, 32, etc.). See VICTUALS.

4. The Greek σῖτος corresponds to the first two of the above Hebrew words, for which it often stands in the Sept. (Matt. iii, 12; Luke iii, 17; John xii, 24; Acts vii, 12, etc.). See EAR (*of corn*).

The other words occasionally translated "corn" in the Bible are בְּלִיל, *belil'* (Job xxiv, 6), "*provender*" (Isa. xxx, 24) or "fodder" (Job vi, 5); גֹּרֶן, *go'ren* (Deut. xvi, 13), elsewhere "*threshing-floor*;" קָמָה, *kamah'* (Deut. xvi, 9; Isa. xvii, 5), "*standing corn*," as often elsewhere; κόκκος (John xii, 24), a "*grain*" of any kind, as elsewhere; and σπόριμα (Matt. xii, 1), a "corn-field," as elsewhere; besides kindred or different terms rendered "beaten corn," "standing corn," "ears of corn," "heap of corn," "corn ground," etc. A single ear is שִׁבֹּלֶת, *shilbo'leth*; "pounded wheat," רִיפוֹת, *riphoth'* (2 Sam. xvii, 19; Prov. xxvii, 22). The most common kinds of corn were *wheat*, חִטָּה, *chittah'*; *barley*, שְׂעֹרָה, *seörah'*; *spelt*, (A. V., Exod. ix, 32, and Isa. xxviii, 25, "rye;" Ezek. iv, 9, "fitches"), כֻּסֶּמֶת, *kusse'meth* (or in plur. form כֻּסְּמִים, *kussemim'*); and *millet*, דֹּחַן, *do'chan*: oats are mentioned only by rabbinical writers. The doubtful word שׂוֹרָה, *sorah'*, rendered "principal," as an epithet of wheat, in the A. V. of Isa. xxviii, 25, is probably not distinctive of any species of grain (see Gesenius, s. v.). The different products coming under the denomination of corn are noticed under the usual heads, as BARLEY, WHEAT, etc.; their culture under AGRICULTURE; their preparation under BREAD, FOOD, MILL, etc.

"Corn crops are still reckoned at twenty-fold what was sown, and were anciently much more. 'Seven ears on one stalk' (Gen. xli, 22) is no unusual phenomenon in Egypt at this day. The many-eared stalk is also common in the wheat of Palestine, and it is of course of the bearded kind. The 'heap of wheat set about with lilies' (which probably grew in the field together with it) may allude to a custom of so decorating the sheaves (Cant. vii, 2). Wheat (see 2 Sam. iv, 6) was stored in the house for domestic purposes—the 'midst of the house' meaning the part more retired than the common chamber where the guests were accommodated. It is at present often kept in a dry well, and perhaps the 'ground corn' of 2 Sam. xvii, 19, was meant to imply that the well was so used. From Solomon's time (2 Chron. ii, 10, 15), i. e. as agriculture became developed under a settled government, Palestine was a corn-exporting country, and her grains were largely taken by her commercial neighbor Tyre (Ezek. xxvii, 17; comp. Amos viii, 5). 'Plenty of corn' was part of Jacob's blessing (Gen. xxvii, 28; comp. Psa. lxv, 13). The 'store-houses' mentioned 2 Chron. xxxii, 28, as built by Hezekiah, were perhaps in consequence of the havoc made by the Assyrian armies (comp. 2 Kings xix, 29); without such protection, the country, in its exhausted state, would have been at the mercy of the desert marauders. Grain crops were liable to יֵרָקוֹן, *yerakon'*, 'mildew' and שִׁדָּפוֹן, *shiddaphon'*, 'blasting' (see 1 Kings viii, 37), as well as, of course, to fire by accident or malice (Exod. xxii, 6; Judg. xv, 5). Some good general remarks will be found in Saalschutz, *Archäol. d. Hebr.*" See HUSBANDRY.

Cornarists, the disciples of Theodore Cornhert or Koornhert, secretary of the States of Holland († 1590). He wrote against the Romanists, the Lutherans, and Calvinists. He maintained that every religious communion needed reformation, but he said no one had a right to engage in it without a mission supported by miracles. He was also of opinion that connection with the visible Church of Christ was not essential to experimental Christianity. Arminius was directed to refute the writings of Coornhert against predestination, and in studying the subject was led to abandon that doctrine. The complete works of Coornhert were collected at Amsterdam in 1630 (3 vols. fol.). See Mosheim, *Church History*, iii, 400; Bayle, *Dictionary*, s. v. Koornhart, and the article ARMINIANISM.

Corne'lius (Κορνήλιος, Lat. *Cornelius*). The centurion of this name, whose history occurs in Acts x, most probably belonged to the *Cornelii*, a noble and distinguished family at Rome. He is reckoned by Julian the Apostate as one of the few persons of *distinction* who embraced Christianity. His station in society will appear upon considering that the Roman soldiers were divided into legions, each legion into ten cohorts, each cohort into three bands, and each band into two centuries or hundreds; and that Cornelius was a commander of one of these centuries (ἑκατοντάρχης) belonging to the *Italic* band, so called from its consisting chiefly of Italian soldiers, formed out of one of the six cohorts granted to the procurators of Judæa, five of which cohorts were stationed at Cæsarea, the usual residence of the procurators (Jahn, *Biblische Archäologie*, ii, 215, Wien, 1824). See CENTURION.

The *religious position* of Cornelius before his interview with Peter has been the subject of much debate. On the one side it is contended that he was what is called a *proselyte of the gate*, or a Gentile, who, having renounced idolatry and worshipping the true God, submitted to the seven (supposed) precepts of Noah, frequented the synagogue, and offered sacrifices by the hands of the priests, but, not having received circumcision, was not reckoned among the Jews. In support of this opinion it is pleaded that Cornelius is φοβούμενος τὸν Θεόν (a man fearing God), ver. 2, the usual appellation, it is alleged, for a proselyte of the gate, as in chap. xiii, 16, 26, and elsewhere; that he prayed at the usual Jewish hours of prayer (x, 30); that he read the Old Testament, because Peter refers him to the prophets (x, 43); and that he gave much alms to the *Jewish* people (x, 2, 22). On the other side it is answered that the phrases φοβούμενοι τὸν Θεόν, and the similar phrases εὐλαβεῖς and εὐσεβεῖς, are used respecting any persons imbued with reverence towards God (x, 35; Luke i, 50; ii, 25; Col. iii, 22; Rev. xi, 18); that he is styled by Peter ἀλλόφυλος (a man of another race or nation), with whom it was *unlawful* for a Jew to associate, whereas the law *allowed* to foreigners a perpetual residence among the Jews, provided they would renounce idolatry and abstain from blood (Lev. xvii, 10, 11, 13), and even commanded the Jews to love them (Lev. xix, 33, 34); that they mingled with the Jews in the synagogue (Acts xiv, 1) and in private life (Luke vii, 3); that, had Cornelius been a proselyte of the gate, his conversion to Christianity would not have occasioned so much surprise to the Jewish Christians (Acts x, 45), nor would "they that were of the circumcision" have contended with Peter so much on his account (xi, 2); that he is expressly classed among the Gentiles by James (xv, 14), and by Peter himself, when claiming the honor

of having first preached to the Gentiles (xv, 7); that the remark of the opposing party at Jerusalem, when convinced, "then hath God also to the Gentiles granted *repentance unto life*," would have been inapplicable upon the very principles of those who assert that Cornelius was a proselyte, since they argue from the traditions of modern Jews, the most eminent of whom, Maimonides, admits a sincere proselyte *to be in a state of salvation*. The other arguments, derived from the observance of the Jewish hours of prayer by Cornelius, and his acquaintance with the Old Testament, are all resolvable into a view of his religious position, which will shortly be stated. The strongest objection against the supposition that Cornelius was a proselyte of the gate arises from the very reasonable doubt whether any such distinction existed in the time of the apostles (see Tomline, *Elements of Theology*, i, 266 sq.). Dr. Lardner has remarked that the notion of two sorts of proselytes is not to be found in any Christian writer before the *fourteenth* century (*Works*, vi, 522). See also Jennings's *Jewish Antiquities* (bk. i, ch. 3). The arguments on the other side are ably stated by Townsend (*Chronolog. N. Test.* note in loc.). See PROSELYTE. On the whole, the position of Cornelius with regard to religion appears to have been in that class of persons described by bishop Tomline, consisting of Gentiles who had so far benefited by their contact with the Jewish people as to have become convinced that theirs was the true religion, who consequently worshipped the true God, were acquainted with the Scriptures of the Old Testament, most probably in the Greek translation, and observed several Jewish customs, as, for instance, their hours of prayer, or anything else that did not involve an act of special profession. This class of persons seems referred to in Acts xiii, 16, where they are plainly distinguished from the Jews, though certainly mingled with them. To the same class is to be referred Candace's treasurer (Acts viii, 27, etc.); and in earlier times the midwives of Egypt (Exod. i, 17), Rahab (Josh. vi, 25), Ruth, Araunah the Jebusite (2 Sam. xxiv, 18, etc.), the persons mentioned 1 Kings viii, 41, 42, 43, Naaman (2 Kings v, 16, 17). See also Josephus, *Antiq.* xiv, 7, 2, and his account of Alexander the Great going into the Temple, and offering sacrifice to God according to the direction of the high-priest (*ibid.* xi, 8, 5); of Antiochus the Great (*ibid.* xii, 3, 3, 4), and of Ptolemy Philadelphus (*ibid.* xii, 2, 1, etc.). Under the influence of these facts and arguments, we regard Cornelius as having been selected of God to become the *first-fruit of the Gentiles*. His character appears suited, as much as possible. to abate the prejudices of the Jewish converts against what appeared to them so great an innovation. It is well observed by Theophylact that Cornelius, though neither a Jew nor a Christian, lived the *life* of a good Christian. He was εὐσεβής, influenced by spontaneous reverence to God. He practically obeyed the restraints of religion, for he feared God, and this latter part of the description is extended to all his family or household (ver. 2). He was liberal in alms to the Jewish people, which showed his respect for them; and he "prayed to God always," at all the hours of prayer observed by the Jewish nation. Such piety, obedience, faith, and charity prepared him for superior attainments and benefits, and secured to him their bestowment (Psa. xxv, 9; 1, 23; Matt. xiii, 12; Luke viii, 15; John vii, 17). His position in command at Cæsarea doubtless brought him into contact with intelligent Jews, from whom he learned the truths respecting the Messiah, and he seems to have been prepared by a personal knowledge of the external facts of Christianity to welcome the message of Peter as of divine authority.

The remarkable circumstances under which the benefits of the Gospel were conferred upon him are too plainly and forcibly related in Acts x to require much comment (see Paley, *Evidences*, prop. 2, ch. 2; Niemeyer, *Charakt.* i, 650 sq.; Neander, *Planting and Training*, p. 69 sq.). While in prayer at the ninth hour of the day, he beheld, in waking vision, an angel of God, who declared that "his prayers and alms had come up for a memorial before God," and directed him to send to Joppa for Peter, who was then abiding "at the house of one Simon, a tanner." Cornelius sent accordingly; and when his messenger had nearly reached that place, Peter was prepared by the symbolical revelations of a noonday ecstasy, or trance, to understand that nothing which God had cleansed was to be regarded as common or unclean.—Kitto, s. v. This event took place about September, A.D. 32 (see *Meth. Quart. Review*, 1850, p. 499–501). "On his arriving at the house of Cornelius, and while he was explaining to them the vision which he had seen in reference to this mission, the Holy Ghost fell on the Gentiles present, and thus anticipated the reply to the question, which might still have proved a difficult one for the apostle, whether they were to be baptized *as Gentiles* into the Christian Church. They were so baptized, and thus Cornelius became the first-fruit of the Gentile world to Christ, publicly recognised as such. Tradition has been busy with his life and acts. According to Jerome (*adv. Jovin.* 1, p. 301), he built a Christian church at Cæsarea; but later tradition makes him bishop of Scamandios (Scamandria ?), and ascribes to him the working of a great miracle (*Menolog. Græc.* 1, 129)."

There are monographs on the history of Cornelius in German by Linder (Basel, 1830), Krummacher (Brem. 1829, transl. Edinburgh, 1839), in Latin by Basil (*Opp.* p. 108), in English by Evans (*Script. Biog.* iii, 309); also in Latin, on his character by Fecht (Rost. 1701), Feuerlin (Altorf. 1736); on Peter's vision, by Deysing (Marb. 1710), Engeström (Lund. 1741); on the effusion of the Spirit, by Goetze (Lubec. 1712); on his baptism, by the same (ib. 1713); on his prayers, by Michaelis (in the *Bibl. Brem.* v, 679 sq.); on Peter's sermon, in English, by Taylor (London, 1659). See also Krummacher, *Life of Cornelius* (Edinb. 1839, 12mo); *Jour. Sac. Lit.* April, 1864.

Cornelius, bishop of Rome, succeeded Fabianus in that see June 4, A.D. 251. Some of the clergy and people of Rome, not approving of the election of Cornelius because of his controversy with Novatianus about the *lapsi*, to whom Cornelius was disposed to be lenient, chose Novatianus bishop, and three Italian bishops ordained him; he therefore was the first antipope. In October, 251, Cornelius having convened a numerous council at Rome, consisting of sixty bishops and a number of presbyters and deacons, they confirmed his election. He did not enjoy his honor long, for he was banished by the emperor Gallus to Civita Vecchia, where he died (or, according to some accounts, suffered martyrdom) September 14, 252. Ten of Cyprian's letters are directed to Cornelius. There are two genuine letters of Cornelius to Cyprian still preserved among Cyprian's epistles; they are the forty-sixth and forty-eighth (ed. Oberthur). Besides these, Cornelius wrote a long letter to Fabianus concerning the character and conduct of Novatian, considerable extracts from which Eusebius has preserved (*Hist. Eccl.* bk. vi, chap. xliii).—Lardner, *Works*, iii, 74 sq.; Cave, *Hist. Lit.* i, 80; Wetzer u. Welte, *Kirchen-Lex.* ii, 879.

Cornelius Agrippa. See AGRIPPA.

Cornelius à Lapide (CORNELIS CORNELISSEN VAN DEN STEEN), a learned Roman Catholic commentator, was born about 1566 at Bocholt, in the diocese of Liege, entered the order of Jesuits, and became professor of Hebrew at Louvain, where he gave exegetical lectures for twenty years. He was then made professor at Rome, where he died March 12, 1637. He wrote commentaries on all the books of Scripture except Job and the Psalms, which are in great esteem, more, how-

ever, from the rich material in the form of citations from the fathers than from any critical skill of his own. The commentaries on the Pentateuch and the Pauline Epistles are commonly regarded as the best. They were published at Antwerp, 1681 (10 vols. fol.); at Venice, 1730 (11 vols. fol.); and at Lyons (best edition, 1838, 11 vols. 4to).—Wetzer u. Welte, *Kirchen-Lex.* ii, 679.

Cornelius, Elias, D.D., a Congregational minister, was born in Somers, N. Y., July 31, 1794. He graduated at Yale in 1813. In 1816, after being licensed to preach, he was appointed agent of the American Board of Commissioners for Foreign Missions. In the spring of 1817 he started on a missionary tour to the Creeks and Cherokees, and then to New Orleans, where he remained until April 2, 1818, when he returned to Boston, visiting the Indian Mission on his way. He was ordained collegiate pastor of Tabernacle church in Salem July 21, 1819. In Oct. 1826, he resigned, and entered upon his duties as secretary of the American Education Society. In Oct. 1831, he was elected secretary of the American Board of Commissioners for Foreign Missions. He died Feb. 12, 1832. He published several occasional sermons and useful tracts.—Sprague, *Annals*, ii, 633; Edwards, *Memoir of Cornelius* (Bost. 1834, 12mo).

Corner. The words thus translated in our version of the Bible are the following:

1. פִּנָּה, *pinnah'*, signifies properly a *pinnacle*, as *shooting up* (2 Chron. xxvi, 15; Zeph. i, 16; iii, 6); hence an *angle*, properly exterior, as of a house (Job i, 19), of a street (Prov. vii, 8); also interior, as of a roof (Prov. xxi, 9; xxv, 24), of a court (Ezek. xlii, 20), of a city (2 Chron. xxviii, 24). It is put metaphorically for a *prince* or chief of the people (1 Sam. xiv, 38; Judg. xx, 2; Isa. xix, 13). The abbreviated form, פֵּן, *pen*, occurs Prov. vii, 8; Zech. xiv, 10.

2. פֵּאָה, *peäh'*, properly the *mouth*, then the *face*; hence, generally, a "*side*" of anything (especially a point of the compass, as on the east side, i. e. eastward, "the four corners" standing for the whole extent), or region, as of the face ("*part*," Lev. xiii, 41); of country ("*corners*," Neh. ix, 22, i. e. various *districts* of the promised land allotted to the Israelites; so "*corner* of Moab," Jer. xlviii, 15, i. e. that *country*: and in the plural, "*corners* [literally, the *two sides*] of Moab," Num. xxiv, 17, the *whole land*). Secondarily it denotes the *extreme part* of anything, as of a field (Lev. xix, 9; xxiii, 22), of the sacred table (Exod. xxv, 26; xxxvii, 13), of a couch or divan, the place of honor (Amos iii, 12). The "corners of the head and beard" (Lev. xix, 27; xxi, 5) were doubtless the extremities of the hair and whiskers running around the ears, which the Jews were forbidden to cut or shave off round, like the *clipped ear-locks* (mistranslated "utmost corners," Jer. ix, 26; xxv, 23; xlix, 32) of the heathen and the ancient Arabs of the desert (Herod. iii, 8). Illustrations of this fashion are still extant; indeed, Mr. Osburn (in his *Ancient Egypt*, p. 125) seems to have identified some figures on the Egyptian monuments with the ancient Hittites, one of the very tribes here alluded to, and who are exhibited as wearing helmets or skull-caps of a peculiar form, so as to leave exposed this peculiar national badge. They appear to have had a hideous custom of shaving a square

Hittite Ear-locks.

place just above the ear, leaving the hair on the side of the face and the whiskers, which hung down in a plaited lock.

3. כָּנָף, *kanaph'*, a *wing* (as elsewhere often), is used in Isa. xi, 12; Ezek. vii, 7, to express "the four *corners* of the earth," or the whole land.

4. כָּתֵף, *katheph'*, a *shoulder* or side (as often elsewhere), occurs in 2 Kings xi, 11, in speaking of the opposite parts of the Temple.

5. מִקְצוֹעַ, *miktso'ä* (literally *cut off* or *bent*), an *angle*, spoken of the external extremities of the tabernacle (Exod. xxvi, 24; xxxvi, 29), and the internal ones of a court (Ezek. xli, 22; xlvi, 21, 22); also of a bend or "turning" of a wall, conventionally applied apparently to the intersection of the internal wall of Jerusalem skirting Mount Zion on the east, with the continuation of that on the northern brow towards the Temple (2 Chron. xxvi, 9; Neh. iii, 19, 20, 24, 25). A kindred form occurs in the last clause of Ezek. xli, 22, where some render four-*square*.

6. פַּעַם, *pa'äm* (literally a *step*, usually a "time" or instance), spoken of the four corners of the sacred ark (Exod. xxv, 12), and of the brazen laver (1 Kings vii, 30).

7. צֵלָע, *tsela'* (literally a *rib* or side, as often elsewhere), spoken of either extremity of each side of the altar of incense (Exod. xxx, 4; xxxvii, 27).

8. קָצָה, *katsah'*, an *end* (as elsewhere usually), spoken of the four corners of the same (Exod. xxvii, 4).

9. זָוִית, *zavith'*, spoken of the "corners" of the altar (Zech. ix, 15); fig. of the *corner columns* of a palace (Psa. cxliv, 12, "that our daughters may be as cornerstones"), finely sculptured, in allusion probably to the *caryatides*, or columns, representing female figures, so common in Egyptian architecture (the point of comparison lying in the slenderness and tallness combined with elegance, comp. Cant. v, 15; vii, 8).

10. The Greek word γωνία signifies properly an *angle*, either exterior, as when streets meet, forming a *square* or place of public resort (Matt. vi, 5), or interior, a dark recess, put for *secrecy* (Acts xxvi, 26). "The four *corners* of the earth" denote the whole land or world, as in No. 1 above (Rev. vii, 1; 'quarters," xx, 8). On "the head of the *corner*," see CORNER-STONE below.

11. The "*corners*" of the great sheet in Peter's vision (Acts x, 11; xi, 5) represent a different word in the original, ἀρχή, which has elsewhere usually the signification of "*beginning*."

"The פֵּאָה, *peäh'*, or 'corner,' i. e. of the field, was not allowed (Lev. xix, 9) to be wholly reaped. The law gave a right to the poor to carry off what was so left, and this was a part of the maintenance from the soil to which that class were entitled. Similarly the gleaning of fields and fruit-trees, and the taking of a sheaf accidentally left on the ground, were secured to the poor and the stranger by law (xxiii, 22; Deut. xxiv, 19–21). See GLEANING. These seem to us, amid the sharply defined legal rights of which alone civilization is cognizant, loose and inadequate provisions for the relief of the poor. But custom and common law had probably ensured their observance (Job xxiv, 10) previously to the Mosaic enactment, and continued for a long but indefinite time to give practical force to the statute. Nor were the 'poor,' to whom appertained the right, the vague class of sufferers whom we understand by the term. On the principles of the Mosaic polity, every Hebrew family had a hold on a certain fixed estate, and could by no ordinary and casual calamity be wholly beggared. Hence its indigent members had the claims of kindred on the 'corners,' etc., of the field which their landed brethren reaped. Similarly the 'stranger' was a recognised dependent; 'within thy gates' being his expressive description, as sharing, though not by any tie of blood, the domestic claim. There was thus a further security for the maintenance of the right in its

definite and ascertainable character. Neither do we discover in the earlier period of the Hebrew polity, closely detailed as its social features are, any general traces of agrarian distress and the unsafe condition of the country which results from it—such, for instance, as is proved by the banditti of the Herodian period. David, a popular leader (1 Sam. xviii, 30; xxi, 11), could only muster from four to six hundred men out of all Judah, though every one that was in distress, in debt, and every one that was discontented,' came to him (1 Sam. xxii, 2; xxv, 13). Further, the position of the Levites, who had themselves a similar claim on the produce of the land, but no possession in its soil, would secure their influence as expounders, teachers, and, in part, administrators of the law, in favor of such a claim. In the later period of the prophets their constant complaints concerning the defrauding of the poor (Isa. x, 2; Amos v, 11; viii, 6) seem to show that such laws had lost their practical force. (These two passages, speaking of 'taking burdens of wheat from the poor,' and of 'selling the refuse [מַפָּל] of the wheat,' i. e. perhaps the gleanings, seem to point to some special evasion of the harvest laws.) Still later, under the Scribes, minute legislation fixed one sixtieth as the portion of a field which was to be left for the legal 'corner,' but provided also (which seems hardly consistent) that two fields should not be so joined as to leave one corner only where two should fairly be reckoned. The proportion being thus fixed, all the grain might be reaped, and enough to satisfy the regulation subsequently separated from the whole crop. This 'corner' was, like the gleaning, tithe-free. Certain fruit-trees, e. g. nuts, pomegranates, vines, and olives, were deemed liable to the law of the corner. Maimonides, indeed, lays down the principle (*Constitutiones de donis pauperam*, cap. ii, 1) that whatever crop or growth is fit for food, is kept, and gathered all at once, and carried into store, is liable to that law. A Gentile holding land in Palestine was not deemed liable to the obligation. As regards Jews, an evasion seems to have been sanctioned as follows: Whatever field was consecrated to the Temple and its services was held exempt from the claim of the poor; an owner might thus consecrate it while the crop was on it, and then redeem it, when in the sheaf, to his own use. Thus the poor would lose the right to the 'corner.' This reminds us of the 'Corban' (Mark vii, 11). For further information, see AGRICULTURE. The treatise *Peah*, in the Mishna, may likewise be consulted, especially chap. I, 2, 3, 4, 5, 6; II, iv, 7; also the above-quoted treatise of Maimonides." See HARVEST.

The CORNER-GATE (שַׁעַר הַפִּנָּה) of Jerusalem, spoken of in 2 Kings xiv, 13; 2 Chron. xxvi, 9; Jer. xxxi, 38, was on the N.W. side of the ancient city, in Josephus's "second wall," and between the present sites of Calvary and the Damascus Gate. (See Strong's *Harmony and Exposition of the Gospels*, Appendix ii, p. 17.) See JERUSALEM.

CORNER-STONE (אֶבֶן פִּנָּה, Job xxxviii, 6; Isa. xxviii, 16; Sept. and N. T. κεφαλὴ γωνίας), a quoin or block of great importance in binding together the sides of a building. (On Psa. cxliv, 12, see No. 9 above.) Some of the corner-stones in the ancient work of the temple foundations are 17 or 19 feet long, and 7½ feet thick (Robinson, *Researches*, i, 422). Corner-stones are usually laid sideways and endways alternately, so that the end of one appears above or below the side-face of the next. At Nineveh the corners are sometimes formed of one angular stone (Layard, *Nineveh*, ii, 201). The corresponding expression, "head of the corner" (רֹאשׁ פִּנָּה), in Psa. cxviii, 22, is by some understood to mean the coping or ridge, "coign of vantage," i. e. topstone of a building; but as in any part a corner-stone must of necessity be of great importance, the phrase "corner-stone" is sometimes used to denote any principal person, as the princes of Egypt (Isa. xix, 13), and is thus applied to our Lord, who, having been once rejected, was afterward set in the highest honor (Matt. xxi, 42; see Grotius on Psa. cxviii; comp. Harmer, *Obs.* ii, 356). The symbolical title of "chief corner-stone" (λίθος ἀκρογωνιαῖος) is also applied to Christ in Eph. ii, 20, and 1 Pet. ii, 8, 16, which last passage is a quotation from Isa. xxviii, 16, where the Sept. has the same words. The "corner-stone," or half-underlying buttress, properly makes no part of the *foundation*, from which it is distinguished in Jer. li, 56; though, as the edifice rests thereon, it may be so called. Sometimes it denotes those massive slabs which, being placed towards the bottom of any wall, serve to bind the work together, as in Isa. xxviii, 16. Of these there were often two layers, without cement or mortar (Bloomfield, *Recens. Synop.* on Eph. ii, 20). Christ is called a "corner-stone," (1.) In reference to his being the foundation of the Christian faith (Eph. ii, 20); (2.) In reference to the importance and conspicuousness of the place he occupies (1 Pet. ii, 6); and (3.) Since men often stumble against a projecting corner-stone, Christ is therefore so called, because his gospel will be the cause of aggravated condemnation to those who reject it (Matt. xxi, 44). See STUMBLING-STONE.

The prophet (Zech. x, 4), speaking of Judah, after the return from the exile, says, "out of him came [i. e. shall come] forth the *corner* [i. e. *prince*], out of him the nail;" probably referring ultimately to the "corner-stone," the Messiah.

Cornerus, CHRISTOPHORUS (KÖRNER), a German divine, was born in Franconia 1518, and was educated under his uncle, Conrad Wimpina. In 1540 he was made professor at Frankfort-on-the-Oder and ecclesiastical superintendent. He aided Andreä in the preparation of the Formula of Concord (see CONCORD), and wrote several works in Biblical literature and theology, now of little account. He died April 17, 1549.—Melchior Adam, *Vitæ Eruditorum*, i, 315.

Cornet, properly שׁוֹפָר, *shophar'* (prob. from שָׁפַר, *to be bright*, with reference to the clearness of sound; comp. שִׁפְרָה, Psa. xvi, 6), Gr. σάλπιγξ, Lat. *buccina*, a loud-sounding instrument, made of the horn of a ram or of a chamois (sometimes of an ox), and used by the ancient Hebrews for signals, for announcing the יוֹבֵל, "jubilee" (Lev. xxv, 9), for proclaiming the new year (Mishna, *Rosh Hashanah*, iii and iv), for the purpose of war (Jer. iv, 5, 19; comp. Job xxxix, 25), as well as for the sentinels placed at the watch-towers to give notice of the approach of an enemy (Ezek. xxxiii, 4, 5). *Shophar* is generally rendered in the A.V. "trumpet," but "cornet" is used in 1 Chron. xv, 28; 2 Chron. xv, 14; Psa. xcviii, 6; Hos. v, 8. "Cornet" is also employed in 2 Sam. vi, 5, for מְנַעַנְעִים, *menaänim'*, *sistra*, a musical instrument or rattle, which gave a tinkling sound on being *shaken* (used in Egypt in the worship of Isis; see Wilkinson, ii, 323 sq.). Finally, in Dan. iii, 5, 7, 10, 15, for the Chald. (and Heb.) term קֶרֶן, *ke'ren*, a *horn* (as elsewhere rendered) or simple tube.

Oriental scholars for the most part consider the *shophar* and the *keren* to be one and the same musical instrument; but some Biblical critics regard the *shophar* and the חֲצוֹצְרָה, *chatsotserah'* (invariably rendered "trumpet" in the A.V.), as belonging to the species of the *keren*, the general term for a horn (Joel Brill, in preface to Mendelssohn's version of the Psalms). Jahn distinguishes *keren*, "the horn or crooked trumpet," from *chatsotserah*, the straight trumpet, an instrument a cubit in length, hollow throughout, and at the larger extremity so shaped as to resemble the mouth of a short bill" (*Archäolog.* xcv, 4, 5); but the generally received opinion is, that *keren* designates the crooked

horn, and *shophar* the long and straight one. The *cornet* properly denotes a shrill wind military instrument of wood, now mostly superseded by the *oboe*. It was blown with a mouth-piece, and varied in size and tone (Mersenne's *Harmonie Universelle*). The sounds emitted from the cornet in modern times are exceedingly harsh, although they produce a solemn effect. See MUSIC.

Ancient Cornets: *a*, from Herculaneum; *b*, from Calmet.

"The silver trumpets (חֲצוֹצְרוֹת כֶּסֶף) which Moses was charged to furnish for the Israelites were to be used for the following purposes: for the calling together of the assembly, for the journeying of the camps, for sounding the alarm of war, and for celebrating the sacrifices on festivals and new moons (Num. x, 1-10). The divine command through Moses was restricted to two trumpets only, and these were to be sounded by the sons of Aaron, the anointed priests of the sanctuary, and not by laymen. It would seem, however, that at a later period an impression prevailed that 'while the trumpets were suffered to be sounded only by the priests *within* the sanctuary, they might be used by others, not of the priesthood, *without* the sacred edifice' (Conrad Iken's *Antiquitates Hebraicæ*, par. i, sec. vii, 'Sacerdotum cum instrumentis ipsorum'). In the age of Solomon the 'silver trumpets' were increased in number to 120 (2 Chron. v, 12); and, independently of the objects for which they had been first introduced, they were now employed in the orchestra of the Temple as an accompaniment to songs of thanksgiving and praise.

"*Yobel'*, יוֹבֵל, used sometimes for the 'year of Jubilee' (שְׁנַת הַיּוֹבֵל; comp. Lev. xxv, 13, 15, with xxv, 28, 30), generally denotes the institution of Jubilee; but in some instances it is spoken of as a musical instrument, resembling in its object, if not in its shape, the *keren* and the *shophar*. Gesenius pronounces *yobel* to be 'an onomato-poetic word, signifying *jubilum* or a joyful sound, and hence applied to the sound of a trumpet signal, like תְּרוּעָה' ('alarm,' Num. x, 5); and Dr. Munk is of opinion that 'the word YOBEL is only an epithet' (*Palestine*, p. 456 *a*, note). Still it is difficult to divest *yobel* of the meaning of a sounding instrument in the following instances: 'When the trumpet (הַיּוֹבֵל) soundeth long, they shall come up to the mount' (Exod. xix, 13); 'And it shall come to pass that when they make a long blast with the ram's horn' (בְּקֶרֶן הַיּוֹבֵל, Joshua vi, 5); 'And let seven priests bear seven trumpets of rams' horns' (שׁוֹפְרוֹת יוֹבְלִים, Josh. vi, 6). See JUBILEE.

"The sounding of the cornet (תְּקִיעַת שׁוֹפָר) was the distinguishing ritual feature of the festival appointed by Moses to be held on the first day of the seventh month, under the denomination of 'a day of blowing trumpets' (יוֹם תְּרוּעָה, Num. xxix, 1), or 'a memorial of blowing of trumpets' (זִכְרוֹן תְּרוּעָה, Lev. xxiii, 24); and that rite is still observed by the Jews in their celebration of the same festival, which they now call 'the day of memorial' (יוֹם הַזִּכָּרוֹן), and also 'New Year' (רֹאשׁ הַשָּׁנָה). 'Some commentators,' says Rosenmüller, 'have made this festival refer to the preservation of Isaac (Gen. xxii), whence it is sometimes called by the Jews 'the Binding of Isaac' (עֲקֵדַת יִצְחָק). But it is more probable that the name of the festival is derived from the usual kind of trumpets (ram's horns) then in use, and that the object of the festival was the celebration of the new year and the exhortation to thanksgivings for the blessings experienced in the year just finished. The use of cornets by the priests in all the cities of the land, not in Jerusalem only (where two silver trumpets were added, while the Levites chanted the 81st Psalm), was a suitable means for that object' (*Morgenland*, vol. ii, No. 337, on Lev. xxiii, 24).

"Although the festival of the first day of the seventh month is denominated by the Mishna 'New Year,' and notwithstanding that it was observed as such by the Hebrews in the age of the second temple, there is no reason whatever to believe that it had such a name or character in the times of Moses. The Pentateuch fixes the vernal equinox (the period of the institution of the Passover) as the commencement of the Jewish year; but for more than twenty centuries the Jews have dated their new year from the autumnal equinox, which takes place about the season when the festival of 'the day of sounding the cornet' is held. Rabbinical tradition represents this festival as the anniversary of the creation of the world, but the statement receives no direct support from Scripture. On the contrary, Moses expressly declares that the month *Abib* (the moon of the spring) is to be regarded by the Hebrews as the first month of the year: 'This month shall be unto you the beginning (רֹאשׁ) of months; it shall be the first (רֹאשׁ) month of the year to you' (Exod. xii, 2) (Munk, *Palestine*, p. 184 *b*). See YEAR.

"The intention of the appointment of the festival 'of the sounding of the cornet,' as well as the duties of the sacred institution, appear to be set forth in the words of the prophet, 'Sound the cornet (שׁוֹפָר) in Zion, sanctify the fast, proclaim the solemn assembly' (Joel ii, 15). Agreeably to the order in which this passage runs, the institution of 'the festival of sounding the cornet' seems to be the prelude and preparation for the awful day of atonement. The divine command for that fast is connected with that for 'the day of sounding the cornet' by the conjunctive particle אַךְ. '*Likewise* on the tenth day of this seventh month is the day of atonement' (Lev. xxiii, 27). Here אַךְ (likewise) unites the festival 'of the day of sounding the cornet' with the solemnity of the day of atonement precisely as the same particle connects the 'festival of tabernacles' with the observance of the ceremonial of 'the fruit of the *hadar*-tree, the palm branches,' etc. (Lev. xxiii, 34-40). The word 'solemn assembly' (עֲצָרָה) in the verse from Joel quoted above applies to the festival 'eighth day of solemn assembly' (שְׁמִינִי עֲצֶרֶת) (Lev. xxiii, 36), the closing rite of the festive cycle of *Tisri* (see Marks, *Religious Discourses*, i, 291-2).

"Besides the use of the cornet on the festival of 'blowing the trumpets,' it is also sounded in the synagogue at the close of the service for the day of atonement, and, among the Jews who adopt the ritual of the *Sephardim*, on the seventh day of the feast of tabernacles, known by the post-biblical denomination of 'the Great Hosannah' (הוֹשַׁעְנָה רַבָּה). See TRUMPET.

Cornhert or Coornhert. See CORNARISTS.

Cornice (Gr. *κορώνις, a curved line*), a horizontal moulded projection crowning the angle of a building or any of its parts, varying with the different orders and periods of architecture. In the early Gothic the cornice consisted of a corbel-table (q. v.). Later, a deep hollow, with a simple moulding (astragal) below, and one or more mouldings above, and with flowers,

animals, or angels richly carved in the hollow, constituted the predominant feature. With the Renaissance the classical cornice returned.

Cyma.... Cornice.
Corona......
Soffit.

Corona (Lat.), the lower member of a classical cornice. The horizontal under surface of it is called the *soffit*. English ecclesiastical writers often have applied the term corona to the semicircular apsis of a choir.

Coronāti, (I.) "a name of the ancient clergy, supposed to have been given to them in consequence of their shaven crowns. But Bingham and others have shown that the tonsure, as used by the Romanists, did not exist at the time of the introduction of this epithet. The custom was to cut the hair to a moderate degree simply for the sake of decent appearance, and especially to avoid conformity to the existing fashion of wearing long hair. St. Jerome says that none but the priests of Isis and Serapis have shaven crowns. The term *coronati* might be given to the clergy out of respect to their office and character, which were held in great honor. It was customary, in addressing bishops, to use some title of respect, such as *per coronam*, and *per coronam vestram;* and the allusion may be to the *corona*, or mitre, which the bishops wore as a part of their priestly dress; or it may be considered as a metaphorical expression, denoting the honor and dignity of the episcopal order."—Bingham, *Orig. Eccl.* vi, iv, 17.

(II.) A title traditionally given to four martyrs—Severus, Severianus, Carpophorus, and Victorinus—so named because, it is said, they were killed, in 304, by having *crowns* with sharp nails pressed into their heads. A church erected at Rome in their honor is mentioned by pope Gregory I, and still exists. They are commemorated in the Church of Rome on Nov. 8; the Acts of their martyrdom are spurious. See Wetzer u. Welte, *Kirch.-Lex.* ii, 880.

Corporal (*corporale*, sc. *velum*), the linen cloth which is spread over the symbols after communion. It is so called from being originally intended to represent the sheet in which our Lord's body (*corpus*) was wrapped after death. It is of linen with reference to Luke xxiii, 53. Originally it was so large as to cover the host and the wine, hence the name *palla* (εἰλητόν); but in the Middle Ages it received its present smaller size. It was retained by the English Reformers.—Herzog, *Real-Encyk.* iii, 153; Wetzer u. Welte, *Kirch.-Lex.* ii, 881.

CORPORAL INFLICTIONS. 1. In all ages, among the Israelites, *beating* was the commonest form of bodily chastisement known in civil offences (Deut. xxv, 2), e. g. in cases of a team of different sorts of beasts (i. e. the driver as well as the person sitting in the wagon), forty blows were inflicted (Mishna, *Chil.* viii, 3). See BASTINADO. The delinquent probably

Modern Egyptian Bastinado.

received the strokes from a stick (comp. Prov. x, 13; a rod of "scorpions" is named in 1 Kings xii, 11, 14; 2 Chron. xi, 14, either a thorny, knotty staff [comp. *scorpio* in Isidor. *Origg.* v, 27, 18; thongs of oxhide are mentioned in Lev. xix, 20, as בִּקֹּרֶת; but see Gesenius, *Thes.* p. 234], or one set with pointed projections [Gesen. *Thes.* p. 1062], probably an unusual severity), in a prostrate attitude (not on the soles of the feet, as in the modern East, Arvieux, iii, 198), and in the presence of the judge (comp. Wilkinson, ii, 41; Rosellini, ii, 3, p. 274); but not over forty stripes (Deut. xxv, 2). The later Jewish infliction (see the Mishna, *Maccoth*) was executed by means of a twisted leather thong (whip), and the blows, not exceeding thirty-nine in number (*Maccoth*, iii, 10; compare Josephus, *Ant.* iv, 8, 21; 2 Cor. xi, 24), were dealt by the officer of justice (חַזָּן) upon the culprit, who stood bent forward (*Maccoth*, iii, 12). The cases in which this punishment was applied were sometimes such as were deemed a capital offence by the Mosaic law (*Maccoth*, iii, esp. 15). That scourging was also in vogue in the synagogue appears from the New Test. (Matt. x, 17; xxiii, 34), where there seems to be an allusion to the threefold sentence that prevailed in that ecclesiastical court (Lightfoot, *Hor. Hebr.* p. 332); yet the Talmudists are not agreed whether forty blows could be inflicted in any case (*Sanhedr.* i, 2). See SYNAGOGUE. Scourging is mentioned (Acts v, 40) as a penalty in the power of the Sanhedrim; an increase of severity being employed in instances of repeated offence (*Sanhedr.* ix, 5; see Wendt, *De debitis reciduis*, Erlangen, 1824). See COUNCIL. Under the Syrian rule chastisement with the lash occurs as a form of torture (2 Macc. vii, 1; comp. Juvenal, xiii, 195; Cicero, *Cluent.* 63). See FLAGELLATION. The Roman scourging (φραγελλοῦν, μαστιγοῦν) with thongs was inflicted on Jesus before crucifixion (Matt. xxix, 26; John xix, 1), and on the apostles as a civil penalty (Acts xvi, 22, 37); but Roman citizens could only be beaten with rods (*virgis cædi*, Cicero, *Verr.* v, 66; comp. Acts xxii, 25). That this punishment might be carried to a fatal extent is evident (Cicero, *Verr.* v, 54; Pluto, *Opp.* ii, 528); it was generally applied with fearful severity by the Roman governors (Josephus, *War*, vi, 5, 3). See SCOURGE.

2. Physical injuries committed upon a free Israelite were to be avenged by retaliation upon the author (Exod. xxi, 23 sq.; Lev. xxiv, 19 sq.). See DAMAGES.

3. Of foreign corporal inflictions we may here enumerate the following: (1.) Partial dichotomy, or the cutting off of the nose and ears, also of the hands or one of them, which species of punishment was often practised among the later Jews, but chiefly in tumultuous times (Josephus, *Life*, 30, 34, 35). A similar maiming of the toes occurs among the Canaanitish incidents (Judg. i, 7). In Egypt such mutilations were sanctioned by law; and it was usually the member through which the offence had been committed that was cut off (Diod. Sic. i, 78); the adulteress must expiate her crime by the loss of the nose (so as to spoil her countenance), a penalty to which Ezek. xxiii, 25, is usually referred, a passage, however, that rather relates to Babylonian usage. (On the Persian custom, see Xenophon, *Anab.* i, 9, 13; Curtius, v, 5, 6; vii, 5, 40. An allusion to dichotomy occurs in the Behistun inscription; see Rawlinson's explanation, p. 9, 17.) On captives in war such disfigurations were and still are (Russegger, *Reise*, ii, 138) most recklessly perpetrated. (2.) Blinding (עִוֵּר) was a Chaldæan (Jer. lii, 11; 2 Kings xxv, 7) and ancient Persian punishment (Herodotus, vii, 18). See EYE. It still prevails in Persia with regard to princes, who are sometimes thus deprived of all prospect to the succession; vision is not entirely obliterated by the process employed in such cases (Chardin, v, 243; Rosenmüller, *Morgenl.* iii,

250 sq.; a different treatment is mentioned by Procopius, in Phot. *Cod.* 63, p. 32). The extinction of the eyes (נִקֵּר אֶת־עֵינַיִם), a practice frequent in Persia (Ctesias, *Pers.* 5), is named in Judg. xvi, 21, as a piece of Philistine barbarity, in 1 Sam. xi, 12, the same atrocity appears to have obtained with the Ammonites. See PUNISHMENT.

Corporation, ECCLESIASTICAL (CORPUS ECCLESIASTICUM), an association for ecclesiastical purposes sanctioned by the state and recognised as a civil person (*corpus*). Among the usual rights of corporations are those to acquire property, to contract obligations and debts, to sue and be sued. Their legal status may be regulated either by general laws applying to all corporations of a certain class, or by special laws given for the benefit of one corporation only.—Wetzer u. Welte, *Kirchen-Lex.* ii, 881.

Corpse (גְּוִיָּה, *geviyah'*, Neh. iii, 3, a *carcase*, as rendered in Judg. xiv, 8, 9, elsewhere "body;" פֶּגֶר, *pe'ger*, 2 Kings xix, 35; Isa. xxxvii, 6, a "*carcase*" or "body" [usually dead], as elsewhere rendered; πτῶμα, Mark vi, 29, a dead "body" or "carcase," as elsewhere rendered), the dead body of a human being. See CARCASE.

Corpus Catholicōrum (*body of the Catholics*), formerly the collective name of the Roman Catholic states of Germany, as contradistinguished from the *Corpus Evangelicorum* (q. v.) of the Protestant states. It was not until after the treaty of Westphalia, wherein the pope had, by settling, so to say, the rights of both parties, officially recognised their existence, that the expression *Corpus Catholicorum* came into general use. Yet the confederation had existed before the *Corpus Evangelicorum*, as is proved by the harmonious action of the Roman Catholic states at the Diet of Nuremberg and the decisions of the Confederation of Ratisbon (1524). The elector of Mayence was the President of the *Corpus Catholicorum*, which generally held its proceedings in a convent of that city in which the diet happened to meet. The abolition of the German Empire in 1806 led to the extinction of the *Corpus Evangelicorum*, and, as a consequence, of that of the *Corpus Catholicorum*.—See Faber, *Europäische Staats-Cantzley*, who, in vol. liii, p. 237, gives a complete list of the states constituting the *Corpus Catholicorum;* Moser, *Teutsches Staats-Recht*, etc.; and CORPUS EVANGELICORUM.

Corpus Christi (*body of Christ*), a festival instituted in the Roman Church in honor of the consecrated host and of transubstantiation. It owes its origin to a nun of Liège named Juliana. In 1230, while looking at the full moon, she said she saw a gap in its orb, and, by a revelation from heaven, learned that the moon represented the Christian Church, and the gap the want of a certain festival—that of the adoration of the body of Christ in the consecrated host—which she was to begin to celebrate, and to announce to the world. Further, in 1264, while a priest at Bolsena, who did not believe in transubstantiation, was going through the ceremony of benediction, it is said drops of blood fell on his surplice, and, when he endeavored to conceal them in the folds of his garment, they formed bloody images of the host! A bloody surplice is still said to be shown at Civita Vecchia. Urban IV published in the same year a bull, in which he appointed the Thursday of the week after Pentecost for the celebration of the Feast of Corpus Christi throughout Christendom, and promised absolution for a period of from forty to one hundred days to the penitent who took part in it. It was afterwards neglected, but was re-established by Clement V, and since that time the festival has been observed as one of the most important in the Romish Church. Splendid processions form a part of it. The children belonging to the choir with flags, and the priests with lighted tapers, move through the streets in front of the priest who carries the host in a precious box, where it can be seen under a canopy held by four laymen of rank. A crowd of common people closes the procession.—Elliott, *Delineation of Romanism*, bk. ii, ch. vii; Sieger, *Handb. d. Christl. Alterthümer*, and references there, and for the Romish view, Butler, *Feasts and Fasts*, treatise xi.

Corpus Doctrinæ, the name given to certain collections of writings which were intended to have authority in the Protestant churches of Germany. The most important of these collections are the following: 1. *Corpus Phillippicum*, also called *Saxonicum* or *Misnicum* (published in 1560, fol. and often). It contained the three general symbols (the Apostolic, Nicæan, and Athanasian), the Confession of Augsburg (the *Invariata*) and the Apology, and Melanchthon's *Loci Communes*, *Examen Ordinandorum*, and *resp. ad artic. Bavaric.* It was considered as crypto-Calvinistic, and violently denounced by the rigorous Lutherans. The Elector of Saxony, in 1569, threatened with deposition all who refused to teach in accordance with it, but subsequently this decree was repealed, and a number of defenders of the work were tried and imprisoned. 2. The *Corpus Doctrinæ Pomeranicum* had the same contents as the preceding one. 3. The *Corpus Doctrinæ Prutenicum* (Prussian), also called *Repetitio doctrinæ ecclesiasticæ*, was published in 1567, and directed against the Osiandrian errors. A decree of the prince, in 1567, prescribed it as a rule of faith for all times to come, and declared that none who refused to accept it should receive office.

Corpus Evangelicōrum (*body of the Evangelical*), formerly the collective name of the evangelical states of Germany. The first league was made between Saxony and Hesse in 1528. Other evangelical states followed, and at the Protestation of Spires in 1529, the *Corpus Evangelicorum* was organized. In the Nuremberg religious peace in 1532, it entered as such in relation with the *Corpus Catholicorum* (q. v.). The head-quarters of the latter were in the electorate of Mayence, while Saxony stood at the head of the evangelical states. At the close of the sixteenth century, Frederic III, elector of the Palatinate, having become Protestant, became head of the *Corpus Evangelicorum*, but after he had lost all his states in the Thirty Years' War, Sweden took the lead, which was, however, restored to Saxony by the Diet of 1653. After the electoral house of Saxony had become Romanist, the lead of the *Corpus Evangelicorum* was claimed by several other Protestant states; yet it remained finally with Saxony, it being, however, stipulated that the envoy of Saxony should receive his instructions, not from the elector, but from the college of the privy council at Dresden. The *Corpus Evangelicorum* ended with the dissolution of the German empire in 1806.—Herzog, *Real-Encyklop.* iii, 156; Bülow, *Ueber gesch. u. Verf. des Corp. Evang.* (1795).

Corpus Juris Canonici, a collection of the sources of the Church law of the Roman Catholic Church, consisting of old canons, resolutions of councils, decrees of popes, and writings of Church fathers. The collection gradually arose from the desire to have for the decision of ecclesiastical cases a law-book of equally general authority as the *Corpus Juris Civilis* possessed in the province of civil legislation. Its component parts were originally compiled in strict imitation of the *Corpus Juris Civilis*.

I. *Component Parts.*—Generally recognised as parts of the *Corpus Juris Canonici*, and constituting what is called the *Corpus Juris Clausum*, are the *Decretum Gratiani* (1151), the decretals of Gregory IX (1234), the *Liber Sextus* of Boniface VIII (1298), and the *Clementines* (1313). Disputed is the authority of the two collections of *Extravagantes* of pope John XXII (1340) and of the *Extravagantes Communes* (1484).

Generally rejected are now the 47 *Canones pœnitentiales* taken from the *Summa de Casibus Conscientiœ* of cardinal di Asti ("*Summa Astesana*"), and the *Canones Apostolorum*, both of which were, in the earlier editions of the *Corpus Juris Canonici*, given as an appendix to the *Decretum Gratiani*. The same is the case with the *Institutiones Juris Canonici*, and with the *Liber Septimus* of Peter Mathews of Lyons.

II. *The Formation of the Collection.*—The name of *Corpus Juris Canonici* was early given to the *Decretum Gratiani* in distinction from the *Corpus Juris Civilis*. But from the fifteenth century it became customary to apply the name to the collection of the law-books above enumerated. Printed editions of the collection with the title of *Corpus Juris Canonici* do not occur before the sixteenth century. Among those who are most noted for spending critical labor on the editing of the *Corpus Juris Canonici* are Anthony Demochares (ed. Paris, 1550-52, without *glossæ*, and Paris, 1561, 3 vols. fol., with *glossæ*), who completed the indefinite references in the headings of the *Decretum* by more accurate statements; Charles Dumoulin, or (as he called himself with a Latin name) Car. Molinæus (Lyons, 1554, 4to, and 1559, fol.), who designated the several passages of the *Decretum* (with the exception of the *Paleæ*) with notes; Le Conte, or Contius (Antw. 1569-1571, 4 vols. 8vo), who from older unprinted collections added, in particular in the decretals of Gregory IX, the *partes decisæ* which had been suppressed by Raymund of Pennaforte; the *Correctores Romani* (q. v.), whose work (Rome, 1582, 5 vols. fol.) is a turning-point of the history of the *Corpus;* the brothers François and Pierre Pithou, whose valuable notes were used by Le Pelletier in his edition (Paris, 1687; again Lpz. 1690 and 1705; and Turin, 1746, 2 vols. fol.); Justus Henning Böhmer (Halle, 1747, 2 vols. 4to); Aem. Lud. Richter (Leipz. 1833-1839, 1 vol. in 2 parts, 4to), who left out all the appendixes having no legal authority. For fuller information on the component parts of the *Corpus Juris Canonici*, and for their legal authority, see article CANON LAW (p. 87 sq.). See also Wetzer u. Welte, *Kirchen-Lex.* ii, 886.

Corpus Juris Civilis (*body of Civil Law*). See JUSTINIAN.

Correctōres Romāni, a congregation of cardinals and Roman theologians of thirty-five members, appointed by pope Pius V to revise the *decretum Gratiani* (see *Corpus juris Canonici*). Among the five cardinals who belonged to the college was Hugo Boncompagnus (subsequently pope Gregory XIII). The work was completed during the pontificate of Gregory XIII, who ordered the compilers to index all that had been collected, with regard to the decretum, by the congregation and by others, to invite all Catholic academies to co-operate in the work of revision, and to have all the former editions of the *decretum* compared. Gregory sanctioned the work July 1, 1580.—Wetzer u. Welte, *Kirchen-Lex.* ii, 894.

Corrodi, HEINRICH, a prominent writer of the Rationalistic school, was born at Zurich, July 31, 1752. He was admitted to the ministry in 1775; continued his theological studies in Leipsic and Halle, where especially Semler (q. v.) had great influence upon him, and was in 1786 appointed professor of ethics and natural law at the gymnasium of Zurich. This position he retained until his death, Sept. 14, 1793. His principal works are *Geschichte des Chiliasmus* (4 vols. Frankf. and Leips. 1781-83, full, but very diffuse, and abounding in worthless matter); *Beleuchtung der Gesch. des jüd. u. christl. Bibelcanons* (Halle, 1792, 2 vols.); *Philos. Aufsätze u. Gespräche* (Winterthur, 1786, 2 vols.); *Versuch über Gott, die Welt u. d. menschl. Seele* (Berlin, 1788), and the periodical *Beiträge zur Beförderung des vernünftigen Denkens in d. Religion* (18 numbers, Winterthur, 1781-1794; two numbers appeared after his death under the name of *Neue Beiträge*).—Pierer, *Universal-Lexikon*, iv, 464; Herzog, *Real-Encyklopädie*, iii, 157.

Corruption (prop. some form of שָׁחַת, *shachath*, *διαφθείρω*). This term is used in Scripture to signify the putrefaction of dead bodies (Psalm xvi, 10), the blemishes which rendered an animal unfit for sacrifice (Lev. xxii, 25), sinful inclinations, habits, and practices, which defile and ruin men (Rom. viii, 21; 2 Peter ii, 12, 19), everlasting ruin (Galat. vi, 8), men in their mortal and imperfect state (1 Cor. xv, 42, 50).

MOUNT OF CORRUPTION (הַר הַמַּשְׁחִית, Sept. *ὄρος τοῦ Μοσχίθ* v. r. *Μοσθάθ*, Vulg. *mons offensionis*), a hill in the neighborhood of Jerusalem, where Solomon had established the worship of the Ammonitish deity Milcom, which Josiah overthrew (2 Kings xxiii, 13). Tradition assigns the locality of the "Mount of Offence" to the eminence immediately south of the Mt. of Olives (see Barclay, *City of the Great King*, p. 64 sq.; Stanley, *Palest.* p. 185, note). See JERUSALEM.

Corrupticŏlæ, a sect of Monophysites, who taught that the body of Christ before the resurrection was corruptible. See MONOPHYSITES; SEVERIANS.

Cortez, DONOSO. See DONOSO CORTEZ.

Cortholt, CHRISTIAN, an eminent Lutheran Church historian, was born at Burg, in the island of Femern, Denmark, Jan. 15th, 1632. His studies, commenced at Schleswig, were continued in the universities of Rostock, Jena, Leipsic, and Wittenberg. In 1662 he became professor of Greek at Rostock, where he was made D.D. He was afterwards called to the professorship of theology at Kiel by the duke of Holstein-Gottorp, and in 1666 became vice-chancellor of that university. He died March 31 (or April 1st), 1694. His principal works are, *De persecutionibus ecclesiæ primitivæ sub imperatoribus ethnicis* (Jen. 1660, 4to; Kilen. 1689); *Paganus obtrectator s. de calumniis gentilium* (lib. iii, Kil. 1698; Lubec, 1703, 4to); *Disquisitiones Anti-Baronianæ* (Kil. 1700, 1708, etc.); *Hist. eccl. N. T.* (Lips. 1697), etc. See Pipping, *Memoria Theologorum nostra ætate clarissimorum* (Lips. 1705, p. 571 sq.); Bayle, *Dictionary*, s. v.; Iselin, *Hist. Wörterbuch;* Schröckh (i, p. 173); Herzog, *Real-Encyklop.* viii, 82.

Corvey, ABBEY of, a celebrated monastery near Höxter, in Germany. The Benedictines of Corbie (q. v.), in Picardy (France), sent out in 816 a colony to found a convent in the forests of Sollingen, but the monks removed in 822 to a more healthy region, where they established *Corbeja nova*, or Corvey. Louis the Pious endowed them with numerous possessions and privileges, and his example was followed by many other princes and laymen, so that Corvey soon became the richest of all the German convents. The abbot obtained a voice in the diets, and was amenable only to the papal authority. The school of the convent was highly flourishing during the 9th and 10th centuries. Among the many celebrated men who proceeded from Corvey was Ansgar (q. v.), the apostle of the Scandinavians, with his eminent associates and pupils, St. Adalbert, archbishop of Magdeburg, and many archbishops of Bremen and Hamburg. At the period of its greatest prosperity the convent had twenty-four theological professors, and its library was celebrated for its large number of classical manuscripts. Thus the first five books of Tacitus, which were commonly regarded as lost, were found in Corvey. Unfortunately, this exquisite library was destroyed in the Thirty Years' War. In 1794 Corvey was erected into a bishopric, but secularized in 1804, and joined in 1807 to Westphalia, and in 1815 to Prussia. See Wigand, *Gesch. d. Abtei Korvey* (Höxter, 1819); and *Korveische Geschichtsquellen* (Lpz. 1841); Schumann, *Ueber das Chronicon Corvejense* (Gött. 1839); Wetzer u. Welte, *Kirchen-Lex.* ii, 898.

Corvinus, ANTHONIUS (properly RÄBENER), one of the German Reformers, was born at Warburg in 1501.

He became a monk, and as such resided for a time in the convents of Riddagshausen and Loccum, but having embraced the doctrine of Luther, was expelled in 1523. He then went to Wittenberg, and thence to Marburg in 1526, and laid the foundation of the university there. He was present at the two synods of Pattensen, 1544, and Münden, 1545, and made himself very useful to the cause by his preachings, writings, and travels; but the duke Erich II having returned to the Roman Church, Corvinus was taken and held a prisoner at Kalenberg in 1549. He died in Hanover in 1553. His principal work is the *Postilla in evangelia et epistolas*. See Baring, *Leben Corvin's* (Hann. 1749); Uhlhorn, *Ein Sendbrief v. Antonius Corvinus m. einer biographischen Einleitung* (Göttingen, 1853); Herzog, *Real-Encyklop.* iii, 166.

Cos (1 Macc. xv, 23). See Coos.

Co'sam (Κωσάμ, prob. for Heb. קֹסֵם, a *diviner*), son of Elmodam, and father of Addi, ancestors of Christ, and descendants of David in the private line, before Salathiel (Luke iii, 28), B.C. ante 588. He is not mentioned in the Old Testament. See GENEALOGY (OF CHRIST).

Cosin, JOHN, a learned prelate of the Church of England, was born at Norwich Nov. 30, 1594. In 1624 he became a prebendary of Durham, in 1628 rector of Brancepath, in 1634 master of Peter-house, and in 1640 dean of Peterborough. The Puritans deprived him of his preferments during the Commonwealth, and even went the length of impeaching him on a charge of being inclined to popery. (For the charges, see Hook, *Eccles. Biography*, iv, 182.) He was acquitted of all these charges, and then retired to France, where he remained until the restoration of Charles II, who raised him to the see of Durham, Dec. 2, 1660, which office he filled with eminent charity and zeal. He died in 1672. Among his writings are, *A History of Transubstantiation*, and *A Scholastical History of the Canon of the Holy Scriptures*, published, with his *Life*, 1673. His whole works are collected in the *Library of Anglo-Catholic Theology* (Oxford, 1843–53, 5 vols. 8vo).

Cosmas, ST., and his brother ST. DAMIANUS, of Arabia, lived in the 3d century, and practiced medicine at Ægea, in Cilicia. The governor Lysias commanded that they, with their three other brothers, should sacrifice to the heathen deities, and as they refused so to do, commanded their heads to be cut off in 303. They are honored as martyrs, and as special patrons of physicians and druggists. They are commemorated in the Roman Church on the 27th Sept.—Wetzer u. Welte, *Kirchen-Lex.* ii, 902; *Acta Sanctorum* (Sept., tom. xii.

Cosmas and Damianus, ORDER OF, an order of knights spiritual, founded in the 11th century, who adopted the rule of St. Benedict. They devoted themselves especially to the care of the pilgrims going to Palestine. They were destroyed by the Turks soon after their organization.

Cosmas Indicopleustes (i. e. *traversing India*), an Egyptian monk, living probably about the middle of the 6th century. He visited as a merchant Egypt, India, and other Eastern countries, and wrote a work, entitled Χριστιανικὴ τοπογραφία, in which he undertook to substitute for the pagan geography of the ancients a new Christian system of geography, based upon all kinds of delusions. His work is contained in the second volume of Montfaucon's *Collectio nova patrum Gr.* (Paris, 1707).

Cosmogony (from κόσμος, the *world*, and γόνος, *generation*), strictly the science of the origin of the earth. The term is applied also to the various theories of the formation of the material universe. If we except the cosmogony of the Indians (which is for the most part extravagant and even monstrous, although the "Institutes of Menu" speak of a simpler system; see Sir William Hamilton's *Asiatic Researches*, vol. v), the earliest profane cosmogony extant is that of Hesiod (in the first part of his *Theogony*, ver. 116–452), which is delivered in verse, and which served as the groundwork for the various physical speculations of most late Greek philosophers. It differs widely from the notion of Homer (*Iliad*, xiv, 200), which is also poetic, and represented the more popular view of the Greeks on this subject. The first prose cosmogonies among heathen writers were those of the early Ionic philosophers, of whom Thales, Anaximenes, Anaximander, and Anaxagoras were the most celebrated. The theories of the ancients on this subject may be reduced to three; for those of moderns, see CREATION; for the view of Ovid (in his *Metamorphoses*), see CHAOS.

"1. That which represents the world as eternal in form as well as substance. Ocellus Lucanus is one of the most ancient philosophers who supposed the world to have existed from eternity. Aristotle appears to have embraced the same doctrine. His theory is, that not only the heaven and earth, but also animate and inanimate beings in general, were without beginning. His opinion rested on the belief that the universe was necessarily the eternal effect of a cause equally eternal, such as the Divine Spirit, which, being at once power and action, could not remain idle. Yet he admitted that a spiritual substance was the cause of the universe, of its motion and its form. He says positively, in his *Metaphysics*, that God is an intelligent spirit (νοῦς), incorporeal, immovable, indivisible, the mover of all things. According to him, the universe is less a creation than an emanation of the Deity. Plato says the universe is an eternal image of the immutable Idea or Type, united, from eternity, with changeable matter. The followers of this philosopher both developed and distorted this idea. Ammonius, a disciple of Proclus, taught, in the 6th century, at Alexandria, the co-eternity of God and the universe. Several ancient philosophers (as also moderns) have gone further, and taught that the universe is one with Deity. Of this opinion were Xenophanes, Parmenides, Melissus, Zeno of Elea, and the Megaric sect.

"2. The theory which considers the *matter* of the universe eternal, but not its *form*, was the prevailing one among the ancients, who, starting from the principle that out of nothing nothing could be made, could not admit the creation of matter, yet did not believe that the world had always been in its present state. The prior state of the world, subject to a constant succession of uncertain movements, which chance afterwards made regular, they called *chaos*. The Phœnicians, Babylonians, and also the Egyptians, seem to have adhered to this theory." "The Chaldæan cosmogony, according to Berosus, when divested of allegory, seems to resolve itself into this: that darkness and water existed from eternity; that Belus divided the humid mass, and gave birth to creation; that the human mind is an emanation from the divine nature. The cosmogony of the ancient Persians is very clumsy. They introduce two eternal principles, the one good, called *Oromasdes*, the other evil, called *Arimanius*; and they make these two principles contend with each other in the creation and government of the world. Each has his province, which he strives to enlarge, and *Mithras* is the mediator to moderate their contentions. This is the most inartificial plan that has been devised to account for the existence of evil, and has the least pretensions to a philosophical basis. The Egyptian cosmogony, according to the account given of it by Plutarch, seems to bear a strong resemblance to the Phœnician, as detailed by Sanchoniatho. According to the Egyptian account, there was an eternal chaos, and an eternal spirit united with it, whose agency at last arranged the discordant materials, and produced the visible system of the universe. The cosmogony of the Northern nations, as may be collected from the Edda, supposes an eternal

principle prior to the formation of the world. The Orphic Fragments state everything to have existed in God, and to proceed from him." "The ancient poets, who have handed down to us the old mythological traditions, represent the universe as springing from chaos without the assistance of the Deity. Hesiod feigns that Chaos was the parent of Erebus and Night, from whose union sprang the Air (Αἰθήρ) and the Day. He further relates how the sky and the stars were separated from the earth, etc. The system of atoms is much more famous. Leucippus and Democritus of Abdera were its inventors. The atoms, or indivisible particles, said they, existed from eternity, moving at hazard, and producing, by their constant meeting, a variety of substances. After having given rise to an immense variety of combinations, they produced the present organization of bodies. This system of cosmogony was that of Epicurus, as described by Lucretius. Democritus attributed to atoms form and size; Epicurus added weight. Many other systems have existed, which must be classed under this division. We only mention that of the Stoics, who admitted two principles, God and matter—in the abstract, both corporeal, for they did not admit spiritual beings. The first was active, the second passive.

"3. The third theory of cosmogony attributes the origin of the world to a great spiritual cause or Creator. This is the doctrine of the sacred Scriptures, in which it is taught with the greatest simplicity and beauty. From its being more or less held by the Etruscans, Magi, Druids, and Brahmins, it would seem to have found its way as a tradition from the regions in which it was possessed as a divine revelation. Anaxagoras was the first who taught it among the Greeks, and it was to some extent adopted by the Romans, notwithstanding the efforts of Lucretius to establish the doctrine of Epicurus." Dr. Good, however, shows that this view was far from general among even the most cultivated nations of antiquity, or, indeed, unquestioned by early Christian writers (*Book of Nature*, p. 27). See COSMOLOGY.

COSMOGONY, MOSAIC, or the Biblical account of the *origin of the world*, especially as contained in the first chapter of the book of Genesis. The following is a close translation of the first (Elohistic) cr general account of the creation as given by Moses (Gen. i, 1–ii, 3). See GENESIS.

At first God created the heavens and the earth; but the *earth* was waste and bare [(a scene of ruin)], and darkness [was] upon [the] face of the abyss, while the Spirit of God [was] brooding upon [the] face of the waters. Then God said, "Let [there] be light!" and [there] was light; and God saw the light, that [it was] good: so God divided between the light and the darkness; and God called the light DAY, but the darkness he called NIGHT. Thus [there] was evening, and [there] was morning—[the] first day.

Then God said, "Let [there] be a firmament in the midst of the waters, and let [it] be a divider between [the] waters [below it] as to [the] waters [above it]:" so God made the firmament, and divided between the waters that [are] underneath as to the firmament, and the waters that [are] overhead as to the firmament; for it was accordingly: and God called the firmament HEAVENS. Thus [there] was evening, and [there] was morning—[the] second day.

Then God said, "Let the waters underneath the heavens be gathered toward one place, and let the dry [land] appear;" and it was accordingly: and God called the dry [land] EARTH, but the gathering of the waters he called SEAS; so God saw that [it was] good. Then God said, "Let the earth sprout the sprout [(grasses)], the plant [(annuals)] seeding seed, the fruit-tree [(of woody stem)] bearing fruit after its kind—in which [is] its seed upon the earth;" and it was accordingly; for the earth sprouted the sprout, the plant seeding seed after its kind, and the tree bearing fruit—in which [is] its seed after its kind: so God saw that [it was] good. Thus [there] was evening, and [there] was morning—[the] third day.

Then God said, "Let [there] be lights in the firmament of the heavens, to divide between the day and the night; and let them be for signs, and for seasons, and for days, and years; even let them be for lights in the firmament of the heavens, to give light upon the earth:" and it was accordingly; so God made the two great lights—the greater light [(sun)] to rule the day, and the smaller light [(moon)] to rule the night—also the stars: and God appointed them in the firmament of the heavens, to give light upon the earth, and to rule over the day and over the night, and to divide between the light and the darkness; so God saw that [it was] good. Thus [there] was evening, and [there] was morning—[the] fourth day.

Then God said, "Let the waters swarm [with] the swarm of the living creature, and let the bird fly upon the earth—upon the face of the firmament of the heavens:" so God created great [sea-] monsters, and every living creature that creeps, [with] which the waters swarmed, after its kind; also every winged bird after its kind; so God saw that [it was] good: and God blessed them, saying, "Be fruitful, and multiply, and fill the waters in the seas; and let the bird multiply on the earth." Thus [there] was evening, and [there] was morning—[the] fifth day.

Then God said, "Let the earth bring forth the living creature after its kind, beast [(large quadrupeds)], and reptile [(short-legged animals)], and [(every other)] living [thing] of the earth, after its kind;" and it was accordingly; for God made the living [thing] of the earth after its kind, and the beast after its kind, and every reptile of the ground after its kind: so God saw that [it was] good. Then God said, "Let us make MAN in our image—according to our likeness [(the exact reflection of the divine [mental] lineaments)]; and let him have dominion over the fish of the sea, and over the bird of the heavens, and over the beast, and over all the earth, and over every reptile that creeps upon the earth;" so God created mankind in his [own] image, in the image of God he created him, [yet] male and female he created them: and God blessed them, when God said to them, "Be fruitful, and multiply, and fill the earth, and subdue it; and have dominion over the fish of the sea, and over the bird of the heavens, and over every living [thing] that creeps upon the earth:" for God said, "Lo! I have given to you every plant seeding seed, which [is] upon [the] face of all the earth, and every tree in which [is] the fruit of a tree seeding seed; to you it shall be for food, also to every living [thing] of the earth, and to every bird of the heavens, and to every [thing] cre ping upon the earth in which [exists] a living creature, [even] every green plant for food." And it was accordingly; so God saw every [thing] that he had made, and lo! [it was] very good: thus [there] was evening, and [there] was morning—the sixth day

Now were finished the heavens, and the earth, and all their army [of stars]; for God finished on the seventh day his work which he had made, and [therefore] ceased on the seventh day from all his work which he had made. Then God blessed the seventh day, and sanctified it; because on it he ceased [(*shabáth*, rested)] from all his work which God created in making.

The statements contained in this passage are thought by a certain class of semi-infidel philosophers to be in conflict with the conclusions of modern science, especially astronomy and geology. We are sure, however, that the works and word of God can never be otherwise than in harmony, and if any conflict appears, it must be in consequence of the unskillfulness or erroneous system of the expounders, either of the book of nature or of revelation. The difficulty consists in the alleged contradiction between the *philological* "interpretation" of the sacred record and the *scientific* or *historical* exposition of the facts. In this, as in all similar instances of apparent discrepancy, it is no disparagement of philology that it is obliged to modify previous interpretations on account of new light from collateral branches of knowledge; the same course has always been pursued, e. g. in the verification of prophecy, where history has necessarily come in as a supplementary aid in fixing a definite meaning to what before was dark and general. This, it is true, would not be allowable if the scriptural statements in question were explicit and in detail, or if they were couched in the precise terms of modern science; but it is a legitimate method of interpretation in the case of such brief and popular phraseology as we often find in the Bible on subjects adverted to for collateral purposes. It is therefore only necessary to show that the essential meaning of the text, when explained according to the analogies of the *usus loquendi* of an unscientific people, should not conflict, *as to the real facts involved*, with the conclusions of late scientific investigators. See INTERPRETATION. There are three principal modes in which this adjustment has been attempted with regard to Moses's account of the creation. (1.) Some regard chapter i of Genesis as a general statement of the original formation of all created things, including that of man as a race, in the several varieties scattered over

the earth's surface; and chap. ii as a detailed account of a *subsequent* creation of the Adamic or Hebrew lineage in particular. It cannot be denied that the difference in language (especially the distinctive use of the titles "Jehovah" and "Elohim"), and the resumptive form of the latter chapter, somewhat favor this view; but, on the other hand, it is emphatically forbidden by the doctrine of the unity of the human race (and "man" is in both cases alike called אָדָם); and after all it leaves essentially untouched the principal question of the reconcilement of the Mosaic order and date of creation with those suggested by science. See ADAM. (2.) Others regard the several "days" of the scriptural narrative as periods of indefinite extent, and so find time enough for the astronomical and geological cycles required. See EARTH. But this interpretation is met by two objections: (*a*) Although the term יוֹם, *day*, is sometimes used in a vague sense for a longer or shorter period of time, such a signification here is forbidden by the distinct recurrence of the divisions "night and morning" stated in connection with each νυχθήμερον or space of twenty-four hours; and the Sabbath comes in as a similar space of time at the close of the week, in a sense probably strict and literal, since it is made the basis of the hebdomadal cycle religiously observed ever since. See DAY. (*b*) The exact number of *six* such periods cannot be made out satisfactorily from the records of science: e. g. the astronomical system requires the sun at the outset of the demiurgic period, whereas Moses does not introduce it till the fourth day, although light had existed from the first; and the lowest geological strata exhibit animal life, whereas Moses speaks of vegetables as created first. See GEOLOGY. (3.) Perhaps the best solution of the difficulty is that which inserts the entire geological period between the original creation of matter in ver. 1 of Gen. i, and the literal account of the last, or, properly, Mosaic creation of the present races of living things detailed in verses 11-31; the intermediate verses (2-10) describing *phenomenally*, i. e. just as the facts would have appeared to a spectator, the gradual restoration of mundane order, after the grand cataclysm that closed the geological period, and swept off the terrestrial tribes then existing; and chap. ii, resuming the account for the purpose of further detail, especially with reference to the formation of Eve. See CREATION.

For a more general exposition of the Hebrew views on this subject, see COSMOLOGY.

Cosmological Argument. See GOD; NATURAL THEOLOGY.

Cosmology, BIBLICAL. The views of the Hebrews on this subject are, in a scientific point of view, confessedly imperfect and obscure. This arises partly from the ulterior objects which led them to the study of natural science, and still more from the poetical coloring with which they expressed their opinions. The books of Genesis, Job, and Psalms supply the most numerous notices: of these, the two latter are strictly poetical works, and their language must be measured by the laws of poetical expression; in the first alone have we any thing approaching to a historical and systematic statement, and even this is but a sketch—an outline—which ought to be regarded at the same distance, from the same point of view, and through the same religious medium as its author regarded it. The act of creation itself, as recorded in the first chapter of Genesis, is a subject beyond and above the experience of man; human language, derived, as it originally was, from the sensible and material world, fails to find an adequate term to describe the act; for our word "create" and the Hebrew *bara*, though most appropriate to express the idea of an original creation, are yet applicable and must necessarily be applicable to other modes of creation; nor does the addition of such expressions as "out of things that were not" (ἐξ οὐκ ὄντων, 2 Macc. vii, 28), or "not from things which appear" (μὴ ἐκ φαινομένων, Heb. xi, 3) contribute much to the force of the declaration. The absence of a term which shall describe exclusively an original creation is a necessary infirmity of language: as the event occurred but once, the corresponding term must, in order to be adequate, have been coined for the occasion and reserved for it alone, which would have been impossible. The same observation applies, though in a modified degree, to the description of the various processes subsequent to the existence of original matter. Moses viewed matter and all the forms of matter in their relations primarily to God, and secondarily to man—as manifesting the glory of God, and as designed for the use of man. In relation to the former, he describes creation with the special view of illustrating the divine attributes of power, goodness, wisdom, and accordingly he throws this narrative into a form which impresses the reader with the sense of these attributes. In relation to the latter, he selects his materials with the special view of illustrating the subordination of all the orders of material things to the necessities and comforts of man. With these objects in view, it ought not to be a matter of surprise if the simple narrative of creation omits much that scientific research has since supplied, and appears in a guise adapted to those objects. The subject itself is throughout one of a transcendental character; it should consequently be subjected to the same standard of interpretation as other passages of the Bible, descriptive of objects which are entirely beyond the experience of man, such as the day of judgment, the states of heaven and hell, and the representations of the divine majesty. The style of criticism applied to Gen. i by the opponents, and not unfrequently by the supporters of revelation, is such as would be subversive of many of the most noble and valuable portions of the Bible. See below.

1. In common with all ancient notions, the earth was regarded by the Hebrews not only as the central point of the universe, but as the universe itself, every other body—the heavens, sun, moon, and stars—being subsidiary to, and, as it were, the complement of the earth. The Hebrew language has no expression equivalent to our *universe:* the phrase "the heavens and the earth" (Gen. i, 1; xiv, 19; Exod. xxxi, 17) has been regarded as such; but it is clear that the heavens were looked upon as a necessary adjunct of the earth—the curtain of the tent in which man dwells (Isa. xl, 22), the sphere above which fitted the sphere below (comp. Job xxii, 14, and Isa. xl, 22)—designed solely for purposes of beneficence in the economy of the earth. This appears from the account of its creation and offices: the existence of the heaven was not prior to or contemporaneous with that of the earth, but subsequent to it; it was created on the second day (Gen. i, 6). The term under which it is described, *rakia* (רָקִיעַ), is significant of its *extension*, that it was *stretched out* as a curtain (Psa. civ, 2) over the surface of the earth. Moreover, it depended upon the earth; it had its "foundations" (2 Sam. xxii, 8) on the edges of the earth's circle, where it was supported by the mountains as by massive pillars (Job xxvi, 11). Its offices were (1) to support the waters which were above it (Gen. i, 7; Psa. cxlviii, 4), and thus to form a mighty reservoir of rain and snow, which were to pour forth through its windows (Gen. vii, 11; Isa. xxiv, 18) and doors (Psa. lxxviii, 23), as through opened sluice-gates, for the fructification of the earth; (2) to serve as the *substratum* (στερέωμα or "*firmament*") in which the celestial bodies were to be fixed. As with the heaven itself, so also with the heavenly bodies; they were regarded solely as the ministers of the earth. Their offices were (1) to give light; (2) to separate between day and night; (3) to be for *signs*, as in the case of eclipses or other extraordinary phenomena; for *sea-*

sons, as regulating seed-time and harvest, summer and winter, as well as religious festivals; and for *days* and *years*, the length of the former being dependent on the sun, the latter being estimated by the motions both of sun and moon (Gen. i, 14-18); so that while it might truly be said that they held "dominion" over the earth (Job xxxviii, 33), that dominion was exercised solely for the convenience of the tenants of earth (Psa. civ, 19-28). So entirely, indeed, was the existence of heaven and the heavenly bodies designed for the earth, that with the earth they shall simultaneously perish (2 Pet. iii, 10): the curtain of the tent shall be rolled up, and the stars shall of necessity drop off (Isa. xxxiv, 4; Matt. xxiv, 29)—their sympathy with earth's destruction being the counterpart of their joyous song when its foundations were laid (Job xxxviii, 7).

2. The earth was regarded in a twofold aspect: in relation to God, as the manifestation of his infinite attributes; in relation to man, as the scene of his abode.

(1.) The Hebrew cosmology is based upon the leading principle that the universe exists, not independently of God, by any necessity or any inherent power, nor yet contemporaneously with God, as being coexistent with him, nor yet in opposition to God, as a hostile element, but dependently upon him, subsequently to him, and in subjection to him. The opening words of Genesis express in broad terms this leading principle; however difficult it may be, as we have already observed, to express this truth adequately in human language, yet there can be no doubt that the subordination of matter to God in every respect is implied in that passage, as well as in other passages, too numerous to quote, which comment upon it. The same great principle runs through the whole history of creation: matter owed all its forms and modifications to the will of God; in itself dull and inert, it received its first vivifying capacities from the influence of the Spirit of God brooding over the deep (Gen. i, 2); the progressive improvements in its condition were the direct and miraculous effects of God's will; no interposition of secondary causes is recognised—"He spake, and it was" (Psa. xxxiii, 9); and the pointed terseness and sharpness with which the writer sums up the whole transaction in the three expressions "God said," "it was so," "God saw that it was good"—the first declaring the divine volition, the second the immediate result, the third the perfectness of the work—harmonizes aptly with the view which he intended to express. Thus the earth became in the eyes of the pious Hebrew the scene on which the divine perfections were displayed: the heavens (Psa. xix, 1), the earth (Psa. xxiv, 1; civ, 24), the sea (Job xxvi, 10; Psa. lxxxix, 9; Jer. v, 22), "mountains and hills, fruitful trees and all cedars, beasts and all cattle, creeping things and flying fowl" (Psa. cxlviii, 9, 10), all displayed one or other of the leading attributes of his character. So also with the ordinary operations of nature—the thunder was his voice (Job xxxvii, 5), the lightnings his arrows (Psa. lxxvii, 17), the wind and storm his messengers (Psa. cxlviii, 8), the earthquake, the eclipse, and the comet the signs of his presence (Joel ii, 10; Matt. xxiv, 29; Luke xxi, 25). See ANTHROPOMORPHISM.

(2.) The earth was regarded in relation to man, and accordingly each act of creation is a preparation of the earth for his abode—light, as the primary condition of all life; the heavens, for purposes already detailed; the dry land, for his home; "grass for the cattle and herb for the service of man" (Psa. civ, 14); the alternations of day and night, the one for his work and the other for his rest (Psa. civ, 23); fish, fowl, and flesh for his food; the beasts of burden, to lighten his toil. The work of each day of creation has its specific application to the requirements and the comforts of man, and is recorded with that special view.

3. Creation was regarded as a progressive work—a gradual development from the inferior to the superior orders of things. Thus it was with the earth's surface, at first a chaotic mass, *waste and empty*, well described in the paronomastic terms *tohu va-bohu*, overspread with waters and enveloped in darkness (Gen. i, 2), and thence gradually brought into a state of order and beauty so conspicuous as to lead the Latins to describe it by the name *Mundus*. Thus also with the different portions of the universe, the earth before the light, the light before the firmament, the firmament before the dry land. Thus also with light itself, at first the elementary principle, separated from the darkness, but without defined boundaries; afterwards the illuminating bodies with their distinct powers and offices—a progression that is well expressed in the Hebrew language by the terms *ôr* and *maôr* (אוֹר, מָאוֹר). Thus also with the orders of living beings; firstly, plants; secondly, fish and birds; thirdly, cattle; and, lastly, man. From "good" in the several parts to "very good" as a whole (Gen. i, 31), such was its progress in the judgment of the Omnipotent workman.

4. Order involves time; a succession of events implies a succession of periods; and, accordingly, Moses assigns the work of creation to six days, each having its specific portion—light to the first, the firmament to the second, the dry land and plants to the third, the heavenly bodies to the fourth, fish and fowl to the fifth, beasts and man to the sixth. The manner in which these acts are described as having been done precludes all idea of time in relation to their performance; it was miraculous and instantaneous: "God said," and then "it was." But the progressiveness, and consequently the individuality of the acts, does involve an idea of time as elapsing between the completion of one and the commencement of another; otherwise the work of creation would have resolved itself into a single continuous act. The period assigned to each individual act is a day—the only period which represents the entire cessation of a work through the interposition of night. That a natural day is represented under the expression "evening was and morning was," admits, we think, of no doubt; the term "day" alone may sometimes refer to an indefinite period contemporaneous with a single event; but when the individual parts of a day, "evening and morning," are specified, and when a series of such days are noticed in their numerical order, no analogy of our language admits of our understanding the term in anything else than its literal sense. The Hebrews had no other means of expressing the civil day of twenty-four hours than as "evening, morning" (עֶרֶב בֹּקֶר, Dan. viii, 14), similar to the Greek νυχθήμερον; and, although the alternation of light and darkness lay at the root of the expression, yet the Hebrews in their use of it no more thought of these elements than do we when we use the terms *fortnight* or *se'nnight*; in each case the lapse of a certain time, and not the elements by which that time is calculated, is intended; so that, without the least inconsistency either of language or of reality, the expression may be applied to the days previous to the creation of the sun. The application of the same expressions to the events subsequent to the creation of the sun, as well as the use of the word "day" in the fourth commandment without any indication that it is used in a different sense, or in any other than the literal acceptation of Gen. i, 5 sq., confirm the view above stated. The interpretation that "evening and morning" = *beginning* and *end*, is opposed not only to the order in which the words stand, but to the sense of the words elsewhere.

5. The Hebrews, though regarding creation as the immediate act of God, did not ignore the evident fact that existing materials and intermediate agencies were employed both then and in the subsequent operations of nature. Thus the simple fact, "God created man" (Gen. i, 27), is amplified by the subsequent notice of the material substance of which his body was made (Gen. ii, 7); and so also of the animals (Gen. i, 24; ii,

19). The separation of sea and land, attributed in Gen. i, 6, to the divine fiat, was seen to involve the process of partial elevations of the earth's surface (Psa. civ, 8, "the mountains ascend, the valleys descend;" comp. Prov. viii, 25-28). The formation of clouds and the supply of moisture to the earth, which in Gen. i, 7, was provided by the creation of the firmament, was afterwards attributed to its true cause in the continual return of the waters from the earth's surface (Eccl. i, 7). The existence of the element of light, as distinct from the sun (Gen. i, 3, 14; Job xxxviii, 19), has likewise been explained as the result of a philosophically correct view as to the nature of light; more probably, however, it was founded upon the incorrect view that the light of the moon was independent of the sun.

6. With regard to the earth's body, the Hebrews conceived its surface to be an immense disc, supported like the flat roof of an Eastern house by pillars (Job ix, 6; Psa. lxxv, 3), which rested on solid foundations (Job xxxviii, 4, 6; Psa. civ, 5; Prov. viii, 29); but where those foundations were on which the "sockets" of the pillars rested, none could tell (Job xxxviii, 6). The more philosophical view of the earth being suspended in free space seems to be implied in Job xxvi, 7; nor is there any absolute contradiction between this and the former view, as the pillars of the earth's surface may be conceived to have been founded on the deep bases of the mountains, which bases themselves were unsupported. Other passages (Psa. xxiv, 2; cxxxvi, 6) seem to imply the existence of a vast subterraneous ocean; the words, however, are susceptible of the sense that the earth was elevated above the level of the sea (Hengstenberg, *Comm.* in loc.), and that this is the sense in which they are to be accepted appears from the converse expression "water under the earth" (Exod. xx, 4), which, as contrasted with "heaven above" and "earth beneath," evidently implies the comparative elevation of the three bodies. Beneath the earth's surface was *sheol* (שְׁאוֹל), the *hollow* place, "*hell*" (Num. xvi, 30; Deut. xxxii, 22; Job xi, 8), the "house appointed for the living" Job xxx, 23), a "land of darkness" (Job x, 21), to which were ascribed in poetical language gates (Isa. xxxviii, 10) and bars (Job xvii, 16), and which had its valleys or deep places (Prov. ix, 18). It extended beneath the sea (Job xxvi, 5, 6), and was thus supposed to be conterminous with the upper world.

7. The Mosaic statement of the world's formation (Gen. i) has been variously treated by different writers on the connection between science and the Bible. Skeptics have designated the Mosaic *heptæmeron* as a "myth," or, more mildly, the speculation of an ancient sage. Most Christians speak of it as a "history" or "narrative," or, more vaguely, a "record." Huxtable calls it a "parable" (*Sacred Record of Creation*, Lond. 1861). Others (e. g. Kurtz, Hugh Miller) suggest that it is a "vision;" one styles it a "plan" (Challier, *Creation*, Lond. 1861). But these are evidently mere glosses. The choice still lies between the Chalmerian interpolation of the geological ages before the first creative *day* begins (so Buckland, Pye Smith, Hitchcock, Crofton, Archd. Pratt, Gloag, and others), and the Cuvierian expansion of the six days into geological ages (with Miller, Macdonald, Silliman, Gaussen, Sime, M'Causland, M'Caul, Dana, and others). See DAY. Mr. Rorison (*The Creation Week*, in *Replies to "Essays and Reviews,"* Lond. and N.Y. 1862, p. 285) thinks he has discovered a new solution of the difficulty by terming the first chapter of Genesis "the inspired *Psalm* of creation," and he accordingly sets his ingenuity to work to draw out the demiurgic passage in a parallelized or hemistich form like Hebrew poetry. Yet this is but a modification of the "mythical theory" applied in a less bold form to the sacred text, but as really destructive of the historical verity of the document as the more palpable rationalistic views. There is no middle ground here between *fact* and *fancy*. The language is too detailed to admit the general dismissal of it as a cosmogonical poem. The same writer's comparison of the 104th Psalm, as being "section by section the daughter, the antiphone, the echo" of the Mosaic proem, is utterly preposterous, as the most casual collation of the two will show. But a fatal circumstance to this hypothesis is that the first chapter of Genesis lacks nearly every element of acknowledged Hebrew poetry. In FORM it has neither the lyrical prosody of the Psalms, nor the epic structure of Job; neither the dithyrambic march of the Prophets, nor the idyllic colloquies of the Canticles, nor even the didactic collocations of the Proverbs and Ecclesiastes. There is no *paronomasia* (except the accidental one in the stereotyped phrase תֹהוּ וָבֹהוּ = pell-mell), no *ellipsis*, no *introversion*, no *pleonasm*, no climactic character; in short, no figurative element whatever to distinguish its phraseology from the veriest prose. There is no proper PARALLELISM (q. v.), based upon intrinsic antithesis and synonyms; no rhythmic measure. (Compare the perfection in all these respects of the earliest real ode on record, Gen. iv, 23, 24.) Again, as to SENTIMENT, it lacks that lofty moral tone, that fine play of the imagination, that abrupt change of subject and field, which—even when other criteria fail—serve to indicate the rhapsodies of the Hebrew bards. The only thing at all resembling poetry in its dress is the strophic return of the clause "evening and morning," which is simply due to the necessary regularity of the hebdomadal periods; and the only feature in its substance allying it to poetry is a certain dignity and advance of thought, which is inherent in the incidents themselves: all that can properly be said of the diction is that it is rhetorical and suited to the subject. Even Mr. Rorison fails to point out in its body the requisite artistic constructiveness, or in its spirit the fire of genius essential to all poetic effusions. Almost any descriptive portion of the Old Testament would be found to exceed it in these respects, if carefully analyzed. The very next chapter of Genesis is fully as poetical, whether in regard to its topics, its style, or its composition; and thus, by the same loose, unscientific process, we might (as many would fain do) reduce the accounts of Adam's specific formation, of a local Eden, and of the origin of human depravity, to poetic legends. Just criticism forbids such a distortion of prose to accommodate speculative preconception. See POETRY. For an able treatise on the bearings of the Hebrew cosmology upon modern astronomy and geology, see Kurtz, *Hist. of the Old Covenant* (Edinb. 1856, vol. i, ch. i; also separately, Phila. 1857); comp. Johannsen, *Die kosmogonischen Ansichten der Hebräer* (Alt. 1833); Browne, *Mosaic Cosmogony* (Lond. 1864). See COSMOGONY; CREATION.

Cosmos. See WORLD.

Cossett, FRANCEWAY RANNA, D.D., a prominent minister of the Cumberland Presbyterian Church. He was born in Claremont, New Hampshire, April 24, 1790. His parents were Episcopalians, his grandfather being the founder and for many years the pastor of the first Episcopal church of Claremont. He studied at Middlebury College, Vermont, and graduated in 1813. From the same institution he received in 1839 the degree of Doctor of Divinity, which degree was also conferred upon him in after years by Cumberland College, Kentucky. Soon after leaving college he engaged in teaching a classical school in Morristown, N. J. After two years he accepted a call as principal of Vine Hill Academy, N. C., where he taught several years, when, his health being poor, he returned to New England, where soon after he was converted. He felt deeply impressed with the duty of preaching

the Gospel, and soon after entered the Episcopal Theological Seminary at New Haven. From the seminary he went to Tennessee, with the commendation and sanction of the bishop as a "lay preacher." Here he became acquainted for the first time with Cumberland Presbyterians, "participated in their extraordinary revivals, attended their delightful camp-meetings." He was especially pleased with their success in winning souls to Christ, and, after a long, prayerful, and hard struggle, he felt it his duty to cast his lot with them. In the year 1822 he was ordained by the Anderson presbytery of this church. He taught very successfully for some time in a classical school in Elkton, Ky. He was the first president of Cumberland College at Princeton, Ky., over which he presided for years with great honor and success. When Cumberland University was started some years later at Lebanon, Tennessee, he accepted a call to the first presidency of that institution. He presided over it until it had arisen to be one of the foremost institutions in the entire South. He was for years, and up to his death, president of the Board of Foreign and Domestic Missions of the C. P. Church. He also started and maintained for several years successfully a weekly religious paper called the "Banner of Peace," which is still (1867) being published at Nashville, Tenn. Dr. Cossett published *The Life and Times of Ewing*, which contains a history of the early years of the C. P. Church. Mr. Cossett was a man of great learning and ability, and in his younger days was a very successful preacher. He was indefatigable in his efforts to promote education among all classes, but especially in the ministry. In all his intercourse with men, either personally, by letter, or as a controvertist, he never deviated from the rules of honorable Christian discussion, or the manners of the Christian gentleman. He died at Lebanon, Tennessee, July 3, 1863.

Costa, Da. See DA COSTA.

Costobărus (Κοστόβαρος). **1.** An Idumæan of honorable connections, married by Herod to his sister Salome, and appointed governor of Idumæa, but afterwards renounced by her on pretext of his favoring the escape of the sons of Babas, the last scions of the Hyrcanian dynasty, and eventually slain by Herod (Josephus, *Ant.* xv, 7, 8-10).

2. A relative of Agrippa, and a ringleader of the Sicarii in their excesses at Jerusalem (Josephus, *War*, xx, 9, 4).

Costume, ORIENTAL. The subject of the style of dress of the ancient Hebrews is involved in much obscurity and doubt. Sculptured monuments and coins afford us all needful information respecting the apparel of the ancient Egyptians, Babylonians, Persians, Greeks, and Romans; and even the garb worn by the barbarous nations is perpetuated in the monuments of their antagonists and conquerors. But the ancient Hebrews have left no monuments, no figures of themselves; and the few figures which have been supposed to represent Jews in the monuments of Egypt and Persia are so uncertain that their authority remains to be established before we can rely upon the information which they convey. There are, however, many allusions to dress in the Scriptures, and these form the only source of our positive information. They are often, indeed, obscure, and of uncertain interpretation, but they are invaluable in so far as they enable us to compare and verify the information derivable from other sources.

1. The range of inquiry into *monumental* costume is very limited. It is a common mistake to talk of "Oriental costume" as if it were a uniform thing, whereas, in fact, the costumes of the Asiatic nations differ far more from one another than do the costumes of the different nations of Europe. That this was also the case anciently is shown by the monuments, in which the costumes of Egyptians, Assyrians, Babylonians, Persians, Medes, Syrians, and Greeks differ as much from one another as do the costumes of the modern Syrians, Egyptians, Arabs, Turks, and Persians. It is therefore nearly useless to examine the monumental costume of any nation, remote from Palestine, for the purpose of ascertaining the costume of the ancient Hebrews. Syria, Arabia, Egypt, and, to some extent, Assyria, Persia, and Babylonia, are the only countries where monuments would be likely to afford any useful information; but Arabia has left no monumental figures, and Syria none of sufficiently ancient date, while those of Assyria, Babylonia, and Persia depict few scenes of social life; and it is left for Egypt to supply nearly all the information likely to be of use. But the Egyptians and the Hebrews were an exceedingly different people; and the climates which they inhabited were also so different as to *necessitate* a greater difference of food and *dress* than might be presupposed of countries so near to each other. It is true that the Jewish nation was cradled in Egypt; and this circumstance may have had some influence on ceremonial dresses and the ornaments of women; but we do not find that nations circumstanced as the Jews were readily adopt the costumes of other nations, especially when their residence in Egypt was always regarded by them as temporary, and when their raiment was of home manufacture—spun and woven by the women from the produce of their flocks (Exod. xxxv. 25). We find also that, immediately after leaving Egypt, the principal article of dress among the Hebrews was some ample woollen garment, fit to sleep in (Exod. xxii, 27), to which nothing similar is to be seen among the costumes of Egypt.

2. With respect to the supposed representation of *Jews* in ancient monuments, if any authentic examples could be found, even of a single figure, in the ancient costume, it would afford much satisfaction, as tending to elucidate many passages of Scripture which cannot at present be with certainty explained. (See also under the article BRICK.)

(*a*.) A painting at Beni Hassan represents the arrival of some foreigners in Egypt, and is supposed to figure the arrival of Joseph's brethren in that country. The accessories of the scene, the physiognomies of the persons, and the time to which the picture relates, are certainly in unison with that event; but other circumstances are against the notion. Sir J. G. Wilkinson speaks hesitatingly on the subject; and, until some greater certainty is obtained, we may admit the possible correctness of the conjecture. The annexed cut

Supposed Representation of Joseph's Brethren on the Egyptian Monuments.

shows the variety of costume which this scene displays. All the men wear sandals. Some of them are clad only in a short tunic or shirt, with close sleeves (fig. 3); others wear over this a kind of sleeveless plaid or mantle, thrown over the left shoulder, and passing under the right arm (fig. 2). It is of a striped and curiously figured pattern, and looks exceedingly like the fine grass woven cloth of the South Sea. Others have, instead of this, a *fringed* skirt of the same material (fig. 1). All the figures are bare-headed, and wear beards, which are circumstances favorable to the identification. The fringed skirt of fig. 1 is certainly a re-

markable circumstance. Moses directed that the people should wear a fringe at the hem of their garments (Num. xv, 38); and the probability is that this command merely perpetuated a more ancient usage.

(*b*.) This fringe reappears, much enlarged, in the other Egyptian sculpture in which Jews are supposed to be represented. These are in a tomb discovered by Belzoni, in the valley of Bab el-Meluk, near Thebes. There are captives of different nations, and among them four figures, supposed to represent Jews. The

Supposed Representation of Jewish Captives on the Egyptian Monuments.

scene is imagined to commemorate the triumphs of Pharaoh-Necho in that war in which the Jews were defeated at Megiddo, and their king Josiah slain (2 Chron. xxxv, xxxvi).

(*c*.) On the face of a rock at Behistun (q. v.), on the Median border of the ancient Assyria, there is a remarkable sculpture representing a number of captives strung together by the neck, brought before the king and conqueror, who seems to be pronouncing sentence upon them. The venerable antiquity of this sculpture is unquestionable; and Sir R. K. Porter was led to fancy that the sculpture commemorates the subjugation and deportation of the *ten* tribes by Shalmaneser, king of Assyria (2 Kings xvii, 6). The reasons which he assigns (*Travels in Persia*, ii, 159 sq.) for this conclusion are of little weight, and not worth examination. But the single fact that the figures are arrayed in a costume similar to the ancient and present garb of the people of Syria and Lebanon inclines us to think that the figures really do represent the costume of nations west of the Euphrates, including, probably, that of the Jews and their near neighbors. The dress here

Supposed Representation of Israelitish Prisoners on the Persian Monuments.

shown is a shirt or tunic confined around the waist by a strap or girdle; while others have a longer and larger robe, furnished with a spacious cape or hood, and, probably, worn over the other.

There is no reason to think that the dress of the Jews was in any important respect different from that of the other inhabitants of the same and immediately bordering countries. It would therefore be satisfactory, and would enable us to judge better of the figures which have been noticed, if we had representations of Canaanites, Phœnicians, Syrians, Moabites, etc., by the Egyptian artists, who were so exact in discriminating, even to caricature, the peculiarities of nations. Under the article ARMOR (p. 423) there is a supposed figure of a Canaanite warrior from this source. The dress, being military, does not afford much room for comparison in the present instance; but we at once recognise in it most of the articles which formed the military dress of the Hebrews. The annexed figures, however, convey more information, as they appear to represent inhabitants of Samaria

Supposed Representation of Natives of Palestine on the Egyptian Monuments.

and Lebanon. The evidence for the last (fig. 2) is as conclusive as can be obtained, for not only is there the name "Lemanon" (*m* being constantly interchanged with *b*), but the persons thus attired are represented as inhabiting a mountainous country, and felling *fir*-trees to impede the chariots of the Egyptian invaders. The dresses are similar to each other, and this similarity strengthens the probability that the dress of the Jews was not very different; and it is also observable that it is similar to the full dress of some of the figures in the sculpture at Behistun: the figures are bearded, and the cap, or head-dress, is bound round with a fillet. The figures are arrayed in a long gown reaching to the ankles, and confined around the waist by a girdle; and the shoulders are covered by a cape, which appears to have been common to several nations of Asia. At first view it would seem that this dress is different from those already figured. But, in all probability, this more spacious robe is merely an outer garment, covering the inner dress which is shown in the figures that seem more scantily arrayed. (See the ingenious papers by a lady on the costumes of the ancient Canaanites in the *Jour. of Sac. Lit.*, Jan. 1853, p. 291 sq., and the cuts in the No. for April, 1854.) See CANAANITE; LEBANON.

3. The information on this subject to be obtained from *tradition* is embodied—(1.) In the dresses of monks and pilgrims, which may be traced to an ancient date, and which are an intended imitation of the dresses supposed to have been worn by the first disciples

Christian Costumes of Oriental Monks and Pilgrims.

and apostles of Christ. (2.) The garb conventionally assigned by painters to scriptural characters, which were equally intended to embody the dress of the apostolical period, and is corrected in some degree by the notions of Oriental costume which were collected during the Crusades.

To judge of the value of these costumes, we must compare them, first, with the scanty materials already produced, and then with the modern costumes of Syria and Arabia. The result of this examination will probably be that these traditional garbs are by no means bad reminiscences of Hebrew costume; and that the dresses which the painters have introduced into scriptural subjects are far more near to correctness than it has latterly been the fashion to suppose. It is per-

Fancy Sketches of Oriental Costume by early Painters.

haps as nearly as possible a just medium between the ecclesiastical tradition and the practical observation. No dress more suitable to the dignity of the subjects could possibly be devised; and, sanctioned as it has been by long use, and rendered venerable by scriptural associations, we should be reluctant to see it exchanged for the existing Oriental costumes, which the French artists have begun to prefer. But this is only with regard to pictorial associations and effects; for, in an inquiry into the costume *actually* worn by the Israelites, modern sources of information must be by no means overlooked.

4. The value of the *modern Oriental* costumes for the purposes of scriptural illustration arises from the fact that the dress, like the usages, of the people is understood to be the same, or nearly the same, as that used in very ancient times. But this must be understood with some limitations. The dress of the Turks is distinctive and peculiar to themselves, and has no connection with the aboriginal costumes of Western Asia. The dress of the Persians has also been changed almost within the memory of man, that of the ruling Tartar tribe having been almost invariably adopted; so that the present costume is altogether different from that which is figured by Sir Thomas Herbert, Chardin, Le Bruyn, Niebuhr, and other travellers of the 17th and 18th centuries. But with the exceptions of the foreign Turkish costume and its modifications, and with certain local exceptions, chiefly in mountainous regions, it may be said that there is one prevailing costume in all the countries of Asia between the Tigris and Mediterranean, and throughout Northern Africa, from the Nile to Morocco and the banks of the Senegal. This costume is essentially Arabian, and owes its extension to the wide conquests under the first caliphs; and it is through the Arabians—the least changed of ancient nations, and almost the only one which has remained as a nation from ancient times—that the antiquity of this costume may be proved. This is undoubtedly the most ancient costume of Western Asia; and while one set of proofs would carry it up to scriptural times, another set of strong probabilities and satisfactory analogies will take it back to the most remote periods of scriptural history, and will suggest that the dress of the Jews themselves was very similar, without being strictly identical.

We may here remark, (1.) That the usages of the Arabians in Syria and Palestine are more in agreement with those of Scripture than those of any other inhabitants of those countries. (2.) That their costume throws more light on the scriptural intimations than any other now existing, while it agrees more than any other with the materials supplied by antiquity and by tradition. (3.) That the dress which the Arabian garbs gradually superseded in Syria and Palestine was not the same as that of scriptural times, excepting, perhaps, among the peasantry, whose dress appears to have then differed little from that of the Arabian conquerors. The Jews had for above five centuries ceased to be inhabitants of Palestine; and it is certain that during the intermediate period the dress of the upper classes—the military and the townspeople—had become assimilated to that of the Greeks of the Eastern empire. Arabia had meanwhile been subjected to no such influences, and the dress which it brought into Syria may be regarded as a restoration of the more ancient costume, rather than (as it was in many countries) the introduction of one previously unknown.

It is to be observed, however, that there are two very different sorts of dresses among the Arabians. One is that of the Bedouin tribes, and the other that of the inhabitants of towns. The distinction between these is seldom clearly understood or correctly stated, but is of the utmost importance for the purpose of the present notice. Instead, therefore, of speaking of the Arabian costume as one thing, we must regard it as two things—the desert costume and the town costume. If, then, our views of Hebrew costume were based on the actual costume of the Arabians, we should be led to conclude that the desert costume represented that which was worn during the patriarchal period, and until the Israelites had been some time settled in Canaan; and the town costume that which was adopted from their neighbors when they became a settled people.

(*a*) The annexed cut represents, in fig. 2, a Bedouin,

Modern Arab Dress of the Desert Tribes.

or desert Arab, in the dress usually worn in Asia; and fig. 1 represents a townsman in a cloak of the same kind, adopted from the Arabs, and worn very extensively as an outermost covering in all the countries from the Oxus (for even the Persians use it) to the Mediterranean. The distinctive head-dress of the Bedouin, and which has not been adopted by any other nation, or even by the Arabian townsmen, is a kerchief (*keffeh*) folded triangularly, and thrown over the head so as to fall down over the neck and shoulders, and bound to the head by a band of twisted wool or camel's hair. The cloak is called an *abba*. It is made of wool and hair, and of various degrees of fineness. It is sometimes entirely black, or entirely white, but is more usually marked with broad stripes, the colors of which (never more than two, one of which is always white) are distinctive of the tribe by which it is worn. The cloak is altogether shapeless, being like a square sack, with an opening in front, and with slits at the sides to let out the arms. The Arab who wears it by day, sleeps in it by night, as does often the peasant by whom it has been adopted; and in all probability this was the garment similarly used by the ancient Hebrews, and which a benevolent law, delivered while Israel was still in the desert, forbade to be kept in pledge beyond the day, that the poor might not be without a covering at night (Exod. xxii, 27). This article of dress appears to have been little known to Biblical illustrators, although it is the principal and

most common outermost garment in Western Asia. This singular neglect has arisen from their information being chiefly derived from Shaw and others, who describe the costume of the Arab tribes or Moors of Northern Africa, where the outer garment is more generally the *bournoos* (fig. 3), a woollen cloak, not unlike the *abba*, but furnished with a hood, and which is sometimes strangely confounded, even by well-informed persons, with a totally different outer garment worn in the same regions, usually called the *hyke*, but which is also, according to its materials, quality, or color, distinguished by various other names; and writers have produced some confusion by not observing that these names refer to an article of raiment which under all these names is essentially the same. Regardless of these minute distinctions, this part of dress may be described as a large woollen blanket, either white or brown, and in summer a cotton sheet (usually blue or white, or both colors together). Putting one corner before over the left shoulder, the wearer brings it behind, and then under the right arm, and so over the body, throwing it behind over the left shoulder, and leaving the right arm free for action. This very picturesque mode of wearing the *hyke* is shown in fig. 2 of the accompanying cut. Another

Various Methods of Wearing the Modern Arab Mantle or *Hyke*.

mode of wearing it is shown in fig. 3. It is sometimes thrown over the head as a protection from the sun or wind (fig. 1), and calls to mind the various passages of Scripture in which persons are described as covering their heads with their mantles (2 Sam. xv, 30; 1 Kings xix, 13; Esther vi, 12). This article of dress, originally borrowed from the nomades, is known in Arabia, and extends westward to the shores of the Atlantic, being most extensively used by all classes of the population. The seat of this dress, and of the abba respectively, is indicated by the direction of their importation into Egypt. The *hykes* are imported from the west (i. e. from North Africa), and the *abbas* from Syria. The close resemblance of the above group of real costume to those in which the traditionary ecclesiastical and traditionary artistical costumes are displayed, must be obvious to the most cursory observer. It may also be noticed that the *hyke* is not without some resemblance, as to the manner in which it was worn, to the outer garment of one of the figures in the Egyptian family, supposed to represent the arrival of Joseph's brethren in Egypt (above).

(*b*) We now turn to the costumes which are seen in the towns and villages of south-western Asia.

In the Scriptures *drawers* are only mentioned in the injunction that the high-priest should wear them (Exod. xxviii, 42), which seems to show that they were not generally in use; nor have we any evidence that they ever became common. Drawers descending to the middle of the thighs were worn by the ancient Egyptians, and workmen often laid aside all the rest of their dress when occupied in their labors. As far as this part of dress was used at all by the Hebrews, it was doubtless either like this, or similar to those which are now worn in Western Asia by all, except some among the poorer peasantry, and by many of the Bedouin Arabs. They are of linen or cotton, of ample breadth, tied around the body by a running string, or band, and always worn next the skin, not over the shirt, as in Europe.

It will be asked, when the poor Israelite had pawned his outer garment "wherein he slept," what dress was left to him? The answer is probably supplied by the annexed engraving, which represents slightly

Modern Oriental Undergarment.

different garments of cotton, or woollen frocks or shirts, which often, in warm weather, form the sole dress of the Bedouin peasants, and the lower class of townspeople. To this the *abba* or *hyke* is the proper outer robe (as in fig. 1, second cut preceding), but is usually, in summer, dispensed with in the daytime, and in the ordinary pursuits and occupations of life. It is sometimes (as in the foregoing cut, fig. 2) worn without, but more usually with a girdle; and it will be seen that the shorter specimens are not unlike the dress of one of the figures (fig. 3) in the earliest of the Egyptian subjects which have been produced. The shirt worn by the superior classes is of the same shape, but of finer materials. This is shown in the accompanying figure, which represents a gentleman as just risen from bed. If we call this a shirt, the Hebrews doubtless had it — the sole dress (excepting the cloak) of the poor, and the inner robe of the rich. Such, probably, were the "sheets" (translated "shirts" in some versions), of which Samson despoiled thirty Philistines to pay the forfeit of his riddle (Judg. xiv, 13, 19). It is shown from the Talmud, indeed, that the Hebrews of later days had a shirt called חָלוּק, *chaluk'*, which, it would appear, was often of wool (Lightfoot, *Hor. Heb.* on Luke ix, 3), and which is described as the ordinary inner garment, the outer being the cloak or mantle. This shows that the shirt or frock was, as in modern usage, the ordinary dress of the Jews, to which a mantle (*abba*, *hyke*, or *bournoos*) was the outer covering.

Modern Oriental Undress.

The Talmud enumerates eighteen several garments which formed the clothing of the Jews from head to foot (Talm. Hieros. *Sabb.* fol. 15; Talm. Bab. *Sabb.* fol. 120), mentioning, however, two sandals, two buskins, etc. This shows, at least, one thing, that they were not more sparingly clad than the modern Orient-

als. This being the case, we may be sure that although persons of the humbler classes were content with the shirt and the mantle, the wealthier people had other robes between these two, and forming a complete dress without the mantle, which with them was probably confined to out-of-door wear, or ceremonial use. It is, of course, impossible to discriminate these precisely, but in this matter we cannot be far wrong in trusting to the analogy of existing usages.

In all the annexed figures, representing persons of

Modern Oriental Outer Garment.

the superior class, we observe the shirt covered by a striped (sometimes figured) gown or *caftan* of mingled silk and cotton. It descends to the ankles, with long sleeves, extending a few inches beyond the fingers' ends, but divided from a point a little above the wrist, so that the hand is generally exposed, though it may be concealed by the sleeve when necessary; for it is customary to cover the hands in the presence of a person of high rank. It is very common, especially in winter, for persons to sleep without removing this gown, but only unloosing the girdle by which it is bound. It is not unusual within doors to see persons without any article of dress outside this; but it is considered decidedly as an undress, and no respectable person is beheld out of doors, or receives or pays visits, without an outer covering. Hence persons clad in this alone are said to be "naked" in Scripture—that is, not in the usual complete dress; for there can be no manner of doubt that this, or something like this, is the כְּתֹנֶת, *ketho'neth*, of Scripture (Exod. xxviii, 40; Job xxx, 18; Isa. xxii, 21, etc.). A similar robe is worn by the women, as was also the case among the Israelites (2 Sam. xiii, 18, 19; Cant. v, 3). It is in the bosom of this robe that various articles are carried. See Bosom.
